Amendment 1 Version 1 to CB 120819 – SPU 2025-2027 Drainage Rates

Sponsor: Councilmember Hollingsworth

Revise the definition of “Highly infiltrative pervious surface”

Effect: This amendment would revise the definition of “highly infiltrative pervious surface” to correct an error in the transmitted legislation. The legislation inadvertently included language related to previous eligibility requirements for the low-impact discount program. This amendment was requested by Seattle Public Utilities (SPU) after transmittal and introduction of the legislation.

Amend Section 1 of CB 120819 to revise the definition of “Highly infiltrative pervious surface”

as follows:

21.33.010 Definitions

((J)) K. “Highly infiltrative pervious surface” means vegetated surface ~~((of specific types such as forests or non-forested land))~~ ~~((that is in the natural progression back to a forested state, or athletic fields))~~ ~~((that have been designed to substantially meet the same Seattle Public Utilities defined performance characteristics for infiltrating stormwater))~~ containing significant tree canopy or undeveloped grassland.
