Statement of Legislative Intent:

This Statement of Legislative Intent (SLI) requests that the Seattle Department of Construction Inspections (SDCI) in cooperation with the Office of Economic Development (OED) deliver a written report to both the Planning, Land Use and Zoning Committee and the Civil Rights, Utilities, Economic Development and Arts Committee, or their successor committees, regarding the City's outreach to communities likely to be affected by the adoption of new policy regarding unreinforced masonry (URM) buildings. One or both of these Council committees may request a briefing on this matter after receiving and reviewing the report.

Background

Unreinforced masonry (URM) buildings are typically brick structures that were built without steel reinforcement or sufficient structural connections between the building's walls and other structural elements. They are located throughout Seattle, notably in some of the City's oldest neighborhoods and commercial and industrial centers. A seismic retrofit can significantly reduce a URM building's risk of collapse in the event of an earthquake. Collapsed buildings can endanger the lives of the building's occupants and nearby pedestrians, block public rights-of-way for emergency response, and delay overall recovery from the earthquake.

Experts agree that the likelihood of a damaging earthquake that would shake Seattle is significant. SDCI is considering a mandate for all URM buildings to undergo a seismic retrofit. Outreach related to that requirement, particularly in areas with concentrations of URM buildings, such historic districts, will be necessary to successfully implement the mandate. There are more than 1,100 URM structures within the city limits that are at risk of earthquake damage. The City's URM Policy Committee reports that the cost to retrofit all the at-risk URM structures to the recommended standard could cost up to \$1 billion.

In October 2017, The City's URM Policy Committee briefed the Council on their recommendations. Based on the recommendations, the Executive is expected to work with Council in 2018 to develop new policy and implementing regulations to address the safety of URM buildings. Structural damage to URM buildings from an earthquake and the retrofitting of URM buildings both have potential for the displacement of low income people and/or communities of color. This SLI opens the dialogue between the Legislative and the Executive about how to assist those most vulnerable to the negative effects of a URM mandate while increasing the safety and resilience of Seattle.

Responsible Council Committee(s): Civil Rights, Utilities, Economic Development and Arts Committee; Planning, Land Use and Zoning Committee

Date Due to Council: March 31, 2017
