CITY OF SEATTLE

ORDINANCE _____

COUNCIL BILL _____

AN ORDINANCE relating to land use and zoning; amending subsection 23.49.156.A of the Seattle Municipal Code to clarify bonus allowances in the Living Building Pilot Program.

WHEREAS, on December 14, 2009, the Seattle City Council adopted Ordinance 123206, establishing a Living Building Pilot program; and

WHEREAS, the Council intended for the Living Building Pilot Program (LBPP) to be one of the City's

Climate Strategies to fundamentally reshape Seattle's building and transportation systems for a fossil-free future; and

WHEREAS, Seattle's buildings produce over one-third of the city's greenhouse gases and, reducing these building emissions is critical in becoming a carbon-neutral community by 2050; and

WHEREAS, as part of the LBPP, projects explore fundamentally different approaches to building design, construction, and operations, and LBPP applicants are eligible for additional height and/or floor area ratio bonuses as well as departures from the Land Use Code; and

WHEREAS, early design guidance for project 3036043-LU was applied for under 3034374-EG. The Master Use Permit for the project was reviewed by the Design Review Board and approved by the Director of the Department of Construction and Inspections granting certain departures under the LBPP including additional height; and

WHEREAS, the Master Use Permit decision 3036043-LU, was appealed by Belltown Livability Coalition to the Seattle Hearing Examiner along with a request for code interpretation alleging that the subject lot

was not eligible for additional height under the LBPP because the height limitation was constrained by a lot size restriction codified in subsection 23.49.156.A of the Seattle Municipal Code (SMC); and

WHEREAS, as part of the appeal, Seattle Department of Construction and Inspections (SDCI) interpreted SMC 23.49.156.A.1 in light of the LBPP code provisions including SMC 23.40.060 and SMC 23.49.008.F and concluded that the subject development project could take advantage of height bonuses to 175 feet without a minimum lot size of 19,000 square feet under the LBPP; and

WHEREAS, the Hearing Examiner disagreed with SDCI's interpretation, stating that "The legislative body set the minimum lot size at 19,000 square feet for buildings over 145 feet. Regardless of policy reasonableness, only the City Council has authority to enact code. The Examiner only interprets that code. The legislative body could provide set criteria so the Department could determine appropriate lot sizes when specified criteria are met or waive the lot size requirement entirely for living buildings. It has not done so"; and

WHEREAS, the Examiner's determination would limit the intent of the LBPP and constrain the City's goal of providing more housing, especially family-sized housing; and

WHEREAS, SDCI proposes this code amendment to explicitly authorize building height in excess of 145 feet in the Downtown Mixed Residential zone on lots smaller than 19,000 square feet in size to enable the City to allow the proposed 182 units of housing in the Downtown Urban Center, including ten three-bedroom units as proposed in Master Use Permit 3036043-LU and to encourage additional lots in the Downtown Urban Center to apply for the LBPP; and

WHEREAS, this ordinance is necessary to make clear that the City Council intends that the LBPP may allow height bonuses for buildings in the LBPP located in the downtown mixed residential/commercial zone regardless of lot size and incentivize additional properties in this zone to join the LBPP; and

WHEREAS, SDCI evaluated the environmental impact of the proposed ordinance, prepared a threshold determination under the State Environmental Policy Act (SEPA) and sought public comment on the

ordinance; however, the ordinance is exempt from administrative or judicial appeal under RCW 36.70A.070(2) for certain development regulations and non-project actions that “increase housing capacity, increase housing affordability, and mitigate displacement”; and

WHEREAS, this ordinance is exempt from administrative or judicial appeal because the ordinance will increase housing capacity, including at least 182 units, ten of which are family-sized units as well as anticipated additional units in the zone; NOW, THEREFORE,

BE IT ORDAINED BY THE CITY OF SEATTLE AS FOLLOWS:

Section 1. Subsection 23.49.156.A of the Seattle Municipal Code, which section was last amended by Ordinance 125371, is amended as follows:

23.49.156 Downtown Mixed Residential, minimum lot size

A. This subsection 23.49.156.A applies to DMR zones outside of South Downtown.

1. The minimum lot size is 19,000 square feet for any structure over 145 feet high, except that a project in a DMR zone that is part of the Living Building Pilot Program pursuant to Section 23.40.060 and uses a height bonus pursuant to subsections 23.40.060.C.5, 23.40.070.C.5, or 23.49.008.F, is exempt from this requirement. Pursuant to subsection 23.76.026.E, an applicant may elect to use this exemption even if the applicant’s application vested before the effective date of this ordinance.

2. To meet the minimum lot size requirement, a lot may be combined with one or more abutting lots, whether occupied by existing structures or not, provided that:

- a. The total area of the combined lots meets the minimum lot size requirement;
- b. All lots have frontage on the same avenue;
- c. Any existing structure does not exceed a height of 145 feet;
- d. The lot coverage of both the proposed and any existing structures does not exceed applicable lot coverage limits in Section 23.49.158; and
- e. The fee owners of the abutting lot(s) execute a deed or other agreement, recorded with

the King County Recorder's Office as an encumbrance on the abutting lot(s), that restricts future development of the abutting lot(s) to a maximum height of 145 feet for the life of the proposed structure, and that precludes the use of the abutting lot(s) in combination with any other abutting lots for purposes of meeting the minimum lot size requirements for any other lot.

* * *

Section 2. This ordinance shall take effect as provided by Seattle Municipal Code Sections 1.04.020 and 1.04.070.

Passed by the City Council the _____ day of _____, 2024, and signed by me in open session in authentication of its passage this _____ day of _____, 2024.

President _____ of the City Council

Approved / returned unsigned / vetoed this ____ day of _____, 2024.

Bruce A. Harrell, Mayor

Filed by me this _____ day of _____, 2024.

Scheereen Dedman, City Clerk

(Seal)

SUMMARY and FISCAL NOTE

Department:	Dept. Contact:	CBO Contact:
SDCI	David VanSike	Christie Parker

1. BILL SUMMARY

Legislation Title: AN ORDINANCE relating to land use and zoning; amending subsection 23.49.156.A of the Seattle Municipal Code to clarify bonus allowances in the Living Building Pilot Program.

Summary and Background of the Legislation: This legislation amends the Land Use Code (Title 23) in subsection 23.49.156.A to clarify and improve the function of the Living Building Pilot Program. The legislation clarifies that projects in the pilot program can use height bonuses to exceed 145 feet in height regardless of lot size under SMC 23.49.156.A in the Downtown Mixed Residential zone.

The Living Building Pilot Program is intended to promote the public interest by encouraging the development of innovative “living” buildings that can reduce environmental impacts, test new technologies, and serve as a model for development throughout the region and country. The ordinance establishing the Living Building Pilot Program became effective in January 2010 and has been revised since. SMC 23.40.060.A establishes an end date of the Program, December 31, 2030, or a maximum of 20 enrollments, whichever comes first. To date, 15 projects have enrolled with only five opportunities remaining. The amendment would allow an important case study for a living building and provide needed housing in the Belltown Neighborhood.

2. CAPITAL IMPROVEMENT PROGRAM

Does this legislation create, fund, or amend a CIP Project? Yes No

3. SUMMARY OF FINANCIAL IMPLICATIONS

Does this legislation have financial impacts to the City? Yes No

4. OTHER IMPLICATIONS

- a. **Please describe how this legislation may affect any departments besides the originating department.** This legislation is not anticipated to affect any other department.
- b. **Does this legislation affect a piece of property? If yes, please attach a map and explain any impacts on the property. Please attach any Environmental Impact Statements, Determinations of Non-Significance, or other reports generated for this property.**
While there is one known project that would benefit from the legislation, it would affect any property in the Downtown Mixed Residential zone that is less than 19,000 square feet and

that is enrolled in the Living Building Pilot Program. Since the Living Building Pilot Program has only five more available opportunities, the number of affected properties would not exceed five.

- c. **Please describe any perceived implication for the principles of the Race and Social Justice Initiative.**
- i. **How does this legislation impact vulnerable or historically disadvantaged communities? How did you arrive at this conclusion? In your response please consider impacts within City government (employees, internal programs) as well as in the broader community.** The proposed amendment was reviewed by SDCI staff and is not anticipated to impact vulnerable or disadvantaged communities.
 - ii. **Please attach any Racial Equity Toolkits or other racial equity analyses in the development and/or assessment of the legislation.** Not applicable for this ordinance.
 - iii. **What is the Language Access Plan for any communications to the public?** SDCI would provide translation or other services, if requested.
- d. **Climate Change Implications**
- i. **Emissions: How is this legislation likely to increase or decrease carbon emissions in a material way? Please attach any studies or other materials that were used to inform this response.** Since this legislation involves use of the Living Building Pilot Program, any new structures built under these provisions would have the likely effect of reducing carbon emissions over those built using conventional practices.
 - ii. **Resiliency: Will the action(s) proposed by this legislation increase or decrease Seattle’s resiliency (or ability to adapt) to climate change in a material way? If so, explain. If it is likely to decrease resiliency in a material way, describe what will or could be done to mitigate the effects.** Since this legislation involves the Living Building Pilot Program, it would help to increase Seattle’s resiliency to climate change. The Living Building Pilot Program requires buildings to be built on non-environmentally sensitive sites, use recycled materials, generate as much or more energy as they use through sustainable sources, capture as much rainwater as they use, treat wastewater on site, and meet a number of other standards.
- e. **If this legislation includes a new initiative or a major programmatic expansion: What are the specific long-term and measurable goal(s) of the program? How will this legislation help achieve the program’s desired goal(s)? What mechanisms will be used to measure progress towards meeting those goals?** While the legislation is not a new initiative, it serves to clarify that the existing Living Building Pilot Program may utilize bonuses in code, which will further help the Program to meet its goals.

5. CHECKLIST

- Is a public hearing required?** Yes, The City Council must hold a public hearing, to be scheduled before the Land Use Committee.
- Is publication of notice with *The Daily Journal of Commerce* and/or *The Seattle Times* required?** Yes. Publication of notice of the Council public hearing will be made in The Daily Journal of Commerce and in the City’s Land Use Information Bulletin (LUIB). Environmental review under the State Environmental Policy Act (SEPA) is also required for this legislation, and publication of notice of the environmental determination was made in The Daily Journal of Commerce and in the Land Use Information Bulletin in July 2024.
- If this legislation changes spending and/or revenues for a fund, have you reviewed the relevant fund policies and determined that this legislation complies?**
- Does this legislation create a non-utility CIP project that involves a shared financial commitment with a non-City partner agency or organization?**

6. ATTACHMENTS

Summary Attachments: None.

Director's Report and Recommendation LIVING BUILDING AMENDMENT

I. Introduction

The Seattle Department of Construction and Inspections (SDCI) proposes to amend the Land Use Code (Seattle Municipal Code (SMC), Title 23) to implement RCW 36.70A.070(2) regarding application of certain height bonuses available through the Living Building Pilot Program as it applies to Section 23.49.156.A of the Downtown Mixed Residential zone. The proposed legislation clarifies that projects using the Living Building Pilot Program height bonuses are allowed to exceed 145 feet in height regardless of lot size under SMC 23.49.156.A.

II. Background and Analysis

The Living Building Challenge is a green building rating system created by the International Living Future Institute (ILFI) to recognize buildings meeting the highest level of sustainability. The current version, 4.1 of the Living Building Challenge, requires buildings to meet 20 prerequisites within seven performance areas, or “Petals”: Place, Water, Energy, Health and Happiness, Materials, Equity, and Beauty. In general, these prerequisites require buildings to be built on non-environmentally sensitive sites, use recycled materials, generate as much or more energy as they use through sustainable sources, capture as much rainwater as they use, treat wastewater on site, and meet a number of standards for other elements.

Projects reviewed under the Living Building Pilot Program explore fundamentally different approaches to building design, construction, and operations. In order to meet the stringent performance standards of the Living Building Challenge, buildings generally rely upon innovative building design techniques and features including natural daylighting and ventilation, use of passive and active solar energy systems, rainwater capture and use, wastewater treatment and reuse, and ultra-efficient heating, ventilation and air conditioning (HVAC) systems. These systems can substantially increase design complexity and necessitate early integrated design processes to ensure that all systems are compatible and work in an efficient manner, and that each performance goal can be met.

The innovative systems used in the program may also necessitate alternative building massing, non-traditional exterior and roof top features, or other elements that were not envisioned when existing codes were adopted; existing codes were designed to provide minimum standards rather than the flexibility to consider radically different building strategies. To accommodate these innovative designs, and to provide incentives for such buildings, program applicants are eligible for additional height and/or floor area, as well as departures from the Land Use Code. All projects participating in the Living Building Pilot Program are subject to design review and are required to go before the Design Review Board.

The ordinance establishing the Living Building Pilot Program became effective in January 2010 and has been revised since. SMC 23.40.060.A establishes an end date of the Program, December

31,2030, or a maximum of 20 enrollments, whichever comes first. To date, 15 projects have enrolled with only five opportunities remaining.

A particular project, 3036043-LU was applied for, and was reviewed by the Design Review Board and approved by the Director of SDCI, which granted the Living Building Pilot program project additional height.

The Master Use Permit decision for 3036043-LU was appealed to the Seattle Hearing Examiner along with a request for code interpretation. The subject of the hearing was whether the lot was eligible for additional height under the Living Building Pilot Program because of a height limitation that constrains building height by a lot size restriction codified in SMC subsection 23.49.156.A. SDCI interprets SMC 23.49.156.A.1 in light of the Living Building Pilot Program code provisions including SMC 23.40.060 and SMC 23.49.008.F, and concluded that the subject development project could take advantage of height bonuses to 175 feet even though the lot size was less than 19,000 square feet.

The Hearing Examiner disagreed with SDCI's interpretation, stating that "The legislative body set the minimum lot size at 19,000 square feet for buildings over 145 feet." The purpose of the Living Building Pilot program is specifically to modify development standards, including height. The proposed amendment would make it clear that additional height should be allowed under the Living Building Pilot Program regardless of lot size in the DMR zone. Without this correction, the Examiner's determination would limit the intent of the Living Building Pilot Program and constrain the City's goal of providing more housing, especially family-sized housing in this downtown neighborhood characterized by dense housing development that is well served by transit and other urban amenities.

III. Recommendation

The Living Building Pilot Program is intended to promote the public interest by encouraging the development of innovative "living" buildings that can reduce environmental impacts, test new technologies, and serve as a model for development throughout the region and country. The proposed code amendment will clarify that projects utilizing the Living Building Pilot Program are eligible for bonuses that might not otherwise be allowed due to minimum lot size restrictions. The potential for development of additional living buildings will address growing environmental concerns and encourage new buildings in Seattle to meet the highest sustainable standards. To that end, the Director recommends approval of the proposed code amendment.

August 30, 2024

MEMORANDUM

To: Land Use Committee
From: Asha Venkataraman, Analyst
Subject: Council Bill 120833: Living Building Amendment

On September 4, 2024, the Land Use Committee will discuss [Council Bill \(CB\) 120833](#), legislation that would clarify the applicability of height bonus allowances for projects in the [Living Building Pilot Program \(LBPP\)](#). This memo will provide background, describe the legislation, and outline next steps.

Background

The [Living Building Challenge](#) is a rating system administered by the International Living Future Institute (ILFI) to recognize buildings that are constructed and designed to minimize carbon emissions and meet high levels of sustainability. To encourage projects to participate in the Living Building Challenge, the City adopted the LBPP, effective in 2010, in [SMC 23.40.060](#), which provides a variety of land use incentives for buildings that meet program standards. The LBPP is set to expire on December 31, 2030, or when a maximum of 20 projects have enrolled, whichever comes first. The Seattle Department of Construction and Inspections (SDCI) indicates that 15 projects have enrolled thus far, leaving room for five more projects to enroll.

A specific project (3036043-LU) located in the Downtown Urban Center in Belltown proposed to build 182 housing units in a Downtown Mixed Residential zone. Under [SMC 23.49.156.A.1](#), any structure in that zone over 145 feet high must have a minimum lot size of 19,000 square feet. SDCI issued a Master Use permit for the project that allowed the project to exceed the 145-foot height limitation even though the lot was smaller than 19,000 square feet; SDCI interpreted the code to allow such an allowance because of the project's participation in the LBPP. The Master Use permit and SDCI's interpretation of the code to allow height up to 175 feet was appealed, and the Hearing Examiner's decision limited the building's height to 145 feet.

SDCI issued a [Determination of Non-Significance](#) (DNS) under the State Environmental Protection Act (SEPA) for CB 120833 on July 8, 2024. An appeal of the DNS has been filed with the Hearing Examiner and is currently pending.

CB 120833

This legislation is intended to address the result of the Hearing Examiner's decision. CB 120833 would amend the Land Use Code to explicitly authorize building heights exceeding 145 feet in the Downtown Mixed Residential zones on lots smaller than 19,000 square feet for projects that are part of the LBPP.

Next Steps

The Land Use Committee will hold a public hearing on CB 120833 on September 18, 2024.

Living Building Pilot Program Legislation

Photo by John Skelton

 Seattle Department of
Construction & Inspections

Land Use Committee
September 4, 2024

Today's Briefing

- Living Building Pilot Program Background
- Proposal
- Questions

Living Building Challenge - Background

- Is a green building rating system created by the International Living Future Institute
- Recognizes buildings meeting the highest level of sustainability
- Buildings use innovative building design techniques and features

Background – cont'd

- Green features include: natural daylighting and ventilation, passive and active solar energy systems, rainwater capture and use, wastewater treatment and reuse, and ultra-efficient heating, ventilation and air conditioning (HVAC) systems.
- To accommodate these innovative designs, and to give incentive for such buildings, applicants are eligible for additional

Proposal

- Amend the code to clarify that Living Building projects are eligible for bonuses that might not otherwise be allowed due to minimum lot size restrictions in the Downtown Mixed Residential (DMR) zone in the Belltown Neighborhood.
- The amendment addresses a DMR zoning limit that constrains building height by lot size (SMC subsection 23.49.156.A).
- The amendment would clarify that a development proposal in this zone could use bonuses to achieve 175 feet in height on a lot that is less than 19,000 square feet in area.

Proposal Objective

The proposal would allow a green building that also contains family-sized housing units in one of the densest neighborhoods in the city and region where high-rise housing development is already allowed.

Legislation Text

File #: CB 120822, **Version:** 1

CITY OF SEATTLE

ORDINANCE _____

COUNCIL BILL _____

AN ORDINANCE relating to land use regulations; removing restrictions on congregate residences; and amending Sections 23.42.049, 23.45.504, 23.45.508, 23.47A.004, 23.54.015, and 23.84A.032 of the Seattle Municipal Code.

WHEREAS, during the 2024 Washington State legislative session the Legislature passed and Governor Inslee signed Engrossed Substitute House Bill 1998 pertaining to co-living housing; and

WHEREAS, Engrossed Substitute House Bill 1998 requires cities to allow co-living housing as a permitted use on any lot within an urban growth area that allows at least six multifamily residential units including in mixed use development, and stipulates that cities may not place certain other limiting development standards on co-housing development; and

WHEREAS, The City of Seattle’s Land Use Code regulates co-living housing under the terminology “congregate residence,” and Engrossed Substitute House Bill 1998 provides that local governments may use other terms to refer to co-living housing; and

WHEREAS, co-living housing/congregate residences provide a valuable housing option for many people because they can provide a relatively low-cost option that provides a private living space, often in combination with other shared community spaces that can facilitate social connections; and

WHEREAS, this proposed legislation satisfies the requirements of Engrossed Substitute House Bill 1998 by expanding the zones where congregate residences are a permitted use and by removing other constraining development standards from the Land Use Code that were specific to the congregate residence housing type; NOW, THEREFORE,

BE IT ORDAINED BY THE CITY OF SEATTLE AS FOLLOWS:

Section 1. Section 23.42.049 of the Seattle Municipal Code, last amended by Ordinance 126626, is amended as follows:

23.42.049 Congregate residences

Congregate residences are subject to the development standards for the zone in which they are located, and to the development standards for apartments where such housing type standards are specified. ~~((, and to the following requirements:))~~ In any zone or instance in which a dwelling unit density limit applies to residential development, congregate residence sleeping rooms shall be treated as one-fourth of a dwelling unit for the purposes of calculating dwelling unit density.

~~((A. Common food preparation area. At least one complete common food preparation area is required within the congregate residence, and all residents shall have access to either a common complete food preparation area or a food preparation area within a sleeping room.~~

~~B. Food preparation areas in sleeping rooms. Within a congregate residence not more than 25 percent of sleeping rooms shall have complete food preparation areas, where a complete food preparation area is identified by the presence of a plumbed sink, a stove or range, a refrigerator, and a counter top. The Director has discretion to increase the percentage up to 100 percent of sleeping rooms if the congregate residence is owned by a college or university, is affiliated with an educational major institution that is part of the Washington State Community and Technical Colleges system, is a sorority or fraternity, or is owned by a not-for-profit entity or charity, or is a congregate residence that is licensed by the State and provides on-site supportive services for seniors or persons with disabilities. Supportive services include meal service, cleaning service, health services, or similar services.~~

~~C. Communal area. Communal areas such as common kitchens, lounges, recreation rooms, dining rooms, living rooms, foyers and lobbies, that are accessible to all residents of the congregate residence with sufficient accommodations for socializing and meeting shall be provided, and shall meet the following~~

standards:

1. The total amount of communal area shall have a floor area that is at least 15 percent of the total floor area of all sleeping rooms. In calculating the total floor area of sleeping rooms, the abutting ancillary areas associated with sleeping rooms shall be included, such as: sleeping lofts, counters, closets, built-ins, and private bathrooms;

2. Service areas, including, but not limited to hallways and corridors, supply or janitorial storage areas, operations and maintenance areas, staff areas and offices, and required bicycle parking areas may not be counted toward the communal area requirement;

3. Communal areas are required in addition to any residential amenity area that is required in the zone.))

Section 2. Section 23.45.504 of the Seattle Municipal Code, last amended by Ordinance 126626, is amended as follows:

23.45.504 Permitted and prohibited uses

A. All uses are permitted outright, prohibited, or permitted as a conditional use according to Table A for 23.45.504 and this Section 23.45.504. Uses not referred to in Table A for 23.45.504 are prohibited, unless otherwise indicated in this Chapter 23.45 or Chapters 23.51A, 23.51B, or 23.57. Communication utilities and accessory communication devices, except as exempted in Section 23.57.002, are subject to the regulations in this Chapter 23.45 and additional regulations in Chapter 23.57. Public facilities are subject to the regulations in Section 23.51A.004.

B. All permitted uses are allowed as a principal use or as an accessory use, unless otherwise indicated in this Chapter 23.45.

Section 3. Section 23.45.508 of the Seattle Municipal Code, last amended by Ordinance 126682, is amended as follows:

23.45.508 General provisions

A. Except for structures related to an urban farm, a structure occupied by a permitted use other than a residential use may be partially or wholly converted to a residential use even if the structure does not conform to the development standards for residential uses in multifamily zones.

B. Off-street parking shall be provided pursuant to Section 23.54.015, and as permitted by provisions of Sections 23.45.504 and 23.45.506, if applicable.

C. Expansions of nonconforming converted structures and conversions of structures occupied by nonconforming uses are regulated by Sections 23.42.108 and 23.42.110.

D. Methods for measurements are provided in Chapter 23.86. Requirements for streets, alleys, and easements are provided in Chapter 23.53. Standards for parking and access and design are provided in Chapter

23.54. Standards for solid waste and recyclable materials storage space are provided in Section 23.54.040.

Standards for signs are provided in Chapter 23.55.

E. Assisted living facilities, congregate residences, nursing homes, and structures containing ground floor commercial uses as allowed by Chapter 23.46 in RC zones shall meet the development standards for apartments unless otherwise specified. ~~((Congregate residences are subject to additional requirements as specified in Section 23.42.049.))~~

* * *

Section 4. Section 23.47A.004 of the Seattle Municipal Code, last amended by Ordinance 126626, is amended as follows:

23.47A.004 Permitted and prohibited uses

A. All uses are permitted outright, prohibited, or permitted as a conditional use according to Table A for 23.47A.004 and this Section 23.47A.004, except as may be otherwise provided pursuant to Subtitle III, Division 3, Overlay Districts, of this Title 23.

B. All permitted uses are allowed as a principal use or as an accessory use, unless otherwise indicated in Table A for 23.47A.004.

C. The Director may authorize a use not otherwise permitted in the zone in a ~~((landmark))~~ Landmark structure, subject to the following criteria:

1. The use will not require significant alteration of the structure;

2. The design of the structure makes uses permitted in the zone impractical in the structure, or the permitted uses do not provide sufficient financial return to make use of the ~~((landmark))~~ Landmark structure feasible; and

3. The physical impacts of the use will not be detrimental to other properties in the zone or vicinity or to the public interest.

D. Public facilities

1. Uses in public facilities that are most similar to uses permitted outright or permitted as a conditional use under this Chapter 23.47A are permitted outright or as a conditional use, respectively, subject to the same use regulations, development standards, and conditional use criteria that govern the similar uses.

2. Permitted uses in public facilities requiring council approval. Unless specifically prohibited in Table A for 23.47A.004, uses in public facilities that are not similar to uses permitted outright or permitted as a conditional use under this Chapter 23.47A, may be permitted by the City Council.

3. In all NC zones and C zones, uses in public facilities not meeting development standards may be permitted by the Council, and the Council may waive or grant departures from development standards, if the following criteria are satisfied:

a. The project provides unique services that are not provided to the community by the private sector, such as police and fire stations;

b. The proposed location is required to meet specific public service delivery needs;

c. The waiver of or departure from the development standards is necessary to meet specific public service delivery needs; and

d. The relationship of the project to the surrounding area has been considered in the design, siting, landscaping, and screening of the facility.

4. The City Council's use approvals, and waivers of or grants of departures from applicable development standards or conditional use criteria, contemplated by subsections 23.47A.004.D.2 and 23.47A.004.D.3, are governed by the provisions of Chapter 23.76, Subchapter III, Council Land Use Decisions.

5. Expansion of uses in public facilities

a. Major expansion. Major expansion of uses in public facilities allowed pursuant to subsections 23.47A.004.D.1, 23.47A.004.D.2, and 23.47A.004.D.3 may be permitted according to the criteria and process in those subsections 23.47A.004.D.1, 23.47A.004.D.2, and 23.47A.004.D.3. A major expansion of a public facility use occurs when an expansion would not meet development standards or the area of the

expansion would exceed either 750 square feet or 10 percent of the existing area of the use, whichever is greater. For the purposes of this subsection (~~(23.47A.004)~~) 23.47A.004.D, area of use includes gross floor area and outdoor area devoted actively to that use, other than as parking.

b. Minor expansion. An expansion of a use in a public facility that is not a major expansion is a minor expansion. Minor expansions to uses in public facilities allowed pursuant to subsections 23.47A.004.D.1, 23.47A.004.D.2, and 23.47A.004.D.3 above may be permitted according to the provisions of Chapter 23.76, for a Type I Master Use Permit.

6. Essential public facilities. Permitted essential public facilities will be reviewed according to the provisions of Chapter 23.80, Essential Public Facilities.

7. Youth service centers existing as of January 1, 2013, in public facilities operated by King County within Urban Center Villages and replacements, additions, or expansions to such King County public facilities are permitted in NC3 zones.

E. Changes from accessory to flexible-use parking may occur, subject to Section 23.54.026.

F. Public use of accessory parking is subject to Section 23.54.027.

G. Live-work units

1. In all NC zones and C zones live-work units are permitted outright subject to the provisions of this Title 23.

2. In pedestrian-designated zones, live-work units shall not occupy more than 20 percent of the street-level street-facing facade along designated principal pedestrian streets listed in subsection 23.47A.005.D.

3. In the Lake City and Bitter Lake Village Hub Urban Villages, live-work units shall not occupy more than 20 percent of the street-level street-facing facade.

4. Except where expressly treated as a residential use, live-work units shall be deemed a nonresidential use.

H. Adult cabarets

1. Any lot line of property containing any proposed new or expanding adult cabaret must be 800 feet or more from any lot line of property on which any of the following uses has been established by permit or otherwise recognized as a legally established use: community center; child care center; school, elementary or secondary; or public parks and open space use.

2. Any lot line of property containing any proposed new or expanding adult cabaret must be 600 feet or more from any lot line of property for which a permit has been issued for any other adult cabaret.

3. The dispersion analysis required by subsections 23.47A.004.H.1 and 23.47A.004.H.2 shall be based on the facts that exist on the earlier of:

a. ~~((the))~~ The date a complete application for a building permit for an adult cabaret for the property proposed to contain the new or expanding adult cabaret is made, or

b. ~~((the))~~ The date of publication of notice of the Director’s decision on the Master Use Permit application to establish or expand an adult cabaret use, if the decision can be appealed to the Hearing Examiner, or the date of the Director’s decision if no Hearing Examiner appeal is available.

I. The terms of Table A for 23.47A.004 are subject to any applicable exceptions or contrary provisions expressly provided for in this Title 23.

pursuant to
subsection
23.47A.032.B.
2. ((20)) 18

Permitted as
surface parking
only on surface
parking lots
existing as of
January 1,
2017. In
pedestrian-
designated
zones, surface
parking is
prohibited
adjacent to
principal
pedestrian
streets
pursuant to
subsection
23.47A.032.B.
((21)) 19

Permitted outright, except prohibited in the SAOD. ⁽⁽²²⁾⁾ See Chapter 23.57, Communications regulations, for regulation of communication utilities. ⁽⁽²³⁾⁾ ²¹ A recycling use that is located on the same development site as a solid waste transfer station may be permitted by administrative conditional use, subject to the requirements of subsection 23.47A.006.A.7.

Section 5. Section 23.54.015 of the Seattle Municipal Code, last amended by Ordinance 126862, is amended as follows:

23.54.015 Required parking and maximum parking limits

* * *

Table B for 23.54.015 Required parking for residential uses		
Use	Minimum parking required	
I. General residential uses		
A.	Adult family homes	1 space for each dwelling unit
B.	Artist’s studio/dwellings	1 space for each dwelling unit
C.	Assisted living facilities	1 space for each 4 assisted living; 1 space for each 2 staff member peak staffing time; plus 1 barrier passenger loading and unloading
D.	Caretaker’s quarters	1 space for each dwelling unit
E.	Congregate residences	1 space for each 4 sleeping room
F.	Cottage housing developments	1 space for each dwelling unit
G.	Floating homes	1 space for each dwelling unit
H.	Mobile home parks	1 space for each mobile home lot in Chapter 22.904
I.	Multifamily residential uses, except otherwise provided in this Table 23.54.015 ¹ , ⁽⁴⁾ ²	1 space per dwelling unit, or 1 space each 2 small efficiency dwelling
J.	Nursing homes	1 space for each 2 staff doctors; additional space for each 3 employees; 1 space for each 6 beds
K.	Single-family dwelling units ⁽²⁾	1 space for each dwelling unit
II. Residential use requirements for specific areas		
L.	All residential uses within urban center within the Station Area Overlay District ⁽¹⁾ ²	No minimum requirement
M.	All residential uses in commercial and multifamily zones within urban center that are not within urban center Station Area Overlay District, if residential use is located within transit service area ^(1,3) ^{2,4}	No minimum requirement

N.	Multifamily residential uses with University of Washington parking area shown on Map A for 23.54	1 space per dwelling unit for dwelling units with fewer than 2 bedrooms; plus 0.25 spaces per dwelling unit for dwelling units with 2 bedrooms; plus 0.25 spaces per dwelling unit for dwelling units with 3 or more bedrooms
O.	Multifamily dwelling units, with area shown on Map B for 23.54	1.5 spaces for each dwelling unit
P.	Congregate residences located within a half mile walking distance of a transit stop	No minimum requirement

Footnotes to Table B
for 23.54.015 ¹For
each moderate-
income unit and
each low-income
unit, no minimum
amount of parking is
required. ((¹)) ²The
minimum amount of
parking prescribed
by Part I of Table B
for 23.54.015 does
not apply if a use,
structure, or
development
qualifies for a
greater or a lesser
amount of minimum
parking, including
no parking, under
any other provision
of this Section
23.54.015. If more
than one provision in
this Table B for
23.54.015 is
applicable, the
provision requiring
the least amount of
minimum parking
applies, except that
if item O in Part II of
Table B for
23.54.015 applies, it
shall supersede any
other requirement in
Part I or Part II of
this Table B for
23.54.015. ((²)) ³No
parking is required
for single-family
residential uses on

residential uses on lots in any residential zone that are less than 3,000 square feet in size or less than 30 feet in width where access to parking is permitted through a required yard or setback abutting a street according to the standards of subsections 23.44.016.B.2, 23.45.536.C.2, or 23.45.536.C.3. ((³))⁴ Except as provided in Footnote 4, the minimum amounts of parking prescribed by Part 1 of Table B for 23.54.015 apply within 1,320 feet of the Fauntleroy Ferry Terminal. ((⁴ For each moderate-income unit and each low-income unit, no minimum amount of parking is required.))

* * *

Table D for 23.54.015 Parking for bicycles ((1)) ¹		
Use	Bike parking requirements	
	Long-term	Short-term

A. COMMERCIAL USES				
A.1.	Eating and drinking establishments	1 per 5,000 square	1 per 1,000 square	
A.2.	Entertainment uses other than theaters and spectator sports facilities	1 per 10,000 square	Equivalent to 5 per of maximum building capacity rating	
	A.2.a.	Theaters and spectator sports facilities	1 per 10,000 square	Equivalent to 8 per maximum building rating ²
A.3.	Lodging uses	3 per 40 rentable room	1 per 20 rentable room plus 1 per 4,000 square feet of conference and meeting rooms	
A.4.	Medical services	1 per 4,000 square	1 per 2,000 square	
A.5.	Offices and laboratories, research and development	1 per 2,000 square	1 per 10,000 square	
A.6.	Sales and services, general	1 per 4,000 square	1 per 2,000 square	
A.7.	Sales and services, heavy	1 per 4,000 square	1 per 10,000 square of occupied floor area spaces minimum	
B. INSTITUTIONS				
B.1.	Institutions not listed below	1 per 4,000 square	1 per 10,000 square	
B.2.	Child care centers	1 per 4,000 square	1 per 20 children. 2 spaces minimum	
B.3.	Colleges	1 per 5,000 square	1 per 2,500 square	
B.4.	Community clubs or centers	1 per 4,000 square	1 per 1,000 square	
B.5.	Hospitals	1 per 4,000 square	1 per 10,000 square	
B.6.	Libraries	1 per 4,000 square	1 per 2,000 square	
B.7.	Museums	1 per 4,000 square	1 per 2,000 square	

B.8.	Religious facilities	1 per 4,000 square	1 per 2,000 square
B.9.	Schools, primary and secondary	3 per classroom	1 per classroom
B.10.	Vocational or fine arts schools	1 per 5,000 square	1 per 2,500 square
C. MANUFACTURING USES		1 per 4,000 square feet	1 per 20,000 square
D. RESIDENTIAL USES ³			
D.1.	Congregate residences ⁴	1 per 4 sleeping rooms	1 per ((20)) 80 sleeping rooms. 2 spaces minimum
D.2.	Multifamily structures other than townhouse and rowhouse developments ^{4, 5}	1 per dwelling unit	1 per 20 dwelling units
D.3.	Single-family residences	None	None
D.4.	Townhouse and rowhouse developments ⁵	1 per dwelling unit	None
E. TRANSPORTATION FACILITIES			
E.1.	Park and ride facilities on surface parking lots	At least 20 ⁶	At least 10
E.2.	Park and ride facilities in parking garages	At least 20 if parking is the principal use of property; zero if no parking uses are the principal use of a property	At least 10 if parking is the principal use of property; zero if no parking uses are the principal use of a property

E.3.	Flexible-use parking garages and flexible-use parking surface lots	1 per 20 auto space	None
E.4.	Rail transit facilities and passenger terminals	Spaces for 5 percent projected AM peak period daily ridership	Spaces for 2 percent projected AM peak period daily ridership

Footnotes to Table D for 23.54.015 ¹ Required bicycle parking includes long-term and short-term amounts shown in this Table D for 23.54.015. ² The Director may reduce short-term bicycle parking requirements for theaters and spectator sport facilities that provide bicycle valet services authorized through a Transportation Management Program. A bicycle valet service is a service that allows bicycles to be temporarily stored in a secure area, such as a monitored bicycle corral. ³ For residential uses, after the first 50 spaces for bicycles are provided, additional spaces are required at three-quarters the ratio shown in this Table D for 23.54.015. ⁴ For congregate residences or multifamily structures that are owned and operated by a not-for-profit entity serving seniors or persons with disabilities, or that are licensed by the State and provide supportive services for seniors or persons with disabilities, as a Type I decision, the Director shall have the discretion to reduce the amount of required bicycle parking to as few as zero if it can be demonstrated that residents

demonstrated that residents are less likely to travel by bicycle. ⁵ In low-income housing, there is no minimum required long-term bicycle parking requirement for each unit subject to affordability limits no higher than 30 percent of median income and long-term bicycle parking requirements may be waived by the Director as a Type I decision for each unit subject to affordability limits greater than 30 percent of median income and no higher than 80 percent of median income if a reasonable alternative is provided (e.g., in-unit vertical bike storage). ⁶ The Director, in consultation with the Director of Transportation, may require more bicycle parking spaces based on the following factors: area topography; pattern and volume of expected bicycle users; nearby residential and employment density; proximity to the Urban Trails system and other existing and planned bicycle facilities; projected transit ridership and expected access to transit by bicycle; and other relevant transportation and land use information.

Section 6. Section 23.84A.032 of the Seattle Municipal Code, last amended by Ordinance 126855, is amended as follows:

23.84A.032 “R”

* * *

“Residential use” means any one or more of the following:

1. “Accessory dwelling unit” means one or more rooms that:
 - a. Are located within a principal dwelling unit or within an accessory structure on the same lot as a principal dwelling unit;
 - b. Meet the standards of Section 23.44.041, Section 23.45.545, or Chapter 23.47A, as applicable;
 - c. Are designed, arranged, and intended to be occupied by not more than one household as living accommodations independent from any other household; and
 - d. Are so occupied or vacant.
2. “Attached accessory dwelling unit” means an accessory dwelling unit that is within a principal dwelling unit.
3. “Adult family home” means an adult family home defined and licensed as such by the State of Washington in a dwelling unit.
4. “Apartment” means a multifamily residential use that is not a cottage housing development, rowhouse development, or townhouse development.
5. “Artist’s studio/dwelling” means a combination working studio and dwelling unit for artists, consisting of a room or suite of rooms occupied by not more than one household.
6. “Assisted living facility” means a use licensed by the State of Washington as a boarding home pursuant to chapter 18.20 RCW that contains at least two assisted living units for people who have either a need

for assistance with activities of daily living (which are defined as eating, toileting, ambulation, transfer (e.g., moving from bed to chair or chair to bath), and bathing) or some form of cognitive impairment but who do not need the skilled critical care provided by nursing homes. See “Assisted living unit.”

7. “Carriage house” means a dwelling unit in a carriage house structure.

8. “Carriage house structure” means a structure within a cottage housing development, in which one or more dwelling units are located on the story above an enclosed parking garage at ground level that either abuts an alley and has vehicle access from that alley, or is located on a corner lot and has access to the parking in the structure from a driveway that abuts and runs parallel to the rear lot line of the lot. See also “Carriage house.”

9. “Caretaker’s quarters” means a use accessory to a non-residential use consisting of a dwelling unit not exceeding 800 square feet of living area and occupied by a caretaker or watchperson.

10. “Congregate residence” means a use in which (~~rooms or lodging, with or without meals, are provided for any number of non-transient persons not constituting a single household~~) sleeping rooms are independently rented and lockable and provide living and sleeping space, and residents share kitchen facilities and other common elements with other residents in a building.

11. “Cottage housing development” means a use consisting of cottages arranged on at least two sides of a common open space or a common amenity area. A cottage housing development may include a carriage house structure. See “Cottage,” “Carriage house,” and “Carriage house structure.”

12. “Detached accessory dwelling unit” means an accessory dwelling unit in an accessory structure.

13. “Domestic violence shelter” means a structure or portion of a structure managed by a nonprofit organization, which unit provides housing at a confidential location and support services for victims of domestic violence.

14. “Floating home” means a dwelling unit constructed on a float that is moored, anchored, or

otherwise secured in the water.

15. “Low-income housing.”

16. “Mobile home” means a structure that is designed and constructed to be transportable in one or more sections and built on a permanent chassis, designed to be used as a dwelling unit without a permanent foundation, and connected to utilities that include plumbing, heating, and electrical systems. A structure that was transportable at the time of manufacture is still considered to meet this definition notwithstanding that it is no longer transportable.

17. “Mobile home park” means a tract of land that is rented for the use of more than one mobile home occupied as a dwelling unit.

18. “Multifamily residential use” means a use consisting of two or more dwelling units in a structure or portion of a structure, excluding accessory dwelling units, or a congregate residence.

19. “Nursing home” means a use licensed by the State of Washington as a nursing home, which provides full-time convalescent and/or chronic care for individuals who, by reason of chronic illness or infirmity, are unable to care for themselves, but that does not provide care for the acutely ill or surgical or obstetrical services. This definition excludes hospitals or sanitariums.

20. “Permanent supportive housing.”

21. “Rowhouse development” means a multifamily residential use in which all principal dwelling units on the lot meet the following conditions:

a. Each dwelling unit occupies the space from the ground to the roof of the structure in which it is located;

b. No portion of a dwelling unit, except for an accessory dwelling unit or shared parking garage, occupies space above or below another dwelling unit;

c. Each dwelling unit is attached along at least one common wall to at least one other dwelling unit, with habitable interior space on both sides of the common wall, or abuts another dwelling unit on

a common lot line;

d. The front of each dwelling unit faces a street lot line;

e. Each dwelling unit provides pedestrian access directly to the street that it faces; and

f. No portion of any other dwelling unit, except for an attached accessory dwelling unit,

is located between any dwelling unit and the street faced by the front of that unit.

22. “Single-family dwelling unit” means a detached principal structure having a permanent foundation, containing one dwelling unit, except that the structure may also contain one or two attached accessory dwelling units where expressly authorized pursuant to this Title 23. A detached accessory dwelling unit is not considered a single-family dwelling unit for purposes of this Chapter 23.84A.

23. “Townhouse development” means a multifamily residential use that is not a rowhouse development, and in which:

a. Each dwelling unit occupies space from the ground to the roof of the structure in which it is located;

b. No portion of a dwelling unit occupies space above or below another dwelling unit, except for an attached accessory dwelling unit and except for dwelling units constructed over a shared parking garage, including shared parking garages that project up to 4 feet above grade; and

c. Each dwelling unit is attached along at least one common wall to at least one other dwelling unit, with habitable interior space on both sides of the common wall, or abuts another dwelling unit on a common lot line.

Scheereen Dedman, City Clerk

(Seal)

SUMMARY and FISCAL NOTE

Department:	Dept. Contact:	CBO Contact:
OPCD	Geoff Wentlandt	Christie Parker

1. BILL SUMMARY

Legislation Title:

AN ORDINANCE relating to land use regulations; removing restrictions on congregate residences; and amending Sections 23.42.049, 23.45.504, 23.45.508, 23.47A.004, 23.54.015, and 23.84A.032 of the Seattle Municipal Code.

Summary and Background of the Legislation:

The legislation edits the text of the Land Use Code (Seattle Municipal Code Title 23) to implement changes to co-living housing as required by Washington State Engrossed Substitute House Bill (ESHB) 1998 from the 2024 legislative session. ESHB 1998 requires that development regulations be updated to take effect no later than December 31, 2025.

Seattle’s land use code regulates co-living housing under the “congregate residence” land use category. This legislation makes several changes to the land use code that remove restrictions or limitations on congregate residences. These changes include:

- Amending the land use code’s allowable use tables to make congregate residences an allowed use on any lot that permits at least six multifamily residential units.
- Removing minimum development standards for congregate residence building configuration, including standards for communal areas and food preparation areas.
- Modifying the parking allowances table to exempt co-living housing/congregate residences from providing off-street parking within one half mile of a major transit stop.
- Reducing the long-term and short-term bicycle parking requirement.
- Updating the definition of “congregate residence” to align with state legislation.

The overarching intent of the changes is to ensure that co-housing/congregate residences are not regulated with stricter limitations than other types of multi-family housing.

2. CAPITAL IMPROVEMENT PROGRAM

Does this legislation create, fund, or amend a CIP Project? Yes No

3. SUMMARY OF FINANCIAL IMPLICATIONS

Does this legislation have financial impacts to the City? Yes No

3.d. Other Impacts

Does the legislation have other financial impacts to The City of Seattle, including direct or indirect, one-time or ongoing costs, that are not included in Sections 3.a through 3.c? If so, please describe these financial impacts.

No meaningful financial impacts have been identified.

If the legislation has costs, but they can be absorbed within existing operations, please describe how those costs can be absorbed. The description should clearly describe if the absorbed costs are achievable because the department had excess resources within their existing budget or if by absorbing these costs the department is deprioritizing other work that would have used these resources.

This legislation affects SDCI as the staff will need to be made aware of the code amendment for the purposes of permit review. However, this will not create a meaningful fiscal impact on SDCI. This legislation will not increase the amount of permit review by SDCI staff. It may in fact decrease the amount of permit review time required because it removes some complex development standards concerning the interior configuration of congregate residence developments. No changes to zoning maps or changes to the permit tracking software are required. This legislation does not change how Mandatory Housing Affordability (MHA) requirements apply to congregate residences and will not reduce the amount of MHA proceeds to the city.

Please describe any financial costs or other impacts of *not* implementing the legislation.

Cities are required by the State to make these changes. If the City does not proactively implement the proposed code changes, it could result in time consuming and confusing permitting issues or potential litigation by development applicants who could argue that the City's land use code is not compliant with State law.

4. OTHER IMPLICATIONS

a. Please describe how this legislation may affect any departments besides the originating department.

This legislation affects SDCI as the staff will need to be made aware of the code amendment for the purposes of permit review. However, this will not create a meaningful fiscal impact on SDCI. No changes to zoning maps or changes to the permit tracking software are required.

b. Does this legislation affect a piece of property? If yes, please attach a map and explain any impacts on the property. Please attach any Environmental Impact Statements, Determinations of Non-Significance, or other reports generated for this property.

No, it does not affect a specific piece of property. This legislation applies to any proposed development for congregate residence in various zones across the city.

c. Please describe any perceived implication for the principles of the Race and Social Justice Initiative.

- i. How does this legislation impact vulnerable or historically disadvantaged communities? How did you arrive at this conclusion? In your response please consider impacts within City government (employees, internal programs) as well as in the broader community.**

This legislation does not impact vulnerable or historically disadvantaged communities.

- ii. Please attach any Racial Equity Toolkits or other racial equity analyses in the development and/or assessment of the legislation.**

None.

- iii. What is the Language Access Plan for any communications to the public?**

None.

d. Climate Change Implications

- i. Emissions: How is this legislation likely to increase or decrease carbon emissions in a material way? Please attach any studies or other materials that were used to inform this response.**

No. This proposal does not alter the City's energy code for buildings. Emissions and energy performance of the building would be considered as part of a building permit review just as it would in the absence of the legislation.

- ii. Resiliency: Will the action(s) proposed by this legislation increase or decrease Seattle's resiliency (or ability to adapt) to climate change in a material way? If so, explain. If it is likely to decrease resiliency in a material way, describe what will or could be done to mitigate the effects.**

This legislation is not expected to increase or decrease the city's resiliency in a material way.

- e. If this legislation includes a new initiative or a major programmatic expansion: What are the specific long-term and measurable goal(s) of the program? How will this legislation help achieve the program's desired goal(s)? What mechanisms will be used to measure progress towards meeting those goals?**

No.

5. CHECKLIST

- Is a public hearing required?**

Yes. A City Council public hearing must be conducted before legislation can be adopted.

- Is publication of notice with *The Daily Journal of Commerce* and/or *The Seattle Times* required?**
Yes. OPCD published a SEPA determination of non-significance (DNS) on May 16, 2024, in the DJC and the City’s Land Use Information Bulletin.
- If this legislation changes spending and/or revenues for a fund, have you reviewed the relevant fund policies and determined that this legislation complies?**
- Does this legislation create a non-utility CIP project that involves a shared financial commitment with a non-City partner agency or organization?**

6. ATTACHMENTS

Summary Attachments:

Summary Attachment 1 – SEPA Environmental Checklist

Summary Attachment 2 – City of Seattle Analysis and Decision of the Director of the Office of Planning and Community Development: SEPA Threshold Determination, Co-Living Housing/Congregate Residence Allowances Legislation

SEPA ENVIRONMENTAL CHECKLIST

Purpose of checklist

Governmental agencies use this checklist to help determine whether the environmental impacts of your proposal are significant. This information is also helpful to determine if available avoidance, minimization, or compensatory mitigation measures will address the probable significant impacts or if an environmental impact statement will be prepared to further analyze the proposal.

Instructions for applicants

This environmental checklist asks you to describe some basic information about your proposal. Please answer each question accurately and carefully, to the best of your knowledge. You may need to consult with an agency specialist or private consultant for some questions. **You may use “not applicable” or “does not apply” only when you can explain why it does not apply and not when the answer is unknown.** You may also attach or incorporate by reference additional studies reports. Complete and accurate answers to these questions often avoid delays with the SEPA process as well as later in the decision-making process.

The checklist questions apply to **all parts of your proposal**, even if you plan to do them over a period of time or on different parcels of land. Attach any additional information that will help describe your proposal or its environmental effects. The agency to which you submit this checklist may ask you to explain your answers or provide additional information reasonably related to determining if there may be significant adverse impact.

Instructions for lead agencies

Please adjust the format of this template as needed. Additional information may be necessary to evaluate the existing environment, all interrelated aspects of the proposal and an analysis of adverse impacts. The checklist is considered the first but not necessarily the only source of information needed to make an adequate threshold determination. Once a threshold determination is made, the lead agency is responsible for the completeness and accuracy of the checklist and other supporting documents.

Use of checklist for nonproject proposals

For nonproject proposals (such as ordinances, regulations, plans and programs), complete the applicable parts of sections A and B, plus the [Supplemental Sheet for Nonproject Actions \(Part D\)](#). Please completely answer all questions that apply and note that the words "project," "applicant," and "property or site" should be read as "proposal," "proponent," and "affected geographic area," respectively. The lead agency may exclude (for non-projects) questions in “Part B: Environmental Elements” that do not contribute meaningfully to the analysis of the proposal.

A. Background [Find help answering background questions](#)

1. Name of proposed project, if applicable:

Co-Living Housing / Congregate Residences Allowances Legislation

2. Name of applicant:

City of Seattle Office of Planning & Community Development

3. Address and phone number of applicant and contact person:

City of Seattle, Office of Planning and Community Development

600 Fourth Avenue

P.O. Box 94788

Seattle, Washington 98124-7088

Contact: Geoff Wentlandt, Geoffrey.Wentlandt@seattle.gov

4. Date checklist prepared:

May 2024

5. Agency requesting checklist:

City of Seattle Office of Planning and Community Development

6. Proposed timing or schedule (including phasing, if applicable):

It is expected that the proposed legislation will be discussed and possibly voted on by the City Council in the fall of 2024 or early 2025.

7. Do you have any plans for future additions, expansion, or further activity related to or connected with this proposal? If yes, explain.

Additional legislative reforms concerning how congregate residences are permitted or regulated in Neighborhood Residential zones may be enacted following adoption of the One Seattle Comprehensive Plan major update.

8. List any environmental information you know about that has been prepared, or will be prepared, directly related to this proposal.

This SEPA environmental checklist has been prepared for this proposal. A brief Director's Report is also prepared for the proposed legislation.

9. Do you know whether applications are pending for governmental approvals of other proposals directly affecting the property covered by your proposal? If yes, explain.

Applications prior to the adoption of this legislation will follow the existing development standards concerning congregate residences. Some site-specific development proposals currently in the permitting process for congregate residences could be pending and could be affected by this proposal.

10. List any government approvals or permits that will be needed for your proposal, if known.

The proposal requires approval by the City Council. No other agency approvals are anticipated.

11. Give a brief, complete description of your proposal, including the proposed uses and the size of the project and site. There are several questions later in this checklist that ask you to describe certain aspects of your proposal. You do not need to repeat those answers on this page. (Lead agencies may modify this form to include additional specific information on project description.)

The Office of Planning and Community Development proposes to edit text of the Land Use Code (Seattle Municipal Code Title 23) to implement Washington State House Bill 1998 from the 2024 legislative session regarding co-living housing. Seattle's land use code regulates co-living housing under the "congregate residence" land use category. The proposed legislation makes the following changes removing restrictions or limitations on congregate residences:

- Amends the allowable uses tables to make congregate residence an allowed use on any lot that allows for at least six multifamily residential units including in all of the city's Lowrise (LR), Midrise (MR), and Highrise (HR) multifamily zones and all Commercial (C) and Neighborhood Commercial (NC) zones. In some of these zones congregate residences are not currently allowed or are only allowed if owned by a college or university or not for profit entity or charity.
- Removes all minimum development standards for configuration and features of living spaces in congregate residences including standards for common food preparation areas, food preparation in sleeping rooms, and communal areas.
- Removes parking requirements for congregate residences in all frequent transit served areas.
- Updates the definition of congregate residence to better match language and terminology of State legislation.

12. Location of the proposal. Give sufficient information for a person to understand the precise location of your proposed project, including a street address, if any, and section, township, and range, if known. If a proposal would occur over a range of area, provide the range or boundaries of the site(s). Provide a legal description, site plan, vicinity map, and topographic map, if reasonably available. While you should submit any plans required by

the agency, you are not required to duplicate maps or detailed plans submitted with any permit applications related to this checklist.

This is a non-project action that would amend various sections of the Land Use Code. The proposal has effects in the city's Lowrise (LR), Midrise (MR), and Highrise (HR) multifamily zones and all Commercial (C) and Neighborhood Commercial (NC) zones.

B. Environmental Elements

1. Earth [Find help answering earth questions](#)

a. General description of the site:

Citywide, anywhere a congregate residence may be constructed. The proposal has specific effects in Lowrise (LR), Midrise (MR), and Highrise (HR) multifamily zones and all Commercial (C) and Neighborhood Commercial (NC) zones and frequent transit served areas.

Circle or highlight one: Flat, rolling, hilly, steep slopes, mountainous, other:

b. What is the steepest slope on the site (approximate percent slope)?

The areas affected by the proposal are city-wide and contain a diversity of slopes from flat areas to steep slopes.

c. What general types of soils are found on the site (for example, clay, sand, gravel, peat, muck)? If you know the classification of agricultural soils, specify them, and note any agricultural land of long-term commercial significance and whether the proposal results in removing any of these soils.

This is a non-project action that would affect areas citywide. The proposed legislation is not likely to result in a significant adverse increase in the removal of soils.

Are there surface indications or history of unstable soils in the immediate vicinity? If so, describe.

See c above.

d. Describe the purpose, type, total area, and approximate quantities and total affected area of any filling, excavation, and grading proposed. Indicate source of fill.

This is a non-project action. No filling, excavation, or grading is proposed. The proposed legislation is not likely to result in any significant filling, excavation, and grading.

e. Could erosion occur because of clearing, construction, or use? If so, generally describe.

This is a non-project action. No clearing nor construction is proposed. The proposed legislation is not likely to result in a significant erosion.

f. About what percent of the site will be covered with impervious surfaces after project construction (for example, asphalt or buildings)?

This is a non-project action. No change of impervious surfaces is proposed. The proposed legislation is not likely to result in a significant impervious surface changes.

g. Proposed measures to reduce or control erosion, or other impacts to the earth, if any.

None. Compliance with existing City ordinances to reduce or control erosion is required for development in Seattle.

2. Air [Find help answering air questions](#)

a. What types of emissions to the air would result from the proposal during construction, operation, and maintenance when the project is completed? If any, generally describe and give approximate quantities if known.

This is a non-project action. No emissions will occur as a direct result of this proposal. The proposed legislation is not likely to result in significant emissions changes.

b. Are there any off-site sources of emissions or odor that may affect your proposal? If so, generally describe.

The areas affected by this proposal are widespread city-wide and contain a variety of emissions and odors consistent with urbanized areas.

c. Proposed measures to reduce or control emissions or other impacts to air, if any.

None. Compliance with existing city ordinances to reduce or control emissions and other impacts to air is required for development in Seattle.

3. Water [Find help answering water questions](#)

a. Surface Water: [Find help answering surface water questions](#)

1. Is there any surface water body on or in the immediate vicinity of the site (including year-round and seasonal streams, saltwater, lakes, ponds, wetlands)? If yes, describe type and provide names. If appropriate, state what stream or river it flows into.

This is a non-project action that would affect sites widespread city-wide, including but not limited to areas near Puget Sound, Lake Washington, Lake Union, Green Lake, Bitter Lake, and Haller Lake.

2. Will the project require any work over, in, or adjacent to (within 200 feet) the described waters? If yes, please describe and attach available plans.

This is a non-project action, and no development is directly proposed.

- 3. Estimate the amount of fill and dredge material that would be placed in or removed from surface water or wetlands and indicate the area of the site that would be affected. Indicate the source of fill material.**

This is a non-project action. No filling or dredging in or from wetlands or surface water will result from the proposal.

- 4. Will the proposal require surface water withdrawals or diversions? Give a general description, purpose, and approximate quantities if known.**

This is a non-project action. No surface water withdrawals or diversions will result from this proposal.

- 5. Does the proposal lie within a 100-year floodplain? If so, note location on the site plan.**

This is a non-project action that would affect proposals for development of congregated residence uses. Seattle has multiple locations within a 100-year floodplain and some of the areas affected by this proposal are within a 100 year floodplain.

- 6. Does the proposal involve any discharges of waste materials to surface waters? If so, describe the type of waste and anticipated volume of discharge.**

This is a non-project action. No discharge of waste materials to surface waters will result from this proposal.

b. Ground Water: [Find help answering ground water questions](#)

- 1. Will groundwater be withdrawn from a well for drinking water or other purposes? If so, give a general description of the well, proposed uses and approximate quantities withdrawn from the well. Will water be discharged to groundwater? Give a general description, purpose, and approximate quantities if known.**

This is a non-project action. The affected area could include some land that contains wells. No withdrawal of groundwater will result from this proposal for drinking water or other purposes.

- 2. Describe waste material that will be discharged into the ground from septic tanks or other sources, if any (domestic sewage; industrial, containing the following chemicals...; agricultural; etc.). Describe the general size of the system, the number of such systems, the number of houses to be served (if applicable), or the number of animals or humans the system(s) are expected to serve.**

This is a non-project action. Seattle is served almost entirely by sanitary sewage systems.

c. Water Runoff (including stormwater):

- 1. Describe the source of runoff (including storm water) and method of collection and disposal, if any (include quantities, if known). Where will this water flow? Will this water flow into other waters? If so, describe.**

This is a non-project action. Seattle is served by stormwater systems that include combined, partially separated, and separated systems.

- 2. Could waste materials enter ground or surface waters? If so, generally describe.**

This is a non-project action. This proposal will not result in waste materials entering ground or surface water.

- 3. Does the proposal alter or otherwise affect drainage patterns in the vicinity of the site? If so, describe.**

This is a non-project action. This proposal will not affect drainage patterns.

- 4. Proposed measures to reduce or control surface, ground, and runoff water, and drainage pattern impacts, if any.**

None. Compliance with existing city ordinances to reduce or control stormwater and wastewater is required for development in Seattle.

4. Plants [Find help answering plants questions](#)

- a. Check the types of vegetation found on the site:**

- deciduous tree: alder, maple, aspen, other
- evergreen tree: fir, cedar, pine, other
- shrubs
- grass
- pasture
- crop or grain
- orchards, vineyards, or other permanent crops.
- wet soil plants: cattail, buttercup, bullrush, skunk cabbage, other
- water plants: water lily, eelgrass, milfoil, other
- other types of vegetation

This is non project action. The affected areas by the proposal are widespread city-wide, they may contain the marked types of vegetation consistent with urbanized areas.

- b. What kind and amount of vegetation will be removed or altered?**

This is a non-project action. This proposal will not result in the direct removal or alteration of vegetation. Changes in vegetation are not likely to result from the proposal as the legislation concerns allowances of congregate residences where similar development is already allowed.

c. List threatened and endangered species known to be on or near the site.

This is non project action. The areas affected by the proposal are widespread city-wide, and they may contain threatened or endangered plant species.

d. Proposed landscaping, use of native plants, or other measures to preserve or enhance vegetation on the site, if any.

None.

e. List all noxious weeds and invasive species known to be on or near the site.

This is non project action. The affected areas by the proposal are widespread city-wide. The affected areas may contain a diversity of invasive plants consistent with urbanized areas. These plants include but are not limited to common urban invasives such as ivy, blackberry, and bindweed.

5. Animals [Find help answering animal questions](#)

a. List any birds and other animals that have been observed on or near the site or are known to be on or near the site.

Examples include:

- **Birds:** hawk, heron, eagle, songbirds, other:
- **Mammals:** deer, bear, elk, beaver, other:
- **Fish:** bass, salmon, trout, herring, shellfish, other:

This is non project action. The affected areas by the proposal are widespread city-wide. The affected areas may contain a diversity of animals consistent with urbanized areas including a diversity of birds, and mammals. These animals include but are not limited to hawk, heron, eagle, and songbirds. Puget Sound waterways and creeks are near the affected area and are habitat for migrating salmon.

b. List any threatened and endangered species known to be on or near the site.

This is non project action. The affected areas by the proposal are widespread city-wide. The affected areas may contain a variety of threatened and endangered species including various birds that may be in or near the site.

c. Is the site part of a migration route? If so, explain.

This is non project action. The affected areas by the proposal are widespread city-wide. The affected areas may include migration routes for a variety of species including but not limited to various birds.

d. Proposed measures to preserve or enhance wildlife, if any.

None.

e. List any invasive animal species known to be on or near the site.

This is non project action. The affected areas by the proposal are widespread city-wide. The affected area may contain a diversity of invasive animal species consistent with urbanized areas.

6. Energy and Natural Resources [Find help answering energy and natural resource questions](#)

a. What kinds of energy (electric, natural gas, oil, wood stove, solar) will be used to meet the completed project's energy needs? Describe whether it will be used for heating, manufacturing, etc.

This is a non-project action. No use of energy is proposed. All kinds of energy could be used indirectly as a result of future development proposals for congregate residences. The proposal does not alter the potential scale of development because it concerns allowed uses but not the overall scale or size of development.

b. Would your project affect the potential use of solar energy by adjacent properties? If so, generally describe.

This is a non-project action. No use of solar energy is proposed. Solar energy could be used indirectly as a result of new conversion proposals. The proposal is unlikely to affect the potential solar energy of buildings adjacent to development because the proposal does not alter the potential scale of development. It proposes a change of allowable use.

c. What kinds of energy conservation features are included in the plans of this proposal? List other proposed measures to reduce or control energy impacts, if any.

This is a non-project action. No energy conservation features are proposed. All kinds of energy conservation features could be used indirectly as a result of new congregate residence development proposals. The proposal does not alter the potential scale of development, it concerns allowable uses.

7. Environmental Health [Find help with answering environmental health questions](#)

a. Are there any environmental health hazards, including exposure to toxic chemicals, risk of fire and explosion, spill, or hazardous waste, that could occur because of this proposal? If so, describe.

This is a non-project action. This proposal will not directly result in any of the environmental health hazards listed above as the legislation concerns allowable uses.

1. **Describe any known or possible contamination at the site from present or past uses.**
 - a. **Describe existing hazardous chemicals/conditions that might affect project development and design. This includes underground hazardous liquid and gas transmission pipelines located within the project area and in the vicinity.**

This is non project action. The areas affected by the proposal are widespread city-wide. The affected areas contain a diversity of conditions consistent with urbanized areas. These include natural gas transmission pipelines.

- b. **Describe any toxic or hazardous chemicals that might be stored, used, or produced during the project's development or construction, or at any time during the operating life of the project.**

This is non project action. The areas affected by the proposal are widespread city-wide. This proposal will not result in the storage, use, or production of toxic or hazardous chemicals as the legislation concerns allowable uses for congregate residences.

- c. **Describe special emergency services that might be required.**

This is a non-project action. This proposal will not directly result in an additional need for special emergency services. If additional congregate residences are constructed in the future there could be an incremental impact on the need for special emergency services. Potential impacts are discussed below in part D of this checklist.

- d. **Proposed measures to reduce or control environmental health hazards, if any.**

None.

b. Noise

1. **What types of noise exist in the area which may affect your project (for example: traffic, equipment, operation, other)?**

There are a wide variety of existing noises consistent with an urban environment in the citywide area affected by this proposal.

2. **What types and levels of noise would be created by or associated with the project on a short-term or a long-term basis (for example: traffic, construction, operation, other)? Indicate what hours noise would come from the site)?**

This is a non-project action. This proposal will not directly result in noise impacts. If additional congregate residences are constructed in the future as a result of this proposal there could be an incremental noise impact. Potential impacts are discussed further below in part D of this checklist.

3. Proposed measures to reduce or control noise impacts, if any.

None. Compliance with existing city ordinances for noise is required for development in Seattle.

8. Land and Shoreline Use [Find help answering land and shoreline use questions](#)

a. What is the current use of the site and adjacent properties? Will the proposal affect current land uses on nearby or adjacent properties? If so, describe.

This is non project action. The areas affected are widespread city-wide. The proposal concerns changes to allowed uses to increase areas congregate residences may be constructed. Area affected most directly are the city's Lowrise, Midrise and Highrise zones and the City's Neighborhood Commercial and Commercial 1 and 2 zones. All the zones allow for multifamily residential use along with other uses. The proposal will have incremental impacts on land use. Impacts are discussed further in section D of the checklist below.

1. Will the proposal affect or be affected by surrounding working farm or forest land normal business operations, such as oversize equipment access, the application of pesticides, tilling, and harvesting? If so, how?

This is a non-project action. The proposal will not directly alter farm or forest land or be affected by farm or forest land.

b. Describe any structures on the site.

This is non project action. The affected areas by the proposal are widespread city-wide. The affected areas may as a diversity of structures consistent with urbanized areas.

c. Will any structures be demolished? If so, what?

This is a non-project action. The proposal will not increase the likelihood of demolitions.

d. What is the current zoning classification of the site?

This is non project action. The affected areas by the proposal are widespread city-wide. Zones most affected are the city's Lowrise, Midrise and Highrise zones and the City's Neighborhood Commercial and Commercial 1 and 2 zones.

e. What is the current comprehensive plan designation of the site?

This is non project action. The affected areas are within multiple Comprehensive Plan land use designations including multifamily residential, commercial, urban center and urban village.

f. If applicable, what is the current shoreline master program designation of the site?

This is non project action. The affected area includes several of the City's shoreline master program designations.

g. Has any part of the site been classified as a critical area by the city or county? If so, specify.

This is non project action. The affected areas by the proposal are widespread city-wide. The affected areas contain a variety of critical areas.

h. Approximately how many people would reside or work in the completed project?

This is a non-project action. This proposal may indirectly result in an increase of the number of people residing in the affected areas if the proposal increases/encourages congregate residence construction.

i. Approximately how many people would the completed project displace?

This is a non-project action. No housing is proposed to be eliminated. This proposal will not result in displacing people as the proposal concerns increasing allowances for a type of housing.

j. Proposed measures to avoid or reduce displacement impacts, if any.

None.

k. Proposed measures to ensure the proposal is compatible with existing and projected land uses and plans, if any.

None.

l. Proposed measures to reduce or control impacts to agricultural and forest lands of long-term commercial significance, if any.

None.

9. Housing [Find help answering housing questions](#)

a. Approximately how many units would be provided, if any? Indicate whether high, middle, or low-income housing.

This is a non-project action. No housing is proposed to be created as part of this project. This proposal could indirectly result in new housing if the proposal incrementally encourages the construction of congregate residence housing.

b. Approximately how many units, if any, would be eliminated? Indicate whether high, middle, or low-income housing.

This is a non-project action. No housing is proposed to be eliminated as part of this project. No elimination of housing is expected to result from the proposal because the proposal concerns removing restrictions and limitations on a type of housing. There could be an incremental impact if the legislation encourages replacement of some existing housing with congregate residences. Additional discussion is below in part D of this checklist.

Proposed measures to reduce or control housing impacts, if any.

None.

10. Aesthetics [Find help answering aesthetics questions](#)

a. What is the tallest height of any proposed structure(s), not including antennas; what is the principal exterior building material(s) proposed?

This is a non-project action. This proposal will not directly result in new buildings. The proposal could incrementally increase the likelihood of congregate residence structures being constructed in the future.

b. What views in the immediate vicinity would be altered or obstructed?

This is a non-project action. No views would be directly altered or obstructed by this proposal because there are no proposed changes to allowed height or other bulk and scale regulations.

c. Proposed measures to reduce or control aesthetic impacts, if any.

None.

11. Light and Glare [Find help answering light and glare questions](#)

a. What type of light or glare will the proposal produce? What time of day would it mainly occur?

This is a non-project action. This proposal will not directly result in additional light or glare.

b. Could light or glare from the finished project be a safety hazard or interfere with views?

This is a non-project action. This proposal will not directly result in additional light or glare.

What existing off-site sources of light or glare may affect your proposal?

This is non project action. The affected areas by the proposal are citywide. The affected area contains a diversity of light and glare sources consistent with urbanized areas.

c. Proposed measures to reduce or control light and glare impacts, if any.

None.

12. Recreation [Find help answering recreation questions](#)

a. What designated and informal recreational opportunities are in the immediate vicinity?

This is non project action. The affected areas by the proposal are citywide. The affected area has a diversity of recreational opportunities in the vicinity consistent with urbanized areas and may include formal parks and natural areas.

b. Would the proposed project displace any existing recreational uses? If so, describe.

This is a non-project action. This proposal will not directly displace any recreational uses.

c. Proposed measures to reduce or control impacts on recreation, including recreation opportunities to be provided by the project or applicant, if any.

None.

13. Historic and Cultural Preservation [Find help answering historic and cultural preservation questions](#)

a. Are there any buildings, structures, or sites, located on or near the site that are over 45 years old listed in or eligible for listing in national, state, or local preservation registers? If so, specifically describe.

This is non project action. The affected areas by the proposal are widespread and citywide. The affected areas contain a wide variety of existing structures including numerous structures over 45 years old and structures with a historic landmark designation or other historical designation.

If any structures are designated Landmarks at The City's Seattle Landmark and Historic Districts, then these structures would need to go through the city of Seattle historic landmarks review process.

b. Are there any landmarks, features, or other evidence of Indian or historic use or occupation? This may include human burials or old cemeteries. Are there any material evidence, artifacts, or areas

of cultural importance on or near the site? Please list any professional studies conducted at the site to identify such resources.

This is non project action. The affected areas by the proposal is widespread and citywide. The affected areas may contain a diversity of locations with evidence of Indian or historic use or occupation. The areas may include locations of historic settlements by Indians and European settlers. Elliott Bay and shoreline areas are adjacent to the affected area and waters were important culturally and for transit and fishing and shell fishing to Tribes in the area.

c. Describe the methods used to assess the potential impacts to cultural and historic resources on or near the project site. Examples include consultation with tribes and the department of archeology and historic preservation, archaeological surveys, historic maps, GIS data, etc.

This is non project action. The affected areas by the proposal are citywide.

d. Proposed measures to avoid, minimize, or compensate for loss, changes to, and disturbance to resources. Please include plans for the above and any permits that may be required.

None. Compliance with existing city ordinances for historic preservation is required for development in Seattle. Seattle Municipal Code Section 23.49.008 has restrictions on the demolition and alteration of existing structures including landmarks.

14. Transportation [Find help with answering transportation questions](#)

a. Identify public streets and highways serving the site or affected geographic area and describe proposed access to the existing street system. Show on site plans, if any.

This is non project action. The affected areas by the proposal are citywide. The affected areas contain a diversity of streets consistent with urbanized areas.

b. Is the site or affected geographic area currently served by public transit? If so, generally describe. If not, what is the approximate distance to the nearest transit stop?

This is non project action. The affected areas by the proposal are citywide and many of the areas are served by transit. The affected areas are served by a diversity of public transit including bus service, and light rail.

c. Will the proposal require any new or improvements to existing roads, streets, pedestrian, bicycle, or state transportation facilities, not including driveways? If so, generally describe (indicate whether public or private).

This is non project action. The affected areas by the proposal are citywide. The proposal is not expected to result in changes to roads, streets or bicycle infrastructure because the proposal concerns reuse of existing structures.

- d. Will the project or proposal use (or occur in the immediate vicinity of) water, rail, or air transportation? If so, generally describe.**

This is non project action. The affected areas are citywide. The affected areas are in broad proximity to water and rail lines.

- e. How many vehicular trips per day would be generated by the completed project or proposal? If known, indicate when peak volumes would occur and what percentage of the volume would be trucks (such as commercial and nonpassenger vehicles). What data or transportation models were used to make these estimates?**

This is a non-project action. This proposal will not directly result in additional vehicular trips. Changes in the number of vehicular trips could occur indirectly if the proposal incrementally encourages the development of congregate residences. It is possible that congregate residences generate trips at different rates or in different patterns to other residential uses.

- f. Will the proposal interfere with, affect, or be affected by the movement of agricultural and forest products on roads or streets in the area? If so, generally describe.**

This is a non-project action. This proposal will not affect the movement of agricultural and forest products.

- g. Proposed measures to reduce or control transportation impacts, if any.**

None.

15. Public Services [Find help answering public service questions](#)

- a. Would the project result in an increased need for public services (for example: fire protection, police protection, public transit, health care, schools, other)? If so, generally describe.**

This is a non-project action. This proposal will not directly result in an increased need for public services. The proposal could incrementally increase the need for certain public services such as fire protection or emergency services if the legislation causes additional development of congregate residences and if such uses incrementally increase demand for those services compared to other residential uses already allowed.

- Proposed measures to reduce or control direct impacts on public services, if any.**

None.

16. Utilities [Find help answering utilities questions](#)

- a. Circle utilities currently available at the site: electricity, natural gas, water, refuse service, telephone, sanitary sewer, septic system, other:**

This is non project action. The areas affected by the proposal are citywide. The affected areas contain a diversity of utilities consistent with urbanized areas. These include electricity, natural gas, water, refuse service, telephone, sanitary sewer, and other utilities.

- b. Describe the utilities that are proposed for the project, the utility providing the service, and the general construction activities on the site or in the immediate vicinity which might be needed.**

This is a non-project action. No utilities are proposed for this project.

C. Signature [Find help about who should sign](#)

The above answers are true and complete to the best of my knowledge. I understand that the lead agency is relying on them to make its decision.

_____ [On File] _____

Type name of signee: Geoffrey Wentlandt

Position and agency/organization: Land Use Policy Manager

Date submitted: 5/9/2024

D. Supplemental sheet for nonproject actions [Find help for the nonproject actions worksheet](#)

IT IS NOT REQUIRED to use this section for project actions.

Because these questions are very general, it may be helpful to read them in conjunction with the list of the elements of the environment.

When answering these questions, be aware of the extent the proposal, or the types of activities likely to result from the proposal, would affect the item at a greater intensity or at a faster rate than if the proposal were not implemented. Respond briefly and in general terms.

1. How would the proposal be likely to increase discharge to water; emissions to air; production, storage, or release of toxic or hazardous substances; or production of noise?

As a non-project action, the proposal would result in no direct impacts on water, air, noise, or toxic/hazardous substances. Greenhouse gas (GHG) emissions have also been considered, and no changes to GHG emissions are expected as a result of this non-project action. The proposal could incrementally encourage development of congregate residences instead of other types of residential uses in the future. Such conversions are not expected to cause additional emissions. In some cases the proposal could have the effect of incrementally reducing emissions because of the ability to build smaller more compact homes in a structure compared to in the absence of the legislation - which may cause less emissions per home. The proposal could incrementally increase noise if a greater number or density of people could live in congregate residences compared to apartment buildings or condominiums use that might otherwise be built. The increment of noise would be attributed to living activities such as talking, recreating and playing music and cooking as well as entering and leaving homes.

- **Proposed measures to avoid or reduce such increases are:**

No increases are anticipated and so no measures are proposed.

2. How would the proposal be likely to affect plants, animals, fish, or marine life?

As a non-project action, the proposal would result in no direct impacts and are unlikely to result in indirect or cumulative impacts related to plant, animal, fish or marine life. The proposal is not expected to cause a notable increase to the total number of development sites or increase any development footprint. The primary affect would be to substitute some future development of other residential uses with congregate residences which would not increase the impact on plants and animals.

- **Proposed measures to protect or conserve plants, animals, fish, or marine life are:**

No impacts are anticipated and so no measures are proposed.

3. How would the proposal be likely to deplete energy or natural resources?

As a non-project action, the proposal would result in no direct impacts and is unlikely to result in indirect or cumulative impacts related to energy or natural resources. The proposal concerns development of congregate residences. Construction of new structures must comply with modern and current energy codes that have a high standard of building performance and efficiency.

- **Proposed measures to protect or conserve energy and natural resources are:**

No impacts are anticipated and so no measures are proposed.

4. How would the proposal be likely to use or affect environmentally sensitive areas or areas designated (or eligible or under study) for governmental protection, such as parks,

wilderness, wild and scenic rivers, threatened or endangered species habitat, historic or cultural sites, wetlands, floodplains, or prime farmlands?

As a non-project action, the proposal would result in no direct impacts and is unlikely to result in indirect or cumulative impacts related to environmentally sensitive areas or areas designated for governmental protection. The proposal would not cause increased development pressure on sensitive areas compared to other development pressure that might occur in the absence of the legislation.

Proposed measures to protect such resources or to avoid or reduce impacts are:

None are proposed because no impacts are anticipated. The existing regulatory framework, i.e., the Land Use Code, The Shoreline Master Program, Environmentally Critical Areas Ordinance, Landmarks Preservation Ordinance will address impacts as part of the project-specific review of development proposals.

5. How would the proposal be likely to affect land and shoreline use, including whether it would allow or encourage land or shoreline uses incompatible with existing plans?

This is a non-project action. The areas affected are widespread city-wide. The proposal concerns changes to allowed uses to expand areas where congregate residences may be constructed. Areas affected most directly are the city's Lowrise, Midrise and Highrise zones and the City's Neighborhood Commercial and Commercial 1 and 2 zones. All the zones allow for multifamily residential use and other urban uses along with the expanded allowance for congregate residences. The legislation could affect land use by allowing a greater density of residents than would otherwise be allowed in the absence of the legislation. The change would be to incrementally increase the intensity of activity and use patterns from a greater number of residents living in an area. The impact could be experienced as a greater volume of people using services and parks or visiting businesses and stores. This could cause some congestion or cause some incremental increase in a wait times to access services or park facilities or other features of a community. The proposal does not allow or encourage incompatible uses with the City's Comprehensive Plan since the locations affected are already planned for and allow other types of multifamily residential uses.

Proposed measures to avoid or reduce shoreline and land use impacts are:

None

6. How would the proposal be likely to increase demands on transportation or public services and utilities?

As a non-project action, the proposal would result in no direct impacts and is unlikely to result in indirect or cumulative negative impacts related to transportation or public services/utilities. All areas potentially affected by the proposal are already urbanized areas with fully developed utility infrastructures. The proposal could incrementally encourage the development of congregate residences instead of other forms of residential use, which could cause an increased

density of persons living in an area. The proposal also removes the requirement that parking be provided for occupants of a congregate residence in areas outside of urban villages and centers that are well served by transit. These changes could cause an incremental increase in demand for on street parking in an area, and could cause an incremental increase in congestion from vehicles on streets or pedestrians on sidewalks on some local roads if additional congregate residences are constructed. Potential effects on services are described in the land use section above.

Proposed measures to reduce or respond to such demand(s) are:

None.

7. Identify, if possible, whether the proposal may conflict with local, state, or federal laws or requirements for the protection of the environment.

It is believed that the proposal would not result in conflicts with local, state, or federal laws or requirements for protection of the environment.

City of Seattle

Office of Planning & Community Development
Rico Quirindongo, Director

**CITY OF SEATTLE
ANALYSIS AND DECISION OF THE DIRECTOR
OF THE OFFICE OF PLANNING AND COMMUNITY DEVELOPMENT
SEPA Threshold Determination
Co-Living Housing / Congregate Residence Allowances Legislation**

- Project Sponsor:** City of Seattle Office of Planning and Community Development
- Location of Proposal:** Citywide. The changes primarily affect land in Lowrise (LR) and Midrise (MR) multifamily zones, and Commercial and Neighborhood Commercial 1 and 2 (C1, C2, NC1, NC2) zones.
- Scope of Proposal:** A legislative action to remove restrictions and limitations on the construction of congregate residences.
- No Appeal Opportunity:** Action taken by a city to comply with the requirements of Engrossed Substitute House Bill 1998 are not subject to legal challenge under chapter 36.70A or chapter 43.21C RCW.

BACKGROUND

Proposal Description and Background

The Office of Planning and Community Development proposes to edit the text of the Land Use Code (Seattle Municipal Code Title 23) to implement Washington State House Bill 1998 from the 2024 legislative session regarding co-living housing. Seattle's land use code regulates co-living housing under the "congregate residence" land use category. The proposed legislation makes the following changes removing restrictions or limitations on congregate residences:

- Amends allowable use tables to make congregate residence an allowed use on any lot that allows for at least six multifamily residential units including in all of the city's Lowrise (LR), Midrise (MR), and Highrise (HR) multifamily zones and all Commercial (C) and Neighborhood Commercial (NC) zones.

- Removes minimum development standards for configuration and features of living spaces in congregate residences including standards for communal areas, common food preparation areas, and food preparation in sleeping rooms.
- Removes parking requirements for congregate residences in all frequent transit served areas.
- Updates the definition of congregate residence to better match language and terminology of State legislation.

Public Comment

Proposed changes to the Land Use Code require City Council approval. Opportunity for public comment will occur during future Council hearings in the first quarter of 2024. This legislation directly implements House Bill 1998. During the 2024 state legislative session the state legislature received public comment relevant to this proposed legislation.

ANALYSIS - OVERVIEW

The following describes the analysis conducted to determine if the proposal is likely to result in *probable significant adverse environmental impacts*. This threshold determination is based on:

- * the copy of the proposed Ordinance;
- * the information contained in the *SEPA checklist* (dated May, 2024);
- * information in relevant policy and regulatory documents including the Comprehensive Plan, the City's SMC Title 25 and Title 23, and
- * Washington State House Bill 1998 and associated documents; and
- * the experience of OPCD analysts in reviewing similar documents and actions.

ELEMENTS OF THE ENVIRONMENT

Short -Term Impacts

As a non-project action, the proposal will not have any short-term adverse impact on the environment. No project specific action is proposed.

Long-Term Impacts

As a non-project action, the proposal is anticipated to have minor long-term impacts on the environment. Future development affected by this legislation will be reviewed under existing laws. Although the legislation expands where congregate residences are a permitted use other requirements on development would continue to apply and other procedures and aspects of the land use code would continue to apply.

The primary effect of this legislation over the long term is that it could incrementally encourage future residential development to be in the form of congregate residences instead of other types of multifamily housing that might otherwise be built. The legislation could incrementally increase the total amount of residential development if builders are enticed to construct more housing overall because of the removed limitation on congregate residence construction.

Natural Environment

The natural environment includes potential impacts to earth, air, water, plants/animals/fisheries, energy, natural resources, environmentally sensitive areas, noise, releases of toxic or hazardous materials. Adoption of the proposed legislation is not anticipated to result in adverse impacts on any of these elements of the natural environment, compared to development that might occur under existing regulations. The proposal could incrementally increase the likelihood of congregate residence construction. However, it is not expected that such construction would increase the profile of impacts to earth, air, water, plants/animals/fisheries, energy, natural resources, environmentally sensitive areas, noise, or releases of toxic or hazardous materials. Other development standards regulating site coverage, landscaping, trees and environmental and energy performance and total allowed height and floor area are not altered by the proposed legislation. Therefore additional adverse impacts on the natural environment are expected.

Built Environment

The proposed legislation will have only minor effects on the built environment because the primary effect of the legislation is to allow for the congregate residence residential use in addition to other residential uses that are already allowed in the same areas. The impacts to the built environment include any impacts related to land and shoreline use, height/bulk/scale, housing, and historic preservation. The proposed legislation does not alter exterior dimensional standards such as height limits and floor area limits,

so there are no expected adverse impacts on the built environment. Below is a discussion of the relationship between the proposal and built environment:

Land Use

The proposal would not encourage uses incompatible with the City's Comprehensive Plan or Shoreline Master Program or other adopted plans. The proposal concerns changes to allowed uses to expand areas where congregate residences may be constructed. Areas affected most directly are the city's Lowrise, Midrise and Highrise zones and the City's Neighborhood Commercial and Commercial 1 and 2 zones. All the zones allow for multifamily residential use and other urban uses along with the expanded allowance for congregate residences. The legislation could affect land use by allowing a greater density of residents than would otherwise be allowed in the absence of the legislation. The change would be to incrementally increase the intensity of activity and use patterns stemming from a greater number of residents living in an area. The impact could be experienced as a greater volume of people using services and parks or visiting businesses and stores. This could cause some congestion or cause some incremental increase in a wait times to access services or park facilities or other features of a community. The proposal does not allow or encourage incompatible uses with the City's Comprehensive Plan since the locations affected are already planned for and allow other types of multifamily residential uses.

Housing

The proposed legislation could have an incremental and minor impact on housing if the legislation encourages the construction of more congregate residences than would otherwise occur. This is considered by the City to be a positive impact on housing because increasing housing supply is a policy goal for the city. Additionally, the City understands that a possible outcome is a substitution effect of multifamily housing development that might otherwise occur in the future being replaced by congregate residence development. In cases where one use is being substituted for another it is plausible that there would be little or no net increase in the degree of impact from development on housing.

With or without the proposed legislation development of residential uses including congregate residences would be subject to the City's Mandatory Housing Affordability (MHA) requirements.

Some minor adverse impact on housing could result from the deletion of minimum standards for the interior configuration of congregate residences, including requirements for communal areas and food preparation areas. It is possible the proposed legislation could result in less desirable or comfortable living quarters compared to in the absence

of the legislation, which could adversely impact quality of life for some future residents. However, the proposal also has potential to increase supply of lower-cost housing that provides more affordable housing options to residents who might otherwise struggle to obtain an independent living quarters, which is a positive impact on housing. The City does not consider the potential adverse impact on housing to be more than minor.

Height/Bulk/Scale, Shadows, and Views

There are no potential impacts on Height/Bulk/Scale, Shadows and Views because the proposed legislation only pertains to allowable uses. There would be no substantial change to the height/bulk/scale or shadow or view effects because standards regulating the overall size or scale of development are not proposed to be changed.

Historic Preservation

The proposed legislation does not alter historic review processes for structures in a Seattle historic district, or for any designated historic Landmark. If the legislation incrementally encourages congregate housing development in the future it is likely that some historic-aged structures and properties in a landmark district or historic landmark structures could be affected. However, since the existing procedures concerning historic preservation are maintained any potential for impact would not be more than minor.

Noise, Light & Glare, Environmental Health

The proposed legislation does not alter the applicability of several standards concerning noise, light and glare and environmental health. The proposal could incrementally increase noise if a greater number or density of people could live in congregate residences compared to apartment buildings or condominiums that might otherwise be built. The increment of noise would be attributed to living activities such as talking, recreating and playing music and cooking as well as entering and leaving homes. In the context of an urban environment these incremental impacts are common and customary and are not considered by the City to be more than minor.

Transportation and Parking

The proposal is not anticipated to result in any direct adverse impacts on transportation or parking. The proposal could incrementally encourage the development of congregate residences instead of other forms of residential use, which could cause an increased density of persons living in an area. The proposal also removes the requirement that parking be provided for occupants of a congregate residence in areas outside of urban

villages and centers that are well served by transit. These changes could cause an incremental increase in demand for on street parking in an area, and could cause an incremental increase in congestion from vehicles on streets or pedestrians on sidewalks on some local roads if additional congregate residences are constructed. The proposal could theoretically have a minor adverse impact on transportation or parking if the proposal incrementally increases the likelihood of congregate residence development, and if such development exerts a different or higher pattern of transportation usage than the uses that would be replaced. It is not expected that the magnitude of these changes would notably affect the capacity of local roadways, bicycle networks or sidewalks when compared with the scenario that would occur in the absence of the legislation. As a result of the factors described above no adverse impact that is more than minor is anticipated from the proposed action on transportation and parking.

Public Services and Utilities

Adoption of the proposal will not directly result in an increased need for public services. The proposal could incrementally increase the intensity or density of residential uses in an area if the proposed legislation incrementally increases the likelihood of congregate residence development. This could theoretically indirectly lead to an increased need for public services associated with residential use, such as an increased number of residents needing emergency services, or visiting nearby public facilities such as libraries and parks. The affected area of the proposal is places where multifamily housing is already an allowed use, and these areas are already well served by the full suite of utility services, including natural gas, electricity, broadband, stormwater and sewer. The degree of change compared to what might occur under existing regulations would not adversely impact the ability of existing utilities to serve anticipated development. Due to the factors discussed in this section and other information above, we determine that there would be no adverse impact that is more than minor as a result of the proposed legislation.

DECISION – SEPA

Adoption of the proposed ordinance would have no short-term impacts on the environment and would not have more than minor adverse long-term impacts on elements of the natural or built environment.

This decision was made after review by the responsible official on behalf of the lead agency of a completed environmental checklist and other information on file with the responsible department. This constitutes the Threshold Determination and form. The intent of this declaration is to satisfy the requirements of the State Environmental Policy Act (RCW 43.21C), including the requirement to inform the public agency decisions pursuant to SEPA.

- Determination of Non-Significance. This proposal has been determined to not have a significant adverse impact upon the environment. An EIS is not required under RCW 43.21C.030(2)(c).
- Determination of Significance. This proposal has or may have a significant adverse impact upon the environment. An EIS is required under RCW 43.21C.030(2)(c).

Co-Living Housing / Congregate Residences Allowances

Seattle Office of Planning and Community Development (OPCD)
Director's Report and Recommendation
June, 2024

Introduction and Background

The Office of Planning and Community Development proposes to edit the text of the Land Use Code (Seattle Municipal Code Title 23) to implement Washington State Engrossed Substitute House Bill 1998 from the 2024 legislative session regarding co-living housing. Seattle's land use code regulates co-living housing under the "congregate residence" land use category. The proposed legislation makes several changes to the land use code that remove restrictions or limitations on congregate residences. The overarching intent of the changes is to ensure that co-living housing/congregate residences are not regulated with stricter limitations than other types of multi-family housing.

Several drivers led to this proposal:

ESSB 1998. During the 2024 State legislative session the legislature passed and Governor Inslee signed ESSB 1998. The bill officially becomes law on June 6, 2024. It includes various findings concerning the benefits of co-living housing as an inexpensive housing choice. The bill establishes requirements on cities that they must allow co-living housing in any urban growth area on any lot where at least six multifamily housing units are allowed, and the bill mandates that cities may not impose certain development standard restrictions on co-living housing that would be more stringent than for other types of multifamily housing. Interested parties are encouraged to review the [full text of ESSB 1998](#) in conjunction with this proposed legislation.

Need for more housing supply. Although the rate of new housing production in Seattle has been at near historic levels in the recent past, Seattle has been gaining jobs at an even faster pace. Between 2005 and 2019, Seattle would have needed to produce an additional 9,000 housing units to maintain its baseline ratio of jobs to housing units. This shortage of housing supply increases competition for each available unit, driving up rents and housing prices across the market¹. One of the City's primary strategies to address high housing costs is to support increased housing production of all kinds.

¹ City of Seattle Market Rate Housing Needs and Supply Analysis, April 2021
[SeattleMarketRateHousingNeedsAndSupplyAnalysis2021.pdf](#)

Potential for a relatively lower cost housing option. As documented in the findings of ESSB 1998, co-living housing / congregate residences can provide rental homes affordable to people with moderate to low incomes without requiring any public funding, and rents in newly constructed, market-rate co-living housing in the Puget Sound region can be affordable to people with incomes as low as 50 percent of area median income. Co-living housing works best for single-person households, but the housing for singles that it provides reduces demand for family-sized rentals from singles who would otherwise group together to rent large homes.

Proposal and Background

The proposed legislation is designed to directly comply with the requirements of ESSB 1998. The City is not, with this action, advancing policy or code changes other than those necessary to translate the requirements of the new state law into the unique context of the City of Seattle's land use code. The only aspect of this legislation that is discretionary concerns its timing. Whereas ESSB gives cities until December 31, 2025 to adopt or amend development regulations satisfying the requirements of the new law, OPCD and Mayor Harrell are proposing to implement the changes as soon as possible. Adopting the development regulations during 2024 or early 2025 will provide an additional year or more during which the housing supply benefits of expanded allowances for co-living housing/congregate residences will be available to the development community to begin bringing more sleeping rooms online.

Co-living housing/ congregate residence is a residential development with sleeping rooms that are independently rented and provide living and sleeping space, in which residents share kitchen and other common facilities with residents of other sleeping rooms in the building. Sleeping rooms are distinguished from "dwelling units" because sleeping rooms may not by themselves contain all of the primary components of a complete housing unit: a bedroom, kitchen and bathroom. Other colloquially used terms for co-living housing/congregate residences include dormitory or rooming house. Micro-housing is another term that has been used informally in recent years as a name to describe co-living/housing congregate residence buildings.

Other multifamily housing that is not co-living housing / congregate residence housing, consists of complete "dwelling units". Housing that consists of a full and complete suite of living components within a self contained unit is deemed to be a multifamily building with "dwelling units" - a formal term in the land use code. Typical multifamily housing can consist of "Small Efficiency Dwelling Units" (SEDUs), or standard dwelling units. For both of these types of homes, regulations govern the minimum size and configuration of the unit, and the units must include a complete kitchen, bathroom and living space. Regulations for SEDUs provide specifics about the configuration of interior spaces befitting of an efficiency unit, and there is an effective minimum square footage size of 220 sq. ft. The regulations for SEDUs require a built-in closet, a minimum amount of additional storage, and minimum requirements for natural light. Typical dwelling units (that are not small efficiency dwelling units) have even more minimum size requirements that generally result in units that are 320 sq ft or larger.

In contrast, sleeping units in co-living housing / congregate residences are not subject to as many space requirements, or requirements for components as SEDUs and dwelling units are. Sleeping rooms may be as small as is allowable for a habitable living space under the building code – down to 70 sq. ft. For sleeping rooms there is no requirement for interior features such as a cooking space, although sleeping

rooms must have access to a window. Therefore, there is greater flexibility afforded to designers in how to configure a co-living housing / congregate residence compared to other types of multifamily development. Sleeping rooms in co-living housing/congregate residences may be constructed with less plumbing than a dwelling unit because they may be provided without a kitchen or bathroom. All of these factors allow co-living housing / congregate residences to be constructed more cost effectively than other types of multifamily housing.

Under current regulations, congregate residences consisting of sleeping rooms are allowed, but in more limited locations (fewer zones) than other types of multifamily housing. The current code also includes some minimum standards for shared spaces and building amenities.

The legislation makes the following specific amendments, all of which are directly required under ESSB 1998.

- ***Allowable Uses.*** The proposal amends the land use code's allowable use tables to make congregate residence an allowed use on any lot that allows for at least six multifamily residential units. This is achieved in the proposed legislation by amending the allowed uses column for Congregate Residences in the city's Lowrise (LR), Midrise (MR), and Highrise (HR) multifamily zones and all Commercial 1 (C1) zones, and all Neighborhood Commercial (NC) zones.
- ***Minimum Standards for Building Features.*** The proposal removes minimum development standards for configuration of congregate residence buildings, including standards for communal areas and common food preparation areas. The city's existing code contains a requirement that a communal area must be included in the building at a size that is at least 15% of the total floor area of sleeping rooms in the building. The city's existing code contains the requirement that at least one common food preparation area be provided in a congregate residence building, and that all residents shall have access to a food preparation area. ESSB mandates that cities may not impose any of these types of development standards on co-living housing / congregate residences that are not imposed on other types of multifamily housing. Therefore, the proposed legislation deletes these requirements from the city's land use code.
- ***Vehicle Parking Requirements.*** ESSB 1998 states that cities may not require co-living housing / congregate residences to provide off-street parking within one-half mile walking distance of a major transit stop. The proposed legislation complies with this provision by modifying the parking allowances table to exempt co-living housing / congregate residences from providing parking in those areas. ESSB 1998 also states that in areas not within one-half mile walking distance of a major transit stop, a city may not require more than 0.25 off-street parking spaces per sleeping unit. No changes to Seattle's code are required to satisfy this latter requirement, since the city already requires only one parking space per 4 congregate residence sleeping rooms.
- ***Bicycle Parking Requirements.*** ESSB 1998 includes general direction that a city may not treat a sleeping unit in co-living housing / congregate residence as more than one-quarter of a dwelling unit for purposes of calculating dwelling unit density requirements. The city's existing practice with respect to numerical dwelling unit or sleeping room density limits is already consistent with this requirement. However existing regulations for bicycle parking do not comport with the one-quarter of a dwelling unit approach. Under the city's existing regulations, one long term

(covered/weather protected) bicycle parking space is required for each sleeping room just as is required for a dwelling unit. The proposed legislation reduces bicycle parking requirements to comport with the intent of ESSB 1998 – that sleeping rooms should generally be treated as 0.25 of a typical dwelling unit. The proposal reduces the long-term and short-term bicycle parking requirement to equal one quarter of the required quantity of the requirement for a dwelling unit. This interpretation also responds to feedback from building owners and operators that bicycle parking requirements currently result in large, underused spaces that unnecessarily add to the cost of construction.

- ***Update to Congregate Residence Definition.*** The proposed legislation updates the definition of congregate residence to better match language and terminology of State legislation.

Previous City Legislation. The current state of the City's regulations for congregate residences and small efficiency dwelling units stems from a package of code changes and interpretations established around 2014 including [Ordinance 124608](#). During the two years prior to 2014 the city experienced an upswing in the development of projects consisting of individually rented sleeping rooms. Many of the developments were marketed under the private branded name "Apodments". Concerns were expressed by members of the public and some councilmembers that this type of housing was not receiving the appropriate levels of review. In fact many of the developments in question were permitted as a series of large dwelling units consisting of eight bedrooms each and shared kitchens and/or bathrooms. In practice the eight bedrooms within a large dwelling unit were rented out individually. This arrangement allowed developers to avoid minimum standards for the size of housing units, and other procedural requirements such as design review.

The City through its then Department of Planning & Development (DPD) put forward legislation aimed at recognizing the type of housing being constructed, but also making sure it would go through design review and receive a SEPA review – if it was a similar size and scale to other types of multifamily housing that would receive those reviews. ([See retired CB118067](#)). The City Council considered DPD's proposal but convened a working group and then introduced its own replacement bill that took a different approach than originally recommended by DPD. The resultant Ordinance 124608 clarified what would be considered a dwelling unit and established the formal term "Small Efficiency Dwelling Unit (SEDU)" in the land use code. Simultaneously, the new law clarified that "Apodment" style developments should be classified as "Congregate Residences" and went further to limit the zones that Congregate Residences were allowed to be constructed in. This new regulatory structure also established minimum standards for shared spaces and bicycle parking requirements for Congregate Residences. The effect of Ordinance 124608 was to curtail development of Congregate Residences and shift the development of small-sized housing towards the SEDU model. This is especially true for relatively small-scale developments in the Lowrise zones, as Congregate Residence became a prohibited use in those zones.

The proposed legislation that is currently before Council would roll back many of the limitations concerning allowed locations and building configuration that were established in Ordinance 124608 concerning Congregate Residences, while retaining some of the advances from that era of legislation to clearly classify the housing type and enact appropriate procedural and review steps for it.

Mandatory Housing Affordability (MHA). MHA requires new development in Seattle to either include a small percentage of rent- and income-restricted affordable housing, or to make an in-lieu payment to the City's Office of Housing for affordable housing. Under existing regulations MHA applies to

development of co-housing / congregate residences whenever a development adds new dwelling units or sleeping rooms. No changes are proposed to how MHA applies to co-living – housing / congregate residences.

State Environmental Policy Act (SEPA). Engrossed Substitute House bill 1998 states that action taken by a city or county to comply with the requirements of ESHB 1998 are not subject to administrative or judicial legal challenge under SEPA or the Growth Management Act. Even though there is not an opportunity for appeal, OPCD completed a SEPA checklist and published a SEPA Determination of Non-Significance (DNS) on May 16th, 2024. The comment period expired on May 31st, 2024 and OPCD did not receive any comments.

Examples of Co-Living Housing / Congregate Residences

The following section provides several examples of co-living housing / congregate residence buildings that have already been built in Seattle in recent years. The buildings were built in areas (zones) that permit congregate residences. The examples are provided to illustrate the character and features of living spaces and buildings that can be expected in more locations under the proposed ordinance.

kärsti apartments
1503 NW 59th St, Seattle

The kärsti apartments building provides 52 small private homes that are less than 200 sq ft, including top floors with sleeping lofts (see figure 2). It provides common amenity spaces, including laundry, mail, cooking, lounges, fitness center, movie theatre, and outdoor seating. These spaces give residents space to socialize, build relationships and community. Owners of the building report that it provides housing for households with incomes in the 30%-80% AMI range without any affordable housing subsidies or public funds.

Figure 2: Karsti apartment building rendering of sleeping loft. Credit Neiman Taber Architects.

Figure 3: Karsti apartment building floor plan. Credit Neiman Taber Architects.

YOBİ MICROHOUSING 1421 31st Ave Seattle

Yobi is designed as a single building with one entry at the street. The ground floor features commons with a lounge, fireplace, kitchen, study room, laundry, and media area. The upper floors and basement have 9-11 sleeping rooms per floor with a shared commons in the middle, and there are a total of 45 sleeping rooms in the building. All homes are in the 150 sq ft – 200 sq ft range.

Figure 4: Yobi building. Credit Neiman Taber Architects.

Figure 5: Yobi building visualization of loft space, and upper level floor plan. Credit Neiman Taber Architects.

THE ROOST LOFTS 901 Hiawatha Pl S, Seattle

The project provides 33 sleeping rooms and includes some inexpensive market-rate units, and some 40% AMI affordable units, and a below market-rate commercial space leased to an arts nonprofit. The housing units are supplemented with shared community kitchens, living, dining, and meeting spaces that improve the livability of the small apartments and provide an opportunity for residents to meet, interact and build community. All units are about 220 sq ft.

Figure 6: The Roost building. Credit Neiman Taber Architects.

Figure 7: The Roost building. Upper level floor plan. Credit Neiman Taber Architects.

Expected Effects of the Legislation

The primary effect of the proposed legislation is to allow and incrementally encourage the Co-housing / Congregate Residence model of housing to be built in more places. The most likely candidate locations for increased Co-housing / Congregate Residence production will be in the

City's Lowrise (LR) multifamily zones. LR zones are most commonly located in the City's designated Urban Villages or along arterial roadways. Places with the largest contiguous areas of LR zoning include Capitol Hill, Ballard, Fremont, and Columbia City. Co-housing / Congregate Residences are almost always built without on-site vehicle parking, so there will likely be an increase in production of the housing type in new areas where parking would not be required. These are places within a one-half mile walking distance of a major transit stop that are not already in an urban village or center.

Future Considerations

In the next two years the City is anticipating significant additional changes to the land use code that will expand locations where "middle housing" is allowed. These code changes will follow other major State legislation from the 2023/2024 session concerning middle housing, especially HB 1110 which mandates cities to allow a variety of housing types in locations that were formerly zoned for single family homes only. The City is currently in the process of contemplating these updates to the Neighborhood Residential (formerly Single Family) zones as a component of the major update to the Comprehensive Plan. After the new plan is complete the City will quickly implement zoning changes to the NR zones that allow greater variety of housing types and more density of housing units on lots, compared to today's regulations. These changes will create new instances and locations where at least six multifamily residential units will be allowed by zoning. Such locations and instances must also comply with ESSB 1998 concerning co-housing/congregate residences. It is our intent to integrate new allowances for co-housing/congregate residences in forthcoming updated regulations for the City's NR zones, when that legislation is advanced following the major Comprehensive Plan update.

Findings and Recommendation

The OPCD Director makes the following findings related to this proposed legislation.

- The proposed legislation addresses the requirements and direction provided to Washington cities by Engrossed Substitute House Bill 1998.
- The proposal is in line with the City's priority to increase housing supply.
- The proposal is in line with the City's priority to increase housing types with the potential to provide a relatively lower cost option.
- The proposal is consistent with numerous policies within the City's Comprehensive Plan in the housing element of the plan.
- OPCD has evaluated the environmental impacts of the proposal and determined them to be non-significant. A SEPA DNS was issued on May 10, 2024. Consistent with ESSB 1998 no opportunity for appeal of the SEPA DNS was provided.

In consideration of the factors and information contained in this report OPCD recommends that City Council review the proposed legislation and adopt the associated Land Use Code text amendments.

August 15, 2024

MEMORANDUM

To: Land Use Committee
From: Lish Whitson, Analyst
Subject: CB 120822: Congregate Residence Amendments

On September 4, the Land Use Committee will receive a briefing and hold a public hearing on Council Bill (CB) [120822](#), which would amend the Land Use Code to update regulations related to congregate residences in order to implement Endorsed Substitute House Bill (ESHB) ([1998](#)) and Revised Code of Washington (RCW) Section [36.70.535](#). ESHB 1988 requires that the City allow “co-living housing” in any area where six or more multifamily housing units are permitted on a lot. It defines co-living housing as:

...a residential development with sleeping units that are independently rented and lockable and provide living and sleeping space, and residents share kitchen facilities with other sleeping units in the building.

Seattle zoning uses the term “congregate residence” for this type of housing. Because Seattle’s regulations are not consistent with all the requirements of ESHB 1998, the City is required to update its congregate residence regulations.

This memorandum describes Seattle’s current congregate residence regulations and the changes to those regulations included in CB 120822 that are necessary to maintain consistency with State law.

Congregate Residences in Seattle

The City has regulated congregate residences as a defined use since 1994, when Ordinance 117202 combined boarding houses, group homes, and halfway houses into a single use category. Congregate residence is defined in the Seattle Municipal Code (SMC) as:

"Congregate residence" means a use in which rooms or lodging, with or without meals, are provided for any number of non-transient persons not constituting a single household.

In other words, congregate residences include individual rooms, with private or shared bathrooms, shared kitchens, and other shared facilities. Dormitories are frequently designed and permitted as congregate residences. Other historic housing types that would also be classified as congregate residences include boarding houses, residential hotels, “apodments,” and Single Room Occupancy buildings (SROs).

Current requirements and limits on congregate residences date to [Ordinance 124608](#), adopted in 2014. Since the adoption of Ordinance 124608, the construction of congregate residences in Seattle has fallen.¹

¹ David Neiman in [When is Seattle Going to Fix Micro-Housing](#) and earlier articles advocating for changes to the City’s congregate housing rules published by the Sightline Institute, has the only available survey of congregate housing units built in

Ordinance 124608 narrowed the locations where congregate residences is permitted. All categories of congregate residences are permitted Midrise (MR), Highrise (HR), Neighborhood Commercial 3 (NC3), Commercial 1 (C1), and Commercial 2 (C2) zones within urban centers and urban villages, and in Seattle Mixed (SM) and Downtown (DT) zones. In other multifamily and commercial zones, only public or not-for-profit congregate residences, such as dormitories or facilities that provide supportive services to residents, are permitted.

Under SMC 23.42.049, congregate residences must generally comply with the development standards that apply to apartments, with a few distinctions. They are required to have communal areas, such as kitchens, lounges, and other communal facilities, equal to at least 15 percent of the space in sleeping rooms. And congregate residences must have a common food preparation area. The number of rooms with private kitchens is limited.

In areas where off-street parking is required, congregate residences are required to provide at least one motor vehicle parking space for every 4 sleeping rooms. One long-term bicycle parking space is required for each sleeping room, with one additional short-term bike parking space per 20 sleeping rooms.

State Co-Living Housing Requirements

RCW 36.70.535 requires that all cities that are required to plan under the Growth Management Act, and that allow six or more multifamily units on a lot, to allow co-living housing by December 31, 2025. Cities may not:

- Apply standards to co-living housing that are distinct from the standards applied to other multifamily housing types;
- Require notice or public meetings for co-living housing projects that is not required for other types of residential uses;
- Impose a minimum size limit on sleeping units other than that provided under the state building code;
- Require a project to include a mix of unit sizes;
- Count a co-living sleeping unit as more than one fourth of a dwelling unit for the purpose of calculating density limits or as more than half of a dwelling unit for the purpose of calculating sewer hook-up fees;
- Require that a co-living housing project include other uses;
- Require off-street parking within a half mile of a major transit stop;
- Require more than one parking space per four sleeping units; or
- Prohibit co-living housing from using affordable housing incentives.

Seattle during this time period. He indicated that between 2014 and 2020, building permit applications for congregate housing dropped by 85 percent. Article accessed July 26, 2024.

CB 120822

Council Bill 120822 would align the City's regulations around congregate residences with the new State requirements for co-living housing. Congregate residences would be clearly defined as a multifamily use, and four sleeping rooms would be equated to one multifamily dwelling unit. The definition of congregate residences would be replaced with the State's definition:

"Congregate residence" means a use in which ~~((rooms or lodging, with or without meals, are provided for any number of non-transient persons not constituting a single household))~~ sleeping rooms are independently rented and lockable and provide living and sleeping space, and residents share kitchen facilities and other common elements with other residents in a building.

Congregate residences would become permitted uses in all multifamily, C and NC, SM and DT zones, including lowrise zones where congregate residences are currently not permitted. Specific requirements for shared kitchens and communal areas would be removed. Parking requirements for congregate residences within one mile of a major transit stop would be removed. A short-term bicycle parking space would be required for every 80 sleeping rooms, rather than 20 sleeping rooms and a long-term bicycle parking space would be required for every four sleeping rooms, rather than one per sleeping room. Overall, these changes would make it easier to build a congregate residence in Seattle, and the City is likely to see more of these types of structures built.

Next Steps

The provisions of CB 120822 are required to be incorporated into the Land Use Code by the end of 2025. The Land Use Committee will hold a public hearing on the bill on September 4 and may vote on it on September 18. If the Committee votes on September 18, it could be considered by the City Council as early as September 24.

Yolanda Ho, Deputy Director

Co-Living Housing / Congregate Residences Allowances Legislation

September 4, 2024

Background & Purpose

- **Directly implements ESSB 1998 from the 2023/2024 State legislative session**
- **Compliance with ESSB 1998 for co-living housing/congregate residences is required.**
- **Addresses need for more housing supply**
- **Provides potential for a relatively lower cost housing option without direct subsidy**
- **Rolls back most of the restrictions that were placed on congregate residences by the Seattle City Council in approximately 2014, to align with State Law**

The Roost building. Credit Neiman Taber Architects.

What is Co-Living Housing / Congregate Residence?

Seattle regulates this housing type as "Congregate Residence"

“Congregate residence” means a use in which sleeping rooms are independently rented and lockable and provide living and sleeping space, and residents share kitchen facilities and other common elements with other residents in a building.

(Amended definition consistent with ESSB 1998)

What is Co-Living Housing / Congregate Residence?

Yobi building. Credit Neiman Taber Architects.

Congregate Residence sleeping rooms are not subject to the dimensional and configuration requirements of dwelling units or small efficiency dwelling units (SEDUs), and may be as small as 70 sq ft., whereas SEDUs have an effective minimum size of 220-240 sq ft.

Summary of the Proposed Legislation

- **Allowable Uses.** Amends the code to allow "congregate residence" as an allowed use in all zones that allow multifamily housing. (i.e. LR zones, NC1 and NC2 zones, etc.)
- **Minimum Standards for building features.** Deletes additional standards for features of congregate residences such as minimum quantity and design standards for common areas.
- **Vehicle Parking.** Deletes parking requirements within ½ mile of major transit stop. Reduces parking requirements to 0.25 spaces per sleeping room elsewhere.
- **Bicycle Parking.** Reduces long term bike parking requirements to 0.25 spaces per sleeping room.
- **Update to Congregate Residence Definition.** Updates the definition of congregate residence to better match language and terminology of State legislation.

Examples of Co-Living Housing / Congregate Residences

kärsti apartments

1503 NW 59th St, Seattle

- 52 small private homes
- Less than 200 sq ft/ unit including top floors with sleeping lofts.
- Amenity spaces, including laundry, mail, cooking, lounges, fitness center, movie theatre, and outdoor seating.
- Households with incomes in the 30%-80% AMI range without affordable housing subsidies or public funds.

Karsti apartment building. Credit Neiman Taber Architects

Rent Levels

Current Market Rate Rents in Co-Living / Congregate Residences*

- \$850 - \$950 for sleeping rooms in congregate residence style buildings
- \$1,150 - \$1,250 range for the smallest units in SEDU style buildings

Comparison to Rent for Subsidized Rent- and Income-Restricted Housing**

- \$1,054 is the maximum allowable rent for a studio unit that is affordable to a household with 40% of AMI
- For most of the City's affordable housing programs, small units less than 400 sq. ft. are required to serve households at the 40% AMI level.

• From a scan of online listings in August, 2024 of known buildings in Seattle

** From Office of Housing 2024 Income and Rent Limits, city-funded rental housing.

Yobi building. Credit Neiman Taber Architects.

Expected Effects of the Legislation

- Encourages the Co-housing/Congregate Residence model in more areas
- Likely increase to production in Lowrise (LR) multifamily zones
 - LR zones are typically in Urban Villages or along arterial roads
 - Key areas: Capitol Hill, Ballard, Fremont, Columbia City
- Co-housing/Congregate Residences usually do not have on-site parking
- Increased production expected in areas within 0.5 miles of major transit stops, not already in an urban village or center

Future Considerations

- **Significant land use code changes are expected in the next two years.**
- **Changes will expand "middle housing" locations following 2023/2024 State legislation, including HB 1110.**
- **Updates to Neighborhood Residential (NR - formerly Single Family) zones are underway as part of the Comprehensive Plan update.**
- **New plan will enable zoning changes for greater housing variety and density in NR zones.**
- **Compliance with ESSB 1998 for co-housing/congregate residences is required.**
- **Intent to integrate new allowances for co-housing/congregate residences in forthcoming update to NR zone regulations.**

SEATTLE CITY COUNCIL

August 5, 2024

PUBLIC HEARING ON Co-Living Housing Congregate Residences Land Use Code Amendments

The Seattle City Council's Land Use Committee will hold a public hearing on Wednesday, September 4, 2024 on Council Bill 120822, a bill that would remove restrictions and limitations on the construction of congregate residences primarily in Lowrise (LR) and Midrise (MR) multifamily zones, and Commercial and Neighborhood Commercial 1 and 2 (C1, C2, NC1, NC2) zones. The changes to the code are intended to put Seattle in compliance with Engrossed Substitute House Bill 1998, passed in the Washington State 2024 legislative session.

The proposed bill would make the following changes:

- Amend allowable use tables to make congregate residence an allowed use on any lot that allows for at least six multifamily residential units, which includes LR, MR, and HR multifamily zones and all C and NC zones;
- Remove minimum development standards for configuration and features of living spaces in congregate residences including standards for communal areas, common food preparation areas, and food preparation in sleeping rooms;
- Remove parking requirements for congregate residences in all frequent transit served areas; and
- Update the definition of congregate residence to better match language and terminology of State legislation.

Councilmembers may adopt the legislation as proposed or amend the legislation to mitigate impacts of the proposal.

PUBLIC HEARING

The City Council's Land Use Committee will hold a public hearing on the proposed bill on Wednesday, September 4, 2024, at 2:00 pm.

The hearing will be held in the:

City Council Chambers
2nd floor, Seattle City Hall
600 Fourth Avenue

Persons who wish to participate in or attend the hearing may be offered the opportunity to do so remotely. If this is the case, the City will provide instructions in the meeting agenda on how to participate remotely. Please check the Land Use Committee agenda a few days prior to the meeting at <http://www.seattle.gov/council/committees>.

Print and communications access is provided on prior request. Please contact Naomi Lewis at 206-833-7218 or via e-mail at: Naomi.Lewis2@seattle.gov as soon as possible to request accommodations for a disability.

Questions concerning the public hearing may be directed to Naomi Lewis in Councilmember Tammy Morales' office, by calling 206-833-7218 or via e-mail at: Naomi.Lewis2@seattle.gov.

WRITTEN COMMENTS

Written comments on the legislation will be accepted until noon on Wednesday, September 4, 2024. Please send comments to Councilmember Tammy Morales office, via e-mail at: Tammy.Morales@seattle.gov, or by mail to:

Councilmember Tammy Morales
Seattle City Council
600 4th Avenue, 2nd Floor
PO Box 34025
Seattle, WA 98124-4025

INFORMATION AVAILABLE

Copies of the proposed bill may be obtained from: [CB 120822](#)

Questions regarding the legislation may be directed to Geoff Wentlandt in the City of Seattle Office of Planning and Community Development at (206) 684-3586 or via e-mail at geoffrey.wentlandt@seattle.gov or Lish Whitson at the City Council Central Staff at (206) 615-1674 or via email at lish.whitson@seattle.gov.

File #: CB 120823, **Version:** 1

AN ORDINANCE relating to land use and zoning; correcting typographical errors, correcting section references, clarifying regulations, and making minor amendments; amending Sections 23.22.066, 23.22.100, 23.24.010, 23.28.020, 23.34.009, 23.34.093, 23.40.002, 23.41.004, 23.41.012, 23.42.058, 23.42.060, 23.42.130, 23.44.014, 23.44.016, 23.44.020, 23.44.041, 23.45.510, 23.45.516, 23.45.528, 23.45.529, 23.45.545, 23.47A.004, 23.47A.010, 23.47A.011, 23.47A.020, 23.48.005, 23.48.225, 23.48.720, 23.49.002, 23.49.008, 23.49.025, 23.49.042, 23.49.058, 23.49.090, 23.49.142, 23.49.162, 23.49.300, 23.49.320, 23.49.338, 23.50.002, 23.50.012, 23.50.044, 23.53.006, 23.53.015, 23.53.030, 23.54.015, 23.54.030, 23.55.032, 23.58C.035, 23.66.110, 23.66.122, 23.66.322, 23.69.002, 23.69.032, 23.69.033, 23.69.034, 23.71.006, 23.84A.006, 23.84A.008, 23.84A.016, 23.84A.025, 23.84A.030, 23.84A.032, 23.84A.038, 25.05.444, 25.05.675, 25.05.714, 25.09.045, 25.09.160, 25.11.020, 25.11.030, 25.11.040, 25.11.050, 25.11.060, 25.11.070, 25.16.080, 25.16.115, 25.16.150, 25.22.070, 25.22.135, 25.24.060, 25.28.230, and 25.28.290 of the Seattle Municipal Code.

The full text of the bill is attached to the legislative file.

CITY OF SEATTLE

ORDINANCE _____

COUNCIL BILL _____

AN ORDINANCE relating to land use and zoning; correcting typographical errors, correcting section references, clarifying regulations, and making minor amendments; amending Sections 23.22.066, 23.22.100, 23.24.010, 23.28.020, 23.34.009, 23.34.093, 23.40.002, 23.41.004, 23.41.012, 23.42.058, 23.42.060, 23.42.130, 23.44.014, 23.44.016, 23.44.020, 23.44.041, 23.45.510, 23.45.516, 23.45.528, 23.45.529, 23.45.545, 23.47A.004, 23.47A.010, 23.47A.011, 23.47A.020, 23.48.005, 23.48.225, 23.48.720, 23.49.002, 23.49.008, 23.49.025, 23.49.042, 23.49.058, 23.49.090, 23.49.142, 23.49.162, 23.49.300, 23.49.320, 23.49.338, 23.50.002, 23.50.012, 23.50.044, 23.53.006, 23.53.015, 23.53.030, 23.54.015, 23.54.030, 23.55.032, 23.58C.035, 23.66.110, 23.66.122, 23.66.322, 23.69.002, 23.69.032, 23.69.033, 23.69.034, 23.71.006, 23.84A.006, 23.84A.008, 23.84A.016, 23.84A.025, 23.84A.030, 23.84A.032, 23.84A.038, 25.05.444, 25.05.675, 25.05.714, 25.09.045, 25.09.160, 25.11.020, 25.11.030, 25.11.040, 25.11.050, 25.11.060, 25.11.070, 25.16.080, 25.16.115, 25.16.150, 25.22.070, 25.22.135, 25.24.060, 25.28.230, and 25.28.290 of the Seattle Municipal Code.

BE IT ORDAINED BY THE CITY OF SEATTLE AS FOLLOWS:

Section 1. Section 23.22.066 of the Seattle Municipal Code, last amended by Ordinance 124378, is amended as follows:

23.22.066 Technical standards for final plat

* * *

C. The description, dedication, acknowledgment, certificates of the Director of Finance and Administrative Services and County official performing the duties of the County Treasurer, certificates of approval by the Director of Transportation, the City Clerk, and the Director, and recording certificate must meet standards promulgated by the Director. ~~((, shall be lettered with india ink or substantially equivalent lettering material and shall be substantially in the form set forth in the Director of Transportation's Subdivision Manual.))~~

* * *

Section 2. Section 23.22.100 of the Seattle Municipal Code, last amended by Ordinance 126157, is amended as follows:

1 **23.22.100 Design standards**

2 Except as provided in Section 23.22.106, design of all subdivisions shall conform to the
3 standards set forth in this Section 23.22.100:

4 A. Streets and ~~((Alleys-))~~ alleys

5 1. All subdivisions shall be served by one or more streets providing adequate
6 ingress and egress to and from the subdivision.

7 2. New streets within each subdivision shall conform to the City's thoroughfare
8 and circulation plans and shall provide for the continuation of streets that serve the property
9 contiguous to the subdivision. Streets serving lots on two sides shall be at least 60 feet wide
10 unless a narrower street is warranted by special physical circumstances as determined by the
11 Director, in consultation with the Director of Transportation, or as specified in ~~((Section 3.1.2b~~
12 ~~((for nonarterial streets) or 3.1.1a (for arterials) 3.1 of))~~ the ~~((Seattle))~~ Right-of-Way
13 Improvements Manual.

14 3. Street intersections shall be as nearly at right angles as practicable and in no
15 event shall the angle formed be less than 30 degrees.

16 4. A cul-de-sac shall be designed according to the ~~((Seattle))~~ Right-of-Way
17 Improvements Manual to provide a circular turnaround at the closed end. A tee or other
18 reasonable alternative may be authorized by the Hearing Examiner in lieu of the turnaround. Cul-
19 de-sac streets shall not exceed 450 feet in length and the right-of-way shall be at least 50 feet
20 wide, except under special circumstances a lesser width is permitted.

21 5. Street networks shall provide ready access for fire and other emergency
22 vehicles and equipment, and routes of escape for inhabitants.

1 D. ~~((Name))~~ The name and address of owner(s) of the property involved.

2 * * *

3 Section 5. Section 23.34.009 of the Seattle Municipal Code, last amended by Ordinance
4 124883, is amended as follows:

5 **23.34.009 Height limits of the proposed rezone**

6 If a decision to designate height limits in residential, commercial, or industrial zones is
7 independent of the designation of a specific zone, in addition to the general rezone criteria of
8 Section 23.34.008, the following shall apply:

9 * * *

10 D. Compatibility with surrounding area

11 1. Height limits for an area shall be compatible with actual and zoned heights in
12 surrounding areas excluding buildings developed under Major Institution height limits; height
13 limits permitted by the underlying zone, rather than heights permitted by the Major Institution
14 designation, shall be used for the rezone analysis.

15 2. A gradual transition in height and scale and level of activity between zones
16 shall be provided unless major physical buffers, as described in subsection ~~((23.34.008.D.2))~~
17 23.34.008.E.2, are present.

18 * * *

19 Section 6. Section 23.34.093 of the Seattle Municipal Code, enacted by Ordinance
20 117430, is amended as follows:

21 **23.34.093 General Industrial 2 (IG2) zone, function, and locational criteria~~((r))~~**

22 * * *

1 B. Locational (~~(Criteria)~~) criteria. General Industrial 2 zone designation is most
2 appropriate in areas generally characterized by the following:

3 1. Areas that are developed with industrial activity or a mix of industrial activity
4 and a wide range of commercial uses;

5 2. Areas where facilities(~~(, such as the Kingdome or Design Center,))~~ have
6 established a more commercial character for the surroundings and have created the need for a
7 broader mix of support uses;

8 3. Areas with adequate access to the existing and planned neighborhood
9 transportation network; where additional trips generated by increased commercial densities can
10 be accommodated without conflicting with the access and circulation needs of industrial activity;

11 4. Areas where increased commercial densities would allow the economic reuse
12 of small sites and existing buildings no longer suited to current industrial needs;

13 5. Areas that, because of their size and isolation from a larger industrial area due
14 to separation by another type of zone or major physical barrier, such as an arterial or waterway,
15 can accommodate more nonindustrial activity without conflicting with the industrial function of
16 the larger industrial area;

17 6. Large areas with generally flat topography;

18 7. Areas platted into large parcels of land.

19 * * *

20 Section 7. Section 23.40.002 of the Seattle Municipal Code, last amended by Ordinance
21 126042, is amended as follows:

22 **23.40.002 Conformity with regulations required**

1 A. The establishment or change of use of any structures, buildings or premises, or any
2 part thereof, requires approval according to the procedures in Chapter 23.76 except:

3 1. Establishment of an urban farm or community garden that does not include
4 major ~~((marijuana))~~ cannabis activity ~~((as defined in Section 23.84A.025))~~ and that is permitted
5 outright under the provisions of this Title 23 applicable to the lot;

6 2. As permitted in subsections 23.47A.004.E and 23.47A.004.F;

7 3. Keeping of animals as permitted under Section 23.42.052;

8 4. Reinstatement of a use interrupted by a temporary use authorized pursuant to
9 Section 23.42.040;

10 5. Establishment of a transitional encampment use on property owned or
11 controlled by a religious organization; and

12 6. Uses located entirely within public rights-of-way.

13 * * *

14 Section 8. Section 23.41.004 of the Seattle Municipal Code, last amended by Ordinance
15 126862, is amended as follows:

16 **23.41.004 Applicability**

17 * * *

18 C. Optional design review

19 1. Design review. Development proposals that are not subject to design review
20 may elect to be reviewed pursuant to the full, administrative, or streamlined design review
21 process if:

22 a. The development proposal is in any zone or area identified in subsection
23 23.41.004.A.1 or 23.41.004.A.2 or in the Stadium Transition Area Overlay District, except

1 development that is within a Master Planned Community zone is not eligible for optional design
2 review; and

3 b. The development proposal does not include the uses listed in subsection
4 23.41.004.A.3.

5 2. Administrative design review. According to the applicable process described in
6 Section 23.41.016, administrative design review is optional for a development proposal that is
7 not otherwise subject to this Chapter 23.41 and is on a site that contains ~~((an exceptional))~~ a Tier
8 1 and/or Tier 2 tree, as defined in Section 25.11.130, when the ability to depart from
9 development standards may result in protection of the tree as provided in ~~((Sections))~~ Section
10 25.11.070 ~~((and 25.11.080))~~.

11 * * *

12 Section 9. Section 23.41.012 of the Seattle Municipal Code, last amended by Ordinance
13 126821, is amended as follows:

14 **23.41.012 Development standard departures**

15 * * *

16 B. Departures may be granted from any Land Use Code standard or requirement, except
17 for the following:

18 * * *

19 10. Floor area ratios (FAR), except that:

20 a. In the Pike/Pine Conservation Overlay District shown on Map A for
21 23.73.004, departures from the development standards for floor area exemptions from FAR
22 calculations in subsection 23.73.009.C and for retention of a character structure on a lot in
23 Section 23.73.015 are allowed;

1 b. Departures of up to an additional 0.5 FAR may be granted if the
2 applicant demonstrates that:

3 1) The departure is needed to protect a tree that is located on the lot
4 that is either ~~((an exceptional))~~ a Tier 1 or Tier 2 tree, as defined in Section 25.11.130~~((, or a tree~~
5 ~~greater than 2 feet in diameter measured 4.5 feet above the ground))~~); and

6 2) Avoiding development in the tree protection area will reduce the
7 total development capacity of the site;

8 11. Structure height, except that:

9 a. Within the Roosevelt Commercial Core building height departures up to
10 an additional 3 feet may be granted for properties zoned NC3-75 (Map A for 23.41.012,
11 Roosevelt Commercial Core);

12 b. Within the Uptown Urban Center building height departures up to 3 feet
13 of additional height may be granted if the top floor of the structure is set back at least 6 feet from
14 all lot lines abutting streets;

15 c. Within the Queen Anne Residential Urban Village and Neighborhood
16 Commercial zones as shown on Map B for 23.41.012, Upper Queen Anne Commercial Areas,
17 building height departures up to 3 feet of additional height may be granted if the top floor of the
18 structure is set back at least 6 feet from all lot lines abutting streets;

19 d. Within the PSM 85-120 zone in the area shown on Map A for
20 23.49.180, departures may be granted from development standards that apply as conditions to
21 additional height, except for floor area ratios and provisions for adding bonus floor area above
22 the base FAR;

1 e. Within the Pike/Pine Conservation Overlay District shown on Map A
2 for 23.73.004, departures may be granted from:

3 1) Development standards that apply as conditions to additional
4 height in subsections 23.73.014.A and 23.73.014.B; and

5 2) The provision for receiving sites for transfer of development
6 potential in subsection 23.73.024.B.5;

7 f. Departures of up to 10 feet of additional height may be granted if the
8 applicant demonstrates that:

9 1) The departure is needed to protect a tree that is located on the lot
10 that is either ~~((an exceptional))~~ a Tier 1 or Tier 2 tree, as defined in Section 25.11.130~~((, or a tree~~
11 ~~greater than 2 feet in diameter measured 4.5 feet above the ground))~~); and

12 2) Avoiding development in the tree protection area will reduce the
13 total development capacity of the site;

14 g. In Midrise and Highrise zones, Seattle Mixed, and in all commercial
15 and Downtown zones, departures for rooftop features may be granted from rooftop coverage
16 limits and setback standards from the roof edge, but not from the height limits for rooftop
17 features.

18 * * *

19 Section 10. Section 23.42.058 of the Seattle Municipal Code, last amended by Ordinance
20 126509, is amended as follows:

21 **23.42.058 ((~~Marijuana~~)) Cannabis**

22 A. Major ~~((marijuana))~~ cannabis activity is prohibited in any dwelling unit, regardless of
23 the zone in which the dwelling unit is located, except that major ~~((marijuana))~~ cannabis activity

1 is allowed in caretaker's quarters unless the quarters are located in a zone or district identified in
2 subsection 23.42.058.B.

3 B. Major (~~(marijuana)~~) cannabis activity is prohibited in the following zones and
4 districts:

- 5 1. Neighborhood residential zones;
- 6 2. Multifamily zones;
- 7 3. Neighborhood Commercial 1 (NC1) zones;
- 8 4. Pioneer Square Mixed (PSM);
- 9 5. International District Mixed (IDM);
- 10 6. International District Residential (IDR);
- 11 7. Downtown Harborfront 1 (DH1);
- 12 8. Downtown Harborfront 2 (DH2);
- 13 9. Pike Market Mixed (PMM);
- 14 10. Ballard Avenue Landmark District;
- 15 11. Columbia City Landmark District;
- 16 12. Fort Lawton Landmark District;
- 17 13. Harvard-Belmont Landmark District;
- 18 14. International Special Review District;
- 19 15. Pike Place Market Historical District;
- 20 16. Pioneer Square Preservation District;
- 21 17. Sand Point Overlay District; or
- 22 18. Stadium Transition Area Overlay District.

1 C. Major ((~~marijuana~~)) cannabis activity is allowed in all other zones if the activity and
2 site meet the following requirements:

3 1. The person operating the major ((~~marijuana~~)) cannabis activity must have a
4 current license issued by the State of Washington pursuant to Title 69 RCW authorizing the
5 person to produce, process, or sell, at the proposed site, ((~~marijuana~~)) cannabis, ((~~marijuana~~))
6 cannabis-infused products, useable ((~~marijuana~~)) cannabis, or ((~~marijuana~~)) cannabis
7 concentrates, or to research or test any of those products at the proposed site for quality
8 assurance pursuant to Title 69 RCW;

9 2. Any lot line of property having a major ((~~marijuana~~)) cannabis activity must be
10 1,000 feet or more from any lot line of property on which any of the following uses as defined in
11 WAC 314-55-010 is located: elementary school; secondary school; or playground;

12 3. Any lot line of property having a major ((~~marijuana~~)) cannabis activity that
13 includes the retail sale of ((~~marijuana~~)) cannabis products, except that in Downtown Mixed
14 Residential and Downtown Mixed Commercial zones within that portion of the Downtown
15 Urban Center that is west of Interstate 5, north of Yesler Way, and south of Denny Way major
16 ((~~marijuana~~)) cannabis activity that includes the retail sale of ((~~marijuana~~)) cannabis products
17 must be 250 feet or more, must be 500 feet or more from any lot line of property on which any of
18 the following uses as defined in WAC 314-55-010 is established and operating: child care center;
19 game arcade; library; public park; public transit center; or recreation center or facility;

20 4. Any lot line of property having a major ((~~marijuana~~)) cannabis activity that
21 does not include the retail sale of ((~~marijuana~~)) cannabis products must be 250 feet or more from
22 any lot line of property on which any of the following uses as defined in WAC 314-55-010 is

1 established and operating: child care center; game arcade; library; public park; public transit
2 center; or recreation center or facility;

3 5. No more than two properties with major ~~((marijuana))~~ cannabis activity that
4 includes the retail sale of ~~((marijuana))~~ cannabis products are allowed within 1000 feet of each
5 other; where any lot lines of two properties with existing major ~~((marijuana))~~ cannabis activity
6 that includes the retail sale of ~~((marijuana))~~ cannabis products are located within 1000 feet of
7 each other, any lot line of another property with a new major ~~((marijuana))~~ cannabis activity that
8 includes the retail sale of ~~((marijuana))~~ cannabis products must be 1000 feet or more from the
9 closest lot line of the property containing existing major ~~((marijuana))~~ cannabis activity that
10 includes the retail sale of ~~((marijuana))~~ cannabis products;

11 6. Whether a major ~~((marijuana))~~ cannabis activity complies with the locational
12 requirements prescribed by subsections 23.42.058.C.2, 23.42.058.C.3, 23.42.058.C.4, or
13 23.42.058.C.5 shall be based on facts that exist on the date of application to the Washington
14 State Liquor and Cannabis Board issues a "Notice of ~~((Marijuana))~~ Cannabis Application" to The
15 City of Seattle.

16 * * *

17 Section 11. Section 23.42.060 of the Seattle Municipal Code, enacted by Ordinance
18 125483, is amended as follows:

19 **23.42.060 Short-term rentals**

20 Short-term rental uses are subject to the following provisions:

21 * * *

22 ~~((D. Number of residents and guests. The total number of residents and guests occupying
23 a dwelling unit that includes a short term rental may not exceed the maximum number of~~

1 ~~residents allowed in a household by this code. For sites with an accessory dwelling unit, the total~~
2 ~~number of residents and guests occupying both the dwelling unit and any accessory dwelling~~
3 ~~units may not exceed the number of residents allowed for a household.))~~

4 ~~E.))~~ D. Short-term rental uses may display signs identifying the use if the signs are
5 permitted by Chapter 23.55.

6 ~~((F.))~~ E. If a short-term rental operator provides breakfast, light snacks, or both to guests,
7 the facility and operator must meet applicable health and safety regulations including but not
8 limited to regulations of Public Health—Seattle & King County and the Washington State
9 Department of Health.

10 ~~((G.))~~ F. Notwithstanding Sections 23.42.100, 23.42.102, and 23.42.104, short-term
11 rental uses, as defined in Section 23.84A.024, in existence prior to ~~((the effective date of the~~
12 ~~Ordinance introduced as Council Bill 119082))~~ January 7, 2018 shall comply with the
13 requirements of this Chapter 23.42 no later than ~~((one year from the effective date of the~~
14 ~~Ordinance introduced as Council Bill 119082))~~ January 7, 2019.

15 Section 12. Section 23.42.130 of the Seattle Municipal Code, last amended by Ordinance
16 126509, is amended as follows:

17 **23.42.130 Nonconforming solar collectors**

18 The installation of solar collectors that do not conform to development standards or that increase
19 an existing nonconformity may be permitted as follows:

20 A. In neighborhood residential zones, pursuant to subsection 23.44.046.B ~~((of Section~~
21 ~~23.44.046))~~;

22 B. In multifamily zones, pursuant to ~~((Section 23.45.582))~~ subsection 23.45.545.E;

23 C. In NC zones or C zones, pursuant to subsection ~~((Section))~~ 23.47A.012.E.

* * *

Section 13. Section 23.44.014 of the Seattle Municipal Code, last amended by Ordinance 126685, is amended as follows:

23.44.014 Yards

* * *

C. Exceptions from standard yard requirements. No structure shall be placed in a required yard except as follows:

* * *

5. Uncovered porches or steps. Uncovered, unenclosed porches or steps may project into any required yard, if the surface of porches or steps are no higher than 4 feet above existing grade, no closer than 3 feet to any side lot line, and has a width and depth no greater than 6 feet within the required yard. For each entry to a principal structure, one uncovered, unenclosed porch and/or associated steps are permitted in ~~((the))~~ each required ~~((yards))~~ yard.

* * *

18. A structure may be permitted to extend into front and rear yards as necessary to protect ~~((exceptional trees and trees over 2 feet in diameter pursuant to Section 25.11.060))~~ a Tier 1 or Tier 2 tree, as defined in Section 25.11.130.

* * *

D. Additional standards for structures if allowed in required yards. Structures in required yards shall comply with the following:

1. Accessory structures, attached garages, and portions of a principal structure shall not exceed a maximum combined coverage of 40 percent of the required rear yard, except that a detached accessory dwelling unit may cover an additional 20 percent of the rear yard

1 provided that the increased rear yard coverage does not require removal of any (~~exceptional~~
2 ~~trees or trees over 2 feet in diameter measured 4.5 feet above the ground~~) Tier 1 or Tier 2 tree.

3 In the case of a rear yard abutting an alley, rear yard coverage shall be calculated from the
4 centerline of the alley.

5 * * *

6 E. Separations between multiple structures in RSL zones

7 * * *

8 4. Fences shall be allowed in the separation between principal structures provided
9 they meet the development standards in subsection 23.44.014.C.10.

10 * * *

11 Section 14. Section 23.44.016 of the Seattle Municipal Code, last amended by Ordinance
12 126821, is amended as follows:

13 **23.44.016 Parking and garages**

14 * * *

15 B. Access to parking

16 * * *

17 2. Access to parking is permitted through a required yard abutting a street only if
18 the Director determines that one of the following conditions exists:

19 a. There is no alley improved to the standards of subsection 23.53.030.C,
20 and there is no unimproved alley in common usage that currently provides access to parking on
21 the lot or to parking on adjacent lots in the same block; or

22 b. Existing topography does not permit alley access; or

1 c. At least 50 percent of alley frontage abuts property in a non-residential
2 zone; or

3 d. The alley is used for loading or unloading by an existing non-residential
4 use; or

5 e. Due to the relationship of the alley to the street system, use of the alley
6 for parking access would create a significant safety hazard; or

7 f. Parking access must be from the street in order to provide access to a
8 parking space that complies with the Seattle Building Code, Chapter 11; or

9 g. Providing alley access would require removal of a tree on private
10 property that is ~~((an exceptional tree or a tree greater than 2 feet in diameter measured 4.5 feet~~
11 ~~above the ground, provided that a permanent covenant meeting the standard in subsection~~
12 ~~25.11.050.C is recorded and all other applicable criteria for tree protection in Chapter 25.11 are~~
13 ~~met)) a Tier 1 or Tier 2 tree, as defined in Section 25.11.130.~~

14 * * *

15 F. Appearance of garages

16 * * *

17 3. Exemptions

18 a. Garages allowed under subsections 23.44.016.D.9, 23.44.016.D.10,
19 23.44.016.D.11, and 23.44.016.D.12 are not subject to the standards of this subsection
20 23.44.016.F.

21 b. Garages that are set back more than 35 feet from the front lot line are
22 not subject to the standards of this subsection 23.44.016.F.

1 c. The Director may waive or modify the standards of this subsection
2 23.44.016.F based on one or more of the following factors:

- 3 1) Irregular lot shape;
- 4 2) Topography of the lot;
- 5 3) Configuration of proposed or existing structures on the lot;
- 6 4) Location of ((~~exceptional~~)) Tier 1 or Tier 2 trees as defined in
7 Section 25.11.130; and

8 5) The proposed structure or addition has design features including
9 but not limited to modulation, screening, and landscaping.

10 * * *

11 Section 15. Section 23.44.020 of the Seattle Municipal Code, last amended by Ordinance
12 126821, is amended as follows:

13 **23.44.020 Tree requirements**

14 * * *

15 B. Tree requirements in RSL zones

16 1. Trees sufficient to achieve one point, according to Table A for 23.44.020, per
17 500 square feet of lot area shall be provided for any development:

- 18 a. Containing one or more new dwelling units;
- 19 b. Containing more than 4,000 square feet of non-residential uses in either
20 a new structure or an addition to an existing structure; or
- 21 c. Expanding surface area parking by more than 20 parking spaces for
22 automobiles.

1 2. Individual trees preserved during construction or planted after construction,
2 excluding street trees, count toward the tree score according to Table A for 23.44.020. All
3 required trees shall meet standards promulgated by the Director to provide for the long-term
4 health, viability, and coverage of plantings. These standards may include, but are not limited to,
5 the type and size of plants, spacing of plants, depth, and quality of soil, access to light and air,
6 and protection practices during construction.

Table A for 23.44.020 Tree points		
Type of tree	Points for ((non-conifer)) <u>deciduous</u> trees	Points for ((conifer)) <u>evergreen</u> trees
Small tree planted after construction	1 point	1.25 point
Small/medium tree planted after construction	2 points	2.5 points
Medium/large tree planted after construction	3 points	3.75 points
Large tree planted after construction	4 points	5 points
Trees 6 inches in diameter or greater that are preserved during construction	1 point per inch of diameter	1.25 point per inch of diameter

7
8 3. Tree protection areas shall be designated for all trees that are proposed to be
9 preserved to receive points under this subsection ((~~23.49.020.B~~)) 23.44.020.B. No excavation,
10 fill, placing of materials or equipment, or vehicle operation shall be allowed during construction
11 within a tree protection area. Tree protection areas shall be an area equal to the outer extent of
12 the dripline of the tree, except that they may be reduced if the following conditions are met:

13 a. A certified arborist has submitted and received approval for a plan
14 providing the rationale used to demonstrate that the alternate method provides an adequate level
15 of protection based on visiting the site and examining the specific tree’s size, location, and extent

1 of root cover, evaluating the tree’s tolerance to construction impact based on its species and
2 health, and identifying any past impacts that have occurred within the root zone; and

3 b. The alternative tree protection area is prepared under the supervision of
4 the certified arborist.

5 4. The owner of the subject lot is required to ensure that the trees planted remain
6 healthy for at least five years after inspection by the City and the owner of the subject lot shall be
7 responsible for replacing any trees that do not remain healthy after inspection by the City.

8 C. Street tree requirements

9 1. Street trees are required for development that would add one or more principal
10 dwelling units on a lot, except as provided in subsection 23.44.020.C.2 and Section 23.53.015.

11 Existing street trees shall be retained unless the Director of Transportation approves their
12 removal. The Director, in consultation with the Director of Transportation, shall determine the
13 number, type, and placement of additional street trees to be provided in order to:

- 14 a. Improve public safety;
- 15 b. Promote compatibility with existing street trees;
- 16 c. Match trees to the available space in the planting strip;
- 17 d. Maintain and expand the urban forest canopy;
- 18 e. Encourage healthy growth through appropriate spacing;
- 19 f. Protect utilities; and
- 20 g. Allow access to the street, buildings, and lot.

21 2. Exceptions to street tree requirements

22 a. If a lot borders an unopened right-of-way, the Director may reduce or
23 waive the street tree requirement along that right-of-way as a Type I decision if, after

1 consultation with the Director of Transportation, the Director determines that the right-of-way is
2 unlikely to be opened or improved.

3 b. If it is not feasible to plant street trees in a right-of-way planting strip, a 5-foot setback
4 shall be planted with street trees along the street lot line that abuts the required front yard, or
5 landscaping other than trees shall be provided in the planting strip, subject to approval by the
6 Director of the Seattle Department of Transportation. If, according to the Director of the
7 Department of Transportation, a 5-foot setback or landscaped planting strip is not feasible, the
8 Director may reduce or waive this requirement as a Type I decision.

9 Section 16. Section 23.44.041 of the Seattle Municipal Code, last amended by Ordinance
10 126855, is amended as follows:

11 **23.44.041 Accessory dwelling units**

12 * * *

13 C. Detached accessory dwelling units. Detached accessory dwelling units are subject to
14 the following additional conditions:

15 1. Detached accessory dwelling units are required to meet the additional
16 development standards set forth in Table A for 23.44.041.

Table A for 23.44.041 Development standards for detached accessory dwelling units ^{1, 2}	
a. Minimum lot size	3,200 square feet
b. Minimum lot width	25 feet
c. Minimum lot depth	70 feet ³
d. Maximum lot coverage	Detached accessory dwelling units are subject to the requirements governing maximum lot coverage and lot coverage exceptions in subsections 23.44.010.C and 23.44.010.D.
e. Maximum rear yard coverage	Detached accessory dwelling units, together with any other accessory structures and other portions of the principal structure, are subject to the

	requirements governing maximum rear yard coverage exceptions in subsections 23.44.014.D.			
f. Maximum size	The gross floor area of a detached accessory dwelling unit may not exceed 1,000 square feet excluding garage and exterior-only accessed storage areas, covered porches and covered decks that are less than 25 square feet in area, and gross floor area that is underground. Up to 35 square feet of floor area dedicated to long-term bicycle parking shall be exempt from the gross floor area calculation for a detached accessory dwelling unit.			
g. Front yard	A detached accessory dwelling unit may not be located within the front yard required by subsection 23.44.014.B, except on a through lot pursuant to Section 23.40.030 or Section 23.40.035.			
h. Minimum side yard	A detached accessory dwelling unit may not be located within the side yard required by subsection 23.44.014.B except as provided in subsection 23.44.014.C.3 or 23.44.014.C.4. ⁴			
i. Minimum rear yard	A detached accessory dwelling unit may be located within a required rear yard if it is not within 5 feet of any lot line, unless the lot line is adjacent to an alley, in which case a detached accessory dwelling unit may be located at that lot line. ^{4, 5, 6, 11}			
j. Location of entry	If the entrance to a detached accessory dwelling unit is located on a facade facing a side lot line or a rear lot line, the entrance may not be within 10 feet of that lot line unless that lot line abuts an alley or other public right-of-way.			
k. Maximum height limits ^{7, 8, 9}	Lot width (feet)			
	Less than 30	30 up to 40	40 up to 50	50 or greater
(1) Base structure height limit (in feet) ^{10, 11}	14	16	18	18
(2) Height allowed for pitched roof above base structure height limit (in feet)	3	7	5	7
(3) Height allowed for shed or butterfly roof above base structure height limit (in feet); see Exhibit A for 23.44.041	3	4	4	4
l. Minimum separation from principal structure	5 feet including eaves and gutters of all structures			

Footnotes to Table A for 23.44.041

¹ The Director may allow an exception to standards a through f and h through k pursuant to subsection 23.44.041.C.2, for converting existing accessory structures to a detached accessory dwelling unit, including additions to an existing accessory structure.

² The Director may allow an exception to standards i and j if the exception allows for the preservation of ~~((an exceptional tree or a tree over 2 feet in diameter measured 4.5 feet above the ground))~~ a Tier 1 or Tier 2 tree, as defined in Section 25.11.130.

³ For lots that do not meet the lot depth requirement but have a greater width than depth and an area greater than 5,000 square feet, a detached accessory dwelling unit is permitted, provided the detached accessory dwelling unit is not located in a required yard.

⁴ ~~((External))~~ Except for properties with a rear lot line adjacent to an alley, external architectural details with no living area, such as chimneys, eaves, cornices, and columns, may project no closer than 3 feet from any lot line. Bay windows are limited to 8 feet in width and may project no closer than 3 feet from any lot line. Other projections that include interior space, such as garden windows, must start a minimum of 30 inches above the finished floor, have a maximum dimension of 6 feet in height and 8 feet in width, and project no closer than 3 feet from any lot line.

⁵ If the lot line is adjacent to an alley and a detached accessory dwelling unit includes a garage with a vehicle entrance that faces the alley, the garage portion of the structure may not be located within 12 feet of the centerline of the alley.

⁶ On a reversed corner lot, no detached accessory dwelling unit shall be located in that portion of the required rear yard that abuts the required front yard of the adjoining key lot.

⁷ Features such as chimneys, antennas, and flagpoles may extend up to 4 feet above the maximum allowed height.

⁸ Projections that accommodate windows and result in additional interior space, including dormers, clerestories, and skylights, may extend no higher than the ridge of a pitched roof permitted pursuant to standard k if all conditions of subsection 23.44.012.C.3 are satisfied.

⁹ Any structure with a green roof or other features necessary to meet a green building standard, as defined by the Director by rule, may extend up to 2 feet above the maximum allowed height.

¹⁰ Open railings that accommodate roof decks may extend 4 feet above the base structure height limit.

¹¹ Attached decks that are portions of a detached accessory dwelling unit are allowed in the required rear yard and up to the applicable height limit, including additions allowed to a detached accessory dwelling unit under subsection 23.44.014.C.4.

Exhibit A for 23.44.041

Additional roof pitch height and base height limit

2. Conversion of accessory structures. An existing accessory structure that is not located in a required front yard, or that is located in a front yard where Section 23.40.030 or 23.40.035 applies, may be converted into a detached accessory dwelling unit if the structure complies with the minimum standards set forth in Sections 22.206.020 through 22.206.140 and with the Seattle Residential Code, if work requiring a permit is performed on the structure or has previously been performed without a permit. To allow the conversion of an existing accessory structure, the Director may allow an exception to one or more of the development standards for accessory dwelling units contained in standards a through f, and h through k, listed in Table A for 23.44.041. These exceptions also apply to any additions to an existing accessory structure. An existing accessory structure may be converted if the applicant can demonstrate that the accessory structure existed prior to December 31, 2017, as an accessory structure. If an accessory

1 structure existing prior to December 31, 2017, was replaced to the same configuration in
2 accordance with the standards of Section 23.42.112, then the replacement structure also qualifies
3 for conversion under this subsection 23.44.041.C.2. For purposes of this subsection
4 23.44.041.C.2, the term "conversion" means either keeping the accessory structure intact or
5 removing and rebuilding the accessory structure(~~(, provided that any expansion or relocation of~~
6 ~~the accessory structure complies with the development standards for detached accessory~~
7 ~~dwelling units)).~~

8 * * *

9 Section 17. Section 23.45.510 of the Seattle Municipal Code, last amended by Ordinance
10 126855, is amended as follows:

11 **23.45.510 Floor area**

12 * * *

13 D. The following floor area is exempt from FAR limits:

14 * * *

15 4. Portions of a story that extend no more than 4 feet above existing or finished
16 grade, whichever is lower, excluding access, (see Exhibit A for 23.45.510), in the following
17 circumstances:

18 a. ~~((Apartments))~~ All residential structures in LR zones, except as
19 provided in subsection 23.45.510.D.4.b;

20 b. Rowhouse and townhouse developments in LR zones, provided that
21 all parking is located at the rear of the structure or is enclosed in structures with garage
22 entrances located on the rear facade; and

23 c. All multifamily structures in MR and HR zones.

Section 18. Section 23.45.516 of the Seattle Municipal Code, last amended by Ordinance 126855, is amended as follows:

23.45.516 Method to achieve extra residential floor area in HR zones

* * *

E. Neighborhood green street setback. Floor area may be gained for a neighborhood green street setback according to the provisions of Chapter 23.58A by development on lots abutting one of the streets or street segments within the First Hill Urban Village shown on Map A for 23.45.516.

F. Neighborhood open space. In HR zones, subject to the limits in this Section 23.45.516 and Chapter 23.58A, extra residential floor area may be gained through a voluntary agreement to provide neighborhood open space, according to the provisions of Section 23.58A.040.

Map A for 23.45.516
Neighborhood Green Streets

1
2
3
4

Section 19. Section 23.45.528 of the Seattle Municipal Code, last amended by Ordinance 125791, is amended as follows:

1 **23.45.528 Structure width and depth limits for lots greater than 9,000 square feet in**

2 **Midrise zones**

3 The width and depth limits of this Section 23.45.528 apply to lots greater than 9,000 square feet
4 in MR zones.

5 A. The width of each principal (~~(structures)~~) structure shall not exceed 150 feet.

6 B. Structure depth

7 1. The depth of each principal (~~(structures)~~) structure shall not exceed 80 percent
8 of the depth of the lot, except as provided in subsection 23.45.528.B.2.

9 2. Exceptions to structure depth limit. To allow for front setback averaging and
10 courtyards as provided in Section 23.45.518, structure depth may exceed the limit set in
11 subsection 23.45.528.B.1 if the total lot coverage resulting from the increased structure depth
12 does not exceed the lot coverage that would have otherwise been allowed without use of the
13 courtyard or front setback averaging provisions.

14 * * *

15 Section 20. Section 23.45.529 of the Seattle Municipal Code, last amended by Ordinance
16 126685, is amended as follows:

17 **23.45.529 Design standards**

18 * * *

19 C. Treatment of street-facing facades. For the purposes of this subsection 23.45.529.C, a
20 street-facing facade includes all vertical surfaces enclosing interior space, including gables and
21 dormers, as shown in Exhibit A for 23.45.529.

22 * * *

1 3. The Director may allow exceptions to the facade opening requirements in
2 subsection 23.45.529.C.1 and the facade articulation requirements in subsection 23.45.529.C.2,
3 if the Director determines that the street-facing facade will meet the intent of subsection
4 23.45.529.A.1 (~~and~~) for all housing types, and, as applicable, the intent of subsections
5 23.45.529.E.2, 23.45.529.F.3, and 23.45.529.G.4 for cottage housing developments, rowhouse
6 developments, and townhouse developments, respectively, through one or more of the
7 following street-facing facade treatments:

8 a. Variations in building materials and/or color, or both, that reflect the
9 stacking of stories or reinforce the articulation of the facade;

10 b. Incorporation of architectural features that add interest and dimension
11 to the facade, such as porches, bay windows, chimneys, pilasters, columns, cornices, and/or
12 balconies;

13 c. Special landscaping elements provided to meet Green Factor
14 requirements pursuant to Section 23.45.524, such as trellises, that accommodate vegetated
15 walls covering a minimum of 25 percent of the facade surface;

16 d. Special fenestration treatment, including an increase in the percentage
17 of windows and doors to at least 25 percent of the street-facing facade(s).

18 * * *

19 Section 21. Section 23.45.545 of the Seattle Municipal Code, last amended by Ordinance
20 126600, is amended as follows:

21 **23.45.545 Standards for certain accessory uses**

22 * * *

1 I. (~~In LR zones, accessory~~) Accessory dwelling units are allowed in single-family,
2 rowhouse and townhouse units, as follows:

3 1. One accessory dwelling unit is allowed for each single-family, rowhouse, or
4 townhouse unit that is a "principal unit." A "principal unit" is a dwelling unit that is not an
5 accessory dwelling unit.

6 2. The height limit for a detached accessory dwelling unit is 20 feet, except that
7 the ridge of a pitched roof on a detached accessory dwelling unit may extend up to 3 feet above
8 the 20-foot height limit. All parts of the roof above the height limit shall be pitched at a rate of
9 not less than 4:12. No portion of a shed roof is permitted to extend beyond the 20-foot height
10 limit.

11 3. The maximum gross floor area of an accessory dwelling unit is 650 square feet,
12 provided that the total gross floor area of the accessory dwelling unit does not exceed 40 percent
13 of the total gross floor area in residential use on the lot or unit lot, if present, exclusive of
14 garages, storage sheds, and other non-habitable spaces.

15 4. An accessory dwelling unit shall be located completely within the same
16 structure as the principal unit or in an accessory structure located between the single-family,
17 rowhouse, or townhouse unit and the rear lot line.

18 5. The entrance to an accessory dwelling unit provided within the same structure
19 as the principal unit shall be provided through one of the following configurations:

- 20 a. Through the primary entry to the principal unit; or
21 b. Through a secondary entry on a different facade than the primary entry
22 to the principal unit; or

1 c. Through a secondary entry on the same facade as the primary entry to
 2 the principal unit that is smaller and less visually prominent than the entry to the principal unit,
 3 and does not have a prominent stoop, porch, portico, or other entry feature.

4 6. Exterior stairs. Exterior stairs providing access to an accessory dwelling unit
 5 may not exceed 4 feet in height, except for exterior stairs providing access to an accessory
 6 dwelling unit located above a garage.

7 7. Parking. Parking is not required for an accessory dwelling unit.

8 8. In the Shoreline District, accessory dwelling units in single-family, rowhouse,
 9 and townhouse units shall be as provided in Chapter 23.60A, and where allowed in the Shoreline
 10 District, are also subject to the provisions in this subsection 23.45.545.I.

11 * * *

12 Section 22. Table A for Section 23.47A.004 of the Seattle Municipal Code, which section
 13 was last amended by Ordinance 126626, is amended as follows:

14 **23.47A.004 Permitted and prohibited uses**

15 * * *

16 I. The terms of Table A for 23.47A.004 are subject to any applicable exceptions or
 17 contrary provisions expressly provided for in this Title 23.

- 50 = Permitted, business establishments limited to 50,000 square feet, pursuant to Section 23.47A.010

Footnotes to Table A for 23.47A.004

- ¹ In pedestrian-designated zones, a portion of the street-level street-facing facade of a structure along a designated principal pedestrian street may be limited to certain uses as provided in subsection 23.47A.005.D. In pedestrian-designated zones, drive-in lanes are prohibited (Section 23.47A.028).
- ² In addition to the provisions in this Chapter 23.47A, uses that entail major ((~~marijuana~~) cannabis) activity are subject to the requirements of Section 23.42.058.
- ³ For commercial uses with drive-in lanes, see Section 23.47A.028.
- ⁴ Subject to subsection 23.47A.004.H.
- ⁵ Permitted at Seattle Center.
- ⁶ Bed and breakfasts in existing structures are permitted outright with no maximum size limit.
- ⁷ Medical services over 10,000 square feet within 2,500 feet of a medical Major Institution Overlay boundary require conditional use approval, unless they are included in a Major Institution Master Plan or dedicated to veterinary services.
- ⁸ Medical service uses that are located in an urban center or urban village, which are in operation at such location before August 1, 2015, and that routinely provide medical services on a reduced fee basis to individuals or families having incomes at or below 200 percent of the poverty guidelines updated periodically in the Federal Register by the U.S. Department of Health and Human Services under the authority of 42 USC 9902(2), are limited to 20,000 square feet. This provision does not apply to medical service uses that are subject to a Major

Institution Master Plan.

⁹ Office uses in C1 and C2 zones are permitted up to the greater of 1 FAR or 35,000 square feet as provided in subsection 23.47A.010.D. Office uses in C1 and C2 zones are permitted outright with no maximum size limit if they meet the standards identified in subsection 23.47A.010.D.

¹⁰ Gas stations and other businesses with drive-in lanes are not permitted in pedestrian-designated zones (Section 23.47A.028). Elsewhere in NC zones, establishing a gas station may require a demonstration regarding impacts under Section 23.47A.028.

¹¹ Grocery stores meeting the conditions of subsection 23.47A.010.E are permitted up to 23,000 square feet in size.

¹² Subject to subsection 23.47A.004.G.

¹³ Permitted pursuant to subsection 23.47A.004.D.7.

¹⁴ Residential uses may be limited to 20 percent of a street-level street-facing facade pursuant to subsection 23.47A.005.C.

¹⁵ Residential uses are conditional uses in C2 zones under subsection 23.47A.006.A.3, except as otherwise provided above in Table A for 23.47A.004 or in subsection 23.47A.006.A.3.

¹⁶ Congregate Residences that are owned by a college or university, or are affiliated with an educational major institution that is part of the Washington State Community and Technical Colleges system, or are a sorority or fraternity, or are owned by a not-for-profit entity or charity, or are licensed by the State and provide supportive services are permitted outright. All others are prohibited. Supportive services include meal service, cleaning service, health services, or similar.

¹⁷ Congregate Residences that are owned by a college or university, or are affiliated with an educational major institution that is part of the Washington State Community and Technical Colleges system, or are a sorority or fraternity, or are owned by a not-for-profit entity or charity, or are licensed by the State and provide supportive services are permitted outright. All others are permitted only in locations within urban villages and urban centers. Supportive services include meal service, cleaning service, health services, or similar.

¹⁸ Permitted at Seattle Center; see Section 23.47A.011.

¹⁹ Flexible-use parking is subject to Section 23.54.026. In pedestrian-designated zones, surface parking is prohibited adjacent to principal pedestrian streets pursuant to subsection 23.47A.032.B.2.

²⁰ Permitted as surface parking only on surface parking lots existing as of January 1, 2017. In pedestrian-designated zones, surface parking is prohibited adjacent to principal pedestrian streets pursuant to subsection 23.47A.032.B.2.

²¹ Permitted outright, except prohibited in the SAOD.

²² See Chapter 23.57, Communications regulations, for regulation of communication utilities.

²³ A recycling use that is located on the same development site as a solid waste transfer station may be permitted by administrative conditional use, subject to the requirements of subsection 23.47A.006.A.7.

* * *

1 Section 23. Section 23.47A.010 of the Seattle Municipal Code, last amended by
2 Ordinance 123046, is amended as follows:

3 **23.47A.010 Maximum size of nonresidential use((:))**

4 * * *

5 B. For the purposes of this ((~~section~~)) Section 23.47A.010, size of use includes the gross
6 floor area of a structure(s), or portion of a structure(s), occupied by a principal use and all uses
7 accessory to that use, except that:

8 1. In NC1 and NC2 zones, any area dedicated to outdoor display of goods or
9 equipment for rent or for sale is also included((~~, and~~)) ;

10 2. In all zones, any gross floor area used for accessory parking is exempted from
11 the size calculation((:)) ; and

12 3. In all zones, any gross floor area used for stockrooms, storage, break rooms,
13 loading, and administrative office accessory to a principal grocery store use is exempted from the
14 size calculation, provided it does not exceed 8,500 square feet or 30 percent of the gross floor
15 area, whichever is less.

16 * * *

17 Section 24. Section 23.47A.011 of the Seattle Municipal Code, last amended by
18 Ordinance 123378, is amended as follows:

19 **23.47A.011 Outdoor activities**

20 * * *

21 E. The following outdoor activities on a lot zoned entirely or split-zoned commercial
22 shall be located at least 50 feet from a lot zoned entirely ((~~in a~~)) residential ((~~zone~~)), unless the

1 elevation of the lot with the activity is at least 15 feet above the grade of the lot in the residential
2 zone at the common lot line:

- 3 1. Outdoor sales and/or service of food or beverages, except products of an
4 agricultural use on the lot;
- 5 2. Outdoor storage;
- 6 3. Outdoor sports and recreation;
- 7 4. Outdoor loading berths.

8 * * *

9 Section 25. Section 23.47A.020 of the Seattle Municipal Code, last amended by
10 Ordinance 124969, is amended as follows:

11 **23.47A.020 Odor standards**

12 * * *

13 B. Major odor sources

14 1. Uses that employ the following odor-emitting processes or activities are major
15 odor sources:

- 16 a. Lithographic, rotogravure, or flexographic printing;
- 17 b. Film burning;
- 18 c. Fiberglassing;
- 19 d. Selling of gasoline and/or storage of gasoline in tanks larger than 260
20 gallons;
- 21 e. Handling of heated tars and asphalts;
- 22 f. Incinerating (commercial);
- 23 g. Tire buffing;

- 1 h. Metal plating;
- 2 i. Vapor degreasing;
- 3 j. Wire reclamation;
- 4 k. Use of boilers (greater than 106 British thermal units per hour, 10,000
- 5 pounds steam per hour, or 30 boiler horsepower);
- 6 l. Animal food processing;
- 7 m. The production or processing of ((~~marijuana~~)) cannabis products by a
- 8 major ((~~marijuana~~)) cannabis activity; and
- 9 n. Other similar processes or activities.

10 * * *

11 Section 26. Section 23.48.005 of the Seattle Municipal Code, last amended by Ordinance
12 126855, is amended as follows:

13 **23.48.005 Uses**

14 A. Permitted uses

15 1. All uses are permitted outright, either as principal or accessory uses, except
16 those specifically prohibited by subsection 23.48.005.B and those permitted only as conditional
17 uses by subsection 23.48.005.C.

18 2. Adult cabarets shall comply with the requirements of subsection 23.47A.004.H.

19 3. Major ((~~marijuana~~)) cannabis activity shall comply with the requirements of
20 Section 23.42.058.

21 * * *

22 Section 27. Section 23.48.225 of the Seattle Municipal Code, last amended by Ordinance
23 126157, is amended as follows:

1 **23.48.225 Structure height in South Lake Union Urban Center**

2 * * *

3 C. Additional height permitted in the SM-SLU 175/85-280 and SM-SLU 85-280 zones

4 * * *

5 4. In the SM-SLU 175/85-280 zone, additional height above the applicable height
6 limit, as described below, for up to two non-residential towers on one block is permitted if the
7 tower or towers meet the following requirements.

8 a. If ~~((two))~~ a non-residential ~~((towers are))~~ tower is developed, the tower
9 closer to the eastern block front may be up to 190 feet in height ~~((and the tower closer to the
10 western block front may be up to 208 feet in height))~~.

11 b. If ~~((two))~~ a residential ~~((towers are))~~ tower is developed, one residential
12 tower on the northwest quadrant of the block may be up to ~~((360))~~ 440 feet ~~((and the other on the
13 southeast quadrant of the block may be up to 320 feet))~~ including a podium up to 125 feet.

14 c. Rooftop features comply with subsection 23.48.025.C, which applies to
15 the additional structure height permitted under this subsection 23.48.225.C.4.

16 d. The additional height is to accommodate an additional increment of
17 floor area provided in subsection 23.48.220.A.3.b.

18 * * *

19 Section 28. Section 23.48.720 of the Seattle Municipal Code, last amended by Ordinance
20 126685, is amended as follows:

21 **23.48.720 Floor area ratio (FAR) in SM-UP zones**

22 A. General provisions. Except as otherwise specified in this subsection 23.48.720.A,
23 FAR limits for SM-U zones are as shown in Table A for 23.48.720.

Table A for 23.48.720 FAR limits for specified zones in the Uptown Urban Center			
Zone	Base FAR limit for all uses	Maximum FAR for structures that include residential use	FAR Limits for non-residential uses
SM-UP 65	NA	4.5	4.5
SM-UP 85	NA	5.25	5.25
SM-UP 95	NA	5.75	5.75
SM-UP 160	5	7 ¹	2 ²

Footnotes to Table A for 23.48.720

¹ All chargeable floor area above the base FAR is considered extra floor area. Extra floor area must be achieved according to Sections 23.48.021, 23.48.722, and Chapter 23.58A.

² In the SM-UP 160, zone structures that do not exceed 125 feet in height are permitted an FAR of 7 for non-residential uses. Additionally, parcels with lot coverage limited by easements or setbacks for monorails, structures with non-residential uses are permitted an FAR of 7 regardless of structure height.

8
9
10
11
12

B. Additional increment of floor area above the maximum FAR. On lots that include uses or features specified in this subsection 23.48.720.B, an additional amount of chargeable floor area is permitted above the maximum FAR as follows:

1. For all SM-UP zones an additional amount of 1 FAR is permitted above the maximum FAR of the zone shown on Table A for 23.48.720 if a lot includes one or more structures that have been designated as landmarks pursuant to Chapter 25.12, subject to the following conditions:

a. The structure is rehabilitated so that all features and characteristics are subject to controls and incentives designated pursuant to Chapter 25.12 and comply with any certificates of approval issued by the Landmarks Preservation Board, all as determined by the Director of the Department of Neighborhoods;

1 b. A notice is recorded in the King County real estate records, in a form
2 satisfactory to the Director, regarding the additional increment of floor area allowed and the
3 effect thereof under the terms of this Chapter 23.48;

4 c. A Landmark structure that obtains additional FAR under this subsection
5 23.48.720.B.1 may not be a sending site for Landmark transferable development rights (TDR) or
6 for transferable development rights (TDP);

7 d. If the increased amount of FAR allowed under this subsection
8 23.48.720.B.1 remains on the lot, the structure must remain designated as a Landmark; and

9 e. The owner shall maintain the exterior and interior of the Landmark
10 structure in good condition in a manner that preserves the Landmark features and characteristics
11 of the structure.

12 2. For SM-UP zones, an additional increment of up to 1 FAR is permitted above
13 the maximum FAR limit of the zone if a lot includes an arts facility operated by a for-profit or
14 not-for-profit operator, subject to the following conditions:

15 a. The amount of the additional increment of FAR shall not exceed floor
16 area of the arts facility.

17 b. The minimum floor area provided for a qualifying arts facility is 2,500
18 square feet.

19 c. The space shall be occupied by an arts facility for the life of the project
20 on the lot. If the property owner is unable to secure a for-profit or not-for-profit organization to
21 operate the arts facility, after a six-month period, if the space remains unoccupied, it may be used
22 for other non-profit purposes such as a community and/or public area, under the following
23 conditions:

1 1) The space shall be made available to community and charitable
2 organizations and is not to be used for profit-making activities;

3 2) The space shall be made available for both day and evening use;

4 3) The space shall be made available on a first-come, first-served
5 basis to community and charitable organizations; and

6 4) Availability of the space and contact person(s) shall be made
7 known to community and charitable groups through means such as newspaper articles, radio
8 announcements, and flyers.

9 d. No permit after the first building permit, no permit for any construction
10 activity other than excavation and shoring, and no permit for occupancy of existing floor area by
11 any use shall be issued for development that includes an arts facility to gain the increase in FAR
12 until the applicant has demonstrated to the satisfaction of the Director that a lease with a for-
13 profit or not-for-profit arts organization has been secured to occupy the space for a minimum of
14 one year.

15 3. For SM-UP zones, an additional increment of up to 1 FAR is permitted above
16 the maximum FAR limit of the zone if a lot includes a preschool, an elementary school, or a
17 secondary school, subject to the following conditions:

18 a. Prior to issuance of a Master Use Permit, the applicant shall submit a
19 letter to the Director from the school indicating that, based on the Master Use Permit plans, the
20 school district has determined that the development could meet the operator's specifications;

21 b. Prior to issuance of a building permit, the applicant shall submit a
22 written certification by the operator to the Director that the operator's specifications have been
23 met; and

1 c. Should the school use be discontinued and replaced by commercial use,
2 the commercial use shall be considered development to which Chapter 23.58B applies,
3 notwithstanding any contrary provision of ((Section)) subsection 23.58B.020.B.

4 4. For all SM-UP zones, an additional increment of up to 1.0 FAR is permitted
5 above the maximum FAR of the zone for a lot that includes residential dwelling units that
6 comply with all of the following conditions:

7 a. Unit number and size. The structure includes a minimum of ten
8 dwelling units that each have a minimum area of 900 gross square feet and include three or more
9 bedrooms; and

10 b. Amenity area. Each dwelling unit shall have access to an outdoor
11 amenity area that is located on the same story as the dwelling unit and meets the following
12 standards:

13 1) The amenity area has a minimum area of 1,300 square feet and a
14 minimum horizontal dimension of 20 feet; and

15 2) The amenity area must be common amenity area, except that up
16 to 40 percent of the amenity area may be private provided that the private and common amenity
17 area are contiguous and are not separated by barriers more than 4 feet in height; and the private
18 amenity areas are directly accessible from units meeting these requirements; and

19 3) The common amenity area includes children's play equipment;
20 and

21 4) The common amenity area is located at or below a height of 85
22 feet.

23 * * *

1 Section 29. Section 23.49.002 of the Seattle Municipal Code, last amended by Ordinance
2 124969, is amended as follows:

3 **23.49.002 Scope of provisions**

4 * * *

5 F. Major ((~~marijuana~~) cannabis) activity is subject to the regulations in this Chapter 23.49
6 and additional regulations in Section 23.42.058.

7 * * *

8 Section 30. Section 23.49.008 of the Seattle Municipal Code, last amended by Ordinance
9 126917, is amended as follows:

10 **23.49.008 Structure height**

11 The following provisions regulating structure height apply to all property in Downtown zones
12 except the DH1 zone. Structure height for PSM, IDM, and IDR zones is regulated by this Section
13 23.49.008, and by Sections 23.49.178, 23.49.208, and 23.49.236.

14 * * *

15 C. Height in Downtown Mixed Residential (DMR) zones is regulated as follows:

16 1. A structure that contains only non-residential or live-work uses may not exceed
17 the lowest height limit established on the Official Land Use Map, except for rooftop features
18 permitted by subsection 23.49.008.D.

19 2. In DMR zones for which only two height limits are established, only those
20 portions of structures that contain only residential uses may exceed the lower height limit, and
21 they may extend to the higher height limit established on the Official Land Use Map.

22 3. On lots in the DMR/C 75/75-170 zone, the base height limit is 75 feet, and it is
23 the applicable height limit for all structures, except that:

1 a. The applicable height limit is 85 feet if the applicant qualifies for extra
2 floor area under Section 23.49.023 and Chapter 23.58A, the structure has no non-residential or
3 live-work use above 75 feet, and the structure does not qualify for a higher height limit under this
4 subsection 23.49.008.C.3.

5 b. The applicable height limit is 170 feet if the applicant qualifies for extra
6 floor area under Section 23.49.023 and Chapter 23.58A; the structure has no non-residential or
7 live-work use above 75 feet; the lot includes all or part of a mid-block corridor that satisfies the
8 conditions of Section 23.58A.040, except to the extent any waiver of such conditions is granted
9 by the Director; and the standards of subsection 23.49.156.B and Section 23.49.163 are satisfied.

10 4. On lots in the DMR/C 75/75-95 zone, the base height limit is 75 feet, and it is
11 the applicable height limit for all structures, except that the applicable height limit is 95 feet if
12 the applicant qualifies for extra floor area under Section 23.49.023 and Chapter 23.58A and the
13 structure has no non-residential or live-work use above 75 feet.

14 5. On lots in the DMR/R 95/65 zone:

15 a. A height limit of 95 feet applies to the portions of a structure that
16 contain residential or lodging uses.

17 b. A height limit of 65 feet applies to the portions of a structure that
18 contain non-residential uses (excluding lodging uses).

19 * * *

20 F. In all Downtown zones except the IDM 75-85 and PMM-85 zones and all DH1, DH2,
21 and PSM zones, and except for projects that receive additional height pursuant to subsection
22 23.49.008.G, an additional 10 feet in height is permitted above the otherwise applicable

1 maximum height limit for residential uses for a structure that includes residential dwelling units
2 that comply with all of the following conditions:

3 1. Unit number and size. The structure includes a minimum of ten dwelling units
4 that each have a minimum area of 900 gross square feet and include three or more bedrooms; and

5 2. Amenity area. Each dwelling unit shall have access to an outdoor amenity area
6 that is located on the same story as the dwelling unit and meets the following standards:

7 a. The amenity area has a minimum area of 1,300 square feet and a
8 minimum horizontal dimension of 20 feet; and

9 b. The amenity area must be common amenity area, except that up to
10 40((%)) percent of the amenity area may be private provided that: the private and common
11 amenity area are continuous and are not separated by barriers more than 4 feet in height; and the
12 private amenity areas are directly accessible from units meeting these requirements; and

13 c. The common amenity area includes children's play equipment; and

14 d. The common amenity area is located at or below a height of 85 feet.

15 * * *

16 Section 31. Section 23.49.025 of the Seattle Municipal Code, last amended by Ordinance
17 124969, is amended as follows:

18 **23.49.025 Odor, noise, light/glare, and solid waste recyclable materials storage space**
19 **standards**

20 A. The venting of odors, fumes, vapors, smoke, cinders, dust, and gas shall be at least 10
21 feet above finished sidewalk grade, and directed away from uses within 50 feet of the vent.

22 1. Major odor sources

1 a. Uses that employ the following odor-emitting processes or activities are
2 major odor sources:

- 3 1) Lithographic, rotogravure, or flexographic printing;
- 4 2) Film burning;
- 5 3) Fiberglassing;
- 6 4) Selling of gasoline and/or storage of gasoline in tanks larger
7 than 260 gallons;
- 8 5) Handling of heated tars and asphalts;
- 9 6) Incinerating (commercial);
- 10 7) Metal plating;
- 11 8) Use of boilers (greater than 106 British thermal units per hour,
12 10,000 pounds steam per hour, or 30 boiler horsepower);
- 13 9) The production or processing of ((~~marijuana~~)) cannabis products
14 by a major ((~~marijuana~~)) cannabis activity; and
- 15 10) Other uses creating similar odor impacts.

16 b. Uses that employ the following processes are considered major odor
17 sources, unless the entire activity is conducted as part of a commercial use other than food
18 processing or heavy commercial services:

- 19 1) Cooking of grains;
- 20 2) Smoking of food or food products;
- 21 3) Fish or fishmeal processing;
- 22 4) Coffee or nut roasting;
- 23 5) Deep fat frying;

1 specified on the plans. After a permit has been issued, any measures that are required by the
2 permit to limit noise shall be maintained.

3 * * *

4 Section 32. Section 23.49.042 of the Seattle Municipal Code, last amended by Ordinance
5 125558, is amended as follows:

6 **23.49.042 Downtown Office Core 1, Downtown Office Core 2, and Downtown Mixed**
7 **Commercial permitted uses**

8 The provisions of this Section 23.49.042 apply in DOC1, DOC2, and DMC zones.

9 A. All uses are permitted outright except those specifically prohibited by Section
10 23.49.044 and those permitted only as conditional uses by Section 23.49.046. Parking is allowed
11 pursuant to Section 23.49.019 and Section 23.49.045, and major ~~((marijuana))~~ cannabis activity
12 is allowed pursuant to Section 23.42.058.

13 B. All uses not prohibited shall be permitted as either principal or accessory uses.

14 C. ~~((Public facilities))~~

15 ~~((+))~~ Except as provided in subsection 23.49.046.D.2, uses in public facilities that
16 are most similar to uses permitted outright under this Chapter 23.49 shall also be permitted
17 outright subject to the same use regulations and development standards that govern the similar
18 uses.

19 ~~((2. Essential public facilities.))~~ D. Permitted essential public facilities shall also
20 be reviewed according to the provisions of Chapter 23.80~~((, Essential Public Facilities))~~.

21 * * *

22 Section 33. Section 23.49.058 of the Seattle Municipal Code, last amended by Ordinance
23 126917, is amended as follows:

1 **23.49.058 Downtown Office Core 1, Downtown Office Core 2, and Downtown Mixed**
2 **Commercial upper-level development standards**

3 A. For purposes of this Section 23.49.058, except in zones with a mapped height limit of
4 170 feet or less, a "tower" is a portion of a structure, excluding rooftop features permitted above
5 the applicable height limit pursuant to Section 23.49.008, in which portion all gross floor area in
6 each story is horizontally contiguous, and which portion is above (i) a height of 85 feet in (a) a
7 structure that has any non-residential use above a height of 65 feet or does not have residential
8 use above a height of 160 feet or contains an elementary or secondary school; or (ii) in any
9 structure not described in clause (i) a height determined as follows:

10 1. For a structure on a lot that includes an entire block front or that is on a block
11 front with no other structures, 65 feet; ~~((65))~~

12 2. For a structure on a lot abutting 3rd Avenue between Union Street and Pike
13 Street that contains only residential uses above a height of 65 feet, 85 feet; or

14 3. For a structure on any other lot, the height of the facade closest to the street
15 property line of the existing structure on the same block front nearest to that lot, but if the nearest
16 existing structures are equidistant from that lot, then the height of the higher such facade; but in
17 no instance shall the height exceed 85 feet or be required to be less than 65 feet.

18 * * *

19 D. Tower spacing in DMC zones

20 * * *

21 7. For purposes of this Section 23.49.058 a tower is considered to be "existing"
22 and must be taken into consideration when other towers are proposed, under any of the following
23 circumstances:

1 a. The tower is physically present, except that a tower that is physically
2 present is not considered "existing" if the owner of the lot where the tower is located has applied
3 to the Director for a permit to demolish the tower and provided that the no building permit for
4 the proposed tower is issued until the demolition of the tower that is physically present has been
5 completed;

6 b. The tower is a proposed tower for which a complete application for a
7 Master Use Permit or building permit has been submitted, provided that:

8 1) The application has not been withdrawn or cancelled without the
9 tower having been constructed; and

10 2) If a decision on that application has been published or a permit
11 on the application has been issued, the decision or permit has not expired, and has not been
12 withdrawn, cancelled, or invalidated, without the tower having been constructed.

13 c. The tower is a proposed tower for which a complete application for
14 early design guidance has been filed and a complete application for a Master Use Permit or
15 building permit has not been submitted, provided that the early design guidance application will
16 not qualify a proposed tower as an existing tower if a complete Master Use Permit application is
17 not submitted within 90 days of the date of the early design guidance public meeting if one is
18 required, or within 90 days of the date the Director provides guidance if no early design meeting
19 is required, or within 150 days of the first early design guidance public meeting if more than one
20 early design guidance public meeting is held. Failure to file a complete Master Use Permit
21 application within 12 months of filing a complete application for early design guidance or from
22 the effective date of this ordinance shall disqualify a proposed tower from being considered an
23 existing tower.

* * *

Section 34. Section 23.49.090 of the Seattle Municipal Code, last amended by Ordinance 125558, is amended as follows:

23.49.090 Downtown Retail Core, permitted uses

A. All uses are permitted outright except those ~~((which))~~ that are specifically prohibited by Section 23.49.092 and those ~~((which))~~ that are permitted only as conditional uses by Section 23.49.096. Parking is allowed subject to Section 23.49.019 and Section 23.49.094 and major ~~((marijuana))~~ cannabis activity is allowed subject to Section 23.42.058.

B. All uses not prohibited shall be permitted as either principal or accessory uses.

C. ~~((Public facilities))~~

~~((1.))~~ Except as provided in Section 23.49.096, uses in public facilities that are most similar to uses permitted outright under this Chapter 23.49 shall also be permitted outright subject to the same use regulations and development standards that govern the similar uses.

~~((2. Essential public facilities.))~~ D. Permitted essential public facilities shall also be reviewed according to the provisions of Chapter 23.80~~((Essential Public Facilities))~~.

* * *

Section 35. Section 23.49.142 of the Seattle Municipal Code, last amended by Ordinance 125558, is amended as follows:

23.49.142 Downtown Mixed Residential, permitted uses

A. All uses are permitted outright except those specifically prohibited by Section 23.49.144 and those permitted only as conditional uses by Section 23.49.148. Parking is permitted pursuant to Section 23.49.019 and Section 23.49.146, and major ~~((marijuana))~~ cannabis activity is allowed pursuant to Section 23.42.058.

1 B. All uses not prohibited are permitted as either principal or accessory uses.

2 C. ~~((Public facilities))~~

3 ~~((1.))~~ Except as provided in subsection 23.49.148.D.2, uses in public facilities that
4 are most similar to uses permitted outright under this Chapter 23.49 are also permitted outright
5 subject to the same use regulations and development standards that govern the similar uses.

6 ~~((2. Essential public facilities.))~~ D. Permitted essential public facilities shall also
7 be reviewed according to the provisions of Chapter 23.80~~((, Essential Public Facilities))~~.

8 * * *

9 Section 36. Section 23.49.162 of the Seattle Municipal Code, last amended by Ordinance
10 123589, is amended as follows:

11 **23.49.162 Downtown Mixed Residential, street facade requirements**

12 * * *

Section 37. Section 23.49.300 of the Seattle Municipal Code, last amended by Ordinance 124969, is amended as follows:

23.49.300 Downtown Harborfront 1, uses

A. Uses that are permitted or prohibited in Downtown Harborfront 1 are identified in Chapter 23.60A, (~~the Seattle Shoreline Master Program,~~) except that major (~~marijuana~~) cannabis activity is prohibited.

1 B. (~~Essential public facilities.~~) Permitted essential public facilities shall also be
2 reviewed according to the provisions of Chapter 23.80(~~(, Essential Public Facilities)~~).

3 * * *

4 Section 38. Section 23.49.320 of the Seattle Municipal Code, last amended by Ordinance
5 124969, is amended as follows:

6 **23.49.320 Downtown Harborfront 2, prohibited uses**

7 The following uses are prohibited as both principal and accessory uses:

8 * * *

9 I. Major (~~marijuana~~) cannabis activity.

10 Section 39. Section 23.49.338 of the Seattle Municipal Code, last amended by Ordinance
11 125558, is amended as follows:

12 **23.49.338 Pike Market Mixed, prohibited uses**

13 A. The following uses are prohibited as both principal and accessory uses in areas outside
14 of the Pike Place Market Historical District, Map 1K:

- 15 1. Drive-in businesses, except gas stations located in parking garages;
- 16 2. Outdoor storage;
- 17 3. Adult motion picture theaters and adult panorams;
- 18 4. Transportation facilities, except flexible-use parking;
- 19 5. Major communication utilities;
- 20 6. All general manufacturing uses;
- 21 7. Solid waste management;
- 22 8. Recycling;
- 23 9. All industrial uses;

- 1 10. Jails;
- 2 11. Work-release centers; and
- 3 12. Major ((~~marijuana~~)) cannabis activity.

4 B. Within the Pike Place Market Historical District, Map 1K, uses may be prohibited by
5 the Pike Market Historical Commission pursuant to ((~~the Pike Place Market Historical District~~
6 ~~Ordinance~~)) Chapter 25.24.

7 * * *

8 Section 40. Section 23.50.002 of the Seattle Municipal Code, last amended by Ordinance
9 126864, is amended as follows:

10 **23.50.002 Scope of provisions**

11 * * *

12 E. Major ((~~marijuana~~)) cannabis activity is subject to the regulations in this Chapter 23.50
13 and additional regulations in Section 23.42.058.

14 * * *

15 Section 41. Table A for Section 23.50.012 of the Seattle Municipal Code, which section
16 was last amended by Ordinance 126864, is amended as follows:

17 **23.50.012 Permitted and prohibited uses**

18 * * *

Key to Table A for 23.50.012

CU = Administrative conditional use

CCU = Council conditional use

EB = Permitted only in a building existing on October 7, 1987

EB/CU = Administrative conditional use permitted only in a building existing on October 7, 1987((-))

P = Permitted

X = Prohibited

Footnotes to Table A for 23.50.012

(1) Except within designated manufacturing and industrial centers, where they are permitted only on rooftops and/or as agricultural uses within an enclosed building. Except for agricultural uses within an enclosed building operating prior to January 4, 2016, agricultural uses within an enclosed building are not permitted in the IG1 zone. Agricultural uses within an enclosed building within designated manufacturing and industrial centers (excluding associated office or food processing areas) shall not exceed:

(a) 5,000 square feet in IG1 zones for agricultural uses within an enclosed building established prior to January 4, 2016;

(b) 10,000 square feet in IB zones; and

(c) 20,000 square feet in IG2 zones.

(2) In addition to the provisions of this Chapter 23.50, urban farms that entail major ~~((marijuana))~~ cannabis activity are regulated by Section 23.42.058.

(3) Animal shelters and kennels maintained and operated for the impounding, holding and/or disposal of lost, stray, unwanted, dead or injured animals are permitted.

(4) Subject to subsection 23.50.012.E.

(5) Parking required for a spectator sports facility or exhibition hall is allowed and shall be permitted to be used as flexible-use parking or shared with another such facility to meet its required parking. A spectator sports facility or exhibition hall within the Stadium Transition

Area Overlay District may reserve parking. Such reserved non-required parking shall be permitted to be used as flexible-use parking and is exempt from the one-space-per-650-square-foot ratio under the following circumstances:

- (a) The parking is owned and operated by the owner of the spectator sports facility or exhibition hall, and
 - (b) The parking is reserved for events in the spectator sports facility or exhibition hall, and
 - (c) The reserved parking is outside of the Stadium Transition Area Overlay District, and south of South Royal Brougham Way, west of 6th Avenue South and north of South Atlantic Street. Parking that is covenanted to meet required parking will not be considered reserved parking.
- (6) Medical service uses over 10,000 square feet, within 2,500 feet of a medical Major Institution Overlay District boundary, require administrative conditional use approval, unless included in an adopted major institution master plan. See Section 23.50.014.
- (7) High-impact uses may be permitted as conditional uses as provided in subsection 23.50.014.B.5.
- (8) Research and education facilities that are a part of a college or university, and that are water-dependent or water-related, as defined by Section 23.60A.944, are permitted in new and existing buildings in the Ballard/Interbay Northend Manufacturing & Industrial Center.
- (9) A college or university offering a primarily vocational curriculum within the zone is permitted.
- (10) Hospitals may be permitted as a conditional use where accessory to a research and development laboratory or an institute for advanced study pursuant to subsection 23.50.014.B.12.
- (11) Major institution uses are permitted only in a building existing on October 7, 1987, except that such uses are permitted on properties located outside of the Ballard/Interbay/Northend Manufacturing and Industrial Center that are located in an area south of the Lake Washington Ship Canal, east of 8th Avenue West, north of West Nickerson Street, and west of 3rd Avenue West regardless of whether the use is located in a building existing on October 7, 1987.
- (12) Museums are prohibited except in buildings or structures that are designated City of Seattle landmarks.
- (13) Transitional encampments accessory to religious facilities or to principal uses located on property owned or controlled by a religious organization are regulated by Section 23.42.054.
- (14) Heavy manufacturing uses may be permitted as a conditional use within the Queen Anne Interbay area as provided in subsection 23.50.014.C.
- (15) Park and ride facilities are not permitted within 3,000 feet of the Downtown Urban Center.
- (16) Subject to subsection 23.50.014.B.7.e.

* * *

1
2 Section 42. Section 23.50.044 of the Seattle Municipal Code, last amended by Ordinance
3 124969, is amended as follows:
4 **23.50.044 All industrial zones – Standards for major odor sources**

1 A. Major odor sources in Industrial Buffer and Industrial Commercial zones

2 1. Uses that involve the following odor-emitting processes or activities are major
3 odor sources:

4 a. Lithographic, rotogravure, or flexographic printing;
5 b. Film burning;
6 c. Fiberglassing;
7 d. Selling of gasoline and/or storage of gasoline in tanks larger than 260
8 gallons;

9 e. Handling of heated tars and asphalts;
10 f. Incinerating (commercial);
11 g. Metal plating;
12 h. Tire buffing;
13 i. Vapor degreasing;
14 j. Wire reclamation;
15 k. Use of boilers (greater than 106 British thermal units per hour, 10,000
16 pounds steam per hour, or 30 boiler horsepower);

17 l. The production or processing of ((~~marijuana~~)) cannabis products by a
18 major ((~~marijuana~~)) cannabis activity; and

19 m. Other uses creating similar odor impacts.

20 2. Uses that employ the following processes shall be considered major odor
21 sources, unless the entire activity is conducted as part of a commercial use other than food
22 processing or heavy commercial services:

23 a. Cooking of grains;

- 1 b. Smoking of food or food products;
- 2 c. Fish or fishmeal processing;
- 3 d. Coffee or nut roasting;
- 4 e. Deep-fat frying;
- 5 f. Dry cleaning;
- 6 g. Animal food processing; and
- 7 h. Other uses creating similar odor impacts.

8 B. Major odor sources in General Industrial zones

9 1. Uses that involve the following odor-emitting processes or activities in General
10 Industrial zones are major odor sources:

- 11 a. The production or processing of ((~~marijuana~~)) cannabis products by a
12 major ((~~marijuana~~)) cannabis activity.

13 * * *

14 Section 43. Section 23.53.006 of the Seattle Municipal Code, last amended by Ordinance
15 126862, is amended as follows:

16 **23.53.006 Pedestrian access and circulation**

17 * * *

18 F. Exceptions. The following exceptions to pedestrian access and circulation
19 requirements and standards apply:

20 1. Projects exempt from requirements. Pedestrian access and circulation
21 improvements are not required for the following types of projects:

- 22 a. Change of use;
- 23 b. Alterations to existing structures;

1 c. Additions to existing structures that are exempt from environmental
2 review;

3 d. Construction of a detached structure accessory to a single-family
4 dwelling unit in any zone, if the property owner enters into a no-protest agreement, as authorized
5 by chapter 35.43 RCW, to future pedestrian access and circulation improvements and that
6 agreement is recorded with the King County Recorder;

7 e. Construction of a single-family dwelling unit on a lot in any zone, if the
8 property owner enters into a no-protest agreement, as authorized by chapter 35.43 RCW, to
9 future pedestrian access and circulation improvements and that agreement is recorded with the
10 King County Recorder, and if at least one of the following conditions is met:

11 1) The lot is on a block front where there are no existing pedestrian
12 access and circulation improvements within 100 feet of the lot; or

13 2) Construction of pedestrian access and circulation improvements
14 is not necessary because, for example, the existing right-of-way has suitable width and surface
15 treatment for pedestrian use; or the existing right-of-way has a limited amount of existing and
16 potential vehicular traffic; or the Director anticipates limited, if any, additional development near
17 the lot because the development near the lot is at or near zoned capacity under current zoning
18 designations;

19 f. Expansions of surface parking, outdoor storage, outdoor sales and
20 outdoor display of rental equipment of less than 20 percent of the parking, storage, sales or
21 display area, or number of parking spaces;

22 g. In the MML zone, the addition of:

23 1) Fewer than ten artist's studio dwellings;

- 1 2) Less than 750 square feet of gross floor area of major and minor
2 vehicle repair uses and multipurpose retail sales; and
- 3 3) Less than 4,000 square feet of gross floor area of non-residential
4 uses not listed in subsection 23.53.006.F.1.g.2; and
- 5 h. Construction of a new non-residential structure of up to 4,000 square
6 feet of gross floor area if the structure is at least 50 feet from any lot line abutting an existing
7 street that does not have pedestrian access and circulation improvements.
- 8 2. Waiver or modification of pedestrian access and circulation requirements. The
9 Director, in consultation with the Director of Transportation, may waive or modify pedestrian
10 access and circulation requirements when one or more of the following conditions are met. The
11 waiver or modification shall provide the minimum relief necessary to accommodate site
12 conditions while maximizing pedestrian access and circulation.
- 13 a. Location in an environmentally critical area or buffer makes installation
14 of a sidewalk, curb, and/or curb ramp structurally impracticable or technically infeasible;
- 15 b. The existence of a bridge, viaduct, or structure such as a substantial
16 retaining wall in proximity to the project site makes installation of a sidewalk, curb, and/or curb
17 ramp structurally impracticable or technically infeasible;
- 18 c. Sidewalk, curb, and/or curb ramp construction would result in
19 undesirable disruption of existing drainage patterns, or disturbance to or removal of natural
20 features such as significant trees or other valuable and character-defining mature vegetation; or
- 21 d. Sidewalk, curb, and/or curb ramp construction would preclude vehicular
22 access to the lot, for example on project sites where topography would render driveway access in
23 excess of the maximum 15 percent slope.

1 ((~~3. Deviation from sidewalk, curb, and curb ramp standards. After consultation~~
2 ~~with the Director of Transportation, the Director of Seattle Department of Construction and~~
3 ~~Inspections, the Director of Transportation may grant a deviation from sidewalk, curb, and curb~~
4 ~~ramp standards specified in the Right of Way Improvements Manual through the Deviation~~
5 ~~Request Process to address environmental, sustainability, or accessibility issues if the deviation~~
6 ~~provides access to the maximum extent feasible with a substantially equivalent alternative design~~
7 ~~or materials.~~

8 4.) 3. Notwithstanding any provision of Section 23.76.026, the applicant for a
9 Master Use Permit or a building permit to which the Land Use Code in effect prior to October
10 30, 2009 applies may, by written election, use the exemptions in subsections 23.53.006.F.1((;))
11 and 23.53.006.F.2((, and 23.53.006.F.3)).

12 * * *

13 Section 44. Section 23.53.015 of the Seattle Municipal Code, last amended by Ordinance
14 126682, is amended as follows:

15 **23.53.015 Improvement requirements for existing streets in residential and commercial**
16 **zones**

17 A. General requirements

18 1. If new lots are proposed to be created, or if any type of development is
19 proposed in residential or commercial zones, existing streets abutting the lot(s) are required to be
20 improved in accordance with this Section 23.53.015 and Section 23.53.006. A setback from the
21 lot line, or dedication of right-of-way, may be required to accommodate the improvements. One
22 or more of the following types of improvements may be required under this Section 23.53.015:

23 a. Pavement;

- 1 b. Drainage;
- 2 c. Grading to future right-of-way grade;
- 3 d. Design of structures to accommodate future right-of-way grade;
- 4 e. No-protest agreements; and
- 5 f. Planting of street trees and other landscaping.

6 2. Subsections 23.53.015.D, 23.53.015.E, and 23.53.015.F contain((s)) exceptions
7 from the standard requirements for street improvements, including exceptions for streets that
8 already have curbs, projects that are smaller than a certain size, and for special circumstances,
9 such as location in an environmentally critical area or buffer.

10 3. Off-site improvements, such as provision of drainage systems or fire access
11 roads, shall be required pursuant to the authority of this Code or other ordinances to mitigate the
12 impacts of development.

13 4. Detailed requirements for street improvements are in the Right-of-Way
14 Improvements Manual.

15 5. The regulations in this Section 23.53.015 are not intended to preclude the use
16 of Chapter 25.05 to mitigate adverse environmental impacts.

17 6. Minimum right-of-way widths

18 a. Arterials. The minimum right-of-way widths for arterials as designated
19 by the Seattle Department of Transportation are as specified in the Right-of-Way Improvements
20 Manual.

21 b. Nonarterial streets

1 1) The minimum right-of-way width for an existing street that is
2 not an arterial designated on the Arterial street map, Section 11.18.010, is as shown on Table A
3 for 23.53.015.

Table A for 23.53.015(⇆) Minimum right-of-way widths for existing nonarterial streets	
Zone category	Required right-of-way width (in feet)
1. ((SF)) NR, LR1, LR2 and NC1 zones; and NC2 zones with a maximum height limit of 40 feet or less	40
2. LR3, MR, HR, NC2 zones with height limits of more than 40 feet, NC3, C1, C2 and SM zones	52

4 2) If a block is split into more than one zone, the required right-of-
5 way width shall be determined based on the requirements in Table A for 23.53.015 for the zone
6 category with the most frontage. If the zone categories have equal frontage, the minimum right-
7 of-way width is 52 feet.

8 B. Improvements to arterial streets. Except as provided in subsections 23.53.015.D,
9 23.53.015.E, and 23.53.015.F, arterials shall be improved according to the following
10 requirements:

11 1. If a street is designated as an arterial by the Seattle Department of
12 Transportation, a paved roadway and pedestrian access and circulation as required by Section
13 23.53.006, drainage facilities, and any landscaping required by the zone in which the lot is
14 located shall be provided in the portion of the street right-of-way abutting the lot, as specified in
15 the Right-of-Way Improvements Manual.

16 2. If necessary to accommodate the right-of-way and roadway widths specified in
17 the Right-of-Way Improvements Manual, dedication of right-of-way is required. If an existing
18 arterial street has less than the minimum right-of-way width established in subsection
19 23.53.015.A.6, dedication of additional right-of-way equal to half the difference between the

1 current right-of-way width and the minimum right-of-way width established in subsection
2 23.53.015.A.6 is required.

3 C. Improvements to non-arterial streets. Except as provided in subsections 23.53.015.D,
4 23.53.015.E, and 23.53.015.F, non-arterial streets shall be improved according to the following
5 requirements:

6 1. Non-arterial streets with right-of-way greater than or equal to the minimum
7 right-of-way width

8 a. Improvement requirements. When an existing non-arterial street right-
9 of-way is greater than or equal to the minimum right-of-way width established in subsection
10 23.53.015.A.6, a paved roadway with pedestrian access and circulation as required by Section
11 23.53.006, drainage facilities, and any landscaping required by the zone in which the lot is
12 located shall be provided, as specified in the Right-of-Way Improvements Manual.

13 b. Fire apparatus access. If the lot does not have vehicular access from a
14 street or private easement that meets the regulations for fire apparatus access roads in Chapter
15 22.600, such access shall be provided. When an existing street does not meet these regulations,
16 the Chief of the Fire Department may approve an alternative that provides adequate emergency
17 vehicle access.

18 c. Dead-end streets. Streets that form a dead end at the property to be
19 developed shall be improved with a cul-de-sac or other vehicular turnaround in accordance with
20 the Right-of-Way Improvements Manual. The Director, in consultation with the Director of
21 Seattle Department of Transportation, shall determine whether the street has the potential for
22 being extended or whether it forms a dead end because of topography and/or the layout of the
23 street system.

1 2. Non-arterial streets with less than the minimum right-of-way width

2 a. Dedication requirement. When an existing non-arterial street has less
3 than the minimum right-of-way width established in subsection 23.53.015.A.6, dedication of
4 additional right-of-way equal to half the difference between the current right-of-way width and
5 the minimum right-of-way width established in subsection 23.53.015.A.6 is required; provided,
6 however, that if right-of-way has been dedicated since 1982, other lots on the block shall not be
7 required to dedicate more than that amount of right-of-way.

8 b. Improvement requirement. A paved roadway with pedestrian access and
9 circulation as required by Section 23.53.006, drainage facilities, and any landscaping required by
10 the zone in which the lot is located shall be provided in the portion of the street right-of-way
11 abutting the lot, as specified in the Right-of-Way Improvements Manual.

12 c. Fire apparatus access. If the lot does not have vehicular access from a
13 street or private easement that meets the regulations for fire apparatus access roads in Chapter
14 22.600, such access shall be provided. When an existing street does not meet these regulations,
15 the Chief of the Fire Department may approve an alternative that provides adequate emergency
16 vehicle access.

17 d. Dead-end streets. Streets that form a dead end at the property to be
18 developed shall be improved with a cul-de-sac or other vehicular turnaround as specified in the
19 Right-of-Way Improvements Manual. The Director, in consultation with the Director of the
20 Seattle Department of Transportation, shall determine whether the street has the potential for
21 being extended or whether it forms a dead end because of topography and/or the layout of the
22 street system.

23 D. Exceptions for streets with existing curbs

1 ~~((1. Streets with existing curbs))~~

2 ~~((a-))~~ 1. Streets with right-of-way greater than or equal to the minimum right-of-
3 way width. If a street with existing curbs abuts a lot and the existing right-of-way is greater than
4 or equal to the minimum width established in subsection 23.53.015.A.6, but the roadway width is
5 less than the minimum established in the Right-of-Way Improvements Manual, the following
6 requirements shall be met:

7 ~~((1-))~~ a. All structures on the lot shall be designed and built to
8 accommodate the grade of the future street improvements.

9 ~~((2-))~~ b. A no-protest agreement to future street improvements is required,
10 as authorized by chapter 35.43 RCW. The agreement shall be recorded with the King County
11 Recorder.

12 ~~((3-))~~ c. Pedestrian access and circulation are required as specified in
13 Section 23.53.006.

14 ~~((b-))~~ 2. Streets with less than the minimum right-of-way width. If a street with
15 existing curbs abuts a lot and the existing right-of-way is less than the minimum width
16 established in subsection 23.53.015.A.6, the following requirements shall be met:

17 ~~((1-))~~ a. Setback requirement. A setback equal to half the difference
18 between the current right-of-way width and the minimum right-of-way width established in
19 subsection 23.53.015.A.6 is required; provided, however, that if a setback has been provided
20 under this provision, other lots on the block shall provide the same setback. ~~((In all residential
21 zones except Highrise zones, an additional 3-foot setback is also required.))~~ The area of the
22 setback may be used to meet any development standard, except that required parking may not be
23 in the setback. Underground structures that would not prevent the future widening and

1 improvement of the right-of-way may be permitted in the required setback by the Director after
2 consulting with the Director of Transportation. Encroachments into this setback shall not be
3 considered structural building overhangs, but the encroachment is limited to the standards set
4 forth in Section 23.53.035. In all residential zones except Highrise zones, an additional 3-foot
5 setback is also required.

6 ((2)) b. Grading requirement. If a setback is required, all structures on the
7 lot shall be designed and built to accommodate the grade of the future street, as specified in the
8 Right-of-Way Improvements Manual.

9 ((3)) c. No-protest agreement requirement. A no-protest agreement to
10 future street improvements is required, as authorized by chapter 35.43 RCW. The agreement
11 shall be recorded with the King County Recorder.

12 ((4)) d. Pedestrian access and circulation are required as specified in
13 Section 23.53.006.

14 ((2-Projects)) E. Exceptions for projects with reduced improvement requirements

15 ((a-)) 1. One or two dwelling units. If no more than two new dwelling units are
16 proposed to be constructed, or no more than two new neighborhood residential zoned lots are
17 proposed to be created, the following requirements shall be met:

18 ((1)) a. If there is no existing hard-surfaced roadway, a crushed-rock
19 roadway at least 16 feet in width is required, as specified in the Right-of-Way Improvements
20 Manual.

21 ((2)) b. All structures on the lot(s) shall be designed and built to
22 accommodate the grade of the future street improvements.

1 ((3)) c. A no-protest agreement to future street improvements is required,
2 as authorized by chapter 35.43 RCW. The agreement shall be recorded with the King County
3 Recorder.

4 ((4)) d. Pedestrian access and circulation are required as specified in
5 Section 23.53.006.

6 ((b)) 2. Other projects with reduced requirements. The types of projects listed in
7 this subsection ((23.53.015.D.2.b)) 23.53.015.E.2 are exempt from right-of-way dedication
8 requirements and are subject to the street improvement requirements of this subsection
9 ((23.53.015.D.2.b)) 23.53.015.E.2, except as waived or modified pursuant to subsection
10 ((23.53.015.D.3)) 23.53.015.F. The requirements of subsection 23.53.015.D.2 shall also be met.

11 ((4)) a. Types of projects

12 ((a)) 1) Proposed developments that contain more than two but
13 fewer than ten units in NR, RSL, and LR1 zones, or fewer than six residential units in all other
14 zones, or proposed short plats in which no more than two additional lots are proposed to be
15 created, except as provided in subsection ((23.53.015.D.2.a)) 23.53.015.E.1;

16 ((b)) 2) The following uses if they are smaller than 750 square feet
17 of gross floor area: major and minor vehicle repair uses, and multipurpose retail sales uses;

18 ((e)) 3) Non-residential structures that have less than 4,000 square
19 feet of gross floor area and that do not contain uses listed in subsection ((23.53.015.D.2.b.1.b))
20 23.53.015.E.2.a.2 that are larger than 750 square feet;

21 ((d)) 4) Structures containing a mix of residential uses and either
22 nonresidential uses or live-work units, if there are fewer than ten units in NR, RSL, and LR1
23 zones, or fewer than six residential units in all other zones, and the square footage of

1 nonresidential use is less than specified in subsections ~~((23.53.015.D.2.b.1.b))~~ 23.53.015.E.2.a.2
2 and ~~((23.53.015.D.2.b.1.e))~~ 23.53.015.E.2.a.3;

3 ~~((e))~~ 5) Remodeling and use changes within existing structures;

4 ~~((f))~~ 6) Additions to existing structures that are exempt from
5 environmental review; and

6 ~~((g))~~ 7) Expansions of surface parking, outdoor storage, outdoor
7 sales or outdoor display of rental equipment of less than 20 percent of the parking, storage, sales
8 or display area or number of parking spaces.

9 ~~((z))~~ b. Paving requirement. For the types of projects listed in subsection
10 ~~((23.53.015.D.2.b.1))~~ 23.53.015.E.2.a, the streets abutting the lot shall have a hard-surfaced
11 roadway at least 18 feet wide. If there is not an 18-foot wide hard-surfaced roadway, the roadway
12 shall be paved to a width of at least 20 feet from the lot to the nearest hard-surfaced street
13 meeting this requirement, or 100 feet, whichever is less. Streets that form a dead end at the
14 property to be developed shall be improved with a cul-de-sac or other vehicular turnaround as
15 specified in the Right-of-Way Improvements Manual. As a Type 1 decision, the Director, after
16 consulting with the Director of Transportation, shall determine whether the street has the
17 potential for being extended or whether it forms a dead end because of topography or the layout
18 of the street system.

19 ~~((3)) Other requirements. The requirements of subsection~~
20 ~~23.53.015.D.1.b shall also be met.))~~

21 ~~((3-))~~ F. Exceptions from required street improvements. As a Type 1 decision, the
22 Director, in consultation with the Director of Transportation, may waive or modify the
23 requirements for paving and drainage, dedication, setbacks, grading, no-protest agreements, and

1 landscaping if one or more of the following conditions are met. The waiver or modification shall
2 provide the minimum relief necessary to accommodate site conditions while maximizing access
3 and circulation.

4 ~~((a-))~~ 1. Location in an environmentally critical area or buffer, disruption of
5 existing drainage patterns, or removal of natural features such as significant trees or other
6 valuable and character-defining mature vegetation makes widening or improving the right-of-
7 way impractical or undesirable.

8 ~~((b-))~~ 2. The existence of a bridge, viaduct, or structure such as a substantial
9 retaining wall in proximity to the project site makes widening or improving the right-of-way
10 impractical or undesirable.

11 ~~((c-))~~ 3. Widening the right-of-way or improving the street would adversely affect
12 the character of the street, as it is defined in an adopted neighborhood plan or adopted City plan
13 for green streets, boulevards, or other special rights-of-way, or would otherwise conflict with the
14 stated goals of such a plan.

15 ~~((d-))~~ 4. Widening or improving the right-of-way would preclude vehicular access
16 to an existing lot.

17 ~~((e-))~~ 5. Widening or improving the right-of-way would make building on a lot
18 infeasible by reducing it to dimensions where development standards cannot reasonably be met.

19 ~~((f-))~~ 6. One or more substantial principal structures on the same side of the block
20 as the proposed project are in the area needed for future expansion of the right-of-way and the
21 structure(s)' condition and size make future widening of the remainder of the right-of-way
22 unlikely.

1 ~~((g-))~~ 7. Widening or improving the right-of-way is impractical because
2 topography would preclude the use of the street for vehicular access to the lot, for example due
3 to an inability to meet the required 15 percent maximum driveway slope.

4 ~~((h-))~~ 8. Widening or improving the right-of-way is not necessary because it is
5 adequate for current and potential vehicular traffic, for example, due to the limited number of
6 lots served by the development or because the development on the street is at zoned capacity.

7 * * *

8 Section 45. Section 23.53.030 of the Seattle Municipal Code, last amended by Ordinance
9 126509, is amended as follows:

10 **23.53.030 Alley improvements in all zones**

11 * * *

12 E. Existing ~~((Alleys That Meet Minimum Width))~~ alleys that meet minimum width.

13 Except as provided in subsection 23.53.030.G and except for one and two dwelling unit
14 developments that abut an alley that is not improved but is in common usage, if an existing alley
15 meets the minimum right-of-way width established in subsection 23.53.030.D, the following
16 requirements shall be met:

17 1. If the alley is used for access to parking spaces, open storage, or loading berths
18 on a lot, the following improvements shall be provided:

19 a. For the following types of projects, the entire width of the portion of the
20 alley abutting the lot, and the portion of the alley between the lot and a connecting street, shall be
21 improved to at least the equivalent of a crushed rock surface, according to ~~((Director's Rule 22-~~
22 ~~2005-))~~ the Right-of-Way Improvements Manual or successor. The applicant may choose the
23 street to which the improvements will be installed. If the alley does not extend from street to

1 street, and the connecting street is an arterial designated on the Arterial street map, Section
2 11.18.010, either the remainder of the alley shall be improved so that it is passable to a passenger
3 vehicle, or a turnaround shall be provided. The turnaround may be provided by easement.

4 1) Residential structures with fewer than ten units;

5 2) The following uses if they are smaller than 750 square feet of
6 gross floor area: major and minor vehicle repair uses, and multipurpose retail sales;

7 3) Nonresidential structures or structures with one or more live-
8 work units that: (a) have less than 4,000 square feet of gross floor area; and (b) do not contain
9 uses listed in subsection 23.53.030.E.1.a.2 that are larger than 750 square feet;

10 4) Structures containing a mix of residential and either
11 nonresidential uses or live-work units, if the residential use is less than ten units, and the total
12 square footage of nonresidential uses and live-work units is less than specified in subsections
13 23.53.030.E.1.a.2 and E.1.a.3;

14 5) Remodeling and use changes within existing structures, if
15 remodeling and use changes require increases to parking spaces, open storage, or loading berths
16 on a lot;

17 6) Additions to existing structures that are exempt from
18 environmental review; and

19 7) Expansions of a surface parking area or open storage area of less
20 than 20 percent of the parking area, storage area or number of parking spaces.

21 b. For projects not listed in subsection 23.53.030.E.1.a, the entire width of
22 the portion of the alley abutting the lot, and the portion of the alley between the lot and a
23 connecting street, shall be paved. The applicant may choose the street to which the pavement

1 will be installed. If the alley does not extend from street to street, and the connecting street is an
 2 arterial designated on the Arterial street map, Section 11.18.010, either the remainder of the alley
 3 shall be improved so that it is passable to a passenger vehicle, or a turnaround shall be provided.
 4 The turnaround may be provided by easement.

5 2. If the alley is not used for access, or if the alley is not fully improved, all
 6 structures shall be designed to accommodate the grade of the future alley improvements, and a
 7 no-protest agreement to future alley improvements is required, as authorized by chapter 35.43
 8 RCW (~~Chapter 35.43~~). The agreement shall be recorded with the King County Recorder.

9 * * *

10 Section 46. Table A for Section 23.54.015 of the Seattle Municipal Code, which section
 11 was last amended by Ordinance 126862, is amended as follows:

12 **23.54.015 Required parking and maximum parking limits**

13 * * *

Table A for 23.54.015				
Required parking for non-residential uses other than institutions				
Use		Minimum parking required		
I. General non-residential uses (other than institutions)				
* * *				
((G.))	TRANSITIONAL ENCAMPMENT INTERIM USE		1 space for every vehicle used as shelter; plus 1 space for each 2 staff members on-site at peak staffing times)	
((H.)) G.	TRANSPORTATION FACILITIES			
	((H.)) G.1.	Cargo terminals	1 space for each 2,000 square feet	
	((H.)) G.2.	Parking and moorage		
		((H.)) G.2.a.	Flexible-use parking	None
		((H.)) G.2.b.	Towing services	None

	(H.) G.2.c.	Boat moorage	1 space for each 2 berths
	(H.) G.2.d.	Dry storage of boats	1 space for each 2,000 square feet
	(H.) G.3.	Passenger terminals	1 space for each 100 square feet of waiting area
	(H.) G.4.	Rail transit facilities	None
	(H.) G.5.	Transportation facilities, air	1 space for each 100 square feet of waiting area
	(H.) G.6.	Vehicle storage and maintenance uses	1 space for each 2,000 square feet
(H.) H.	UTILITIES		1 space for each 2,000 square feet

II. Non-residential use requirements for specific areas

(J.) I.	Non-residential uses in urban centers or the Station Area Overlay District ⁵	No minimum requirement
(K.) J.	Non-residential uses in urban villages that are not within an urban center or the Station Area Overlay District, if the non-residential use is located within a frequent transit service area ⁵	No minimum requirement
(L.) K.	Non-residential uses permitted in MR and HR zones pursuant to Section 23.45.504	No minimum requirement
(M.) L.	Non-residential uses permitted in II zones	No minimum requirement

Footnotes for Table A for 23.54.015

¹ No parking is required for urban farms or community gardens in residential zones.

² Required parking for spectator sports facilities or exhibition halls must be available when the facility or exhibition hall is in use. A facility shall be considered to be "in use" during the period beginning three hours before an event is scheduled to begin and ending one hour after a scheduled event is expected to end. For sports events of variable or uncertain duration, the expected event length shall be the average length of the events of the same type for which the most recent data are available, provided it is within the past five years. During an inaugural season, or for nonrecurring events, the best available good faith estimate of event duration will be used. A facility will not be deemed to be "in use" by virtue of the fact that administrative or maintenance personnel are present. The Director may reduce the required parking for any event when projected attendance for a spectator sports facility is certified to be 50 percent or less of the facility's seating capacity, to an amount not less than that required for the certified projected attendance, at the rate of one space for each ten fixed seats of certified projected attendance. An application for reduction and the certification shall be submitted to the Director at least 15 days prior to the event. When the event is one of a series of similar events, such certification may be submitted for the entire series 15 days prior to the first event in the series. If the Director finds that a certification of projected attendance of 50 percent or less of the seating capacity is based on satisfactory evidence such as past attendance at similar events or

advance ticket sales, the Director shall, within 15 days of such submittal, notify the facility operator that a reduced parking requirement has been approved, with any conditions deemed appropriate by the Director to ensure adequacy of parking if expected attendance should change. The parking requirement reduction may be applied for only if the goals of the facility's Transportation Management Plan are otherwise being met. The Director may revoke or modify a parking requirement reduction approval during a series, if projected attendance is exceeded.

³ For indoor sports and recreation uses that exceed 25,000 square feet in size in a Manufacturing Industrial Center, the minimum requirement is 1 space for each 2,000 square feet.

⁴ The amount of required parking is calculated based on the maximum number of staff or animals the center is designed to accommodate.

⁵ The general minimum requirements of Part I of Table A for 23.54.015 are superseded to the extent that a use, structure, or development qualifies for either a greater or a lesser minimum parking requirement (which may include no requirement) under any other provision. To the extent that a non-residential use fits within more than one line in Table A for 23.54.015, the least of the applicable minimum parking requirements applies. The different parking requirements listed for certain categories of non-residential uses shall not be construed to create separate uses for purposes of any requirements related to establishing or changing a use under this Title 23.

1
2

* * *

Table C for 23.54.015	
Required parking for public uses and institutions	
Use	Minimum parking required
I. General public uses and institutions	
A. Adult care centers ^{1, 2, 3}	1 space for each 10 adults (clients) or 1 space for each staff member, whichever is greater; plus 1 loading and unloading space for each 20 adults (clients)
B. Child care centers ^{2, 3, 4, 12}	1 space for each 10 children or 1 space for each staff member, whichever is greater; plus 1 loading and unloading space for each 20 children
* * *	
F. Community farms ^{((⁴))⁵}	1 space plus 1 space for each 10,000 square feet of site area, or 10 spaces, whichever is ((greater)) less
* * *	

Footnotes to Table C for 23.54.015

¹ When this use is permitted in a neighborhood residential zone as a conditional use, the Director may modify the parking requirements pursuant to Section 23.44.022; when the use is permitted in a multifamily zone as a conditional use, the Director may modify the parking requirements pursuant to Section 23.45.570.

² The amount of required parking is calculated based on the maximum number of staff,

children, or clients that the center is designed to accommodate on site at any one time.

³ As a Type I decision, the Director, in consultation with the Director of the Seattle Department of Transportation, may allow adult care and child care centers to provide loading and unloading spaces on street, if not prevented by current or planned transportation projects adjacent to their property, when no other alternative exists.

⁴ A child care facility, when co-located with an assisted living facility, may count the passenger load/unload space required for the assisted living facility toward its required passenger load/unload spaces.

⁵ When this use is permitted outright in a neighborhood residential or multifamily zone, the Director may reduce the parking and loading requirements of Section 23.54.015 and the requirements of Section 23.44.016 or Section 23.45.536 on a case-by-case basis if the applicant can demonstrate that the modification is necessary due to the specific features, activities, or programs of the institution and links the reduction to the features of the institution that justify the reduction. Such modifications shall be valid only under the conditions specified, and if those conditions change, the standard requirement shall be satisfied.

⁶ When family support centers are located within community centers owned and operated by the Department of Parks and Recreation, the Director may lower the combined parking requirement by up to a maximum of 15 percent, pursuant to subsection 23.54.020.I.

⁷ Indoor gymnasiums are not considered ball courts, nor are they considered auditoria or public assembly rooms unless they contain bleachers (fixed seats). If the gymnasium contains bleachers, the parking requirement for the gymnasium is one parking space for every eight fixed seats. Each 20 inches of width of bleachers is counted as one fixed seat for the purposes of determining parking requirements. If the gymnasium does not contain bleachers and is in a school, there is no parking requirement for the gymnasium. If the gymnasium does not contain bleachers and is in a community center, the parking requirement is one space for each 350 square feet.

⁸ When a library is permitted in a multifamily or commercial zone as a conditional use, the Director may modify the parking requirements of Section 23.54.015 and the requirements of Section 23.45.536 or Sections 23.47A.030 and 23.47A.032 on a case-by-case basis if the applicant can demonstrate that the modification is necessary due to the specific features, activities, or programs of the institution and links the reduction to the features of the institution that justify the reduction. Such modifications shall be valid only under the conditions specified, and if those conditions change, the standard requirement shall be satisfied.

⁹ For public schools, when an auditorium or other place of assembly is demolished and a new one built in its place, parking requirements are determined based on the new construction. When an existing public school on an existing public school site is remodeled, additional parking is required if any auditorium or other place of assembly is expanded or additional fixed seats are added. Additional parking is required as shown in this Table C for 23.54.015 for the increase in floor area or increase in number of seats only. If the parking requirement for the increased area or seating is 10 percent or less than that for the existing auditorium or other place of assembly, then no additional parking is required.

¹⁰ Development standard departures may be granted or required pursuant to the procedures and criteria set forth in Chapter 23.79 to reduce the required or permitted number of parking spaces.

¹¹ The general requirements of lines A through P of this Table C for 23.54.015 for general public uses and institutions, and requirements of subsection 23.54.016.B for Major Institution

uses, are superseded to the extent that a use, structure, or development qualifies for either a greater or a lesser parking requirement (which may include no requirement) under any other provision. To the extent that a general public use, institution, or Major Institution use fits within more than one line in this Table C for 23.54.015, the least of the applicable parking requirements applies. The different parking requirements listed for certain categories of general public uses or institutions shall not be construed to create separate uses for purposes of any requirements related to establishing or changing a use under this Title 23.

¹² The Director may reduce the minimum parking requirements for a child care center in any zone if a portion of its parking demand can be accommodated in nearby on-street parking.

Section 47. Section 23.54.030 of the Seattle Municipal Code, last amended by Ordinance 126685, is amended as follows:

23.54.030 Parking space and access standards

All parking spaces provided, whether required by Section 23.54.015 or not, and required barrier-free parking, shall meet the standards of this Section 23.54.030.

* * *

B. Parking space requirements. The required size of parking spaces shall be determined by whether the parking is for a residential, live-work, or non-residential use. In structures containing residential uses and also containing either non-residential uses or live-work units, parking that is clearly set aside and reserved for residential or live-work use shall meet the standards of subsection 23.54.030.B.1. Parking for all other uses within the structure shall meet the standards of subsection 23.54.030.B.2. All uses shall provide barrier-free accessible parking if required by the Seattle Building Code or the Seattle Residential Code.

1. Residential uses

a. When five or fewer parking spaces are provided, the minimum required size of a parking space shall be for a medium vehicle, as described in subsection 23.54.030.A.2, except as provided in subsection 23.54.030.B.1.d.

1 b. When more than five parking spaces are provided, a minimum of 60
2 percent of the parking spaces shall be striped for medium vehicles. The minimum size for a
3 medium parking space shall also be the maximum size. Forty percent of the parking spaces may
4 be striped for any size category in subsection 23.54.030.A, provided that when parking spaces
5 are striped for large vehicles, the minimum required aisle width shall be as shown for medium
6 vehicles.

7 c. Assisted living facilities. Parking spaces shall be provided as in
8 subsections 23.54.030.B.1.a and 23.54.030.B.1.b, except that a minimum of two spaces shall be
9 striped for a large vehicle.

10 d. Townhouse units. For an individual garage serving a townhouse unit,
11 the minimum required size of a parking space shall be for a medium vehicle, as described in
12 subsection 23.54.030.A.

13 2. Non-residential uses

14 a. When ten or fewer parking spaces are provided, a maximum of 25
15 percent of the parking spaces may be striped for small vehicles. A minimum of 75 percent of the
16 spaces shall be striped for large vehicles.

17 b. When between 11 and 19 parking spaces are provided, a minimum of
18 25 percent of the parking spaces shall be striped for small vehicles. The minimum required size
19 for these small parking spaces shall also be the maximum size. A maximum of 65 percent of the
20 parking spaces may be striped for small vehicles. A minimum of 35 percent of the spaces shall
21 be striped for large vehicles.

22 c. When 20 or more parking spaces are provided, a minimum of 35
23 percent of the parking spaces shall be striped for small vehicles. The minimum required size for

1 small parking spaces shall also be the maximum size. A maximum of 65 percent of the parking
2 spaces may be striped for small vehicles. A minimum of 35 percent of the spaces shall be striped
3 for large vehicles.

4 d. The minimum vehicle clearance shall be at least 6 feet 9 inches on at
5 least one floor, and there shall be at least one direct entrance (~~((from the street))~~) that is at least 6
6 feet 9 inches in height for all parking garages accessory to non-residential uses and live-work
7 units and for all flexible-use parking garages.

8 3. Live-work uses. The first required parking space shall meet the parking
9 standards for residential use. Additional required parking for a live-work use shall meet the
10 parking standards for non-residential use.

11 * * *

12 J. The Director may, as a Type I decision, modify any required dimension or distribution
13 percentage of parking spaces identified in subsections (~~((23.54.030.B.2 for nonresidential uses
14 and live-work units))~~) 23.54.030.A or 23.54.030.B to allow more efficient use of a surface
15 parking area or parking garage, when the parking area or parking garage provides adequate and
16 safe circulation.

17 * * *

18 Section 48. Section 23.55.032 of the Seattle Municipal Code, enacted by Ordinance
19 123543, is amended as follows:

20 **23.55.032 Signs in the Sand Point Overlay District((=))**

21 * * *

22 F. (~~((On-Premises Signs.))~~) On-premises signs

1 1. The following on-premises signs are permitted in addition to the signs
2 permitted by subsections 23.55.032.F.2 and F.3:

3 a. Memorial signs or tablets, and the names of buildings and dates of
4 building erection when cut into a masonry surface or constructed of bronze or other
5 noncombustible materials, up to a maximum of 5 square feet;

6 b. Signs for public facilities indicating danger and/or providing service or
7 safety information;

8 c. National, state, county, city, and institutional flags. In addition, flags are
9 permitted for a non-profit organization not meeting the definition of an Institution in ((~~Seattle~~
10 ~~Municipal Code Section 23.84~~)) Section 23.84A.018.

11 2. The number and type of on-premises signs allowed for business establishments
12 in subarea B and subarea C of the Sand Point Overlay District are as follows:

13 a. Each individual business establishment is permitted one projecting sign
14 oriented to pedestrians on each building facade occupied by that business on public rights-of-
15 way and publicly-owned roadways. The maximum area of this sign is 16 square feet.

16 b. Each individual business establishment is permitted one of the
17 following types of signs for each 300 linear feet, or portion thereof, of building facade occupied
18 by that business establishment on public rights-of-way and publicly-owned roadways. These
19 signs are:

20 *~~(i. wall;~~*

21 *~~ii. ground;~~*

22 *~~iii. projecting;~~*

23 *~~iv. awning;~~*

- ~~v. canopy;~~
- ~~vi. marquee, or~~
- ~~vii. under marquee.))~~
- 1) Wall;
- 2) Ground;
- 3) Projecting;
- 4) Awning;
- 5) Canopy;
- 6) Marquee; or
- 7) Under-marquee.

The maximum area for any of these signs is 48 square feet each. The sign shall be located on the portion of the structure that is on the public right-of-way or publicly owned roadway and occupied by the business establishment.

c. A business establishment with more than 300 linear feet of a building facade on a public right-of-way or publicly owned roadway is permitted to have one additional sign of the type permitted under subsection 23.55.032.F.2.b. A business establishment that is permitted to have two signs under this subsection 23.55.032.F.2.c may combine the two signs into one of the type of signs permitted under subsection 23.55.032.F.2.b, up to a maximum total combined area of 96 square feet.

d. Sign (~~(Height.)~~) height

~~((1))~~ 1) The maximum height for any portion of a pedestrian oriented projecting sign permitted under subsection 23.55.032.F.2.a is 10 feet above existing grade.

1 ((2)) 2) The maximum height for any portion of a projecting sign
2 that is not a pedestrian oriented sign permitted under subsection 23.55.032.F.2.a is 50 feet above
3 existing grade, or the height of the top of the wall, excluding any cornice, of the structure to
4 which the sign is attached, whichever is less.

5 ((3)) 3) The maximum height for any portion of a wall, awning,
6 canopy, marquee, or under-marquee sign is 20 feet or the height of the top of the wall, excluding
7 any cornice of the structure to which the sign is attached, whichever is greater.

8 3. Multifamily structures in subarea C of the Sand Point Overlay District are
9 allowed to have identification signs as follows:

10 a. One identification sign is permitted on each facade of a building
11 containing a multifamily use on public rights-of-way and publicly-owned roadways. Such signs
12 may not be located within 50 feet of each other.

13 b. Identification signs may be wall, ground, projecting, awning, canopy,
14 marquee, or under-marquee.

15 c. The maximum area of each identification sign is 24 square feet.

16 d. The maximum height for any portion of a wall, projecting, awning,
17 canopy, marquee, or under-marquee identification sign is 20 feet or the height of the top of the
18 wall, excluding any cornice, whichever is greater.

19 * * *

20 Section 49. Section 23.58C.035 of the Seattle Municipal Code, last amended by
21 Ordinance 125371, is amended as follows:

22 **23.58C.035 Modification of payment and performance amounts**

23 * * *

1 B. Inability to use certain capacity

2 1. In a SM-U 75-240, SM-U/R 75-240, or SM-U 95-320 zone, the performance
3 calculation amount according to Table B for 23.58C.050 shall be reduced to six percent and the
4 payment calculation amount according to Table B for 23.58C.040 shall be reduced such that it is
5 equal to the amount that applies in SM-U 85 if the applicant demonstrates that the site does not
6 meet the minimum lot size required for a highrise structure according to subsection
7 23.48.615.A.2, or that one or more specific requirements of Sections 23.48.635, 23.48.645, and
8 23.48.646 would prevent a highrise development from being able to achieve an average highrise
9 floor area of at least 7,500 square feet for stories subject to the highrise floor area limit according
10 to Section 23.48.645. For purposes of this subsection 23.58C.035.B.1, the following shall apply:

11 a. Financial feasibility shall not be considered in determining whether a
12 threshold could be achieved.

13 b. Recommendations by a Design Review Board shall not be considered
14 requirements of this Title 23.

15 2. In Downtown and SM-SLU zones listed in Table A for 23.58C.035, the
16 payment calculation amount according to Table A for 23.58C.040 and the performance
17 calculation amount according to Table A for 23.58C.050 shall be reduced if all of the conditions
18 of subsections 23.58C.035.B.2.a and 23.58C.035.B.2.b are met. The amount of the reduction
19 shall be as identified in subsections 23.58C.035.B.2.c and 23.58C.035.B.2.d.

20 a. If the development is located in a DOC1 zone, the development has a lot
21 size of at least 16,000 square feet.

22 b. The applicant demonstrates that one or more specific requirements of
23 this Title 23 directly prohibit the development from being able to achieve the maximum size

1 threshold or the secondary size threshold according to Table A for 23.58C.035 for the zone in
2 which the development is located. For purposes of this subsection 23.58C.035.B.2, the following
3 shall apply:

4 1) Financial feasibility shall not be considered in determining
5 whether a threshold could be achieved.

6 2) Recommendations by a Design Review Board shall not be
7 considered requirements of this Title 23.

8 3) The development shall be considered able to achieve the
9 secondary or maximum size threshold according to Table A for 23.58C.035 if any portion of the
10 development to which this Chapter 23.58C applies containing occupiable space could achieve
11 that size threshold, excluding rooftop features.

12 c. If the project cannot achieve the secondary size threshold for the
13 applicable development standard in Table A for 23.58C.035, the payment calculation amount
14 according to Table A for 23.58C.040 and the performance calculation amount according to Table
15 A for 23.58C.050 shall be reduced by the maximum reduction percentage according to Table A
16 for 23.58C.035.

17 d. If the project can achieve the secondary size threshold, but cannot
18 achieve the maximum size threshold for the applicable development standard in Table A for
19 23.58C.035, the payment calculation amount according to Table A for 23.58C.040 and the
20 performance calculation amount according to Table A for 23.58C.050 shall be reduced by a
21 percentage equal to the maximum reduction percentage in Table A for 23.58C.035 multiplied by
22 the difference of the maximum size threshold minus the size that could be achieved under
23 requirements of Title 23 and divided by the difference of the maximum size threshold minus the

1 secondary size threshold, provided that the total reduction shall never be more than the
2 maximum reduction percentage.

3 * * *

4 Section 50. Section 23.66.110 of the Seattle Municipal Code, last amended by Ordinance
5 121568, is amended as follows:

6 **23.66.110 Responsible agency((:))**

7 A. A special review board for the Pioneer Square Preservation District is created and
8 shall be known as the “Pioneer Square Preservation Board” (hereafter, the “Board” or the
9 “Preservation Board”). The Preservation Board shall be composed of nine ~~((9))~~ members, all of
10 whom shall be appointed by the Mayor and confirmed by the Council, and shall consist of two
11 ~~((2))~~ architects, two ~~((2))~~ owners of property in the District, one ~~((4))~~ District retail business
12 owner, one ~~((4))~~ attorney, one ~~((4))~~ human service representative, one ~~((4))~~ at-large
13 member, and one ~~((4))~~ historian or architectural historian. At least one ~~((4))~~ of the Board’s
14 members shall be a resident of the District. Appointments shall be for staggered terms of three
15 ~~((3))~~ years each~~((, except that initial appointments shall be staggered so that three (3) of the~~
16 ~~appointees shall serve for three (3) years, three (3) for two ((2)) years, and three (3) for one (1)~~
17 ~~year each. All members of the Pioneer Square Preservation Board, established by Ordinance~~
18 ~~110058, are appointed and confirmed as interim members of the Pioneer Square Preservation~~
19 ~~Board and shall serve until appointments pursuant to this chapter have been completed.))~~

20 Members ~~((of the Preservation Board))~~ shall serve without compensation.

21 ~~((In addition to the members set forth above, one (1)))~~ One additional designated young
22 adult position shall be added to the Preservation Board pursuant to the Get Engaged Program,

1 ((SMC)) Chapter 3.51. The terms of service related to this young adult position are set forth in
2 ((SMC)) Chapter 3.51.

3 B. The Department of Neighborhoods Director shall provide staff and clerical support for
4 the Preservation Board and shall assign a member of the Department's staff to act as
5 Preservation Board Coordinator. The Coordinator shall be the custodian of the Board's records,
6 handle official correspondence, and organize and supervise the Board's clerical and technical
7 work. The Coordinator shall also recommend to the Preservation Board such actions, policies,
8 rules and regulations as may be necessary to carry out the purposes of this ((chapter)) Chapter
9 23.66.

10 C. The Department of Neighborhoods Director, after receiving the Board's
11 recommendations, shall formulate detailed rules, to be adopted after a public hearing pursuant to
12 Chapter 3.02 ((of this Code)), which will clarify the use and development standards for the
13 District.

14 Section 51. Section 23.66.122 of the Seattle Municipal Code, last amended by Ordinance
15 125558, is amended as follows:

16 **23.66.122 Prohibited uses**

17 A. The following uses are prohibited in the Pioneer Square Preservation District as both
18 principal and accessory uses:

- 19 1. Retail ice dispensaries;
- 20 2. Plant nurseries;
- 21 3. Frozen food lockers;
- 22 4. Animal shelters and kennels;

- 1 5. Pet daycare, except as permitted as a street-level use in subsection 23.49.180.F
2 if an applicant elects to use added height under the provisions of Section 23.49.180;
3 6. Automotive sales and service, except gas stations located in parking garages;
4 7. Marine sales and service;
5 8. Heavy commercial services;
6 9. Heavy commercial sales;
7 10. Adult motion picture theaters;
8 11. Adult panorams;
9 12. Bowling alleys;
10 13. Skating rinks;
11 14. Major communication utilities;
12 15. Advertising signs and off-premises directional signs;
13 16. Transportation facilities, except passenger terminals, rail transit facilities,
14 parking garages, and streetcar maintenance bases;
15 17. Outdoor storage;
16 18. Jails;
17 19. Work-release centers;
18 20. General and heavy manufacturing uses;
19 21. Solid waste management;
20 22. Recycling uses;
21 23. Major (~~marijuana~~) cannabis activity; and
22 24. High-impact uses.

* * *

1 Section 52. Section 23.66.322 of the Seattle Municipal Code, last amended by Ordinance
2 124969, is amended as follows:

3 **23.66.322 Prohibited uses**

4 A. The following uses are prohibited as both principal and accessory uses in the entire
5 International Special Review District:

- 6 1. Adult motion picture theaters;
- 7 2. Adult panorams;
- 8 3. All general and heavy manufacturing uses;
- 9 4. All high-impact uses;
- 10 5. Solid waste management;
- 11 6. Recycling uses;
- 12 7. Automotive sales and service;
- 13 8. Bowling lanes;
- 14 9. Major communication utilities;
- 15 10. Heavy commercial sales;
- 16 11. Drive-in businesses;
- 17 12. Frozen food lockers;
- 18 13. Heavy commercial services;
- 19 14. Marine sales and services;
- 20 15. Medical testing laboratories;
- 21 16. Mortuary services;
- 22 17. Motels;
- 23 18. Outdoor storage;

- 1 19. Plant nurseries;
- 2 20. Retail ice dispensaries;
- 3 21. Shooting galleries;
- 4 22. Skating rinks;
- 5 23. Mobile home parks;
- 6 24. Transportation facilities except: passenger terminals, rail transit facilities, and
- 7 parking and moorage uses;
- 8 25. Animal shelters and kennels;
- 9 26. Jails;
- 10 27. Major ((~~marijuana~~) cannabis) activity; and
- 11 28. Work-release centers.

12 * * *

13 Section 53. Section 23.69.002 of the Seattle Municipal Code, last amended by Ordinance
14 126685, is amended as follows:

15 **23.69.002 Purpose and intent**

16 The purpose of this Chapter 23.69 is to regulate Seattle’s major educational and medical
17 institutions ((~~in order~~)) to:

18 * * *

19 D. Provide for the coordinated growth of major institutions through major institution
20 ((~~conceptual~~)) master plans and the establishment of major institutions overlay zones;

21 * * *

22 Section 54. Section 23.69.032 of the Seattle Municipal Code, last amended by Ordinance
23 126685, is amended as follows:

1 **23.69.032 Master plan process**

2 A. Not less than 60 days prior to applying for a master plan, the institution shall file a
3 notice of intent to prepare a master plan with the Director.

4 B. Formation of a Development or Implementation Advisory Committee

5 1. Immediately following submittal of a notice of intent to prepare a master plan,
6 the institution shall initiate the establishment of a Development Advisory Committee of at least
7 six, but no more than 12 members. In addition, all institutions with adopted master plans shall
8 have an Implementation Advisory Committee.

9 2. Where there is more than one Major Institution in the same general area, as
10 determined by the Director, a single Advisory Committee serving more than one institution may
11 be permitted.

12 3. The institution, in consultation with the Director of the Department of
13 Neighborhoods, shall notify individuals and organizations directly affected by the actions of the
14 institution of ~~((the opportunity))~~ opportunities to serve on its Advisory Committee. To the extent
15 possible, members of the Advisory Committee should possess experience in such areas as
16 consensus building, community organizing, land use and zoning, architecture or landscape
17 architecture, economic development, real estate development, and educational or medical
18 services. A nonmanagement representative of the institution shall be included.

19 4. Members of the Advisory Committee shall have no direct economic
20 relationship with the institution except as provided in subsection 23.69.032.B.3.

21 5. The Director of the Department of Neighborhoods shall review the list of
22 potential ~~((advisory committee))~~ Advisory Committee members and recommend to the Council
23 those individuals appropriate to achieve a balanced, independent, and representative

1 Development Advisory Committee. ~~((After the recommendation has been submitted, the~~
2 ~~Department of Neighborhoods may convene the Development Advisory Committee.))~~ The City
3 Council may confirm the Development Advisory Committee composition, make changes in the
4 size and/or composition of the Development Advisory Committee, or remand the matter to the
5 Director of the Department of Neighborhoods for further action. The City Council shall establish
6 the final composition of the Development Advisory Committee through a memorandum of
7 agreement with the institution, prepared by the Department of Neighborhoods and adopted by
8 resolution.

9 6. Four nonvoting, ex-officio members of the Advisory Committee shall represent
10 the Major Institution, the Seattle Department of Construction and Inspections, the Department of
11 Neighborhoods, and the Seattle Department of Transportation.

12 7. The ~~((advisory committee))~~ Advisory Committee shall be staffed by the
13 Department of Neighborhoods with the cooperation and assistance of the Major Institution.
14 Technical assistance to the committee shall be provided by the Seattle Department of
15 Construction and Inspections, the Seattle Department of Transportation, and the Department of
16 Neighborhoods.

17 8. During the master plan review and adoption process, the Council may, in the
18 interest of ensuring representative community participation on the Implementation Advisory
19 Committee, amend the size and/or composition of the Implementation Advisory Committee.

20 9. The City-University Community Advisory Committee (CUCAC) shall serve as
21 the Development and Implementation Advisory Committee for the University of Washington.

1 10. The Director of the Department of Neighborhoods shall promulgate rules
2 applicable to Major Institution advisory committees, including terms of office, selection of
3 chairpersons, and methods of conflict resolution.

4 C. Application for a (~~(Master Plan.)~~) master plan

5 1. Within (~~(one hundred twenty (120))~~) 120 days of filing a notice of intent to
6 prepare a master plan, the institution shall submit an application and applicable fees for a master
7 plan. This application shall include an environmental checklist and a concept plan. The
8 requirement for the environmental checklist may be waived if the Director and the Major
9 Institution agree that an Environmental Impact Statement (EIS) will be prepared. The concept
10 plan shall consist of the following:

- 11 a. Proposed institution boundaries; and
- 12 b. A proposed site plan including planned development and an estimate of
13 total gross floor area proposed by the Major Institution; and
- 14 c. Planned uses; and
- 15 d. Any planned street vacations and planned parking location and access;
- 16 and
- 17 e. A description of alternative proposals for physical development and
18 decentralization options, including a detailed explanation of the reasons for considering each
19 alternative; and
- 20 f. A description of the uses and character of the neighborhood surrounding
21 the major institution and how the Major Institution relates to the surrounding area. This shall
22 include pedestrian connections, physical and visual access to surrounding amenities and services,

1 and the relationship of the Major Institution to other Major Institution development within ((two
2 thousand five hundred (2,500))) 2,500 feet of its MIO District boundaries.

3 2. The Development Advisory Committee shall review and may submit
4 comments on the concept plan and if there is one, the environmental checklist.

5 3. After an application for a master plan has been filed, the Director, in
6 consultation with the institution and the Development Advisory Committee, shall prepare a
7 schedule for the completion of the master plan. The timelines described in this ((section))
8 Section 23.69.032 shall be goals((;)) and shall form the basis for the master plan schedule. The
9 goal of the City Council shall be to make a decision on the master plan within ((twenty four
10 (24))) 24 months from the date of application.

11 4. Notice of application for a master plan shall be provided as required by Chapter
12 23.76((, Procedures for Master Use Permits and Council Land Use Decisions)).

13 D. Development of ((Master Plan)) master plan

14 1. The Development Advisory Committee shall participate directly in the
15 formulation of the master plan from the time of its preliminary concept so that the concerns of
16 the community and the institution are considered. The primary role of the Development Advisory
17 Committee is to work with the Major Institution and the City to produce a master plan that meets
18 the intent of Section 23.69.025. Development Advisory Committee comments shall focus on
19 identifying and mitigating the potential impacts of institutional development on the surrounding
20 community based on the purpose and intent of this Chapter 23.69 as described in Section
21 23.69.002 and as prescribed in Chapter 25.05((, Environmental Policies and Procedures)). The
22 Development Advisory Committee may review and comment on the mission of the institution,
23 the need for the expansion, public benefits resulting from the proposed new development, and

1 the way in which the proposed development will serve the public purpose mission of the Major
2 Institution, but these elements are not subject to negotiation nor shall such review delay
3 consideration of the master plan or the final recommendation to Council.

4 2. The Development Advisory Committee shall hold open meetings with the
5 institution and City staff to discuss the master plan and resolve differences. The institution shall
6 provide adequate and timely information to the Development Advisory Committee for its
7 consideration of the content and level of detail of each of the specific elements of the master
8 plan.

9 3. The threshold determination of need for preparation of an Environmental
10 Impact Statement (EIS) shall be made as required by Chapter 25.05(~~(, Environmental Policies~~
11 ~~and Procedures)~~).

12 4. If an EIS is required and an institution is the lead agency, it shall initiate a
13 predraft EIS consultation with the Director. The Development Advisory Committee shall meet to
14 discuss the scope of the document. The Development Advisory Committee shall submit its
15 comments on the scope of the draft EIS to the lead agency and the Director before the end of the
16 scoping comment period. The lead agency shall prepare a final scope within one week after the
17 end of the scoping period.

18 5. The institution shall prepare a preliminary draft master plan within 70 days of
19 completion of the final scope of the EIS.

20 6. If an EIS is required, the institution or Seattle Department of Construction and
21 Inspections, whichever is lead agency, shall be responsible for the preparation of a preliminary
22 draft EIS within 70 days of the completion of the final scope, or approval of an EIS consultant
23 contract, whichever is later.

1 7. The Development Advisory Committee, the Director of Transportation, the
2 Director, and the institution shall submit comments on the preliminary draft master plan and the
3 preliminary draft EIS to the lead agency within three weeks of receipt, or on the environmental
4 checklist and supplemental studies if an EIS is not required. If the Seattle Department of
5 Construction and Inspections is the lead agency, a compiled list of the comments shall be
6 submitted to the institution within ten days of receipt of the comments.

7 8. Within three weeks of receipt of the compiled comments, the institution shall
8 review the comments and revise the preliminary draft master plan, if necessary, discussing and
9 evaluating in writing the comments of all parties. The lead agency shall review the comments
10 and be responsible for the revision of the preliminary draft EIS if necessary. If no EIS is
11 required, the lead agency shall review the comments and be responsible for the annotation of the
12 environmental checklist and revisions to any supplemental studies if necessary. Within three
13 weeks after receipt of the revised drafts, the Director shall review the revised drafts and may
14 require further documentation or analysis on the part of the institution. Three additional weeks
15 may be spent revising the drafts for publication.

16 9. The Director shall publish the draft master plan. If an EIS is required, the lead
17 agency shall publish the draft EIS.

18 10. The Director and the lead agency shall hold a public hearing on the draft
19 master plan and if an EIS is required, on the draft EIS.

20 11. The Development Advisory Committee, the Director of Transportation, and
21 the Director shall submit comments on the draft master plan and, if an EIS is required, on the
22 draft EIS within six weeks after the issuance of the draft master plan and EIS.

1 12. Within 13 weeks after receipt of the comments, the institution shall review the
2 comments on the draft master plan and shall prepare the final master plan.

3 13. If an EIS is required, the lead agency shall be responsible for the preparation
4 of a preliminary final EIS, following the public hearing and within six weeks after receipt of the
5 comments on the draft EIS. The Director of Transportation, the Director, and the institution shall
6 submit comments on the preliminary final EIS.

7 14. The lead agency shall review the comments on the preliminary final EIS and
8 shall be responsible for the revision of the preliminary final EIS, if necessary. The Director shall
9 review the revised final document and may require further documentation or analysis on the part
10 of the institution.

11 15. Within seven weeks after preparation of the preliminary final EIS, the
12 Director shall publish the final master plan and, if an EIS is required, the lead agency shall
13 publish the final EIS.

14 E. Draft report and recommendation of the Director

15 1. Within five weeks of the publication of the final master plan and EIS, the
16 Director shall prepare a draft report on the application for a master plan as provided in Section
17 23.76.050.

18 2. In the Director's Report, a determination shall be made whether the planned
19 development and changes of the Major Institution are consistent with the purpose and intent of
20 this Chapter 23.69, and represent a reasonable balance of the public benefits of development and
21 change with the need to maintain livability and vitality of adjacent neighborhoods. Consideration
22 shall be given to:

1 a. The reasons for institutional growth and change, the public benefits
2 resulting from the planned new facilities and services, and the way in which the proposed
3 development will serve the public purpose mission of the major institution; and

4 b. The extent to which the growth and change will significantly harm the
5 livability and vitality of the surrounding neighborhood.

6 3. In the Director's Report, an assessment shall be made of the extent to which the
7 Major Institution, with its proposed development and changes, will address the goals and
8 applicable policies ((~~under the Human Development~~)) in the Community Well-Being Element of
9 the Comprehensive Plan.

10 4. The Director's analysis and recommendation on the proposed master plan's
11 development program component shall consider the following:

12 a. The extent to which the Major Institution proposes to lease space or
13 otherwise locate a use at street level in a commercial zone outside of, but within ((~~two thousand~~
14 ~~five hundred (2,500))~~) 2,500 feet of, the MIO District boundary that is not similar to a personal
15 and household retail sales and service use, eating and drinking establishment, customer service
16 office, entertainment use or child care center but is allowed in the zone. To approve such
17 proposal, the Director shall consider the criteria in ((~~Section 23.69.035-D3~~)) subsection
18 23.69.035.D.3;

19 b. The extent to which proposed development is phased in a manner
20 ((~~which~~)) that minimizes adverse impacts on the surrounding area. When public improvements
21 are anticipated in the vicinity of proposed Major Institution development or expansion,
22 coordination between the Major Institution development schedule and timing of public
23 improvements shall be required;

1 c. The extent to which historic structures (~~which~~) that are designated on
2 any federal, state, or local historic or landmark register are proposed to be restored or reused.
3 Any changes to designated Seattle Landmarks shall comply with the requirements of (~~the~~
4 ~~Landmarks Preservation Ordinance~~) Chapter 25.12. The Major Institution's Development
5 Advisory Committee shall review any application to demolish a designated Seattle Landmark
6 and shall submit comments to the Landmarks Preservation Board before any certificate of
7 approval is issued;

8 d. The extent to which the proposed density of Major Institution
9 development will affect vehicular and pedestrian circulation, adequacy of public facilities,
10 capacity of public infrastructure, and amount of open space provided;

11 e. The extent to which the limit on the number of total parking spaces
12 allowed will minimize the impacts of vehicular circulation, traffic volumes, and parking in the
13 area surrounding the MIO District.

14 5. The Director's analysis and recommendation on the proposed master plan's
15 development standards component shall be based on the following:

16 a. The extent to which buffers such as topographic features, freeways or
17 large open spaces are present or transitional height limits are proposed to mitigate the difference
18 between the height and scale of existing or proposed Major Institution development and that of
19 adjoining areas. Transition may also be achieved through the provision of increased setbacks,
20 articulation of structure facades, limits on structure height or bulk, or increased spacing between
21 structures;

22 b. The extent to which any structure is permitted to achieve the height
23 limit of the MIO District. The Director shall evaluate the specified limits on structure height in

1 relationship to the amount of MIO District area permitted to be covered by structures, the impact
2 of shadows on surrounding properties, the need for transition between the Major Institution and
3 the surrounding area, and the need to protect views;

4 c. The extent to which setbacks of Major Institution development at
5 ground level or upper levels of a structure from the boundary of the MIO District or along public
6 rights-of-way are provided for and the extent to which these setbacks provide a transition
7 between Major Institution development and development in adjoining areas;

8 d. The extent to which allowable lot coverage is consistent with permitted
9 density and allows for adequate setbacks along public rights-of-way or boundaries of the MIO
10 District. Coverage limits should (~~insure~~) ensure that view corridors through Major Institution
11 development are enhanced and that area for landscaping and open space is adequate to minimize
12 the impact of Major Institution development within the MIO District and on the surrounding
13 area;

14 e. The extent to which landscaping standards have been incorporated for
15 required setbacks, for open space, along public rights-of-way, and for surface parking areas.
16 Landscaping shall meet or exceed the amount of landscaping required by the underlying zoning.
17 Trees shall be required along all public rights-of-way where feasible;

18 f. The extent to which access to planned parking, loading, and service
19 areas is provided from an arterial street;

20 g. The extent to which the provisions for pedestrian circulation maximize
21 connections between public pedestrian rights-of-way within and adjoining the MIO District in a
22 convenient manner. Pedestrian connections between neighborhoods separated by Major
23 Institution development shall be emphasized and enhanced;

1 h. The extent to which designated open space maintains the patterns and
2 character of the area in which the Major Institution is located and is desirable in location and
3 access for use by patients, students, visitors, and staff of the Major Institution;

4 i. The extent to which designated open space, though not required to be
5 physically accessible to the public, is visually accessible to the public;

6 j. The extent to which the proposed development standards provide for the
7 protection of scenic views and/or views of landmark structures. Scenic views and/or views of
8 landmark structures along existing public rights-of-way or those proposed for vacation may be
9 preserved. New view corridors shall be considered where potential enhancement of views
10 through the Major Institution or of scenic amenities may be enhanced. To maintain or provide for
11 view corridors the Director may require, but not be limited to, the alternate spacing or placement
12 of planned structures or grade-level openings in planned structures. The institution shall not be
13 required to reduce the combined gross floor area for the MIO District in order to protect views
14 other than those protected under City laws of general applicability.

15 6. The Director's report shall specify all measures or actions necessary to be taken
16 by the Major Institution to mitigate adverse impacts of Major Institution development that are
17 specified in the proposed master plan.

18 F. Draft (~~Advisory Committee Report~~) Development Advisory Committee report

19 1. At the same time the Director is preparing a written report on the master plan
20 application, the Development Advisory Committee shall prepare a written report of its findings
21 and recommendations on the final master plan. The Development Advisory Committee report
22 shall include, in addition to its recommendations, the public comments it received. The document
23 may incorporate minority reports.

1 2. The Development Advisory Committee report shall set forth any issues
2 ~~((which))~~ that the committee believes were inadequately addressed in the final master plan and
3 final EIS and clearly state the committee's position on these issues.

4 3. The Development Advisory Committee report shall include a record of
5 committee meetings, including the meetings' minutes.

6 G. Preparation of ~~((Final))~~ final Director's ~~((Report))~~ report and ~~((Final))~~ final
7 Development Advisory Committee ~~((Report.))~~ report

8 1. The Director shall submit the draft Director's report to the Development
9 Advisory Committee and the institution for their review.

10 2. Within three ~~((3))~~ weeks after receipt of the draft Director's Report, the
11 Development Advisory Committee and the institution shall review and submit comments to the
12 Director on the draft Director's Report.

13 3. Within two ~~((2))~~ weeks after receipt of the Development Advisory
14 Committee's and institution's comments, the Director shall review the comments, and prepare a
15 final Director's report using the criteria in subsection 23.69.032.E ~~((of this section))~~. The
16 Director shall address each of the issues in the Development Advisory Committee's comments on
17 the draft Director's Report. In addition, on those issues where the Director's recommendation
18 differs from the Development Advisory Committee's recommendations, the Director shall
19 include explanation of the difference.

20 4. The Director shall submit the final Director's Report to the Development
21 Advisory Committee.

22 5. Within two ~~((2))~~ weeks after receipt of the final Director's Report, the
23 Development Advisory Committee shall finalize its report according to subsection 23.69.032.F

1 ~~((of this section))~~. The Development Advisory Committee report shall also include comments on
2 the final Director's Report.

3 H. Hearing Examiner ~~((Consideration))~~ of the ~~((Master Plan.))~~ master plan

4 1. The Hearing Examiner shall review the Director's report and recommendation
5 and the Development Advisory Committee's report on the Director's report, as provided in
6 Section 23.76.052.

7 2. If the Hearing Examiner considers the proposed master plan and all
8 recommendations for changes, alternatives, mitigating measures, and conditions, and determines
9 that a significant master plan element or environmental issue was not adequately addressed by
10 the proposed master plan, the Hearing Examiner may request the institution to prepare new
11 proposals on the issues identified, may request the Director to conduct further analysis or provide
12 clarification, and may request the Development Advisory Committee to reconvene for the
13 limited purpose of commenting on the new proposals. The new proposals shall also be submitted
14 to the Director, Development Advisory Committee and parties of record for comment. After the
15 new proposals and comments have been received, the Hearing Examiner may:

16 a. Remand the new proposals and Development Advisory Committee
17 comments and recommendation to the Director for further consideration and report; or

18 b. Hold the hearing record open for evidence on the new proposals, the
19 Development Advisory Committee comments and recommendation, and/or any comments
20 pertaining to the limited issues ~~((which))~~ that were presented by other parties of record.

21 3. The Hearing Examiner shall submit a recommendation to the Council on the
22 proposed master plan within 30 days following the hearing. In addition to the Hearing
23 Examiner's recommendation, the Hearing Examiner shall transmit to the Council the proposed

1 master plan, environmental documentation, the Development Advisory Committee's reports, and
2 the report and recommendation of the Director.

3 I. City Council (~~((Consideration))~~) consideration of the Hearing Examiner's
4 (~~((Recommendation))~~) recommendation

5 1. The City Council shall review and consider the Hearing Examiner's
6 recommendation as provided in Section 23.76.054. The (~~((goal of the))~~) City Council shall (~~((be))~~)
7 endeavor to take final action on the (~~((Hearing Examiner's))~~) recommendation (~~((no later than))~~)
8 within three months after (~~((the date))~~) it receives the recommendation.

9 2. If the City Council examines the proposed master plan and all
10 recommendations for changes, alternatives, mitigating measures, and conditions, and determines
11 that a significant master plan element was not adequately addressed by the proposed master plan,
12 the City Council may remand the master plan for submission of additional information and/or
13 new proposal(s) on the issue determined to be inadequately addressed, in a time frame specified
14 in the remand. The institution shall submit the additional information and/or new proposals to the
15 Development Advisory Committee, to the parties of record to the City Council decision to
16 remand, and to the Director. The Development Advisory Committee shall prepare and submit
17 comments and a report to the Director. The Director shall submit a report and recommendation
18 on the additional information and/or new proposal(s) to the Hearing Examiner. The Hearing
19 Examiner shall consider the additional information and/or new proposal(s) and submit a
20 recommendation to the City Council pursuant to subsection 23.69.032.H.

21 J. City Council decision

1 1. The City Council's decision to adopt, adopt with conditions, or deny an
2 application for a Major Institution Master Plan shall comply with the requirements of Section
3 23.76.056.

4 2. Adoption of a master plan shall be by ordinance.

5 K. Requirement for compiled plan. Within 30 days of adoption of a master plan by the
6 City Council, the institution shall submit a draft copy of the compiled adopted plan for the
7 Director's review and approval. This compiled plan shall incorporate all changes and conditions
8 imposed during the plan approval process. The Director shall review the compiled plan within 30
9 days of receipt of the plan((~~7~~)) and may request corrections or clarifications if necessary. Upon
10 the Director's approval, the institution shall submit six written copies of the compiled adopted
11 plan to the Director. The Director shall keep one copy and distribute the other five copies to the
12 City Clerk's Office, the Department of Neighborhoods, and the Seattle Public Library (one copy
13 each for the main downtown library and ((~~two copies to go to~~)) the two branch libraries nearest
14 the institution). The institution shall also submit one copy of the compiled adopted plan in
15 electronic format for the City to post on the City's ((~~of Seattle Official Web Site~~)) website. No
16 Master Use Permit for development first permitted in the adopted plan shall be issued until the
17 compiled plan has been reviewed and approved by the Director except as provided in Section
18 23.69.033.

19 Section 55. Section 23.69.033 of the Seattle Municipal Code, last amended by Ordinance
20 118362, is amended as follows:

21 **23.69.033 Approval of master use permits prior to master plan adoption((~~7~~))**

1 An institution may submit an application for development requiring a master plan prior to the
2 master plan's adoption at any time following application for a master plan. The application may
3 be approved if the following conditions are met:

4 A. Development proposed in the ~~((Master Plan))~~ master plan:

5 1. The Draft Environmental Impact Statement (DEIS) and the draft master plan
6 have been published; and

7 2. The development standards shall be established through the conditional use
8 process; and either:

9 ~~((3-))~~ a. The end of the schedule for submittal to the City Council of the master
10 plan has been reached, ~~((and b. Review))~~ review of the application has been completed by the
11 ~~((advisory committee))~~ Development Advisory Committee and it has made a recommendation to
12 the Director, and ~~((e. The))~~ the City Council has approved the development as a Council
13 Conditional Use according to the criteria of ~~((Section))~~ subsection 23.69.012.A; or

14 ~~((4. a-))~~ b. The ~~((advisory committee))~~ Development Advisory Committee
15 has reviewed the application and has recommended by a ~~((three-fourths (3/4)))~~ 3/4 vote of all
16 ~~((advisory committee))~~ Development Advisory Committee members, with at least six ~~((6))~~
17 affirmative votes, approval of the application, and ~~((b. The))~~ the Director has approved the
18 development as an Administrative Conditional Use according to the criteria of Section
19 23.69.012;

20 B. Development not proposed in the ~~((Master Plan))~~ master plan:

21 1. The conditions of subsection 23.69.033.A ~~((of this section))~~ have been met; and
22 2. The institution shall provide a statement describing the unforeseen conditions
23 or circumstances ~~((which))~~ that warrant the need to include the proposed development; and

1 3. An analysis of the environmental impacts of the new proposal shall be
2 incorporated into the environmental analysis of the proposed master plan and shall be reviewed
3 by the ~~((advisory committee))~~ Development Advisory Committee; and

4 4. The published final master plan and final EIS shall be amended to include the
5 proposed development.

6 Section 56. Section 23.69.034 of the Seattle Municipal Code, last amended by Ordinance
7 126685, is amended as follows:

8 **23.69.034 Effect of master plan adoption**

9 * * *

10 B. The Director may approve applications requiring a master plan prior to final adoption
11 of the master plan subject to the provisions of ~~((Section 23.04.040 F, Section 23.04.040 G, or))~~
12 Section 23.69.033.

13 * * *

14 Section 57. Section 23.71.006 of the Seattle Municipal Code, enacted by Ordinance
15 116795, is amended as follows:

16 **23.71.006 Application of regulations~~((:))~~**

17 All land located within the Northgate Overlay District is subject to regulations of the underlying
18 zone unless specifically modified by the provisions of this ~~((chapter))~~ Chapter 23.71. Where the
19 boundaries of the Northgate Overlay District overlap with the boundaries of the Major Institution
20 Overlay District, the zoning underlying a major institution shall be as modified by the Northgate
21 Overlay District. In the event of irreconcilable differences between the provisions of the
22 Northgate Overlay District and the underlying zone, the provisions of this ~~((chapter))~~ Chapter
23 23.71 apply, except that where a conflict exists between the provisions of this ~~((chapter))~~ Chapter

1 23.71 and Chapter 23.69, Major Institution Overlay District, the provisions of Chapter 23.69 take
2 precedence(~~(, provided that the major institution may be granted an exception pursuant to SMC~~
3 ~~Section 23.71.026)~~).

4 Section 58. Section 23.84A.006 of the Seattle Municipal Code, last amended by
5 Ordinance 125681, is amended as follows:

6 **23.84A.006 “C”**

7 * * *

8 "Candelabra mounting." See "communication devices and utilities."

9 "Cannabis" means all parts of the plant Cannabis, whether growing or not; the seeds
10 thereof; the resin extracted from any part of the plant; and every compound, manufacture, salt,
11 derivative, mixture, or preparation of the plant, its seeds, or resin. The term does not include:

- 12 1. The mature stalks of the plant;
- 13 2. Fiber produced from the mature stalks of the plant;
- 14 3. Oil or cake made from the seeds of the plant;
- 15 4. Any other compound, manufacture, salt, derivative, mixture, or preparation of
16 the mature stalks (except the resin extracted therefrom), fiber, oil, or cake; or
- 17 5. The sterilized seed of the plant (~~(which)~~) that is incapable of germination.

18 "Cannabis activity, major" means, except as provided below, any production, processing,
19 or selling of cannabis, cannabis-infused products, usable cannabis, or cannabis concentrates.

20 Major cannabis activity does not include the following activities when they occur within a
21 dwelling unit occupied by a qualifying patient or designated provider, as those terms are defined
22 in RCW 69.51A.010, or within an enclosed structure that is accessory to such a dwelling unit:

- 23 1. Production of cannabis involving up to 15 plants;

1 b. Production of cannabis involving up to 60 plants if the production is conducted
2 by a cooperative that is registered with the Washington State Liquor and Cannabis Board and
3 operates in compliance with RCW 69.51A.043;

4 c. Drying or incorporation into food of up to 15 cannabis plants; or

5 d. Drying or incorporation into food of up to 60 cannabis plants if such processing
6 is conducted by a cooperative that is registered with the Washington State Liquor and Cannabis
7 Board and operates in compliance with chapter 69.51A RCW.

8 "Cannabis concentrates" means products consisting wholly or in part of the resin
9 extracted from any part of the plant Cannabis and having a THC concentration greater than ten
10 percent.

11 "Cannabis-infused products" means products that contain cannabis or cannabis extracts
12 and are intended for human use. The term "cannabis-infused products" does not include useable
13 cannabis.

14 "Cannabis, useable" means dried cannabis flowers. The term "useable cannabis" does not
15 include cannabis-infused products.

16 * * *

17 Section 59. Section 23.84A.008 of the Seattle Municipal Code, last amended by
18 Ordinance 124919, is amended as follows:

19 **23.84A.008 "D"**

20 * * *

21 "Downtown Amenity Standards" means the provisions contained ~~((in Attachment 3 to))~~
22 Ordinance ~~((122054))~~ 124591, as they may be amended from time to time by ordinance. The
23 Downtown Amenity Standards replaced the Public Benefit Features Rule.

~~(("Marijuana" means all parts of the plant Cannabis, whether growing or not; the seeds thereof; the resin extracted from any part of the plant; and every compound, manufacture, salt, derivative, mixture, or preparation of the plant, its seeds, or resin. The term does not include:~~

- ~~1. the mature stalks of the plant;~~
- ~~2. fiber produced from the mature stalks of the plant;~~
- ~~3. oil or cake made from the seeds of the plant;~~
- ~~4. any other compound, manufacture, salt, derivative, mixture, or preparation of the mature stalks (except the resin extracted therefrom), fiber, oil, or cake; or~~
- ~~5. the sterilized seed of the plant which is incapable of germination.~~

1 ~~"Marijuana activity, major" means, except as provided below, any production,~~
2 ~~processing, or selling of marijuana, marijuana-infused products, useable marijuana, or marijuana~~
3 ~~concentrates. Major marijuana activity does not include the following activities when they occur~~
4 ~~within a dwelling unit occupied by a qualifying patient or designated provider, as those terms are~~
5 ~~defined in RCW 69.51A.010, or within an enclosed structure that is accessory to such a dwelling~~
6 ~~unit:~~

7 ~~a. production of marijuana involving up to 15 plants;~~

8 ~~b. production of marijuana involving up to 60 plants if the production is~~
9 ~~conducted by a cooperative that is registered with the Washington State Liquor and Cannabis~~
10 ~~Board and operates in compliance with RCW 69.51A.043;~~

11 ~~c. drying or incorporation into food of up to 15 marijuana plants; or~~

12 ~~d. drying or incorporation into food of up to 60 marijuana plants if such~~
13 ~~processing is conducted by a cooperative that is registered with the Washington State Liquor and~~
14 ~~Cannabis Board and operates in compliance with chapter 69.51A RCW.~~

15 ~~"Marijuana concentrates" means products consisting wholly or in part of the resin~~
16 ~~extracted from any part of the plant Cannabis and having a THC concentration greater than ten~~
17 ~~percent.~~

18 ~~"Marijuana-infused products" means products that contain marijuana or marijuana~~
19 ~~extracts and are intended for human use. The term "marijuana-infused products" does not include~~
20 ~~useable marijuana.~~

21 ~~"Marijuana, useable" means dried marijuana flowers. The term "useable marijuana" does~~
22 ~~not include marijuana-infused products.))~~

23 * * *

1 Section 62. Section 23.84A.030 of the Seattle Municipal Code, last amended by
2 Ordinance 126855, is amended as follows:

3 **23.84A.030 “P”**

4 * * *

5 "Public Benefit Features Rule" means the (~~DPD~~) superseded Director's Rule 20-93,
6 subject heading Public Benefit Features: Guidelines for Evaluating Bonus and TDR Projects,
7 Administrative Procedures and Submittal Requirements in Downtown Zones, to the extent the
8 provisions thereof have not been superseded by amendments to, or repeal of, provisions of this
9 title. References to the "Public Benefit Features Rule" for provisions on a particular subject also
10 shall include, where applicable, any successor rule or rules issued by the Director to incorporate
11 provisions on that subject formerly included in Rule 20-93, with any appropriate revisions to
12 implement amendments to this title since the date of such rule. The Downtown Amenity
13 Standards replaced this rule.

14 * * *

15 Section 63. Section 23.84A.032 of the Seattle Municipal Code, last amended by
16 Ordinance 126855, is amended as follows:

17 **23.84A.032 “R”**

18 * * *

19 "Residential use" means any one or more of the following:

20 1. "Accessory dwelling unit" means one or more rooms that:

21 a. Are located within a principal dwelling unit or within an accessory
22 structure on the same lot as a principal dwelling unit;

1 b. Meet the standards of Section 23.44.041, Section 23.45.545, or Chapter
2 23.47A, as applicable;

3 c. Are designed, arranged, and intended to be occupied by not more than
4 one household as living accommodations independent from any other household; and

5 d. Are so occupied or vacant.

6 2. "Attached accessory dwelling unit" means an accessory dwelling unit that is
7 within a principal dwelling unit.

8 3. "Adult family home" means an adult family home defined and licensed as such
9 by the State of Washington in a dwelling unit.

10 4. "Apartment" means a multifamily residential use that is not a cottage housing
11 development, rowhouse development, or townhouse development.

12 5. "Artist's studio/dwelling" means a combination working studio and dwelling
13 unit for artists, consisting of a room or suite of rooms occupied by not more than one household.

14 6. "Assisted living facility" means a use licensed by the State of Washington as a
15 boarding home (~~(pursuant to chapter 18.20 RCW)~~) that contains at least two assisted living units
16 for people who have either a need for assistance with activities of daily living (which are defined
17 as eating, toileting, ambulation, transfer (e.g., moving from bed to chair or chair to bath), and
18 bathing) or some form of cognitive impairment but who do not need the skilled critical care
19 provided by nursing homes. See "Assisted living unit."

20 7. "Carriage house" means a dwelling unit in a carriage house structure.

21 8. "Carriage house structure" means a structure within a cottage housing
22 development, in which one or more dwelling units are located on the story above an enclosed
23 parking garage at ground level that either abuts an alley and has vehicle access from that alley, or

1 is located on a corner lot and has access to the parking in the structure from a driveway that abuts
2 and runs parallel to the rear lot line of the lot. See also "Carriage house."

3 9. "Caretaker's quarters" means a use accessory to a non-residential use consisting
4 of a dwelling unit not exceeding 800 square feet of living area and occupied by a caretaker or
5 watchperson.

6 10. "Congregate residence" means a use in which rooms or lodging, with or
7 without meals, are provided for any number of non-transient persons not constituting a single
8 household.

9 11. "Cottage housing development" means a use consisting of cottages arranged
10 on at least two sides of a common open space or a common amenity area. A cottage housing
11 development may include a carriage house structure. See "Cottage," "Carriage house," and
12 "Carriage house structure."

13 12. "Detached accessory dwelling unit" means an accessory dwelling unit in an
14 accessory structure.

15 13. "Domestic violence shelter" means a structure or portion of a structure
16 managed by a nonprofit organization, which unit provides housing at a confidential location and
17 support services for victims of domestic violence.

18 14. "Floating home" means a dwelling unit constructed on a float that is moored,
19 anchored, or otherwise secured in the water.

20 15. "Low-income housing."

21 16. "Mobile home" means a structure that is designed and constructed to be
22 transportable in one or more sections and built on a permanent chassis, designed to be used as a
23 dwelling unit without a permanent foundation, and connected to utilities that include plumbing,

1 heating, and electrical systems. A structure that was transportable at the time of manufacture is
2 still considered to meet this definition notwithstanding that it is no longer transportable.

3 17. "Mobile home park" means a tract of land that is rented for the use of more
4 than one mobile home occupied as a dwelling unit.

5 18. "Multifamily residential use" means a use consisting of two or more dwelling
6 units in a structure or portion of a structure, excluding accessory dwelling units.

7 19. "Nursing home" means a use licensed by the State of Washington as a nursing
8 home(~~(, which))~~ that provides full-time convalescent and/or chronic care for individuals who, by
9 reason of chronic illness or infirmity, are unable to care for themselves, but that does not provide
10 care for the acutely ill or surgical or obstetrical services. This definition excludes hospitals or
11 sanitariums.

12 20. "Permanent supportive housing."

13 21. "Rowhouse development" means a multifamily residential use in which all
14 principal dwelling units on the lot meet the following conditions:

15 a. Each dwelling unit occupies the space from the ground to the roof of the
16 structure in which it is located;

17 b. No portion of a dwelling unit, except for an accessory dwelling unit or
18 shared parking garage, occupies space above or below another dwelling unit;

19 c. Each dwelling unit is attached along at least one common wall to at
20 least one other dwelling unit, with habitable interior space on both sides of the common wall, or
21 abuts another dwelling unit on a common lot line;

22 d. The front of each dwelling unit faces a street lot line;

1 e. Each dwelling unit provides pedestrian access directly to the street that
2 it faces; and

3 f. No portion of any other dwelling unit, except for an attached accessory
4 dwelling unit, is located between any dwelling unit and the street faced by the front of that unit.

5 22. "Single-family dwelling unit" means a detached principal structure having a
6 permanent foundation, containing one dwelling unit, except that the structure may also contain
7 one or two attached accessory dwelling units where expressly authorized pursuant to this Title

8 23. A detached accessory dwelling unit is not considered a single-family dwelling unit for
9 purposes of this Chapter 23.84A.

10 23. "Townhouse development" means a multifamily residential use that is not a
11 rowhouse development, and in which:

12 a. Each dwelling unit occupies space from the ground to the roof of the
13 structure in which it is located;

14 b. No portion of a dwelling unit occupies space above or below another
15 dwelling unit, except for an attached accessory dwelling unit and except for dwelling units
16 constructed over a shared parking garage, including shared parking garages that project up to 4
17 feet above grade; and

18 c. Each dwelling unit is attached along at least one common wall to at
19 least one other dwelling unit, with habitable interior space on both sides of the common wall, or
20 abuts another dwelling unit on a common lot line.

22 Section 64. Section 23.84A.038 of the Seattle Municipal Code, last amended by
23 Ordinance 126855, is amended as follows:

1 **23.84A.038 "T"**

2 * * *

3 ((~~"Tree, exceptional" means a tree designated as such per Chapter 25.11.~~))

4 * * *

5 Section 65. Section 25.05.444 of the Seattle Municipal Code, last amended by Ordinance
6 114057, is amended as follows:

7 **25.05.444 Elements of the environment**

8 * * *

9 B. Built Environment.

10 * * *

11 3. Transportation:

12 a. Transportation systems;

13 b. Vehicular traffic;

14 c. Waterborne, rail, and air traffic;

15 ~~((d. Parking;~~

16 e.)) d. Movement/circulation of people or goods;

17 ~~((f.))~~ e. Traffic hazards.

18 * * *

19 Section 66. Section 25.05.675 of the Seattle Municipal Code, last amended by Ordinance
20 125558, is amended as follows:

21 **25.05.675 Specific environmental policies**

22 * * *

23 J. Land use

1 1. Policy background

2 a. The City has adopted land use regulations that are designed, in part, to
3 minimize or prevent impacts resulting from incompatible land use. However, Title 23 cannot
4 identify or anticipate all possible uses and all potential land use impacts. For example, adverse
5 cumulative land use impacts may result when a particular use or uses permitted under Title 23
6 occur in an area to such an extent that they foreclose opportunities for higher-priority, preferred
7 uses called for in the Land Use Element, Growth Strategy Element, and Shoreline Element of the
8 Seattle Comprehensive Plan.

9 b. Density-related impacts of development are addressed under the
10 policies set forth in subsections 25.05.675.G (height, bulk, and scale), ~~((25.05.675.M (parking),))~~
11 25.05.675.O (public services and facilities), and 25.05.675.R (traffic and transportation) and are
12 not addressed under this policy.

13 2. Policies

14 a. It is the City's policy to ensure that proposed uses in development
15 projects are reasonably compatible with surrounding uses and are consistent with any applicable,
16 adopted City land use regulations, the goals and policies set forth in the Land Use Element,
17 Growth Strategy Element, and Shoreline Element of the Seattle Comprehensive Plan for the area
18 in which the project is located.

19 b. Subject to the overview policy set forth in Section 25.05.665, the
20 decisionmaker may condition or deny any project to mitigate adverse land use impacts resulting
21 from a proposed project or to achieve consistency with the applicable City land use regulations;
22 the goals and policies set forth in the Land Use Element, Growth Strategy Element, and
23 Shoreline Element of the Seattle Comprehensive Plan; the procedures and locational criteria for

1 shoreline environment redesignations set forth in Sections 23.60A.060 and 23.60A.220,
2 respectively; and the environmentally critical areas policies.

3 * * *

4 M. Reserved. ((Parking

5 1. Policy background

6 a. ~~It is the City's policy to encourage use of a broad range of transportation~~
7 ~~options and to reduce reliance on single-occupant vehicles.~~

8 b. ~~Increased parking demand associated with development projects may~~
9 ~~adversely affect the availability of parking in an area, especially one that is not well served by~~
10 ~~transit or other transportation choices.~~

11 c. ~~Parking regulations, where appropriate, and other policies and~~
12 ~~regulations designating preferred land use patterns and promoting transportation choices,~~
13 ~~combine to alleviate most growth-related parking impacts including cumulative impacts. This~~
14 ~~policy recognizes that the City's land use and transportation planning policies encourage~~
15 ~~development patterns that support personal choices among many transportation modes and~~
16 ~~maximize the ability of the street network to function efficiently. This policy also recognizes the~~
17 ~~substantial costs imposed on housing by requiring construction of parking, which adversely~~
18 ~~affects the ability to provide housing, including affordable housing. City land use policies that~~
19 ~~encourage residential and commercial growth in the areas with the greatest availability of~~
20 ~~transportation choices promote efficiencies that may reduce or limit per capita parking demand.~~
21 ~~Due, however, to shortfalls in available parking resulting from existing or projected demands, the~~
22 ~~City recognizes that in some neighborhoods parking spillover impacts may occur.~~

23 2. Policies

1 a. ~~It is the City's policy to minimize or prevent adverse parking impacts~~
2 ~~associated with development projects. This is achieved by requiring parking impact mitigation of~~
3 ~~development projects where appropriate as provided for in the Land Use Code or other codes. It~~
4 ~~is also achieved through implementing growth management policies, transportation policies, and~~
5 ~~policies that support reducing or eliminating off-street parking requirements where residents and~~
6 ~~others may conveniently choose to use other forms of transportation instead of relying on~~
7 ~~automobiles.~~

8 b. ~~Subject to the overview and cumulative effects policies set forth in~~
9 ~~Sections 25.05.665 and 25.05.670, the decisionmaker may condition a project to mitigate the~~
10 ~~effects of development in an area on parking; provided that:~~

11 1) ~~No SEPA authority is provided to mitigate the impact of~~
12 ~~individual developments on parking availability in the Downtown and South Lake Union Urban~~
13 ~~Centers;~~

14 2) ~~No SEPA authority is provided for the decisionmaker to~~
15 ~~mitigate the impact of individual developments on parking availability for uses located within:~~

16 a) ~~The Capitol Hill/First Hill Urban Center, the Uptown~~
17 ~~Urban Center, and the University District Urban Center, except the portion of the Ravenna Urban~~
18 ~~Village that is not within one-quarter mile (1,320 feet) of a street with frequent transit service,~~
19 ~~measured as the walking distance from the nearest transit stop to the lot line of the lot;~~

20 b) ~~The Station Area Overlay District; and~~

21 c) ~~Portions of urban villages within one-quarter mile (1,320~~
22 ~~feet) of a street with frequent transit service, measured as the walking distance from the nearest~~
23 ~~transit stop to a lot line, which in the case of unit lots shall be made from the parent lot;~~

1 ~~3) Outside of the areas listed in this subsection 25.05.675.M.2.b,~~
2 ~~parking impact mitigation for multifamily development, except in the Alki area, as described in~~
3 ~~subsection 25.05.675.M.2.c, may be required only where on-street parking is at capacity, as~~
4 ~~defined by the Seattle Department of Transportation, or where the development itself would~~
5 ~~cause on-street parking to reach capacity as so defined.~~

6 ~~e. For the Alki area, as identified on Map B for 23.54.015, a higher~~
7 ~~number of spaces per unit than is required by Section 23.54.015 may be required to mitigate the~~
8 ~~adverse parking impacts of specific multifamily projects. Projects that generate a greater need for~~
9 ~~parking and that are located in places where the street cannot absorb that need—for example,~~
10 ~~because of proximity to Alki Beach Park—may be required to provide additional parking spaces~~
11 ~~to meet the building's actual need. In determining that need, the size of the development project,~~
12 ~~the size of the units, and the number of bedrooms in the units shall be considered.~~

13 ~~d. If parking impact mitigation is authorized by this subsection~~
14 ~~25.05.675.M, it may include but is not limited to:~~

15 ~~1) Transportation management programs;~~
16 ~~2) Parking management and allocation plans; or~~
17 ~~3) Incentives for the use of alternatives to single-occupancy~~
18 ~~vehicles, such as transit pass subsidies, parking fees, subsidies for participation in car share or~~
19 ~~bike share programs or similar mobility choice programs, and provision of bicycle parking space;~~

20 ~~4) Increased parking ratios; and~~
21 ~~5) Reductions in non-residential development densities to the~~
22 ~~extent that it can be shown that reduced parking spillover is likely to result; provided, that~~

1 ~~parking impact mitigation for multifamily development may not include reduction in~~
2 ~~development density.))~~

3 * * *

4 P. Public view protection

5 1. Policy background

6 a. Seattle has a magnificent natural setting of greenery, mountains, and
7 water; visual amenities and opportunities are an integral part of the City's environmental quality.

8 b. The City has developed particular sites for the public's enjoyment of
9 views of mountains, water, and skyline and has many scenic routes and other public places
10 where such views enhance one's experience.

11 c. Obstruction of public views may occur when a proposed structure is
12 located in close proximity to the street property line, when development occurs on lots situated at
13 the foot of a street that terminates or changes direction because of a shift in the street grid
14 pattern, or when development along a street creates a continuous wall separating the street from
15 the view.

16 d. Authority provided through Chapter 25.12 is intended to preserve sites
17 and structures ((which)) that reflect significant elements of the City's historic heritage and to
18 designate and regulate such sites and structures as historic landmarks.

19 e. The Land Use Code provides for the preservation of specified view
20 corridors through setback requirements.

21 f. The Land Use Code attempts to protect private views through height and
22 bulk controls and other zoning regulations but it is impractical to protect private views through
23 project-specific review.

1 2. Policies

2 a. ~~((H))~~ It is the City's policy to protect public views of significant natural
3 and human-made features: Mount Rainer, the Olympic and Cascade Mountains, the downtown
4 skyline, and major bodies of water including Puget Sound, Lake Washington, Lake Union and
5 the Ship Canal, from public places consisting of the specified viewpoints, parks, scenic routes,
6 and view corridors, identified in Attachment 1. (Attachment 1 is located at the end of this Section
7 25.05.675.) This subsection 25.05.675.P.2.a~~((H))~~ does not apply to the Space Needle, which is
8 governed by subsection 25.05.675.P.2.~~((E))~~d.

9 ~~((Z))~~ b. The decisionmaker may condition or deny a proposal to eliminate
10 or reduce its adverse impacts on designated public views, whether or not the project meets the
11 criteria of the overview policy set forth in Section 25.05.665; provided that downtown projects
12 may be conditioned or denied only when public views from outside of downtown would be
13 blocked as a result of a change in the street grid pattern.

14 ~~((b-1))~~ c. It is the City's policy to protect public views of historic
15 landmarks designated by the Landmarks Preservation Board that, because of their prominence of
16 location or contrasts of siting, age, or scale, are easily identifiable visual features of their
17 neighborhood or the City and contribute to the distinctive quality or identity of their
18 neighborhood or the City. This subsection 25.05.675.P.2.c does not apply to the Space Needle,
19 which is governed by subsection 25.05.675.P.2.~~((E))~~d. ~~((Z))~~ A proposed project may be
20 conditioned or denied to mitigate view impacts on historic landmarks, whether or not the project
21 meets the criteria of the overview policy set forth in Section 25.05.665.

22 ~~((e-))~~ d. It is the City's policy to protect public views of the Space Needle
23 from the following public places. A proposed project may be conditioned or denied to protect

1 such views, whether or not the project meets the criteria of the overview policy set forth in
2 Section 25.05.665.

3 1) Alki Beach Park (Duwamish Head)

4 2) Bhy Kracke Park

5 3) Gasworks Park

6 4) Hamilton View Point

7 5) Kerry Park

8 6) Myrtle Edwards Park

9 7) Olympic Sculpture Park

10 8) Seacrest Park

11 9) Seattle Center

12 10) Volunteer Park

13 d. Mitigating measures may include, but are not limited to:

14 1) Requiring a change in the height of the development;

15 2) Requiring a change in the bulk of the development;

16 3) Requiring a redesign of the profile of the development;

17 4) Requiring on-site view corridors or requiring enhancements to

18 off-site view corridors;

19 5) Relocating the project on the site;

20 6) Requiring a reduction or rearrangement of walls, fences or plant

21 material; and

22 7) Requiring a reduction or rearrangement of accessory structures

23 including, but not limited to towers, railings and antennae.

5 Section 67. Section 25.05.714 of the Seattle Municipal Code, last amended by Ordinance
6 118012, is amended as follows:

7 **25.05.714 Agency**

8 * * *

9 E. For those proposals requiring a hydraulic project approval under RCW (~~75.20.100~~)
10 77.55.021, both the Department of Game and the Department of Fisheries shall be considered
11 agencies with jurisdiction.

12 * * *

13 Section 68. Section 25.09.045 of the Seattle Municipal Code, last amended by Ordinance
14 126685, is amended as follows:

15 **25.09.045 Exemptions**

16 A. General criteria and applications

17 1. When the Director determines that criteria in subsections 25.09.045.E to
18 25.09.045.J are met, those activities are exempt from the provisions of this Chapter 25.09, except
19 for subsections 25.09.045.B, 25.09.045.C, 25.09.065.A, and 25.09.065.B and Sections
20 25.09.017, 25.09.030.B, and 25.09.070, and as otherwise provided in this Section 25.09.045.

21 2. An application for an exemption may be made only as a component of a
22 specific proposed development. The application shall include all portions of the proposed
23 development, including utilities. Requesting approval for an exemption does not require a

1 separate application from a development permit application if the proposed development permit
2 application shows that all applicable provisions of this Section 25.09.045 are met, unless a
3 separate application is required by the Director.

4 3. Applications

5 a. The applicant for an exemption shall provide all information requested
6 by the Director and demonstrate that the work qualifies for the exemption. The Director shall
7 determine whether work is exempt, apply tree and vegetation standards pursuant to
8 subsection((s)) 25.09.070.G ((and 25.09.070.H)), and impose conditions on the work to protect
9 environmentally critical areas and buffers or other property, including application of Section
10 25.09.065.

11 b. City agencies taking the action under any subsection of this Section
12 25.09.045 and a public agency taking the action under subsection 25.09.045.J do not need to
13 make an application to the Director, provided that, if no application is made, they shall comply
14 with all provisions of this Section 25.09.045, make all determinations required to be made by the
15 Director, including required conditions, and maintain records documenting compliance with all
16 provisions.

17 * * *

18 Section 69. Section 25.09.160 of the Seattle Municipal Code, last amended by Ordinance
19 126685, is amended as follows:

20 **25.09.160 Development standards for wetlands and wetland buffers**

21 * * *

22 B. Wetland buffer location

- 1 1. The wetland buffer is measured horizontally and perpendicular to the edges of
 2 the wetland.
- 3 2. The width of wetland buffers is set out in Table A for 25.09.160 and is based
 4 on the size, category, and habitat function of the wetland.
- 5 3. Wetland habitat function is as follows:
- 6 a. High level equals a habitat function score of 8 or 9;
- 7 b. Moderate level equals a habitat function score of 5, 6 or 7; and
- 8 c. Low level equals a habitat function score of 3 or 4.

Table A for 25.09.160

Wetland	Wetland buffer requirements for non-degraded buffers
Category I Bogs and Wetlands of High Conservation Value over 100 square feet in total size or of any size that abut any Type S, F, Np, or Ns water per WAC 222-16-030 and 222-16-031	200 feet for all levels of habitat functions
Category I and II wetlands over 100 square feet in total size or of any size that abut any Type S, F, Np, or Ns water per WAC 222-16-030 and 222-16-031	200 feet for wetlands with high level of habitat function 110 feet for wetlands with moderate level habitat function 100 feet for wetlands with low level habitat function
Category III wetlands over 100 square feet in total size or of any size that abut any Type S, F, Np, or Ns water per WAC 222-16-030 and 222-16-031	200 feet for wetlands with high level of habitat function 110 feet for wetlands with moderate or greater level habitat function 60 feet for wetlands with low level habitat function
Category IV wetlands 1,000 square feet or more in total size or of any size that abut any Type S, F, Np, or Ns water per WAC 222-16-030 and 222-16-031	50 feet for all wetlands
Category IV wetlands under 1,000 square feet in total size that do not abut any Type S, F, Np, or Ns water per WAC 222-16-030 and 222-16-031	No buffer. Use mitigation under Sections 25.09.160 and 25.09.065

9

1 4. Degraded buffers. If a buffer is degraded due to the lack of trees and
2 vegetation, the presence of invasive or non-native species and/or the presence of impervious
3 surface or other development, the Director may require that:

4 a. The degraded portion of the buffer be restored to the extent
5 commensurate with the impact of the development on the riparian management area buffer and
6 according to mitigation standards pursuant to Section 25.09.065; or

7 b. The standard buffer width listed in Table A for 25.09.160 be increased
8 or other conditions be placed on the development on a case-by-case basis when necessary to
9 protect wetland functions and values based on best available science and local conditions if it is
10 determined that:

11 1) A larger buffer is necessary to maintain viable populations or
12 critical habitat of State or federally listed threatened or endangered species living within the
13 subject wetland(s) boundaries;

14 2) The adjacent land is susceptible to severe erosion, and erosion
15 control measures otherwise required in Section 25.09.080 will not effectively prevent adverse
16 wetland impacts; or

17 3) A larger buffer maintains connections between other nearby
18 wetlands, flood-prone areas, and/or fish and wildlife habitat conservation areas.

19 * * *

20 Section 70. Section 25.11.020 of the Seattle Municipal Code, last amended by Ordinance
21 126821, is amended as follows:

22 **25.11.020 Exemptions**

23 The following trees and tree activities are exempt from the provisions of this Chapter 25.11:

* * *

D. ~~((Trees located within an Environmentally Critical Area))~~ Tree removal as part of an Environmentally Critical Area tree and vegetation plan as provided in Section 25.09.070, except that tree service providers conducting commercial tree work on these trees must comply with the tree service provider registry requirements of Section 25.11.100;

* * *

Section 71. Section 25.11.030 of the Seattle Municipal Code, enacted by Ordinance 126821, is amended as follows:

25.11.030 Emergency actions

Emergency actions may be undertaken without obtaining ~~((a permit))~~ approval in advance from the Seattle Department of Construction and Inspections. Prior to an emergency action, a registered tree service provider, that has an employee or a person on retainer who is currently credentialed with an International Society of Arboriculture (ISA) Tree Risk Assessment Qualification, must determine if there is an extreme risk of imminent failure for the tree or tree part ~~((using the TRAQ method in its most current form))~~. Any person undertaking an emergency action must ~~((complete the following))~~:

A. Notify the Director via email or through the Seattle Department of Construction and Inspections' website before beginning the emergency action;

B. Submit a hazardous tree removal application to the Seattle Department of Construction and Inspections within ten calendar days of the emergency action; otherwise, the responsible party may be subject to enforcement including fines and penalties in accordance with Section 25.11.120; and

1 C. Include all documentation of tree status, including the ISA Tree Risk Assessment form
2 ~~((TRAQ report))~~ and photographs as part of the retroactive ~~((permit))~~ tree removal application
3 submission.

4 Section 72. Section 25.11.040 of the Seattle Municipal Code, enacted by Ordinance
5 126821, is amended as follows:

6 **25.11.040 Hazardous tree removal**

7 A. For any tree regulated pursuant to this Section 25.11.040, approval from the Seattle
8 Department of Construction and Inspections is required in advance of hazardous tree removal
9 unless it is an emergency action pursuant to Section 25.11.030.

10 B. Trees subject to the provisions of this Chapter 25.11 may be removed as hazardous, if
11 those trees are rated by a registered tree service provider that has an employee or a person on
12 retainer who is currently credentialed with an ISA Tree Risk Assessment Qualification as an
13 Extreme or High Risk hazard, according to the following:

14 1. A tree risk assessment, prepared by a registered tree service provider, assesses
15 the risk of the tree(s) as one of the following:

16 a. Extreme Risk. This category applies to trees in which failure is
17 imminent and there is a high likelihood of impacting a target, and the consequences of the failure
18 are severe.

19 b. High Risk. This category applies to trees in which consequences are
20 significant and likelihood is very likely or likely, or when consequences are severe and
21 likelihood is likely.

1 c. Moderate Risk. This category applies to trees in which consequences
2 are minor and likelihood is very likely or likely, or when likelihood is somewhat likely and the
3 consequences are significant or severe.

4 d. Low Risk. This category applies to trees in which consequences are
5 negligible and likelihood is unlikely; or when consequences are minor and likelihood is
6 somewhat likely;

7 2. A potential target includes permanent structures or an area of moderate to high
8 use;

9 3. If a potential target does not exist, applicants may be limited to normal and
10 routine pruning and maintenance to mitigate hazards;

11 4. Assessment of Extreme and High Risk trees:

12 a. If a tree is assessed as a High Risk, then the Director may authorize
13 hazard pruning to mitigate the risk rather than removing the entire tree; or

14 b. If the tree is assessed as an Extreme or High Risk and mitigation of the
15 risk through pruning or moving of potential targets is not feasible, then the Director may
16 designate the tree as a hazardous tree and allow complete removal; and

17 5. The assessment of other risk categories applicable to regulated trees shall be at
18 the discretion of the Director.

19 C. Tier 1, Tier 2, and Tier 3 trees must be replaced pursuant to Section 25.11.090 when
20 approved for removal as hazardous, except as provided in subsection 25.11.040.D.

21 D. Removal of dead trees is exempt from the risk assessment requirements of subsection
22 25.11.040.B and replacement requirements of subsection 25.11.040.C.

1 Section 73. Section 25.11.050 of the Seattle Municipal Code, enacted by Ordinance
2 126821, is amended as follows:

3 **25.11.050 General provisions for regulated tree categories**

4 A. The removal or topping of the following trees is prohibited, except as provided in
5 Section 25.11.020 and as performed in accordance with Sections 25.11.030 and 25.11.040:

6 1. When no development is proposed, Tier 1, Tier 2, Tier 3, and Tier 4 trees on
7 undeveloped lots in all zones;

8 2. When no development is proposed, Tier 1, Tier 2, Tier 3, and Tier 4 trees on
9 developed lots in all zones, except as allowed in subsection 25.11.050.B;

10 3. When development is proposed, in Neighborhood Residential, Lowrise,
11 Midrise, commercial, and Seattle Mixed zones:

12 a. Tier 1 trees may not be removed unless in emergency situations or
13 unless they are hazardous as provided in Sections 25.11.030 and 25.11.040;

14 b. Tier 2 trees may not be removed except as permitted under Sections
15 25.11.070 and 25.11.080; and

16 c. Tier 3 and Tier 4 trees may be removed as part of a development permit.

17 B. When no development is proposed, no more than two Tier 4 trees may be removed in
18 any three-year period on developed lots in Neighborhood Residential, Lowrise, Midrise,
19 commercial, and Seattle Mixed zones, and no more than three Tier 3 and Tier 4 trees may be
20 removed on developed lots in any one-year period in all other zones.

21 C. Relocated and required replacement trees included in an approved plan set may not be
22 removed, unless removal is approved by a future permit.

1 D. In addition to the tree removal allowances in subsection 25.11.050.B, the Director may
2 authorize removal and replacement of a Tier 3 tree, or removal of a Tier 4 tree, from developed
3 lots in Neighborhood Residential, Lowrise, Midrise, commercial, and Seattle Mixed zones when
4 removal is needed because the tree is causing obvious physical damage to building foundations
5 or utility infrastructure, where continued or additional damage cannot be avoided through actions
6 other than removal.

Table A for 25.11.050 Tree related activities on developed lots in Neighborhood Residential, Lowrise, Midrise, commercial, and Seattle Mixed Zones including but not limited to removal and topping by tree category ¹		
Tree category	Not part of a permit application ⁽¹⁾ ²	During development—Part of a permit application
Tier 1 Includes trees designated as heritage trees	May not be removed unless deemed hazardous or in need of emergency action with documentation required	May not be removed unless deemed hazardous or in need of emergency action with documentation required
Tier 2 Includes trees 24 inches at DSH or greater, tree groves, and specific tree species as provided by Director's Rule	May not be removed unless deemed hazardous or in need of emergency action with documentation required	Approval for removal is part of overall development permit <u>consistent with Sections 25.11.070 or 25.11.080</u> Documentation required for hazardous and emergency actions
Tier 3 Includes trees 12 inches at DSH or greater but less than 24 inches at DSH that are not considered Tier 2 trees as provided by Director's Rule	May not be removed unless deemed hazardous or in need of emergency action with documentation required, except as provided in subsections 25.11.050.B ((and)) , 25.11.050.C, and 25.11.050.D	Approval for removal is part of overall development permit Documentation required for hazardous and emergency actions
Tier 4 Includes trees 6 inches at DSH but less than 12 inches at DSH	May not be removed unless deemed hazardous or in need of emergency action with documentation required, except as provided in subsections 25.11.050.B and 25.11.050.C	Approval for removal is part of overall development permit

Other trees (under 6 inches DSH)	Not regulated, except as provided in subsection 25.11.050.C	Not regulated, except as provided in subsection 25.11.050.C
-------------------------------------	-------------------------------------------------------------------	-------------------------------------------------------------------

Footnotes to Table A for 25.11.050
¹ In all other zones, all trees may be removed when development is proposed.
⁽¹⁾ ² For standards related to undeveloped lots, see subsection 25.11.050.A.

1 Section 74. Section 25.11.060 of the Seattle Municipal Code, enacted by Ordinance
2 126821, is amended as follows:

3 **25.11.060 Requirements for trees when development is proposed**

4 A. Tree protection area

5 1. A tree protection area is required for all existing Tier 1, Tier 2, and Tier 3 trees
6 that are not removed during development, as well as any tree relocated offsite if on private
7 property or any tree planted onsite as part of required mitigation pursuant to this Chapter 25.11.

8 2. The tree protection area for Tier 1, Tier 2, and Tier 3 trees shall be determined
9 by the Director pursuant to this subsection 25.11.060.A and any rules promulgated by the
10 Director.

11 3. The tree protection area may be modified from the basic tree protection area
12 based on species tolerance; expected impacts of construction activities; tree size, age, and health;
13 and soil conditions not to exceed the area of the feeder root zone. The Director may require
14 Master Use Permits or building permits to include measures to protect tree(s) during
15 construction, including within the feeder root zone.

16 4. The tree protection area may be reduced by the Director pursuant to the
17 provisions of Title 23 and this Chapter 25.11, as follows:

18 a. Any new encroachment into the tree protection area may not be closer
19 than one half of the tree protection radius. Existing encroachments closer than one half of the
20 tree protection radius may remain or be replaced if no appreciable damage to the tree will result.

1 b. The tree protection area shall not be reduced more than 35 percent of
2 the outer half of the tree protection radius unless an alternative tree protection area or
3 construction method will provide equal or greater tree protection and result in long-term
4 retention and viability of the tree as determined by a certified arborist.

5 c. Existing encroachments do not count toward the reduction.

6 d. The tree protection area may be temporarily reduced in size during a
7 specific construction activity that is not likely to cause appreciable damage to the tree.

8 Appropriate mitigation measures shall be implemented per ANSI A300 standards or their
9 successor, and the tree protection area shall be returned to its permanent size after the specific
10 construction activity is complete.

11 5. The tree protection area is required to include fencing, signage, and other safety
12 requirements as required in the Seattle Department of Construction and Inspections Tree and
13 Vegetation Protection Detail.

14 * * *

15 Section 75. Section 25.11.070 of the Seattle Municipal Code, enacted by Ordinance
16 126821, is amended as follows:

17 **25.11.070 Tree protection on sites undergoing development in Neighborhood Residential,**

18 **Lowrise, Midrise, commercial, and Seattle Mixed zones**

19 A. Neighborhood Residential zones

20 1. Tier 2 trees may be removed only if:

21 a. The maximum lot coverage permitted on the site pursuant to Title 23
22 cannot be achieved without extending into the basic tree protection area or into a required front
23 and/or rear yard to an extent greater than provided for in subsection 25.11.070.A.2;

1 b. Avoiding development in the basic tree protection area would result in a
2 portion of a principal dwelling unit, or an accessory dwelling unit, being less than 15 feet in
3 width; or

4 c. Tree removal is necessary for the construction of new structures~~((;))~~;
5 vehicle and pedestrian access, utilities, retaining wall, or other similar improvements associated
6 with development.

7 2. ~~((Permitted extension into front or rear yards shall be limited to an area equal to~~
8 ~~the amount of the basic tree protection area not located within required yards.))~~ For purposes of
9 retaining an existing on-site and off-site Tier 1, Tier 2, Tier 3, or Tier 4 tree, extension into front
10 or rear yards is permitted but limited to an area equal to the amount of the tree protection area of
11 those trees not located within required yards. The maximum projection into the required front or
12 rear yard shall be 50 percent of the yard requirement.

13 3. If the maximum lot coverage permitted on the site can be achieved or a
14 structure will be less than 15 feet in width without extending into required front and/or rear
15 yards, then no such extension into required yards shall be permitted.

16 4. For the purposes of this subsection 25.11.070.A:

17 a. Lot coverage calculation shall not include any portion of a parcel
18 containing a biodiversity area or corridor, riparian corridor, priority habitat, priority area setback,
19 wetland, wetland buffer, or steep slope erosion hazard area, unless the Director has approved
20 critical areas reduction, waiver, or modification pursuant to Chapter 25.09; and

21 b. The basic tree protection area cannot be modified.

22 B. Lowrise, Midrise, commercial, and Seattle Mixed zones

23 1. Tier 2 trees may be removed as follows:

1 a. If an otherwise allowable development area of 85 percent cannot be
2 achieved without extending into the basic tree protection area, as follows:

3 1) Calculate the basic tree protection area on the lot. For the
4 purposes of this subsection 25.11.070.B, the basic tree protection area cannot be modified.

5 2) Subtract the basic tree protection area and the area of any
6 portions of the lot between a property line and basic tree protection area when the portion of the
7 lot is 15 feet or less measured from a lot line to a basic tree protection area from the lot area. If
8 this number is less than 85 percent of the total lot area, Tier 2 trees may be removed.

9 3) When multiple Tier 2 trees are located on a lot, the minimum
10 number of trees needed to reach 85 percent may be removed based on the evaluation required by
11 subsection 25.11.060.C.

12 4) When the basic tree protection area of an off-site Tier 1, Tier 2,
13 or Tier 3 tree is located on the lot, this area shall be included in accordance with subsection
14 25.11.070.B.

15 b. In Midrise, Commercial, and Seattle Mixed zones Tier 2 trees may be
16 removed, if an otherwise allowable development area of 100 percent cannot be achieved without
17 extending into the basic tree protection area more than allowed pursuant to subsection
18 25.11.060.A.

19 c. For the purposes of this subsection 25.11.070.B, allowable development
20 area shall not include any portion of a parcel containing a biodiversity area or corridor, riparian
21 corridor, priority habitat, priority area setback, wetland, wetland buffer, or steep slope erosion
22 hazard area, unless the Director has approved a critical area reduction, waiver, or modification
23 pursuant to Chapter 25.09.

1 2. If an applicant chooses to retain Tier 2 trees that would otherwise be allowed to
2 be removed under subsection 25.11.070.B.1 or if encroachment into the tree protection area of an
3 off-site Tier 1, Tier 2, or Tier 3 tree cannot otherwise be avoided, modifications to development
4 standards are allowed as follows:

5 a. For development not subject to design review, the following Type I
6 modifications to standards:

7 1) Setbacks and separation requirements, if applicable, may be
8 reduced by a maximum of 75 percent;

9 2) Amenity areas may be reduced by a maximum of 75 percent;

10 3) Landscaping and screening may be reduced by a maximum of
11 75 percent; and

12 4) Structure width, structure depth, and facade length limits, if
13 applicable, may be increased by a maximum of 30 percent.

14 b. The following Type I modifications to standards are permitted for
15 development that: i) Receives public funding or an allocation of federal low-income housing tax
16 credits; and ii) is subject to a regulatory agreement, covenant, or other legal instrument recorded
17 on the property title and enforceable by The City of Seattle, Washington State Housing Finance
18 Commission, State of Washington, King County, (~~U.S. Department of Housing and Urban~~
19 ~~Development~~), or other similar entity as approved by the Director of Housing; and iii) either:
20 restricts at least 40 percent of rental units to occupancy by households earning no greater than 60
21 percent of median income, and controls the rents that may be charged for a minimum period of
22 40 years: or restricts at least 40 percent of ownership dwelling units (~~to occupancy by~~

1 ~~households~~) earning no greater than 80 percent of median income, and controls the sale price of
2 the units for a minimum period of ~~((40))~~ 50 years:

3 1) Setback, separation, amenity area, landscaping, and screening
4 requirements, if applicable, may be reduced by a maximum of 100 percent; and

5 2) Structure width, structure depth, and facade length limits, if
6 applicable, may be increased by a maximum of 100 percent.

7 c. For development subject to design review, the departures permitted in
8 Section 23.41.012.

9 d. Parking reduction. A reduction in the parking quantity required by
10 Section 23.54.015 and the modification of standards for safe access of any required parking of
11 Section 23.54.030 may be permitted in order to protect a Tier 2 tree, if the reduction would result
12 in a project that would avoid the tree protection area.

13 e. In Lowrise zones, for a principal structure with a base height limit of 40
14 feet that is subject to the pitched roof provisions of subsection 23.45.514.D, the Director may
15 permit the ridge of a pitched roof with a minimum slope of 6:12 to extend up to a height of 50
16 feet if the increase is needed to accommodate, on an additional story, the amount of floor area
17 lost by avoiding development within the tree protection area and the amount of floor area on the
18 additional story is limited to the amount of floor area lost by avoiding development within the
19 tree protection area.

20 3. Tree removal required for development to achieve the allowable development
21 area according to subsection 25.11.070.B.1 or height limits of the applicable zone includes, but is
22 not limited to, the construction of new structures, vehicles and pedestrian access, utilities,
23 retaining wall, or other similar improvement.

1 Section 76. Section 25.16.080 of the Seattle Municipal Code, last amended by Ordinance
2 124919, is amended as follows:

3 **25.16.080 Certificate of approval – Application((~~z~~))**

4 A. Application((~~z~~))

5 1. All applications for a certificate of approval shall be submitted to the District
6 Board.

7 2. The following information must be provided ((~~in order~~)) for the application to
8 be complete, unless the Board staff indicate in writing that specific information is not necessary
9 for a particular application:

- 10 a. Building name and building address;
- 11 b. Name of the business(es) located at the site of the proposed work;
- 12 c. Applicant's name and address;
- 13 d. Building owner's name and address;
- 14 e. Applicant's telephone number;
- 15 f. The building owner's signature on the application, or a signed letter
16 from the owner designating the applicant as the owner's representative, if the applicant is not the
17 owner;
- 18 g. Confirmation that the fee required by ((~~SMC Chapter 22.901T of the~~
19 ~~Permit Fee Subtitle~~)) 22.900G.010 has been paid;
- 20 h. A detailed description of the proposed work; including:
 - 21 ((~~i~~)) 1) Any changes it will make to the building or the site,
 - 22 ((~~ii~~)) 2) Any effect that the work would have on the public right-
23 of-way or other public spaces, and

1 ~~((iii.))~~ 3) Any new construction;

2 i. Four ~~((4))~~ sets of scale drawings, with all dimensions shown, of:

3 ~~((i.))~~ 1) A site plan of existing conditions, showing adjacent streets
4 and buildings, and, if the proposal includes any work in the public right-of-way, the existing
5 street uses, such as street trees and sidewalk displays, and another site plan showing proposed
6 changes to the existing conditions,

7 ~~((ii.))~~ 2) A floor plan showing the existing features and a floor plan
8 showing the proposed new features,

9 ~~((iii.))~~ 3) Elevations and sections of both the proposed new features
10 and the existing features,

11 ~~((iv.))~~ 4) Construction details, and

12 ~~((v.))~~ 5) A landscape plan showing existing features and plantings,
13 and another landscape plan showing proposed site features and plantings;

14 j. Photographs of any existing features that would be altered and
15 photographs showing the context of those features, such as the building facade where they are
16 located;

17 k. One ~~((1))~~ sample of proposed colors, if the proposal includes new
18 finishes or paint, and an elevation drawing or a photograph showing the location of proposed
19 new finishes or paint;

20 l. If the proposal includes new signage, awnings, or exterior lighting:

21 ~~((i.))~~ 1) Four ~~((4))~~ sets of scale drawings of proposed signage or
22 awnings, showing the overall dimensions, material, design graphics, typeface, letter size, and
23 colors,

1 ((i-)) 2) Four (~~((4))~~) sets of a plan, photograph, or elevation
2 drawing showing the location of the proposed awning, sign, or lighting,

3 ((ii-)) 3) Four (~~((4))~~) copies of details showing the proposed
4 method of attaching the new awning, sign or lighting,

5 ((iv-)) 4) The wattage and specifications of the proposed lighting,
6 and a drawing or picture of the lighting fixture, and

7 ((v-)) 5) One (~~((1))~~) sample of proposed sign colors or awning
8 material and color;

9 m. If the proposal includes demolition of a structure or object:

10 ((i-)) 1) A statement of the reason(s) for demolition,

11 ((ii-)) 2) A description of the replacement structure or object; and

12 n. If the proposal includes replacement, removal, or demolition of existing
13 features, a survey of the existing conditions of the features that would be replaced, removed, or
14 demolished.

15 3. The staff shall determine whether an application is complete and shall notify
16 the applicant in writing within (~~((twenty eight (28)))~~) 28 days of the application being filed
17 whether the application is complete or that the application is incomplete and what additional
18 information is required before the application will be complete. Within (~~((fourteen (14)))~~) 14 days
19 of receiving the additional information, the staff shall notify the applicant in writing whether the
20 application is now complete or what additional information is necessary. An application shall be
21 deemed to be complete if the staff does not notify the applicant in writing by the deadlines in this
22 section that the application is incomplete. A determination that the application is complete is not
23 a determination that the application is vested.

1 4. The determination of completeness does not preclude the staff or the District
2 Board from requiring additional information during the review process if more information is
3 needed to evaluate the application according to the standards in this chapter and in any rules
4 adopted by the Board, or if the proposed work changes. For example, additional information that
5 may be required could include a shadow study or a traffic study when new construction is
6 proposed.

7 * * *

8 Section 77. Section 25.16.115 of the Seattle Municipal Code, last amended by Ordinance
9 123899, is amended as follows:

10 **25.16.115 Requests for interpretation**

11 * * *

12 E. A fee shall be charged for interpretations in the amount provided in ~~((the Permit Fee~~
13 ~~Subtitle of the Seattle Municipal Code, Chapter 22.901E, Table 6 Land Use Fees,))~~ Table C-1 for
14 22.900C.010, subsection B.20, and shall be collected by the Department of Neighborhoods.

15 * * *

16 Section 78. Section 25.16.150 of the Seattle Municipal Code, enacted by Ordinance
17 105462, is amended as follows:

18 **25.16.150 Conflicting provisions(~~(=)~~)**

19 In case of conflict between this ~~((chapter))~~ Chapter 25.16 and ~~((the Landmarks Preservation~~
20 ~~Ordinance (Ordinance 102229))~~ Chapter 25.12, the provisions of this ~~((chapter))~~ Chapter 25.16
21 shall govern the Ballard Avenue Landmark District.

22 * * *

1 Section 79. Section 25.22.070 of the Seattle Municipal Code, enacted by Ordinance
2 109388, is amended as follows:

3 **25.22.070 Development and design review guidelines((=))**

4 A. The Landmarks Preservation Board shall draft and, after consideration and review in
5 accordance with ~~((the Administrative Procedure Ordinance (102228)))~~ Chapter 3.02, shall adopt
6 development and design review guidelines as rules ~~((which))~~ that shall become effective upon
7 filing with the City Clerk. Notice and conduct of such public hearing(s) shall be in accordance
8 with the rules of the Landmarks Preservation Board and ~~((Ordinance 102228))~~ Chapter 3.02.

9 B. The development and design review guidelines shall identify the unique values of the
10 District, shall include a statement of purpose and intent, and shall be consistent with the purposes
11 of this chapter and the criteria specified in Section 25.22.030. The guidelines shall identify
12 design characteristics ~~((which))~~ that have either a positive or negative effect upon the unique
13 values of the District and shall specify design-related considerations ~~((which))~~ that will be
14 allowed, encouraged, limited or excluded from the District when certificate of approval
15 applications are reviewed. All guidelines shall be consistent with ~~((the Zoning Ordinance~~
16 ~~(86300)))~~ Title 23 and other applicable ordinances.

17 * * *

18 Section 80. Section 25.22.135 of the Seattle Municipal Code, last amended by Ordinance
19 123899, is amended as follows:

20 **25.22.135 Requests for interpretation**

21 * * *

1 E. A fee shall be charged for interpretations in the amount provided in ~~((the Permit Fee~~
2 ~~Subtitle of the Seattle Municipal Code, Chapter 22.901E, Table 6, Land Use Fees,))~~ Table C-1
3 for 22.900C.010, subsection B.20, and shall be collected by the Department of Neighborhoods.

4 * * *

5 Section 81. Section 25.24.060 of the Seattle Municipal Code, last amended by Ordinance
6 124919, is amended as follows:

7 **25.24.060 Approval of changes to buildings, structures, and other visible elements((,))**

8 * * *

9 E. The Commission shall have sole responsibility for determining the appropriate
10 location, design, and use of signs and structures to be located on or above the surface of public
11 places in the Historical District and the sole responsibility for licensing and determining the
12 appropriate locations for performers ~~((as defined in Section 17.32.010 H of the Seattle Municipal~~
13 ~~Code, in the Historical District))~~; provided, that property owned by the Pike Place Market
14 Preservation and Development Authority shall not be considered a public place for the purposes
15 of this subsection 25.24.060.E. The Commission shall establish guidelines for the use of public
16 places in the District by performers, may assess reasonable permit fees, and may utilize the
17 services of the Pike Place Market Preservation and Development Authority (PDA) or, should the
18 PDA decline to make its services available, may utilize the services of any other organization
19 appropriate for implementation of performers licensing guidelines. It shall be unlawful for any
20 performer to actively solicit donations by word of mouth, gestures, mechanical devices, second
21 parties. It shall also be unlawful for any performer or other person to use any device for the
22 reproduction or amplification of sound without the express written approval of the Commission
23 secured in advance.

* * *

Section 82. Section 25.28.230 of the Seattle Municipal Code, last amended by Ordinance 124919, is amended as follows:

25.28.230 Definitions((:))

~~((A:))~~ For the purpose of this ~~((subchapter))~~ Subchapter II certain abbreviations, terms, phrases, words, and their derivations shall be construed as specified in this ~~((section))~~ Section 25.28.230.

~~((Words used in the singular include the plural and the plural the singular. Words used in the masculine gender include the feminine and the feminine the masculine.))~~

~~((B:))~~ "Building" means any structure, other than the Burlington Northern railroad tunnel, used or intended for supporting or sheltering any use or occupancy.

~~((C:))~~ "Hearing Examiner" means the Hearing Examiner of the City created by ~~((Ordinance 102228))~~ Chapter 3.02, or ~~((his duly authorized representative))~~ designee.

~~((D:))~~ "Owner" means any person who, alone or jointly or severally with others, has title or interest in any building, with or without accompanying actual possession thereof, and includes any person who as agent, or executor, administrator, trustee, or guardian of an estate has charge, care, or control of any building.

~~((E:))~~ "Party affected" means any owner, tenant, or other person having a direct financial interest in the subject building or any adjacent property or any person whose health or safety is directly affected by the subject building, or the ~~((Pioneer Square Historic Preservation Board established by Ordinance 98852))~~ Pioneer Square Preservation Board.

~~((F:))~~ "Permit" means any form of certificate, approval, registration, license, or other written permission ~~((which))~~ that is required by law, ordinance, or regulation to be obtained before engaging in any activity.

1 ~~((G.))~~ "Person" means any individual, firm, corporation, association, or partnership, and
2 their agents or assigns.

3 ~~((H.))~~ "Superintendent" means the Director of the Seattle Department of Construction and
4 Inspections ~~((and shall also include any duly authorized representative of the Director))~~, or
5 designee.

6 Section 83. Section 25.28.290 of the Seattle Municipal Code, enacted by Ordinance
7 107323, is amended as follows:

8 **25.28.290 Method of service of notice and order~~((.))~~**

9 Service of the notice and order shall be made upon all persons having an interest in the property
10 in the manner provided for the service of notices in ~~((Section 5.03 of the Housing Code~~
11 ~~(Ordinance 106319)))~~ Subtitle II of Title 22; provided, that when personal service is obtained
12 upon all persons having an interest in the property, it shall not be necessary to post a copy of the
13 notice and order of the property.

14 Section 84. The provisions of this ordinance are declared to be separate and severable.

1. BILL SUMMARY

Legislation Title: AN ORDINANCE relating to land use and zoning; correcting typographical errors, correcting section references, clarifying regulations, and making minor amendments; amending Sections 23.22.066, 23.22.100, 23.24.010, 23.28.020, 23.34.009, 23.34.093, 23.40.002, 23.41.004, 23.41.012, 23.42.058, 23.42.060, 23.42.130, 23.44.014, 23.44.016, 23.44.020, 23.44.041, 23.45.510, 23.45.516, 23.45.528, 23.45.529, 23.45.545, 23.47A.004, 23.47A.010, 23.47A.011, 23.47A.020, 23.48.005, 23.48.225, 23.48.720, 23.49.002, 23.49.008, 23.49.025, 23.49.042, 23.49.058, 23.49.090, 23.49.142, 23.49.162, 23.49.300, 23.49.320, 23.49.338, 23.50.002, 23.50.012, 23.50.044, 23.53.006, 23.53.015, 23.53.030, 23.54.015, 23.54.030, 23.55.032, 23.58C.035, 23.66.110, 23.66.122, 23.66.322, 23.69.002, 23.69.032, 23.69.033, 23.69.034, 23.71.006, 23.84A.006, 23.84A.008, 23.84A.016, 23.84A.025, 23.84A.030, 23.84A.032, 23.84A.038, 25.05.444, 25.05.675, 25.05.714, 25.09.045, 25.09.160, 25.11.020, 25.11.030, 25.11.040, 25.11.050, 25.11.060, 25.11.070, 25.16.080, 25.16.115, 25.16.150, 25.22.070, 25.22.135, 25.24.060, 25.28.230, and 25.28.290 of the Seattle Municipal Code.

Summary and Background of the Legislation: Ongoing maintenance of the Land Use Code and related land use regulations periodically requires amendments that are relatively small scale and have limited scope and impact. Such amendments include correcting typographical errors and incorrect section references, as well as clarifying existing code provisions, and minor policy changes that don't warrant independent legislation.

Periodic updating of the Land Use Code is an important part of the regulatory process. Clarifying development regulations is necessary from time to time to correct errors and omissions when they are discovered, and to ensure that the City's policy intent is clear and achievable. Adoption of these Land Use Code amendments will help to facilitate easier understanding and improved administration and application of the Land Use Code. The last omnibus ordinance was adopted in 2022. Examples of the changes include:

- Multiple changes to make the SMC consistent with RCW 69.50.710, changing the term "Marijuana" to "Cannabis".
- Various updates to make the SMC consistent with tree categories as defined in the tree protection ordinance.
- Clarification to allow commercial outdoor activities adjacent to a lot that is both zoned residential and commercial (SMC 23.47A.011.)
- Several changes are proposed to Seattle Mixed zones to facilitate additional height for preserving open space (SMC 23.48.225) and to facilitate additional FAR for preserving the Monorail (SMC 23.48.720.)

- Several changes are proposed to Downtown zones to clarify lodging height limit (SMC 23.49.008) and the height of ‘towers’ (SMC 23.49.058.)
- Several administrative changes are proposed to 25.11 Tree Protection to provide for clarity of use and implementation of the requirements.

For a complete listing of the changes, please consult the Director’s Report accompanying this legislation.

2. CAPITAL IMPROVEMENT PROGRAM

Does this legislation create, fund, or amend a CIP Project? Yes No

3. SUMMARY OF FINANCIAL IMPLICATIONS

Does this legislation have financial impacts to the City? Yes No

4. OTHER IMPLICATIONS

- Please describe how this legislation may affect any departments besides the originating department.** This legislation includes several changes requested by Department of Neighborhoods staff to improve clarity in that department’s operations.
- Does this legislation affect a piece of property? If yes, please attach a map and explain any impacts on the property. Please attach any Environmental Impact Statements, Determinations of Non-Significance, or other reports generated for this property.**
No, this legislation does not impact a specific piece of property.
- Please describe any perceived implication for the principles of the Race and Social Justice Initiative.**
 - How does this legislation impact vulnerable or historically disadvantaged communities? How did you arrive at this conclusion? In your response please consider impacts within City government (employees, internal programs) as well as in the broader community.** The omnibus ordinance involves only changes which are consistent with existing code, intent and policy. As such, no new policy issues are typically involved in an Omnibus. Nevertheless, all proposed amendments were reviewed internally by SDCI staff for consistency with city policy regarding race and social justice with a particular lens towards adopting plain language whenever possible.
 - Please attach any Racial Equity Toolkits or other racial equity analyses in the development and/or assessment of the legislation.** Not applicable for this omnibus ordinance.

- iii. **What is the Language Access Plan for any communications to the public?** No public communications are required for this ordinance, unless requested.

d. Climate Change Implications

- i. **Emissions: How is this legislation likely to increase or decrease carbon emissions in a material way? Please attach any studies or other materials that were used to inform this response.** This legislation is not proposing development and will not increase or decrease carbon emissions.
- ii. **Resiliency: Will the action(s) proposed by this legislation increase or decrease Seattle’s resiliency (or ability to adapt) to climate change in a material way? If so, explain. If it is likely to decrease resiliency in a material way, describe what will or could be done to mitigate the effects.** This legislation does not propose development and will not increase or decrease Seattle’s resiliency to climate change.
- e. **If this legislation includes a new initiative or a major programmatic expansion: What are the specific long-term and measurable goal(s) of the program? How will this legislation help achieve the program’s desired goal(s)? What mechanisms will be used to measure progress towards meeting those goals?** Not applicable.

5. CHECKLIST

- Is a public hearing required?** Yes, The City Council must hold a public hearing, to be scheduled before the Land Use Committee.
- Is publication of notice with *The Daily Journal of Commerce* and/or *The Seattle Times* required?** Yes. Publication of notice of the Council public hearing will be made in The Daily Journal of Commerce and in the City’s Land Use Information Bulletin (LUIB). Environmental review under the State Environmental Policy Act (SEPA) is also required for this legislation, and publication of notice of the environmental determination was made in The Daily Journal of Commerce and in the Land Use Information Bulletin in April 2024.
- If this legislation changes spending and/or revenues for a fund, have you reviewed the relevant fund policies and determined that this legislation complies?**
- Does this legislation create a non-utility CIP project that involves a shared financial commitment with a non-City partner agency or organization?**

6. ATTACHMENTS

Summary Attachments:

- A. SEPA Threshold Determination

**CITY OF SEATTLE****ANALYSIS AND DECISION OF THE DIRECTOR
OF THE SEATTLE DEPARTMENT OF CONSTRUCTION AND INSPECTIONS****SEPA Threshold Determination****2024 Omnibus Legislation****Project Sponsor:** City of Seattle Department of Construction and Inspections**Location of Proposal:** The proposal is a non-project action, applicable City-wide**SUMMARY OF PROPOSED ACTION**

The proposal is to amend the City’s land use regulations to correct typographical errors and section references, clarify regulations, and make minor amendments.

The following approval is required:

SEPA - Environmental Determination - Chapter 25.05, Seattle Municipal Code.

SEPA DETERMINATION: Exempt DNS MDNS EIS DNS with conditions DNS involving non-exempt grading, or demolition, or involving another agency with jurisdiction.**BACKGROUND**

The Department of Construction and Inspections (SDCI) is responsible for maintenance of the Land Use Code (SMC Title 23). Amendments to the Land Use Code are proposed periodically in an “omnibus ordinance,” which is designed to clarify and improve the function of the existing code. The proposed amendments to the Land Use Code include “clean-up” amendments that correct inadvertent clerical or typographical errors, fix incorrect cross-references, and clarify existing code language. Applicants, residents, elected officials, and City staff identified the need for the proposed amendments. In coordination with the City’s Law Department, SDCI has concluded that the changes are not substantive in content.

Public Comment

Proposed changes to the Land Use Code require City Council approval. Public comment will be taken on the proposal during Council meetings and a City Council public hearing.

Proposal Description

This proposal involves numerous minor amendments to the Land Use Code and to some related sections of the Seattle Municipal Code that are intended to clarify current provisions or to correct minor oversights and clerical or typographical errors. The proposed changes in this omnibus are summarized in the Director's Report prepared by SDCI that accompanies the proposed amendments and is published together with the SEPA checklist for public review.

ANALYSIS - SEPA

This proposal is for an adoption of legislation and is defined as a non-project action. The disclosure of the potential impacts from this proposal was made in an environmental checklist submitted by the proponent, dated March 27, 2024. The information in the checklist, a copy of the proposed code changes, the Director's Report and Recommendation, and the experience of the lead agency with review of similar legislative actions form the basis for this analysis and decision.

The proposed amendments may result in potential environmental impacts, which are identified and discussed below.

ELEMENTS OF THE ENVIRONMENT

Adoption of the proposed Land Use Code amendments would not result in any immediate adverse short-term impacts because the adoption would be a non-project action. The discussion below evaluates the potential long-term impacts that might conceivably result from differences in future development patterns due to the proposed amendments.

Natural Environment

Earth, Air, Water, Plants and Animals, Energy, Natural Resources, Environmentally Sensitive Areas, Noise, Releases of Toxic or Hazardous Materials

The proposed changes would result in no direct impacts and are unlikely to result in significant indirect or cumulative adverse impacts related to earth, air, water, plants/animals, fisheries, energy, natural resources, sensitive areas, noise, or releases of toxic/hazardous substances. The changes do not alter the eligible locations for development. As discussed below, the proposed changes to the Land Use Code are considered with the context of the City's related environmental protection regulations.

The proposal does not significantly alter any procedures or regulations related to natural environment protections. Development of specific projects on individual sites are subject to the City's existing regulations, such as the Stormwater Code, the Shoreline Management Program, Grading and Drainage Ordinance, the Regulations for Environmentally Critical Areas, and the Noise Ordinance. Any future project-specific development proposal that exceeds adopted thresholds are subject to environmental review as a part of the permit review process and would continue to be subject to environmental review under the proposal.

Built Environment

Land & Shoreline Use, Height/Bulk/Scale

The proposed changes are not expected to create significant impacts on existing and planned land and shoreline use. No incompatible uses would be allowed or encouraged by these amendments. No site-specific proposals are proposed at this time. A few changes to development standards warrant additional analysis and are discussed below.

23.47A.010 – Maximum size of nonresidential use – This amendment to add subsection 23.47A.010.B.3 would clarify the amount of back of house space that is accessory to grocery stores that does not count towards the maximum size of use. This adjustment is needed to make the maximum size of use consistent with the intent to allow neighborhood grocery stores adequate space for loading, storage and other back of house functions necessary for a grocery store. With this additional back of house space, grocery stores can better meet the intent of these provisions to provide cafe and specialty food stores without breaking into the larger template found in corporate grocery stores.

23.47A.011 – Outdoor Activities – Existing code prohibits certain outdoor activities on commercial properties when they are located within 50 feet of a lot in a residential zone. This amendment to subsection 23.47A.011.E adds an allowance for these outdoor activities to be within 50 feet of a lot that is both zoned residential and commercial. This addition helps to address an increased need for outdoor activity areas, that since the pandemic, have been essential to businesses and the community. Properties that are split between residential and commercial zones occur throughout the city and represent an opportunity to increase outdoor activity areas.

23.48.225 – Structure height in South Lake Union Urban Center – This code amendment to section 23.48.225 is to facilitate additional height for the site identified in several prior code amendments. This amendment would facilitate the density transfer from the site known as ‘Seattle Times Park’, to facilitate the floor area authorized under Ordinance 125927 and Council Bill 119597 known as the South Lake Union Open Space Incentive. This legislation was created to revise the existing incentives for preservation of open space in the South Lake Union Urban Center. The proposed legislation is a response to changes in the structure of incentive zoning system that occurred with the adoption of MHA. The amendment is clarifying language to allow either residential towers at 440 feet in height or non-residential towers at the height of 190 feet. This is consistent with the findings in the original Open Space Incentive program.

23.48.720 – Floor area ratio (FAR) in SM-UP zones – This amendment to the FAR in the Seattle Mixed Uptown zones (SM-UP 160) would adjust the FAR for sites with lot coverage and limited ability to achieve maximum FAR due to a building base which is limited due to easements or setbacks from the monorail supports. This change is limited in scope with only one known development site the SM-UP 160 zone that is currently constrained by this monorail setback. This correction would restore additional FAR for structures to offset the limitations that the monorail setback causes.

An analysis of a proposal under the existing code would result in the same ultimate FAR but would be provided almost entirely in residential use with no usable ground level public space. With the proposed change, a proposal with a mix of residential and commercial use could be developed and would result in a footprint with a greater degree of ground level open space.

23.49.008 – Structure height – The amendment to add subsection 23.49.008.A.10 to clarify the intent to

not preclude lodging uses from the lower-level height limit of 65 and to apply the 95 foot height limit to both residential and lodging uses.

23.49.058 - Downtown Office Core 1, Downtown Office Core 2, and Downtown Mixed Commercial upper-level development standards- Clarifies tower standards, found in section 23.49.058, in this zone consistent with Ordinance 126855 to exclude structures abutting 3rd Avenue between Union Street and Pike Street with only residential uses above a height of 85 from the definition of a tower. A second change at subsection amends the tower definition to exclude those proposals for which an early design guidance application has been submitted but never pursued from being considered a “tower” for purposes of this section. A provision is added to require such applications to advance to a complete building permit within 12 months of filing its early design guidance application or from the effective date of this ordinance. This would disqualify a proposed tower from being considered an existing tower for purposes of the tower spacing requirements of this subsection.

23.54.015 - Required parking and maximum parking limits – Changes to Table A for 23.54.015 to resolve formatting and style edits for consistency, and to remove transitional encampment interim use parking standards that were established by expired Ordinance 124747. Changes to Table C for 23.54.015 item F. Community Farms to correct a scrivener’s error. An additional change to Table C for 23.54.015 footnote 12, consistent with prior legislation for childcare centers, the Directors authority to modify parking requirements for childcare centers.

25.11.070 – Tree protection on sites undergoing development in Neighborhood Residential, Lowrise, Midrise, commercial, and Seattle Mixed zones – Three changes are proposed. The first amendment is to subsection 25.11.070.A.2 to provide clarity around reducing yards and setbacks in order to voluntarily protect Tier 1, 2, 3 and 4 trees. The second amendment is in subsection 25.11.070.A.3 to address the calculation of maximum lot coverage and the minimum width of a structure that must be able to be achieved in order to determine if a tree may be removed. The third change is to subsection 25.11.070.B.2.b to clarify that developments identified are for low-income housing meeting the definition in Title 23.

Conclusion

The proposed changes fall within the scope and intent of adopted policy goals for the City of Seattle. The general effect of the changes would be to provide greater consistency between SDCI practice and policy, update agency references, clarify various Code provisions, and correct typographical errors and incorrect cross-references. Future development using these provisions will be subject to SEPA, as required, to address potential adverse impacts. Therefore, no mitigation pursuant to SEPA policies is warranted.

DECISION - SEPA

This decision was made after review by the responsible official on behalf of the lead agency of a completed environmental checklist, code amendment, and other information on file with the responsible department. This constitutes the Threshold Determination and form. The intent of this declaration is to satisfy the requirement of the State Environmental Policy Act (RCW 43.21.C), including the requirement to inform the public of agency decisions pursuant to SEPA.

- Determination of Non-Significance. This proposal has been determined to not have a significant adverse impact upon the environment. An EIS is not required under RCW 43.21C.030(2)(c).
- Determination of Significance. This proposal has or may have a significant adverse impact upon the environment. An EIS is required under RCW 43.21C.030(2)(c).

Seattle Department of Construction & Inspections

Date: April 25, 2024

DIRECTOR'S REPORT AND RECOMMENDATION
2024 Omnibus Ordinance
June 11, 2024

Introduction

The Seattle Department of Construction and Inspections (SDCI) is responsible for routine maintenance of the Land Use and other codes. The proposed amendments are called “omnibus” amendments because SDCI packages a collection of amendments for efficiency that are relatively small scale. Such amendments include relatively minor changes that do not warrant independent legislation, correcting typographical errors and incorrect section references, as well as clarifying or correcting existing code language for consistency. The following is a section-by-section description of the proposed amendments. Where the only changes are minor grammatical corrections to existing language or corrections of typographical errors, the descriptions are limited or omitted.

Land Use Code: Title 23

23.22.100 - Design standards- Changes subsection 23.22.100.A to revise incorrect references to the Right of Way Improvement manual and formatting and style edits.

23.24.010 - Filing of application- Changes to subsection 23.24.020.A to revise incorrect references to Subtitle IX of Title 22 and formatting and style edits.

23.28.020 - Application for approval of lot boundary adjustment- Changes to section 23.28.020 to revise incorrect references to the Revised Code of Washington and formatting and style edits.

23.34.009 - Height limits of the proposed rezone – Changes subsection 23.34.009.D to revise incorrect code references.

23.34.093 - General Industrial 2 (IG2) zone, function, and locational criteria Changes to subsection 23.34.093.B revise incorrect reference to Kingdome and formatting and style edits.

23.40.002 - Conformity with regulations required – Update to section 23.40.002 includes a nomenclature change from “Marijuana” to “Cannabis” for consistency with State Statute.

23.41.004 - Applicability- The change to subsection 23.41.004.C reflects a consistency update to Design Review with regards to the Tree Protection code that revised the term “Exceptional” tree to the new code regime which uses tiered rating system for protected trees. New language clarifies that optional Administrative Design review is available for projects seeking to save Tier 1 or Tier 2 trees. This update is needed to facilitate implementation of Design Review on sites with trees regulated under the recently updated Title 25.11 (Ord. 126821).

23.41.012 - Development standard departures- Similar to the amendment of section 23.41.004, these changes at subsections 23.41.012.B.10 and 11 provides consistency with the Tree Protection code that revised the term from "Exceptional" tree to tiered rating system for trees.

23.42.058 - Marijuana-Updated section 23.42.058 with nomenclature change from "Marijuana" to "Cannabis" for consistency with Statute.

23.42.060 - Short-term rentals- Updated section 23.42.060 to remove obsolete reference to "household" definition and refine references to effective dates of code to enhance plain language reading.

23.42.130 - Nonconforming solar collectors –Updated section 23.42.130 with correct code references.

23.44.014 – Yards - Two changes are proposed. A change to subsection 23.44.014.C.5 to reflect that uncovered porches and steps are allowed as an exception to the yard requirements in more than one required yard. The second change to subsection 23.44.014.E.4 includes new language clarifying that fences are allowed in separation between structures. This change will clarify a longstanding interpretation that permits fences in both required setbacks and separations.

23.44.016 – Parking and garages. These amendments are to revise section 23.44.016 with the nomenclature for protected trees from exceptional to Tier trees consistent with recent code update (Ordinance 126821.)

23.44.020 - Tree requirements –Two changes are proposed. Update to Table A for 23.44.020 to include updated tree species for the tree requirements in RSL zones. The second change is to correct code reference to reflect updated tree code language in subsection 23.44.020.C.

23.44.041 - Accessory dwelling units - The change to the nomenclature for protected trees from exceptional to Tier 1 and Tier 2 trees consistent with recent tree code update (Ord. 126821) in Table A for 23.44.041 footnote 2. The change provides clarification at Table A for 23.44.041 footnote 4 to make plain the setbacks along alleys. The existing code allows DADUs to be built up to an alley line. This amendment will clarify that should include architectural features such as eaves and chimneys that are also allowed up to but not over the property line. The amendment to subsection 23.44.041.C.2 resolves inconsistent language that would disallow flexibility in converting existing structures to detached accessory units in the preceding table A.

23.45.510 - Floor area – Amendment made to subsection 23.45.510.D.4.a to allow all residential structures, not just apartments, in Lowrise zones this floor area exemption.

23.45.516 - Method to achieve extra residential floor area in HR zones – Addition of Map A for 23.45.516 Neighborhood Green Streets.

23.45.528 - Structure width and depth limits for lots greater than 9,000 square feet in Midrise zone - Change to section 23.45.528 clarifies language such that the code appropriately assigns width and depth limits lots with more than one principal structures.

23.45.529 - Design standards- Amendment to subsection 23.45.529.C.3 clarifies that the design standards are applicable to all housing types in Lowrise zones.

23.45.545 - Standards for certain accessory uses- Amendment to subsection 23.45.545.I, clarifies language that accessory dwelling units are permitted in Lowrise zones for single family, rowhouses and townhouses uses, not for apartment uses.

23.47A.004- Permitted and prohibited uses Nomenclature change to Table A for 23.47A.004 footnote 2 from "Marijuana" to "Cannabis" for consistency with Statute.

23.47A.010 - Maximum size of nonresidential use- This amendment to add subsection 23.47A.010.B.3 would clarify the amount of back of house space that is accessory to grocery stores that does not count towards the maximum size of use. This adjustment is needed to make the maximum size of use consistent with the intent to allow neighborhood grocery stores adequate space for loading, storage and other back of house functions necessary for a grocery store. With this additional back of house space, grocery stores can better meet the intent of these provisions to provide cafe and specialty food stores without breaking into the larger template found in corporate grocery stores.

23.47A.011 – Outdoor Activities - Existing code prohibits certain outdoor activities of commercial properties when they are located within 50 feet of a lot in a residential zone. This amendment to subsection 23.47A.011.E adds an allowance for these outdoor activities to be within 50 feet of a lot that is both zoned residential and commercial. This addition helps to address an increased need for outdoor activity areas, that since the pandemic, have been essential to businesses and the community. Properties that are split between residential and commercial zones occur throughout the city and represent an opportunity to increase outdoor activity areas.

23.47A.020 Odor standards - Nomenclature change to subsection 23.47A.020.B.1.m from "Marijuana" to "Cannabis" for consistency with Statute.

23.48.005 Uses - Nomenclature change at subsection 23.48.005.A.3 from "Marijuana" to "Cannabis" for consistency with Statute.

23.48.225 - Structure height in South Lake Union Urban Center-This code amendment to section 23.48.225 is to facilitate additional height for the site identified in several prior code amendments. This amendment would facilitate the density transfer from the site known as 'Seattle Times Park', to facilitate the floor area authorized under Ordinance 125927 and Council

Bill 119597 known as the South Lake Union Open Space Incentive. This legislation was created to revise the existing incentives for preservation of open space in the South Lake Union Urban Center. The proposed legislation is a response to changes in the structure of incentive zoning system that occurred with the adoption of MHA. The amendment is clarifying language to allow either residential towers at 440 feet in height or non-residential towers at the height of 190 feet. This is consistent with the findings in the original Open Space Incentive program.

23.48.720 - Floor area ratio (FAR) in SM-UP zones- This amendment to the FAR in the Seattle Mixed Uptown zones (SM-UP 160) would adjust the FAR for sites with lot coverage and limited ability to achieve due to a building base which is limited due to easements or setback from the monorail. This change is limited in scope with only one known development site the SM-UP 160 zone that is currently constrained by this monorail setback, this correction. This correction would allow additional FAR for structures to offset the limitations that the monorail setback result.

An analysis of a proposal under the existing code would result in the same ultimate FAR, but provided almost entirely in residential use with no usable ground level public space. With the proposed change, a proposal with a mix of residential and commercial use could be developed and would result in a footprint with a greater degree of ground level open space.

23.49.002 - Scope of provisions- Nomenclature change to subsection 23.49.002.F from "Marijuana" to "Cannabis" for consistency with Statute.

23.49.008 - Structure height- The amendment to add subsection 23.49.008.A.10, to clarify the intent to not preclude lodging uses from the lower-level height limit of 65 and to apply the 95 foot height limit to both residential and lodging uses. 95 feet.

23.49.025 - Odor, noise, light/glare, and solid waste recyclable materials storage space standards- Nomenclature change at subsection 23.49.025.A.1.a.9) from "Marijuana" to "Cannabis" for consistency with Statute. Also, a plain language edit at section 23.49.025.B. so that noise standards apply to repair shops for auto body, boat and airplanes.

23.49.042 - Downtown Office Core 1, Downtown Office Core 2, and Downtown Mixed Commercial permitted uses- Nomenclature change at subsection 23.49.042.A from "Marijuana" to "Cannabis" for consistency with Statute. Change at subsection 23.49.042.C and add subsection 23.49.042.D for formatting and style edits consistency.

23.49.058 - Downtown Office Core 1, Downtown Office Core 2, and Downtown Mixed Commercial upper-level development standards -

There are two amendments proposed. The first one clarifies tower standards, found in section 23.49.058 to correct an omission from the Third Avenue Rezone legislation recently passed as part of the Downtown Activation Plan. The amendment would allow structures abutting 3rd

Avenue between Union Street and Pike Street to have a podium height limit of 85' rather than 65' as originally intended.

The second amendment is proposed to the tower definition to exclude those proposals for which an early design guidance (EDG) application has been submitted but have not progressed in a timely manner to Master Use Permit application submittal. These older EDG applications would be excluded from being considered a "tower" for purposes of this Section. The existing provisions do not recognize that some permit applications at the EDG level may never be pursued. A provision is added to require that an EDG application must advance to a complete MUP within 12 months from filing its EDG application, or from the effective date of this ordinance to be considered an "existing tower."

23.49.090 - Downtown Retail Core, permitted uses - Nomenclature change at subsection 23.49.090.A from "Marijuana" to "Cannabis" for consistency with Statute. Change to subsection 23.49.090.C and add subsection 23.49.090.D for formatting and style edits consistency.

23.49.142 - Downtown Mixed Residential, permitted uses-- Nomenclature change at subsection 23.49.142.A from "Marijuana" to "Cannabis" for consistency with Statute. Change to subsection 23.49.142.C and add subsection 23.49.142.D for formatting and style edits consistency.

23.49.162 - Downtown Mixed Residential, street facade requirements- Amend Exhibits 23.49.162.A, and 23.49.162.B for clarity.

23.49.300 - Downtown Harborfront 1, uses-Nomenclature change at subsection SMC 23.49.300.A from "Marijuana" to "Cannabis" for consistency with Statute. Change at subsection SMC 23.49.300.B for formatting and style edits consistency.

23.49.320 - Downtown Harborfront 2, prohibited uses- Nomenclature change at subsection 23.49.320.I from "Marijuana" to "Cannabis" for consistency with Statute.

23.49.338 - Pike Market Mixed, prohibited uses- Nomenclature change at subsection 23.49.338.A.12 from "Marijuana" to "Cannabis" for consistency with Statute and corrected code reference at subsection 23.49.338.B.

23.50.002 - Scope of provisions - Nomenclature change at subsection 23.50.002.E from "Marijuana" to "Cannabis" for consistency with Statute.

23.50.012 – Permitted and prohibited uses – Nomenclature change to footnote 2 of Table A for 23.50.012 Uses in Industrial zones from "Marijuana" to "Cannabis" for consistency with Statute.

23.50.044 – All industrial zones – Standards for major odor sources - Nomenclature change at subsection 23.50.044.B.1.I from "Marijuana" to "Cannabis" for consistency with Statute.

23.53.006 - Pedestrian access and circulation Eliminate subsection 23.53.006.F 2. A.3 to the Street Use division deviation process which lies outside Title 23 administration and is within Seattle Department of Transportation's purview.

23.53.015 - Improvement requirements for existing streets in residential and commercial zones- Changes to correct internal code references at sections A, B and C. Amendments at sections D, E and F to correct formatting and style edits and to move a reference to an additional setback in Highrise zones at subsection 23.53.015.D.2.a) for readability later in the section.

23.53.030 – Alley improvements in all zones – Changes to section 23.53.030 include formatting and style edits changes for consistency and resolve out of date code references.

23.54.015 - Required parking and maximum parking limits – Changes to Table A for 23.54.015 to resolve formatting and style edits for consistency, and to remove transitional encampment interim use parking standards that were established by expired Ordinance 124747. Changes to Table C for 23.54.015 item F. Community Farms to correct a scrivener's error. An additional change to Table C for 23.54.015 footnote 12, consistent with prior legislation for childcare centers, clarifies the Directors authority to modify parking requirements for childcare centers.

23.54.030 - Parking space and access standards- Two changes are proposed. The first is to clarify subsection 23.54.030.B.2.d to reflect minimum height of garages regardless of where the garage takes access. The second is to update subsection 23.54.030.J to clarify Director's authority for modifying parking space size standards for residential as well as nonresidential uses.

23.55.032 - Signs in the Sand Point Overlay District- Changes to section 23.55.032 formatting and style edits changes for consistency and resolve out of date code references.

23.58C.035 - Modification of payment and performance amounts- Updates reference to include the SM-U 75-240 zone. Subsection 23.58C.035.B.1 also includes updates for formatting and style edits.

23.66.110 - Responsible agency- Updates to section 23.66.110 to delete the sentence starting with "All members of the Pioneer Square Preservation Board, established by Ordinance 110058" and make formatting and style edits.

23.66.122 - Prohibited uses- Nomenclature change at subsection 23.66.122.A.23) from "Marijuana" to "Cannabis" for consistency with Statute.

23.66.322 - Prohibited uses-- Nomenclature change at subsection 23.66.322.A.27) from "Marijuana" to "Cannabis" for consistency with Statute.

23.69.002 - Purpose and intent- Update to section 23.69.002 to delete superfluous term, "conceptual" in reference to a Master Plan.

23.69.032 - Master plan process- Changes to section 23.69.032 includes a number of formatting and style edits and reference correction including correcting reference to the Healthy Growth, Aging, and Lifestyles and Lifelong Learning Headings in the Community Well-Being element of the Comprehensive plan.

23.69.033 - Approval of master use permits prior to master plan adoption- Changes to section 23.69.033 includes a number of formatting and style edits and code reference correction.

23.69.034 - Effect of master plan adoption- Changes to section 23.69.034 to correct outdated code references.

23.71.006 - Application of regulations- Changes to section 23.71.006 to remove language referencing an exception procedure in Section 23.71.026 that was repealed in 2003.

23.84A.006 "C" – Insert new definition to section 23.84A.006 of 'Cannabis, Cannabis Activity, Major, Cannabis-infused products, Cannabis, useable' to align Title 23 with nomenclature in the Statute.

23.84A.007 "D"- Changes to section 23.84A.007 to replace language regarding superseded Public Benefit Features Rule in definition of "Downtown Amenity Standards."

23.84A.025 "M" -Changes to section 23.84A.025 to strike outdated Marijuana definitions consistent with changes to new cannabis definitions in 23.84A.006.

23.84A.030 "P" -Changes to section 23.84A.030 to clarify language and correct references to "Public Benefits Features Rule" which refers to Superseded Director's Rule 20-93.

23.84A.032 "R" – Changes to section 23.84A.032 to remove outdated reference to RCW Chapter 18.20 in definition of "Assisted Living Facility."

23.84A.038 "T" – Changes to section 23.84A.038 to remove definition of "exceptional trees" a reference used in Chapter 25.11 that has been updated to new nomenclature and a tiered tree rating system.

Environmental Policies and Procedures

25.05.444 - Elements of the environment- Changes to section 25.05.444 to delete parking as an element under consideration in Environmental Review consistent with updates to the Revised Code of Washington.

25.05.675 - Specific environmental policies- Changes to section 25.05.675 to update Attachment A with the official name of several City Parks including Charles Richey Sr. Viewpoint, Rainbow Viewpoint, East Portal I-90 Overlook, Kerry Viewpoint, NW 60th Street Viewpoint and Ursula Judkins Viewpoint.

25.05.714 - Agency- Amend incorrect reference to Revised Code of Washington in subsection 25.05.714.E.

Environmental Critical Areas

25.09.045 Exemptions- Changes to section 25.09.045 to provide clarifying language that an exemption is not required to be processed separately from a development permit application.

25.09.160 Development standards for wetlands and wetland buffers-Changes to section 25.09.160 to correct internal references to riparian area "buffers."

Tree Protection

25.11.020 Exemptions- Changes to section 25.11.020 to clarify the existing tree removal exemption that applies in Environmentally Critical Areas and provide correct code reference to the process for approval in Section 25.09.070.

25.11.030 Emergency actions- Changes to section to 25.11.030 to provide correct reference to the qualifications and industry standard for Tree Risk Assessments consistent with Ordinance 126821.

25.11.040 - Hazardous tree removal – Amendment subsection 25.11.040.B.3 to clarify that normal and routine pruning shall be completed to mitigate hazards.

25.11.050 General provisions for regulated tree categories – Updates to Table A for 25.11.050 are provided to correctly implement tree removal regulations in Neighborhood Residential, Lowrise, Midrise, commercial, and Seattle Mixed Zones, to provide corrected reference notation and provide correct code references. Include clarifying footnote 1 that indicates which zones that table does not apply.

25.11.060 Requirements for trees when development is proposed- Changes to section 25.11.060 to provide corrected reference to indicate which portion of the Tree Protection Area may be reduced by the Director consistent with the language in Ordinance 126821.

25.11.070 Tree protection on sites undergoing development in Neighborhood Residential, Lowrise, Midrise, commercial, and Seattle Mixed zones- Three changes are proposed. The first amendment is to subsection 25.11.070.A.2 to provide clarity around reducing yards and setbacks in order to voluntarily protect Tier 1,2,3 and 4 trees. The second amendment is in subsection 25.11.070.A.3 address the calculation of maximum lot coverage and that minimum

width of structure that must be able to be achieved in order to determine if a tree may be removed. The third change is to subsection 25.11.070.B.2.b to clarify that developments identified are for low -ncome housing meeting the definition in Title 23.

Ballard Avenue Landmark District

25.16.080 Certificate of approval – Application-Correct subsection 25.16.080.A.1.g to refer to correct chapter reference Section 22.900G.010. Additional formatting and style edits.

25.16.115 Requests for interpretation- Changes to section 25.16.115 to update for consistency and add correct code references.

25.16.150 Conflicting provisions- Changes to section 25.16.150 to update for consistency and add correct code references.

Harvard Belmont Landmark District

25.22.070 - Development and design review guidelines- Changes to section 25.22.070 for consistency, add correct code references.

25.22.135 - Requests for interpretations- Changes to section 25.22.135 for consistency, add correct code references.

Pike Place Markey Historic District

25.24.060 - Approval of changes to buildings, structures and other visible elements- Updates to section 25.24.060 for consistency, add correct code references.

Pioneer Square Historical District.

25.28.230 Definitions- Changes to section 25.28.230 for formatting and style edits changes for consistency and resolve out of date code references.

25.28.290 - Method of service of notice and order - Correct section 25.28.290 out of date code references.

Recommendation

Adoption of these Land Use Code amendments will help to facilitate easier understanding and improved administration and application of the Land Use and other codes. SDCI recommends approval of the proposed legislation.

August 16, 2024

MEMORANDUM

To: Land Use Committee
From: Lish Whitson, Analyst
Subject: CB 120823 – 2024 Land Use Omnibus Bill

On September 4, the Land Use Committee will receive a briefing and hold a public hearing on Council Bill (CB) [120823](#), the 2024 Omnibus bill. Approximately every other year the Seattle Department of Construction and Inspections (SDCI) develops an omnibus bill amending the Land Use Code (LUC) and related sections of the Seattle Municipal Code (SMC). Generally, the omnibus bill corrects typographical errors and cross-references, clarifies existing regulations, and makes other minor amendments identified by SDCI in the course of Code administration. While the omnibus bill is not intended to be a vehicle for addressing significant policy issues, inevitably the omnibus does result in some minor policy changes.

In the 2024 Omnibus, most changes are technical, primarily amending the Land Use Code to update terminology or fix outdated references. Many amendments either replace the term “marijuana” with “cannabis,” update references to the categories of trees included in [Ordinance 126821](#), 2023’s tree regulation ordinance, or clarify language in accordance with Ordinance 126821.

This memorandum identifies and discusses: (1) areas where CB 120823 departs from prior policy decisions made by the Council or there are considerations that Central Staff has identified with the proposal; (2) other substantive changes included in the proposed bill that are consistent with prior Council actions; and (3) proposed amendments that are required due to changes to Washington State law.

Departures from Prior Policy Choices and Potential issues

Bill Sections	Discussion
17	<p>Basement Floor Area Exemptions Amendments to SMC 23.45.510, related to multifamily floor area regulations, would broaden an exemption that allows daylight basements to be exempt from limits on floor area in Lowrise zones. Currently the exemption applies to apartments. For rowhouses and townhouses the exemption applies only when all parking is located behind or within a structure.</p> <p>These amendments would expand the exemption to apply to other housing types, such as congregate housing, assisted living facilities and nursing homes, single family houses and cottage housing. Under Revised Code of Washington (RCW) 36.70A.535, the City is required to treat congregate housing the same as other</p>

Bill Sections	Discussion
	<p data-bbox="342 321 1321 394">multifamily housing types and must adopt these provisions as they apply to congregate housing by December 31, 2025.</p> <p data-bbox="342 436 1354 590"><i>Considerations: To encourage the development of a more pedestrian-friendly streetscape, Councilmembers may want to apply the rules for townhouses and rowhouses (i.e., exemption applies only when all parking is located behind or within the structure) to single family houses and cottage housing.</i></p>
23	<p data-bbox="342 600 834 632">Grocery Store Floor Area Exemptions</p> <p data-bbox="342 638 1419 905">This amendment to SMC 23.47A.010, related to the maximum size of nonresidential uses in commercial zones, would allow back-of-house functions of a grocery store – storage rooms, administrative offices, etc. – to be exempt from floor area limits in Neighborhood Commercial (NC) zones. This applies in NC1 zones, where most commercial uses are limited to 10,000 square feet and existing grocery stores are limited to 23,000 square feet, and NC2 zones, where commercial uses including grocery stores, are limited to 50,000 square feet.</p> <p data-bbox="342 947 1354 1094">The amount of floor area that could be exempt from size limits would equal approximately 3,000 square feet for new grocery stores in NC1 zones, 6,900 square feet for existing grocery stores in NC1 zones, and 8,500 square feet for grocery stores in NC2 zones.</p> <p data-bbox="342 1136 1403 1289"><i>Considerations: To simplify regulations and allow for flexibility in how grocery stores choose to organize their space, the Council could instead allow grocery stores to be larger generally, rather than limiting the additional floor area to back-of-house functions.</i></p>
27	<p data-bbox="342 1299 922 1331">SM-SLU 175/85-280 Height Limit Exceptions</p> <p data-bbox="342 1337 1403 1484">This amendment to SMC 23.48.225, related to height limits in South Lake Union, would amend a special height exception that applies in the Seattle Mixed-South Lake Union 175/85-280 (SM-SLU 175/85-280) zone. A map of the zone is included as Attachment 1.</p> <p data-bbox="342 1526 1419 1793">Currently, in this zone a project that preserves open space and includes two non-residential towers on one block is permitted to exceed the applicable height limits. The code provides for different heights where there are two non-residential towers and different heights where there are two residential towers on a block. The provisions were adopted in 2019, and were drafted to support development that commits to preserve the “Seattle Times Park” or “Onni Park” at the southwest corner of Fairview Avenue and John Street N.</p>

Bill Sections	Discussion
	<p>This amendment would still require that two non-residential towers be built on a block. But height limits would be changed. A non-residential tower closer to the eastern block front would be allowed up to 190 feet tall. A residential tower on the northwestern portion of a block front would be allowed up to 440 feet tall (up from 360 feet), with a 125-foot podium. Non-residential towers on other portions of the block would be limited to 175 feet (down from 208 feet) and residential towers on other portions of the block would be limited to 280 feet (down from 320 feet).</p> <p><i>Considerations: SDCI has been unable to confirm whether there are any projects that have already been built or permitted under the existing regulations, so it is unclear whether these changes would impact any existing projects. To prevent possible non-conformities, the Council could instead add the new limits as an alternative to the existing provisions, rather than replacing the existing provisions. However, doing so would add complexity to an already complex code.</i></p>
28	<p>SM-UP 160 Non-residential FAR</p> <p>This amendment to SMC 23.48.720, related to floor area ratios in Uptown, would allow taller non-residential buildings on blocks in the Uptown neighborhood that have the monorail running through them. The Seattle Mixed Uptown 160 (SM-UP 160) zone (see Attachment 2) allows a maximum Floor Area Ratio (FAR) of 7.0 for structures with residential uses, 7.0 FAR for nonresidential structures with heights below 125 feet, and 2.0 FAR for nonresidential structures with a height above 160 feet. The Uptown neighborhood supported this mix of height limits and FARs to encourage mixed-use development, including both residential and non-residential development in this area.</p> <p>An application has been filed for development of a hotel at the northwest corner of Denny Way and 5th Avenue N. This parcel has the monorail running through it and would not be able to accommodate 7.0 FAR in a 125-foot structure. The proposed bill would allow non-residential structures up to 7.0 FAR and 160 feet for lots that have a monorail running through them.</p> <p><i>Considerations: Because this proposed change is inconsistent with the intent of the Uptown community for the SM-UP 160 zone, the Council may want to consider removing this change. If the current provisions are maintained, a residential or mixed-use project would be the most likely type of development in this location.</i></p>
33	<p>Downtown Tower Vesting Rules</p> <p>Downtown zones include tower spacing requirements intended to maintain light and air to occupants of towers. When multiple towers on a block are proposed, SMC 23.49.058 includes regulations that identify the first of those tower</p>

Bill Sections	Discussion
	<p>proposals. The first tower proposal is allowed to move forward providing that the applicant for the first tower proposal continues to pursue permits. Specifically, the first proposed tower to submit an Early Design Guidance (EDG) package is considered “existing” for the purposes of the tower spacing rules. They do not need to proceed directly to an EDG meeting. Once there is an EDG meeting, then the tower proposal has up to 90 days to file their Master Use Permit application (MUP) to continue to be considered an existing tower.</p> <p>Under the current regulations, an applicant can indefinitely delay having an EDG meeting and have a project maintain “existing” status, thereby constraining options for other proposed tower projects on the same block, including precluding tower development on nearby sites. The bill proposes to clarify and tighten those requirements by requiring the applicant to file a complete application for a MUP within 12 months of filing their complete EDG application, even if an EDG meeting has not occurred.</p> <p><i>Considerations: This change could mean some Downtown tower projects that have submitted EDG proposals but not had their EDG meeting may lose their status as an existing building for the purpose of applying the tower spacing rules if they are not actually ready to begin the permitting process. On the other hand, other tower projects on the block that are ready to begin the permitting process would then be able to move forward.</i></p>

Other Substantive Changes Consistent with Previous Council Actions

Bill Sections	Discussion
30	<p>DMR/R Hotel Height Limits This would adjust the height limits for hotels in the Downtown Mixed Residential/Residential 95/65 (DMR/R 95/65) zone in Section 23.49.008, related to downtown height limits. Currently the zone has a height limit of 95 feet for residential uses and 65 feet for non-residential uses. Under the proposed amendment, hotels would also be able to be built to 95 feet. This is consistent with changes that the Council made last year in adopting Ordinance 126914. That ordinance exempted lodging in this area from FAR limits. The result of this bill would be to allow an additional three stories of hotel space on lots in the DMR/R zone in Belltown.</p>
33	<p>3rd and Union podium heights This change to SMC 23.49.058 would allow taller podium heights for development on one block along 3rd Avenue Downtown. This block, located between Union Street and Pike Street, was rezoned to DMC 240/290-440 under Ordinance</p>

Bill Sections	Discussion
	<p>120632. The proposed amendment would provide flexibility for development on this block, allowing an 85-foot-tall podium for future structures on the block, rather than requiring the podium to match the height of existing structures on the block. This proposal was brought up during the discussion of Ordinance 120632 but was raised too late to include in that bill.</p>

Changes required under State Law

Bill Sections	Discussion
11 and 60	<p>Household size Changes to SMC 23.42.060 related to short-term rentals and the definition of household in SMC 23.84A.016 remove limits on household size for dwelling units that include a short-term rental unit. Revised Code of Washington (RCW) 35.21.682 prohibits the City from limiting the number of people in a household.</p>
21	<p>Accessory Dwelling Units SMC 23.45.545, related to standards for accessory uses in multifamily zones, would be amended allow to Accessory Dwelling Units (ADUs) for single-family, townhouse and rowhouse units in all zones where those uses are allowed. The amendment implements RCW 36.70A.681, which states that the City must allow up to two ADUs in all zones where single-family houses are permitted.</p> <p>Additional amendments to this sections will be required to bring Seattle’s code in line with the requirements of RCW 36.70A.681. For example, the RCW requires that the City allow two detached ADUs, rather than the one detached ADU currently permitted in Seattle. We anticipate that the Council will receive legislation to make these changes in 2025.</p>
65 and 66	<p>Review of Parking under SEPA Amendments to SMC 25.05.444, listing elements of the environment under the State Environmental Policy Act (SEPA) and SMC 25.05.675 related to SEPA policies, remove parking as an element of the environment that is required to be analyzed under SEPA. The Washington State Legislature directed the Washington State Department of Ecology to amend WAC 197-11-444, which lists the elements of the environment that jurisdictions need to analyze when SEPA review is required, to remove parking as an element of the environment to be studied. Subsequently, the City has removed parking from the list of topics to be analyzed on its SEPA documents.</p> <p>Amendments in these sections of the bill implement this change to the WAC by removing parking from the list of elements of the environment that need to be analyzed under SEPA in Seattle.</p>

Next Steps

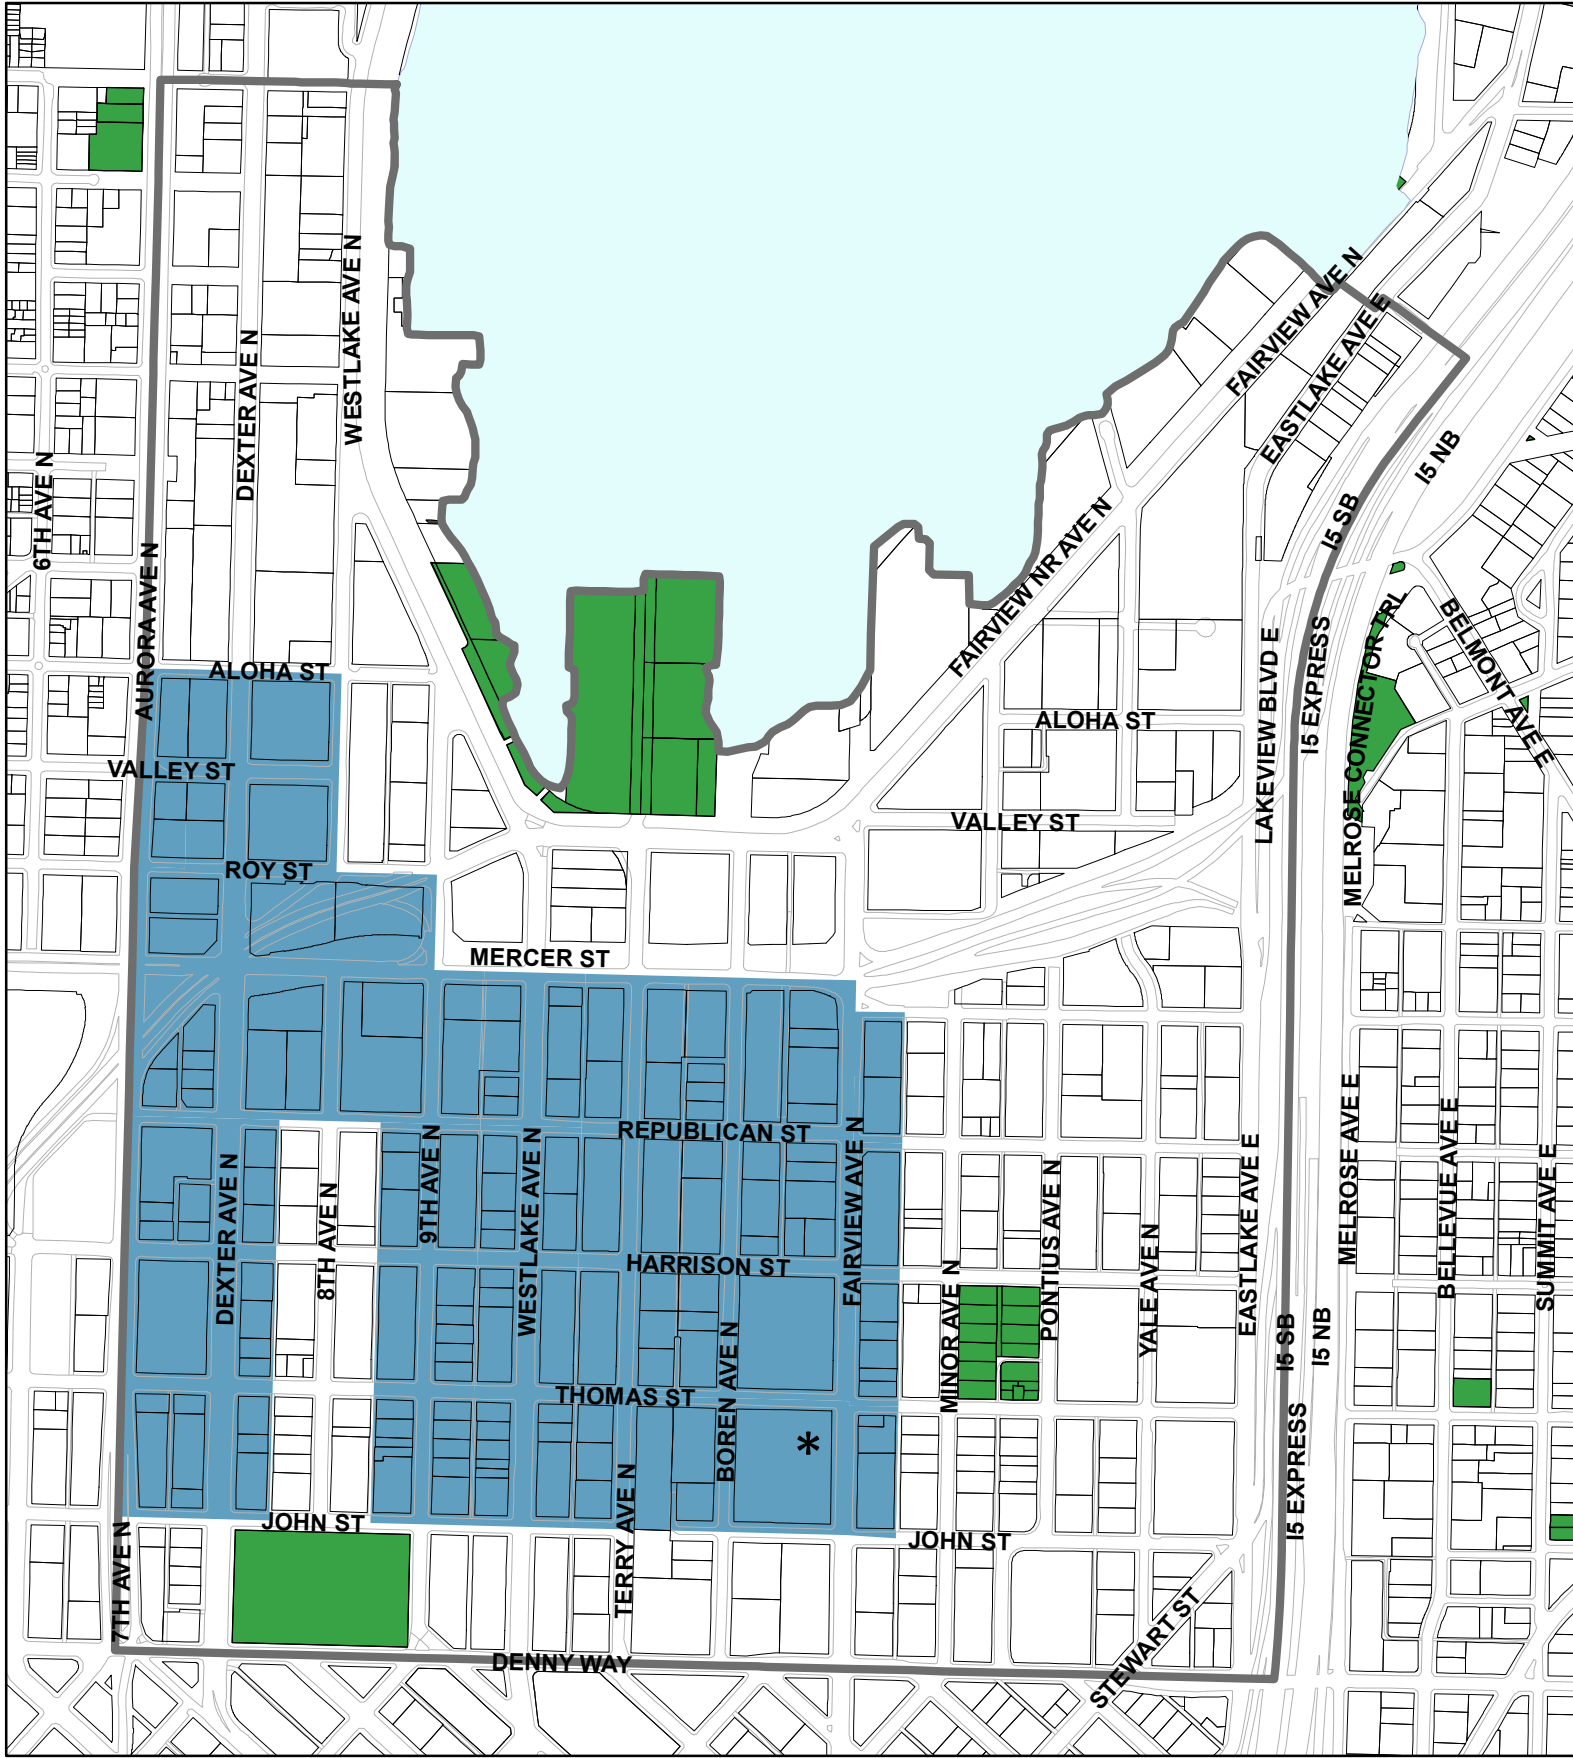

The Land Use Committee will hold a public hearing on CB 120823 on September 4, at 2:00. The committee is currently scheduled to vote on the bill at its September 18 meeting. A vote on September 18 would allow for the City Council to vote on the bill on September 24.

Construction & Inspections

TODAY'S PRESENTATION

- Introduction
- Omnibus Legislation highlights
- Questions

Omnibus Introduction

- Seattle has processed omnibus legislation about every two years since the mid-1990s
- Keeps code updated – code updates, correcting errors and omissions is a good government practice
- Recommended for local jurisdictions by the State of Washington
- The last Omnibus Ordinance was adopted in 2022.

Introduction Continued

Includes multiple amendments:

- Largely to Land Use and Environmental codes
- Minor updates that do not warrant stand-alone legislation
- Correct errors and omissions
- Updates in response to changes in State law
- Clarifies confusing provisions

Omnibus Highlights

Amendments generally identified by:

- City permit review staff
- Law Department
- Permit applicants
- Neighborhood representatives

Omnibus Highlights

- Multiple changes to make the SMC consistent with RCW 69.50.710, changing the term “Marijuana” to “Cannabis”.
- Clarification of the amount of back of house space accessory to grocery stores to be exempt from the maximum size for the use (SMC 23.47A.010).
- Clarification to allow commercial outdoor activities adjacent to a lot that is both zoned residential and commercial (SMC 23.47A.011.)

Omnibus Highlights cont.

- Several changes are proposed to Seattle Mixed zones to facilitate additional height for preserving open space (SMC 23.48.225) and to facilitate additional FAR for lots impacted by the Monorail (SMC 23.48.720.)
- Several changes are proposed to Downtown zones to clarify lodging height limit (SMC 23.49.008), the height of podiums along a portion of Third Ave, and tower spacing provisions (SMC 23.49.058.)
- Several administrative changes are proposed to 25.11 Tree Protection to provide for clarity of use and implementation.

SEATTLE CITY COUNCIL

August 5, 2024

NOTICE OF A SEATTLE CITY COUNCIL PUBLIC HEARING ON THE 2024 OMNIBUS LAND USE BILL

The Seattle City Council's Land Use Committee will hold a public hearing on September 4, at 2:00 PM on Council Bill 120823, the 2024 Omnibus Land Use Bill, which makes minor changes to various sections of Titles 23 and 25 of the Seattle Municipal Code (SMC). The proposed bill includes relatively minor changes that have been determined to not warrant independent legislation, including updating regulations based on changes to State Law, correcting typographical errors and incorrect section references, as well as clarifying or correcting existing code language for consistency. Among the changes the bill would make are the following:

- Amending the SMC to reflect changes to Washington State law, including removing parking as a subject of environmental review (SMC 25.05.444 and 25.05.675), removing references to household size (SMC 23.42.060 and 23.84A.016), and changing the term "marijuana" to "cannabis" to make the SMC consistent with RCW 69.50.710
- Expanding the permitted size of grocery stores in Neighborhood Commercial zones (SMC 23.47A.010.)
- Clarifying that commercial outdoor activities are allowed when adjacent to a lot that is both zoned residential and commercial (SMC 23.47A.011.)
- Amending the Seattle Mixed zones to facilitate additional height for preserving open space in South Lake Union (SMC 23.48.225) and to facilitate additional FAR for lots that the monorail runs through in Uptown (SMC 23.48.720.)
- Clarifying the lodging height limit in part of Belltown (SMC 23.49.008) and the height of 'towers' (SMC 23.49.058) for a block of 3rd Avenue in Downtown.
- Updating to multiple sections of the SMC in order to use the tree categories defined in the tree protection ordinance (Ordinance 126821.)
- Clarifying provisions of SMC 25.11 Tree Protection to support implementation of new tree protection requirements.

PUBLIC HEARING

The City Council's Land Use Committee will hold a public hearing to take comments on the bill on Wednesday, September 4, 2024, at 2:00 p.m. The hearing will be held in the:

City Council Chambers
2nd Floor, Seattle City Hall
600 Fourth Avenue, Seattle, WA

Persons who wish to participate in or attend the hearing may be offered the opportunity to do so remotely. If this is the case, the City Council will provide instructions in the meeting agenda on how to participate remotely. Please check the City Council agenda a few days prior to the meeting at <http://www.seattle.gov/council/committees>.

Print and communications access is provided on prior request. Seattle City Council Chambers is accessible. Directions to the City Council Chambers, and information about transit access and parking are available at <http://www.seattle.gov/council/meet-the-council/visiting-city-hall>.

WRITTEN COMMENTS

For those unable to attend the public hearing, written comments may be sent to:

Council Member Tammy Morales
Attn: Naomi Lewis
600 Fourth Avenue, Floor 2
PO Box 34025
Seattle, WA 98124-4025
or by email to council@seattle.gov

Written comments should be received by Wednesday, September 4, 2024, at 2:00 p.m.

INFORMATION AVAILABLE

Copies of the proposal may be obtained from the City Clerk website at <https://seattle.legistar.com/Legislation.aspx>. Please reference Council Bill No. 120823 in the "Search" field.

Amendment 1 Version #1 to CB 120823 - SDCI 2024 Omnibus ORD

Sponsor: Councilmember Morales

Single-Family and Cottage Basement Floor Area Exemption Conditions

Effect: The 2024 Omnibus Bill would extend a provision that exempts basement floor area from maximum Floor Area Ratio limits in apartment, townhouse and rowhouse projects in multifamily zones to all residential projects. This provision allows basements that extend no more than four feet above grade to be exempt from floor area limits that apply to above-grade stories in the building. Currently, for townhouse and rowhouse projects, in order to qualify for the exemption, all parking needs to be located within or behind structures. This both provides a better pedestrian streetscape, and generally reduce the number of curb cuts needed to serve these projects.

This amendment would apply the rowhouse and townhouse standards to single-family and cottage housing developments. Single-family housing and cottage housing developments, like rowhouses and townhouses and unlike other residential types, may include multiple units with separate entries and separate garages. By encouraging parking to be located behind or beneath single-family and cottage housing developments, the impacts of parking facilities along the streetscape will be reduced. This is not as much of an issue for apartment buildings or congregate housing projects, where there is typically only one entrance and exit to parking on a site.

Amend Section 17 of CB 120823 as follows:

Section 17. Section 23.45.510 of the Seattle Municipal Code, last amended by Ordinance 126855, is amended as follows:

23.45.510 Floor area

* * *

D. The following floor area is exempt from FAR limits:

* * *

4. Portions of a story that extend no more than 4 feet above existing or finished grade, whichever is lower, excluding access, (see Exhibit A for 23.45.510), in the following circumstances:

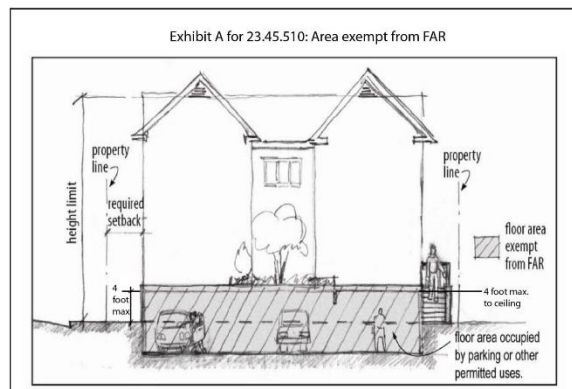

a. ~~((Apartments))~~ All residential structures in LR zones, except as provided in subsection 23.45.510.D.4.b;

b. Single family, cottage housing, rowhouse, ~~((Rowhouse))~~ and townhouse developments in LR zones, provided that all parking is located at the rear of the structure or is enclosed in structures with garage entrances located on the rear facade; and

c. All multifamily structures in MR and HR zones.

Exhibit A for 23.45.510

Area exempt from FAR

Amendment 1 Version #1 to CB 120823 - SDCI 2024 Omnibus ORD

Sponsor: Councilmember Morales

Remove grocery store back-of-house size limit expansion

Effect: The City applies maximum size-of-use limits to many uses in commercial zones. In Neighborhood Commercial 1 (NC1) and Neighborhood Commercial 2 (NC2) zones, the land use code includes size-of-use limits on most types of commercial activity. The intent of these zones is to provide for neighborhood goods and services at a scale appropriate to the surrounding neighborhood. NC1 zones are typically found in the middle of the lowest-density neighborhoods, and NC2 zones are typically found in moderately-dense neighborhoods.

Given their importance to their surrounding communities, and their purpose of providing a wide range of goods to their customers, the size-of use limits for grocery stores are generally higher than the limits that apply to other types of commercial uses. In the NC1 zone, most commercial uses are limited to 10,000 square feet. However, an existing grocery store can be expanded up to 23,000 square feet in size. In the NC2 zone, most commercial uses are permitted up to 25,000 square feet in size, but grocery stores (and similar businesses like drug stores) can be 50,000 square feet in size. There is no maximum size limit on grocery stores in the other commercial zones.

The 2024 Omnibus bill includes a provision that would allow grocery stores to expand further, increasing their size by the lesser of 30 percent or 8,500 square feet. The additional space would be limited to area used for back-of-house functions such as stockrooms, storage, break rooms, loading, and administrative offices.

This amendment would remove that provision. Grocery stores in NC1 zones would be limited to 10,000 square feet for new stores or 23,000 square feet for existing stores. Grocery stores in NC2 zones would be limited to 50,000 square feet. Back-of-house functions on floors subject to FAR limits would be counted toward those maximums.

1. Delete Section 23 of CB 120823:

~~Section 23. Section 23.47A.010 of the Seattle Municipal Code, last amended by~~

~~Ordinance 123046, is amended as follows:~~

~~**23.47A.010 Maximum size of nonresidential use(())**~~

~~***~~

~~B. For the purposes of this ((section)) Section 23.47A.010, size of use includes the gross floor area of a structure(s), or portion of a structure(s), occupied by a principal use and all uses accessory to that use, except that:~~

~~1. In NC1 and NC2 zones, any area dedicated to outdoor display of goods or equipment for rent or for sale is also included((, and));~~

~~2. In all zones, any gross floor area used for accessory parking is exempted from the size calculation((.)) ; and~~

~~3. In all zones, any gross floor area used for stockrooms, storage, break rooms, loading, and administrative office accessory to a principal grocery store use is exempted from the size calculation, provided it does not exceed 8,500 square feet or 30 percent of the gross floor area, whichever is less.~~

~~***~~

2. Renumber the following sections as appropriate.

File #: CB 120824, **Version:** 1

AN ORDINANCE relating to design review for the Downtown, Uptown, South Lake Union, and First Hill Urban Centers, a subarea adjacent to the Uptown Urban Center, and a portion of the Greater Duwamish Manufacturing and Industrial Center; adopting temporary regulations to exempt single-use and mixed-use development projects with lodging, residential, or research and development laboratory uses from design review, and allowing the Director of the Department of Construction and Inspections to grant waivers and modifications from certain development standards; and amending Sections 23.41.004, 23.41.020, 23.76.004, 23.76.006, 23.76.010, 23.76.012, and 23.76.026 of the Seattle Municipal Code.

The full text of the bill is attached to the legislative file.

CITY OF SEATTLE

ORDINANCE _____

COUNCIL BILL _____

..title

AN ORDINANCE relating to design review for the Downtown, Uptown, South Lake Union, and First Hill Urban Centers, a subarea adjacent to the Uptown Urban Center, and a portion of the Greater Duwamish Manufacturing and Industrial Center; adopting temporary regulations to exempt single-use and mixed-use development projects with lodging, residential, or research and development laboratory uses from design review, and allowing the Director of the Department of Construction and Inspections to grant waivers and modifications from certain development standards; and amending Sections 23.41.004, 23.41.020, 23.76.004, 23.76.006, 23.76.010, 23.76.012, and 23.76.026 of the Seattle Municipal Code.

..body

BE IT ORDAINED BY THE CITY OF SEATTLE AS FOLLOWS:

Section 1. Section 23.41.004 of the Seattle Municipal Code, last amended by Ordinance 126862, is amended as follows:

23.41.004 Applicability

* * *

E. Temporary provisions

1. Developments with units provided on-site to comply with Chapter 23.58C through the performance option

a. A development proposal subject to design review under subsection 23.41.004.A that is complying with Chapter 23.58C solely through the performance option by providing affordable units on-site according to Section 23.58C.050.C shall be exempt from design review if the applicant files a valid and complete building permit application electing the exemption while this ordinance is in effect.

b. A development proposal subject to design review under subsection 23.41.004.A that is complying with Chapter 23.58C solely through the performance option by

1 providing affordable units on-site according to Section 23.58C.050.C that is vested according to
2 Section 23.76.026 prior to August 14, 2023 may elect to be processed as allowed by Section
3 23.41.004.E.

4 c. The design review exemption under subsection 23.41.004.E.1 shall be
5 rescinded for a development proposal that changes from the performance option to the payment
6 option at any time prior to issuance of a building permit.

7 d. Requests for departures. If a project subject to design review under
8 subsection 23.41.004.A is exempt from design review according to subsection 23.41.004.E.1, the
9 Director may consider requests for departures from any development standard in this Title 23,
10 except as otherwise limited in subsection 23.41.012.B.

11 e. Departures decision. Requests for departures according to subsection
12 23.41.004.E.1.d shall be evaluated and may be granted by the Director as a Type I decision if the
13 departure would result in additional housing units being constructed.

14 2. Low-income housing

15 a. Notwithstanding any contrary provision of this Title 23, the Director
16 may consider requests for departures from any development standard in this Title 23, except as
17 otherwise limited in subsection 23.41.012.B, for low-income housing.

18 b. Departures decision. Requests for departures shall be evaluated by the
19 Director, in consultation with the Office of Housing, in light of the particular population
20 designed to be served by the project, and may be granted by the Director as a Type I decision if
21 the departure would result in additional housing units being constructed.

22 3. Downtown Activation Plan

1 a. A development proposal that is subject to design review according to
2 this Section 23.41.004 shall be exempt from this Chapter 23.41, unless ineligible for exemption
3 due to other code provisions, if:

4 1) The proposal includes residential use comprising at least 50
5 percent of its chargeable floor area, except if at least 50 percent of the chargeable floor area in
6 nonresidential use is lodging then no residential use is required; or includes a research and
7 development laboratory use; and

8 2) The proposal is located on a property within the Downtown
9 Urban Center, Uptown Urban Center, South Lake Union Urban Center, First Hill Urban Center,
10 or an area within the Greater Duwamish Manufacturing and Industrial Center, as shown on Map
11 A for 23.41.004; or within an area included in an adopted expansion area of an urban center or
12 manufacturing and industrial center shown on Map A for 23.41.004; and

13 3) The applicant files a letter of eligibility for exemption pursuant
14 to subsection 23.76.010.G, provided that permit application materials are subsequently filed per
15 subsection 23.76.026.A.4; and

16 4) The proposal does not involve a Type IV or Type V Council
17 land use decision.

18 b. Waiver or modification of development standard. If a project is exempt
19 from design review according to this subsection 23.41.004.E.3, the Director may consider
20 requests for waivers or modifications of the following development standards in Title 23:

21 1) Upper-level setbacks, modulation, articulation, facade opening
22 requirements, and structure width;

1 2) Street level setbacks and facade setbacks: dimensional and area
2 limits;

3 3) Floor-to-floor height requirements at street level, except as
4 otherwise limited in subsection 23.41.012.B;

5 4) Rooftop screening and coverage limits in relation to mechanical
6 equipment, energy-related features, elevator equipment, and related enclosures;

7 5) Street-level use type, minimum depth, and percent presence on
8 street-level street-facing facade requirements;

9 6) Facade transparency and blank facade requirements;

10 7) Overhead weather protection requirements;

11 8) Requirements for the size and design of common recreational
12 areas, amenity areas, community rooms, and similar indoor amenities, but not including required
13 outdoor open space requirements;

14 9) Open space and open areas: dimensional, area, distribution of
15 types, and amount of overhead coverage requirements, except standards for open space amenities
16 provided to meet requirements of Chapter 23.58A;

17 10) Landscaping: dimensional, area, and location requirements;

18 11) Vehicle access to parking, loading, and utility spaces;

19 12) Minimum dimensions and slope of vehicle access;

20 13) Parking space size requirements in subsections 23.54.030.A
21 and 23.54.030.B;

22 14) Bicycle parking minimum quantity requirements in Table D
23 for 23.54.015; and

Section 2. Section 23.41.020 of the Seattle Municipal Code, last amended by Ordinance

6 126188, is amended as follows:

7 **23.41.020 Master Planned Community design review process**

8 A. Scope. This Section 23.41.020 applies only to development proposals in Master
9 Planned Community zones that do not include a request for departures. If an application in a

1 Master Planned Community zone includes a request for departures, then the applicable design
2 review procedures are in Section 23.41.014, except if the temporary provisions in subsection
3 23.41.004.E.3 apply. For purposes of this Section 23.41.020, "highrise structure" and "non-
4 highrise structure" are as defined in Section 23.75.020.

5 * * *

6 Section 3. Section 23.76.004 of the Seattle Municipal Code, last amended by Ordinance
7 126821, is amended as follows:

8 **23.76.004 Land use decision framework**

9 A. Land use decisions are classified into five categories. Procedures for the five different
10 categories are distinguished according to who makes the decision, the type and amount of public
11 notice required, and whether appeal opportunities are provided. Land use decisions are generally
12 categorized by type in Table A for 23.76.004.

13 * * *

Table A for 23.76.004 LAND USE DECISION FRAMEWORK¹	
Director's and Hearing Examiner's Decisions Requiring Master Use Permits TYPE I	
Director's Decision (Administrative review through land use interpretation as allowed by Section 23.88.020 ²)	
*	Application of development standards for decisions not otherwise designated Type II, III, IV, or V
*	Uses permitted outright
*	Temporary uses, four weeks or less
*	Renewals of temporary uses, except for temporary uses and facilities for light rail transit facility construction
*	Intermittent uses
*	Uses on vacant or underused lots pursuant to Section 23.42.038
*	Transitional encampment interim use
*	Certain street uses
*	Lot boundary adjustments
*	Modifications of features bonused under Title 24
*	Determinations of significance (EIS required) except for determinations of significance based solely on historic and cultural preservation

*	Temporary uses for relocation of police and fire stations
*	Exemptions from right-of-way improvement requirements
*	Reasonable accommodation
*	Minor amendment to a Major Phased Development permit
*	Determination of whether an amendment to a property use and development agreement is major or minor
*	Streamlined design review decisions pursuant to Section 23.41.018; if no development standard departures are requested, and design review decisions in an MPC zone pursuant to Section 23.41.020 if no development standard departures are requested
*	Shoreline special use approvals that are not part of a shoreline substantial development permit
*	Adjustments to major institution boundaries pursuant to subsection 23.69.023.B
*	Determination that a project is consistent with a planned action ordinance
*	Decision to approve, condition, or deny, based on SEPA policies, a permit for a project determined to be consistent with a planned action ordinance
*	Decision to increase the maximum height for residential uses in the DOC2 zone according to subsection 23.49.008.H
*	Decision to increase the maximum allowable FAR in the DOC2 zone according to subsection 23.49.011.A.2.n
*	Minor revisions to an issued and unexpired MUP that was subject to design review
*	Building height increase for minor communication utilities in downtown zones
*	Application of tree provisions pursuant to Chapter 25.11
*	<u>Director’s acceptance of an eligibility letter for proposals subject to temporary design review exemption provisions, subject to the additional requirement to file a valid and complete Type I or II Master Use Permit application in subsection 23.41.004.E.3</u>
*	<u>Director’s application of development standards for decisions on Type I or II Master Use Permit applications subject to temporary design review exemption provisions in subsection 23.41.004.E.3</u>
*	<u>Waiver or modification of development standards for development proposals subject to temporary design review exemption provisions in subsection 23.41.004.E.3</u>
*	Other Type I decisions that are identified as such in the Land Use Code

* * *

Footnotes for Table A for 23.76.004

¹ Sections 23.76.006 and 23.76.036 establish the types of land use decisions in each category. This Table A for 23.76.004 is intended to provide only a general description of land use decision types.

² Type I decisions may be subject to administrative review through a land use interpretation pursuant to Section 23.88.020.

³ Shoreline decisions, except shoreline special use approvals that are not part of a shoreline substantial development permit, are appealable to the Shorelines Hearings Board along with all related environmental appeals.

* * *

1
2 Section 4. Section 23.76.006 of the Seattle Municipal Code, last amended by Ordinance
3 126821, is amended as follows:

1 **23.76.006 Master Use Permits required**

2 A. Type I, II, and III decisions are components of Master Use Permits. Master Use
3 Permits are required for all projects requiring one or more of these decisions.

4 B. The following decisions are Type I:

5 1. Determination that a proposal complies with development standards;

6 2. Establishment or change of use for uses permitted outright, uses allowed
7 under Section 23.42.038, temporary relocation of police and fire stations for 24 months or less,
8 transitional encampment interim use, temporary uses for four weeks or less not otherwise
9 permitted in the zone, and renewals of temporary uses for up to six months, except temporary
10 uses and facilities for light rail transit facility construction;

11 3. The following street use approvals:

12 a. Curb cut for access to parking, whether associated with a development
13 proposal or not;

14 b. Concept approval of street improvements associated with a
15 development proposal, such as additional on-street parking, street landscaping, curbs and
16 gutters, street drainage, sidewalks, and paving;

17 c. Structural building overhangs associated with a development proposal;

18 d. Areaways associated with a development proposal;

19 4. Lot boundary adjustments;

20 5. Modification of the following features bonused under Title 24:

21 a. Plazas;

22 b. Shopping plazas;

23 c. Arcades;

- 1 d. Shopping arcades; and
- 2 e. Voluntary building setbacks;
- 3 6. Determinations of Significance (determination that an Environmental Impact
- 4 Statement is required) for Master Use Permits and for building, demolition, grading, and other
- 5 construction permits (supplemental procedures for environmental review are established in
- 6 Chapter 25.05, Environmental Policies and Procedures), except for Determinations of
- 7 Significance based solely on historic and cultural preservation;
- 8 7. Discretionary exceptions for certain business signs authorized by subsection
- 9 23.55.042.D;
- 10 8. Waiver or modification of required right-of-way improvements;
- 11 9. Reasonable accommodation;
- 12 10. Minor amendment to Major Phased Development Permit;
- 13 11. Streamlined design review decisions pursuant to Section 23.41.018 if no
- 14 development standard departures are requested pursuant to Section 23.41.012, and design
- 15 review decisions in an MPC zone if no development standard departures are requested
- 16 pursuant to Section 23.41.012;
- 17 12. Shoreline special use approvals that are not part of a shoreline substantial
- 18 development permit;
- 19 13. Determination that a project is consistent with a planned action ordinance,
- 20 except as provided in subsection 23.76.006.C;
- 21 14. Decision to approve, condition, or deny, based on SEPA policies, a permit
- 22 for a project determined to be consistent with a planned action ordinance;

1 15. Determination of requirements according to subsections 23.58B.025.A.3.a,
2 23.58B.025.A.3.b, 23.58B.025.A.3.c, 23.58C.030.A.2.a, 23.58C.030.A.2.b, and
3 23.58C.030.A.2.c;

4 16. Decision to increase the maximum height of a structure in the DOC2
5 500/300-550 zone according to subsection 23.49.008.F;

6 17. Decision to increase the maximum FAR of a structure in the DOC2 500/300-
7 550 zone according to subsection 23.49.011.A.2.n;

8 18. Minor revisions to an issued and unexpired MUP that was subject to design
9 review, pursuant to subsection 23.41.008.G;

10 19. Building height departures for minor communication facilities in downtown
11 zones, pursuant to Section 23.57.013;

12 20. Application of tree provisions pursuant to Chapter 25.11; (~~and~~)

13 21. Director's acceptance of an eligibility letter for proposals subject to
14 temporary design review exemption provisions subject to the additional requirement to file a
15 valid and complete Type I or II Master Use Permit application in subsection 23.41.004.E.3;

16 22. Director's application of development standards for decisions on Type I or II
17 Master Use Permit applications subject to temporary design review exemption provisions in
18 subsection 23.41.004.E.3;

19 23. Waiver or modification of development standards for development proposals
20 subject to temporary design review exemption provisions in subsection 23.41.004.E.3; and

21 24. Other Type I decisions.

22 * * *

23 Section 5. Section 23.76.010 of the Seattle Municipal Code, last amended by Ordinance
24 126685, is amended as follows:

1 **23.76.010 Applications for Master Use Permits**

2 * * *

3 D. All applications shall contain the submittal information required by the applicable
4 sections of this Title 23, Land Use Code; Title 15, Street and Sidewalk Use; Chapter 25.05,
5 Environmental Policies and Procedures; Chapter 25.09, Regulations for Environmentally Critical
6 Areas; Chapter 25.12, Landmarks Preservation; Chapter 25.16, Ballard Avenue Landmark
7 District; Chapter 25.20, Columbia City Landmark District; Chapter 25.22, Harvard-Belmont
8 Landmark District; Chapter 25.24, Pike Place Market Historical District; and other codes as
9 determined applicable and necessary for review by the Director. All shoreline substantial
10 development, conditional use or variance applications shall also include applicable submittal
11 information as specified in WAC 173-27-180. The Director shall make available, in writing, a
12 general list of submittal requirements for a complete application.

13 * * *

14 G. A letter of eligibility for exemption from design review is required for applications
15 subject to temporary provisions in subsection 23.41.004.E.3. This letter of eligibility shall
16 document a proposal’s consistency with the qualifications for design review exemption in
17 subsection 23.41.004.E.3.a, including:

18 1. Describing the proposed uses within the proposal per subsection
19 23.41.004.E.3.a.1;

20 2. Identifying the location of the development site within the area subject to
21 temporary design review exemption per subsection 23.41.004.E.3.a.2;

22 3. A statement that the proposal does not involve a Type IV or Type V Council
23 land use decision; and

1 4. An acknowledgement that complete Master Use Permit application materials
2 must be submitted within 90 days to establish vesting as indicated in subsection 23.76.026.A.4.

3 Section 6. Section 23.76.012 of the Seattle Municipal Code, last amended by Ordinance
4 126684, is amended as follows:

5 **23.76.012 Notice of Application**

6 A. Notice.

7 1. No notice of application is required for Type I decisions, except that notice of
8 application is required for:

9 a. ~~((all))~~ All projects in MPC zones that are subject to Master Planned
10 Community design review in Section 23.41.020, as described in subsection 23.76.012.B.6; ~~((:))~~
11 and

12 b. An application for a Type I permit with an interim design review
13 exemption as described in subsection 23.41.004.E.3.

14 2. Within 14 days after the Director determines that an application is complete,
15 for the following types of applications, the Director shall provide notice of the application and an
16 opportunity for public comment as described in this Section 23.76.012:

17 a. An application for Type I permit with an interim design review
18 exemption as described in subsection 23.41.004.E.3;

19 b. Type II Master Use Permits;

20 ~~((b-))~~ c. Type III Master Use Permits;

21 ~~((e-))~~ d. Type IV Council land use decisions, provided that for
22 amendments to property use and development agreements, additional notice shall be given
23 pursuant to subsection 23.76.058.C; and

1 (~~e.~~) e. The following Type V Council land use decisions:

2 1) Major Institution designations and revocation of Major
3 Institution designations;

4 2) Concept approvals for the location or expansion of City
5 facilities requiring Council land use approval; and

6 3) Waivers or modification of development standards for City
7 facilities.

8 3. Other Agencies with Jurisdiction. The Director shall provide notice to other
9 agencies of local, state, or federal governments that may have jurisdiction over some aspect of
10 the project to the extent known by the Director.

11 4. Early Review Determination of Nonsignificance (DNS). In addition to the
12 requirements of subsection A.3 of this Section 23.76.012, the Director shall provide a copy of the
13 early review DNS notice of application and environmental checklist to the following:

14 a. State Department of Ecology;

15 b. Affected tribes;

16 c. Each local agency or political subdivision whose public services would
17 be changed as a result of implementation of the proposal; and

18 d. Persons who submit a written request for this information and who
19 provide an address for notice.

20 B. Types of notice required

21 1. For projects subject to a Type I permit with an interim design review
22 exemption as described in subsection 23.41.004.E.3, or an application for a Type II
23 environmental determination pursuant to Section 23.76.006 or design review pursuant to Section

1 23.41.004, the Department shall direct the installation of a large notice sign on the site, unless an
2 exemption or alternative posting as set forth in this subsection 23.76.012.B is applicable. The
3 large notice sign shall be located so as to be clearly visible from the adjacent street or sidewalk,
4 and shall be removed by the applicant at the direction of the Department after final City action
5 on the application is completed.

6 a. In the case of submerged land, the large notice sign shall be posted on
7 adjacent dry land, if any, owned or controlled by the applicant. If there is no adjacent dry land
8 owned or controlled by the applicant, notice shall be provided according to subsection
9 23.76.012.B.1.c.

10 b. Projects limited to interior remodeling, or that are subject to a Type II
11 environmental determination pursuant to Section 23.76.006 only because of location over water
12 or location in an environmentally critical area, are exempt from the large notice sign
13 requirement.

14 c. If use of a large notice sign is neither feasible nor practicable to assure
15 that notice is clearly visible to the public, the Department shall post ten placards within 300 feet
16 of the site.

17 d. The Director may require both a large notice sign and the alternative
18 posting measures described in subsection 23.76.012.B.1.c, or may require that more than one
19 large notice sign be posted, if necessary to assure that notice is clearly visible to the public.

20 2. For projects that are categorically exempt from environmental review, the
21 Director shall post one land use sign visible to the public at each street frontage abutting the site
22 except that if there is no street frontage or the site abuts an unimproved street, the Director shall
23 post more than one sign and/or use an alternative posting location so that notice is clearly visible

1 to the public. The land use sign shall be removed by the applicant after final action on the
2 application is completed.

3 3. For all projects requiring notice of application, the Director shall provide notice
4 in the Land Use Information Bulletin. For projects requiring installation of a large notice sign or
5 subject to design review pursuant to Section 23.41.014, notice in the Land Use Information
6 Bulletin shall be published after installation of the large notice sign required in subsection
7 23.76.012.B.1.

8 4. The Director shall provide mailed notice of:

9 a. Applications for variances, administrative conditional uses, special
10 exceptions, temporary uses for more than four weeks, shoreline variances, shoreline conditional
11 uses, short plats that do not exclusively create unit lots, early design guidance process for
12 administrative design review and streamlined administrative design review, subdivisions, Type
13 IV Council land use decisions, amendments to property use and development agreements, Major
14 Institution designations and revocation of Major Institution designations, concept approvals for
15 the location or expansion of City facilities requiring Council land use approval, ~~((and))~~ waivers
16 or modification of development standards for City facilities, and applications receiving an
17 exemption from design review pursuant to temporary provisions in subsection 23.41.004.E.3;

18 and

19 b. The first early design guidance meeting for a project subject to design
20 review pursuant to Section 23.76.014.

21 5. For a project subject to design review, except streamlined design review
22 pursuant to Section 23.41.018 for which no development standard departure pursuant to Section
23 23.41.012 is requested, notice of application shall be provided to all persons who provided an

1 address for notice and either attended an early design guidance public meeting for the project or
2 wrote to the Department about the proposed project before the date that the notice of application
3 is distributed in the Land Use Information Bulletin.

4 6. For a project that is subject to both Type I decisions and Master Planned
5 Community design review under Section 23.41.020, notice shall be provided as follows:

6 a. The Director shall provide notice of application in the Land Use
7 Information Bulletin.

8 b. The Director shall post one land use sign visible to the public at each
9 street frontage abutting the site, except that if there is no street frontage or the site abuts an
10 unimproved street, the Director shall post more than one sign and/or use an alternative posting
11 location so that notice is clearly visible to the public. The land use sign(s) shall be posted prior to
12 publication of notice of application in the Land Use Information Bulletin, and shall be removed
13 by the applicant after final action on the Master Use Permit application is completed.

14 c. For a project that includes a highrise structure as defined in Section
15 23.75.020, the Director shall also post ten placards within the right-of-way within 300 feet of the
16 site. The land use placards shall be posted prior to publication of notice of application in the
17 Land Use Information Bulletin, and shall be removed by the applicant after final action on the
18 Master Use Permit application is completed.

19 d. Mailed notice shall be provided consistent with subsection
20 23.76.012.B.5.

21 7. No notice is required of a Type I determination whether a project is consistent
22 with a planned action ordinance, except that if that determination has been made when notice of

1 application is otherwise required for the project, then the notice shall include notice of the
2 planned action consistency determination.

3 C. Contents of notice

4 1. The City's official notice of application is the notice placed in the Land Use
5 Information Bulletin, which shall include the following required elements as specified in RCW
6 36.70B.110:

7 a. Date of application, date of notice of completion for the application, and
8 the date of the notice of application;

9 b. A description of the proposed project action and a list of the project
10 permits included in the application, including if applicable:

11 1) A list of any studies requested by the Director;

12 2) A statement that the project relies on the adoption of a Type V
13 Council land use decision to amend the text of Title 23;

14 c. The identification of other permits not included in the application to the
15 extent known by the Director;

16 d. The identification of existing environmental documents that evaluate
17 the proposed project, and the location where the application and any studies can be reviewed;

18 e. A statement of the public comment period and the right of any person to
19 comment on the application, request an extension of the comment period, receive notice of and
20 participate in any hearings, and request a copy of the decision once made, and a statement of any
21 administrative appeal rights;

22 f. The date, time, location, virtual location if applicable, and type of
23 hearing, if applicable and if scheduled at the date of notice of the application;

1 g. A statement of the preliminary determination, if one has been made at
2 the time of notice, of those development regulations that will be used for project mitigation and
3 the proposed project's consistency with development regulations;

4 h. A statement that an advisory committee is to be formed as provided in
5 Section 23.69.032, for notices of intent to file a Major Institution master plan application;

6 i. Any other information determined appropriate by the Director; and

7 j. The following additional information if the early review DNS process is
8 used:

9 1) A statement that the early review DNS process is being used and
10 the Director expects to issue a DNS for the proposal;

11 2) A statement that this is the only opportunity to comment on the
12 environment impacts of the proposal;

13 3) A statement that the proposal may include mitigation measures
14 under applicable codes, and the project review process may incorporate or require mitigation
15 measures regardless of whether an EIS is prepared; and

16 4) A statement that a copy of the subsequent threshold
17 determination for the proposal may be obtained upon written request.

18 2. All other forms of notice, including but not limited to large notice and land use
19 signs, placards, and mailed notice, shall include the following information: the project
20 description, location of the project, date of application, location where the complete application
21 file may be reviewed, and a statement that persons who desire to submit comments on the
22 application or who request notification of the decision may so inform the Director in writing
23 within the comment period specified in subsection 23.76.012.D. The Director may, but need not,

1 include other information to the extent known at the time of notice of application. Except for the
2 large notice sign, each notice shall also include a list of the land use decisions sought. The
3 Director shall specify detailed requirements for large notice and land use signs.

4 D. Comment period. The Director shall provide a 14 day public comment period prior to
5 making a threshold determination of nonsignificance (DNS) or publishing a decision on the
6 project; provided that the comment period shall be extended by 14 days if a written request for
7 extension is submitted within the initial 14 day comment period; provided further that the
8 comment period shall be 30 days for applications requiring shoreline decisions except that for
9 limited utility extensions and bulkheads subject to Section 23.60A.064, the comment period shall
10 be 20 days as specified in Section 23.60A.064. The comment period shall begin on the date
11 notice is published in the Land Use Information Bulletin. Comments shall be filed with the
12 Director by 5 p.m. of the last day of the comment period. If the last day of the comment period is
13 a Saturday, Sunday, or federal or City holiday, the comment period shall run until 5 p.m. the next
14 day that is not a Saturday, Sunday, or federal or City holiday. Any comments received after the
15 end of the official comment period may be considered if the comment is material to review yet to
16 be conducted.

17 E. If a Master Use Permit application includes more than one decision component, notice
18 requirements shall be consolidated and the broadest applicable notice requirements imposed.

19 F. The mailing list used for the Land Use Information Bulletin shall be updated annually
20 in consultation with the Director of the Department of Neighborhoods.

21 Section 7. Section 23.76.026 of the Seattle Municipal Code, last amended by Ordinance
22 126685, is amended as follows:

23 **23.76.026 Vesting**

1 A. Master Use Permit components other than subdivisions and short subdivisions. Except
2 as otherwise provided in this Section 23.76.026 or otherwise required by law, applications for all
3 Master Use Permit components other than subdivisions and short subdivisions shall be
4 considered vested under the Land Use Code and other land use control ordinances in effect on
5 the date:

6 1. That notice of the Director's decision on the application is published, if the
7 decision is appealable to the Hearing Examiner;

8 2. Of the Director's decision, if the decision is not appealable to the Hearing
9 Examiner; ~~((or))~~

10 3. A valid and fully complete building permit application is filed, as determined
11 under Section 106 of the Seattle Building Code or Section R105 of the Seattle Residential Code,
12 if it is filed prior to the date established in subsections 23.76.026.A.1 or 23.76.026.A.2((-)) ; or

13 4. Of the filing of a letter of eligibility for exemption from design review pursuant
14 to subsection 23.41.004.E.3, provided that a valid and complete Type I or Type II Master Use
15 Permit application pursuant to Section 23.76.010 is filed within 90 days. If a complete Type I or
16 Type II Master Use application pursuant to Section 23.76.010 has not been filed within 90 days
17 for a proposal associated with a filed letter of eligibility for exemption from design review, the
18 filed letter of eligibility for exemption from design review and its relevance to establishing
19 vesting under Title 23 shall be void. A filed letter of eligibility may be withdrawn by the
20 applicant. A new letter of eligibility may be filed, that defines a new 90-day timeframe for
21 providing a valid and complete Type I or Type II Master Use Permit application.

22 B. Subdivision and short subdivision components of Master Use Permits. An application
23 for approval of a subdivision or short subdivision of land shall be considered under the Land Use

1 Code and other land use control ordinances in effect when a fully complete application for such
2 approval that satisfies the requirements of Section 23.22.020 (subdivision) or Sections
3 23.24.020 and 23.24.030 (short subdivision) is submitted to the Director.

4 C. Design review component of Master Use Permits

5 1. If a complete application for a Master Use Permit is filed prior to the date
6 design review becomes required for that type of project, design review is not required.

7 2. Except as otherwise provided by law, a complete application for a Master Use
8 Permit that includes a design review component other than an application described in
9 subsection 23.76.026.C.3 shall be considered under the Land Use Code and other land use
10 control ordinances in effect on:

11 a. The date a complete application for the early design guidance process or
12 streamlined design review guidance process is submitted to the Director, provided that such
13 Master Use Permit application is filed within 90 days of the date of the early design guidance
14 public meeting if an early design guidance public meeting is required, or within 90 days of the
15 date the Director provided guidance if no early design guidance public meeting is required. If
16 more than one early design guidance public meeting is held, then a complete application for a
17 Master Use Permit that includes a design review component shall be considered under the Land
18 Use Code and other land use control ordinances in effect on the date a complete application for
19 the early design guidance process is submitted to the Director, provided that such Master Use
20 Permit application is filed within 150 days of the first meeting. If a complete application for a
21 Master Use Permit that includes a design review component is filed more than 150 days after the
22 first early design guidance public meeting, then such Master Use Permit application shall be
23 considered under the Land Use Code and other land use control ordinances in effect at the time

1 of the early design guidance public meeting that occurred most recently before the date on which
2 a complete Master Use Permit application was filed, provided that such Master Use Permit
3 application is filed within 90 days of the most recent meeting; or

4 b. A date elected by the applicant that is later than the date established in
5 subsection 23.76.026.C.2.a and not later than the dates established in subsections 23.76.026.A.1
6 through 23.76.026.A.3.

7 3. A complete application for a Master Use Permit that includes a Master Planned
8 Community design review component, but that pursuant to subsection 23.41.020.C does not
9 include an early design guidance process, shall be considered under the Land Use Code and other
10 land use control ordinances in effect on the date the complete application is submitted.

11 D. If an applicant elects a date for consideration of an application for Master Use Permit
12 components pursuant to subsection 23.76.026.C.2.b after notice of the application required
13 by Section 23.76.012 has been given, notice of the application and an opportunity to comment
14 shall be repeated according to Section 23.76.012.

15 E. Notwithstanding any other provision of this Section 23.76.026 or this Chapter 23.76,
16 an applicant may elect, at such time and in such manner as the Director may permit, that specific
17 Land Use Code provisions that became effective after the applicant's application vested may
18 nonetheless be applied to the application, pursuant to authorization for such election set forth
19 elsewhere in this Title 23.

20 Section 8. This ordinance shall automatically expire 36 months after its effective date
21 unless the Council takes action to either extend it as provided by statute or terminate it sooner.

1 Section 9. This ordinance shall take effect as provided by Seattle Municipal Code
2 Sections 1.04.020 and 1.04.070.

3 Passed by the City Council the _____ day of _____, 2024,
4 and signed by me in open session in authentication of its passage this _____ day of

SUMMARY and FISCAL NOTE

Department:	Dept. Contact:	CBO Contact:
SDCI	Gordon Clowers	Christie Parker

1. BILL SUMMARY

Legislation Title: AN ORDINANCE relating to design review for the Downtown, Uptown, South Lake Union, and First Hill Urban Centers, a subarea adjacent to the Uptown Urban Center, and a portion of the Greater Duwamish Manufacturing and Industrial Center; adopting temporary regulations to exempt single-use and mixed-use development projects with lodging, residential, or research and development laboratory uses from design review, and allowing the Director of the Department of Construction and Inspections to grant waivers and modifications from certain development standards; and amending Sections 23.41.004, 23.41.020, 23.76.004, 23.76.006, 23.76.010, 23.76.012, and 23.76.026 of the Seattle Municipal Code.

Summary and Background of the Legislation:

The legislation amends the Land Use Code, for an interim three-year period, to exempt new development proposals from the Design Review process if they consist of housing, hotels, or research and development laboratory uses.

The affected area is in the core Urban Centers of Downtown,¹ South Lake Union, Uptown, and First Hill; and in a limited portion of the Greater Duwamish Manufacturing and Industrial Center adjacent to the Downtown Urban Center. Also, the proposal applies to any future City Council adopted expansions of an Urban Center boundary in the affected area. Currently, an area north of the Uptown Urban Center is proposed to be extended as a result of the One Seattle Comprehensive Plan update.

¹ The proposal would not apply to the Pike Place Market Historical District; and also not in the Chinatown/International District and Pioneer Square neighborhoods, where development projects are already exempt from Design Review and may elect to go through the Special Review District process to seek flexibility in a manner that fits with their historic districts' character.

Projects Eligible Under the Proposal

	Mixed-use (If all nonresidential uses)	Mixed-use (If residential and nonresidential uses)	Residential	Research and Development Laboratory
How the floor area in the proposed development must be used to be eligible under the proposal	At least 50% of the floor area must be in hotel use, the remainder may be a mix of any nonresidential use allowed in the zone	At least 50% of the floor area must be in residential use, the remainder may be a mix of any nonresidential use allowed in the zone	Up to 100% of the floor area in residential use	Up to 100% of the floor area in research and development laboratory use
Most likely use mix	Hotel, office, retail and entertainment uses	Housing and hotel	Housing, including buildings with street-level retail and entertainment uses	Laboratory uses may include accessory office use and may include street-level retail and entertainment uses

The legislation also includes the following:

- Requires public notice in the form of on-site signage and mailed notice to surrounding properties, for all projects that were previously subject to Design Review;
- Allows for vesting, similar to that provided for Design Review projects, to apply at the date a letter of eligibility is filed by an applicant, provided a complete MUP application is accepted by SDCI within 90 days;
- Allows the SDCI Director to waive or modify compliance with several development standards, which is comparable to the range of departures granted through Design Review in the subject area; and
- Provides for applicants to opt in or opt out of Design Review, including for development proposals already under review.

The legislation is expected to lead to greater use of Type I administrative review of development proposals, only some of which would have Type II MUP decisions appealable to the Hearing Examiner. The Type I status is due to the proposed exemption from Design Review in combination with an exemption from SEPA review for residential development from State statute applicable through at least September 2025.

Adopting this legislation will allow more efficient permit review of development to address an urgent need for more activity and vitality in Seattle’s center city. Residential and hotel uses are active for long periods of the day and week, and employees at research and development labs are more likely to be present at their workplaces than office workers.

The legislation continues the trend of City efforts to assist in the production of housing by exempting certain housing projects, including affordable housing (see Ordinances 126287, 126854), from Design Review. The legislation should accelerate the permitting of housing, hotel, and research and development laboratory projects throughout center city, thereby reducing costs and decreasing the time needed for important new development to be available for occupancy.

2. CAPITAL IMPROVEMENT PROGRAM

Does this legislation create, fund, or amend a CIP Project?

No

3. SUMMARY OF FINANCIAL IMPLICATIONS

Does this legislation have financial impacts to the City?

Yes

This legislation to exempt certain types of new development in Seattle’s core Urban Centers from Chapter 23.41 Design Review for a three-year period will reduce or eliminate review responsibilities of discretionary land use review staff for Master Use Permit projects. Some projects will still have discretionary land use reviews (those that remain Type II MUP projects), and some will not (projects without SEPA reviews or Design Review). For the latter, a code-consistency review step would still occur, but would be covered by building permit review fees calculated according to project valuation.

The following analysis uses estimates for permit application volumes exempted for the next three years and gives an estimate of the resulting reduction in fee revenue from discontinuing Design Review. The affected area’s project volume is only a subset of all the Design Review projects expected citywide due to the geographic focus and other criteria to qualify for the exemption. The analysis uses Design Review project data from the last three years, plus interpretation of current market conditions and awareness of possibly interested parties that could proceed with development proposals.

Applicants that are currently undecided about development proposals could be persuaded by the exemption from Design Review. Additionally, a development proposal exempted from Design Review but still requiring a MUP permit (such as a project still requiring SEPA review) would likely proceed to building permit review faster. Given the center city location, the possible development proposals are likely to be larger than an average development citywide and fees based on construction costs would be commensurately large. These factors mean the legislation

could have effects that would partly mitigate potential review fee losses by generating additional projects to review in the near term, if the intended stimulative effect occurs.

Estimated project volumes

Development activity levels are sensitive to economic conditions and regulatory requirements. Permit review activities depend on the pace of development proposals seeking permits. Presently, economic uncertainties and unfavorable financing conditions appear to be dampening the volume of permit review activities, including for developments involving Design Review. Unfavorable conditions might persist for another 1-2 years or so, which affects projections of the number of developments that could be affected by the proposed legislation.

Summary of Design Review (DR) project permit volumes and exempted projects anticipated over a three-year period

	Number of projects no longer subject to DR based on baseline permit data projections	Number of projects no longer subject to DR based on expressed developer interest	Total number of projects no longer subject to DR
Center city: Estimated Number of Projects to be Exempt From Design Review	9 total (3/year) that might be exempt from a projected baseline of Design Review projects citywide	15 total (5 per year)	24 total* (8 per year)

**In contrast, 50 to 75 DR projects are anticipated to occur in the City, outside of the proposal area during the 3-year effective period of the ordinance.*

Fiscal Effects

At an overview level, the estimates above suggest that SDCI’s Design Review permit volumes citywide could drop by about one-third due to the effects of the proposed legislation – from 75 developments over three years down to approximately 50 Design Review processes. These estimates reflect a projected slower pace of new developments under review over the next three years.

SDCI’s data for permit reviews and time spent on different review tasks helps to assess how much less time could be spent due to foregone Design Review tasks. This includes certain categories of work that would be foregone as charged hours if a Design Review MUP permit effort would be redirected to a building-permit review process: intake/addressing, discretionary land use, and code-consistency reviews. Of these, the administrative work and code-consistency

review would still occur, but it would be covered by building permit review fees calculated according to project valuation.

SDCI’s data shows that for the class of developments that might occur, a total of approximately 87 hours of review could be foregone per exempted project: 68 hours for discretionary land use review, 13 hours for code-consistency review, and 6 hours for intake/addressing tasks. Using the current 2024 rate of \$439/hour rate for land use yields an estimated revenue reduction of \$305,544 per year for 8 projects foregoing Design Review. Summarized in table below.

Summary of Estimated Annual Lost Revenue due to Design Review Exemption Legislation

Most affected review tasks	Average hours spent per project, center city Design Review projects 2021- present	Numbers of projects affected by the Design Review exemption legislation	Average revenue lost per task, for typical center city Design Review projects (\$439/hr.) 2021 - present	Total revenue lost due to proposed Design Review exemption legislation
Discretionary land use review	68	8	\$29,852	\$238,816
Code-consistency review (zoning and building code compliance)	13	8	\$5,707	\$45,656
Intake/addressing	6	8	\$2,634	\$21,072
TOTAL	87 hrs.	8	\$38,193	\$305,544

Notes:

- For every additional typical Design Review project foregone in the affected area, an average revenue reduction of approximately \$38,000 would occur. This is an estimate; individual Design Review projects can require large variations in review time depending on project-specific matters.
- These estimates are in 2024 dollars.
- This analysis does not evaluate the possibility that the Design Review exemption could attract more development proposals to proceed more quickly than they otherwise would. To the extent this occurred, it would generate revenues from building permit lines of work that might otherwise not proceed in the near term. These would help offset potential revenue reductions, while at the same time entailing work that is no longer directly covered by hourly fees.

3.d. Other Impacts

Does the legislation have other financial impacts to The City of Seattle, including direct or indirect, one-time or ongoing costs, that are not included in Sections 3.a through 3.c? If so, please describe these financial impacts.

None are identified to date. To our knowledge, existing systems and business practices do not need substantive updating to proceed with the proposed Design Review exemption.

If the legislation has costs, but they can be absorbed within existing operations, please describe how those costs can be absorbed. The description should clearly describe if the absorbed costs are achievable because the department had excess resources within their existing budget or if by absorbing these costs the department is deprioritizing other work that would have used these resources.

Most time spent on tasks foregone due to the Design Review exemption would no longer be needed because the process steps would not be undertaken. A code-consistency review would still be undertaken; however, this will occur within the building-permit process, for which permit fees are used to recover review costs.

Please describe any financial costs or other impacts of *not* implementing the legislation.

The proposed Design Review exemption affecting Seattle's core Urban Center areas could help induce developers to proceed with permitting for development proposals sooner than they would without this legislation. This relates to the potentially significant savings in duration of review and total permitting costs. While not quantified further, not proceeding with the legislation could result in the stalling or cancellation of development proposals coming in for permit review.

4. OTHER IMPLICATIONS

a. Please describe how this legislation may affect any departments besides the originating department.

The legislation exempts SDCI discretionary land use review tasks that would directly affect SDCI revenues generated. Other departments' review responsibilities for development proposals would not be affected by the legislation.

b. Does this legislation affect a piece of property? If yes, please attach a map and explain any impacts on the property. Please attach any Environmental Impact Statements, Determinations of Non-Significance, or other reports generated for this property.

The legislation affects property within the Downtown Urban Center (except in the Pioneer Square and Chinatown/I.D. neighborhoods as well as Pike Place Market), South Lake Union Urban Center, Uptown Urban Center, the First Hill portion of the First Hill/Capitol Hill Urban Center, and a limited portion of the Greater Duwamish Manufacturing and Industrial Center, east of 4th Avenue S, west of Interstate 5, north of S. Royal Brougham Way, and south of S Charles Street adjacent to the Chinatown/I.D. neighborhood.

c. Please describe any perceived implication for the principles of the Race and Social Justice Initiative.

- i. How does this legislation impact vulnerable or historically disadvantaged communities? How did you arrive at this conclusion? In your response please consider impacts within City government (employees, internal programs) as well as in the broader community.**

The legislation is not likely to generate significant or disproportionate burdens on communities of color or households with lower incomes. The affected area is identified as having up to a moderate risk of displacement, while locationally having very good access to opportunity. While certain areas such as Yesler Terrace, First Hill, and downtown Seattle have existing low-income housing resources, those resources are not particularly likely to be affected by the legislation because most are secured by agreements for their long-term presence. So, the risk of displacement for those resources is low in the affected area. Chinatown/International District faces a high risk of displacement or similar effects and is not included in this proposal.

The legislation is not likely to directly or indirectly affect matters of racial equity or add to current disparities or biases.

The legislation seeks to reduce barriers that delay new development, to help bring economic benefits over the long term, and more new housing as soon as possible. In the short and mid-term, new development of all kinds would maintain or bring new construction-sector jobs; and development of new hotels would generate additional jobs for households at a wide range of income levels.

This legislation foregoes one kind of public venue at which members of the public can attend and provide their comments about a development proposal. This is a reduction in the number of opportunities to express personal opinions about a development proposal. However, the proposed permitting processes would retain opportunities for interested parties to provide their written comments about a proposal to the City staff engaged in the permit reviews. The legislation includes amendments that would provide public notice and the opportunity to comment, comparable to today's practices.

- ii. Please attach any Racial Equity Toolkits or other racial equity analyses in the development and/or assessment of the legislation.** None.
- iii. What is the Language Access Plan for any communications to the public?** SDCI provides language access by making translation services available upon request.

d. Climate Change Implications

- i. Emissions: How is this legislation likely to increase or decrease carbon emissions in a material way? Please attach any studies or other materials that were used to inform this response.**

The legislation could encourage an estimated 24 development proposals to proceed with permitting for future development within the next three years. While this might lead to slight, incremental increases in near-term carbon emissions related to future construction, the combination of low project volumes, increased efficiencies in minimum code requirements, and construction practices would ensure that potential carbon emissions are negligible in magnitude.

- ii. Resiliency: Will the action(s) proposed by this legislation increase or decrease Seattle’s resiliency (or ability to adapt) to climate change in a material way? If so, explain. If it is likely to decrease resiliency in a material way, describe what will or could be done to mitigate the effects.**

The legislation’s focus on the core urban centers of Seattle intends to support increased density of residential and employment growth in centers, as advised by the City’s Comprehensive Plan. This fosters efficiencies of growth patterns, which along with progressively stronger minimum requirements for energy efficiency in new buildings, contributes to an overall community with greater resilience against natural environmental challenges including those related to climate change over time.

- e. If this legislation includes a new initiative or a major programmatic expansion: What are the specific long-term and measurable goal(s) of the program? How will this legislation help achieve the program’s desired goal(s)? What mechanisms will be used to measure progress towards meeting those goals?**

The legislation is for a short-term (interim) adjustment in code requirements, applicable for three years in a subarea of the city. As a pilot effort, it could yield information about additional long-term reforms. SDCI expects to monitor total permitting times for participants in the Design Review exemption program to assess how much efficiency is gained in permitting, and other similar gauges of efficiency that could help the City make further process improvements in the future.

5. CHECKLIST

Is a public hearing required? Yes

Is publication of notice with *The Daily Journal of Commerce* and/or *The Seattle Times* required? Yes

If this legislation changes spending and/or revenues for a fund, have you reviewed the relevant fund policies and determined that this legislation complies?

Does this legislation create a non-utility CIP project that involves a shared financial commitment with a non-City partner agency or organization?

Director's Report and Recommendation Downtown Activation Plan – Design Review Exemption June 18, 2024

Proposal Summary

Like many other cities, Seattle is experiencing economic challenges in the post-pandemic period. Mayor Harrell's Downtown Activation Plan (DAP) aims to revitalize Seattle's downtown core neighborhoods as a safe and vibrant shopping, cultural/entertainment, employment, and residential destination. See the Downtown Activation Plan webpage (www.downtownisyou.com) for more information. SDCI's Design Review Exemption proposal is one of the actions proposed to help carry out the Mayor's plan.

Also, with respect to DAP, the Design Review exemption proposal would help new development that is anticipated to make use of recent zoning changes adopted by the City Council along Third Avenue (Ordinance 126917) and in the Belltown (Ordinance 126914) part of Downtown. The zoning changes and this proposal would work together to help residential and hotel development be constructed to help activate these important parts of the center city area. In addition, research and development (R&D) laboratories have been an important part of the jobs mix available in the downtown core urban centers, and are likely to have economic viability in the coming years. R&D laboratories are included in the proposal.

This legislation would:

1. Provide a design review exemption for development projects:
 - Located in the center city area of Seattle designated in the Comprehensive Plan as Urban Centers: Downtown,¹ South Lake Union, Uptown, and First Hill; in a portion of the Greater Duwamish Manufacturing and Industrial Center (MIC); and in a subarea adjacent and north of the Uptown Urban Center, if such area is adopted at a later date by the One Seattle Plan comprehensive plan update.²
 - Occupied largely by residential and hotel uses, which may or may not include other uses allowed in the zone;
 - Occupied by research and development laboratories; and
 - Require public notice for all permit applications for eligible development proposals.
2. Allow the SDCI Director to waive or modify certain Land Use Code development standards for these projects as a Type I decision (not appealable to the City's Hearing Examiner);

¹ The proposal would not apply to the Pike Place Market Historical District; and also not in the Chinatown/International District and Pioneer Square neighborhoods, where development projects are already exempt from Design Review and may elect to go through the process to seek flexibility in a manner that fits with their historic districts' character.

² See page 22, Growth Strategy Element, of the public review draft of the One Seattle Plan comprehensive plan update.

3. Allow applicants to vest to the Land Use Code when SDCI accepts a completed MUP or building permit application;
4. Maintain current allowances for applicants to opt for Design Review; and
5. Be effective for an interim period of three years.

Adopting this legislation will allow more efficient and/or flexible permit review of development to address an urgent need for more activity and vitality in Seattle's center city. In addition, residential and hotel uses are active for long periods of the day and week. The proposal is intended to help promote more housing and jobs to be produced at lower permit cost and a shorter time in permit review.

The legislation continues the trend of City efforts to assist in the production of housing by exempting certain housing projects, including affordable housing (see Ordinances 126287, 126854), from Design Review. The legislation should accelerate the permitting of housing, hotel, and research and development laboratory projects throughout center city, thereby reducing costs and decreasing the time needed for important new development to be available for occupancy.

Proposal and Analysis

The proposal would amend various provisions of the Land Use Code, on an interim basis. The proposal would apply for an interim three-year period that would forego the Design Review process for proposals that include housing, hotels, or research and development laboratories, within the Downtown, Uptown, South Lake Union Urban Centers, the First Hill portion of the First Hill/Capitol Hill Urban Center, and two other adjacent areas (see the map at the end of this report). This is intended to encourage new development in these urban centers where the City's comprehensive plan supports increasing density and vibrant mixed-use urban environments.

During the effective period, an applicant would not be required to undergo Design Review for an eligible development, with residential, hotel, and/or research and development laboratory uses. The potential make-up of the uses in eligible projects is summarized in the table below.

Development proposals, such as office towers, not meeting the proposed eligibility requirements would not participate in this exemption and would remain subject to the City's Design Review program.

Projects Eligible Under the Proposal

	Mixed-use (If all nonresidential uses)	Mixed-use (If residential and nonresidential uses)	Residential	Research and Development Laboratory
How the floor area in the proposed development must be used to be eligible under the proposal	At least 50% of the floor area must be in hotel use, the remainder may be a mix of any nonresidential use allowed in the zone	At least 50% of the floor area must be in residential use, the remainder may be a mix of any nonresidential use allowed in the zone	Up to 100% of the floor area in residential use	Up to 100% of the floor area in research and development laboratory use
Most likely use mix	Hotel, office, retail and entertainment uses	Housing and hotel	Housing, including buildings with street-level retail and entertainment uses	Laboratory uses may include accessory office use and may include street-level retail and entertainment uses

Exempted development proposals would still be reviewed according to other Land Use Code requirements (and other applicable codes), and be subject to Master Use Permits (MUPs) and/or building permits. The zoning designations in the proposal area include a wide variety of Downtown classifications that allow for tower-scale development including in the densest office core zones, retail, and mixed-use zones. Development in the special review districts in the Pioneer Square, Chinatown/I.D. and Pike Place Market neighborhoods are not part of the proposal. Projects in these areas are already not required to go through Design Review. South Lake Union and Uptown include several Seattle Mixed zones that accommodate relatively dense non-residential and residential development. Other zones in Uptown and First Hill include neighborhood commercial (NC) zones, Highrise (HR), Midrise or Lowrise (MR, LR) multifamily zones, and Yesler Terrace zones (MPC-YT) that accommodate a mix of residential and non-residential development. The portion of the Greater Duwamish MIC proposed for this exemption is zoned Industry and Innovation (II). The subarea adjacent and north of the Uptown Urban Center that may at a future date receive this exemption is within Midrise and Lowrise 3 (MR, LR3) multifamily zones.

Design Review

Currently, Design Review is required for mid- and large-sized commercial and residential development projects such as:

- An office building, research and development laboratory, or apartment building
- Commercial or multifamily development; not a single-family home
- Large projects that meet the size thresholds in certain zones

For Full Design Review projects, SDCI holds public meetings where the Design Review Boards review development projects during the early design guidance and recommendation phases. The review process includes an opportunity for public comment and involvement before SDCI approves the design. Permit applicants may request "departures" from the Land Use Code as part of Design Review.

There are currently three paths for design review in the city:

- Streamlined Design Review (SDR): Type I Decision (not appealable to the Seattle Hearing Examiner) reviewed by SDCI staff. Includes Early Design Guidance (EDG) only and then straight to Construction permit. Includes public comment but not a design review public meeting.
- Administrative Design Review (ADR): Type II Decision (appealable to the Seattle Hearing Examiner) reviewed by SDCI staff. Includes Early Design Guidance, Master Use Permit (MUP) / Recommendation, Construction permit. Reviews completed by city staff. Includes public comment but not a design review public meeting.
- Full Design Review (FDR): Type II Decision (appealable to the Seattle Hearing Examiner) reviewed by Design Review Boards. Includes Early Design Guidance, Master Use Permit / Recommendation, Construction permit. Reviews completed by city staff using recommendations from the Design Review Board. Includes public comment and public meeting(s).

The scale of the development in these urban centers predominantly requires FDR under current requirements.

Design Review – Process Time

SDCI recently produced a report in January 2023 that summarizes permit turnaround times for Design Review projects. The data show that for commercial and multi-family development going through Design Review (ADR and FDR) from July 2018 to December 2022, overall calendar time of all steps from EDG through MUP issuance takes 739 days (24.3 months).

Recent state legislation in 2023 (Senate Bill 5412) exempted housing from environmental (SEPA) review until September 30, 2025. While this exemption is in place, projects that are eligible for the Design Review exemption would undergo a review for a building permit with a zoning review using the extensive development standards in the zones that make up the center city area. While permits that include a SEPA review generally take the same amount of review time as Design Review, the median time required to undergo residential building permit review is 300 – 750 days (10 – 25 months) as of 2023, depending on size of the development.

Reported time periods for review of projects do not include projects subject to an appeal to the City's Hearing Examiner or other legal action.

Number of Projects

The number of center city projects that would be eligible under the proposal is estimated after examining permit records in the area. The recent projects included five hotel-residential, mixed-use development proposals among 44 developments tallied with residential uses. Two other stand-

alone hotel development proposals are also noted, bringing the total to 46 residential and hotel-related development proposals. In addition, approximately 9 non-residential development proposals included laboratory components. This means approximately 55 development proposals involving Design Review in the last 5 years were consistent with the development types that would be affected by this proposal.

For the proposed interim period of 3 years going forward, if this recent pace is maintained, it would translate to an estimated 30 to 42 residential and mixed-use developments that might occur throughout the proposed exemption area.³ This estimate encompasses mixed-use developments that may include a combination of residential and hotel uses, stand-alone hotel developments, and non-residential developments that include either hotels or R&D laboratories. Residential and hotel combinations may be most likely in the zones allowing high-rise towers, where these uses may be complementary. Stand-alone hotel developments may be most likely in mid-scaled height and density zones, such as in the Belltown Neighborhood.

Authority for the SDCI Director to Grant Flexibility in Meeting Standards

Data from the recent development proposals with residential uses or hotel uses in the affected area yield the following observations about topics related to Land Use Code departures granted during the Design Review process under existing codes and practices.

1. The 46 residential and hotel-related development proposals received approximately:
 - 40 departures from Land Use Code requirements involving development standards that manage the location of the building on the site, such as setbacks between structures or from lot lines; and
 - 48 departures from Land Use Code requirements involving standards related to features of new development, such as ground-level uses, landscaping, the amount of wall area with windows or blank spaces, or adjustments in automobile access, parking, or weather protection;
2. For the 9 non-residential development proposals that included laboratory components:
 - 42 total departures were proposed, which averages out to 4-5 departures per development.
 - Most of these were for building-siting departures, in proportions similar to other non-residential developments.

Some development proposals needed no departures, while others received more than one departure of the kinds summarized above. The proposals involving residential or hotel uses sought an average of two departures, typically one related to siting or building shape, and one for other design reasons like landscaping, ground floor features, or automobile access.

In comparison, the full range of non-residential development proposals sought an average of four

³ This includes the Greater Duwamish Industrial Center's proposed exemption area just south of S. Charles Street, where the presence of a few vacant or underused properties may increase the chances for development proposals to use the design review exemption.

departures, of which typically three related to siting or building shape, and one was for other design reasons. This may suggest that architects for non-residential developments sought to design varied building forms that “pushed the envelope” more often than architects designing residential and hotel developments.

During the effective period of this proposal, flexibility in meeting Land Use Code development standards would be considered and decided administratively by the SDCI Director as part of the permit review process. The proposal limits the Director’s authority to grant waivers and modifications to be comparable to the design topics for which departures have been granted in recent years through Design Review. Therefore, the outcome of permit approvals under the proposal is anticipated to be similar to that experienced in the center city area.

Development Standard Departures Routinely Granted

Departures from Land Use Code development standards accommodate flexibility for different design solutions responding to unique site circumstances or constraints. For example:

- A development may relate better to adjacent existing building patterns on its block if it is allowed a larger or smaller front or side setback than the code standards otherwise require.
- A limited-size property may necessitate a different mix of indoor and outdoor recreational amenity spaces or different preferable locations for landscaping, including ground floor or upper floor locations, than required by code standards.
- A site may have an adjacent feature such as a bus stop zone or an above-ground power pole, that necessitates a greater setback than otherwise allowed by the code, or alternative layouts of landscaping.
- A requirement for certain categories of retail commercial use to be at ground floor levels may significantly hinder the ability of a development to fully meet its intended purpose such as efficiently providing housing.

Permit applications reviewed show that one or more of the following kinds of departures from Land Use Code development standards have been approved and are proposed to be allowed using the Director’s authority during the interim period of this proposal:

1. Upper-level setback and modulation requirements
2. Ground-level setback requirements
3. Minimum building podium facade heights
4. Rooftop coverage limits in relation to mechanical or energy features, mechanical penthouses and/or top-of-building form
5. Site coverage limits (ground floor or upper)
6. Building width limits
7. Minimum required percent presence of street-level uses along building facade(s)
8. Minimum required depth of street-level uses

9. Required street-level use types
10. Minimum percent transparency and maximum blank façade requirements, which may address constraining situations such as sloping sites
11. Slope, width, location of garage/vehicle entry
12. Overhead weather protection
13. Minimum amount of open space amenity and/or landscaping, ground level
14. Maximum percent of outdoor open space amenity that is covered by overhead building features
15. Percent of required amenity/open space area provided indoors vs. outdoors
16. Locations for and accessibility to utility spaces such as solid waste storage space.

In recently reviewed examples from the urban centers affected by this proposal, alternate designs accommodated by departures tend to be designed to enhance the local setting, and are typically supportive of achieving net benefits in urban design outcomes, such as an improved overall sidewalk environment through provision of aesthetic amenities or greater widths of walkable areas.

Also, certain departures may accommodate design solutions to overcome a significant site-related constraint to meeting a minimum requirement. These can be caused by lots' size, dimensions, or access difficulties. All of these factors can affect floor layouts of buildings and practicalities for access. Similarly, ground-level commercial use spaces like cafes may be difficult or impossible to locate along a building façade due to physical limitations at the site, such as sloping topography; thus, relief from provision of some building features that would otherwise be minimum requirements can occur.

Timing of Projects' Vesting to Land Use Code

The proposal is to set a Land Use Code vesting date upon the date SDCI accepts a letter of eligibility from a development proponent, provided a permit application for the development proposal is submitted and accepted by SDCI within 90 days of receipt of the letter of eligibility. This is intended to provide a low-barrier application process for applicants while helping ensure that sufficient permit application details and materials are provided to SDCI. The proposed permit process is similar to that used in the current Design Review process, which uses the date of an application for the Early Design Guidance process to set the vesting date provided a MUP application is filed in a timely manner.

Public Notice for Eligible Development Projects

Most development proposals receiving a Design Review exemption would be Type II MUP decisions like many development proposals today, which require the posting of a large white sign and mailed notice within a certain distance of the development proposal. Some of the affected development proposals, such as residential-only developments, could require only Type I reviews for building permits and Land Use Code consistency review. This would be the case for proposals that are not subject to SEPA environmental review or Design Review, for example. The proposal extends the current noticing requirements for Type II proposals to include all new Type I-only

proposals with Design Review exemptions, which would require installation of a large white sign, notice of application in the Land Use Information Bulletin, and mailed notice to property owners, lessees, building managers, and residents of properties within 300 feet of the boundaries of a specific site.

Comprehensive Plan Goals and Policies

The proposal is consistent with relevant goals and policies in the *Seattle 2035* Comprehensive Plan including:

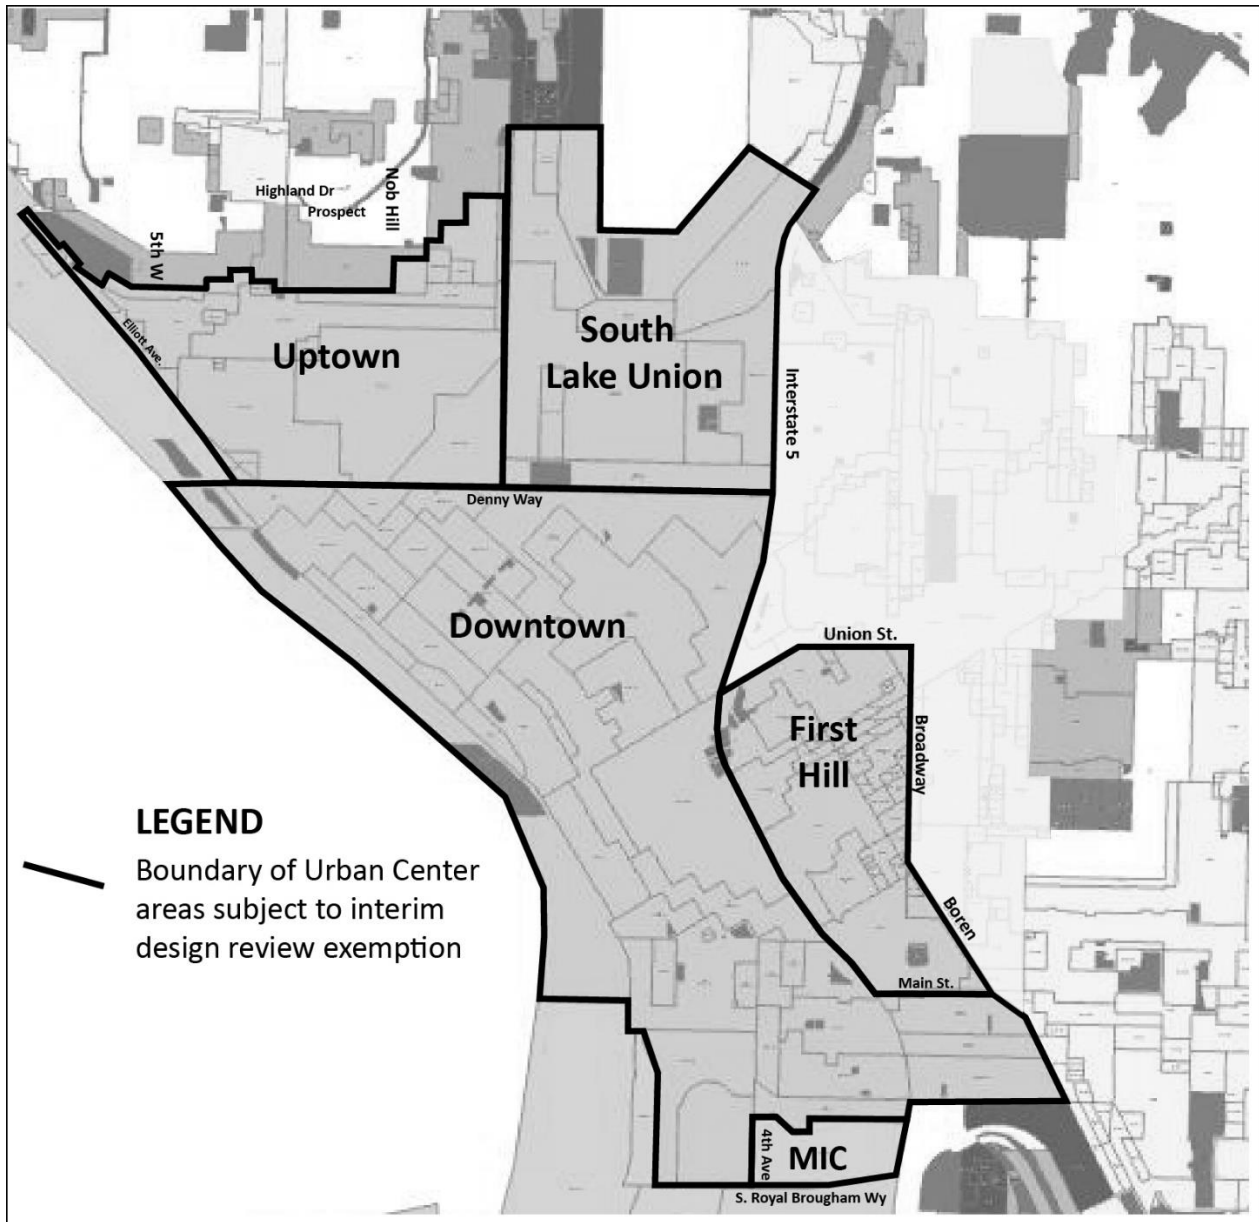

- **Goal H G2** - Help meet current and projected regional housing needs of all economic and demographic groups by increasing Seattle's housing supply.
- **Goal H G5** - Make it possible for households of all income levels to live affordably in Seattle, and reduce over time the unmet housing needs of lower-income households in Seattle.
- **Goal LU G9** - Create and maintain successful commercial/mixed-use areas that provide focus for the surrounding neighborhood and that encourage new businesses, provide stability and expansion opportunities for existing businesses, and promote neighborhood vitality, while also accommodating residential development in livable environments.
- **Policy LU 9.2** - Encourage the development of compact, concentrated commercial/mixed-use areas, in urban centers and urban villages, where pedestrians can easily access transit and a variety of businesses.
- **Policy LU 9.6** - Encourage housing in mixed-use developments in pedestrian-oriented commercial/mixed-use areas to provide additional opportunities for residents to live in neighborhoods where they can walk to transit, services, and employment.
- **Policy LU 9.15** - Allow limited exceptions to the height limit in order to accommodate ground-floor commercial uses or special rooftop features, encourage development of mixed-use structures, enable structures to function appropriately, accommodate special features consistent with the special character or function of an area, or support innovative design that furthers the goals of this Plan.
- **Policy B-P14 (Belltown) Land Use** – Promote pedestrian activity through such methods as eliminating “dead spots” of street-level activity.
- **Policy QA-P1 (Queen Anne Uptown) Streetscape** – Seek to create and maintain attractive pedestrian-oriented streetscapes and enhance Queen Anne's community character with open space, street trees, and other vegetation.
- **Goal LU G11 (Downtown Areas)** -- Promote Downtown Seattle as an urban center with the densest mix of residential and commercial development in the region, with a vital and attractive environment that supports employment and residential activities and is inviting to visitors.
- **Downtown Neighborhood Plan – Commercial Core, Goal COM-G1** Maintain the Commercial Core as a major employment center, tourist and convention attraction, shopping magnet, residential neighborhood, and regional hub of cultural and entertainment activities.

- **Economic Development Policy ED 1.1** -- Enhance the Downtown core as the economic center of the city and the region and strengthen its appeal as home to many of Seattle's vital professional service firms, high technology companies, and regional retailers, as well as cultural, historic, entertainment, convention, and tourist facilities.
- **Economic Development Goal ED G2** -- Enhance strategic industry clusters that build on Seattle's competitive advantages.
- **Economic Development Policy ED 2.1** -- Improve linkages between industry clusters and research institutions, hospitals, educational institutions, and other technology-based businesses.
- **Economic Development Policy ED 2.2** -- Encourage collaboration among businesses within and across industry clusters in the areas of marketing, research, capital and talent acquisition, job training, and expansion of highly skilled jobs.
- **Economic Development Policy ED 2.3** -- Improve the ability of industry clusters to transfer technology in cooperation with other jurisdictions and with major education and research institutions.

Recommendation

The Director of SDCI recommends that the City Council adopt the proposed legislation to help facilitate development in the center city area of Seattle, to help produce more activity and vitality to this important part of the city, and to promote more badly needed housing and jobs.

Map of the proposed area eligible for interim design review exemption

August 28, 2024

MEMORANDUM

To: Land Use Committee
From: Ketil Freeman, Analyst
Subject: Council Bill 120824 – Downtown Activation Plan: Design Review Exemption

On September 4, 2024, the Land Use Committee (Committee) will have an initial briefing and hold a public hearing on [Council Bill \(CB\) 120824](#). Among other things, CB 120824 would exempt certain projects located in the Downtown, South Lake Union, and Uptown urban centers and parts of the adjacent the First Hill / Capitol Hill urban center and Duwamish Manufacturing and Industrial Center from Design Review while affording those projects some of the same benefits available through Design Review.

This memorandum: (1) provides background on the Design Review program, ongoing review of the program, and changes required by [Engrossed Substitute House Bill \(ESHB\) 1293](#); (2) describes what CB 120824 would do; and (3) provides preliminary policy considerations.

Background

Design Review Program

Called Early Project Implementation at its inception in 1993, the Design Review Program has three primary goals: (1) encouraging better siting and design of private development projects, (2) providing flexibility in application of physical development standards, and (3) improving public engagement with developers earlier in the design process.¹ Generally, Design Review is required for most larger new development in Multifamily, Commercial, Seattle Mixed, and Downtown zones. Design Review is not required in Neighborhood Residential and most Industrial zones.²

There are three types of design review: Streamlined Design Review (SDR), Administrative Design Review (ADR), and Full Design Review (FDR). The type of Design Review required depends on the size of the lot, location, and gross floor area of development. Because most projects that could benefit from the proposed exemption in CB 120824 are of a scale that would require FDR, descriptions of the Design Review process in this memo are of FDR.

Under FDR, development teams must provide early outreach to near neighbors, present project details before a board and the public at one or more Early Design Guidance (EDG) meetings prior to permit application, and present again before a board and the public at one or more recommendation meetings. A board consists of six members appointed by the Mayor and

¹ See [Ordinance 116909](#) and [Seattle Municipal Code \(SMC\) Section 23.41.002](#).

² For more information on the Design Review Program see [Design Review - Program - SDCI | seattle.gov](#) and [SMC Chapter 23.41](#).

Council to represent development, design, business, and other specified interests.³ Board meetings are subject to the Open Public Meetings Act.

At the EDG meeting, a board hears comment from the public and prioritizes applicable guidelines from citywide or neighborhood-specific [design guidelines](#) that have been approved by ordinance by the Council and Mayor.⁴ At the recommendation meeting, a board reviews a project for consistency with prioritized guidelines and makes a recommendation to the Seattle Department of Construction and Inspection’s Director (Director), including a recommendation on any modifications to development standards, called “departures,” sought by the applicant. Departures can be granted if a proposal better meets the intent of design guidelines. This is distinct from most other waivers or modifications in the Code, which can typically only be granted based on a showing of property-related hardship or other property, or use, related special circumstance.

An FDR land use decision is a Type II decision, meaning that it is a discretionary decision by the Director that can be appealed to the City Hearing Examiner. Because design review projects are reviewed for compliance with adopted design guidelines, projects that are also subject to State Environmental Policy Act (SEPA) review are afforded a deferential standard on some claims in SEPA appeals, meaning that the Hearing Examiner is more likely to uphold an affirmative recommendation by the Director.⁵

Subject to some limitations, the Director is required to make compliance with any recommended condition by a board mandatory, if four or more members agree.⁶ A recent review of the program found that FDR can take as long as about two years, with approximately 16 months of that time in active review by the City and the remainder with the applicant.⁷

To address the added time associated with FDR, projects are allowed to vest to development standards in place at the time of EDG, prior to permit application, provided that the permit application is made within 90 days of the EDG meeting.⁸ When a project “vests” it secures the legal right to develop to development standards in place at the time of vesting. By contrast, other projects requiring land use approval that are not subject to design review vest towards the end of land use permit review at issuance of a Master Use Permit (MUP) decision.⁹

⁸ [SMC Section 23.76.026.C.](#)

Ongoing Program Review and ESHB 1293

In November 2021, as part of the 2022 Adopted Budget the Council approved [Statement of Legislative Intent \(SLI\) SDCI-004-A-001](#), which requested that the Director report on Design Review program outcomes, process improvements, and equity. SDCI convened a stakeholder group, which met from May of 2022 through January of 2023.¹⁰ The [response to the SLI](#), which contains a consultant report dated March 2023, was provided to the Council on July 16, 2024.

Among other things, the report identifies program improvements that “were generally well-supported by stakeholders and staff,” which include, but are not limited to:

- Improving capacity building in identified equity areas to enhance engagement with design review;
- Rewriting design guidelines for clarity and creating targeted design guidelines in equity areas that have been developed with the community;
- Increasing program predictability; and
- Re-evaluating the EDG process.

At the state level, in 2023 the legislature passed and the governor signed ESHB 1293, codified at [RCW 36.70A.630](#). ESHB 1293 requires that design review programs for jurisdictions planning under the Growth Management Act (GMA):

- Must have clear and objective guidelines,
- Cannot result in a reduction in development capacity from otherwise applicable development standards, and
- Cannot include more than one public meeting.

The City must come into compliance with these requirements six months after the next required Comprehensive Plan update. The GMA requires the City to update its Comprehensive Plan by the end of this year, although the current schedule contemplates passage of the required update in the summer of 2025. Using the earlier and more conservative date, the City may be required to either suspend its Design Review program or implement a new program that complies with ESHB 1293 by June of 2025.

What CB 120824 Would Do

CB 120824 would exempt hotel, residential, and research and development laboratory projects located in the Downtown, South Lake Union, and Uptown urban centers and parts of the adjacent the First Hill / Capitol Hill urban center and Duwamish Manufacturing and Industrial Center from Design Review while affording those projects some of the same benefits available through Design Review.

¹⁰ Materials from the stakeholder process and recordings of stakeholder meetings are available at [Design Review Program Analysis - SDCI | seattle.gov](#).

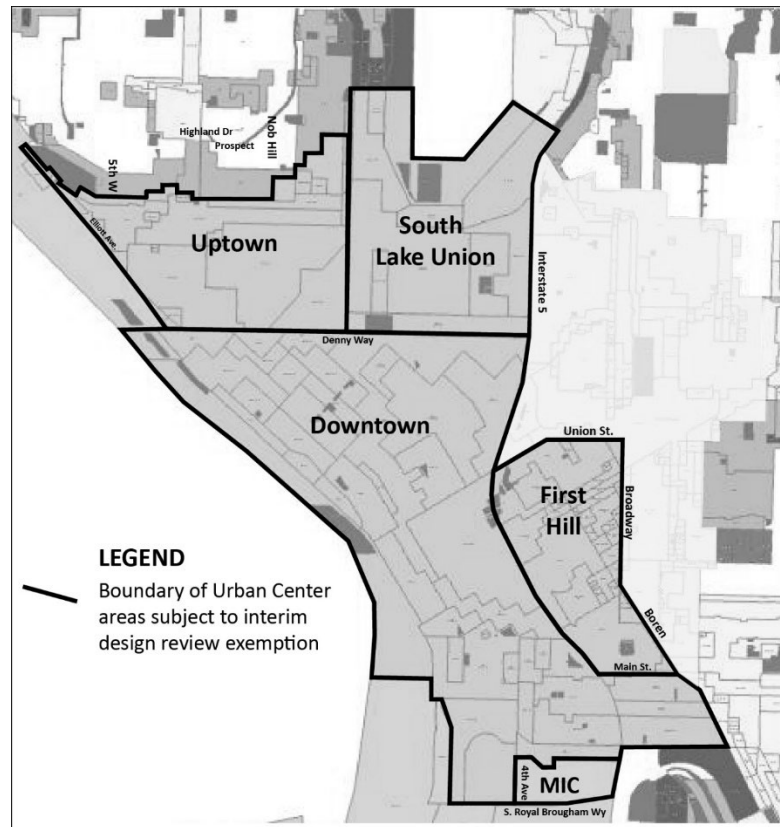

Eligible exemption areas are shown on the accompanying map from the bill. Historic Districts would not be included. In addition to those areas shown on the map, eligible projects could include those located in expansion areas for the Uptown Urban Center and Duwamish Manufacturing and Industrial Center. A policy decision on those expansion areas has not been made by the Council. The earliest such a decision would be made is the Summer of 2025 with adoption of the periodic Comprehensive Plan update.

Eligible projects would be able to receive waivers or modifications from development standards, including modification to development standards that can

result in additional leasable floor area. Additionally, projects would vest upon filing a letter, prior to application, establishing that the project would be eligible for the design review exemption provided by the bill. This is like vesting currently afforded through the early design guidance process.

The decision to modify development standards would be a Type I decision, meaning that it would be an administrative decision made by the Director without an opportunity for appeal to the Hearing Examiner. The decision to waive or modify development standards would be based on the sole criterion of whether the waiver would result in more being built. Specifically, the Director would be required to grant the waiver if it “would result in an increased number of dwelling units, lodging rooms, or increased floor area for of a research and development laboratory use, being constructed.”¹¹

Public notice of application and opportunity for comment would be similar to what is required for discretionary, Type II land use decision. However, the early outreach required for FDR and notice of decision would not be required. If passed, the proposed exemption would expire three years from its effective date.

¹¹ Council Bill (CB) 120824, page 5 at line 6.

Key differences between FDR and the exemption process proposed by CB 120824 are summarized in the table below:

Standard	Full Design Review	CB 120825
Development Standard Waivers, Decision-maker and Vesting		
Availability of development standard waivers	Yes	Yes
Decision Maker	SDCI Director based on a recommendation by an appointed board. A board recommendation can be binding on the Director if four or more board members agree.	SDCI Director
Criteria for Approval	Consistency with prioritized design guidelines that are approved by ordinance.	More dwelling units, lodging rooms, or increased floor area of a research and development laboratory use.
Vesting	At filing of a complete application for EDG, provided that a MUP application is filed within 90 days of EDG meeting.	At filing of an eligibility letter provided that a MUP application is filed within 90 days.
Public Outreach and Notice		
Required Community Outreach Prior to Application	Yes ¹²	No
Required Public Meetings	Yes	No
Notice of Application	Mailed notice and large sign	Mailed notice and large sign
Notice of Decision	Written notice and publication in the Land Use Information Bulletin	No
Type of Decision and Due Process Safeguards		
Decision Type	Type II, discretionary decision	Type I, administrative decision
Due Process Safeguards	Opportunity for appeal to the City Hearing Examiner and potential subsequent appeal to King County Superior Court	No Hearing Examiner appeal, potential appeal to King County Superior Court

Preliminary Policy Considerations

CB 120824 would authorize the SDCI Director to administratively grant waivers or modifications of development standards that would otherwise only be available, on a project basis, through a

¹² Specialized early community outreach is required in identified equity areas, which overlap with much of the exemption area proposed by CB 120824. See [SDCI and DON Joint Director’s Rule 4-2018 and 1-2018](#).

discretionary decision in Design Review or, on a zone-wide basis, by a legislative decision to establish new development standards applicable to all future projects in that zone.

It is unclear what problem CB 120824 seeks to solve. The Director's Report notes, "[t]he proposal is intended to help promote more housing and jobs to be produced at lower permit cost and a shorter time in permit review." Greater downtown, the general planning geography subject to the proposal, is not capacity constrained. The City's [development capacity dashboard](#), which was last updated in 2022, indicates that greater downtown has zoned capacity for approximately 110,000 additional jobs and 41,000 additional housing units. That capacity is likely to increase with future Comprehensive Plan changes and areawide rezones.

Assuming that Design Review is a barrier to more housing and jobs, the purpose of promoting more housing and jobs and lowering permit costs and review times could be accomplished simply by making Design Review optional for those projects not seeking departures from development standards.

Preliminary issues are identified and discussed below. Additional issues may be identified through the public hearing and ongoing Council review.

Ripeness for Council Deliberation

In 2025 the Council will be considering Comprehensive Plan changes that may modify downtown planning geographies and provide the policy basis for future area-wide rezones that will likely increase residential and employment development capacity in the Downtown urban center and adjacent urban centers. Future implementing areawide rezones and changes to development standards will likely follow in 2026. Those planning processes will also be informed by a future Federal Transit Administration record of decision for Sound Transit.

While it is unclear whether and how the bill is related to any future changes to the Design Review program required by ESHB 1293 or identified in the response to the Design Review SLI, the City will nevertheless need to either suspend the Design Review program or implement a replacement to comply with ESHB 1293. Conservatively, that will need to happen no later than June 30, 2025. The interim provisions of the bill are proposed to lapse in late 2027.

Council could defer action on any downtown design review exemptions until one or all of these planning processes are complete.

Delegation to the SDCI Director and Public Engagement

CB 120824 proposes that the Council provide a broad delegation of authority to the SDCI Director to grant waivers or modifications to development standards based on the single criterion of more floor area in lodging, residential, or research and development use. Decisions by the Director based on that delegation would be purely administrative, subject to less public visibility than is currently afforded through Design Review, and could not be appealed to the

City Hearing Examiner. All land use decisions may be appealed to the Superior Court through the Land Use Petition Act. However, access to that pathway to remedy an abuse of discretion is more costly and requires greater appellant sophistication.

By contrast, under FDR, delegation of the decision to grant waivers or modifications are informed by a recommendation from an appointed board. That recommendation is based on design guidelines that have been developed through an often neighborhood-specific planning process and approved by ordinance. Potential abuse of discretion by the board or SDCI Director is protected against by public visibility into the decision-making process and the opportunity for appeal to the City Hearing Examiner.

The Council could narrow the delegation to the SDCI Director by limiting the scope of waivers and circumstances under which they could be granted and / or providing additional public participation or procedural requirements to guard against abuse of discretion.

Vesting

CB 120824 would allow eligible projects to vest prior to permit application by filing a letter establishing their eligibility, provided that a permit application is made within 90 days. This is similar to the vesting provisions available through Design Review that are intended to mitigate the risk to the applicant of a regulatory change during the sometimes-lengthy FDR period. The risk to applicants associated with a lengthy design review process is obviated by two factors in the bill: (1) the Design Review exemption itself, which eliminates the time associated with public meeting requirements and deliberations by a board, and (2), for projects seeking waivers or modification of development standards, the proposal that the Director's decision not be appealable to the Hearing Examiner.

Council could eliminate the favorable vesting and have eligible projects vest as all other projects not subject to Design Review do, which is with a MUP decision or with filing of a complete building permit application.

Applicability to Industrial Innovation Zones

After initial publication of a SEPA decision on the bill, SDCI issued an addendum and further SEPA analysis to add an area zoned Industrial Innovation (II 85-240) between Royal Brougham and the International District. This is the area identified with "MIC" for Manufacturing Industrial Center on the map from the bill. Ownership in the area includes City-owned parcels managed by the Department of Finance and Administrative Services; a development entity associated with Alexandria, a Real Estate Investment Trust that specializes in biotech facility development; and a development entity associated with Seattle-based developer Urban

Visions. That area was rezoned from Industrial Commercial to Industrial Innovation through the City's industrial lands work in 2023.¹³

Design Review is not required in Industrial Innovation zones. Since passage of the industrial lands bills, the only industrial zones where Design Review is required are Industrial Commercial zones located outside of MICs. Because Design review is not required in the II 85-240 zone, absent some future regulatory change, development in that zone could not benefit from the waivers or modifications available to development that might otherwise be subject to Design Review.

Council could remove that area from the map of eligible areas until such a time as there is a proposal to modify the zone designation or other applicable development standards to make projects subject to Design Review.

Next Steps

The Committee will hold a public hearing on September 4, 2024. A vote on a Committee recommendation could occur at the next regularly scheduled Committee meeting on September 18, 2024.

cc: Ben Noble, Director
Yolanda Ho, Deputy Director
Lish Whitson, Supervising Analyst

¹³ [Ordinance 126862](#) established new industrial zone designations and development standards. [Ordinance 126863](#) rezoned land in industrial areas.

Design Review Exemption Legislation

September 4, 2024

Seattle Department of Construction and Inspections

Purpose and Goals

- Downtown Activation Plan goals:
 - Revitalize Seattle's core to support more living, jobs, shopping, and cultural opportunities
 - Stimulate investments in new development
 - Efficient permitting, with flexibility retained for new building design

A trend toward Design Review reform

- State law (ESHB 1293) mandated reforms to shorten the process
- Explore how codes can best support a straightforward permit process, with flexibility and design quality
- Financing and economy is challenging for new construction
- Code complexity adds additional challenges

Source: DSA, 2024

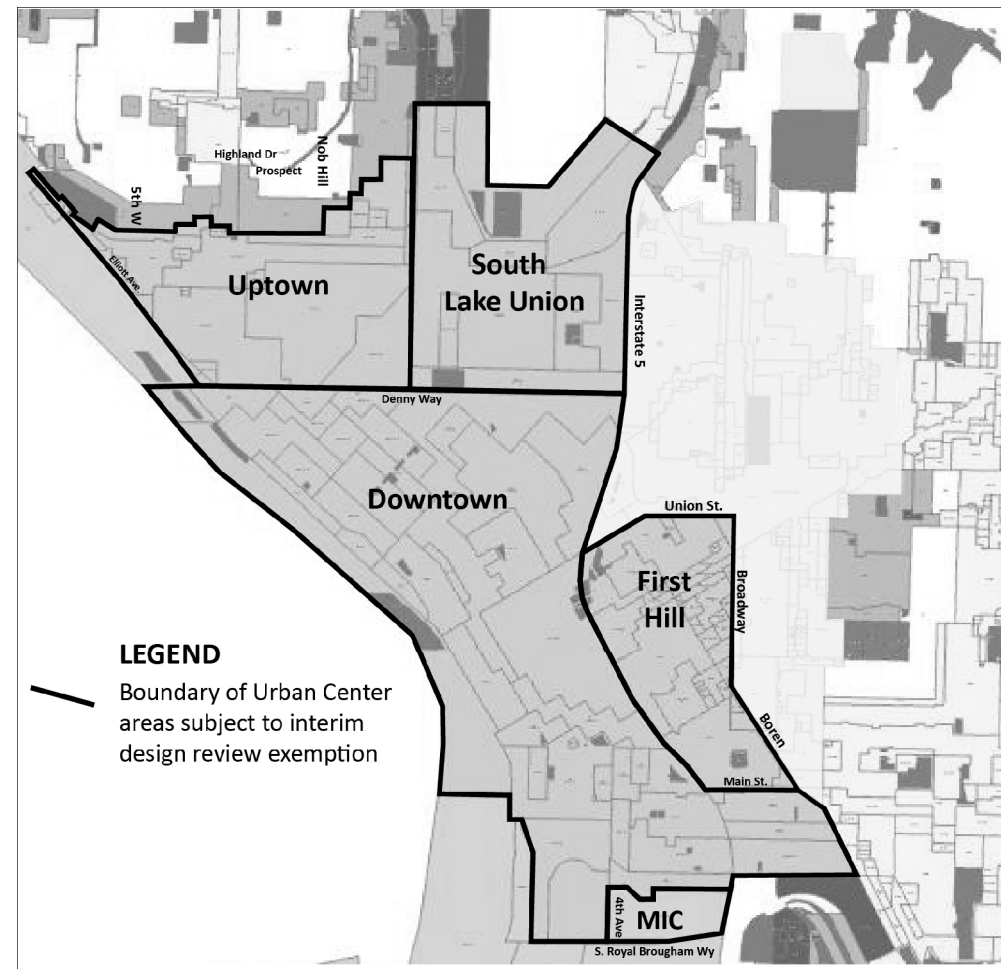

Proposal

- Exempt new development proposals from the Design Review process
- Interim legislation: in place for 3 years
- Downtown, Uptown, South Lake Union, First Hill, and a portion of Duwamish MIC adjacent to Downtown (map on next slide).

Geography

- Mostly along Urban Center boundaries
- First Hill is a subarea of First Hill/Capitol Hill U.C.
- “MIC” (Greater Duwamish Manuf./Industrial Center) subarea is north of Royal Brougham Way and east of 4th Ave. S.
- Excludes Pioneer Square, Chinatown/I.D., Pike Place Market Districts (no Chapter 23.41 Design Review)

Eligible uses and proposed flexibility

- Eligible: Residential, hotels, mixed-use projects*, Research/Development laboratory uses (*At least 50% floor area in residential and hotel uses)
- Designs may deviate from minimum development standards per SDCI administrative review
- Comparable to departures given by the Design Review process

Subjects of code and design flexibility

Upper-level setbacks, modulation, façade openings, width	Common indoor recreational and amenity areas
Street/façade setbacks	Outdoor open space: area and other details
Floor-to-floor height at street level	Landscaping: area, dimension, locations
Rooftop screening and coverage limits (mech, energy, elevator enclosures)	Vehicle access to parking, loading, utility spaces
Street-level use type, depth, and % presence	Vehicle access route slopes, dimensions
Façade transparency, blank façades	Parking space size requirements
Overhead weather protection	Bicycle parking minimum quantities

Early vesting point, like Design Review

- Vesting determines the codes that apply to the project
- Vesting date at “letter of eligibility” as long as permit application package filed within 90 days
- Approach is like the “early design guidance application” date for Design Review projects

Public Notice provisions

- Proposal includes public notice for all eligible projects:
 - Land Use Information Bulletin
 - Large white sign
 - Mailed notice
 - 14 day comment period

See code section 23.76.012

SEATTLE CITY COUNCIL

August 5, 2024

PUBLIC HEARING ON Design Review Exemption Land Use Code Amendments

The Seattle City Council's Land Use Committee will hold a public hearing on Wednesday, September 4, 2024 on Council Bill 120824, a bill that would provide design review exemptions for developments with primarily residential and hotel uses or research and development laboratory uses in Downtown, South Lake Union, Uptown, and First Hill; in a portion of the Greater Duwamish Manufacturing and Industrial Center (MIC); and in a subarea adjacent and north of the Uptown Urban Center, if such area is adopted at a later date by the One Seattle Plan comprehensive plan update. The regulatory changes would be effective for three years, starting from the effective date of the legislation.

The proposed bill would make the following changes:

- Provide a design review exemption for development projects:
 - Located in the center city area of Seattle designated in the Comprehensive Plan as Urban Centers: Downtown, South Lake Union, Uptown, and First Hill; in a portion of the Greater Duwamish Manufacturing and Industrial Center (MIC); and in a subarea adjacent and north of the Uptown Urban Center, if such area is adopted at a later date by the One Seattle Plan comprehensive plan update.
 - The proposal would not apply to the Pike Place Market Historical District, the International Special Review District in Chinatown/ID, or the Pioneer Square Preservation District, where the special review boards will continue to be the review bodies addressing design and relationship to historic districts' character.
 - Occupied largely by residential and hotel uses, which may or may not include other uses allowed in the zone;
 - Occupied by research and development laboratories; and
 - Require public notice for all permit applications for eligible development proposals.
- Allow the SDCI Director to waive or modify certain Land Use Code development standards for these projects as a Type I decision (not appealable to the City's Hearing Examiner);
- Allow applicants to vest to the Land Use Code when SDCI accepts a completed MUP or building permit application;
- Maintain current allowances for applicants to opt for Design Review; and
- Be effective for an interim period of three years.

Councilmembers may adopt the legislation as proposed or amend the legislation to mitigate impacts of the proposal.

PUBLIC HEARING

The City Council’s Land Use Committee will hold a public hearing on the proposed bill on Wednesday, September 4, 2024, at 2:00 pm.

The hearing will be held in the:

City Council Chambers
2nd floor, Seattle City Hall
600 Fourth Avenue

Persons who wish to participate in or attend the hearing may be offered the opportunity to do so remotely. If this is the case, the City will provide instructions in the meeting agenda on how to participate remotely. Please check the Land Use Committee agenda a few days prior to the meeting at <http://www.seattle.gov/council/committees>.

Print and communications access is provided on prior request. Please contact Naomi Lewis at 206-833-7218 or via e-mail at: Naomi.Lewis2@seattle.gov as soon as possible to request accommodations for a disability.

Questions concerning the public hearing may be directed to Naomi Lewis in Councilmember Tammy Morales’ office, by calling 206-833-7218 or via e-mail at: Naomi.Lewis2@seattle.gov.

WRITTEN COMMENTS

Written comments on the legislation will be accepted until noon on Wednesday, September 4, 2024. Please send comments to Councilmember Tammy Morales office, via e-mail at: Tammy.Morales@seattle.gov, or by mail to:

Councilmember Tammy Morales
Seattle City Council
600 4th Avenue, 2nd Floor
PO Box 34025
Seattle, WA 98124-4025

INFORMATION AVAILABLE

Copies of the proposed bill may be obtained from: [CB 120824](#)

Questions regarding the legislation may be directed to Gordon Clowers in the City of Seattle Department of Construction and Inspections, at (206) 684-8375 or via e-mail at gordon.clowers@seattle.gov or Ketil Freeman at the City Council Central Staff at (206) 684-8178 or via email at ketil.freeman@seattle.gov.

Amendment 1 Version #1 to CB 120824 – Downtown Activation Plan: Design Review Exemption

Sponsor: Councilmember Morales

Vesting for Exempt projects

Effect: Council Bill (CB) 120824 would allow eligible projects to vest prior to permit application by filing a letter establishing their eligibility, provided that a permit application is made within 90 days. This is similar to the vesting provisions available through Design Review that are intended to mitigate the risk to the applicant of a regulatory change during the sometimes-lengthy Design Review period. The mayor did not propose, nor did the Council authorize, similarly favorable vesting when it approved permanent Design Review exemptions for low-income housing ([Ordinance 126855](#)) or temporary exemptions for projects providing units on-site under the Mandatory Housing Affordability program ([Ordinance 126854](#)).

This amendment would maintain current vesting provisions applicable all other projects that are not subject to Design Review. Outside of Design Review a project vests with a Master Use Permit decision or through filing a complete building permit application.

Amend Sections 1, 5, and 7 of CB 120824 as follows:

Section 1. Section 23.41.004 of the Seattle Municipal Code, last amended by Ordinance 126862, is amended as follows:

23.41.004 Applicability

* * *

E. Temporary provisions

* * *

3. Downtown Activation Plan

a. A development proposal that is subject to design review according to this Section 23.41.004 shall be exempt from this Chapter 23.41, unless ineligible for exemption due to other code provisions, if:

1) The proposal includes residential use comprising at least 50 percent of its chargeable floor area, except if at least 50 percent of the chargeable floor area in nonresidential use is lodging then no residential use is required; or includes a research and development laboratory use; and

2) The proposal is located on a property within the Downtown Urban Center, Uptown Urban Center, South Lake Union Urban Center, First Hill Urban Center, or an area within the Greater Duwamish Manufacturing and Industrial Center, as shown on Map A for 23.41.004; or within an area included in an adopted expansion area of an urban center or manufacturing and industrial center shown on Map A for 23.41.004; and

3) The applicant files a letter of eligibility for exemption pursuant to subsection 23.76.010.G, ~~provided that permit application materials are subsequently filed per subsection 23.76.026.A.4;~~ and

4) The proposal does not involve a Type IV or Type V Council land use decision.

* * *

Section 5. Section 23.76.010 of the Seattle Municipal Code, last amended by Ordinance 126685, is amended as follows:

23.76.010 Applications for Master Use Permits

* * *

G. A letter of eligibility for exemption from design review is required for applications subject to temporary provisions in subsection 23.41.004.E.3. This letter of eligibility shall document a proposal's consistency with the qualifications for design review exemption in subsection 23.41.004.E.3.a, including:

1. Describing the proposed uses within the proposal per subsection 23.41.004.E.3.a.1;
2. Identifying the location of the development site within the area subject to temporary design review exemption per subsection 23.41.004.E.3.a.2; ~~and~~
3. A statement that the proposal does not involve a Type IV or Type V Council land use decision; ~~and~~
- ~~4. An acknowledgement that complete Master Use Permit application materials must be submitted within 90 days to establish vesting as indicated in subsection 23.76.026.A.4.~~

Section 7. Section 23.76.026 of the Seattle Municipal Code, last amended by Ordinance 126685, is amended as follows:

23.76.026 Vesting

A. Master Use Permit components other than subdivisions and short subdivisions. Except as otherwise provided in this Section 23.76.026 or otherwise required by law, applications for all Master Use Permit components other than subdivisions and short subdivisions shall be considered vested under the Land Use Code and other land use control ordinances in effect on the date:

1. That notice of the Director's decision on the application is published, if the decision is appealable to the Hearing Examiner;

2. Of the Director's decision, if the decision is not appealable to the Hearing Examiner; ~~((or))~~ or

3. A valid and fully complete building permit application is filed, as determined under Section 106 of the Seattle Building Code or Section R105 of the Seattle Residential Code, if it is filed prior to the date established in subsections 23.76.026.A.1 or 23.76.026.A.2((-)) ~~;~~

~~4. Of the filing of a letter of eligibility for exemption from design review pursuant to subsection 23.41.004.E.3, provided that a valid and complete Type I or Type II Master Use Permit application pursuant to Section 23.76.010 is filed within 90 days. If a complete Type I or Type II Master Use application pursuant to Section 23.76.010 has not been filed within 90 days for a proposal associated with a filed letter of eligibility for exemption from design review, the filed letter of eligibility for exemption from design review and its relevance to establishing vesting under Title 23 shall be void. A filed letter of eligibility may be withdrawn by the applicant. A new letter of eligibility may be filed, that defines a new 90-day timeframe for providing a valid and complete Type I or Type II Master Use Permit application.~~

Amendment 2 Version #1 to CB 120824 – Downtown Activation Plan: Design Review Exemption

Sponsor: Councilmember Morales

Reporting on Exemption Outcomes

Effect: Council Bill (CB) 120824 would authorize the Director of the Department of Construction and Inspections (SDCI) on an interim basis to grant waivers or modifications to development standards that would otherwise only be available on a project basis through Design Review or on an areawide basis through rezones or changes to development standards approved by the Council through an ordinance.

This amendment would request that SDCI report to the Council by early summer of 2025 on exemption outcomes. Reporting by May will allow the Council to consider outcomes in light of broader changes to the Design Review program required by [ESHB 1293](#) and other required reporting on temporary Design Review provisions approved by [Ordinance 126854](#), which is intended to encourage development of units on site under the Mandatory Housing Affordability program.

Add a new section 8 to CB 120824 as follows:

Section 8. By May 31, 2025, the Council requests that SDCI provide to the Council, and publish on its website, a report on the Downtown Activation Plan design review exemption authorized by this ordinance. The report should include a map showing the location of projects that have utilized the exemption and identify for each project the waivers or modifications sought; the waivers or modifications granted; public comment provided to SDCI; and the amount of additional floor area in the project that resulted from the waivers or modifications.

Section ~~((8))~~ 9. This ordinance shall automatically expire 36 months after its effective date unless the Council takes action to either extend it as provided by statute or terminate it sooner.

Ketil Freeman
Land Use Committee
September 11, 2024
D#1

Section ~~((9))~~ 10. This ordinance shall take effect as provided by Seattle Municipal Code Sections 1.04.020 and 1.04.070.

Legislation Text

File #: CB 120832, Version: 1

CITY OF SEATTLE

ORDINANCE _____

COUNCIL BILL _____

AN ORDINANCE relating to Seattle’s construction codes; adopting the Seattle Boiler Code, Building Code, Electrical Code, Energy Code, Existing Building Code, Fuel Gas Code, Mechanical Code, Plumbing Code, and Residential Code and chapters of the Washington Administrative Code by reference, amending certain chapters of those codes, and adopting new chapters for those codes; amending Sections 3.06.030, 5.73.020, 11.60.690, 22.101.010, and 22.502.016 of the Seattle Municipal Code; and repealing Section 1 of Ordinance 126278, Ordinance 126279, Ordinance 126358, and Ordinance 126508.

BE IT ORDAINED BY THE CITY OF SEATTLE AS FOLLOWS:

ADOPTION OF NEW CONSTRUCTION CODES

Section 1. To the extent listed in Sections 22.101.010 and 22.502.016 of the Seattle Municipal Code as amended by this ordinance, and with copies filed with the City Clerk as noted in those sections, the following codes are adopted by reference:

- A. The 2024 Seattle Boiler and Pressure Vessel Code, substantially as shown in Attachment A to this ordinance.
- B. The 2021 International Building Code, with amendments as shown in Attachment B to this ordinance.
- C. The 2023 National Electrical Code, with amendments as shown in Attachment C to this ordinance.
- D. Chapters 51-11C and 51-11R of the Washington Administrative Code (WAC), the 2021 Washington State Energy Code, with amendments as shown in Attachment D of this ordinance.
- E. The 2021 International Existing Building Code, with amendments as shown in Attachment E to this ordinance.

F. The 2021 International Fuel Gas Code, with amendments as shown in Attachment F to this ordinance.

G. The 2021 International Mechanical Code, with amendments as shown in Attachment G to this ordinance.

H. Chapter 51-56 WAC, adopting the 2021 Uniform Plumbing Code, with amendments as shown in Attachment H to this ordinance.

G. The 2021 International Residential Code, with amendments as shown in Attachment I to this ordinance.

Section 2. Section 22.101.010 of the Seattle Municipal Code, last amended by Ordinance 126279, is amended as follows:

22.101.010 List of construction codes

Table A for 22.101.010 lists various adopted Seattle editions of construction codes. For each base code that has been adopted by reference, a copy is available in the City Clerk’s Office under the listed Clerk File number. Each code consists of the listed portions of the base code, any additional chapters listed as adopted by ordinance, and amendments adopted by ordinance.

**Table A for 22.101.010
Construction codes adopted by reference**

Name	Base code	Additional chapters	Clerk File
Seattle Boiler and Pressure Vessel Code	Attachment A to (Ordinance 126278) <u>this ordinance</u>		
Seattle Building Code	(2018) <u>2021</u> International Building Code, Chapters 2 through 29 and 31 through 35	Chapters 1 and 30, in Attachment B to (Ordinance 126278) <u>this ordinance</u>	(321854) <u>323091</u>
Seattle Electrical Code	(2020) <u>2023</u> National Electrical Code and selected portions of chapter 296-46B WAC	Article 80, in Attachment C to (Ordinance 126278) <u>this ordinance</u>	(321855) <u>323099</u>
Seattle Energy Code	(2018) <u>2021</u> Washington State Energy Code		(321861) <u>323092</u>

Seattle Existing Building Code	((2018)) <u>2021</u> International Existing Building Code, Chapters 2 through 11, 13, 15, and 16 and Appendix A	Chapter 1, in Attachment ((D)) <u>E</u> to ((Ordinance 126278)) <u>this ordinance</u>	((321856)) <u>323093</u>
Seattle Fuel Gas Code	((2018)) <u>2021</u> International Fuel Gas Code, Chapters 2 through 8 and Appendices A through D	Chapter 1, in Attachment ((E)) <u>F</u> to ((Ordinance 126278)) <u>this ordinance</u>	((321857)) <u>323095</u>
Seattle Mechanical Code	((2018)) <u>2021</u> International Mechanical Code, Chapters 2 through 9 and 11 through 15 and Appendices A and B	Chapter 1, in Attachment ((F)) <u>G</u> to ((Ordinance 126278)) <u>this ordinance</u>	((321858)) <u>323096</u>
Seattle Residential Code	((2018)) <u>2021</u> International Residential Code, Chapters 2 through 10, 12 through 24, 29, and 44 and Appendices <u>AF</u> , <u>AQ</u> , and <u>AT</u>	Chapters <u>1</u> and <u>44</u> , in Attachment ((G)) <u>I</u> to ((Ordinance 126278)) <u>this ordinance</u>	((321860)) <u>323097</u>

Section 3. Section 22.502.016 of the Seattle Municipal Code, last amended by Ordinance 126278, is amended as follows:

22.502.016 Adoption of Seattle Plumbing Code

The Seattle Plumbing Code consists of: (1) all of chapter 51-56 of the Washington Administrative Code (WAC) in effect on ~~((July 1, 2020))~~ March 15, 2024, except Sections 51-56-008 and 51-56-0100; (2) amendments and additions to chapter 51-56 WAC adopted by the City Council by ordinance; and (3) Chapter 1, which is composed of all local provisions. One copy of chapter 51-56 ~~((of the Washington Administrative Code))~~ WAC in effect on ~~((July 1, 2020))~~ March 15, 2024, is filed with the City Clerk in Clerk File ~~((321859))~~ 323098.

REPEAL OF OLD CONSTRUCTION CODES AND TRANSITION PROVISIONS

Section 4. Section 1 of Ordinance 126278 and Ordinances 126279, 126358, and 126508, adopting or amending various construction codes, are repealed.

Section 5. Beginning on the effective date of this ordinance and ending on November 15, 2024, permit applicants who submit a valid and fully complete building permit application during that period may elect to have the application reviewed under the provisions of codes repealed by this ordinance rather than the

provisions of codes adopted in this ordinance.

SEATTLE MUNICIPAL CODE CLEANUP AND CORRECTIONS

Section 6. Section 3.06.030 of the Seattle Municipal Code, last amended by Ordinance 124919, is amended as follows:

3.06.030 Director-Powers and duties

The Director of the Seattle Department of Construction and Inspections, under direction of the Mayor, shall manage the Seattle Department of Construction and Inspections, appoint, assign, and dismiss all employees in conformance with the City’s personnel ordinances and rules, and perform the following functions:

A. Enforcing development-related ordinances and rules of the City; (~~(, including but not limited to the Building Code; the Residential Code; the Electrical Code; the Mechanical Code; the Housing and Building Maintenance Code; the Land Use Code; the Pioneer Square Minimum Maintenance Ordinance; the Condominium Conversion Ordinance; the Energy Code; the Stormwater Code; the Grading Code; the Rental Registration and Inspection Ordinance; the Tenant Relocation Assistance Ordinance; the Noise Control Code; the Shoreline Master Program; and the Regulations for Environmentally Critical Areas;))~~)

* * *

Section 7. Section 5.73.020 of the Seattle Municipal Code, last amended by Ordinance 126443, is amended as follows:

5.73.020 Definitions

* * *

“Bedroom” means a sleeping area in a dwelling unit that meets the following criteria: (1) requirements for a habitable space, as defined by Chapter 2 of the Seattle Building Code; (2) minimum room widths and ceiling heights according to (~~(Section 1207.1 and Section 1207.2))~~ Sections 1208.1 and 1208.2 of the Seattle Building Code; (3) natural light requirements according to Section 1204.2 of the Seattle Building Code; (4) natural ventilation requirements according to Section 1202.5 of the Seattle Building Code; and (5) complete

separation of the habitable space from other portions of the dwelling unit by walls and one or more exit access doorways, consistent with Chapter 2 of the Seattle Building Code.

* * *

Section 8. Section 11.60.690 of the Seattle Municipal Code, enacted by Ordinance 108200, is amended as follows:

11.60.690 Transportation of liquefied petroleum gas ((-))

The bulk transportation of liquefied petroleum gas (LPG) is prohibited in or through Fire Zone No. 1 as defined in the ~~((City of Seattle Building Code (see)))~~ Fire Zone One map ~~((+))~~ below.

* * *

SEVERABILITY AND EFFECTIVE DATE CLAUSES

Section 9. The provisions of this ordinance are declared to be separate and severable. The invalidity of any clause, sentence, paragraph, subdivision, section, or portion of this ordinance, or the invalidity of its application to any person or circumstance, does not affect the validity of the remainder of this ordinance or the validity of its application to other persons or circumstances.

Section 10. Section 4 of this ordinance shall take effect on November 15, 2024.

Section 11. This ordinance shall take effect as provided by Seattle Municipal Code Sections 1.04.020 and 1.04.070.

Passed by the City Council the _____ day of _____, 2024, and signed by me in open session in authentication of its passage this _____ day of _____, 2024.

President _____ of the City Council

Approved / returned unsigned / vetoed this _____ day of _____, 2024.
/

Bruce A. Harrell, Mayor

Filed by me this _____ day of _____, 2024.

Scheereen Dedman, City Clerk

2024 Seattle Boiler and Pressure Vessel Code

Section 1 – Administrative

1.1 **Title.** These regulations shall be known as the “Seattle Boiler and Pressure Vessel Code,” may be cited as such, and will be referred to herein as “this code.”

1.2 **Purpose.** The purpose of this code is to provide minimum standards for the protection of public health, safety, and property by regulating and controlling the quality, location, and installation of boilers and pressure vessels, piping, and appurtenances. It is not intended to create or otherwise establish or designate any particular class or group of persons who will or should be especially protected or benefited by the terms of this code.

1.3 **General.**

1.3.1 **Scope.** This code applies to the construction, erection, installation, operation, inspection, repair, alteration, relocation, replacement, addition to, use, or maintenance of all boilers and pressure vessels. The design and testing of equipment regulated by this code are subject to the approval of the code official.

1.3.2 **Applicability of city laws.** A boiler permit application shall be considered under the Seattle Boiler Code in effect on a date as provided below, or on a date as otherwise required by law.

A. Boiler code permit applications shall be considered under the codes in effect on the date used to determine the codes applicable to the building permit application in accordance with the Seattle Building Code Section 101.3 if any of Items 1 through 3 apply:

1. The boiler permit application is submitted as part of a building permit application;
2. The boiler permit application is for work directly associated with a building permit but is submitted separately from the building permit application; or
3. The boiler permit application is for initial tenant alterations submitted no later than 18 months after the date of the approved final inspection for the building, and is submitted before the expiration date of the building permit for the tenant alteration, as determined by Seattle Building Code Section 106.9.

B. Boiler permit applications, other than those subject to subsection 1.3.2.A, shall be considered under the codes in effect on the date a complete boiler permit application is submitted that complies with all the requirements of subsection 4.1 of this code, Permits Required.

1.3.3 **Conflicts.** Where, in any specific case, different sections of this code specify different materials, methods of construction, or other requirements, the most restrictive shall govern. Where there is a conflict between a general requirement and a specific requirement, the specific requirement shall be applicable.

1.3.4 **Workmanship.** All equipment, appurtenances, devices, and piping shall be installed in a workmanlike manner, in accordance with recognized engineering practice, and in conformity with the provisions and intent of this code.

1.4 Organization and duties of the code official

1.4.1 General.

- A. Applications and permits.** The code official shall: receive applications, review construction documents, and issue permits for the erection and alteration, demolition, and moving of buildings and structures; inspect the premises for which such permits have been issued; and enforce compliance with provisions of this code.
- B. Inspections.** The code official shall make the required inspections or the code official shall have the authority to accept reports of inspection by approved agencies or individuals. Reports of such inspections shall be in writing and be certified by a responsible officer of such approved agency or by the responsible individual. The code official is authorized to engage such expert opinion as the code official deems necessary to report upon unusual technical issues that arise.
- C. Notices and orders.** The code official shall issue necessary notices or orders to ensure compliance with this code.
- D. Official records.** The code official shall keep official records of applications received, permits and certificates issued, fees collected, reports of inspections, and notices and orders issued. Such records shall be retained in the official records for the period required for retention of public records.

1.4.2 **Right of entry.** With the consent of the owner or occupier of a building or premises, or pursuant to a lawfully issued warrant, the code official may enter a building or premises at any reasonable time to perform the duties imposed or authorized by the code.

1.4.3 **Liability.** Nothing in this code is intended to be nor shall be construed to create or form the basis for any liability on the part of the City or its officers, employees, or agents for any injury or damage resulting from: 1) the failure of equipment to conform to the provisions of this code; 2) any inspection, notice, order, certificate, permission, or approval authorized or issued; 3) the implementation or enforcement of this code; or 4) any action or inaction on the part of the City related in any manner to the enforcement of this code by its officers, employees, or agents. This code shall not be construed to relieve or lessen the responsibility of any person owning, operating, or controlling any equipment, building, or structure for any damages to persons or property caused by defects, nor shall the Seattle Department of Construction and Inspections or The City of Seattle be held to have assumed any such liability by reason of the inspections, permits, or certificates issued under this code.

1.4.4 **Responsibility for Compliance.** Compliance with the requirements of this code is the obligation of the owner of the building, structure, or premises, the duly authorized agent of the owner, or any other person responsible for the condition or work, not the obligation of the City or any of its officers, employees, or agents.

1.4.5 **Cooperation of other officials and officers.** The code official may request, and shall receive, so far as is required in the discharge of the code official's duties, the assistance and cooperation of other officials of The City of Seattle.

1.4.6 **Rules of the code official.** The code official has authority to interpret this code and adopt and enforce rules and regulations supplemental to this code as may be necessary to clarify the application of this code. Such interpretations, rules, and regulations shall conform to the intent and purpose of this code. The code official shall promulgate, adopt, and issue rules in accordance with the procedures specified in SMC Chapter 3.02, the Administrative Code.

1.5 Construction Codes Advisory Board.

1.5.1 **General.** A committee of the Construction Codes Advisory Board may examine proposed administrative rules and amendments relating to this code and related provisions of other codes and make recommendations to the code official and to the City Council for changes in this code. The committee will be called as needed by the Construction Codes Advisory Board.

1.6 Violations, enforcement, and penalties.

1.6.1 **Violations.** It is a violation of this code for anyone to perform the actions contained in subsection 1.6.1 below.

- A. Work in violation of code.** Install, erect, construct, enlarge, alter, repair, replace, remodel, move, improve, remove, convert, demolish, equip, occupy, use, or maintain any boiler or pressure vessel or auxiliary equipment or cause, allow, or direct the same to be done in the City, contrary to, or in violation of, any provision of this code.
- B. Unapproved material or devices.** Use any material or install any device, appliance, or equipment that does not comply with this code or has not been approved by the code official.
- C. Operating without a license.** Have charge of, operate, or permit any person to have charge of or operate any boiler or steam engine regulated by this code without a license to do so as required by the Steam Engineer and Boiler Operator License Code, SMC Chapter 6.420.
- D. Posted notices.** Remove, mutilate, destroy, or conceal any notice or order issued or posted by the code official pursuant to the provisions of this code, or any notice or order issued or posted by the code official in response to a natural disaster or other emergency.
- E. Requesting inspections.** Conduct work under a permit without requesting an inspection required by this code.
- F. Encouraging violation of code.** Knowingly aid, abet, counsel, encourage, hire, induce, or otherwise procure another to violate or fail to comply with this code.
- G. Non-compliance with notice of violation.** Fail to comply with a notice of violation by the date set by the code official in the notice.
- H. Complying with orders of the code official.** Fail to comply with any order issued by the code official, including but not limited to a stop work order, emergency order, or hazard correction order.

1.6.2 **Notice of Violation.** If, after investigation, the code official determines that standards or requirements of this code have been violated, or that orders or requirements have not been complied with, the code official may issue a notice of violation to the owner, agent, or other person responsible for the action or condition.

- A. Contents of notice of violation.** The notice of violation shall state:
1. The standards or requirements violated;
 2. What corrective action, if any, is necessary to comply; and
 3. A reasonable date certain for compliance.
- B. Serving notice of violation.** The notice shall be served upon the owner, agent, or other responsible person by personal service or regular first class mail, addressed to the last known address of such person, or if no address is available after reasonable inquiry, the notice shall be posted in a conspicuous place on the premises. The notice may also be posted on the premises at any time.
- C. Code official review.** Any person affected by a notice of violation issued pursuant to this subsection 1.6.2 may obtain a review of the notice by making a request in writing to the code official within 10 business days after service of the notice.
- D. Review procedure.** The review shall occur not earlier than 10 nor later than 20 days after the request is received by the code official unless otherwise agreed to by the person requesting the review. Any person affected by the notice of violation may submit additional information to the code official. The review shall be made by a representative of the code official who will review any additional information that is submitted and the basis for issuance of the notice of violation. The reviewer may request clarification of the information received and perform a site visit.
- E. Decision.** After the review, the code official shall render one of the following four decisions:
1. Sustain the notice of violation;
 2. Withdraw the notice of violation;
 3. Amend the notice of violation; or
 4. Continue the review of the notice of violation to a date certain.
- F. Order.** The code official shall issue an order containing the decision within 15 days after the review is completed and shall cause the order to be sent by regular first-class mail to the person or persons requesting the review, to any person on whom the stop work order was served, and to any other person who requested a copy before issuance of the order, addressed to their last known address.
- G. Scope of enforcement.** Nothing in this subsection 1.6.2 limits or precludes any action or proceeding to enforce this code, and nothing in this subsection obligates or requires the code official to issue a notice of violation prior to the imposition of civil or criminal penalties.

1.6.3 Stop work orders. The code official may issue a stop work order whenever any work is being done without a permit, contrary to the provisions of this code, contrary to a permit issued by the code official, or in the event of dangerous or unsafe conditions related to equipment, construction, or demolition of boilers or pressure vessels.

- A. Violation identified.** The stop work order shall identify the violation or unsafe condition and may prohibit work or other activity on the site.
- B. Serving the stop work order.** The code official shall serve the stop work order by posting it on the premises in a conspicuous place at the site. If posting is not physically possible, the stop work order may be served by personal service or by regular first-class mail to the last known address of the person doing or causing the work to be done, the property owner, or the holder of a permit if the

work is being stopped on a permit. For purposes of this subsection 1.6.3.B, service is complete at the time of posting or personal service or, if mailed, three business days after the date of mailing.

- C. Stop work order effective date.** Stop work orders are effective when posted, or if posting is not physically possible, when one of the persons identified in subsection 1.6.3.B is served.
- D. Work after stop work order.** It is unlawful for any person to engage in work or to cause work to continue until authorization from the code official is received.
- E. Administrative review of stop work orders.** Any person aggrieved by a stop work order may obtain a review of the order by delivering to the code official a written request for review within two business days of the date of service of the stop work order.
 - 1. Review procedure.** The review shall occur within two business days after receipt by the code official of the request for review unless otherwise agreed by the person making the request. Any person affected by the stop work order may submit additional information to the code official for consideration as part of the review at any time prior to the review. The review will be made by the code official, who will review all additional information received and may also request a site visit.
 - 2. Decision.** After the review, the code official may:
 - a. Sustain the stop work order;
 - b. Withdraw the stop work order;
 - c. Modify the stop work order; or
 - d. Continue the review to a date certain.
 - 3. Issuing order.** The code official shall issue an order containing the decision within two business days after the review is completed and shall cause the order to be sent by regular first-class mail to the person or persons requesting the review, any person on whom the stop work order was served, and any other person who requested a copy before issuance of the order, addressed to their last known address.

1.6.4 Authority to disconnect utilities in emergencies. The code official has the authority to:

- A. Disconnect fuel-gas utility service or energy supplied to a building, structure, premises, or equipment regulated by this code in cases of emergency when necessary to eliminate an immediate hazard to life or property; and
- B. Enter any building or premises to disconnect utility service. Whenever reasonably feasible, the code official shall notify the serving utility, owner, and occupant of the building, structure, or premises of the decision to disconnect prior to taking such action, and shall notify the serving utility, owner, and occupant of the building, structure, or premises in writing of such disconnection immediately after the disconnection.

1.6.5 Reconnection. Until the code official authorizes reconnection of equipment, it is a violation of this code to:

- 1. Make connections from an energy, fuel, or power supply or supply energy or fuel to any equipment regulated by this code that is disconnected or ordered to be disconnected by the code official; or

2. Use the equipment ordered to be disconnected before the code official authorizes the reconnection and use of such equipment.

1.6.6 Authority to condemn equipment. Whenever the code official determines that any equipment or portion thereof regulated by this code is hazardous to life, health, or property, the code official shall order in writing that such equipment be disconnected, removed, or restored to a safe or sanitary condition. The written notice shall fix a date certain for compliance with such order. It is a violation of this code for any person to use or maintain defective equipment after receiving such notice. When any equipment or installation is to be disconnected, the code official shall give written notice of such disconnection and causes therefor within 24 hours to the serving utility, the owner, and the occupant of the building, structure, or premises. When any equipment is maintained in violation of this code, or in violation of a notice issued pursuant to the provisions of this subsection 1.6.6, the code official shall institute any appropriate action to prevent, restrain, correct, or abate the violation.

1.6.7 Emergency order. Whenever the code official finds that any equipment regulated by this code is so unsafe as to constitute an imminent hazard to life or limb, the code official may issue an emergency order. The emergency order may:

A. Content of emergency order. The emergency order may:

1. Direct that the equipment be restored to a safe condition by a date certain;
2. Require that the building, structure, or premises, or portion thereof, containing the equipment be vacated within a reasonable time to be specified in the order, or in the case of extreme danger, the order may specify immediate vacation of the building, structure, or premises, or portion thereof; or
3. Authorize immediate disconnection of the utilities or energy source.

B. Service of emergency order. The emergency order shall be posted on the premises or personally served on the owner of the building or premises or any person responsible for the condition. The order shall specify the time for compliance.

C. Effect of emergency order. No person may occupy a building, structure, or premises, or portion thereof, after the date on which the building is required to be vacated until the building, structure, or premises, or portion thereof, is restored to a safe condition as required by the order and this code. It is a violation of this code for any person to fail to comply with an emergency order issued by the code official. When any equipment is operated in violation of this code, or in violation of an order issued pursuant to the provisions of this subsection 1.6.7, the code official may begin an action to prevent, restrain, correct, or abate the violation.

1.6.8 Hazard correction order. Whenever the code official finds that unsafe equipment exists, the code official may issue a hazard correction order.

A. Content of hazard correction order. The order shall:

1. State the conditions causing the equipment to be unsafe;
2. Direct the owner or other persons responsible for the unsafe equipment to correct the condition; and
3. Give a date certain for completing the required corrections.

- B. Alternative to hazard correction.** In lieu of correction, the owner may submit a report or analysis of the conditions to the code official establishing that the equipment is, in fact, safe. The code official may require that the report or analysis be prepared by a licensed engineer. The code official may accept the report as adequate or may reject the report as insufficient.
- C. Service of hazard correction order.** The order shall be served upon the owner, agent, or other responsible person by personal service or regular first-class mail addressed to the last known address of such person, or if no address is available after reasonable inquiry, the order may be posted in a conspicuous place on the premises. The order may also be posted on the premises if it is also being served by personal service or first-class mail.
- D. Effect of hazard correction order.** It is a violation of this code for any person to fail to comply with a hazard correction order as specified in this subsection 1.6.8.

1.6.9 **Recording.** The code official may record a copy of any order or notice with the King County Department of Executive Services.

1.6.10 **Civil penalties.**

- A. Civil penalties.** Any person violating this code is subject to a cumulative civil penalty in an amount not to exceed \$500 per day for each violation from the date the violation occurs or begins until compliance is achieved. In cases where the code official has issued a notice of violation, the violation will be deemed to begin, for purposes of determining the number of days of violation, on the date compliance is required by the notice of violation.
- B. Enforcement in Municipal Court.** Civil actions to enforce this code shall be brought exclusively in Seattle Municipal Court, except as otherwise required by law or court rule. In any civil action for a penalty, the City has the burden of proving by a preponderance of the evidence that a violation of this code exists or existed. The issuance of a notice of violation or of an order following review by the code official is not itself evidence that a violation of this code exists.
- C. Judicial review.** Because civil actions to enforce this code must be brought exclusively in Seattle Municipal Court pursuant to subsection 1.6.10.B, orders of the code official, including notices of violation issued under this chapter, are not subject to judicial review pursuant to chapter 36.70C Revised Code of Washington (RCW), Judicial Review of Land Use Decisions.
- D. Appeal to Superior Court.** Final decisions of the Seattle Municipal Court on enforcement actions authorized by this code may be appealed pursuant to the Rules for Appeal of Decisions of Courts of Limited Jurisdiction.

1.6.11 **Alternative criminal penalty.** Anyone who violates or fails to comply with any notice of violation or order issued by the code official pursuant to this code or who removes, mutilates, destroys, or conceals a notice or order issued or posted by the code official shall, upon conviction thereof, be punished by a fine of not more than \$5,000 or by imprisonment for not more than 364 days, or by both fines and imprisonment for each separate violation. If the violation continues to exist, each day the violation or failure to comply is continued shall constitute a separate offense.

- 1. Additional Relief.** The code official may seek legal or equitable relief to enjoin any acts or practices and abate any condition when necessary to achieve compliance.

2. **Administrative review by the code official.** Prior to issuance of the boiler or pressure vessel permit, applicants may request administrative review by the code official of decisions or actions pertaining to the administration and enforcement of this code. Requests shall be addressed to the code official.
3. **Construction Codes Advisory Board Review.** After completion of an administrative review by the code official, and prior to issuance of the boiler or pressure vessel permit, applicants may request a review of the code official's decisions or actions pertaining to the application and interpretation of this code by the Construction Codes Advisory Board (CCAB). The review will be performed by three or more members of the CCAB, chosen by the board chair. The chair shall consider the subject of the review and members' expertise when selecting members to conduct a review. The decision of the CCAB committee is advisory only. The final decision is made by the code official.

Exception: Stop work orders, notices of violations and revocations of permits shall not be subject of a CCAB review.

1.7 Existing Installations.

1.7.1 **Existing boilers and pressure vessels.** Boilers and pressure vessels lawfully in existence at the time of the adoption of this code may continue in use at the location approved in the original permit. The systems may be maintained or repaired, converted to another type of fuel, or have components replaced if the use, maintenance, repair, conversion of fuel, or component replacement is done in accordance with the original code of construction and/or installation requirements when approved by the code official.

1.7.2 **Maintenance of existing installations.** All boilers and pressure vessels, materials and appurtenances, and parts, both existing and new, shall be maintained in proper operating condition in accordance with the original design and in a safe and hazard-free condition. All devices or safeguards required by the Seattle Boiler and Pressure Vessel Code shall be maintained in conformance with the code edition in effect when the system was installed, and boilers and pressure vessels shall be maintained in accordance with the manufacturer's instructions or nationally recognized standards. The owner or the owner's designated agent is responsible for maintenance of boilers and pressure vessels and auxiliary equipment. To determine compliance with this subsection 1.7.2, the code official may require a boiler or pressure vessel or equipment to be inspected or re-inspected.

Exception: The code official may modify the requirements of this subsection 1.7.2 where all or a portion of the building is unoccupied.

1.7.3 **Changes in existing building or occupancy.** Existing boilers and pressure vessels that are a part of a building or structure housing a vessel undergoing a change in use or occupancy, as defined in the Seattle Building Code, shall comply with all requirements of this code that are applicable to the new use or occupancy. If the use of the boiler or pressure vessel changes, a new permit may be required and the equipment shall comply with this code.

1.7.4 **Landmarks.** The code official may modify this code as it applies to landmarks and require in lieu thereof alternate requirements that, in the opinion of the code official, will result in a reasonable degree of safety to the public and the occupants of those buildings.

1.8 Alternative materials, designs, and methods of construction. This code does not prevent the use of any material, alternative design, or method of construction not specifically allowed or prohibited by this code, provided the alternative is approved and its use is authorized by the code official. The code official may approve an alternative if it complies with the intent of this code and, when considered together with other safety features of the building or other relevant circumstances, provides at least an equivalent level of strength, effectiveness, fire resistance, durability, sanitation, and safety. The code official may require that sufficient evidence or proof be submitted to reasonably substantiate any claims regarding the use or suitability of the alternative. Acceptance of a Construction Code Advisory Board recommendation may be considered sufficient evidence by the code official to approve the alternative. The code official may, but is not required to, record the approval of alternatives and any relevant information in the files of the code official or on the approved permit plans.

1.9 Modifications. The code official may modify the requirements of this code for individual cases provided:

1. There are practical difficulties in complying with the requirements of this code;
2. The modification is in conformity with the intent and purpose of this code; and
3. The modification provides a reasonable level of strength, effectiveness, fire resistance, durability, sanitation, and safety when considered together with other safety features of the building or other relevant circumstances. The code official may, but is not required to, record the approval of modifications and any relevant information in the files of the code official or on the approved set of construction documents.

1.10 Tests. If there is insufficient evidence of compliance with the requirements of this code, or evidence that a material or method does not conform to the requirements of this code, the code official may require that tests, as proof of compliance, be made at no expense to the City. Test methods shall be those specified in this code or by other recognized test standards. If there are no recognized and accepted test methods for the proposed alternative or modification, the code official shall determine the test procedures. All tests shall be made by an agency approved by the code official. The agency shall provide a report of tests or examination results, and those results shall be retained by the code official for the period required for retention of public records.

Section 2 – Definitions

2.1 Scope. The following words and terms shall, for the purposes of this code, have the meanings given in this Section 2.

2.2 Interchangeability. Words used in the present tense include the future; words in the masculine gender include the feminine and neuter; the singular number includes the plural and the plural the singular.

2.3 Terms defined in other codes. Terms used but not defined in this code but defined in the International Building Code, International Fire Code, Seattle Electrical Code, International Fuel Gas Code, Uniform Plumbing Code, or ASME Standard CSD-1 Controls and Safety Devices for Automatically Fired Boilers shall be used. When a definition is found here and in ASME CSD-1, the definition given in this code shall govern.

2.4 Terms not defined. When a definition is not found below, the definitions of terms found in the codes and standards listed in subsection 3.1 of this code shall govern.

“A” OCCUPANCIES are places of public assembly. Details can be found in Seattle Building Code Chapter 3.

ACCESSIBLE means having access to and includes the removal of an access panel, door, or similar obstruction designed for removal.

ACCESSIBLE, READILY means capable of being reached safely and quickly for operation, repair, or inspection without climbing over or removing obstacles, or resorting to the use of portable access equipment.

ALTERATION means a change in the item described on the original Manufacturer’s Data Report which affects the pressure-containing capability of the pressure-retaining item.

APPLIANCE means a device utilizing fuel or other forms of energy to produce light, heat, power, refrigeration, or air conditioning, including vented decorative appliances.

APPROVED means accepted by the code official.

APPROVED AGENCY means an agency approved by the code official that is regularly engaged in conducting tests or examinations or furnishing inspection services.

ASME means American Society of Mechanical Engineers.

ATTENDANT means the person in charge of the operation of a boiler or unfired pressure vessel.

AUTOMATIC CERTIFICATION PERMIT means a permit used to modify the licensed attendance requirements for a specific boiler. (See Steam Engineer and Boiler Operator License Code, SMC Chapter 6.420.)

“B” OCCUPANCIES are business uses, such as offices. Details can be found in Seattle Building Code Chapter 3.

BOILER means a closed vessel in which water is heated, steam is generated, steam is superheated, or any combination thereof, under pressure or vacuum by the direct application of heat, including fired units for heating or vaporizing liquids other than water where these systems are complete within themselves.

BOILER ROOM means any room primarily used to house a boiler.

BOILER, CERTIFIED AS AUTOMATIC means a boiler that complies with subsection 4.25 of this code, has an automatic certification permit that passed final inspection and is used to modify the licensed attendant requirements for a specific boiler. (See the Steam Engineer and Boiler Operator License Code, SMC Chapter 6.420).

BOILER, CERTIFIED AS MONITORED means a boiler that complies with subsection 4.26 of this code and is used to modify the licensed attendant requirements for a specific boiler. (See the Steam Engineer and Boiler Operator License Code, SMC Chapter 6.420.)

BOILER, HOT-WATER SUPPLY means a listed potable water boiler, exceeding the limitations of a potable water heater, but that does not exceed a pressure of 160 psig (1,100 kPa) or a temperature of 250 degrees F (121 degrees C), that provides hot water to be used externally to itself.

BOILER, LOW-PRESSURE HOT-WATER-HEATING means a boiler that circulates hot water for heating purposes at pressures not exceeding 160 psig (1,100 kPa) and at temperatures not exceeding 250 degrees F (121 degrees C), which water is then typically returned to the boiler.

BOILER, LOW-PRESSURE STEAM-HEATING means a boiler furnishing steam for heating purposes at pressures not exceeding 15 psig (103 kPa).

BOILER, POWER HOT-WATER (HIGH-TEMPERATURE WATER BOILER) means a boiler used for heating water or liquid to a pressure exceeding 160 psig (1,100 kPa) or to a temperature exceeding 250 degrees F (121 degrees C).

BOILER, POWER means a boiler that generates steam or vapor at pressures exceeding 15 psig (103 kPa).

BOILER, RENTAL means any type of boiler that is owned by an entity for the purpose of renting to other entities for temporary or long-term usage.

BOILER, USED means any installed boiler that was in previous service.

BURNER means a device that conveys fuel and air or steam into the combustion chamber of a boiler to cause and maintain stable combustion.

BUSINESS DAY means a day that is neither a Saturday, a Sunday, nor a City holiday recognized in SMC 4.20.190.

CHIMNEY means a primarily vertical structure containing one or more flues for the purpose of carrying gaseous products of combustion and air from a fuel-burning appliance to the outside atmosphere.

CODE OFFICIAL is the Director of the Seattle Department of Construction and Inspections and the Director's designees, which include the Chief Boiler Inspector and other authorized representatives.

COMBUSTION AIR means the air necessary for complete combustion of a fuel, including theoretical air and excess air.

DAY, when not a business day, means a calendar day. When any period of time prescribed by this code is expressed in days and the period ends on a day that is not a business day, the period shall extend to the next business day.

DEPARTMENT means the Seattle Department of Construction and Inspections.

DRAFT HOOD means a nonadjustable device built into an appliance or made a part of the vent connector from an appliance, that is designed to:

1. Provide for the ready escape of the flue gases in the event of no draft, backdraft, or stoppage beyond the draft hood;
2. Prevent a backdraft from entering the appliance; and
3. Neutralize the effect of stack action of the chimney or gas vent upon the operation of the appliance.

DUCT means a tube or conduit for conveying air. The air passages of listed self-contained systems are not to be construed as air ducts.

“E” OCCUPANCIES are educational facilities. Details can be found in Seattle Building Code Chapter 3.

EXTERNAL INSPECTION means an inspection of the outside and fireside of the boiler, including safety controls.

“F” OCCUPANCIES are factory and industrial uses. Details can be found in Seattle Building Code Chapter 3.

FUEL TRAIN means a series of valves, regulators, and controls, between the burner and the source of fuel, that regulates and controls the flow of fuel to the burner.

“H” OCCUPANCIES are high hazard uses. Details can be found in Seattle Building Code Chapter 3.

“I” OCCUPANCIES are medical and institutional facilities. Details can be found in Seattle Building Code Chapter 3.

INSPECTOR means any of the inspector types defined by this code, who examine internal and external boiler and pressure vessel parts and surfaces and who test the function of operating controls and safety devices for correct operation.

INSPECTOR, CITY means an inspector employed by the Department.

INSPECTOR, INSURANCE means an inspector employed by an authorized insurance company.

INSURANCE COMPANY, AUTHORIZED means an insurance company that has been authorized by the State of Washington to write and provide insurance coverage for loss of boilers or unfired pressure vessels.

INTERNAL INSPECTION means an inspection requiring that the water side of the boiler be examined visually.

JACKETED STEAM KETTLE means a pressure vessel, with inner and outer walls, that is subject to steam pressure and is used to boil or heat liquids or to cook food.

LETHAL SUBSTANCE means a poisonous gas or liquid that in a very small amount is dangerous to life when inhaled or absorbed through the skin or membranes. It is the responsibility of the user or the user’s designated agent to determine and declare if contents are lethal substances.

LANDMARK means a building or structure that is subject to a requirement to obtain a certificate of approval from the City Landmarks Preservation Board before altering or making significant changes to specific features or characteristics, that has been nominated for designation and the City Landmarks Preservation Board has not issued a determination regarding designation, that has been designated for preservation by the City Landmarks Preservation Board, that has been designated for preservation by the State of Washington, that has been listed or determined eligible to be listed in the National Register of Historic Places, or that is located in a landmark or special review district subject to a requirement to obtain a certificate of approval before making a change to the external appearance of a structure.

LICENSED OPERATOR means a person licensed to operate boilers in accordance with the Seattle Steam Engineer and Boiler Operator License Code, SMC Chapter 6.420.

LISTED means that equipment, materials, products, or services are included in a list published by an organization acceptable to the code official. The listing organization provides an evaluation of products or services by performing periodic inspection during production of equipment or materials, or periodic evaluation of services. The resulting listing states either that the equipment, material, product, or service meets identified standards, or was tested and found suitable for use in a specified manner.

“M” OCCUPANCIES are retail and wholesale facilities. Details can be found in Seattle Building Code Chapter 3.

MANUALLY OPERATED (FIRED) BOILER means a boiler that requires constant attendance by an operator with no duties other than the proper and safe operation of the boiler and its related equipment when the boiler is in operation.

MAWP means maximum allowable working pressure.

NATIONAL BOARD means the National Board of Boiler and Pressure Vessel Inspectors.

NBIC means National Board Inspection Code.

PERSON means an individual, receiver, administrator, executor, assignee, trustee in bankruptcy, trust, estate, firm, partnership, joint venture, club, company, joint stock company, business trust, municipal corporation, political subdivision of the State of Washington, corporation, limited liability company, association, society, or any group of individuals acting as a unit, whether mutual, cooperative, fraternal, nonprofit, or otherwise, and the United States or any instrumentality thereof.

PILOT means a small burner that is used to light the main burner.

PILOT, CONTINUOUS (also known as constant burning pilot) means a pilot that burns without turndown during the entire time the boiler is in service, whether the main burner is firing or not.

PILOT, INTERMITTENT means a pilot that is automatically lighted each time there is a call for heat and burns during the entire period the main burner is firing.

PILOT, INTERRUPTED means a pilot that is automatically lighted each time there is a call for heat. The pilot fuel is cut off automatically once the main burner flame is ignited.

PRESSURE VESSEL means a closed, unfired container under internal pressure.

PRESSURE VESSEL, USED means any installed pressure vessel that was in service at a previous time.

PURGE means to blow air, fuel, water, or other foreign substances out of a container or confined space.

“R” OCCUPANCIES are residential facilities. Details can be found in Seattle Building Code Chapter 3.

REPAIR means the work necessary to restore pressure-retaining items to a safe and satisfactory operating condition.

REPAIR INSPECTOR means a person holding a valid A or IS Commission with an “R” Endorsement issued by the National Board who performs the final inspection of a repair or alteration.

REPAIR ORGANIZATION means an organization in possession of a valid National Board “R” Certificate of Authorization issued by the National Board.

“S” OCCUPANCIES are storage facilities. Details can be found in Seattle Building Code Chapter 3.

SMC means the Seattle Municipal Code.

“U” OCCUPANCIES are accessory utility facilities such as private garages and greenhouses. Details can be found in Seattle Building Code Chapter 3.

VENT means a pipe or other conduit composed of factory-made components, containing a passageway for conveying combustion products and air to the atmosphere, listed and labeled for use with a specific type or class of appliance.

VENT CONNECTOR means the pipe that connects an approved fuel-fired appliance to a vent.

WATER HEATER, COMBINATION means a potable water heater: the heat source for which may be fired, electric, thermal, solar, or indirect; that is listed for the use of producing both space heat and potable hot water; and that does not exceed 210 degrees F (99 degrees C), maximum allowable working pressure (MAWP) of 160 psig (1103 kPa), volume of 120 gallons (454 L), or a heat input of 200,000 Btu/hr (58.6 kW). Appliances and equipment that exceed any one of these values are classified as boilers.

WATER HEATER, POOL means a potable water heater that is listed for use of heating water for pools, spas, saunas, and similar equipment and that does not exceed 210 degrees F (99 degrees C), maximum allowable working pressure of 160 psig (1103 kPa), volume of 120 gallons (454 L), or a heat input of 200,000 Btu/hr (58.6 kW). Appliances and equipment that exceed any one of these values are classified as boilers.

WATER HEATER, POTABLE. Any listed heating appliance or equipment that heats potable water and supplies such water to the potable hot water distribution system excluding any appliance or equipment that exceeds any of the following:

1. An operating temperature of 210 degrees F (99 degrees C);
2. A maximum allowable working pressure of 160 pounds per square inch (1103 kPa);
3. A volume of 120 gallons (454 L); or
4. A heat input of 200,000 Btu/hr (58.6 kW).

Any *appliance* or equipment that exceeds any one of these values is classified as a *boiler*.

Section 3 – Applicable Installation Codes, Listings, and Standards

3.1 Required codes. Boilers and pressure vessels installed within The City of Seattle shall conform to this code and the minimum manufacturing standards, including any addenda, in effect on the date of manufacture as listed in subsection 3.1.1 of this code. Where differences occur between the requirements of this code and the codes and standards referenced in subsections 3.1.1.A through 3.1.1.E, the provisions of this code apply.

3.1.1 Applicable codes and standards.

- A. ASME Boiler and Pressure Vessel Code, Sections I, III, IV, VIII, X, and PVHO-1 (construction codes).
- B. The American National Standards Institute (ANSI) B31.1.0 Power Piping Code.
- C. Boilers with burner fuel input ratings of less than 12,500,000 Btu/hour shall comply with the fuel train requirements set forth in ASME CSD-1. Boilers with burner fuel input ratings of 12,500,000 Btu/hour or more shall comply with the fuel train requirements set forth in National Fire Protection Association (NFPA) 85.
- D. Appurtenances that are not within the scope of the ASME construction codes listed in subsection 3.1.1.A may be constructed to a nationally recognized standard of construction approved by the code official.
- E. Jacketed steam kettle vessels that are equal to or greater than 1-1/2 cubic feet in volume (11.22 gallons capacity) shall bear an appropriate ASME certification mark.

3.2 Listing. Appurtenances, such as safety controls, operating controls, burner assemblies, and fuel trains, shall bear the mark of a recognized listing agency or the appropriate certifications as listed by the manufacturer. Appurtenances shall be installed and operated in accordance with the requirements of the listing or the manufacturer's certification and written instructions. Electrical components and wiring shall bear the mark of a recognized listing agency and have a listing appropriate for the environment of the installation.

3.3 Certification mark and registration. Boilers and pressure vessels shall bear the appropriate certification mark required by the ASME Boiler and Pressure Vessel Code, and shall be registered with the National Board.

Exception: Cast iron and cast aluminum sectional boilers, and pressure vessels bearing the ASME "UM" designator, do not require registration with the National Board.

Section 4 – Installation

4.1 Permits required. Except as otherwise specifically provided in this code, the installer shall obtain a boiler/pressure vessel permit from the code official prior to commencement of any of the following work:

1. Installation or replacement of new or used boilers and pressure vessels.
2. Installation of rental boilers.
3. Certification of boilers as Automatic.
4. Certification of boilers as Monitored.
5. Modification of existing control systems on boilers certified as Automatic or Monitored.
6. Replacement or modification of fuel burners, changing of fuels, or addition of different fuel combinations.
7. Repair or alteration of boilers or pressure vessels.
8. Installation of pressure vessels containing lethal substances, regardless of size or occupancy.

9. Potable water heaters and pool heaters that exceed any of the following limits, which are classified as boilers:
 - a. 200,000 BTU/Hr input;
 - b. 120 gallons capacity;
 - c. 160 psig; or
 - d. 210 degrees F.

Informational Note: Seattle Energy Code Section C403.1.4 restricts the use of electric resistance and fossil fuel-fired equipment for HVAC heating in most buildings, and Section C404.2.1 restricts the use of electric resistance and fossil fuel-fired service water heating equipment in Group R-1 and R-2 buildings.

4.2 Exemption from permits. Providing they do not contain lethal substances, the following boilers, pressure vessels, and other equipment do not require a boiler/pressure vessel permit from the code official:

1. Portable unfired pressure vessels that are inspected by the State of Washington as required by chapter 70.79 RCW;
2. Containers for liquefied petroleum gases regulated by the Seattle Fire Code;
3. Any boiler or pressure vessel subject to regular inspection by federal inspectors or licensed by a federal authority, such as the Department of Transportation (DOT);
4. Pressure vessels located in Groups B, F, H, M, R, S, and U Occupancies having a volume of 5 cubic feet or less and operated at pressures not exceeding 250 psig;

Informational Note: Expansion tanks exempted for size by subsection 4.2.4 of this code, shall conform to the requirements of ASME Section IV, HG-709 or HLW-809 applicable edition together with applicable addenda.

5. Unfired pressure vessels, regardless of occupancy, that are:
 - a. less than 1-1/2 cubic feet in volume (11.22 gallons), or
 - b. 6 inches in internal diameter with no limit as to length or pressure;
6. Water storage tanks with no air cushion and no energy or heat source that operate at ambient temperature;
7. Unfired pressure vessels of any size that are protected by approved pressure relief devices set to operate at a pressure not exceeding 15 psig or otherwise open to ambient atmospheric pressure;
8. Boilers and pressure vessels under the direct ownership and operation of the State of Washington that are inspected in accordance with Washington State boiler and pressure vessel rules (chapter 70.79 RCW) and have a current Washington State certificate to operate; and
9. Potable water heaters and pool heaters that do not exceed any of the following limits:
 - a. 200,000 BTU/Hr input;
 - b. 120 gallons capacity;
 - c. 160 psig; or
 - d. 210 degrees F.

Informational Note: Potable water heaters require a plumbing permit issued from Public Health – Seattle and King County.

4.3 Application for permit. To obtain a permit, the installer shall first file an application in a format determined by the code official.

A. Every application shall:

1. Identify and describe the work to be covered by the permit for which application is made;
2. Describe the land on which the proposed work is to be done by legal description, property address, or similar description that will readily identify and definitively locate the proposed building or work;
3. Be accompanied by construction documents and/or specifications in the standard ASME form (Manufacturers' Data Report) when required by the code official;
4. Be signed by the owner of the property or building, or the owner's authorized agent, who may be required to submit evidence to indicate such authority;
5. Include the names, addresses, and phone numbers of the boiler owner, general contractor, and any other contractor or contact persons; and
6. Provide additional data and information, including but not limited to the manufacturer name and serial number, as may be required by the code official.

B. The code official may require that one or more sets of construction documents, including plans, computations, and specifications, be prepared and submitted to the code official. Construction documents shall be submitted to the code official or designee at the time of the first boiler inspection. Nothing shall prevent the code official from requiring the submittal of construction documents prior to the issuance of the permit. Plans and specifications shall be drawn to a clearly indicated and commonly accepted scale in a format determined by the code official. The construction documents shall be sufficiently clear for electronic storage and shall show that the proposed installation conforms to the provisions of this code and all applicable laws, ordinances, rules, regulations, and orders.

4.4 Reserved.

4.5 Emergency repairs. In the case of emergency, the installation or repair of any boiler or pressure vessel or auxiliary equipment may be made without first applying for a permit. The code official shall be given notice by email or voicemail of the work performed within the later of 24 hours or one business day from the time when the emergency work was started. Permit applications shall be submitted within the later of 24 hours or one business day from the start of the emergency work, or as directed by the code official.

4.6 Application review and permit issuance. The application shall be reviewed by the code official or designee. The application may be reviewed by other departments of the City to check compliance with the laws and ordinances under their jurisdiction.

4.6.1 Issuance of permit. The code official shall issue a permit to the applicant if the code official finds the following:

1. The work described in the application, and other construction documents when required by the code official prior to issuance, substantially conforms to the requirements of this code and other pertinent laws and ordinances;
2. The permit fees specified in the Fee Subtitle, SMC Title 22, Subtitle IX, Permit Fees, have been paid; and
3. The applicant has complied with all requirements to be performed prior to issuance of a permit for the work: under other pertinent laws, ordinances, or regulations; included in a master use permit; or otherwise imposed by the code official. When the permit is issued, the applicant or the applicant's authorized agent becomes the permit holder.

4.6.2 **Compliance with approved construction documents.** When the code official issues a permit, the code official shall endorse the permit in writing or in electronic format and, where plans have been required, stamp the plans "APPROVED." Such approved plans and permit shall not be changed, modified, or altered without authorization from the code official, and all work shall be done in accordance with the approved construction documents and permit except as authorized by the code official during a field inspection to correct errors or omissions, or as authorized by subsection 4.6.3 of this code.

4.6.3 **Revisions to the permit.** When changes to the approved work are made during construction, approval of the code official shall be obtained prior to execution. The boiler and pressure vessel inspector may approve minor changes for work not reducing the structural strength or fire and life safety of the structure or the integrity of the boiler or pressure vessel or auxiliary equipment. The inspector shall determine if it is necessary to revise the approved construction documents. If revised plans are required, changes shall be submitted to and approved by the code official, accompanied by fees specified in the Fee Subtitle, SMC Title 22, Subtitle IX, Permit Fees, prior to occupancy. All changes shall conform to the requirements of this code and other pertinent laws and ordinances and other issued permits. Minor changes shall not incur additional fees if these changes do not: (1) add to the general scope of work; (2) change the basic design concept; (3) involve major relocation of equipment, ducts, or pipes; (4) substantially alter approved equipment size; or (5) require extensive re-review of the plans and specifications.

4.6.4 **Cancellation of permit applications.** Applications may be cancelled if no permit is issued by the earlier of the following: (1) 12 months following the date of application; or (2) 60 days after the date of written notice that the permit is ready to be issued. After cancellation, construction documents may be returned to the applicant or destroyed by the code official. The code official shall notify the applicant in writing at least 30 days before the application is cancelled. The notice shall specify a date by which a request for extension must be submitted to avoid cancellation. The date shall be at least two weeks prior to the date on which the application will be cancelled.

4.7 **Validity of permit.** The issuance or granting of a permit or approval of construction documents shall:

1. Not be construed to be a permit for, or an approval of, any violation of any provisions of this code or any other pertinent laws and ordinances;
2. Not prevent the code official from requiring correction of conditions found to be in violation of this code or other pertinent laws and ordinances of the City;

3. Not prevent the code official from requiring the correction of errors in the construction documents or from preventing building operations being carried on thereunder when in violation of this code or of other pertinent laws and ordinances of the City; and
4. Not be construed to extend the period of time for which any such permit is issued or otherwise affect any period of time for compliance specified in any notice or order issued by the code official or other administrative authority requiring the correction of any such conditions.

4.8 Permit Expiration. Authority to do the work authorized by a permit expires 18 months from the date of issuance. An approved renewal extends the life of a permit for an additional 18 months from the prior expiration date. An approved reestablishment extends the duration of the permit for 18 months from the date the permit expired.

Exceptions:

1. Initial permits for major construction projects that require more than 18 months to complete may be issued for a period that provides reasonable time to complete the work, according to an approved construction schedule. The code official may authorize a permit expiration date not to exceed three years from the date of issuance.
2. The code official may issue permits that expire in less than 18 months if the code official determines a shorter period is appropriate to complete the work.

4.9 Renewal of permits. Permits may be renewed, and renewed permits may be further renewed by the code official, if the following conditions are met:

1. Application for renewal is made within the 30-day period immediately preceding the expiration date of the permit;
2. The project has been issued a master use permit, which has not expired; and
3. If the application for renewal is made more than 18 months after the date of mandatory compliance with a new or revised edition of this code, the permit shall not be renewed unless:
 - a. The code official determines that the permit complies, or is modified to comply, with the Seattle Boiler and Pressure Vessel Code in effect on the date of application for renewal; or
 - b. The work authorized by the permit is substantially underway and progressing at a rate approved by the building official. "Substantially underway" means that normally required inspections have been approved for work such as foundations, framing, mechanical, and insulation and finish work is being completed on a continuing basis; or
 - c. Commencement or completion of the work authorized by the permit is delayed by litigation, appeals, strikes, or other causes related to the work authorized by the permit that are beyond the permit holder's control.

4.10 Reestablishment of expired permits. A new permit is required to complete work if a permit has expired and was not renewed.

Exception: A permit that expired less than one year prior to the date of a request for reestablishment may be reestablished without the issuance of a new permit upon approval of the code official if it complies with subsections 4.9.2 and 4.9.3 of this code. Once re-established, the permit will not be

considered to have expired. The new expiration date of a re-established permit shall be determined in accordance with subsection 4.8 of this code.

4.11 Revocation of boiler and pressure vessel permits. Whenever the code official determines there are grounds for revoking a permit, the code official may issue a notice of revocation. The notice of revocation shall identify the reason for the proposed revocation, including, but not limited to, the violations, the conditions violated, and any alleged false or misleading information provided.

4.11.1 Standards for revocation. The code official may revoke a permit if:

1. This code or the permit has been or is being violated and issuance of a notice of violation or stop work order has been or would be ineffective to secure compliance because of circumstances related to the violation; or
2. The permit was obtained with false or misleading information.

4.11.2 Service of notice of revocation. The notice of revocation shall be served upon the owner, agent, or other responsible person by personal service or regular first class mail addressed to the last known address of such person, or if no address is available after reasonable inquiry, the notice may be posted in a conspicuous place on the premises. The notice may also be posted if served by personal service or first-class mail.

4.11.3 Effective date of revocation. The code official shall identify in the notice of revocation a date certain on which the revocation will take effect. This date may be stayed pending complete review by the code official pursuant to subsection 4.11.4 of this code.

4.11.4 Review by the code official for notice of revocation. Any person aggrieved by a notice of revocation may obtain a review by making a request in writing to the code official within three business days of the date of service of the notice of revocation. The review shall occur within five business days after receipt by the building official of the request for review. Any person affected by the notice of revocation may submit additional information to the building official for consideration as part of the review at any time prior to the review.

A. Review procedure. The review will be made by a representative of the code official who will review all additional information received and may also request a site visit. After the review, the code official may:

1. Sustain the notice of revocation and affirm or modify the date the revocation will take effect;
2. Withdraw the notice of revocation;
3. Modify the notice of revocation and affirm or modify the date the revocation will take effect; or
4. Continue the review to a date certain.

B. Order of revocation of permit. The code official shall issue an order containing the decision within ten days after the review is completed and shall cause the same to be sent by regular first-class mail to the person or persons requesting the review, any other person on whom the notice of revocation was served, and any other person who requested a copy before issuance of the order. The order of the building official is the final order of the City, and the City and all parties shall be bound by the order.

4.12 Fees. A fee for each boiler and pressure vessel permit and for other activities related to the enforcement of this code shall be paid as set forth in the Fee Subtitle, Seattle Municipal Code, Title 22, Subtitle IX, Permit Fees. The permit fee covers the cost of the inspection to verify that the installation has been completed in accordance with the permit.

4.13 Inspections: General.

4.13.1 Inspection of work. Boilers and pressure vessels for which a permit is required by this code shall be subject to inspection by the code official.

4.13.2 Approval in error. Approval resulting from an inspection shall not be construed to be an approval of a violation of this code or of other ordinances of the City. Inspections presuming to give authority to violate or cancel the provisions of this code or of other ordinances of the City shall not be valid.

4.13.3 Inspector qualifications. City-employed inspectors holding a current Inservice Inspector (IS) Commission issued by the National Board shall conduct the required inspections and use the current edition of the National Board Inspection Code (NBIC), Part 1, as a guide for conducting the inspection. When differences occur between the requirements of this code and other codes and standards, this code shall apply.

Informational Note: The NBIC provides standards for the installation, inspection, and repair and/or alteration of boilers, pressure vessels, and pressure relief devices.

4.13.4 Responsibility for inspection requests. It is the duty of the installer to notify the code official that work requiring inspection as specified in subsection 4.13.1 is ready for inspection.

4.13.5 Access for inspection. The permit holder and the person requesting any inspections required by this code shall provide access to and means for proper inspection of such work. The work shall remain accessible and exposed for inspection purposes. Neither the code official nor the City shall be liable for expenses incurred in the removal or replacement of any material impeding the access necessary to perform required inspections.

4.13.6 Posting permit. The permit holder or permit holder's agent shall post the permit in a conspicuous place on the premises as directed by the code official.

4.13.7 Approvals required. No work shall be done on any part of the building or structure beyond the point indicated in each successive inspection without first obtaining the written approval of the code official.

4.13.8 Testing of equipment and systems. The code official may require testing of equipment and systems as part of permit inspections.

4.13.9 Inspections required. The installation of boilers and pressure vessels must be inspected. The following inspections may be required by the code official:

A. Special investigation inspection. If work that requires a permit or approval is commenced or performed prior to making formal application and receiving the code official's permission to

proceed, the code official may make a special investigation inspection before a permit is issued for the work. If a special investigation inspection is made, a special investigation fee may be assessed in accordance with the Fee Subtitle, SMC Title 22, Subtitle IX, Permit Fees.

- B. Pre-installation inspection.** When the owner or the owner's authorized representative requests inspection of a boiler prior to its installation, the code official shall make the inspection. Any additional inspection outside the scope of the permit may be subject to additional fees in accordance with Fee Subtitle, SMC Title 22, Subtitle IX, Permit Fees.
- C. Final inspection.** When the installation of a boiler or pressure vessel or its auxiliary equipment or related system is complete, a final inspection shall be performed approving the boiler, pressure vessel, auxiliary equipment, or related system as ready for service.
- D. Reinspection.** The code official may require a reinspection if:
 - 1. Work for which inspection is requested is not complete;
 - 2. Required corrections called for are not made;
 - 3. The permit record is not properly posted on the work site;
 - 4. The approved plans are not readily available to the inspector;
 - 5. Deviations from construction documents that require the approval of the code official have been made without proper approval;
 - 6. Access is not provided on the date requested for the inspection; or
 - 7. Other unforeseen hazards are identified by the code official.

4.13.10 **Reinspection fees.** The code official may assess a reinspection fee as set forth in the Fee Subtitle, SMC Title 22, Subtitle IX, Permit Fees, for reinspection. In instances where reinspection fees have been assessed, no additional inspection of the work will be performed until the required fees are paid.

4.14 Requirements for new installations.

- A. On-site.** The code official shall require:
 - 1. Boiler installations to have equipment controls set, adjusted, and tested by the installing contractor upon completion.
 - 2. The following documentation to be on site and available to the inspector upon request:
 - a. the boiler/pressure vessel permit issued by the code official;
 - b. National Board or ASME Data Report(s); and
 - c. the manufacturer's installation and operation instructions.
 - 3. Tests deemed necessary to determine that the installation complies with the provisions of this code. Such tests shall be made in the presence of the code official.
 - 4. Access to, and the means for, safe inspection of the installation.

4.15 **Testing rental and used boilers.** Rental boilers and used boilers are subject to hydrostatic testing, non-destructive testing, or other special testing as may be required by the code official.

4.16 Combustion air. Combustion air shall be provided in accordance with Chapter 7 of the Seattle Mechanical Code.

4.17 Venting. Venting of combustion byproducts shall be in accordance with Chapter 8 of the Seattle Mechanical Code. Gas-fired appliances shall be vented in accordance with Chapter 5 of the Seattle Fuel Gas Code. Stack dampers on boilers fired with oil or solid fuel shall not close off more than 80 percent of the stack area when closed. Operative dampers shall not be placed within any stack, flue, or vent of a gas-fired boiler, unless the boiler is fired automatically and is equipped with pre-purge, automatic draft control, and draft interlock.

4.18 Controls, safety devices, and instrumentation. Required electrical, mechanical, safety, and operating controls shall carry approval of an approved testing agency. Electrical controls shall be of such design and construction as to be suitable for installation in the environment in which they are located.

4.18.1 Valves. No valve shall be placed between a safety device and the boiler or pressure vessel.

4.18.2 Burners.

- A. All burners shall be listed by a nationally recognized testing agency. Burners that are integral parts of boilers shall be listed as part of the overall boiler/burner assembly.
- B. Burners capable of burning two or more fuels and installed on or after June 1, 1987, shall be equipped with a fuel selector switch designed and constructed to prevent switching from one fuel to a different fuel without a physical stop in the center/off position.

4.18.3 Gauges. The following gauges are required and shall be kept in good working condition:

- A. All steam boilers shall be provided with a pressure gauge and a water level glass; and
- B. All water boilers shall be provided with a pressure gauge and a temperature indicator.

4.18.4 Pressure and temperature relief.

A. Overpressure protection. All boilers and pressure vessels shall be protected from excess pressure as specified in the applicable ASME Code Section or recognized standard. Pressure relief devices shall be installed per the applicable ASME Code Section or the manufacturer's requirements, subject to the following additional requirements:

1. Safety relief valves. Safety relief valves on boilers and pressure vessels shall be sized in accordance with the manufacturer's instructions or as approved by the code official.
2. Discharged liquid. The discharge from liquid relief valves shall be piped to within 18 inches of the floor to an open receptacle or floor drain. If the discharged liquid has the potential to exceed 140 degrees F, the discharge shall be cooled prior to entering a drainage system in accordance with the requirements found in the Chapter 8 of the Seattle Plumbing Code.
3. Safety valve discharge. Safety valve discharge from boilers and pressure vessels containing steam shall be directed upward to a minimum of 6 feet above the boiler room floor or horizontally to an inaccessible area of the boiler room. If the discharge from safety valves would result in a hazardous discharge of steam inside the boiler room, or if the discharge of safety valves on boilers exceeds the capacity of 1,000 pounds of steam per hour, the steam discharge

shall be extended outside the boiler room to a safe location. No valve shall be placed on the discharge pipe between the safety relief valve and the atmosphere.

4.18.5 **Emergency shutdown switch.** Automatically fired boilers exceeding 400,000 BTU/Hr input, or 400,000 BTU/Hr combined capacity in multiple boiler installations, including electric boilers exceeding 117KW, shall have an emergency shut down switch installed outside the boiler room, or in another location approved by the code official. If there is more than one door to the boiler room, there shall be a switch located at each door. The switch shall allow shutdown of all boilers in the boiler room without having to enter the boiler room. The emergency shutdown switch shall be suitable for the intended use and marked for easy identification.

4.18.6 **Low-water cutoff or flow-sensing devices.**

- A. For low-pressure water boilers.** Low-pressure water boilers shall be equipped with a manual reset type low-water cutoff device.
1. Low-water cutoff devices shall be mounted so that activation of the device does not damage the boiler or reset the device.
 2. Low-water cutoff devices shall be capable of being tested without draining the boiler system.
 3. Manually operated and power-actuated isolation valves between the low-water cutoff device and the boiler are prohibited.
 4. Delay functions incorporated in any low-water cut-off device requires pre-approval by the code official. Delay functions shall be installed in accordance with the manufacturer's instructions.
 5. In installations where two or more low-water cutoff devices are installed, the cutoffs shall be separately piped where feasible.
- B. For forced circulation boilers.** Boilers that require forced circulation to prevent overheating shall have a flow-sensing device installed in lieu of, or in addition to, the low-water cutoff device.
1. Flow-sensing devices shall be mounted so that activation of the device does not damage the boiler or reset the device.
 2. Flow sensing devices shall be testable without draining the boiler system.
 3. Delay functions incorporated in any flow-sensing device require pre-approval by the code official. Approved delay functions shall be installed in accordance with the manufacturer's instructions.
- C. For steam and power hot-water boilers.** Every steam or power hot-water boiler shall be equipped with two low-water cutoff devices. The lower of the two cutoffs shall be equipped with a manual reset device. This device shall be so located as to automatically cut off the fuel supply before the surface of the water falls below the lowest visible part of the water gauge glass.
1. The manual reset device shall be mounted so that activation of the device does not damage the boiler or reset the device.
 2. The manual reset device shall be testable without draining the boiler system.
 3. Manually operated and power-actuated isolation valves between the low-water cutoff device and the boiler are prohibited.

4. Delay functions incorporated in any low-water cut-off device requires pre-approval by the code official. Approved delay functions shall be installed in accordance with the manufacturer's instructions.
5. In installations where two or more low-water cutoff devices are installed, the cutoffs shall be separately piped where feasible.

Exceptions to subsections 4.18.6.A through 4.18.6.C:

1. Manually fired water and steam boilers.
2. Hot water supply boilers, such as those bearing the ASME "HLW" designator, that are directly connected to and pressurized by the public water supply.

4.18.7 Additional required devices.

- A. Temperature control.** Water and liquid boilers shall be equipped with two temperature controls, one of which shall have a manual reset device.
- B. Pressure control.** Steam and vapor boilers shall be equipped with two pressure controls, one of which shall have a manual reset device.
- C. Automatic water feeding devices.** All steam, vapor, and water boilers shall be equipped with an automatic water feeding device. For steam boilers and boilers having an operating water level, the water feeder shall be controlled by the actual water level in the boiler.

Exception: Manually operated boilers that have a qualified person in constant attendance of the boiler while it is in operation to ensure adequate water feed.

- D. Blow-off tank.** All steam boilers shall be equipped with a blow-off tank fabricated in accordance with the National Board Blow-off Equipment Standard NB-27. Blow-off tanks shall collect and temper water and steam discharged from safety relief valves and, as applicable, from blow-off and blowdown effluent and low-water fuel cut-off drains. Effluent shall not exceed 140 degrees F prior to entering building drains. (See Seattle Plumbing Code).

Exception: An alternative means for safe discharge may be approved by the code official.

- E. Expansion tanks.** All closed hot water heating systems shall be provided with an expansion tank. Expansion tanks shall be fabricated to ASME Section IV, HG-709 or HLW-809, as applicable. Expansion tanks shall be sized appropriately and securely fastened to supports that are adequate to support twice the weight of the tank filled with water without placing strain on connecting piping.
- F. Manual reset devices.** Mechanically fired boilers which require manual ignition or lighting of the burner shall have a manual reset device to prevent automatic recycling in the event of any shut down.
- G. Energy management systems.** Energy management systems shall not have the ability to override safety devices required by this code. Such systems may only connect to a boiler control system at points provided by the manufacturer for such use.

4.19 Location of boilers and pressure vessels.

4.19.1 **Clearance requirements.** When boilers and pressure vessels are installed or replaced, clearance shall be provided to allow access for safe operation, inspection, maintenance, and repair. Passageways around all sides of boilers and pressure vessels shall have an unobstructed width of not less than 18 inches. Clearance for repair and cleaning may be provided through a door or access panel into another area, provided the opening is of sufficient size.

Exception: When approved by the code official, boilers and pressure vessels may be installed with a side clearance of less than 18 inches provided that the lesser clearance does not inhibit inspection, maintenance, or repair or violate the terms of the listing or the manufacturer's installation instructions.

- A. Power boilers having a steam generating capacity in excess of 5,000 pounds per hour or having a heating surface in excess of 1,000 square feet or inputs in excess of 5,000,000 Btu/h shall have a minimum clearance of 7 feet from the top of the boiler to the ceiling.
- B. The following shall have a minimum clearance of 3 feet from the top of the boiler to the ceiling:
 - 1. Steam heating boilers and hot water heating boilers that exceed one of the following limits: 5,000,000 Btu/h input, 5,000 pounds steam-per-hour capacity, or 1,000 square-foot heating surface;
 - 2. Power boilers that do not exceed: 5,000,000 Btu/h input, 5,000 pounds steam-per-hour capacity, or 1,000-square-foot heating surface; and
 - 3. All boilers with manholes on top of the boiler, except those described in subsection A of this subsection 4.19.1.
- C. Package boilers, steam heating boilers, and hot-water heating boilers with no manhole on top of shell and not exceeding one of the limits contained in subsection 4.19.1.B shall have a minimum clearance of 2 feet from the ceiling.
- D. Manhole openings shall have a minimum clearance of 5 feet from any outside obstruction.

4.19.2 **Underground installations.** Boilers and pressure vessels installed underground shall be enclosed in a concrete or masonry pit. A covered pit shall be equipped with a removable cover so that adequate inspection can be made. Requirements for clearances shall be the same as subsection 4.19.1 of this code.

4.19.3 Boiler rooms.

- A. Construction.** Boiler rooms shall be constructed in accordance with the current edition of the Seattle Building or Residential Code. Equipment shall be mounted to adequately support the vessel and its contents and keep the equipment level and safely anchored to prevent unwanted movement and damage due to vibration. Floors shall be of noncombustible materials or listed as appropriate for the equipment being mounted. Floors shall have an adequate drain system or legal method of catching and holding liquid wastes incidental to cleaning, recharging, or discharging of safety relief valves.
- B. Access platform.** Platforms to conduct maintenance and inspection shall be provided to allow safe access and egress to each boiler or pressure vessel.

4.19.4 **Garage or warehouse locations.** Boilers and pressure vessels installed in garages, warehouses, or other locations where damage from moving vehicles is possible shall be protected with barriers or shall be elevated or located outside the path of vehicles. Boilers, if fuel-fired and installed in garages, shall be at least 18 inches above the floor level. (See Seattle Mechanical Code Section 304.)

Exception: Boilers and pressure vessels installed within a garage may be enclosed in a separate approved compartment having access only from outside the garage if the required combustion air is taken from and discharged to the exterior of the garage.

4.20 Pressure reducing valves.

4.20.1. **Limiting equipment pressure.** All the equipment downstream of the boiler or pressure vessel shall:

- A. Meet the pressure requirements for the MAWP of the boiler or pressure vessel; or
- B. Have a pressure reducing system that includes:
 - 1. Safety relief valves. The low-pressure side of the pressure reducing valve shall be protected by one or more safety valves having adequate volume capacity and a set pressure not to exceed the MAWP of equipment or piping installed downstream of the pressure reducing valve;
 - 2. Pressure gauges. Pressure gauges shall be installed on the high and low pressure sides of the pressure reducing valve;
 - 3. Venting. Proper protection shall be provided to prevent injury or damage caused by the discharge of the safety relief valves when vented to the atmosphere; and
 - 4. Bypass valves. The use of a hand-controlled bypass around the reducing valves is allowed. The capacity of the bypass valve shall not exceed the capacity of the reducing valve.

4.21 Fuel piping

4.21.1. **Manual shutoff valves.** An approved manual shutoff valve shall be installed upstream of all control devices on the main burner of a gas-fired boiler. The takeoff point for the gas supply to the pilot shall be valved separately and be upstream of the gas shutoff valve for the main burner. A union or other approved means of disconnect shall be provided immediately downstream from these shutoff valves.

4.21.2. **Gas pressure regulators.** An approved gas-pressure regulator shall be installed on gas-fired boilers if the gas supply pressure is higher than that at which the main burner is designed to operate. A separate approved gas-pressure regulator shall be installed to regulate the gas pressure to any pilot.

Exceptions: A separate regulator is not required if the pilot:

- 1. Is part of a manufacturer-assembled boiler-burner unit approved by the code official;
- 2. Serves a gas-fired boiler in Group R Occupancies of less than six units; or
- 3. Serves a gas-fired boiler in Group U Occupancies.

4.21.3 **Code compliant.** Fuel piping installation shall comply with the provisions of the current edition of the Seattle Fuel Gas Code.

4.22 Steam and hydronic piping. Steam and hydronic piping systems that are part of a boiler or heating system shall comply with the requirements of the Seattle Mechanical Code, Chapter 12, Hydronic Piping, and the requirements of this code. When piping falls outside the scope of the applicable sections of the above codes, a standard approved by the code official may be used.

4.22.1 Materials and construction.

A. Quality. All piping, tubing, valves, joints, fittings, devices, and materials shall be free of defects and shall comply with nationally recognized standards of construction listed in Section 3 of this code or as approved by the code official.

B. Prohibited. Galvanized piping and fittings are prohibited.

4.23 Elevator machine rooms/spaces and hoistways. No pipes conveying gases, vapors, or liquids that are not specifically used in the operation of the elevator shall be installed in any elevator hoistway, machine room, or machinery space.

4.24 Alarms. Alarms such as CO detectors, smoke detectors, CO2 detectors, or other alarms required by this code or other codes are subject to inspection by the code official. Alarms shall be properly maintained and, upon request by the code official, shall be demonstrated to be in good working order.

4.25 Boilers certified as automatic. The Seattle Steam Engineer and Boiler Operator License Code, SMC Chapter 6.420, provides for reduced attendance requirements for boilers that are certified as automatic. Boilers certified as automatic are required to have the following:

1. Control and limit devices as set forth in Table 4.25 or as certified by the manufacturer if approved by the code official to be equivalent.
2. Feed water systems not requiring manual operation.
3. Stack temperature gauges.
4. Oil temperature and oil suction pressure gauges and/or high and low gas pressure gauges, as applicable.
5. The original equipment manufacturer's operating and installation manual, together with electrical schematics or diagrams.
6. Boilers 12.5 MM BTU/H and greater. All boilers certified as automatic of 12,500,000 Btu/h input and greater shall also comply with the installation requirements of the current edition of NFPA 85, Boiler and Combustion Systems Hazards Code.
7. Solid fuel boilers. The code official may approve solid-fuel-fired boilers that meet the safety requirements for automatic gas- or oil-fired boilers.

Table 4.25-A
(Part 1 of 2)

Boiler Group	Fuel	Fuel Input ¹ Range in BTU/hr. (inclusive)	Type of Pilot ²	Safety Control Timing (in seconds unless otherwise indicated)			Assured Fuel Supply Control ⁴	Assured Fuel Supply Control ⁵	
				Trial for Pilot	Trial for Main Burner Flame				Main Burner Flame Failure ³
					Direct Electric Ignition	Flame Pilot			
A	Gas	0 – 400,000	Any type	90	Not required	90	90	Not required	Required
B	Gas	400,001 – 2,500,000	Any type	15	15	15	2 – 4	Not required	Required

Footnotes for Table 4.25, Parts 1 and 2.

1. Fuel input shall be determined by one of the following:
 - (a) The maximum burner input as shown on the burner nameplate or as otherwise identified by the manufacturer.
 - (b) The nominal boiler rating, as determined by the code official, plus 25 percent.
 - (c) A permanently affixed meter to indicate fuel consumption, timed to determine the rate of fuel input.
2. Automatic boilers shall have one flame failure device on each burner which shall prove the presence of a suitable ignition source at the point where it will reliably ignite the main burner, except that boiler groups A, B, E, F, and G which are equipped with direct electric ignition shall monitor the main burner, and all boiler groups using interrupted pilots shall monitor only the main burner after the prescribed limited trial and ignition periods. Continuous pilots used in boiler groups A and B shall accomplish 100 percent shutoff upon pilot flame failure. Intermittent pilots may be used in group C for atmospheric burners only, provided the input per combustion chamber does not exceed 5,000,000 Btu/h and modulating or high-low firing is not employed.
3. Continuous pilots provided on manufacturer assembled boiler-burner units must be tested by an approved agency complying with nationally recognized standards and approved by the code official.
4. Boiler groups C and D shall have controls interlocked to accomplish a non-recycling fuel shutoff upon detecting high or low gas pressure. Boiler groups F, G, and H using steam or air for fuel atomization shall have controls interlocked to accomplish a non-recycling fuel shutoff upon detecting low atomizing steam or air pressure. Boiler groups F, G, and H equipped with a preheated oil system shall have controls interlocked to provide fuel shutoff upon detecting low oil temperature.
5. Automatic boilers shall have controls interlocked to shut off the fuel supply in the event of draft failure if forced or induced draft fans are used or, in the event of low combustion air flow, if a gas power burner is used. In boiler groups C, D, G, and H failure to prove the air flow required shall result in a safety shutdown. Where a single motor directly driving both the fan and the oil pump is used, a separate control is not required.
6. Boiler groups C, D, G, and H, when firing in excess of 400,000 Btu per combustion chamber, shall be provided with low fire start of its main burner system to permit smooth light-off. This will normally be a rate of approximately one-third of its maximum firing rate.
7. Boiler groups B, C, D, G, and H shall not permit pilot or main burner trial for ignition operation before a purging operation of sufficient duration to allow a minimum of four complete air changes through the furnace, including combustion chamber and the boiler passes. Where this is not readily determinable, five complete air changes of the

furnace, including combustion chamber up to the first pass, are considered equivalent. An atmospheric gas burner with no mechanical means of creating air movement or an oil burner which obtains two-thirds or more of the air required for combustion without mechanical means of creating air movement shall not require purge by means of four air changes so long as its secondary air openings are not provided with means of closing. If such burners have means of closing secondary air openings, a time delay shall be provided which puts these closures in a normally open position for four minutes before attempting ignition. An installation with a trapped combustion chamber shall always be provided with a mechanical means of creating air movement for purging. Purge air flow in boiler groups C, D, G, and H shall be proved. Proof of purge air flow may be accomplished by providing:

- (1) Air pressure and "open damper" interlocks for all dampers in the flow path, or
- (2) Air flow interlock.

8. Shall comply with subsection 4.18 of this code.
9. Shall comply with subsection 4.18 of this code.
10. Automatic boilers firing gas or using gas pilots shall be equipped with an approved safety shutoff valve(s) in the main gas burner supply line or pilot gas burner supply line. The safety shutoff valve(s) shall be interlocked to the required programming control devices. Boilers in group C having an input per combustion chamber which does not exceed 5,000,000 Btu/h shall have two safety shutoff valves in series or one safety shutoff valve of the type incorporating a valve seal over travel interlock. Boilers in group C having an input per combustion chamber exceeding 5,000,000 Btu/h and boilers in group D shall have two safety shutoff valves in series and the downstream valve shall be of the type incorporating a valve seal over travel interlock. Boilers in groups C and D using gas in excess of one-half pound per square inch (1/2 lb/in²) pressure shall be provided with a permanent and ready means for making periodic tightness checks of the main fuel safety shutoff valves. Boilers in group D shall have a normally open electrically operated valve in a vent line between the two safety shutoff valves. This vent shall be sized in accordance with an approved vent sizing table but shall not be less than three-quarters (3/4) inch pipe size. On oil burners where the safety shutoff valve will be subjected to pressures in excess of 10 psig, a second safety shutoff valve shall be provided in series with the first. In boiler group H where a second safety shutoff valve is required, the upstream valve shall be of the 3-way bypass or recirculating type.
11. Control and limit device systems shall be grounded with operating voltage not to exceed 150 volts, except that upon approval by the code official, existing control equipment to be reused in an altered boiler control system may use 220-volt single phase with one side grounded, provided such voltage is used for all controls. Control and limit devices shall interrupt the ungrounded side of the circuit. A readily accessible means of manually disconnecting the control circuit shall be provided with controls arranged so that when they are de-energized the burner shall be inoperative.

4.26 Boilers certified as monitored. Boilers certified as monitored shall comply with the reduced attendance requirements allowed by the Seattle Steam Engineer and Boiler Operator License Code, SMC Chapter 6.420. The boiler owner or lessee is responsible for compliance with this subsection 4.26.

4.26.1 Definitions related to monitored boiler systems. For the purposes of this subsection 4.26, certain terms, phrases, words, and their derivatives shall be defined as follows:

CENTRAL STATION AGENCY means a 'Class A' Central Station Agency as defined and approved by the Seattle Fire Department.

MONITORING SYSTEM means a protective alarm signaling system used for surveillance of controls and limit devices required on certain automatic boilers.

ON-SITE MONITORED SYSTEM means a monitoring system with constant supervision by competent and experienced personnel in a central supervising station located on the site where the boiler is installed. The system includes equipment and facilities required to allow the boiler and monitoring system operators to test and operate the system and, upon receipt of a signal, to take responsive action.

SIGNALING SYSTEMS means electrically operated circuits, instruments, and devices, together with the necessary electrical energy designed to transmit alarms and trouble signals to the monitoring system operators to effectively monitor boilers.

4.26.2 Approval of monitoring systems.

- A. Status.** Monitored boiler status is available only to boilers certified by the code official as automatic boilers.
- B. Acceptance tests.** Upon completion of system installation, a satisfactory test of the entire installation shall be made in the presence of the City inspector. It shall be the responsibility of the applicant to demonstrate the operation and reliability of the monitoring system during the test of the equipment. The City inspector may require additional tests if deemed necessary for the operation and proper maintenance of the monitoring system and the boiler plant served by such system.
- C. Inspection.** An inspection by a City inspector may be conducted annually for certification renewal.
- D. Listing required.** All monitoring system devices shall be listed and labeled by a nationally recognized testing agency.

4.26.3 Signals, personnel, and reporting.

A. Required signals. The following signals are required:

1. Low water level;
2. Flame failure; and
3. Steam pressure at the upper limit setting on steam boilers or water temperature at the upper limit setting on hot water boilers.

Upon sensing any of the above conditions, a signal shall be sent to the monitoring system. The monitoring system shall send a signal if existing limit controls and flame failure devices have caused the boiler to shut down.

- B. Monitoring system personnel.** The monitoring station shall have sufficient personnel on duty to assure immediate attention to all signals received.
- C. Report availability.** Reports of all signals received by the monitoring station shall be made available when requested by the code official and as required in this subsection 4.26.3.
- D. Disposition of signals.** Upon receipt of a signal pertaining solely to matters of equipment maintenance of the signaling systems, the monitoring station operating company shall:
 - 1. Notify the property owner when the function of the signaling system is interrupted and is not corrected within 12 hours;
 - 2. Notify the on-site designated point of contact as soon as possible; and
 - 3. Notify the code official upon receipt of a signal not caused by routine inspection and maintenance.
- E. Procedures to be available.** Procedures for responding to signals shall be readily available to the on-site designated point of contact and shall include procedures for notifying the boiler supervisor and the code official.
- F. Maintenance and repair of monitoring equipment.**
 - 1. The monitoring station operating company shall have a person available within two-hours' travel who is competent to inspect, maintain, and repair the monitoring equipment.
 - 2. All monitoring station systems shall be under the supervision of qualified persons. These persons shall cause proper tests and inspection to be made at prescribed intervals and shall have general charge of all alterations and additions to the monitoring system under their supervision or a satisfactory agreement on the maintenance, operation and efficiency of the system shall be provided.

Section 5 – In-service inspections for existing installations

5.1 Duty to inspect. The code official shall inspect or have inspected all boilers and pressure vessels and listed potable water heaters. After satisfactory completion of inspections and upon receipt of fees as set forth in the Fee Subtitle, SMC Title 22, Subtitle IX, Permit Fees, the code official shall issue a Certificate of Inspection. Inspectors conducting in-service inspections must have current IS Commissions issued by the National Board. Inspectors are required to be either City inspectors or insurance company inspectors.

5.2 In-service inspection. In-service inspections are conducted in accordance with the current edition of the NBIC, Part 2. The code official shall keep a complete record of the type, dimensions, maximum allowable working pressure, age, condition, location, and date of the last recorded internal and external inspections of all boilers and pressure vessels regulated by this code.

5.2.1 Exemptions from in-service inspection. The following boilers, pressure vessels, and other equipment shall not be required to comply with in-service inspection requirements, provided that they do not contain lethal substances:

- 1. Portable.** Portable unfired pressure vessels subject to regular inspection by the State of Washington (chapter 70.79 RCW).

2. **LPG containers.** Containers for liquefied petroleum gases regulated by the Seattle Fire Code.
3. **Specific unfired pressure vessels.** Unfired pressure vessels located in Group B, F, H, M, R, S, and U occupancies having a volume of 5 cubic feet or less and operated at pressures not exceeding 250 psig.
4. **Small unfired pressure vessels.** Regardless of occupancy, unfired pressure vessels that are:
 - a. less than 1-1/2 cubic feet in volume (11.22 gallons); or
 - b. 6 inches in internal diameter with no limit as to length or pressure.
5. **Pressure relief protected.** Unfired pressure vessels of any size that are protected by approved pressure relief devices set to operate at a designator pressure not exceeding 15 psig or otherwise open to ambient atmospheric pressure.
6. **DOT inspected.** Any boiler or pressure vessel subject to regular inspection by federal inspectors or licensed by federal authorities, such as DOT.
7. **Certain electric boilers.** Electric boilers that meet all of the following criteria:
 - a. Having a vessel volume not exceeding 1-1/2 cubic feet (11.22 gallons); and
 - b. Having a maximum allowable working pressure of 100 psig; and
 - c. If constructed after June 10, 1994, the boiler was constructed to ASME Boiler and Pressure Vessel Code standards, or listed or otherwise certified by a nationally recognized testing agency or recognized foreign testing laboratory.
8. **Storage tanks.** Water storage tanks with no air cushion and no energy or heat source that operate at ambient temperature.
9. **State Owned.** Boilers and pressure vessels under the direct ownership and operation of the State of Washington, and that are inspected in accordance with Washington State Boiler and Pressure Vessel rules (chapter 70.79 RCW) and in possession of a current Washington State Certificate to Operate.
10. **Group R and U occupancies.** Steam heating boilers, low-pressure hot water heating boilers, hot-water-supply boilers, and pressure vessels in Group R occupancies of less than six units and in Group U occupancies.

5.3 **In-service inspection frequency.** Inspection frequency shall, at a minimum, be as required by this subsection 5.3. At the discretion of the inspector and as warranted by equipment conditions, the internal, external, or ultrasonic (UT) inspection frequency may be increased until the inspector is satisfied that conditions are corrected and that the minimum prescribed frequencies of inspection may resume.

5.3.1 External inspections.

- A. **Boiler inspections.** Boilers are inspected externally annually. All required boiler controls and safety devices are tested during the external inspection to determine that they are operating properly.
- B. **Unfired pressure vessel inspections.** Unfired pressure vessels are inspected externally biennially.
- C. **Potable water heaters and pool heaters.** In Group A, E, and I occupancies, potable water heaters, combination water heaters (fired, electric, thermal, solar, and indirect), and pool heaters shall be inspected externally biennially for safe condition. The safety inspection consists of lifting the safety

relief try-lever to verify free flow of the safety relief valve and of a visual inspection of the exterior of the vessel for leakage or physical damage.

5.3.2 **Internal Inspections.** Boilers are subject to internal inspection as follows:

- A. Annual inspections.** High pressure boilers are inspected internally annually.
- B. Biennial inspections.**
 - 1. Low pressure steam boilers shall be inspected internally at least once every two years.
 - 2. Unfired pressure vessels, when subject to corrosion and where construction allows, are inspected internally at least once every two years. Subject to the discretion of the inspector, an ultrasonic examination of the external side of the pressure vessel may substitute for an internal inspection.
- C. Quadrennial inspections.** Low pressure hot water heating boilers not using corrosion inhibitors are inspected internally at least once every four years.
- D. Discretionary inspections.** Low pressure hot water heating boilers using corrosion inhibitors, glycol, or oil are inspected internally at a frequency determined by the inspector. The inspector shall consider factors including, but not limited to, history of the installation, adequacy of corrosion inhibitors, and tightness of the system.

5.4 **Preparation for Inspection.**

5.4.1 **Boiler preparation.** The owner or user shall prepare a boiler for internal inspection as necessary to allow for a meaningful inspection.

- A. Preparation.** Preparation shall include the following unless directed otherwise by the boiler inspector:
 - 1. Water shall be drained and the boiler thoroughly cleaned.
 - 2. Manhole and handhole plates and wash-out plugs and water column connections shall be removed.
 - 3. Furnace and combustion chambers shall be thoroughly cooled and cleaned.
 - 4. All grates of internally fired boilers shall be removed.
 - 5. Brickwork or refractory shall be removed, if needed, to determine the condition of the boiler headers, furnace, supports, or other parts.
 - 6. Leakage of steam or hot water into the boiler shall be prevented while it is open for inspection.
 - 7. Low water cutout shall be disassembled as necessary to allow for inspection.
 - 8. Compliance with any lock-out or tag-out and confined space entry procedures shall be followed if required by the owner, operator, Occupational Safety and Health Administration rules, Washington Department of Labor and Industries Division of Occupational Safety and Health rules, and other regulations applying to the safety of personnel.
- B. Unprepared.** If a boiler or unfired pressure vessel has not been properly prepared for an internal inspection, the inspector may decline to make the inspection or test. The Certificate of Inspection will be withheld until the owner or user complies with the inspector's requirements. At the

discretion of the inspector, an additional inspection fee may be charged per the Fee Subtitle, SMC Title 22, Subtitle IX, Permit Fees.

5.5 Inspection results – Corrections required. The inspector shall notify the owner or authorized representative of defects and deficiencies. It is the responsibility of the owner to promptly and properly make the corrections required by the inspector. If such corrections are not made, or if the operation of the boiler or pressure vessel is deemed unsafe by the inspector, the Certificate of Inspection for the boiler or pressure vessel may be withheld until the corrections are made.

5.6 Inspection by authorized insurance companies. Inspection of boilers and pressure vessels may be made by employees of an authorized insurance company. Such inspection shall be conducted in accordance with the requirements of this code by persons holding an active IS Commission from the National Board.

5.6.1. Inspector list. Authorized insurance companies must annually notify the code official, in writing, of those inspectors that will be conducting inspections within The City of Seattle. Notification shall include the National Board Commission number and expiration date of the inspectors' current National Board Commission. Notification in writing may be on company letterhead or by email. Authorization is subject to the approval of the code official.

5.6.2. Reports. Authorized insurance inspectors shall make their reports to the code official on forms or as prescribed by the Department.

5.6.3. Suspension of coverage. Authorized insurance inspectors shall immediately notify the code official of any suspension of insurance coverage.

5.6.4. New or discontinued coverage. Authorized insurance companies providing insurance coverage of equipment subject to inspection by the code official shall notify the code official within 30 days of any new insurance in effect or any discontinuance of insurance coverage of that equipment.

5.7 Certificate of inspection. It is unlawful to operate any boiler or pressure vessel without first obtaining a valid Certificate of Inspection from the code official. Certificates of Inspection shall be displayed in a conspicuous place adjacent to the boiler or vessel and a copy placed in the service manual. The Certificate of Inspection shall not be issued until the equipment passes inspection and is approved by the code official. A grace period of no longer than 60 days past the expiration date of a Certificate of Inspection may be granted.

5.8 Removal from service due to dangerous conditions. If the operation of a boiler or pressure vessel is deemed by the code official to constitute an imminent hazard, the pressure on such boiler or pressure vessel shall be relieved and the boiler or pressure vessel shall be secured at the owner's expense. The unsafe boiler or pressure vessel shall not be operated without approval of the code official, who may issue an emergency order pursuant to subsection 1.6.7 of this code.

5.9 Operation of boilers and pressure vessels.

5.9.1. Operation. Boilers and pressure vessels shall be operated and maintained by an appropriately licensed boiler operator as required by the Seattle Steam Engineer and Boiler Operator License Code, SMC Chapter 6.420.

5.9.2. **Maintenance.** Boilers and pressure vessels shall be operated and maintained in a safe condition as required by the code official and in accordance with this code and nationally recognized standards. All safety devices, controls, and appurtenances shall be maintained and cared for throughout the life of the boiler or pressure vessel. When the devices are deemed to be non-functioning, they shall be immediately replaced or repaired, and the vessel made whole and safe to operate.

5.10 **Accidents are required to be reported.** In case of an explosion or other event rendering a boiler or pressure vessel unsafe to return to operation, notice shall be given immediately to the code official. No boiler or unfired pressure vessel nor any parts shall be removed or disturbed before an inspection is made by a city inspector, except as necessary to prevent injury. The code official shall conduct an investigation to determine the cause of the accident and to recommend actions to prevent future occurrences.

Section 6 – Repairs and alterations

6.1 Repairs and alterations of boilers and pressure vessels.

6.1.1. **Pre-approval.** Repairs and alterations to in-service boilers and pressure vessels must be approved by the code official prior to proceeding with the repair or alteration and require a permit.

Exception: Routine repairs, as defined by the NBIC Part 3, Repairs and Alterations, do not require a permit.

6.1.2. **Code compliance.** Repairs or alterations to pressure-retaining portions of the boiler or pressure vessel shall comply with the current edition of this code and the NBIC Part 3, Repairs and Alterations. If there are conflicts between the two codes, this code applies.

6.1.3. **Notification.** The in-service inspector shall be notified of the nature of the repair or alteration and kept apprised of the progress of the work.

6.1.4. **Approval.** The repair inspector shall conduct the final inspection and accept the repair or alteration as satisfactory before the boiler or pressure vessel is returned to service.

Exception: Routine repairs do not require a final inspection.

6.1.5. **Documentation.** Upon completion of the required documentation, the repair organization shall submit a copy to the code official.

Section 7 – Retroactive requirements

7.1 **Retroactive requirements.** The following requirements apply to all boilers and pressure vessels whether new or existing:

1. Every power hot water boiler, other than manually fired, shall be equipped with at least two temperature controls wired in series.
2. Every steam heating boiler, other than manually fired, shall be equipped with at least two pressure controls and a low-water cutoff device.

3. Each temperature or pressure control shall have an independent sensing element.
4. Every mechanically fired boiler that requires manual ignition of the burner shall have a manual reset device to prevent automatic recycling of the ignition in the event of any shut down.

CHAPTER 1

SCOPE AND ADMINISTRATION

Note: Chapter 1 is entirely Seattle amendments to the *International Building Code* and is not underlined.

SECTION 101 TITLE, PURPOSE AND SCOPE

101.1 Title. This subtitle shall be known as the “Seattle Building Code,” may be so cited, and is referred to herein as “this code.”

101.2 Scope. This code applies to the construction and occupancy of any building or structure within the City. *Repair, alteration, change of occupancy, addition to, relocation and maintenance of buildings and structures shall comply with this code as required by the International Existing Building Code.* This code applies to *unsafe* buildings, structures, equipment and premises. See Chapter 32 for regulation of structures located on, over or under public property or a public right-of-way.

Exceptions:

1. Detached one- and two-family *dwelling*s and multiple single-family *dwelling*s (townhouses) not more than three *stories above grade plane* in height with a separate means of egress, and their accessory structures not more than three *stories above grade plane* in height, shall comply with the *International Residential Code*.
2. This code does not apply to public utility towers and poles, mechanical equipment not specifically regulated in this code, construction equipment and structural components thereof, and hydraulic flood control structures.

101.2.1 Existing buildings. The *International Existing Building Code* applies to the *repair, alteration, change of occupancy, addition to, relocation and maintenance of existing buildings*.

101.3 Applicability of City laws. A building permit application shall be considered under applicable City law in effect on the date a valid and fully complete building permit application is submitted or on a date as otherwise required by law.

Exception: For any project for which an associated, unexpired master use permit has been issued, a building permit application shall be considered under the versions of Seattle Municipal Code Title 23, Seattle *Land Use Code*; Seattle Municipal Code Chapter 25.09, Environmentally Critical Areas regulations; and Seattle Municipal Code Chapter 25.09, Tree Protection regulations in effect on the date established by Seattle Municipal Code Section 23.76.026 or 23.76.032.C.1 for consideration of the master use permit, unless that date is later than the date of the complete building permit application. This exception does not apply to a subdivision or short subdivision component of a master use permit.

Note: Applicable City law includes but is not limited to Seattle Municipal Code Title 23, Seattle *Land Use Code*; Seattle Municipal Code Chapter 25.09, Environmentally Critical Areas regulations; Seattle Municipal Code Chapter 25.11, Tree Protection; and Seattle Municipal Code Title 22, Building and Construction Codes.

101.3.1 Complete building permit applications. A building permit application is complete if the *building official* determines it meets the requirements of Sections 106.5.1 through 106.5.10, and the application includes, without limitation, the *construction documents* for the architectural and structural components of the building.

Exception: If the *building official* allows a building permit application to be submitted in phases for portions of a building, each phased portion submittal shall meet the requirements of Sections 106.5.1 through 106.5.7 applicable to the scope of the allowed phased portion, and the building permit application shall be considered complete for the purposes of Section 101.3 on the date the phased portion submittal that includes the structural frame for the entire building is submitted.

101.3.2 Initial tenant improvements. Complete permit applications for the initial tenant *alterations* submitted no later than 18 months after the date of the *approved* final inspection for the building shall be considered under the codes applicable to the permit application for the building in accordance with Section 101.3.

Complete permit applications for initial tenant *alterations* submitted more than 18 months after the date of the *approved* final inspection for the building shall comply with the codes in effect at the time of application.

101.4 Purpose. The purpose of this code is to provide minimum standards to safeguard life or limb, health, property and public welfare by regulating and controlling the design, construction, quality of materials, occupancy, location and maintenance of buildings and structures within the City and certain equipment specifically regulated herein. The purpose of this code is to provide for and promote the health, safety and welfare of the general public, and not to create or otherwise establish or designate any particular class or group of *persons* who will or should be especially protected or benefited by the terms of this code.

SCOPE AND ADMINISTRATION

101.5 Internal consistency. Where in any specific case, different sections of this code specify different materials, methods of construction or other requirements, the most restrictive governs. Where there is a conflict between a general requirement and a specific requirement, the specific requirement governs.

101.6 Referenced codes and standards. The codes and standards referenced in this code are considered part of this code to the extent prescribed by each such reference. If differences occur between provisions of this code and referenced codes and standards, the provisions of this code apply, except that nothing in this code limits the effect of any provision of the Grading Code, Stormwater Code, or Regulations for Environmentally Critical Areas.

101.7 Appendices. Provisions in the appendices of the *International Building Code* do not apply unless specifically adopted.

101.8 Metric units. Wherever in this code there is a conflict between metric units of measurement and U.S. customary units, the U.S. customary units govern.

SECTION 102 UNSAFE BUILDINGS, STRUCTURES OR PREMISES

102.1 Emergency order. Whenever the *building official* finds that any building or structure or premises, or portion thereof is in such a dangerous and *unsafe* condition as to constitute an imminent hazard to life or limb, the *building official* may issue an emergency order. The emergency order may (1) direct that the building, structure or premises, or portion thereof be restored to a safe condition by a date certain; (2) require that the building, structure or premises, or portion thereof, be vacated within a reasonable time to be specified in the order, or in the case of extreme danger, may specify immediate vacation of the building, structure or premises, or portion thereof; or (3) authorize immediate disconnection of the utilities or energy source.

102.1.1 Service of emergency order. The order shall be posted on the premises or personally served on the owner of the building or premises or any *person* responsible for the condition. The order shall specify the time for compliance.

102.1.2 Effect of emergency order. No *person* may occupy a building, structure or premises, or portion thereof, after the date on which the building is required to be vacated until the building, structure or premises, or portion thereof, is restored to a safe condition as required by the order and this code. It is a violation for any *person* to fail to comply with an emergency order issued by the *building official*.

102.2 Hazard correction order. Whenever the *building official* finds that an *unsafe* building, structure or premises exists, the *building official* may issue a hazard correction order specifying the conditions causing the building, structure or premises to be *unsafe* and directing the owner or other *person* responsible for the *unsafe* building, structure or premises to correct the condition by a date certain. In lieu of correction, the owner may submit a report or analysis to the *building official* analyzing said conditions and establishing that the building, structure or premises is, in fact, safe. The *building official* may require that the report or analysis be prepared by a licensed engineer and may require compliance with the *International Existing Building Code*.

102.2.1 Service of hazard correction order. The order shall be served upon the owner, agent or other responsible *person* by personal service or regular first class mail addressed to the last known address of such *person* or if no address is available after reasonable inquiry, the order may be posted in a conspicuous place on the premises. The order may also be posted if served by personal service or first class mail.

102.2.2 Effect of hazard correction order. It is a violation for any *person* to fail to comply with a hazard correction order as specified in this subsection.

SECTION 103 ENFORCEMENT, VIOLATIONS AND PENALTIES

103.1 Violations. It is a violation of this code for any *person* to:

1. Erect, construct, enlarge, *repair*, move, improve, remove, convert, demolish, equip, occupy, inspect or maintain any building or structure, or cause or permit the same to be done, in the City, contrary to or in violation of any of the provisions of this code;
2. Knowingly aid, abet, counsel, encourage, hire, induce or otherwise procure another to violate or fail to comply with this code;
3. Use any material or to install any device, appliance or equipment that does not comply with applicable standards of this code or that has not been approved by the *building official*;
4. Violate or fail to comply with any order issued by the *building official* pursuant to the provisions of this code or with any requirements of this code;

5. Remove, mutilate, destroy or conceal any notice or order issued or posted by the *building official* pursuant to the provisions of this code, or any notice or order issued or posted by the *building official* in response to a natural disaster or other emergency;
6. Conduct work under a permit without requesting an inspection as required by Section 108.

103.2 Notice of violation. If, after investigation, the *building official* determines that standards or requirements of this code have been violated or that orders or requirements have not been complied with, the *building official* may issue a notice of violation upon the owner, agent, or other *person* responsible for the action or condition. The notice of violation shall state the standards or requirements violated, shall state what corrective action, if any, is necessary to comply with the standards or requirements, and shall set a reasonable time for compliance.

103.2.1 Service of notice of violation. The notice shall be served upon the owner, agent or other responsible *person* by personal service or regular first class mail addressed to the last known address of such *person* or if no address is available after reasonable inquiry, the notice may be posted in a conspicuous place on the premises. The notice may also be posted if served by personal service or first class mail. Nothing in this section limits or precludes any action or proceeding to enforce this code, and nothing obligates or requires the *building official* to issue a notice of violation prior to the imposition of civil or criminal penalties.

103.2.2 Review of notice of violation by the building official. Any *person* affected by a notice of violation issued pursuant to Section 103.2 may obtain a review of the notice by making a request in writing to the *building official* within ten days after service of the notice. When the last day of the period computed is a Saturday, Sunday, or city holiday, the period runs until 5 p.m. of the next business day.

103.2.2.1 Review procedure. The review shall occur not less than ten nor more than 20 days after the request is received by the *building official* unless otherwise agreed to by the *person* requesting the review. Any *person* affected by the notice of violation may submit additional information to the *building official*. The review shall be made by a representative of the *building official* who will review any additional information that is submitted and the basis for issuance of the notice of violation. The reviewer may request clarification of the information received and a site visit.

103.2.2.2 Decision. After the review, the *building official* shall:

1. Sustain the notice;
2. Withdraw the notice;
3. Amend the notice; or
4. Continue the review to a date certain.

103.2.2.3 Order. The *building official* shall issue an order containing the decision within 15 days of the date that the review is completed and shall cause the order to be mailed by regular first class mail to the *persons* requesting the review and the *persons* named on the notice of violation, addressed to their last known addresses.

103.3 Stop work orders. The *building official* may issue a stop work order whenever any work is being done contrary to the provisions of this code or contrary to a permit issued by the *building official*, or in the event of dangerous or *unsafe* conditions related to construction or demolition. The stop work order shall identify the violation and may prohibit work or other activity on the site.

103.3.1 Service of stop work order. The *building official* shall serve the stop work order by posting it in a conspicuous place at the site. If posting is not physically possible, the stop work order may be served by personal service or by regular first class mail to the last known address of: the property owner, the *person* doing or causing the work to be done, or the holder of a permit if work is being stopped on a permit. For purposes of this section, service is complete at the time of posting or of personal service, or if mailed, three days after the date of mailing. When the last day of the period so computed is a Saturday, Sunday or City holiday, the period runs until 5 p.m. on the next business day.

103.3.2 Effective date of stop work order. Stop work orders are effective when posted, or if posting is not physically possible, when one of the *persons* identified in Section 103.3.1 is served.

103.3.3 Review of stop work orders by the building official. Any *person* aggrieved by a stop work order may obtain a review of the order by delivering to the *building official* a request in writing within two business days of the date of service of the stop work order.

103.3.3.1 Review procedure. The review shall occur within two business days after receipt by the *building official* of the request for review unless otherwise agreed by the *person* making the request. Any *person* affected by the stop work order may submit additional information to the *building official* for consideration as part of the review at any time prior to the review. The review will be made by a representative of the *building official* who will review all additional information received and may also request a site visit.

103.3.3.2 Decision. After the review, the *building official* may:

1. Sustain the stop work order;

SCOPE AND ADMINISTRATION

2. Withdraw the stop work order;
3. Modify the stop work order; or
4. Continue the review to a date certain.

103.3.3.3 Order. The *building official* shall issue an order containing the decision within two business days after the review is completed and shall cause the order to be sent by regular first class mail to the *person* or *persons* requesting the review, any *person* on whom the stop work order was served, and any other *person* who requested a copy before issuance of the order, addressed to their last known address.

103.4 Occupancy violations. Whenever any building or structure is being occupied contrary to the provisions of this code, the *building official* may order such occupancy discontinued and the building or structure, or portion thereof, vacated by notice.

103.4.1 Service of notice of occupancy violation. The notice of occupancy violation shall be served upon the owner, agent or other responsible *person* by personal service or regular first class mail addressed to the last known address of such *person* or if no address is available after reasonable inquiry, the notice may be posted in a conspicuous place on the premises. The notice may also be posted if served by personal service or first class mail.

103.4.2 Compliance with notice of occupancy violation. Any *person* occupying the building or structure shall discontinue the occupancy by the date specified in the notice of the *building official*, or shall make the building or structure, or portion thereof, comply with the requirements of this code; provided, however, that in the event of an *unsafe* building, Section 102 may apply.

103.5 Civil penalties. Any *person* violating or failing to comply with the provisions of this code shall be subject to a cumulative civil penalty in an amount not to exceed \$500 per day for each violation from the date the violation occurs or begins until compliance is achieved, except that the penalty for violations of Section 3107.4.1 shall be \$1500 per day. In cases where the *building official* has issued a notice of violation, the violation will be deemed to begin, for purposes of determining the number of days of violation, on the date compliance is required by the notice of violation.

103.6 Enforcement in Municipal Court. Civil actions to enforce Title 22 of the Seattle Municipal Code (SMC) shall be brought exclusively in Seattle Municipal Court, except as otherwise required by law or court rule. In any civil action for a penalty, the City has the burden of proving by a preponderance of the evidence that a violation exists or existed; the issuance of a notice of violation or of an order following a review by the *building official* is not itself evidence that a violation exists.

103.7 Judicial review. Because civil actions to enforce Title 22 SMC must be brought exclusively in Seattle Municipal Court pursuant to Section 103.6, orders of the *building official* including Notices of Violation issued under this chapter are not subject to judicial review pursuant to Chapter 36.70C RCW.

103.8 Alternative criminal penalty. Anyone who violates or fails to comply with any notice of violation or order issued by the *building official* pursuant to this code or who removes, mutilates, destroys or conceals a notice issued or posted by the *building official* shall, upon conviction thereof, be punished by a fine of not more than \$5,000 or by imprisonment for not more than 365 days, or by both such fine and imprisonment for each separate violation. Each day's violation shall constitute a separate offense.

103.9 Additional relief. The *building official* may seek legal or equitable relief to enjoin any acts or practices and abate any condition when necessary to achieve compliance.

103.10 Administrative review by the building official. Prior to issuance of the building permit, applicants may request administrative review by the *building official* of decisions or actions pertaining to the administration and enforcement of this code. Requests shall be addressed to the *building official*.

103.11 Administrative review by the Construction Codes Advisory Board. After administrative review by the *building official*, and prior to issuance of the building permit, applicants may request review of decisions or actions pertaining to the application and interpretation of this code by the Construction Codes Advisory Board, except for stop work orders, notices of violations, revocations of permits, and enforcement of Section 3107. The review will be performed by three or more members of the Construction Codes Advisory Board, chosen by the Board Chair. The Chair shall consider the subject of the review and members' expertise when selecting members to conduct a review. The decision of the review panel is advisory only; the final decision is made by the *building official*.

103.12 Recording of notices. The *building official* may record a copy of any order or notice with the Department of Records and Elections of King County.

103.13 Appeal to Superior Court. Final decisions of the Seattle Municipal Court on enforcement actions authorized by Title 22 and this code may be appealed pursuant to the Rules for Appeal of Decisions of Courts of Limited Jurisdiction.

SECTION 104 ORGANIZATION AND DUTIES

104.1 Jurisdiction of Department of Construction and Inspections. The Department of Construction and Inspections is authorized to administer and enforce this code. The Department of Construction and Inspections is under the administrative and operational control of the Director, who is the *building official*.

104.2 Designees. The *building official* may appoint such officers, inspectors, assistants and employees as are authorized from time to time. The *building official* may authorize such employees and other agents as may be necessary to carry out the functions of the *building official*.

104.3 Right of entry. With the consent of the owner or occupier of a building or premises, or pursuant to a lawfully issued warrant, the *building official* may enter a building or premises at any reasonable time to perform the duties imposed by this code.

104.4 Modifications. The *building official* may modify the requirements of this code for individual cases provided the *building official* finds: (1) there are practical difficulties involved in carrying out the provisions of this code; (2) the modification is in conformity with the intent and purpose of this code; and (3) the modification will provide a reasonable level of strength, effectiveness, fire resistance, durability, safety and sanitation when considered together with other safety features of the building or other relevant circumstances. The *building official* may, but is not required to, record the approval of modifications and any relevant information in the files of the *building official* or on the *approved construction documents*.

104.5 Alternate materials, methods of construction and design. This code does not prevent the *use* of any material, design or method of construction not specifically allowed or prohibited by this code, provided the alternate has been approved and its use authorized by the *building official*. The *building official* may approve an alternate, provided the *building official* finds that the proposed alternate complies with the provisions of this code and that the alternate, when considered together with other safety features of the building or other relevant circumstances, will provide at least an equivalent level of strength, effectiveness, fire resistance, durability, safety and sanitation. Certain code alternates have been pre-approved by the *building official* and are identified in this code as numbered code alternates. The *building official* may require that sufficient evidence or proof be submitted to reasonably substantiate any claims regarding the use or suitability of the alternate. The *building official* may, but is not required to, record the approval of code alternates and any relevant information in the files of the *building official* or on the *approved construction documents*.

104.6 Flood hazard areas. The *building official* shall not grant modifications to any provision required in flood hazard areas as established by Section 1612.3 unless a determination has been made that:

1. A showing of good and sufficient cause that the unique characteristics of the size, configuration or topography of the site render the elevation standards of Section 1612 inappropriate.
2. A determination that failure to grant the variance would result in exceptional hardship.
3. A determination that the granting of a variance will not result in increased flood heights, additional threats to public safety, extraordinary public expense, cause fraud on or victimization of the public, or conflict with existing laws or ordinances.
4. A determination that the variance is the minimum necessary to afford relief, considering the flood hazard.
5. Submission to the applicant of written notice specifying the difference between the design flood elevation and the elevation to which the building is to be built, stating that the cost of flood insurance will be commensurate with the increased risk resulting from the reduced floor elevation, and stating that construction below the design flood elevation increases risks to life and property.

104.7 Tests. Whenever there is insufficient evidence of compliance with any of the provisions of this code or evidence that any material or construction does not conform to the requirements of this code, the *building official* may require tests as proof of compliance to be made at no expense to the City. Test methods shall be specified by this code or by other recognized test standards. If there are no recognized and accepted test methods for the proposed alternate, the *building official* shall determine the test procedures. All tests shall be made by an *approved agency*. Reports of such tests shall be retained by the *building official* for the period required for retention of public records.

104.8 Rules of the building official. The *building official* has authority to issue interpretations of this code and to adopt and enforce rules and regulations supplemental to this code as may be deemed necessary in order to clarify the application of the provisions of this code. Such interpretations, rules and regulations shall be in conformity with the intent and purpose of this code.

104.8.1 Procedure. The *building official* shall promulgate, adopt and issue rules according to the procedures specified in the Administrative Code, Chapter 3.02 of the Seattle Municipal Code.

104.9 Liability. Nothing in this code is intended to be nor shall be construed to create or form the basis for any liability on the part of the City, or its officers, employees or agents, for any injury or damage resulting from the failure of a building to conform to the provisions of this code, or by reason or as a consequence of any inspection, notice, order, certificate, permission or

SCOPE AND ADMINISTRATION

approval authorized or issued or done in connection with the implementation or enforcement of this code, or by reason of any action or inaction on the part of the City related in any manner to the enforcement of this code by its officers, employees or agents.

This code shall not be construed to relieve or lessen the responsibility of any *person* owning, operating or controlling any building or structure for any damages to *persons* or property caused by defects, nor shall the Department of Construction and Inspections or the City of Seattle be held to have assumed any such liability by reason of the inspections authorized by this code or any permits or certificates issued under this code.

104.10 Responsibilities of parties.

104.10.1 Responsibility for compliance. Compliance with the requirements of this code is the obligation of the owner of the building, structure, or premises, the duly authorized agent of the owner, and other *persons* responsible for the condition or work, and not of the City or any of its officers, employees or agents.

104.10.2 Responsibilities of registered design professional in responsible charge. It is the responsibility of the *registered design professional in responsible charge* to ensure that the information in the *construction documents* is complete, accurate, and, to the best of the design professional’s knowledge, conforms to the requirements of this code.

104.10.3 Responsibilities of structural engineer in responsible charge. It is the responsibility of the *structural engineer in responsible charge* to:

1. Design the primary structure;

Exception: A licensed engineer other than the *structural engineer in responsible charge* may design the primary structure of single-story metal buildings.

2. Specify design loads, configurations, controlling dimensions, deflection limits and/or other criteria necessary for the design of secondary structural components and sub-systems and the selection of *structurally qualified products*;
3. Determine the adequacy and conformance of the application of the *structurally qualified products* with the design intent of the City-approved *construction documents*;
4. Review for compatibility with the City-approved *construction documents* previously approved by the *building official*, the *deferred submittals* for the primary structural frame and the design and *deferred submittals* for *secondary members* for the following structural elements:

Wood trusses

Prefabricated stair systems

Steel joists

Post-tensioned floor systems

Precast concrete piles

Precast prestressed planks

Curtain wall systems

Precast concrete/masonry wall panels

Major skylight frames

The *building official* may approve additions to, or deletions from this list for specific projects. If there is no *structural engineer in responsible charge* on the project, the architect in responsible charge shall assume these responsibilities.

Note: “*Primary structural frame*” and “*secondary member*” are defined in Chapter 2.

104.10.4 Responsibilities of contractor. It is the responsibility of the contractor to perform all the work in conformance with the City-approved *construction documents*.

104.10.5 Responsibilities of plans examiner. It is the responsibility of the plans examiner to verify that the description of the work in the *construction documents* is substantially complete, and to require corrections where, to the best of the plans examiner’s knowledge, the *construction documents* do not conform to this code or other pertinent laws and ordinances.

104.10.6 Responsibilities of field inspector. It is the responsibility of the field inspector to conduct inspections to verify that the work in progress conforms with the *approved construction documents* and to require corrections where, to the best of the field inspector’s knowledge, the work either does not conform to the *construction documents* or where the work is in violation of this code or other pertinent laws and ordinances.

SECTION 105 CONSTRUCTION CODES ADVISORY BOARD

105.1 Establishment. There is a Construction Codes Advisory Board (“Board”) consisting of 13 voting members, appointed by the Mayor and subject to confirmation by the City Council. The Board membership consists of one representative of each of the following professions or organizations. The representative of a profession need not be a member of the profession but may be a representative of an organization of such professionals.

1. One architect;

2. One structural engineer;
3. One electrical engineer;
4. One heating, refrigeration and air-conditioning engineer;
5. One general contractor;
6. One electrical contractor;
7. One commercial building owner or operator;
8. One apartment building owner or operator;
9. One developer and/or contractor of residential projects;
10. One member of organized labor; and
11. Three members of the general public.

A representative of each of the following departments shall be ex officio, non-voting members of the Board:

1. Seattle Fire Department;
2. Seattle City Light; and
3. Seattle-King County Department of Public Health.

105.2 Duties of Board. The Board shall act in an advisory capacity for all of its duties. The Board shall meet on call either by the *building official* or the Board Chair, subject to timely notice.

105.2.1 Code adoption and amendment. The Board may examine proposed new editions and amendments to the following codes and regulations listed in this section. The Board may make recommendations to the *building official* and to the City Council for adoption and amendment of these codes.

1. Seattle Building Code – Chapter 22.101 SMC.*
2. Seattle Residential Code – Chapter 22.101 SMC.
3. Seattle Mechanical Code – Chapter 22.101 SMC.
4. Seattle Fuel Gas Code – Chapter 22.101 SMC.
5. Seattle Boiler Code – Chapter 22.101 SMC.
6. Seattle Energy Code – Chapter 22.101 SMC.
7. Seattle Electrical Code – Chapter 22.101 SMC.
8. Seattle Plumbing Code – Title 22 SMC, Subtitle V.
9. Seattle Wildland-Urban Interface Code – Chapter 22.101 SMC.
10. Seattle Existing Building Code – Chapter 22.101 SMC.

* SMC is the Seattle Municipal Code.

105.2.2 Review of director's rules. The Board may examine proposed administrative rules relating to the codes and regulations listed above and make recommendations to the *building official*.

105.3 Organization. The Board shall organize, and elect a chair and any other officers as may be established by the Board. The Board may adopt rules of procedure. There shall be a committee of the Board for each code assigned to its review. Committees shall consist of Board members and may include additional members such as other representatives of the general public and professions not specifically represented on the Board. Any non-Board members of committees shall be appointed by the Chair. The Chair may, from time to time, appoint special topic subcommittees.

105.4 Terms of service. Terms of Board members are three years, dating from the day of expiration of the preceding term; provided, a member whose term has expired shall continue to serve until a successor is appointed and confirmed. Terms on the Board shall be staggered so that the terms of not more than five positions expire concurrently. Vacancies shall be filled for any unexpired term in the same manner as the original appointment.

105.5 Removal of Board member. A member may be removed by the Mayor, subject to a majority vote of members of the City Council.

105.6 Compensation of Board members. No member shall receive any compensation for service on the Board.

SECTION 106 BUILDING PERMITS

106.1 Permits required. Except as otherwise specifically provided in this code, a building permit shall be obtained from the *building official* for each building or structure prior to erecting, constructing, enlarging, altering, repairing, moving, improv-

SCOPE AND ADMINISTRATION

ing, removing, changing the occupancy of, or demolishing such building or structure, or allowing the same to be done. All work shall comply with this code, even where no permit is required.

106.2 Work exempt from permit. A building permit is not required for the work listed below. Exemption from the permit requirements of this code does not authorize any work to be done in any manner in violation of this code or any other laws or ordinances of the City.

1. Minor *repairs* or *alterations* if the value of construction, as determined by the *building official*, is \$6,000 or less in any six-month period. Such *repairs* and *alterations* shall not include the removal, reduction, *alteration*, or relocation of any loadbearing support. Egress, light, ventilation, and fire-resistance shall not be reduced without a permit.
2. Minor work including the following, provided no changes are made to the building envelope: patio and concrete slabs on grade, painting or cleaning a building, repointing a chimney, installing kitchen cabinets, paneling or other surface finishes over existing wall and ceiling systems applied in accordance with Chapter 8, insulating *existing buildings*, abatement of hazardous materials, demolition of nonstructural interior tenant improvements in retail and office uses, and in-kind or similar replacement of or *repair* of deteriorated members of a structure.
3. One-story detached accessory buildings used for greenhouse, tool or storage shed, playhouse, or similar uses, if:
 - 3.1. The projected roof area does not exceed 120 square feet; and
 - 3.2. The building is not placed on a concrete foundation other than a slab on grade.
4. Fences not over 8 feet high that do not have masonry or concrete elements above 6 feet.
5. Arbors and other open-framed landscape structures not exceeding 120 square feet in projected area.
6. Display cases, cabinets, counters and partitions not over 5 feet 9 inches high.
7. Retaining walls and rockeries which are not over 4 feet in height measured from the bottom of the footing to the top of the wall, if:
 - 7.1. There is no surcharge or impoundment of Class I, II or III-A liquids.
 - 7.2. The wall or rockery is not located in an Environmentally Critical Area (ECA) or ECA buffer pursuant to Chapter 25.09 of the Seattle Municipal Code;
 - 7.3. Construction does not support soils in a steep slope area, potential landslide area or known slide area as identified in the Seattle Environmentally Critical Areas Ordinance, Section 25.09.030 of the Seattle Municipal Code.
 - 7.4. Possible failure would likely cause no damage to adjoining property or structures.
8. Platforms, walks and driveways not more than 18 inches above grade and not over any basement or *story* below.
9. Temporary motion picture, television and theater stage sets and scenery.
10. Window *awnings* supported by an exterior wall of Group R-3, and Group U occupancies when projecting not more than 54 inches.
11. Prefabricated swimming pools, spas and similar equipment accessory to a Group R-3 occupancy in which the pool walls are entirely above the adjacent grade and if the capacity does not exceed 5,000 gallons.
12. Replacement of siding. This shall not include structural changes, replacement of sheathing or *alterations* to doors and windows. See Energy Code Sections R503.1.1, Exceptions 2 and 3, and C503.1, Exceptions 3 and 4, for requirements for *existing buildings*.
13. Roof recover.
14. Roof replacement under either of the following conditions:
 - 14.1. In one- and two-family *dwellings* and townhouses if no changes are made to the building envelope other than adding or replacing insulation, and the insulation value is equivalent to or better than the *existing structure*; or
 - 14.2. Where less than 500 square feet of roof sheathing or insulation is exposed within any 6 month period. Permits are required for structural changes and replacement of sheathing of any size. See Energy Code Sections R503.1.1, C503.1 and C503.3 for insulation requirements for *existing buildings*.
15. School, park or private playground equipment including tree houses.
16. Removal and/or replacement of underground storage tanks that are subject to regulation by a state or federal agency.

Note: A Fire Department permit is required for removal, replacement and decommissioning of underground storage tanks.

17. Installation of dish and panel antennas 6.56 feet (2 m) or less in diameter or diagonal measurement.
18. Water tanks not located in Environmentally Critical Areas that are supported directly on grade if the capacity is not greater than 5,000 gallons (18 925 L) and the ratio of height to diameter or width is not greater than 2:1.

106.3 Other permits required. Unless otherwise exempted by this or other pertinent codes, separate master use, plumbing, electrical, mechanical and other permits may be required for the above exempted items.

106.4 Flood hazard areas. In addition to the permit required by this section, all work to be performed in areas of special flood hazard, as defined in Seattle Municipal Code Chapter 25.06, are subject to additional standards and requirements, including floodplain development approval or a Floodplain Development License, as set forth in Chapter 25.06, the Seattle Floodplain Development Ordinance.

106.4.1 Determination of substantially improved or substantially damaged existing buildings and structures in flood hazard areas. For applications for reconstruction, rehabilitation, *repair, alteration, addition* or other improvement of *existing buildings* or structures located in *flood hazard areas*, the *building official* shall determine if the proposed work constitutes *substantial improvement* or *repair of substantial damage*. Where the *building official* determines that the proposed work constitutes *substantial improvement* or *repair of substantial damage*, and where required by this code, the *building official* shall require the building to meet the requirements of Section 1612.

106.5 Application for permit. To obtain a permit, the applicant shall first file an application in a format determined by the *building official*. Every such application shall:

1. Identify and describe the work to be covered by the permit for which application is made.
2. Describe the land on which the proposed work is to be done by legal description, property address or similar description that will readily identify and definitely locate the proposed building or work.
3. Provide contractor's business name, address, phone number and current contractor registration number (required if contractor has been selected).
4. Be accompanied by *construction documents*, including plans and other data as required in Section 106.5.2 through 106.5.10.
5. State the valuation of any new building or structure or any *addition, remodeling or alteration* to an *existing building* including cost breakdown between *additions* and *alterations*.
6. Be signed by the owner of the property or building, or the owner's authorized agent, who may be required to submit evidence to indicate such authority.
7. Give such other data and information as may be required by the *building official*, including, but not limited to, master use and shoreline permits and building identification plans.
8. State the name of the owner and contractor and the name, address and phone number, of a contact *person*.
9. Substantially conform with applicable City law in effect on the date described in Section 101.3, as modified by any exception.
10. Applications that include a grading component shall include all information prescribed by the Grading Code and rules adopted thereunder, and all additional information required by the *building official* pursuant to the Grading Code and rules adopted thereunder.

106.5.1 Construction documents. *Construction documents* shall be submitted in two or more sets with each application for a permit, or shall be submitted in electronic format determined by the *building official*. Computations, stress diagrams, shop and fabrication drawings and other data sufficient to show the adequacy of the plans shall be submitted when required by the *building official*.

Exception: The *building official* may waive the submission of *construction documents*, if the *building official* finds that the nature of the work applied for is such that reviewing of *construction documents* is not necessary to obtain compliance with this code.

106.5.2 Preparation by registered design professionals. *Construction documents* for all work shall be prepared and designed by or under the direct supervision of an architect or structural engineer licensed to practice under the laws of the State of Washington. The registered design professional shall apply their seal and signature to each sheet of the construction documents that is within their scope of qualifications before the permit is issued.

Exceptions:

1. *Construction documents* for work not involving structural design are permitted to be prepared by a registered professional engineer or registered architect qualified in the proposed work.
2. When authorized by the *building official*, *construction documents* for assembly line products or designed specialty structural products may be designed by a registered professional engineer.
3. When authorized by the *building official*, *construction documents* need not be prepared by an engineer or architect licensed by the State of Washington for the following:
 - 3.1. Detached one- and two-family *dwelling*s.

SCOPE AND ADMINISTRATION

- 3.2. New buildings or structures, and *additions, alterations* or *repairs* made to them of conventional light frame construction, if the value of construction, as determined by the *building official*, is less than \$75,000.
- 3.3. Nonstructural *alterations* and *repairs* if the value of construction, as determined by the *building official*, is less than \$75,000, excluding the value of electrical and mechanical systems, fixtures, equipment, interior finish and millwork.
- 3.4. Other work as specified in rules promulgated by the *building official*.

106.5.3 Design professional in responsible charge. The *building official* is authorized to require the owner to engage and designate on the building permit application a registered design professional who shall act as the registered design professional in responsible charge. If the circumstances require, the owner shall designate a substitute registered design professional in responsible charge who shall perform the duties required of the original registered design professional in responsible charge. The *building official* shall be notified in writing by the owner if the registered design professional in responsible charge is changed or is unable to continue to perform the duties. The registered design professional in responsible charge is responsible for reviewing and coordinating submittal documents prepared by others, including phased and *deferred submittal* items, for compatibility with the design of the building.

106.5.4 Information required on construction documents. *Construction documents* shall include the following, as applicable:

1. A plot plan showing the width of streets, alleys, yards and courts.
2. The location (and/or location within a building), floor area, *story*, height, type of construction and occupancy classification as defined by the Building Code and use as defined by the *Land Use Code* of the proposed building and of every *existing building* on the property.
3. Where there are more than two buildings located on a property, a building identification plan identifying the location of each building on the property and identifying each building by a numbering system unrelated to address. Such plan is not required where a plan for the site is already on file and no new buildings are being added to the site.
4. Types of heating and air conditioning systems.
5. Architectural plans, including floor plans, elevations and door and finish schedules showing location of all doors, windows, mechanical equipment, shafts, pipes, vents and ducts. *Fire walls*, fire barriers, fire partitions, smoke barriers and smoke partitions or any other wall or horizontal assembly required to have protected openings or penetrations shall be identified on the architectural plans.
6. Structural plans, including foundation plan and framing plans.
7. Cross-sections and construction details for both architectural and structural plans including wall sections, foundation, floor and roof details, connections of structural members and types of construction material.
8. Topographic plans, including original and final contours, location of all buildings and structures on the site and, when required by the *building official*, adjacent to the site, and cubic yards of cut and fill.
9. If the *building official* has reason to believe that there may be an intrusion into required open areas or over the property line, a survey of the property prepared by a land surveyor licensed by the State of Washington is required for new construction, and for *additions* or accessory buildings.
10. If any building or structure is to be erected or constructed on property abutting an unimproved or partially improved street or alley, the plans shall also include a profile showing the established or proposed grade of the street or alley, based upon information obtained from the Director of Transportation relating to the proposed finished elevations of the property and improvements thereon.
11. Where design flood elevations are not specified, they shall be established in accordance with Section 1612.3.1.
12. Non-structural components: Construction documents shall indicate if structural support and anchoring documentation for nonstructural components is part of the design submittal or a deferred submittal. The construction documents for nonstructural components shall at a minimum identify the following:
 1. All nonstructural components required by ASCE 7 Section 13.1.3 to have an importance factor, *I_p*, of 1.5.
 2. All mechanical equipment, fire sprinkler equipment, electrical equipment, and other nonstructural components required by ASCE 7 Section 13.1.3 Item 1 to be operational following a seismic event that require designated seismic systems per ASCE 7 Section 13.2.2 and special inspections per Section 1705.13.4.

106.5.5 Information on first sheet. The first or general note sheet of each set of plans shall specify the following, as applicable:

1. The building and street address of the work.
2. The name and address of the owner and *person* who prepared the plans.
3. Legal description of the property.

4. Occupancy classification(s) of all parts of the building(s) and where mixed use and occupancy applies, a diagram of the building or any portion thereof showing how the mixed uses/occupancies are “separated” or “non-separated” per Section 508.
5. Description of fixed fire protection devices or systems for each occupancy, or note “Full” when provided for the entire building.
6. Zoning classification of the property and existing and proposed uses of the structure(s) as defined in the *Land Use Code*.
7. Indication of location within the *fire district* as defined in this code, if applicable.
8. Type of construction as defined in this code.
9. Number of *stories above grade plane, mezzanines and basements* as defined in this code.
10. Variances, conditional uses, special exceptions, including project numbers, approval and approval extension dates.
11. Where applicable, a description of the design selected and approved at a Section 403 high-rise building presubmittal conference, a Section 404 atrium presubmittal conference, a Section 909.1.1 smoke control presubmittal conference, a Section 414.1.4 hazardous occupancy presubmittal conference, a Section 1613.1.1 seismic design presubmittal conference or a similar conference on a building subject to Fire Code Chapter 93.

106.5.6 Structural notes. Plans shall include applicable information including, but not limited to, the following:

1. Design loads: Snow load, live loads and lateral loads. If required by the *building official*, the structural notes for plans engineered to ASCE 7 shall include the factors of the base shear formula used in the design;
2. Foundations: Foundation investigations, allowable bearing pressure for spread footings, allowable load capacity of piles, lateral earth pressure;
3. Masonry: Type and strength of units, strength or proportions of mortar and grout, type and strength of reinforcement, method of testing, design strength;
4. Wood: Species or species groups, and grades of sawn lumber, glued-laminated lumber, plywood and assemblies, type of fasteners;
5. Concrete: Design strengths, mix designs, type and strength of reinforcing steel, welding of reinforcing steel, restrictions, if any;
6. Steel and aluminum: Specification types, grades and strengths, welding electrode types and strengths.

In lieu of detailed structural notes the *building official* may approve minor references on the plans to a specific section or part of this code or other ordinances or laws.

106.5.7 Fire-resistive notes. The *building official* may require that plans for buildings more than two *stories* in height of other than Groups R-3 and U occupancies indicate how required structural and fire-resistive integrity will be maintained where a penetration will be made for electrical, mechanical, plumbing and communication conduits, pipes and similar systems.

The *building official* may require that, when required for fire-resistive construction, the method of installation of wall and ceiling coverings and the protection of structural parts be specified on the plans unless the listing that documents the rating specifies a method no more restrictive than the minimum standards of Chapter 7.

106.5.8 Deferred submittals. Deferral of any submittal items shall have the prior approval of the *building official*. The registered design professional in responsible charge shall list *deferred submittals* on the plans for review by the *building official*.

Documents for *deferred submittal* items shall be submitted to the registered design professional in responsible charge who shall review them and forward them to the *building official* with a notation indicating that the *deferred submittal* documents have been reviewed and been found to be in general conformance to the design of the building. The *deferred submittal* items shall not be installed until the *deferred submittal* documents have been approved by the *building official*.

106.5.9 Construction and demolition waste. The information in Sections 106.5.9.1 and 106.5.9.2 shall be submitted for projects generating construction or demolition material for salvage, recycling or disposal. These requirements apply to building *alterations* having a work area greater than 750 square feet or a project value greater than \$75,000, whichever is more restrictive, and for all whole building demolitions.

Exception: Projects for which an emergency order or hazard correction order has been issued pursuant to Section 102.

106.5.9.1 Salvage Assessment. This form shall be provided at the time of permit application and is a requirement for permit application submittal.

1. A salvage assessment completed by an approved agent identifying building components having potential to be salvaged prior to building removal. The building owner is permitted to complete the assessment for building *alterations* that include some demolition.

2. A statement of compliance with the regulations of the Puget Sound Clean Air Agency regarding asbestos identification, notification and abatement.

Exception: A salvage assessment is not required if the project does not impact an *existing building*, such as construction of a new detached accessory dwelling unit or backyard cottage.

106.5.9.2 Waste Diversion Report. A Waste Diversion Report shall be submitted within 60 days of final inspection approval. The Waste Diversion Report shall identify the weight or volume of project-generated construction waste and demolition material, the hauler of the material, and the receiving facility or location for each commodity. A signed affidavit from the receiving party and photo documentation shall be included for the salvaged materials for which a tip receipt cannot be obtained.

106.5.10 Clarity of plans. Plans shall be drawn to a clearly indicated and commonly accepted scale in a format determined by the *building official*.

106.6 Application review and permit issuance. The *construction documents* shall be reviewed by the *building official*. Such *construction documents* may be reviewed by other departments of the City to check compliance with the laws and ordinances under their jurisdiction.

106.6.1 Determination of completeness. Within 28 days after an application is filed, the *building official* shall notify the applicant in writing either that the application is complete or that it is not complete, and if not complete, what additional information is required to make it complete. Within 14 days after receiving the additional information, the *building official* shall notify the applicant in writing whether the application is now complete or what additional information is necessary. An application shall be deemed to be complete if the *building official* does not notify the applicant in writing by the deadlines in this section that the application is incomplete.

106.6.2 Decision on application. Except as provided in Section 106.6.8, the *building official* shall approve, condition or deny the application within 120 days after the *building official* notifies the applicant that the application is complete.

To determine the number of days that have elapsed after the notification that the application is complete, the following periods shall be excluded:

1. All periods of time during which the applicant has been requested by the Director to correct plans, perform required studies, or provide additional required information, until the determination that the request has been satisfied. The period shall be calculated from the date the *building official* notifies the applicant of the need for additional information until the earlier of the date the *building official* determines whether the additional information satisfies the request for information or 14 days after the date the information has been provided to the *building official*.
2. If the *building official* determines that the information submitted by the applicant under item 1 of this subsection is insufficient, the *building official* shall notify the applicant of the deficiencies, and the procedures under item 1 of this subsection shall apply as if a new request for information had been made.
3. All extensions of time mutually agreed upon by the applicant and the *building official*.

If a project permit application is substantially revised by the applicant, the time period shall start from the date at which the revised project application is determined to be complete under Section 101.3.1.

106.6.3 Issuance of permit.

106.6.3.1. Subject to Section 106.6.3.2, the *building official* shall issue a permit to the applicant if the *building official* finds the following:

1. The work described in the *construction documents* conforms to the requirements of this code and other pertinent laws, ordinances, and regulations and with all conditions imposed under any of them;
2. The fees specified in the *Fee Subtitle* have been paid; and
3. The applicant has complied with all requirements to be performed prior to issuance of a permit for the work under other pertinent laws, ordinances or regulations or included in a master use permit, or otherwise imposed by the *building official*.

When the permit is issued, the applicant or the applicant's authorized agent becomes the permit holder.

106.6.3.2. The *building official* shall not issue a permit if the *building official* has determined that the property owner violated subsection 22.210.136.A of the Seattle Municipal Code and the owner has not obtained any required tenant relocation license.

106.6.4 Phased permits.

1. The *building official* may authorize construction of a portion or portions of a building or structure before complete *construction documents* for the whole building or structure have been submitted or *approved*, or before the applicant has complied with all conditions of a building permit for the entire building or structure under the *Land Use Code* or master use permit. The entire proposed project shall comply with applicable city law in effect on the date set forth in Section 101.3.

The applicant shall proceed at the applicant's risk without assurance that a permit for the entire building or structure will be granted.

2. After approval of a Master Use Permit as required by the *Land Use Code*, if the applicant has satisfied all applicable requirements for issuance of a grading permit under the Grading Code and rules adopted thereunder, a permit for excavation, shoring and other *land-disturbing activity* may be issued.

106.6.5 Grading permits. The grading component of the building permit is the portion of the building permit that authorizes work that is subject to the requirements of the Grading Code. That component constitutes a grading permit.

106.6.6 Permit conditions and denial. The *building official* may impose on a permit any conditions authorized by this code or other pertinent ordinances or regulations, including but not limited to the Grading Code, the Stormwater Code, Regulations for Environmentally Critical Areas, and rules adopted pursuant to those codes. In addition, the *building official* may condition a permit in order to reduce the risks associated with development, construction, ownership and occupancy including, but not limited to risks in potential slide areas. The *building official* may deny a permit if the *building official* determines that the risks cannot be reduced to an acceptable level, that the proposed project or *construction documents* do not conform to the requirements of this code or other pertinent laws, ordinances or regulations, or to requirements included in the Master Use Permit or requirements otherwise imposed by the *building official* or other City departments, or that the applicant has failed to comply with any requirement or condition imposed pursuant to the authority described above.

106.6.7 Compliance with approved construction documents. When the *building official* issues a permit, the *building official* shall endorse the permit in writing or in electronic format, and stamp the plans APPROVED. Such *approved* plans and permit shall not be changed, modified or altered without authorization from the *building official*, and all work shall be done in accordance with the *approved construction documents* and permit except as authorized by the *building official* during a field inspection to correct errors or omissions or as authorized by Section 106.6.8.

106.6.8 Revisions to the permit. When changes to the *approved* work are made during construction, approval of the *building official* shall be obtained prior to execution. The building inspector may approve minor changes to the *construction documents* for work not reducing the structural strength or fire and life safety of the structure. The building inspector shall determine if it is necessary to revise the *approved construction documents*. No changes that are subject to special inspection required by Section 1704 shall be made during construction unless approved by the *building official*. If revised plans are required, changes shall be submitted to and approved by the *building official*, accompanied by fees specified in the *Fee Subtitle* prior to occupancy. All changes shall conform to the requirements of this code and other pertinent laws and ordinances and other issued permits.

106.6.9 Cancellation of permit applications. Applications may be cancelled if no permit is issued by the earlier of the following: (1) 12 months following the date of application; or (2) 60 days from the date of written notice that the permit is ready to issue. After cancellation, *construction documents* submitted for review may be returned to the applicant or destroyed by the *building official*.

The *building official* will notify the applicant in writing at least 30 days before the application is cancelled. The notice shall specify a date by which a request for extension must be submitted in order to avoid cancellation. The date shall be at least two weeks prior to the date on which the application will be cancelled.

106.6.10 Extensions prior to permit issuance. At the discretion of the *building official*, applications for projects that require more than 12 months to review and approve may be extended for a period that provides reasonable time to complete the review and approval, but in no case longer than 24 months from the date of the original application. No application may be extended more than once. After cancellation, the applicant shall submit a new application and pay a new fee to restart the permit process.

Notwithstanding other provisions of this code, applications may be extended where issuance of the permit is delayed by litigation, preparation of environmental impact statements, appeals, strikes or other causes related to the application that are beyond the applicant's control, or while the applicant is making progress toward issuance of a master use permit.

106.7 Retention of plans. One set of *approved* plans, which may be on microfilm or in electronic format, shall be retained by the *building official*. One set of *approved* plans shall be returned to the applicant and shall be kept at the site of the building or work for use by inspection personnel at all times during which the work authorized is in progress.

106.8 Validity of permit. The issuance or granting of a permit or approval of *construction documents* shall:

1. Not be construed to be a permit for, or an approval of, any violation of any of the provisions of this code or other pertinent laws and ordinances;
2. Not prevent the *building official* from requiring the correction of errors in the *construction documents* or from preventing building operations being carried on thereunder when in violation of this code or of other pertinent laws and ordinances of the City;
3. Not prevent the *building official* from requiring correction of conditions found to be in violation of this code or other pertinent laws and ordinances of the City; or

SCOPE AND ADMINISTRATION

4. Not be construed to extend the period of time for which any such permit is issued or otherwise affect any period of time for compliance specified in any notice or order issued by the *building official* or other administrative authority requiring the correction of any such conditions.

106.9 Expiration of permits. Authority to do the work authorized by a permit expires 18 months from the date of issuance. An *approved* renewal extends the life of a permit for an additional 18 months from the prior expiration date. An *approved* reestablishment extends the life of the permit for 18 months from the date the permit expired.

Exceptions:

1. Initial permits for major construction projects that require more than 18 months to complete may be issued for a period that provides reasonable time to complete the work, according to an *approved* construction schedule. The *building official* may authorize a permit expiration date not to exceed three years from the date of issuance, except when there is an associated Shoreline Substantial Development permit in which case the *building official* may authorize an expiration date not to exceed the life of the Shoreline permit.
2. The *building official* may issue permits which expire in less than 18 months if the *building official* determines a shorter period is appropriate to complete the work.

This section is subject to the limitations in Seattle Municipal Code Section 22.800.100, Stormwater Code.

106.10 Renewal of permits. Permits may be renewed and renewed permits may be further renewed by the *building official* if the following conditions are met:

1. Application for renewal is made within the 30-day period immediately preceding the date of expiration of the permit; and
2. If the project has had an associated discretionary Land Use review, the land use approval has not expired; and
3. If an application for renewal is made more than 18 months after the date of mandatory compliance with a new or revised edition of the Seattle Building Code, the permit shall not be renewed unless:
 - 3.1. The *building official* determines that the permit complies, or is modified to comply, with the Seattle Building, Mechanical, Fuel Gas, Energy, Stormwater, Side Sewer and Grading codes in effect on the date of application for renewal; or
 - 3.2. The work authorized by the permit is substantially underway and progressing at a rate approved by the *building official*. “Substantially underway” means that normally required building inspections have been *approved* for work such as foundations, framing, mechanical, insulation and finish work that is being completed on a continuing basis; or
 - 3.3. Commencement or completion of the work authorized by the permit is delayed by litigation, appeals, strikes or other extraordinary circumstances related to the work authorized by the permit, beyond the permit holder’s control, subject to approval by the *building official*; and
4. The permit shall not be renewed unless: (a) the *building official* determines that the permit complies, or is modified to comply, with the Seattle Stormwater Code in effect on the date of application for renewal; or (b) construction has started. For purposes of this provision, “started construction” means the site work associated with and directly related to the *approved* project has begun. For example, grading the project site to final grade or utility installation constitutes the start of construction; simply clearing the project site does not.

106.11 Reestablishment of expired permits. A new permit is required to complete work if a permit has expired and was not renewed.

Exception: A permit that expired less than one year prior to the date of a request for reestablishment may be reestablished upon approval of the *building official* if it complies with Section 106.10, Items 2, 3, and 4 above. Once re-established the permit will not be considered to have expired. The new expiration date of a reestablished permit shall be determined in accordance with Section 106.9.

106.12 Revocation of building permits. Whenever the *building official* determines there are grounds for revoking a permit, the *building official* may issue a notice of revocation. The notice of revocation shall identify the reason for the proposed revocation, including but not limited to, the violations, the conditions violated, and any alleged false or misleading information provided.

106.12.1 Standards for revocation. The *building official* may revoke a permit if:

1. The code or the building permit has been or is being violated and issuance of a notice of violation or stop work order has been or would be ineffective to secure compliance because of circumstances related to the violation; or
2. The permit was obtained with false or misleading information.

106.12.2 Service of notice of revocation. The notice of revocation shall be served upon the owner, agent or other responsible *person* by personal service or regular first class mail addressed to the last known address of such *person* or if no address

is available after reasonable inquiry, the notice may be posted in a conspicuous place on the premises. The notice may also be posted if served by personal service or first class mail.

106.12.3 Effective date of revocation. The *building official* shall identify in the notice of revocation a date certain on which the revocation will take effect. This date may be stayed pending complete review by the *building official* pursuant to Section 106.12.4.

106.12.4 Review by the building official for notice of revocation. Any *person* aggrieved by a notice of revocation may obtain a review by making a request in writing to the *building official* within three business days of the date of service of the notice of revocation. The review shall occur within five business days after receipt by the *building official* of the request for review. Any *person* affected by the notice of revocation may submit additional information to the *building official* for consideration as part of the review at any time prior to the review.

106.12.4.1 Review procedure. The review will be made by a representative of the *building official* who will review all additional information received and may also request a site visit. After the review, the *building official* may:

1. Sustain the notice of revocation and affirm or modify the date the revocation will take effect;
2. Withdraw the notice of revocation;
3. Modify the notice of revocation and affirm or modify the date the revocation will take effect; or
4. Continue the review to a date certain.

106.12.4.2 Order of revocation of permit. The *building official* shall issue an order containing the decision within ten days after the review is completed and shall cause the same to be sent by regular first class mail to the *person* or *persons* requesting the review, any other *person* on whom the notice of revocation was served and any other *person* who requested a copy before issuance of the order. The order of the *building official* is the final order of the City, and the City and all parties shall be bound by the order.

106.13 Permits for temporary structures.

106.13.1 Tents and similar facilities used for 18 months or less. The *building official* may issue a permit to erect and maintain a tent or other similar temporary structure to be used for religious services, conventions, circuses, carnivals, fairs, special sales or similar uses for a period not to exceed eighteen months.

Exceptions:

1. Authority to issue permits is vested with the Fire Department for temporary tents and *canopies* meeting all of the following conditions:
 - 1.1. The permit is for less than four weeks;
 - 1.2. The temporary structure will be located 200 feet or more from shorelines;
 - 1.3. No stage, platform, bleacher or similar structure greater than 4 feet in height will be installed inside any temporary structure;
 - 1.4. No temporary structure will be attached to a building or other permanent structure for support;
 - 1.5. The temporary structure is not proposed to be used during severe weather, and
 - 1.6. The temporary structure is not of unusual shape, unusual location or large area or height.

Note: The Land Use and Fire Codes may impose additional restrictions or conditions on tents and temporary structures.

106.13.1.1 Renewal. Permits issued pursuant to Section 106.13.1 are not renewable.

106.13.1.2 Subsequent permits. If the occupant load of the structure is 100 or more and is issued for less than 4 weeks, no more than one permit per tent vendor for each event shall be issued in any three-month period.

106.13.1.3 Removal. Such structures shall be removed before the expiration of the permit.

106.13.1.4 Requirements for tents and similar structures. The structure shall be subject to such reasonable safeguards for *persons* and property as the *building official* prescribes. The nature and extent of fire-extinguishing equipment and decorations shall be subject to the requirements of the fire chief, and the sanitary facilities shall meet the requirements of the Director of Public Health.

106.13.1.5 Cash deposit or bond. The *building official* may require that removal of the structure be guaranteed by a cash deposit with the *building official* or by a surety bond, the amount of which, in either case, shall be fixed by the *building official*. The cash deposit or bond shall also be conditioned so that, if the occupant or owner fails to conform to any of the requirements of the City related to the erection, maintenance or removal of the tent or other structure, the *building official* may enter the premises and take steps necessary to make the structure conform to the requirements. The City shall be permitted to recover the cost thereof from the cash deposit or bond.

SCOPE AND ADMINISTRATION

106.13.2 Temporary structures. Temporary structures such as reviewing stands and other structures conforming to the requirements of this code, and sheds, *canopies*, or fences used for the protection of the public around and in conjunction with construction work may be erected by special permit from the *building official* for a limited period of time. The building or structure shall be subject to the bonding, removal and safety provisions of Section 106.13.1.5.

106.13.3 Temporary structures in the right-of-way. Temporary buildings or structures in the right-of-way are regulated by the Director of Transportation.

106.13.4 Temporary commercial coaches and modular homes. The *building official* may issue permits for eighteen months for the installation of commercial coaches and modular homes as temporary offices or other uses as may be determined by the *building official*, subject to the following:

1. Commercial coach shall be identified by a State of Washington black sticker located by the door. The structure may be placed on a temporary foundation and shall be anchored to resist wind and seismic lateral forces.
2. Modular homes shall be identified by a State of Washington gold sticker located by the door. Modular homes shall be permitted only if no heavy storage is anticipated for the temporary office use. The structure may be placed on a temporary foundation and shall be anchored to resist wind and seismic lateral forces.
3. A plot plan shall be submitted to verify compliance with the *Land Use Code* and to check exposure to other buildings.
4. The proposed use must be permitted outright under the *Land Use Code* and comply with all other pertinent laws and ordinances.
5. Construction offices, dry shacks and similar temporary buildings are regulated by Section 106.13.5.

106.13.4.1 Renewal of temporary commercial coach and modular home permits. A subsequent permit for another 18 months may be issued at the end of each 18-month period if the *building official* determines that the commercial coach or modular home complies with this section.

106.13.5 Construction buildings. The *building official* may issue a permit to erect and maintain construction offices, dry shacks and similar temporary buildings, including material and equipment storage, for the purpose of constructing an improvement.

Exception: A temporary permit is not required for construction offices and similar temporary buildings located on the same premises for which a construction permit has been issued.

106.13.5.1 Removal of construction buildings. Such structures shall be removed within 14 days after the end of the temporary permit's term. Removal shall be guaranteed by a cash deposit with the *building official* or by a surety bond, the amount of which, in either case, shall be fixed by the *building official*.

106.13.5.2 Requirements for construction buildings. The construction of the structure shall be subject to reasonable safeguards for *persons* and property as the *building official* shall prescribe; the nature and extent of fire-extinguishing equipment shall be subject to the requirements of the fire chief, and the sanitary facilities shall meet the requirements of the Director of Public Health.

106.13.5.3 Cash deposit or bond. The *building official* may require that removal of the structure be guaranteed by a cash deposit with the *building official* or by a surety bond, the amount of which, in either case, shall be fixed by the *building official*. The cash deposit or bond shall be conditioned so that, if the occupant or owner fails to conform to any of the requirements of the City related to the erection, maintenance or removal of the tent or other structure, the *building official* may enter the premises and take steps necessary to make the structure conform to the requirements. The City shall be permitted to recover the cost thereof from the cash deposit or bond.

SECTION 107 FLOOR AND ROOF DESIGN LOADS

107.1 Live loads posted. Where the live loads for which each floor or portion thereof of a commercial or industrial building is or has been designed to exceed 125 pounds per square foot and for all warehouse and storage areas, such design live loads shall be conspicuously posted by the owner or the owner's authorized agent in that part of each *story* in which they apply, using durable signs. It shall be unlawful to remove or deface such notices.

107.2 Issuance of certificate of occupancy. A certificate of occupancy required by Section 109 shall not be issued until the floor load signs, required by Section 107.1, have been installed.

107.3 Restrictions on loading. It shall be unlawful to place, or cause or permit to be placed, on any floor or roof of a building, structure or portion thereof, a load greater than is permitted by this code.

SECTION 108 INSPECTIONS

108.1 General. All construction or work for which a permit is required is subject to inspection by the *building official*, and certain types of construction shall have special inspections by registered special inspectors as specified in Chapter 17.

108.2 Surveys. A survey of the lot may be required by the *building official* to verify compliance of the structure with *approved construction documents*.

108.3 Preconstruction conferences. When required by the *building official*, the owner or the owner's agent shall arrange a conference with the project contractor, the design team, the special inspection agency if special inspection is required, and the *building official* prior to commencing work on any portion of construction. The intent of the conference is to identify and clarify unusual inspection requirements of the project. See Section 1703.7 for preconstruction conferences for projects requiring special inspection.

108.4 Inspection requests. The owner of the property or the owner's authorized agent, or the *person* designated by the owner or agent to do the work authorized by a permit shall notify the *building official* that work requiring inspection as specified in this section and Chapter 17 is ready for inspection.

108.5 Access for inspection. The permit holder and the *person* requesting any inspections required by this code shall provide access to and means for proper inspection of such work, including safety equipment required by Washington Industrial Safety and Health Agency. The work shall remain accessible and exposed for inspection purposes until approved by the *building official*. Neither the *building official* nor the City shall be liable for expense entailed in the required removal or replacement of any material to allow inspection.

108.6 Inspection record. Work requiring a permit shall not be commenced until the permit holder or the permit holder's agent has posted an inspection record in a conspicuous place on the premises and in a position that allows the *building official* to conveniently make the required entries regarding inspection of the work. This record shall be maintained in such a position by the permit holder or the permit holder's agent until final approval has been granted by the *building official*.

108.7 Approvals required. No work shall be done on any part of the building or structure beyond the point indicated in each successive inspection without first obtaining the written approval of the *building official*. Written approval shall be given only after an inspection has been made of each successive step in the construction as indicated by each of the inspections required in Section 108.9. There shall be a final inspection and approval of all buildings when completed and ready for occupancy.

108.7.1 Effect of approval. Approval as a result of an inspection is not an approval of any violation of the provisions of this code or of other pertinent laws and ordinances of the City. Inspections presuming to give authority to violate or cancel the provisions of this code or of other pertinent laws and ordinances of the City are not valid.

108.8 Concealment of work. No required reinforcing steel or structural framework of any part of any building or structure shall be covered or concealed in any manner whatsoever without first obtaining the approval of the *building official*. Protection of joints and penetrations in fire-resistance-rated assemblies, smoke barriers and smoke partitions shall not be concealed from view until inspected and *approved*.

Exception: Modular homes and commercial coaches identified by State of Washington stickers as specified in Section 106.13.4 and placed upon a permanent foundation approved and inspected by the *building official*.

108.9 Required inspections. The *building official*, upon notification by the permit holder or the permit holder's agent, of the property address and permit number, shall make the following inspections and shall either approve that portion of the construction as completed or shall notify the permit holder or the permit holder's agent if the construction fails to comply with the law.

108.9.1 First ground disturbance inspection. To be made prior to beginning *land-disturbing activity*, and following installation of erosion control measures and any required fencing that may restrict land disturbance in steep slope or other buffers as defined in Seattle Municipal Code Chapter 25.09.

Note: The purpose of the site inspection is to verify the erosion control method, location and proper installation. *Approved* drainage plan requirements and site plan conditions will also be verified, including buffer delineations.

108.9.2 Foundation inspection. To be made after trenches are excavated and forms erected and when all materials for the foundation are delivered on the job. Where concrete from a central mixing plant (commonly termed "ready mix") is to be used, materials need not be on the job.

108.9.3 Concrete slab or under-floor inspection. To be made after all in-slab or under-floor building service equipment, conduit, piping accessories and other ancillary equipment items are in place but before any concrete is poured or floor sheathing installed, including the subfloor.

SCOPE AND ADMINISTRATION

108.9.4 Lowest floor elevation. In flood hazard areas, upon placement of the lowest floor, including the basement, and prior to further vertical construction, the elevation certification required in Section 1612.4 shall be submitted to the *building official*.

108.9.5 Frame inspection. To be made after the roof, all framing, fire-blocking and bracing are in place and all pipes, chimneys and vents are complete and the rough electrical, plumbing, and heating wires, pipes and ducts are *approved*.

108.9.6 Type IV-A, IV-B, and IV-C connection protection inspection. In buildings of Type IV-A, IV-B, and IV-C construction, where connection fire resistance ratings are provided by wood cover calculated to meet the requirements of Section 2304.10.1, inspection of the wood cover shall be made after the cover is installed, but before any other coverings or finishes are installed.

108.9.7 Insulation inspection. To be made after all insulation and vapor barriers are in place but before any gypsum board or plaster is applied.

108.9.8 Lath and/or gypsum board inspection. For shear walls, to be made after lathing and/or gypsum board, interior and exterior, is in place, but before any plastering is applied or before gypsum board joints and fasteners are taped and finished.

108.9.9 Final site inspection. To be made after all grading is complete, and all permanent erosion controls, stormwater facilities and stormwater best management practices have been installed.

Exception: A final site inspection is not required for projects with less than 750 square feet of *land disturbing activity*.

108.9.10 Final inspection. To be made after finish grading and the building is completed and before occupancy.

108.9.10.1 Flood hazard documentation. If located in a flood hazard area, documentation of the elevation of the lowest floor as required in Section 1612.4 shall be submitted to the *building official* prior to the final inspection.

108.10 Special inspections. For special inspections, see Chapter 17.

108.11 Other inspections. In addition to the called inspections specified above, the *building official* may make or require any other inspections of any construction work or site work to ascertain compliance with the provisions of this code and other pertinent laws and ordinances that are enforced by the *building official*.

108.12 Special investigation. If work that requires a permit or approval is commenced or performed prior to making formal application and receiving the *building official's* permission to proceed, the *building official* may make a special investigation inspection before a permit is issued for the work. Where a special investigation is made, a special investigation fee may be assessed in accordance with the *Fee Subtitle*.

108.13 Reinspections. The *building official* may require a reinspection if work for which inspection is called is not complete, required corrections are not made, the inspection record is not properly posted on the work site, the *approved* plans are not readily available to the inspector, access is not provided on the date for which inspection is requested, or if deviations from *construction documents* that require the approval of the *building official* have been made without proper approval, or as otherwise required by the *building official*.

108.13.1 Compliance with International Existing Building Code Section 101.5. For the purpose of determining compliance with *International Existing Building Code* Section 101.5, Maintenance, the *building official* or the fire chief may cause any structure to be reinspected.

108.13.2 Reinspection fee. The *building official* may assess a reinspection fee as set forth in the *Fee Subtitle* for any action for which reinspection is required. In instances where reinspection fees have been assessed, no additional inspection of the work will be performed until the required fees have been paid.

SECTION 109 CERTIFICATE OF OCCUPANCY

109.1 Occupancy. No new building or structure shall be used or occupied until the *building official* has issued a Certificate of Occupancy. For *existing buildings*, a Certificate of Occupancy is required for:

1. Any *change of occupancy*,
2. Change in type of construction,
3. Addition, removal or change in type of a fire sprinkler system,
4. Changes in occupant load of an assembly occupancy,
5. Change in the number of *dwelling* units.

Exception: Certificates of occupancy are not required for:

1. Detached Group R-3 occupancies and Group U occupancies accessory to them, provided they shall not be used or occupied until *approved* for occupancy after final inspection.

2. Work exempt from permits under Section 106.2.
3. Work for which a temporary permit was issued under Section 106.13.

109.1.1 Effect of Certificate of Occupancy. Issuance of a Certificate of Occupancy is not approval of any violation of the provisions of this code or other pertinent laws and ordinances of the City. Certificates presuming to give authority to violate or cancel the provisions of this code or of other pertinent laws and ordinances of the City are not valid.

109.2 Change in occupancy. Changes in the occupancy of a building shall not be made except as specified in the *International Existing Building Code*.

109.3 Certificate issued. After satisfactory completion of inspections, if the *building official* finds that the building or structure requiring a Certificate of Occupancy complies with the provisions of this code, the Fire Code, other pertinent laws, ordinances and regulations of the City, and with all conditions imposed under any of them, and that the applicant has complied with all requirements to be performed prior to issuance of a Certificate of Occupancy in other pertinent laws, ordinances or regulations or in a Master Use Permit, or otherwise imposed by the *building official* or by another City department under any pertinent laws, ordinances or regulations, then the *building official* shall issue a Certificate of Occupancy which shall contain the following information:

1. The building permit number;
2. The address of the building;
3. A description of that portion of the building for which the certificate is issued;
4. A statement that the described portion of the building has been inspected for compliance with the requirements of this; and
5. The name of the *building official*.

109.4 Temporary certificate. A Temporary Certificate of Occupancy may be issued by the *building official* for the use of a portion or portions of a building or structure prior to the completion of the entire building or structure if all devices and safeguards for fire protection and life safety, as required by this code, the Fire Code, and other pertinent laws and ordinances of the City, are maintained in a safe and usable condition.

109.5 Posting. A Certificate of Occupancy shall be posted in a conspicuous place on the premises and shall not be removed except by the *building official*.

109.6 Suspension or revocation of Certificates of Occupancy.

109.6.1 Notice of suspension or revocation. Whenever the *building official* determines there are grounds for suspending or revoking a Certificate of Occupancy, the *building official* may issue a notice of revocation. The notice shall state the reason for suspension or revocation, and shall set the date that the suspension or revocation will take effect if compliance is not achieved by the date set in the notice, which shall be a reasonable time for compliance.

109.6.2 Standards for suspension or revocation of Certificates of Occupancy. The *building official* may suspend or revoke a Certificate of Occupancy if:

1. The certificate is issued in error or on the basis of incorrect information supplied; or
2. It is determined that the building or structure or portion thereof is in violation of any pertinent laws or ordinances of the City or any of the provisions of this code; or
3. When the building, site, applicant, or owner is in violation of any requirement or condition imposed by or pursuant to any other pertinent laws or ordinances of the City that provide for suspension or revocation of a Certificate of Occupancy.

109.6.3 Service of notice of suspension or revocation. The notice of suspension or revocation shall be served upon the owner, agent or other responsible *person* by personal service or regular first class mail addressed to the last known address of such *person* or if no address is available after reasonable inquiry, the notice may be posted in a conspicuous place on the premises. The notice may also be posted if served by personal service or first class mail.

109.6.4 Effect of notice of suspension or revocation. The notice shall be considered an order of the *building official* if no request for review before the *building official* is made pursuant to Section 109.6.5. Nothing in this subsection shall be deemed to limit or preclude any action or proceeding pursuant to Sections 102 or 103 of this code.

109.6.5 Review of suspension or revocation of Certificate of Occupancy by the building official. Any *person* affected by a notice of revocation issued pursuant to Section 109.6 may obtain a review of the notice by making a request in writing within ten days after service of the notice. When the last day of the period computed is a Saturday, Sunday, or City holiday, the period shall run until 5 p.m. of the next business day.

109.6.5.1 Review procedure. The review shall occur not less than ten nor more than 20 days after the request is received by the *building official* unless otherwise agreed by the *person* requesting the review. Any *person* affected by the notice of revocation may submit additional information to the *building official*. The review shall be made by a repre-

SCOPE AND ADMINISTRATION

sentative of the *building official* who will review any additional information that is submitted and the basis for issuance of the notice of suspension or revocation. The reviewer may request clarification of the information received and a site visit.

109.6.5.2 Decision. After the review, the *building official* shall:

1. Sustain the notice;
2. Withdraw the notice;
3. Amend the notice; or
4. Continue the review to a date certain.

109.6.5.3 Order. The *building official* shall issue an order containing the decision within 15 days of the date that the review is completed and shall cause the order to be mailed by regular first class mail to the *persons* requesting the review and the *persons* named on the notice of violation addressed to their last known address.

SECTION 110 FEES

110.1 Fees. A fee for each building permit and for other activities related to the enforcement of this code shall be paid as set forth in the *Fee Subtitle*.

CHAPTER 2

DEFINITIONS

User notes:

About this chapter: Codes, by their very nature, are technical documents. Every word, term and punctuation mark can add to or change the meaning of a technical requirement. It is necessary to maintain a consensus on the specific meaning of each term contained in the code. Chapter 2 performs this function by stating clearly what specific terms mean for the purposes of the code.

Code development reminder: Code change proposals to sections preceded by the designation [A] or [BS] will be considered by one of the code development committees meeting during the 2022 (Group B) Code Development Cycle.

SECTION 201 GENERAL

201.1 Scope. Unless otherwise expressly stated, the following words and terms shall, for the purposes of this code, have the meanings shown in this chapter.

201.2 Interchangeability. Words used in the present tense include the future; words stated in the masculine gender include the feminine and neuter; the singular number includes the plural and the plural, the singular.

[S] 201.3 Terms defined in other codes. Where terms are not defined in this code and are defined in the *International Energy Conservation Code*, *International Fuel Gas Code*, *International Fire Code*, *International Mechanical Code* or (~~International~~) *Uniform Plumbing Code*, such terms shall have the meanings ascribed to them as in those codes.

201.4 Terms not defined. Where terms are not defined through the methods authorized by this section, such terms shall have ordinarily accepted meanings such as the context implies.

[S] 201.5 References to other codes. Whenever an International, National or Uniform Code is referenced in this code, it shall mean the Seattle edition of that code, including any local amendments. References to the “Building Code,” “Fire Code,” “Mechanical Code” and “Plumbing Code” mean the Seattle editions of those codes.

SECTION 202 DEFINITIONS

[BG] 24-HOUR BASIS. The actual time that a person is an occupant within a facility for the purpose of receiving care. It shall not include a facility that is open for 24 hours and is capable of providing care to someone visiting the facility during any segment of the 24 hours.

[BS] AAC MASONRY. *Masonry* made of autoclaved aerated concrete (AAC) units, manufactured without internal reinforcement and bonded together using thin- or thick-bed *mortar*.

[BE] ACCESSIBLE. A site, *building*, *facility* or portion thereof that complies with Chapter 11.

[BE] ACCESSIBLE MEANS OF EGRESS. A continuous and unobstructed way of egress travel from any accessible point in a *building* or *facility* to a *public way*.

[BE] ACCESSIBLE ROUTE. A continuous, unobstructed path that complies with Chapter 11.

[BE] ACCESSIBLE UNIT. A *dwelling unit* or *sleeping unit* that complies with this code and the provisions for *Accessible units* in ICC A117.1.

[BS] ACCREDITATION BODY. An *approved*, third-party organization that is independent of the grading and inspection agencies, and the lumber mills, and that initially accredits and subsequently monitors, on a continuing basis, the competency and performance of a grading or inspection agency related to carrying out specific tasks.

[A] ADDITION. An extension or increase in floor area, number of *stories* or height of a building or structure.

[BS] ADHERED MASONRY VENEER. *Veneer* secured and supported through the adhesion of an *approved* bonding material applied to an *approved* backing.

[BS] ADOBE CONSTRUCTION. Construction in which the exterior *load-bearing* and *nonload-bearing walls* and partitions are of unfired clay *masonry* units, and floors, roofs and interior framing are wholly or partly of wood or other *approved* materials.

Adobe, stabilized. Unfired clay *masonry units* to which admixtures, such as emulsified asphalt, are added during the manufacturing process to limit the units' water absorption so as to increase their durability.

OCCUPANCY CLASSIFICATION AND USE

Adobe, unstabilized. Unfired clay *masonry units* that do not meet the definition of “Adobe, stabilized.”

[W] ADULT FAMILY HOME. A dwelling, licensed by the State of Washington Department of Social and Health Services, in which a person or persons provide personal care, special care, room and board to more than one but not more than six adults who are not related by blood or marriage to the person or persons providing the services. An existing adult family home may provide services to up to eight adults upon approval from the Department of Social and Health Services in accordance with RCW 70.128.066.

[F] AEROSOL CONTAINER. A metal can or plastic container up to a maximum size of 33.8 fluid ounces (1000 ml), or a glass bottle up to a maximum size of 4 fluid ounces (118 ml), designed and intended to dispense an aerosol.

[F] AEROSOL PRODUCT. A combination of a container, a propellant and a material that is dispensed. Aerosol products shall be classified by means of the calculation of their chemical heats of combustion and shall be designated Level 1, Level 2 or Level 3.

Level 1 aerosol products. Those with a total chemical heat of combustion that is less than or equal to 8,600 British thermal units per pound (Btu/lb) (20 kJ/g).

Level 2 aerosol products. Those with a total chemical heat of combustion that is greater than 8,600 Btu/lb (20 kJ/g), but less than or equal to 13,000 Btu/lb (30 kJ/g).

Level 3 aerosol products. Those with a total chemical heat of combustion that is greater than 13,000 Btu/lb (30 kJ/g).

[BS] AGGREGATE. In roofing, crushed stone, crushed slag or water-worn gravel used for surfacing for *roof coverings*.

[BG] AGRICULTURAL BUILDING. A structure designed and constructed to house farm implements, hay, grain, poultry, livestock or other horticultural products. This structure shall not be a place of human habitation or a place of employment where agricultural products are processed, treated or packaged, nor shall it be a place used by the public.

[BF] AIR-IMPERMEABLE INSULATION. An insulation having an air permeance equal to or less than $0.02 \text{ l/s} \times \text{m}^2$ at 75 pa pressure differential tested in accordance with ASTM E283 or ASTM E2178.

[BG] AIR-INFLATED STRUCTURE. A structure that uses air-pressurized membrane beams, arches or other elements to enclose space. Occupants of such a structure do not occupy the pressurized area used to support the structure.

[BG] AIR-SUPPORTED STRUCTURE. A structure wherein the shape of the structure is attained by air pressure and occupants of the structure are within the elevated pressure area. *Air-supported structures* are of two basic types:

Double skin. Similar to a single skin, but with an attached liner that is separated from the outer skin and provides an airspace which serves for insulation, acoustic, aesthetic or similar purposes.

Single skin. Where there is only the single outer skin and the air pressure is directly against that skin.

[BE] AISLE. An unenclosed *exit access* component that defines and provides a path of egress travel.

[BE] AISLE ACCESSWAY. That portion of an *exit access* that leads to an *aisle*.

[F] ALARM NOTIFICATION APPLIANCE. A *fire alarm system* component such as a bell, horn, speaker, light or text display that provides audible, tactile or visible outputs, or any combination thereof.

[F] ALARM SIGNAL. A signal indicating an emergency requiring immediate action, such as a signal indicative of fire.

[F] ALARM VERIFICATION FEATURE. A feature of *automatic* fire detection and alarm systems to reduce unwanted alarms wherein *smoke detectors* report alarm conditions for a minimum period of time, or confirm alarm conditions within a given time period, after being automatically reset, in order to be accepted as a valid alarm-initiation signal.

[BS] ALLOWABLE STRESS DESIGN. A method of proportioning structural members, such that elastically computed stresses produced in the members by *nominal loads* do not exceed *specified* allowable stresses (also called “working stress design”).

[A] ALTERATION. Any construction or renovation to an *existing structure* other than *repair* or *addition*.

[BE] ALTERNATING TREAD DEVICE. A device that has a series of steps between 50 and 70 degrees (0.87 and 1.22 rad) from horizontal, usually attached to a center support rail in an alternating manner so that the user does not have both feet on the same level at the same time.

[BG] AMBULATORY CARE FACILITY. Buildings or portions thereof used to provide medical, surgical, psychiatric, nursing or similar care on a less than *24-hour basis* to persons who are rendered *incapable of self-preservation* by the services provided or staff has accepted responsibility for care recipients already incapable.

[BG] ANCHOR BUILDING. An exterior perimeter building of a group other than H having direct access to a *covered or open mall building* but having required *means of egress* independent of the mall.

[BS] ANCHORED MASONRY VENEER. *Veneer* secured with *approved* mechanical fasteners to an *approved* backing.

[BF] ANNULAR SPACE. The opening around the penetrating item.

[F] **ANNUNCIATOR.** A unit containing one or more indicator lamps, alphanumeric displays or other equivalent means in which each indication provides status information about a circuit, condition or location.

[A] **APPROVED.** Acceptable to the *building official*.

[A] **APPROVED AGENCY.** An established and recognized agency that is regularly engaged in conducting tests, furnishing inspection services or furnishing product certification where such agency has been *approved* by the *building official*.

[BS] **APPROVED FABRICATOR.** An established and qualified person, firm or corporation *approved* by the *building official* pursuant to Chapter 17 of this code.

[A] **APPROVED SOURCE.** An independent person, firm or corporation, *approved* by the *building official*, who is competent and experienced in the application of engineering principles to materials, methods or systems analyses.

[BS] **AREA (for masonry).**

Gross cross-sectional. The *area* delineated by the out-to-out *specified dimensions* of *masonry* in the plane under consideration.

Net cross-sectional. The *area* of *masonry units*, grout and *mortar* crossed by the plane under consideration based on out-to-out *specified dimensions*.

[BG] **AREA, BUILDING.** The area included within surrounding *exterior walls*, or *exterior walls* and *fire walls*, exclusive of vent *shafts* and *courts*. Areas of the building not provided with surrounding walls shall be included in the *building area* if such areas are included within the horizontal projection of the roof or floor above.

[BE] **AREA OF REFUGE.** An area where persons unable to use *stairways* can remain temporarily to await instructions or assistance during emergency evacuation.

[BE] **AREA OF SPORT ACTIVITY.** That portion of an indoor or outdoor space where the play or practice of a sport occurs.

[BG] **AREAWAY.** A subsurface space adjacent to a building open at the top or protected at the top by a grating or guard.

ASSEMBLY SEATING, MULTILEVEL. See “*Multilevel assembly seating*.”

[W] **ASSISTED LIVING FACILITY.** A home or other institution, licensed by the state of Washington, providing housing, basic services and assuming general responsibility for the safety and well-being of residents under chapters 18.20 RCW and 388-78A WAC. These facilities may provide care to residents with symptoms consistent with dementia requiring additional security measures.

[BG] **ATRIUM.** A vertical space that is closed at the top, connecting two or more *stories* in Group I-2 and I-3 occupancies or three or more *stories* in all other occupancies.

[BG] **ATTIC.** The space between the ceiling framing of the top *story* and the underside of the roof.

[F] **AUDIBLE ALARM NOTIFICATION APPLIANCE.** A notification appliance that alerts by the sense of hearing.

[F] **AUTOMATIC.** As applied to fire protection devices, a device or system providing an emergency function without the necessity for human intervention and activated as a result of a predetermined temperature rise, rate of temperature rise or combustion products.

[F] **AUTOMATIC FIRE-EXTINGUISHING SYSTEM.** An *approved* system of devices and equipment which automatically detects a fire and discharges an *approved* fire-extinguishing agent onto or in the area of a fire.

[F] **AUTOMATIC SMOKE DETECTION SYSTEM.** A *fire alarm system* that has initiation devices that utilize *smoke detectors* for protection of an area such as a room or space with detectors to provide early warning of fire.

[F] **AUTOMATIC SPRINKLER SYSTEM.** An *automatic sprinkler system*, for fire protection purposes, is an integrated system of underground and overhead piping designed in accordance with fire protection engineering standards. The system includes a suitable water supply. The portion of the system above the ground is a network of specially sized or hydraulically designed piping installed in a structure or area, generally overhead, and to which *automatic* sprinklers are connected in a systematic pattern. The system is usually activated by heat from a fire and discharges water over the *fire area*.

[F] **AUTOMATIC WATER MIST SYSTEM.** A system consisting of a water supply, a pressure source and a distribution piping system with attached nozzles, which, at or above a minimum operating pressure defined by its listing, discharges water in fine droplets meeting the requirements of NFPA 750 for the purpose of the control, suppression or extinguishment of a fire. Such systems include wet-pipe, dry-pipe and preaction types. The systems are designed as engineered, preengineered, local-application or total-flooding systems.

[F] **AVERAGE AMBIENT SOUND LEVEL.** The root mean square, A-weighted sound pressure level measured over a 24-hour period, or the time any person is present, whichever time period is less.

[S][BG] **AWNING.** ((An architectural projection that provides weather protection, identity or decoration and is partially or wholly supported by the building to which it is attached. An awning is composed of a lightweight *frame structure* over which a covering is attached.)) A protective covering with a nonrigid surface projecting from a building.

OCCUPANCY CLASSIFICATION AND USE

[SI] AWNING SIGN. A sign applied to the surface of an *awning* or *canopy*.

[BF] BACKING. The wall or surface to which the *vener* is secured.

[BE] BALANCED DOOR. A door equipped with double-pivoted hardware so designed as to cause a semicounterbalanced swing action when opening.

[F] BALED COTTON. A natural seed fiber wrapped in and secured with industry accepted materials, usually consisting of burlap, woven polypropylene, polyethylene or cotton or sheet polyethylene, and secured with steel, synthetic or wire bands or wire; also includes linters (lint removed from the cottonseed) and motes (residual materials from the ginning process).

[F] BALED COTTON, DENSELY PACKED. Cotton made into banded bales with a packing density of not less than 22 pounds per cubic foot (360 kg/m³), and dimensions complying with the following: a length of 55 inches (1397 mm), a width of 21 inches (533.4 mm) and a height of 27.6 to 35.4 inches (701 to 899 mm).

[BS] BALLAST. In roofing, *ballast* comes in the form of large stones or paver systems or light-weight interlocking paver systems and is used to provide uplift resistance for roofing systems that are not adhered or mechanically attached to the roof deck.

[F] BARRICADE. A structure that consists of a combination of walls, floor and roof, which is designed to withstand the rapid release of energy in an *explosion* and which is fully confined, partially vented or fully vented; or other effective method of shielding from *explosive* materials by a natural or artificial barrier.

Artificial barricade. An artificial mound or revetment a minimum thickness of 3 feet (914 mm).

Natural barricade. Natural features of the ground, such as hills, or timber of sufficient density that the surrounding exposures that require protection cannot be seen from the magazine or building containing *explosives* when the trees are bare of leaves.

[BS] BASE FLOOD. The *flood* having a 1-percent chance of being equaled or exceeded in any given year.

[BS] BASE FLOOD ELEVATION. The elevation of the *base flood*, including wave height, relative to the National Geodetic Vertical Datum (NGVD), North American Vertical Datum (NAVD) or other datum specified on the *Flood Insurance Rate Map* (FIRM).

[BG] BASEMENT. A *story* that is not a *story above grade plane* (see “*Story above grade plane*”). This definition of “Basement” does not apply to the provisions of Section 1612 for *flood loads*.

[BS] BASEMENT (for flood loads). The portion of a building having its floor subgrade (below ground level) on all sides. This definition of “Basement” is limited in application to the provisions of Section 1612.

[BS] BEARING WALL STRUCTURE. A building or other structure in which vertical *loads* from floors and roofs are primarily supported by walls.

[BS] BED JOINT. The horizontal layer of *mortar* on which a *masonry unit* is laid.

[BE] BLEACHERS. Tiered seating supported on a dedicated structural system and two or more rows high and is not a *building element* (see “*Grandstand*”).

[BG] BOARDING HOUSE. A building arranged or used for lodging for compensation, with or without meals, and not occupied as a single-family unit.

[F] BOILING POINT. The temperature at which the vapor pressure of a *liquid* equals the atmospheric pressure of 14.7 pounds per square inch (psia) (101 kPa) or 760 mm of mercury. Where an accurate boiling point is unavailable for the material in question, or for mixtures which do not have a constant boiling point, for the purposes of this classification, the 20-percent evaporated point of a distillation performed in accordance with ASTM D86 shall be used as the boiling point of the *liquid*.

[W] BOTTLE FILLING STATION. A plumbing fixture connected to the potable water distribution system and sanitary drainage system that is designed and intended for filling personal use drinking water bottles or containers not less than 10 inches (254 mm) in height. Such fixtures can be separate from or integral to a drinking fountain and can incorporate a water filter and a cooling system for chilling the drinking water.

[BS] BRACED WALL LINE. A straight line through the building plan that represents the location of the lateral resistance provided by the wall bracing.

[BS] BRACED WALL PANEL. A full-height section of wall constructed to resist in-plane shear *loads* through interaction of framing members, sheathing material and anchors. The panel’s length meets the requirements of its particular bracing method and contributes toward the total amount of bracing required along its *braced wall line*.

[BE] BREAKOUT. For revolving doors, a process whereby wings or door panels can be pushed open manually for *means of egress* travel.

[BS] BRICK.

Calcium silicate (sand lime brick). A pressed and subsequently autoclaved unit that consists of sand and lime, with or without the inclusion of other materials.

Clay or shale. A solid or hollow *masonry unit of clay or shale*, usually formed into a rectangular *prism*, then burned or fired in a kiln; *brick* is a ceramic product.

Concrete. A concrete *masonry unit* made from Portland cement, water, and suitable aggregates, with or without the inclusion of other materials.

[A] BUILDING. Any structure utilized or intended for supporting or sheltering any occupancy.

BUILDING AREA. See “*Area, building.*”

[BG] BUILDING ELEMENT. A fundamental component of building construction, specified in TABLE 601, which may or may not be of fire-resistance-rated construction and is constructed of materials based on the building type of construction.

BUILDING HEIGHT. See “*Height, building.*”

[BG] BUILDING LINE. The line established by law, beyond which a building shall not extend, except as specifically provided by law.

[S][A] BUILDING OFFICIAL. The ~~((officer or other designated authority charged with the administration and enforcement of this code))~~ Director of the Seattle Department of Construction and Inspections, or a duly authorized representative.

[BS] BUILDING-INTEGRATED PHOTOVOLTAIC (BIPV) PRODUCT. A building product that incorporates *photovoltaic modules* and functions as a component of the building envelope.

[BS] BUILDING-INTEGRATED PHOTOVOLTAIC ROOF PANEL (BIPV ROOF PANEL). A *photovoltaic panel* that functions as a component of the building envelope.

[BS] BUILT-UP ROOF COVERING. Two or more layers of felt cemented together and surfaced with a cap sheet, mineral aggregate, smooth coating or similar surfacing material.

[S][BG] CANOPY. ~~((A permanent structure or architectural projection of rigid construction over which a covering is attached that provides weather protection, identity or decoration. A canopy is permitted to be structurally independent or supported by attachment to a building on one or more sides.))~~ A protective covering with a rigid surface projecting from a building. *Marquees* are a type of canopy.

[S] CANOPY SIGN. A sign applied to the surface of a *canopy*.

[F] CAPACITOR ENERGY STORAGE SYSTEM. A stationary, rechargeable energy storage system consisting of capacitors, chargers, controls and associated electrical equipment designed to provide electrical power to a building or facility. The system is typically used to provide standby or emergency power, an uninterruptable power supply, load shedding, load sharing or similar capabilities.

[F] CARBON DIOXIDE EXTINGUISHING SYSTEMS. A system supplying carbon dioxide (CO₂) from a pressurized vessel through fixed pipes and nozzles. The system includes a manual- or *automatic*-actuating mechanism.

[F] CARBON MONOXIDE ALARM. A single- or multiple-station alarm intended to detect carbon monoxide gas and alert occupants by a distinct audible signal. It incorporates a sensor, control components and an alarm notification appliance in a single unit.

[F] CARBON MONOXIDE DETECTOR. A device with an integral sensor to detect carbon monoxide gas and transmit an alarm signal to a connected alarm control unit.

[BG] CARE SUITE. In Group I-2 occupancies, a group of treatment rooms, care recipient sleeping rooms and the support rooms or spaces and circulation space within the suite where staff are in attendance for supervision of all care recipients within the suite, and the suite is in compliance with the requirements of Section 407.4.4.

[BS] CAST STONE. A building stone manufactured from Portland cement concrete precast and used as a *trim*, *veneer* or facing on or in buildings or structures.

[F] CEILING LIMIT. The maximum concentration of an airborne contaminant to which one may be exposed. The ceiling limits utilized are those published in DOL 29 CFR Part 1910.1000. The ceiling Recommended Exposure Limit (REL-C) concentrations published by the US National Institute for Occupational Safety and Health (NIOSH), Threshold Limit Value—Ceiling (TLV-C) concentrations published by the American Conference of Governmental Industrial Hygienists (ACGIH), Ceiling Workplace Environmental Exposure Level (WEEL-Ceiling) Guides published by the American Industrial Hygiene Association (AIHA), and other *approved*, consistent measures are allowed as surrogates for hazardous substances not listed in DOL 29 CFR Part 1910.1000.

OCCUPANCY CLASSIFICATION AND USE

[BF] CEILING RADIATION DAMPER. A *listed* device installed in a ceiling membrane of a fire-resistance-rated floor/ceiling or roof/ceiling assembly to limit automatically the radiative heat transfer through an air inlet/outlet opening. Ceiling radiation dampers include air terminal units, ceiling dampers and ceiling air diffusers. Ceiling radiation dampers are classified for use in either static systems that will automatically shut down in the event of a fire, or in dynamic systems that continue to operate during a fire. A dynamic ceiling radiation damper is tested and rated for closure under elevated temperature airflow.

[BG] CELL (Group I-3 occupancy). A room within a *housing unit* in a detention or correctional facility used to confine inmates or prisoners.

[BS] CELL (masonry). A void space having a gross cross-sectional *area* greater than 1-1/2 square inches (967 mm²).

[BG] CELL TIER. Levels of *cells* vertically stacked above one another within a *housing unit*.

[BS] CEMENT PLASTER. A mixture of Portland or blended cement, Portland cement or blended cement and hydrated lime, *masonry* cement or plastic cement and aggregate and other *approved* materials as specified in this code.

[BF] CERAMIC FIBER BLANKET. A high-temperature mineral wool insulation material made of alumina-silica ceramic or calcium magnesium silicate soluble fibers and weighing 4 to 10 pounds per cubic foot (pcf) (64 to 160 kg/m³).

[BS] CERTIFICATE OF COMPLIANCE. A certificate stating that materials and products meet specified standards or that work was done in compliance with *approved construction documents*.

[S][A] CHANGE OF OCCUPANCY. ~~((Either of the following shall be considered as a))~~ Δ change ((of occupancy where this code requires a greater degree of safety, accessibility, structural strength, fire protection, means of egress, ventilation or sanitation than is existing in the current)) in the use of a building or ((structure)) portion of a building which results in one of the following:

1. ~~((Any))~~ Δ change ((in the)) of occupancy classification, ((of a building or structure.))
2. ~~((Any))~~ Δ change ((in the purpose of, or a change in the level of activity)) from one group to another group within ((a building or structure)) an occupancy classification.
3. Any change in use within a group for a specific occupancy classification.

[W] CHILD CARE. The care of children during any period of a 24-hour day.

[W] CHILD CARE, FAMILY HOME. A *child care* facility, licensed by the state of Washington, located in the *dwelling* of the person or persons under whose direct care and supervision the child is placed, for the care of 12 or fewer children, including children who reside at the home.

[M] CHIMNEY. A primarily vertical structure containing one or more flues, for the purpose of carrying gaseous products of combustion and air from a fuel-burning appliance to the outdoor atmosphere.

Factory-built chimney. A *listed* and *labeled chimney* composed of factory-made components, assembled in the field in accordance with manufacturer's instructions and the conditions of the listing.

Masonry chimney. A field-constructed chimney composed of solid *masonry units*, bricks, stones, or concrete.

Metal chimney. A field-constructed chimney of metal.

[M] CHIMNEY TYPES.

High-heat appliance type. An *approved* chimney for removing the products of combustion from fuel-burning, high-heat appliances producing combustion gases in excess of 2,000°F (1093°C) measured at the appliance flue outlet (see Section 2113.11.3).

Low-heat appliance type. An *approved* chimney for removing the products of combustion from fuel-burning, low-heat appliances producing combustion gases not in excess of 1,000°F (538°C) under normal operating conditions, but capable of producing combustion gases of 1,400°F (760°C) during intermittent forces firing for periods up to 1 hour. Temperatures shall be measured at the appliance flue outlet.

Masonry type. A field-constructed chimney of solid *masonry units* or stones.

Medium-heat appliance type. An *approved* chimney for removing the products of combustion from fuel-burning, medium-heat appliances producing combustion gases not exceeding 2,000°F (1093°C) measured at the appliance flue outlet (see Section 2113.11.2).

[BE] CIRCULATION PATH. An exterior or interior way of passage from one place to another for pedestrians.

[F] CLEAN AGENT. Electrically nonconducting, volatile or gaseous fire extinguishant that does not leave a residue upon vaporation.

[BF] CLIMATE ZONE. A geographical region that has been assigned climatic criteria as specified in Chapters 3 [CE] and 3 [RE] of the *International Energy Conservation Code*.

[BG] CLINIC, OUTPATIENT. Buildings or portions thereof used to provide *medical care* on less than a 24-hour basis to persons who are not rendered *incapable of self-preservation* by the services provided.

[W] CLOSED CIRCUIT TELEPHONE. A telephone with a dedicated line such as a house phone, courtesy phone or phone that must be used to gain entrance to a facility.

[F] CLOSED SYSTEM. The *use* of a *solid* or *liquid hazardous material* involving a closed vessel or system that remains closed during normal operations where vapors emitted by the product are not liberated outside of the vessel or system and the product is not exposed to the atmosphere during normal operations; and all *uses of compressed gases*. Examples of closed systems for *solids* and *liquids* include product conveyed through a piping system into a closed vessel, system or piece of equipment.

[BS] COASTAL A ZONE. Area within a *special flood hazard area*, landward of a V zone or landward of an open coast without mapped *coastal high-hazard areas*. In a *coastal A zone*, the principal source of *flooding* must be astronomical tides, storm surges, seiches or tsunamis, not riverine *flooding*. During the *base flood* conditions, the potential for breaking wave height shall be greater than or equal to 1-1/2 feet (457 mm). The inland limit of the *coastal A zone* is (a) the *Limit of Moderate Wave Action* if delineated on a FIRM, or (b) designated by the authority having jurisdiction.

[BS] COASTAL HIGH-HAZARD AREA. Area within the *special flood hazard area* extending from offshore to the inland limit of a primary dune along an open coast and any other area that is subject to high-velocity wave action from storms or seismic sources, and shown on a *Flood Insurance Rate Map* (FIRM) or other flood hazard map as velocity Zone V, VO, VE or V1-30.

[BS] COLLAR JOINT. Vertical longitudinal space between *wythes* of *masonry* or between *masonry wythe* and backup construction that is permitted to be filled with *mortar* or grout.

[BS] COLLECTOR. A horizontal *diaphragm* element parallel and in line with the applied force that collects and transfers *diaphragm* shear forces to the vertical elements of the lateral force-resisting system or distributes forces within the *diaphragm*, or both.

[BF] COMBINATION FIRE/SMOKE DAMPER. A *listed* device installed in ducts and air transfer openings designed to close *automatically* upon the detection of heat and resist the passage of flame and smoke. The device is installed to operate automatically, controlled by a smoke detection system, and where required, is capable of being positioned from a *fire command center*.

[BS] COMBINED PILE RAFT. A geotechnical composite construction that combines the bearing effect of both foundation elements, raft and piles, by taking into account interactions between the foundation elements and the subsoil.

[F] COMBUSTIBLE DUST. Finely divided *solid* material that is 420 microns or less in diameter and which, when dispersed in air in the proper proportions, could be ignited by a flame, spark or other source of ignition. Combustible dust will pass through a US No. 40 standard sieve.

[F] COMBUSTIBLE FIBERS. Readily ignitable and free-burning materials in a fibrous or shredded form, such as cocoa fiber, cloth, cotton, excelsior, hay, hemp, henequen, istle, jute, kapok, oakum, rags, sisal, Spanish moss, straw, tow, wastepaper, certain synthetic fibers or other like materials. This definition does not include densely packed *baled cotton*.

[F] COMBUSTIBLE LIQUID. A *liquid* having a closed cup *flash point* at or above 100°F (38°C). Combustible liquids shall be subdivided as follows:

The category of combustible liquids does not include *compressed gases* or *cryogenic fluids* or *liquids* that do not have a fire point when tested in accordance with ASTM D92.

Class II. *Liquids* having a closed cup *flash point* at or above 100°F (38°C) and below 140°F (60°C).

Class IIIA. *Liquids* having a closed cup *flash point* at or above 140°F (60°C) and below 200°F (93°C).

Class IIIB. *Liquids* having a closed cup *flash point* at or above 200°F (93°C).

[F] COMMERCIAL MOTOR VEHICLE. A motor vehicle used to transport passengers or property where the motor vehicle meets one of the following:

1. Has a gross vehicle weight rating of 10,000 pounds (4540 kg) or more.
2. Is designed to transport 16 or more passengers, including the driver.

[BE] COMMON PATH OF EGRESS TRAVEL. That portion of *exit access* travel distance measured from the most remote point of each room, area or space to that point where the occupants have separate and distinct access to two *exits* or *exit access* doorways.

[BE] COMMON USE. Interior or exterior *circulation paths*, rooms, spaces or elements that are not for public use and are made available for the shared use of two or more people.

OCCUPANCY CLASSIFICATION AND USE

[F] COMPRESSED GAS. A material or mixture of materials that meets both of the following:

1. Is a gas at 68°F (20°C) or less at 14.7 pounds per square inch atmosphere (psia) (101 kPa) of pressure.
2. Has a *boiling point* of 68°F (20°C) or less at 14.7 psia (101 kPa) which is either liquefied, nonliquefied or in solution, except those gases which have no other health- or physical-hazard properties are not considered to be compressed until the pressure in the packaging exceeds 41 psia (282 kPa) at 68°F (20°C).

The states of a compressed gas are categorized as follows:

1. Nonliquefied compressed gases are gases, other than those in solution, which are in a packaging under the charged pressure and are entirely gaseous at a temperature of 68°F (20°C).
2. Liquefied compressed gases are gases that, in a packaging under the charged pressure, are partially *liquid* at a temperature of 68°F (20°C).
3. Compressed gases in solution are nonliquefied gases that are dissolved in a solvent.
4. Compressed gas mixtures consist of a mixture of two or more compressed gases contained in a packaging, the hazard properties of which are represented by the properties of the mixture as a whole.

[BS] CONCRETE.

Carbonate aggregate. Concrete made with aggregates consisting mainly of calcium or magnesium carbonate, such as limestone or dolomite, and containing 40 percent or less quartz, chert or flint.

Cellular. A lightweight insulating concrete made by mixing a preformed foam with Portland cement slurry and having a dry unit weight of approximately 30 pcf (480 kg/m³).

Lightweight aggregate. Concrete made with aggregates of expanded clay, shale, slag or slate or sintered fly ash or any natural lightweight aggregate meeting ASTM C330 and possessing equivalent fire-resistance properties and weighing 85 to 115 pcf (1360 to 1840 kg/m³).

Perlite. A lightweight insulating concrete having a dry unit weight of approximately 30 pcf (480 kg/m³) made with perlite concrete aggregate. Perlite aggregate is produced from a volcanic rock which, when heated, expands to form a glass-like material of cellular structure.

Sand-lightweight. Concrete made with a combination of expanded clay, shale, slag, slate, sintered fly ash, or any natural lightweight aggregate meeting ASTM C330 and possessing equivalent fire-resistance properties and natural sand. Its unit weight is generally between 105 and 120 pcf (1680 and 1920 kg/m³).

Siliceous aggregate. Concrete made with normal-weight aggregates consisting mainly of silica or compounds other than calcium or magnesium carbonate, which contains more than 40-percent quartz, chert or flint.

Vermiculite. A light weight insulating concrete made with *vermiculite* concrete aggregate which is laminated micaceous material produced by expanding the ore at high temperatures. When added to a Portland cement slurry the resulting concrete has a dry unit weight of approximately 30 pcf (480 kg/m³).

[BG] CONGREGATE LIVING FACILITIES. A building or part thereof that contains *sleeping units* where residents share bathroom or kitchen facilities, or both.

[F] CONSTANTLY ATTENDED LOCATION. A designated location at a facility staffed by trained personnel on a continuous basis where alarm or supervisory signals are monitored and facilities are provided for notification of the fire department or other emergency services.

[S][A] CONSTRUCTION DOCUMENTS. Written, graphic and pictorial documents, in electronic or paper format, prepared or assembled for describing the design, location and physical characteristics of the elements of a project necessary for obtaining a building *permit and final approval of construction*.

[BG] CONSTRUCTION TYPES. See Section 602.

Type I. See Section 602.2.

Type II. See Section 602.2.

Type III. See Section 602.3.

Type IV. See Section 602.4.

Type V. See Section 602.5.

[BF] CONTINUOUS INSULATION (ci). Insulating material that is continuous across all structural members without thermal bridges other than fasteners and service openings. It is installed on the interior or exterior, or is integral to any opaque surface of the building envelope.

[F] CONTROL AREA. Spaces within a building where quantities of *hazardous materials* not exceeding the maximum allowable quantities per control area are stored, dispensed, *used* or handled. See the definition of “*Outdoor control area*” in the *International Fire Code*.

[BS] CONTROLLED LOW-STRENGTH MATERIAL. A self-compacted, cementitious material used primarily as a back-fill in place of compacted fill.

[BS] CONVENTIONAL LIGHT-FRAME CONSTRUCTION. Construction whose primary structural elements are formed by a system of repetitive wood-framing members. See Section 2308 for conventional *light-frame construction* provisions.

[BG] CORNICE. A projecting horizontal molded element located at or near the top of an architectural feature.

[BE] CORRIDOR. An enclosed *exit access* component that defines and provides a path of egress travel.

CORRIDOR, OPEN-ENDED. See “*Open-ended corridor*.”

[BF] CORRIDOR DAMPER. A *listed* device intended for use where air ducts penetrate or terminate at horizontal openings in the ceilings of fire-resistance-rated corridors, where the *corridor* ceiling is permitted to be constructed as required for the *corridor* walls.

[BS] CORROSION RESISTANCE. The ability of a material to withstand deterioration of its surface or its properties when exposed to its environment.

[F] CORROSIVE. A chemical that causes visible destruction of, or irreversible alterations in, living tissue by chemical action at the point of contact. A chemical shall be considered corrosive if, when tested on the intact skin of albino rabbits by the method described in DOTn 49 CFR, Part 173.137, such chemical destroys or changes irreversibly the structure of the tissue at the point of contact following an exposure period of 4 hours. This term does not refer to action on inanimate surfaces.

[BG] COURT. An open, uncovered space, unobstructed to the sky, bounded on three or more sides by exterior building walls or other enclosing devices.

[S] COVERED BOAT MOORAGE. A pier or system of floating or fixed accessways to which vessels on water may be secured, and any portion of which is covered by a roof.

[BG] COVERED MALL BUILDING. A single building enclosing a number of tenants and occupants, such as retail stores, drinking and dining establishments, entertainment and amusement facilities, passenger transportation terminals, offices and other similar uses wherein two or more tenants have a main entrance into one or more malls. *Anchor buildings* shall not be considered as a part of the covered mall building. The term “covered mall building” shall include *open mall buildings* as defined below.

Mall. A roofed or covered common pedestrian area within a *covered mall building* that serves as access for two or more tenants and not to exceed three levels that are open to each other. The term “mall” shall include open malls as defined below.

Open mall. An unroofed common pedestrian way serving a number of tenants not exceeding three levels. Circulation at levels above grade shall be permitted to include open exterior balconies leading to exits discharging at grade.

Open mall building. Several structures housing a number of tenants, such as retail stores, drinking and dining establishments, entertainment and amusement facilities, offices, and other similar uses, wherein two or more tenants have a main entrance into one or more open malls. *Anchor buildings* are not considered as a part of the open mall building.

[BS] CRIPPLE WALL. A framed stud wall extending from the top of the foundation to the underside of floor framing for the lowest occupied floor level.

[F] CRITICAL CIRCUIT. A circuit that requires continuous operation to ensure safety of the structure and occupants.

[BS] CROSS-LAMINATED TIMBER. A prefabricated engineered wood product consisting of not less than three layers of solid-sawn lumber or *structural composite lumber* where the adjacent layers are cross oriented and bonded with structural adhesive to form a solid wood element.

[F] CRYOGENIC FLUID. A *liquid* having a *boiling point* lower than -150°F (-101°C) at 14.7 pounds per square inch atmosphere (psia) (an absolute pressure of 101 kPa).

[BG] CUSTODIAL CARE. Assistance with day-to-day living tasks; such as assistance with cooking, taking medication, bathing, using toilet facilities and other tasks of daily living. *Custodial care* includes persons receiving care who have the ability to respond to emergency situations and may receive limited verbal or physical assistance. These care recipients may evacuate at a slower rate and/or who have mental and psychiatric complications.

[BS] DALLE GLASS. A decorative composite glazing material made of individual pieces of glass that are embedded in a cast matrix of concrete or epoxy.

DAMPER. See “*Ceiling radiation damper*,” “*Combination fire/smoke damper*,” “*Corridor damper*,” “*Fire damper*” and “*Smoke damper*.”

OCCUPANCY CLASSIFICATION AND USE

~~[S] ((**BS**) **DANGEROUS**. Any building, structure or portion thereof that meets any of the conditions described below shall be deemed *dangerous*:~~

- ~~1. The building or structure has collapsed, has partially collapsed, has moved off its foundation or lacks the necessary support of the ground.~~
- ~~2. There exists a significant risk of collapse, detachment or dislodgment of any portion, member, appurtenance or ornamentation of the building or structure under permanent, routine, or frequent loads; under actual loads already in effect; or under snow, wind, rain, flood, earthquake, or other environmental loads when such loads are imminent.)~~

[F] DAY BOX. A portable magazine designed to hold *explosive* materials constructed in accordance with the requirements for a Type 3 magazine as defined and classified in Chapter 56 of the *International Fire Code*.

[BS] DEAD LOAD. The weight of materials of construction incorporated into the building, including but not limited to walls, floors, roofs, ceilings, *stairways*, built-in partitions, finishes, cladding and other similarly incorporated architectural and structural items, and the weight of fixed service equipment, including cranes and material handling systems.

[BS] DECORATIVE GLASS. A carved, leaded or *Dalle glass* or glazing material whose purpose is decorative or artistic, not functional; whose coloring, texture or other design qualities or components cannot be removed without destroying the glazing material and whose surface, or assembly into which it is incorporated, is divided into segments.

[F] DECORATIVE MATERIALS. All materials applied over the building *interior finish* for decorative, acoustical or other effect including, but not limited to, curtains, draperies, fabrics and streamers; and all other materials utilized for decorative effect including, but not limited to, bulletin boards, artwork, posters, photographs, batting, cloth, cotton, hay, stalks, straw, vines, leaves, trees, moss and similar items, foam plastics and materials containing foam plastics. Decorative materials do not include wall coverings, ceiling coverings, floor coverings, ordinary window shades, *interior finish* and materials 0.025 inch (0.64 mm) or less in thickness applied directly to and adhering tightly to a substrate.

[BS] DEEP FOUNDATION. A deep foundation is a foundation element that does not satisfy the definition of a *shallow foundation*.

[BE] DEFEND-IN-PLACE. A method of emergency response that engages building components and trained staff to provide occupant safety during an emergency. Emergency response involves remaining in place, relocating within the building, or both, without evacuating the building.

[S][A] DEFERRED SUBMITTAL. Those portions of the design that are not submitted at the time of the application and that are to be submitted to the *building official* within a specified period. Deferred submittals include but are not limited to shop drawings for truss systems and sprinkler systems.

[F] DEFLAGRATION. An exothermic reaction, such as the extremely rapid oxidation of a flammable dust or vapor in air, in which the reaction progresses through the unburned material at a rate less than the velocity of sound. A deflagration can have an explosive effect.

[BF] DELAYED-ACTION CLOSER. A *self-closing* device that incorporates a delay prior to the initiation of closing. Delayed-action closers are mechanical devices with an adjustable delay.

[F] DELUGE SYSTEM. A sprinkler system employing open sprinklers attached to a piping system connected to a water supply through a valve that is opened by the operation of a detection system installed in the same areas as the sprinklers. When this valve opens, water flows into the piping system and discharges from all sprinklers attached thereto.

[BS] DESIGN EARTHQUAKE GROUND MOTION. The earthquake ground motion that buildings and structures are specifically proportioned to resist in Section 1613.

[BS] DESIGN FLOOD. The *flood* associated with the greater of the following two areas:

1. Area with a flood plain subject to a 1-percent or greater chance of *flooding* in any year.
2. Area designated as a *flood hazard area* on a community's flood hazard map, or otherwise legally designated.

[BS] DESIGN FLOOD ELEVATION. The elevation of the "*design flood*," including wave height, relative to the datum specified on the community's legally designated flood hazard map. In areas designated as Zone AO, the *design flood elevation* shall be the elevation of the highest existing grade of the building's perimeter plus the depth number (in feet) specified on the flood hazard map. In areas designated as Zone AO where a depth number is not specified on the map, the depth number shall be taken as being equal to 2 feet (610 mm).

DESIGN PROFESSIONAL, REGISTERED. See "*Registered design professional*."

DESIGN PROFESSIONAL IN RESPONSIBLE CHARGE, REGISTERED. See "*Registered design professional in responsible charge*."

[BS] DESIGN STRENGTH. The product of the nominal strength and a *resistance factor* (or strength reduction factor).

[BS] DESIGNATED SEISMIC SYSTEM. Those nonstructural components that require design in accordance with Chapter 13 of ASCE 7 and for which the component importance factor, I_p , is greater than 1 in accordance with Section 13.1.3 of ASCE 7.

[F] **DETACHED BUILDING.** A separate single-story building, without a *basement* or crawl space, used for the storage or *use of hazardous materials* and located an *approved* distance from all structures.

[BS] **DETAILED PLAIN CONCRETE STRUCTURAL WALL.** See Section 1905.1.1.

[BE] **DETECTABLE WARNING.** A standardized surface feature built in or applied to walking surfaces or other elements to warn visually impaired persons of hazards on a *circulation path*.

[F] **DETECTOR, HEAT.** A fire detector that senses heat—either abnormally high temperature or rate of rise, or both.

[F] **DETONATION.** An exothermic reaction characterized by the presence of a shock wave in the material which establishes and maintains the reaction. The reaction zone progresses through the material at a rate greater than the velocity of sound. The principal heating mechanism is one of shock compression. Detonations have an explosive effect.

[BG] **DETOXIFICATION FACILITIES.** Facilities that provide treatment for substance abuse, serving care recipients who are *incapable of self-preservation* or who are harmful to themselves or others.

[BS] **DIAPHRAGM.** A horizontal or sloped system acting to transmit lateral forces to vertical elements of the lateral force-resisting system. When the term “*diaphragm*” is used, it shall include horizontal bracing systems.

Diaphragm, blocked. In *light-frame construction*, a diaphragm in which all sheathing edges not occurring on a framing member are supported on and fastened to blocking.

Diaphragm boundary. In *light-frame construction*, a location where shear is transferred into or out of the diaphragm sheathing. Transfer is either to a boundary element or to another force-resisting element.

Diaphragm chord. A diaphragm boundary element perpendicular to the applied load that is assumed to take axial stresses due to the diaphragm moment.

Diaphragm, unblocked. A diaphragm that has edge nailing at supporting members only. Blocking between supporting structural members at panel edges is not included. Diaphragm panels are field nailed to supporting members.

[BS] **DIMENSIONS.** This definition applies only to Chapter 21.

Nominal. The *specified dimension* plus an allowance for the *joints* with which the units are to be laid. Nominal *dimensions* are usually stated in whole numbers. Thickness is given first, followed by height and then length.

Specified. *Dimensions* specified for the manufacture or construction of a unit, *joint* or element.

[BE] **DIRECT ACCESS.** A path of travel from a space to an immediately adjacent space through an opening in the common wall between the two spaces.

[F] **DISPENSING.** The pouring or transferring of any material from a container, tank or similar vessel, whereby vapors, dusts, fumes, mists or gases are liberated to the atmosphere.

[S] **DISPLAY SURFACE.** The area of a *sign structure* used to display the message.

DOOR, BALANCED. See “*Balanced door*.”

DOOR, LOW-ENERGY POWER-OPERATED. See “*Low-energy power-operated door*.”

DOOR, POWER-ASSISTED. See “*Power-assisted door*.”

DOOR, POWER-OPERATED. See “*Power-operated door*.”

DOORWAY, EXIT ACCESS. See “*Exit access doorway*.”

[BG] **DORMITORY.** A space in a building where group sleeping accommodations are provided in one room, or in a series of closely associated rooms, for persons not members of the same family group, under joint occupancy and single management, as in college *dormitories* or fraternity houses.

[BF] **DRAFTSTOP.** A material, device or construction installed to restrict the movement of air within open spaces of concealed areas of building components such as crawl spaces, floor/ceiling assemblies, roof/ceiling assemblies and *attics*.

DRAG STRUT. See “*Collector*.”

[BS] **DRILLED SHAFT.** A cast-in-place *deep foundation* element, also referred to as a caisson, drilled pier or bored pile, constructed by drilling a hole (with or without permanent casing or drilling fluid) into soil or rock and filling it with fluid concrete after the drilling equipment is removed.

Socketed drilled shaft. A drilled shaft with a permanent pipe or tube casing that extends down to bedrock and an uncased socket drilled into the bedrock.

[BS] **DRY FLOODPROOFING.** A combination of design modifications that results in a building or structure, including the attendant utilities and equipment and sanitary facilities, being water tight with walls substantially impermeable to the passage of water and with structural components having the capacity to resist *loads* as identified in ASCE 7.

OCCUPANCY CLASSIFICATION AND USE

[F] DRY-CHEMICAL EXTINGUISHING AGENT. A powder composed of small particles, usually of sodium bicarbonate, potassium bicarbonate, urea-potassium-based bicarbonate, potassium chloride or monoammonium phosphate, with added particulate material supplemented by special treatment to provide resistance to packing, resistance to moisture absorption (caking) and the proper flow capabilities.

[A] DWELLING. A building that contains one or two *dwelling units* used, intended or designed to be used, rented, leased, let or hired out to be occupied for living purposes.

[A] DWELLING UNIT. A single unit providing complete, independent living facilities for one or more persons, including permanent provisions for living, sleeping, eating, cooking and sanitation.

[BG] DWELLING UNIT, EFFICIENCY. A *dwelling unit* where all permanent provisions for living, sleeping, eating and cooking are contained in a single room.

DWELLING UNIT OR SLEEPING UNIT, MULTISTORY. See “*Multistory unit.*”

[BE] EGRESS COURT. A *court* or *yard* which provides access to a *public way* for one or more *exits*.

[SI] ELECTRIC SIGN. Any sign containing electrical wiring, but not including signs illuminated by an exterior light source.

[BG] ELECTRIC VEHICLE CHARGING STATION. One or more vehicle spaces served by an electric vehicle charging system.

[BF] ELECTRICAL CIRCUIT PROTECTIVE SYSTEM. A specific construction of devices, materials, or coatings installed as a fire-resistive barrier system applied to electrical system components, such as cable trays, conduits and other raceways, open run cables and conductors, cables, and conductors.

[F] ELEVATOR GROUP. A grouping of elevators in a building located adjacent or directly across from one another that responds to common hall call buttons.

[F] EMERGENCY ALARM SYSTEM. A system to provide indication and warning of emergency situations involving *hazardous materials*.

[F] EMERGENCY CONTROL STATION. An *approved* location on the premises where signals from emergency equipment are received and which is staffed by trained personnel.

[BE] EMERGENCY ESCAPE AND RESCUE OPENING. An operable exterior window, door or other similar device that provides for a means of escape and access for rescue in the event of an emergency.

~~**[F] EMERGENCY POWER SYSTEM.** A source of *automatic* electric power of a required capacity and duration to operate required life safety, fire alarm, detection and ventilation systems in the event of a failure of the primary power. Emergency power systems are required for electrical loads where interruption of the primary power could result in loss of human life or serious injuries.)~~

[SI] EMERGENCY POWER SYSTEM. An electrical system that complies with Seattle Electrical Code Article 700.

[F] EMERGENCY VOICE/ALARM COMMUNICATIONS. Dedicated manual or *automatic* facilities for originating and distributing voice instructions, as well as alert and evacuation signals pertaining to a fire emergency, to the occupants of a building.

[BF] EMITTANCE. The ratio of radiant heat flux emitted by a specimen to that emitted by a blackbody at the same temperature and under the same conditions.

[BE] EMPLOYEE WORK AREA. All or any portion of a space used only by employees and only for work. *Corridors*, toilet rooms, kitchenettes and break rooms are not employee work areas.

[F] ENERGY STORAGE SYSTEM, ELECTROCHEMICAL. An energy storage system that stores energy and produces electricity using chemical reactions. It includes, among others, battery ESS and capacitor ESS.

[BS] ENGINEERED WOOD RIM BOARD. A full-depth *structural composite lumber*, *wood structural panel*, structural glued laminated timber or *prefabricated wood I-joist* member designed to transfer horizontal (shear) and vertical (compression) loads, provide attachment for *diaphragm* sheathing, siding and exterior deck ledgers, and provide lateral support at the ends of floor or roof joists or rafters.

ENTRANCE, PUBLIC. See “*Public entrance.*”

ENTRANCE, RESTRICTED. See “*Restricted entrance.*”

ENTRANCE, SERVICE. See “*Service entrance.*”

[BG] EQUIPMENT PLATFORM. An unoccupied, elevated platform used exclusively for mechanical systems or industrial process equipment, including the associated elevated walkways, *stairways*, *alternating tread devices* and ladders necessary to access the platform (see Section 505.3).

[BS] ESSENTIAL FACILITIES. Buildings and other structures that are intended to remain operational in the event of extreme environmental loading from *flood*, wind, snow or earthquakes.

[F] EXHAUSTED ENCLOSURE. An appliance or piece of equipment that consists of a top, a back and two sides providing a means of local exhaust for capturing gases, fumes, vapors and mists. Such enclosures include laboratory hoods, exhaust fume hoods and similar appliances and equipment used to locally retain and exhaust the gases, fumes, vapors and mists that could be released. Rooms or areas provided with general *ventilation*, in themselves, are not exhausted enclosures.

[S][A] EXISTING BUILDING, EXISTING STRUCTURE (Except for Section 1612.2). A building or structure erected prior to the date of adoption of the appropriate code, or one for which a ~~((legal building permit))~~ valid Certificate of Occupancy has been issued, or one that has passed a final inspection.

~~**[S] (([BS] EXISTING STRUCTURE.** A structure erected prior to the date of adoption of the appropriate code, or one for which a legal building permit has been issued.))~~

[BE] EXIT. That portion of a *means of egress* system between the *exit access* and the *exit discharge* or *public way*. Exit components include exterior exit doors at the *level of exit discharge*, *interior exit stairways* and *ramps*, *exit passageways*, *exterior exit stairways* and *ramps* and *horizontal exits*.

EXIT, HORIZONTAL. See “*Horizontal exit*.”

[BE] EXIT ACCESS. That portion of a *means of egress* system that leads from any occupied portion of a building or structure to an *exit*.

[BE] EXIT ACCESS DOORWAY. A door or access point along the path of egress travel from an occupied room, area or space where the path of egress enters an intervening room, *corridor*, *exit access stairway* or *ramp*.

[BE] EXIT ACCESS RAMP. A *ramp* within the *exit access* portion of the *means of egress* system.

[BE] EXIT ACCESS STAIRWAY. A *stairway* within the *exit access* portion of the *means of egress* system.

[BE] EXIT DISCHARGE. That portion of a *means of egress* system between the termination of an *exit* and a *public way*.

[BE] EXIT DISCHARGE, LEVEL OF. The *story* at the point at which an *exit* terminates and an *exit discharge* begins.

~~**[S][BE] EXIT PASSAGEWAY.** An *exit* component that ((is separated from other interior spaces of a building or structure by fire-resistance-rated construction and opening protectives, and)) provides for a protected path of egress travel in a horizontal direction to an *exit* or to the *exit discharge*.~~

[BF] EXPANDED VINYL WALL COVERING. Wall covering consisting of a woven textile backing, an expanded vinyl base coat layer and a nonexpanded vinyl skin coat. The expanded base coat layer is a homogeneous vinyl layer that contains a blowing agent. During processing, the blowing agent decomposes, causing this layer to expand by forming closed cells. The total thickness of the wall covering is approximately 0.055 inch to 0.070 inch (1.4 mm to 1.78 mm).

[F] EXPLOSION. An effect produced by the sudden violent expansion of gases, which may be accompanied by a shock wave or disruption, or both, of enclosing materials or structures. An explosion could result from any of the following:

1. Chemical changes such as rapid oxidation, *deflagration* or *detonation*, decomposition of molecules and runaway polymerization (usually *detonations*).
2. Physical changes such as pressure tank ruptures.
3. Atomic changes (nuclear fission or fusion).

[F] EXPLOSIVE. A chemical compound, mixture or device, the primary or common purpose of which is to function by explosion. The term includes, but is not limited to: dynamite, black powder, pellet powder, initiating explosives, detonators, safety fuses, squibs, detonating cord, igniter cord, and igniters. The term “explosive” includes any material determined to be within the scope of USC Title 18: Chapter 40 and also includes any material classified as an explosive other than consumer fireworks, 1.4G by the *hazardous materials* regulations of DOTn 49 CFR Parts 100-185.

High explosive. Explosive material, such as dynamite, which can be caused to detonate by means of a No. 8 test blasting cap when unconfined.

Low explosive. Explosive material that will burn or deflagrate when ignited. It is characterized by a rate of reaction that is less than the speed of sound. Examples of low explosives include, but are not limited to: black powder; safety fuse; igniters; igniter cord; fuse lighters; fireworks; and propellants, 1.3C.

Mass-detonating explosives. Division 1.1, 1.2 and 1.5 explosives alone or in combination, or loaded into various types of ammunition or containers, most of which can be expected to explode virtually instantaneously when a small portion is subjected to fire, severe concussion, impact, the impulse of an initiating agent or the effect of a considerable discharge of energy from without. Materials that react in this manner represent a mass explosion hazard. Such an explosive will normally cause severe structural damage to adjacent objects. Explosive propagation could occur immediately to other items of ammunition and explosives stored sufficiently close to and not adequately protected from the initially exploding pile with a time interval short enough so that two or more quantities must be considered as one for quantity-distance purposes.

[F] FABRICATION AREA. An area within a semiconductor fabrication facility and related research and development areas in which there are processes using hazardous production materials. Such areas are allowed to include ancillary rooms or areas such as dressing rooms and offices that are directly related to the fabrication area processes.

[A] FACILITY. All or any portion of buildings, structures, site improvements, elements and pedestrian or vehicular routes located on a *site*.

[BS] FACTORED LOAD. The product of a *nominal load* and a load factor.

[S] FEE SUBTITLE. Seattle Municipal Code Title 22, Subtitle IX.

[BS] FENESTRATION. Products classified as either *vertical fenestration* or *skylights and sloped glazing*, installed in such a manner as to preserve the weather-resistant barrier of the wall or roof in which they are installed. *Fenestration* includes products with glass or other transparent or translucent materials.

[BS] FENESTRATION, VERTICAL. Windows that are fixed or movable, opaque doors, glazed doors, glazed block and combination opaque and glazed doors installed in a wall at less than 15 degrees from the vertical.

[BS] FIBERBOARD. A fibrous, homogeneous panel made from lignocellulosic fibers (usually wood or cane) and having a density of less than 31 pounds per cubic foot (pcf) (497 kg/m³) but more than 10 pcf (160 kg/m³).

[BS] FIBER-CEMENT (BACKER BOARD, SIDING, SOFFIT, TRIM AND UNDERLAYMENT) PRODUCTS. Manufactured thin section composites of hydraulic cementitious matrices and discrete nonasbestos fibers.

[BF] FIBER-REINFORCED POLYMER. A polymeric composite material consisting of reinforcement fibers, such as glass, impregnated with a fiber-binding polymer which is then molded and hardened. Fiber-reinforced polymers are permitted to contain cores laminated between fiber-reinforced polymer facings.

FIELD NAILING. See “*Nailing, field.*”

FIRE ALARM BOX, MANUAL. See “*Manual fire alarm box.*”

[F] FIRE ALARM CONTROL UNIT. A system component that receives inputs from *automatic* and *manual fire alarm* devices and may be capable of supplying power to detection devices and transponders or off-premises transmitters. The control unit may be capable of providing a transfer of power to the notification appliances and transfer of condition to relays or devices.

[F] FIRE ALARM SIGNAL. A signal initiated by a *fire alarm-initiating device* such as a *manual fire alarm box*, *automatic fire detector*, waterflow switch or other device whose activation is indicative of the presence of a fire or fire signature.

[F] FIRE ALARM SYSTEM. A system or portion of a combination system consisting of components and circuits arranged to monitor and annunciate the status of *fire alarm* or *supervisory signal-initiating devices* and to initiate the appropriate response to those signals.

[BF] FIRE AREA. The aggregate floor area enclosed and bounded by *fire walls*, *fire barriers*, *exterior walls* or *horizontal assemblies* of a building. Areas of the building not provided with surrounding walls shall be included in the fire area if such areas are included within the horizontal projection of the roof or floor next above.

[BF] FIRE BARRIER. A fire-resistance-rated wall assembly of materials designed to restrict the spread of fire in which continuity is maintained.

[S] FIRE CODE OFFICIAL. The chief of the Seattle Fire Department or a duly authorized representative.

[F] FIRE COMMAND CENTER. The principal attended or unattended location where the status of detection, alarm communications and control systems is displayed, and from which the systems can be manually controlled.

[BF] FIRE DAMPER. A *listed* device installed in ducts and air transfer openings designed to close automatically upon detection of heat and resist the passage of flame. Fire dampers are classified for use in either static systems that will automatically shut down in the event of a fire, or in dynamic systems that continue to operate during a fire. A dynamic fire damper is tested and rated for closure under elevated temperature airflow.

[S] FIRE DETECTION SYSTEM. A system of smoke or heat detectors monitored at an *approved* central station, with no requirement for notification appliances in the building.

[F] FIRE DETECTOR, AUTOMATIC. A device designed to detect the presence of a fire signature and to initiate action.

[S] FIRE DISTRICT. That part of the city within the boundary described as follows:

Beginning at the intersection of the center line of Alaskan Way and Clay Street; thence northeasterly along the center line of Clay Street to an intersection with the center line of Denny Way; thence easterly along the center line of Denny Way to an intersection with the center line of Yale Avenue; thence southeasterly along the center line of Yale Avenue to an intersection with the center line of Interstate Highway 5; thence southerly and southeasterly along the centerline of Interstate Highway 5 to an intersection with the center line of 7th Avenue South; thence southerly along the center line of 7th Avenue South to an intersection with the center line of Dearborn Street; thence westerly along the center line of Dearborn Street to an intersection with the center line of Airport Way; thence northwesterly along the center line of Airport Way to an inter-

OCCUPANCY CLASSIFICATION AND USE

section with the center line of 4th Avenue South; thence southerly along the center line of 4th Avenue South to an intersection with the center line of South Royal Brougham Way; thence westerly along the center line of South Royal Brougham Way to an intersection with the center line of South Alaskan Way; thence southerly along the center line of South Alaskan Way to an intersection with the center line of South Massachusetts Street, thence westerly along the center line of South Massachusetts Street to the Outer Harbor Line in Elliott Bay, thence northerly and northwesterly along the Outer Harbor Line to an intersection with the center line of West Harrison Street, thence easterly along the center line of West Harrison Street to an intersection with the center line of Alaskan Way, then southeasterly along the center line of Alaskan Way to the point of beginning.

Buildings and structures located partially within and partially outside the Fire District are considered to be located in the Fire District. See Figure 202F.

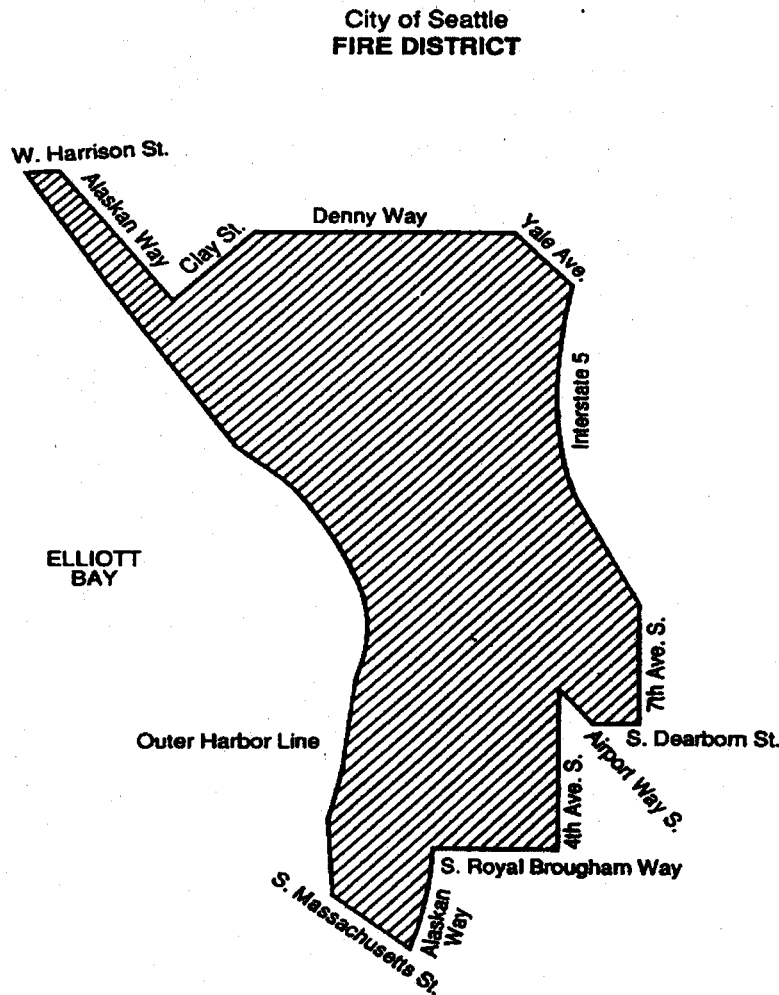

FIGURE 202F

[BF] FIRE DOOR. The door component of a *fire door assembly*.

[BF] FIRE DOOR ASSEMBLY. Any combination of a *fire door*, frame, hardware and other accessories that together provide a specific degree of fire protection to the opening.

FIRE DOOR ASSEMBLY, FLOOR. See "*Floor fire door assembly*."

[BF] FIRE EXIT HARDWARE. *Panic hardware* that is listed for use on *fire door assemblies*.

[F] FIRE LANE. A road or other passageway developed to allow the passage of fire apparatus. A fire lane is not necessarily intended for vehicular traffic other than fire apparatus.

[BF] FIRE PARTITION. A vertical assembly of materials designed to restrict the spread of fire in which openings are protected.

[BF] FIRE PROTECTION RATING. The period of time that an opening protective will maintain the ability to confine a fire as determined by tests specified in Section 716. Ratings are stated in hours or minutes.

[F] FIRE PROTECTION SYSTEM. *Approved* devices, equipment and systems or combinations of systems used to detect a fire, activate an alarm, extinguish or control a fire, control or manage smoke and products of a fire or any combination thereof.

[BF] FIRE PROTECTIVE CURTAIN ASSEMBLY. An assembly consisting of a fabric curtain, a bottom bar, guides, a coil, and an operating and closing system.

[BF] FIRE RESISTANCE. That property of materials or their assemblies that prevents or retards the passage of excessive heat, hot gases or flames under conditions of use.

[S] FIRE-RETARDANT COVERING. Material with a flame spread rating of less than 15 when tested in accordance with ASTM E84.

[F] FIRE SAFETY FUNCTIONS. Building and fire control functions that are intended to increase the level of life safety for occupants or to control the spread of harmful effects of fire.

[S][BF] FIRE SEPARATION DISTANCE. The distance measured from the building face to one of the following:

1. The closest interior *lot line*.
2. To the ~~((centerline))~~ opposite side of a street, an alley or *public way*.
3. To an imaginary line between two buildings on the lot.

The distance shall be measured at right angles from the face of the wall.

[S][BF] FIRE WALL. A fire-resistance-rated wall having protected openings, which restricts the spread of fire and extends continuously from the foundation to or through the roof, ~~((with sufficient structural stability under fire conditions to allow collapse of construction on either side without collapse of the wall.))~~

[BF] FIRE WINDOW ASSEMBLY. A window constructed and glazed to give protection against the passage of fire.

[BF] FIREBLOCKING. Building materials, or materials *approved* for use as fireblocking, installed to resist the free passage of flame to other areas of the building through concealed spaces.

[M] FIREPLACE. A hearth and fire chamber or similar prepared place in which a fire may be made and which is built in conjunction with a chimney.

[BS] FIREPLACE THROAT. The opening between the top of the firebox and the smoke chamber.

[BF] FIRE-RATED GLAZING. Glazing with either a *fire protection rating* or a *fire-resistance rating*.

[BF] FIRE-RESISTANCE RATING. The period of time a *building element*, component or assembly maintains the ability to confine a fire, continues to perform a given structural function, or both, as determined by the tests, or the methods based on tests, prescribed in Section 703.

[BF] FIRE-RESISTANT JOINT SYSTEM. An assemblage of specific materials or products that are designed, tested and fire-resistance rated in accordance with either ASTM E1966 or UL 2079 to resist for a prescribed period of time the passage of fire through *joints* made in or between fire-resistance-rated assemblies.

[BS] FIRE-RETARDANT-TREATED WOOD. Wood products that, when impregnated with chemicals by a pressure process or other means during manufacture, exhibit reduced surface-burning characteristics and resist propagation of fire.

FIRESTOP, MEMBRANE-PENETRATION. See “*Membrane-penetration firestop.*”

FIRESTOP, PENETRATION. See “*Penetration firestop.*”

FIRESTOP SYSTEM, THROUGH-PENETRATION. See “*Through-penetration firestop system.*”

[F] FIREWORKS. Any composition or device for the purpose of producing a visible or audible effect for entertainment purposes by combustion, *deflagration* or *detonation* that meets the definition of 1.4G fireworks or 1.3G fireworks.

Fireworks, 1.3G. Large fireworks devices, which are explosive materials, intended for use in fireworks displays and designed to produce audible or visible effects by combustion, *deflagration* or *detonation*. Such 1.3G fireworks include, but are not limited to, firecrackers containing more than 130 milligrams (2 grains) of explosive composition, aerial shells containing more than 40 grams of pyrotechnic composition, and other display pieces which exceed the limits for classification as 1.4G fireworks. Such 1.3G fireworks are also described as fireworks, UN0335 by the DOTn.

Fireworks, 1.4G. Small fireworks devices containing restricted amounts of pyrotechnic composition designed primarily to produce visible or audible effects by combustion or deflagration that complies with the construction, chemical composition and labeling regulations of the DOTn for fireworks, UN0336, and the US Consumer Product Safety Commission (CPSC) as set forth in CPSC 16 CFR: Parts 1500 and 1507.

OCCUPANCY CLASSIFICATION AND USE

[F] GAS DETECTION SYSTEM. A system or portion of a combination system that utilizes one or more stationary sensors to detect the presence of a specified gas at a specified concentration and initiate one or more responses required by this code, such as notifying a responsible person, activating an alarm signal, or activating or deactivating equipment. A self-contained gas detection and alarm device is not classified as a gas detection system.

[F] GAS ROOM. A separately ventilated, fully enclosed room in which only *compressed gases* and associated equipment and supplies are stored or *used*.

[F] GASEOUS HYDROGEN SYSTEM. An assembly of piping, devices and apparatus designed to generate, store, contain, distribute or transport a nontoxic, gaseous hydrogen-containing mixture having not less than 95-percent hydrogen gas by volume and not more than 1-percent oxygen by volume. Gaseous hydrogen systems consist of items such as *compressed gas* containers, reactors and appurtenances, including pressure regulators, pressure relief devices, manifolds, pumps, compressors and interconnecting piping and tubing and controls.

[BF] GLASS FIBERBOARD. Fibrous glass roof insulation consisting of inorganic glass fibers formed into rigid boards using a binder. The board has a top surface faced with asphalt and kraft reinforced with glass fiber.

[BS] GLASS MAT GYPSUM PANEL. A *gypsum panel* consisting of a noncombustible core primarily of gypsum, surfaced with glass mat partially or completely embedded in the core.

[BS] GRADE (LUMBER). The classification of lumber in regard to strength and utility in accordance with American Softwood Lumber Standard DOC PS 20 and the grading rules of an *approved* lumber rules-writing agency.

[BE] GRADE FLOOR EMERGENCY ESCAPE AND RESCUE OPENING. An *emergency escape and rescue opening* located such that the bottom of the clear opening is not more than 44 inches (1118 mm) above or below the finished ground level adjacent to the opening.

[S][BG] GRADE PLANE. A reference plane representing the average of finished ground level adjoining the building at *exterior walls*. Where the finished ground level slopes away from the *exterior walls*, the reference plane shall be established by the lowest points within the area between the building and the *lot line* or, where the *lot line* is more than 6 feet (1829 mm) from the building, between the building and a point 6 feet (1829 mm) from the building. For grade of structures built over water, see Section 425.3.

GRADE PLANE, STORY ABOVE. See “*Story above grade plane.*”

[BE] GRANDSTAND. Tiered seating supported on a dedicated structural system and two or more rows high and is not a *building element* (see “*Bleachers*”).

[BG] GREENHOUSE. A structure or thermally isolated area of a building that maintains a specialized sunlit environment used for and essential to the cultivation, protection or maintenance of plants.

[BG] GROSS LEASABLE AREA. The total floor area designed for tenant occupancy and exclusive use. The area of tenant occupancy is measured from the centerlines of joint partitions to the outside of the tenant walls. All tenant areas, including areas used for storage, shall be included in calculating *gross leasable area*.

[BG] GROUP HOME. A facility for social rehabilitation, substance abuse or mental health problems that contains a group housing arrangement that provides *custodial care* but does not provide *medical care*.

[BE] GUARD. A building component or a system of building components located at or near the open sides of elevated walking surfaces that minimizes the possibility of a fall from the walking surface to a lower level.

[BG] GUESTROOM. A room used or intended to be used by one or more guests for living or sleeping purposes.

[BS] GYPSUM BOARD. The generic name for a family of sheet products consisting of a noncombustible core primarily of gypsum with paper surfacing.

[BS] GYPSUM PANEL PRODUCT. The general name for a family of sheet products consisting essentially of gypsum complying with the standards specified in Table 2506.2 and Table 2507.2, and Chapter 35. *Gypsum board* and *glass mat gypsum panels* are examples of *gypsum panel products*.

[BS] GYPSUM PLASTER. A mixture of calcined gypsum or calcined gypsum and lime and aggregate and other *approved* materials as specified in this code.

[BS] GYPSUM SHEATHING. *Gypsum panel products* specifically manufactured with enhanced water resistance for use as a substrate for exterior surface materials.

[BS] GYPSUM VENEER PLASTER. *Gypsum plaster* applied to an *approved* base in one or more coats normally not exceeding 1/4 inch (6.4 mm) in total thickness.

[BS] GYPSUM WALLBOARD. A *gypsum board* used primarily as an interior surfacing for building structures.

[BG] HABITABLE SPACE. A space in a building for living, sleeping, eating or cooking. Bathrooms, toilet rooms, closets, halls, storage or utility spaces and similar areas are not considered *habitable spaces*.

[F] HALOGENATED EXTINGUISHING SYSTEM. A fire-extinguishing system using one or more atoms of an element from the halogen chemical series: fluorine, chlorine, bromine and iodine.

[F] HANDLING. The deliberate transport by any means to a point of storage or *use*.

[BE] HANDRAIL. A horizontal or sloping rail intended for grasping by the hand for guidance or support.

[BS] HARDBOARD. A fibrous-felted, homogeneous panel made from lignocellulosic fibers consolidated under heat and pressure in a hot press to a density not less than 31 pcf (497 kg/m³).

HARDWARE. See “*Fire exit hardware*” and “*Panic hardware*.”

[F] HAZARDOUS MATERIALS. Those chemicals or substances that are *physical hazards* or *health hazards* as classified in Section 307 and the *International Fire Code*, whether the materials are in usable or waste condition.

[F] HAZARDOUS PRODUCTION MATERIAL (HPM). A *solid, liquid* or gas associated with semiconductor manufacturing that has a degree-of-hazard rating in health, flammability or instability of Class 3 or 4 as ranked by NFPA 704 and which is *used* directly in research, laboratory or production processes which have as their end product materials that are not hazardous.

[BS] HEAD JOINT. Vertical *mortar joint* placed between *masonry units* within the *wythe* at the time the *masonry units* are laid.

[F] HEALTH HAZARD. A classification of a chemical for which there is statistically significant evidence that acute or chronic health effects are capable of occurring in exposed persons. The term “health hazard” includes chemicals that are *toxic* or *highly toxic*, and *corrosive*.

HEAT DETECTOR. See “*Detector, heat*.”

[S][BG] HEIGHT, BUILDING. The vertical distance from *grade plane* to the average height of the highest roof surface other than rooftop structures complying with Section 1510.

[BS] HELICAL PILE. Manufactured steel *deep foundation* element consisting of a central shaft and one or more helical bearing plates. A *helical pile* is installed by rotating it into the ground. Each helical bearing plate is formed into a screw thread with a uniform defined pitch.

[F] HELIPAD. A structural surface that is used for the landing, taking off, taxiing and parking of helicopters.

[F] HELIPORT. An area of land or water or a structural surface that is used, or intended for use, for the landing and taking off of helicopters, and any appurtenant areas that are used, or intended for use, for heliport buildings or other heliport facilities.

[F] HELISTOP. The same as “heliport,” except that no fueling, defueling, maintenance, repairs or storage of helicopters is permitted.

[F] HIGHER EDUCATION LABORATORY. Laboratories in Group B occupancies used for educational purposes above the 12th grade. Storage, use and handling of chemicals in such laboratories shall be limited to purposes related to testing, analysis, teaching, research or developmental activities on a nonproduction basis.

[F] HIGHLY TOXIC. A material which produces a lethal dose or lethal concentration that falls within any of the following categories:

1. A chemical that has a median lethal dose (LD₅₀) of 50 milligrams or less per kilogram of body weight when administered orally to albino rats weighing between 200 and 300 grams each.
2. A chemical that has a median lethal dose (LD₅₀) of 200 milligrams or less per kilogram of body weight when administered by continuous contact for 24 hours (or less if death occurs within 24 hours) with the bare skin of albino rabbits weighing between 2 and 3 kilograms each.
3. A chemical that has a median lethal concentration (LC₅₀) in air of 200 parts per million by volume or less of gas or vapor, or 2 milligrams per liter or less of mist, fume or dust, when administered by continuous inhalation for 1 hour (or less if death occurs within 1 hour) to albino rats weighing between 200 and 300 grams each.

Mixtures of these materials with ordinary materials, such as water, might not warrant classification as *highly toxic*. While this system is basically simple in application, any hazard evaluation that is required for the precise categorization of this type of material shall be performed by experienced, technically competent persons.

[BF] HIGH-PRESSURE DECORATIVE EXTERIOR-GRADE COMPACT LAMINATE (HPL). Panels consisting of layers of cellulose fibrous material impregnated with thermosetting resins and bonded together by a high-pressure process to form a homogeneous nonporous core suitable for exterior use.

[BF] HIGH-PRESSURE DECORATIVE EXTERIOR-GRADE COMPACT LAMINATE (HPL) SYSTEM. An *exterior wall covering* fabricated using HPL in a specific assembly including *joints*, seams, attachments, substrate, framing and other details as appropriate to a particular design.

OCCUPANCY CLASSIFICATION AND USE

[W][S][BG] HIGH-RISE BUILDING. A building with an occupied floor located more than 75 feet (22 860 mm) above the lowest level of fire department vehicle access. For the purposes of this definition, an occupied roof with an occupant load of 50 or more in a building that is equipped with an *automatic sprinkler system* and an occupant load of 10 or more in a building not equipped with an *automatic fire sprinkler system* are considered to be occupied floors.

[S][A] HISTORIC BUILDINGS. (~~Any building or structure that is one or more of the following:)) See “Landmark.”~~

- ~~1. Listed or certified as eligible for listing by the State Historic Preservation Officer or the Keeper of the National Register of Historic Places, in the National Register of Historic Places.~~
- ~~2. Designated as historic under an applicable state or local law.~~
- ~~3. Certified as a contributing resource within a National Register, state designated or locally designated historic district.)~~

[BF] HORIZONTAL ASSEMBLY. A fire-resistance-rated floor or *roof assembly* of materials designed to restrict the spread of fire in which continuity is maintained.

[BE] HORIZONTAL EXIT. An *exit* component consisting of fire-resistance-rated construction and opening protectives intended to compartmentalize portions of a building thereby creating refuge areas that afford safety from the fire and smoke from the area of fire origin.

[W] HOSPICE CARE CENTER. A building or portion thereof used on a 24-hour basis for the provision of hospice services to terminally ill inpatients.

[BG] HOSPITALS AND PSYCHIATRIC HOSPITALS. Facilities that provide care or treatment for the medical, psychiatric, obstetrical, or surgical treatment of care recipients who are *incapable of self-preservation*.

[BG] HOUSING UNIT. A *dormitory* or a group of *cells* with a common dayroom in Group I-3.

HPM. See “*Hazardous Production Material*.”

[F] HPM ROOM. A room used in conjunction with or serving a Group H-5 occupancy, where *HPM* is stored or *used* and which is classified as a Group H-2, H-3 or H-4 occupancy.

[BS] HURRICANE-PRONE REGIONS. Areas vulnerable to hurricanes defined as:

1. The US Atlantic Ocean and Gulf of Mexico coasts where the basic design wind speed, *V*, for Risk Category II buildings is greater than 115 mph (51.4 m/s);
2. Hawaii, Puerto Rico, Guam, Virgin Islands and American Samoa.

[F] HYDROGEN FUEL GAS ROOM. A room or space that is intended exclusively to house a *gaseous hydrogen system*.

[BS] ICE-SENSITIVE STRUCTURE. A structure for which the effect of an atmospheric ice *load* governs the design of a structure or portion thereof. This includes, but is not limited to, lattice structures, guyed masts, overhead lines, light suspension and cable-stayed bridges, aerial cable systems (e.g., for ski lifts or logging operations), amusement rides, open catwalks and platforms, flagpoles and signs.

[F] IMMEDIATELY DANGEROUS TO LIFE AND HEALTH (IDLH). The concentration of airborne contaminants which poses a threat of death, immediate or delayed permanent adverse health effects, or effects that could prevent escape from such an environment. This contaminant concentration level is established by the National Institute of Occupational Safety and Health (NIOSH) based on both toxicity and flammability. It generally is expressed in parts per million by volume (ppmv/v) or milligrams per cubic meter (mg/m³). If adequate data do not exist for precise establishment of IDLH concentrations, an independent certified industrial hygienist, industrial toxicologist, appropriate regulatory agency or other source *approved* by the *building official* shall make such determination.

[BS] IMPACT LOAD. The *load* resulting from moving machinery, elevators, craneways, vehicles and other similar forces and kinetic *loads*, pressure and possible surcharge from fixed or moving *loads*.

[BS] IMPACT PROTECTIVE SYSTEM. Construction that has been shown by testing to withstand the impact of test missiles and that is applied, attached or locked over exterior glazing.

[BG] INCAPABLE OF SELF-PRESERVATION. Persons who, because of age, physical limitations, mental limitations, chemical dependency or medical treatment, cannot respond as an individual to an emergency situation.

[F] INCOMPATIBLE MATERIALS. Materials that, when mixed, have the potential to react in a manner that generates heat, fumes, gases or byproducts which are hazardous to life or property.

[BS] INDIVIDUAL TRUSS MEMBER. A truss chord or truss web.

[F] INERT GAS. A gas that is capable of reacting with other materials only under abnormal conditions such as high temperatures, pressures and similar extrinsic physical forces. Within the context of the code, inert gases do not exhibit either physical or health hazard properties as defined (other than acting as a simple asphyxiant) or hazard properties other than those of a *compressed gas*. Some of the more common inert gases include argon, helium, krypton, neon, nitrogen and xenon.

[F] INITIATING DEVICE. A system component that originates transmission of a change-of-state condition, such as in a *smoke detector, manual fire alarm box* or supervisory switch.

[BF] INSULATING SHEATHING. A rigid panel or board insulation material having a thermal resistance of not less than R-2 of the core material with properties suitable for use on walls, floors, roofs or foundations.

[BE] INTENDED TO BE OCCUPIED AS A RESIDENCE. This refers to a *dwelling unit* or *sleeping unit* that can or will be used all or part of the time as the occupant's place of abode.

[BE] INTERIOR EXIT RAMP. An *exit* component that serves to meet one or more *means of egress* design requirements, such as required number of *exits* or *exit access* travel distance, and provides for a protected path of egress travel to the *exit discharge* or *public way*.

[BE] INTERIOR EXIT STAIRWAY. An *exit* component that serves to meet one or more *means of egress* design requirements, such as required number of *exits* or *exit access* travel distance, and provides for a protected path of egress travel to the *exit discharge* or *public way*.

[BF] INTERIOR FINISH. Interior finish includes *interior wall* and *ceiling finish* and *interior floor finish*.

[BF] INTERIOR FLOOR FINISH. The exposed floor surfaces of buildings including coverings applied over a finished floor or *stair*, including risers.

[BF] INTERIOR FLOOR-WALL BASE. *Interior floor finish trim* used to provide a functional or decorative border at the intersection of walls and floors.

[BF] INTERIOR SURFACES. Surfaces other than weather exposed surfaces.

[BF] INTERIOR WALL AND CEILING FINISH. The exposed *interior surfaces* of buildings, including but not limited to: fixed or movable walls and partitions; toilet room privacy partitions; columns; ceilings; and interior wainscoting, paneling or other finish applied structurally or for decoration, acoustical correction, surface insulation, structural fire resistance or similar purposes, but not including *trim*.

[BS] INTERLAYMENT. A layer of felt or nonbituminous saturated felt not less than 18 inches (457 mm) wide, shingled between each course of a wood-shake *roof covering*.

[BS] INTERMODAL SHIPPING CONTAINER. A six-sided steel unit originally constructed as a general cargo container used for the transport of goods and materials.

[BF] INTUMESCENT FIRE-RESISTANT COATINGS. Thin film liquid mixture applied to substrates by brush, roller, spray or trowel which expands into a protective foamed layer to provide fire-resistant protection of the substrates when exposed to flame or intense heat.

[BS] JOINT. The opening in or between adjacent assemblies that is created due to building tolerances, or is designed to allow independent movement of the building in any plane caused by thermal, seismic, wind or any other loading.

[S] (~~[A] JURISDICTION.~~ The governmental unit that has adopted this code.)

[BF] L RATING. The air leakage rating of a *through penetration firestop system* or a fire-resistant *joint* system when tested in accordance with UL 1479 or UL 2079, respectively.

[A] LABEL. An identification applied on a product by the manufacturer that contains the name of the manufacturer, the function and performance characteristics of the product or material and the name and identification of an *approved agency*, and that indicates that the representative sample of the product or material has been tested and evaluated by an *approved agency* (see Section 1703.5, "*Manufacturer's designation*" and "*Mark*").

[A] LABELED. Equipment, materials or products to which has been affixed a *label*, seal, symbol or other identifying *mark* of a nationally recognized testing laboratory, *approved agency* or other organization concerned with product evaluation that maintains periodic inspection of the production of the above-labeled items and whose labeling indicates either that the equipment, material or product meets identified standards or has been tested and found suitable for a specified purpose.

[F] LABORATORY SUITE. A fire-rated, enclosed laboratory area providing one or more laboratory spaces within a Group B educational occupancy that includes ancillary uses such as offices, bathrooms and corridors that are contiguous with the laboratory area, and are constructed in accordance with Section 428.

[S] LAND USE CODE. *Seattle Land Use Code*, Title 23 of the Seattle Municipal Code, as amended.

[S] LAND-DISTURBING ACTIVITY. Any activity that results in a movement of earth, or a change in the existing soil cover (both vegetative and nonvegetative) or the existing topography. Land-disturbing activities include, but are not limited to, clearing, grading, filling, excavation or addition or replacement of impervious surface.

[S] LANDMARK. A building or structure that is subject to a requirement to obtain a certificate of approval from the City Landmarks Preservation Board before altering or making significant changes to specific features or characteristics, that has been nominated for designation and the City Landmarks Preservation Board has not issued a determination regarding designation, that has been designated for preservation by the City Landmarks Preservation Board, that has been designated for preser-

OCCUPANCY CLASSIFICATION AND USE

variation by the State of Washington, that has been listed or determined eligible to be listed in the National Register of Historic Places, or that is located in a landmark or special review district subject to a requirement to obtain a certificate of approval before making a change to the external appearance of a structure.

LEVEL OF EXIT DISCHARGE. See “Exit discharge, level of.”

[F] LIFE SAFETY SYSTEMS. Systems, devices and equipment that enhance or facilitate evacuation, smoke control, compartmentation and isolation.

[BF] LIGHT-DIFFUSING SYSTEM. Construction consisting in whole or in part of lenses, panels, grids or baffles made with light-transmitting plastics positioned below independently mounted electrical light sources, skylights or light-transmitting plastic roof panels. Lenses, panels, grids and baffles that are part of an electrical fixture shall not be considered as a light-diffusing system.

[BS] LIGHT-FRAME CONSTRUCTION. Construction whose vertical and horizontal structural elements are primarily formed by a system of repetitive wood or cold-formed steel framing members.

[BF] LIGHT-TRANSMITTING PLASTIC ROOF PANELS. Structural plastic panels other than *skylights* that are fastened to structural members, or panels or sheathing and that are used as light-transmitting media in the plane of the roof.

[BF] LIGHT-TRANSMITTING PLASTIC WALL PANELS. Plastic materials that are fastened to structural members, or to structural panels or sheathing, and that are used as light-transmitting media in *exterior walls*.

[BS] LIMIT OF MODERATE WAVE ACTION. Line shown on FIRMs to indicate the inland limit of the 1-1/2-foot (457 mm) breaking wave height during the *base flood*.

[BS] LIMIT STATE. A condition beyond which a structure or member becomes unfit for service and is judged to be no longer useful for its intended function (serviceability *limit state*) or to be unsafe (strength *limit state*).

[W] LIMITED VERBAL OR PHYSICAL ASSISTANCE. Persons who, because of age, physical limitations, cognitive limitations, treatment or chemical dependency, and may not independently recognize, respond, or evacuate without limited verbal or physical assistance during an emergency situation. Verbal assistance includes prompting, giving, and repeating instructions. Physical assistance includes assistance with transfers to walking aids or mobility devices and assistance with egress.

[F] LIQUID. A material that has a melting point that is equal to or less than 68°F (20°C) and a *boiling point* that is greater than 68°F (20°C) at 14.7 pounds per square inch absolute (psia) (101 kPa). When not otherwise identified, the term “liquid” includes both *flammable* and *combustible liquids*.

[F] LIQUID STORAGE ROOM. A room classified as a Group H-3 occupancy used for the storage of *flammable* or *combustible liquids* in a closed condition.

[F] LIQUID USE, DISPENSING AND MIXING ROOM. A room in which Class I, II and IIIA *flammable* or *combustible liquids* are used, dispensed or mixed in open containers.

[A] LISTED. Equipment, materials, products or services included in a list published by an organization acceptable to the *building official* and concerned with evaluation of products or services that maintains periodic inspection of production of listed equipment or materials or periodic evaluation of services and whose listing states either that the equipment, material, product or service meets identified standards or has been tested and found suitable for a specified purpose.

[BS] LIVE LOAD. A *load* produced by the use and occupancy of the building or other structure that does not include construction or environmental *loads* such as wind load, snow load, rain load, earthquake load, flood load or dead load.

[BS] LIVE LOAD, ROOF. A *load* on a roof produced:

1. During maintenance by workers, equipment and materials; or
2. During the life of the structure by movable objects such as planters or other similar small decorative appurtenances that are not occupancy related.

[BG] LIVE/WORK UNIT. A *dwelling unit* or *sleeping unit* in which a significant portion of the space includes a nonresidential use that is operated by the tenant.

[BS] LOAD AND RESISTANCE FACTOR DESIGN (LRFD). A method of proportioning structural members and their connections using load and *resistance factors* such that no applicable *limit state* is reached when the structure is subjected to appropriate load combinations. The term “LRFD” is used in the design of steel and wood structures.

[BS] LOAD EFFECTS. Forces and deformations produced in structural members by the applied *loads*.

[BS] LOAD FACTOR. A factor that accounts for deviations of the actual *load* from the *nominal load*, for uncertainties in the analysis that transforms the *load* into a *load effect*, and for the probability that more than one extreme *load* will occur simultaneously.

[BS] LOADS. Forces or other actions that result from the weight of building materials, occupants and their possessions, environmental effects, differential movement and restrained dimensional changes. Permanent *loads* are those *loads* in which variations over time are rare or of small magnitude, such as *dead loads*. All other *loads* are variable loads (see “*Nominal loads*”).

[BG] LODGING HOUSE. A one-family dwelling where one or more occupants are primarily permanent in nature and rent is paid for guest rooms.

[W] LOFT. A space on an intermediate level or levels between the floor and ceiling of a Group R occupancy dwelling or sleeping unit, open on one or more sides to the room in which the loft is located, and in accordance with Section 420.14.

[A] LOT. A portion or parcel of land considered as a unit.

[A] LOT LINE. A line dividing one lot from another, or from a street or any public place.

[BE] LOW-ENERGY POWER-OPERATED DOOR. A swinging, sliding or folding door that opens automatically upon an action by a pedestrian such as pressing a push plate or waving a hand in front of a sensor. The door closes automatically, and operates with decreased forces and decreased speeds (see “*Power-assisted door*” and “*Power-operated door*”).

[F] LOWER FLAMMABLE LIMIT (LFL). The minimum concentration of vapor in air at which propagation of flame will occur in the presence of an ignition source. The LFL is sometimes referred to as “LEL” or “lower explosive limit.”

[BS] LOWEST FLOOR. The *lowest floor* of the lowest enclosed area, including *basement*, but excluding any unfinished or flood-resistant enclosure, usable solely for vehicle parking, building access or limited storage provided that such enclosure is not built so as to render the structure in violation of Section 1612.

[W] MAILBOXES. Receptacles for the receipt of documents, packages or other deliverable matter. *Mailboxes* include, but are not limited to, post office boxes and receptacles provided by commercial mail-receiving agencies, apartment houses and schools.

[BS] MAIN WINDFORCE-RESISTING SYSTEM. An assemblage of structural elements assigned to provide support and stability for the overall structure. The system generally receives wind loading from more than one surface.

MALL BUILDING, COVERED and MALL BUILDING, OPEN. See “*Covered mall building*.”

[F] MANUAL FIRE ALARM BOX. A manually operated device used to initiate an *alarm signal*.

[A] MANUFACTURER’S DESIGNATION. An identification applied on a product by the manufacturer indicating that a product or material complies with a specified standard or set of rules (see “*Label*” and “*Mark*”).

[S] MARINA. A facility, generally on the waterfront, that stores and services boats in berths, on moorings, and in dry storage or dry stack storage.

[A] MARK. An identification applied on a product by the manufacturer indicating the name of the manufacturer and the function of a product or material (see “*Label*” and “*Manufacturer’s designation*”).

[S][BG] MARQUEE. ((A *canopy* that has a top surface which is sloped less than 25 degrees from the horizontal and is located less than 10 feet (3048 mm) from operable openings above or adjacent to the level of the marquee.)) *Marquees* are a type of *canopy*. See “*Canopy*.”

[BS] MASONRY. A built-up construction or combination of building units or materials of clay, shale, concrete, glass, gypsum, stone or other *approved* units bonded together with or without *mortar* or grout or other accepted methods of joining.

Glass unit masonry. Masonry composed of glass units bonded by *mortar*.

Plain masonry. Masonry in which the tensile resistance of the masonry is taken into consideration and the effects of stresses in reinforcement are neglected.

Reinforced masonry. Masonry construction in which reinforcement acting in conjunction with the masonry is used to resist forces.

Solid masonry. Masonry consisting of solid *masonry units* laid contiguously with the *joints* between the units filled with *mortar*.

Unreinforced (plain) masonry. Masonry in which the tensile resistance of masonry is taken into consideration and the resistance of the reinforcing steel, if present, is neglected.

[BS] MASONRY UNIT. *Brick*, tile, stone, glass block or concrete block conforming to the requirements specified in Section 2103.

Hollow. A *masonry unit* whose net cross-sectional *area* in any plane parallel to the load-bearing surface is less than 75 percent of its gross cross-sectional *area* measured in the same plane.

Solid. A *masonry unit* whose net cross-sectional *area* in every plane parallel to the load-bearing surface is 75 percent or more of its gross cross-sectional *area* measured in the same plane.

OCCUPANCY CLASSIFICATION AND USE

[BG] MASS TIMBER. Structural elements of Type IV construction primarily of solid, built-up, panelized or engineered wood products that meet minimum cross-section dimensions of Type IV construction.

[BF] MASTIC FIRE-RESISTANT COATINGS. Liquid mixture applied to a substrate by brush, roller, spray or trowel that provides fire-resistant protection of a substrate when exposed to flame or intense heat.

[BE] MEANS OF EGRESS. A continuous and unobstructed path of vertical and horizontal egress travel from any occupied portion of a building or structure to a *public way*. A *means of egress* consists of three separate and distinct parts: the *exit access*, the *exit* and the *exit discharge*.

[BF] MECHANICAL EQUIPMENT SCREEN. A rooftop structure, not covered by a roof, used to aesthetically conceal plumbing, electrical or mechanical equipment from view.

[BG] MECHANICAL-ACCESS ENCLOSED PARKING GARAGE. An enclosed parking garage that employs parking machines, lifts, elevators or other mechanical devices for vehicle moving from and to street level and in which public occupancy in the garage is prohibited in all areas except the vehicle access bay.

[BG] MECHANICAL-ACCESS OPEN PARKING GARAGES. *Open parking garages* employing parking machines, lifts, elevators or other mechanical devices for vehicles moving from and to street level and in which public occupancy is prohibited above the street level.

[BG] MEDICAL CARE. Care involving medical or surgical procedures, nursing or for psychiatric purposes.

[BF] MEMBRANE PENETRATION. A breach in one side of a floor-ceiling, roof-ceiling or wall assembly to accommodate an item installed into or passing through the breach.

[BG] MEMBRANE-COVERED CABLE STRUCTURE. A nonpressurized structure in which a mast and cable system provides support and tension to the membrane weather barrier and the membrane imparts stability to the structure.

[BG] MEMBRANE-COVERED FRAME STRUCTURE. A nonpressurized building wherein the structure is composed of a rigid framework to support a tensioned membrane which provides the weather barrier.

[BF] MEMBRANE-PENETRATION FIRESTOP. A material, device or construction installed to resist for a prescribed time period the passage of flame and heat through openings in a protective membrane in order to accommodate cables, cable trays, conduit, tubing, pipes or similar items.

[BF] MEMBRANE-PENETRATION FIRESTOP SYSTEM. An assemblage consisting of a fire-resistance-rated floor-ceiling, roof-ceiling or wall assembly, one or more penetrating items installed into or passing through the breach in one side of the assembly and the materials or devices, or both, installed to resist the spread of fire into the assembly for a prescribed period of time.

[BE] MERCHANDISE PAD. A merchandise pad is an area for display of merchandise surrounded by *aisles*, permanent fixtures or walls. Merchandise pads contain elements such as nonfixed and movable fixtures, cases, racks, counters and partitions as indicated in Section ((405.2)) 106.2 from which customers browse or shop.

[BF] METAL COMPOSITE MATERIAL (MCM). A factory-manufactured panel consisting of metal skins bonded to both faces of a solid plastic core.

[BF] METAL COMPOSITE MATERIAL (MCM) SYSTEM. An *exterior wall covering* fabricated using MCM in a specific assembly including *joints*, seams, attachments, substrate, framing and other details as appropriate to a particular design.

[BS] METAL ROOF PANEL. An interlocking metal sheet having a minimum installed weather exposure of 3 square feet (0.279 m²) per sheet.

[BS] METAL ROOF SHINGLE. An interlocking metal sheet having an installed weather exposure less than 3 square feet (0.279 m²) per sheet.

[BG] MEZZANINE. An intermediate level or levels between the floor and ceiling of any *story* and in accordance with Section 505.

[BS] MICROPILE. A *micropile* is a bored, grouted-in-place *deep foundation* element that develops its load-carrying capacity by means of a bond zone in soil, bedrock or a combination of soil and bedrock.

[BF] MINERAL BOARD. A rigid felted thermal insulation board consisting of either felted mineral fiber or cellular beads of expanded aggregate formed into flat rectangular units.

[BF] MINERAL FIBER. Insulation composed principally of fibers manufactured from rock, slag or glass, with or without binders.

[BF] MINERAL WOOL. Synthetic vitreous fiber insulation made by melting predominately igneous rock or furnace slag, and other inorganic materials, and then physically forming the melt into fibers.

[BS] MODIFIED BITUMEN ROOF COVERING. One or more layers of polymer-modified asphalt sheets. The sheet materials shall be fully adhered or mechanically attached to the substrate or held in place with an *approved ballast* layer.

[BS] MORTAR. A mixture consisting of cementitious materials, fine aggregates, water, with or without admixtures, that is used to construct unit masonry assemblies.

[BS] MORTAR, SURFACE-BONDING. A mixture to bond concrete *masonry units* that contains hydraulic cement, glass fiber reinforcement with or without inorganic fillers or organic modifiers and water.

[BE] MULTILEVEL ASSEMBLY SEATING. Seating that is arranged in distinct levels where each level is composed of either multiple rows, or a single row of box seats accessed from a separate level.

[F] MULTIPLE-STATION ALARM DEVICE. Two or more single-station alarm devices that can be interconnected such that actuation of one causes all integral or separate audible alarms to operate. A multiple-station alarm device can consist of one single-station alarm device having connections to other detectors or to a *manual fire alarm box*.

[F] MULTIPLE-STATION SMOKE ALARM. Two or more single-station alarm devices that are capable of interconnection such that actuation of one causes the appropriate *alarm signal* to operate in all interconnected alarms.

[BE] MULTISTORY UNIT. A *dwelling unit* or *sleeping unit* with *habitable space* located on more than one story.

[BF] NAILABLE SUBSTRATE. A product or material such as framing, sheathing or furring, composed of wood, wood-based materials or other materials providing equivalent fastener withdrawal resistance.

[BS] NAILING, BOUNDARY. A special nailing pattern required by design at the boundaries of *diaphragms*.

[BS] NAILING, EDGE. A special nailing pattern required by design at the edges of each panel within the assembly of a *diaphragm* or *shear wall*.

[BS] NAILING, FIELD. Nailing required between the sheathing panels and framing members at locations other than *boundary nailing* and *edge nailing*.

[BS] NATURALLY DURABLE WOOD. The heartwood of the following species except for the occasional piece with corner sapwood, provided 90 percent or more of the width of each side on which it occurs is heartwood.

Decay resistant. Redwood, cedar, black locust and black walnut.

Termite resistant. Redwood, Alaska yellow cedar, Eastern red cedar and Western red cedar.

[W] NIGHTCLUB. An A-2 occupancy use in which the aggregate area of concentrated use of unfixed chairs and standing space that is specifically designated and primarily used for dancing or viewing performers exceeds 350 square feet, excluding adjacent lobby areas. "Nightclub" does not include theaters with fixed seating, banquet halls, or lodge halls.

[BS] NOMINAL LOADS. The magnitudes of the *loads* specified in Chapter 16 (dead, live, soil, wind, snow, rain, *flood* and earthquake).

[BS] NOMINAL SIZE (LUMBER). The commercial size designation of width and depth, in standard sawn lumber and glued-laminated lumber *grades*; somewhat larger than the standard net size of dressed lumber, in accordance with DOCPS 20 for sawn lumber and with the ANSI/AWC NDS for glued-laminated lumber.

[BG] NONCOMBUSTIBLE MEMBRANE STRUCTURE. A membrane structure in which the membrane and all component parts of the structure are noncombustible.

[BF] NONCOMBUSTIBLE PROTECTION (FOR MASS TIMBER). Noncombustible material, in accordance with Section 703.6, designed to increase the *fire-resistance rating* and delay the combustion of *mass timber*.

[S] NON-PRODUCTION LABORATORY FACILITY. A workplace facility where chemicals are used or synthesized on a non-production basis and the containers used for reactions, transfers, and other handling of chemicals are designed to be easily and safely manipulated by one person.

[BS] NONSTRUCTURAL CONCRETE. Any element made of plain or reinforced concrete that is not part of a structural system required to transfer either gravity or lateral *loads* to the ground.

[S] NONSTRUCTURAL TRIM. The moldings, battens, caps, nailing strips, laticing or cutouts which are attached to the sign structure.

[F] NORMAL TEMPERATURE AND PRESSURE (NTP). A temperature of 70°F (21°C) and a pressure of 1 atmosphere [14.7 psia (101 kPa)].

[BE] NOSING. The leading edge of treads of *stairs* and of landings at the top of *stairway flights*.

NOTIFICATION ZONE. See "*Zone, notification.*"

[F] NUISANCE ALARM. An alarm caused by mechanical failure, malfunction, improper installation or lack of proper maintenance, or an alarm activated by a cause that cannot be determined.

[BG] NURSING HOMES. Facilities that provide care, including both intermediate care facilities and skilled nursing facilities where any of the persons are *incapable of self-preservation*.

[BE] OCCUPANT LOAD. The number of persons for which the *means of egress* of a building or portion thereof is designed.

[BE] PANIC HARDWARE. A door-latching assembly incorporating a device that releases the latch upon the application of a force in the direction of egress travel. See “*Fire exit hardware.*”

[BS] PARTICLEBOARD. A generic term for a panel primarily composed of cellulosic materials (usually wood), generally in the form of discrete pieces or particles, as distinguished from fibers. The cellulosic material is combined with synthetic resin or other suitable bonding system by a process in which the interparticle bond is created by the bonding system under heat and pressure.

[BF] PENETRATION FIRESTOP. A *through-penetration* firestop or a *membrane-penetration* firestop.

[BG] PENTHOUSE. An enclosed, unoccupied rooftop structure used for sheltering mechanical and electrical equipment, tanks, elevators and related machinery, *stairways*, and vertical *shaft* openings.

[BS] PERFORMANCE CATEGORY. A designation of *wood structural panels* as related to the panel performance used in Chapter 23.

[BF] PERIMETER FIRE CONTAINMENT SYSTEM. An assemblage of specific materials or products that is designed to resist for a prescribed period of time the passage of fire through voids created at the intersection of exterior curtain wall assemblies and fire-resistance-rated floor or floor/ceiling assemblies.

[BS] PERMANENT INDIVIDUAL TRUSS MEMBER DIAGONAL BRACING (PITMDB). Structural member or assembly intended to permanently stabilize the *PITMRs*.

[BS] PERMANENT INDIVIDUAL TRUSS MEMBER RESTRAINT (PITMR). Restraint that is used to prevent local buckling of an individual truss chord or web member because of the axial forces in the *individual truss member*.

[A] PERMIT. An official document or certificate issued by the *building official* that authorizes performance of a specified activity.

[S][A] PERSON. An individual, (~~heirs, executors, administrators or assigns, and also includes a~~) receiver, administrator, executor, assignee, trustee in bankruptcy, trust estate, firm, partnership, (~~or~~) joint venture, club, company, joint stock company, business trust, municipal corporation, political subdivision of the State of Washington, the State of Washington and any instrumentality thereof, corporation, (~~its or their successors or assigns, or the agent of any of the aforesaid~~) limited liability company, association, society or any group of individuals acting as a unit, whether mutual, cooperative, fraternal, nonprofit or otherwise, and the United States or any instrumentality thereof.

[BG] PERSONAL CARE SERVICE. The care of persons who do not require *medical care*. Personal care involves responsibility for the safety of the persons while inside the building

[BE] PHOTOLUMINESCENT. Having the property of emitting light that continues for a length of time after excitation by visible or invisible light has been removed.

[BS] PHOTOVOLTAIC MODULE. A complete, environmentally protected unit consisting of solar cells, optics and other components, exclusive of tracker, designed to generate DC power when exposed to sunlight.

[BS] PHOTOVOLTAIC PANEL. A collection of modules mechanically fastened together, wired and designed to provide a field-installable unit.

[BS] PHOTOVOLTAIC PANEL SYSTEM. A system that incorporates discrete *photovoltaic panels*, that converts solar radiation into electricity, including rack support systems.

[BS] PHOTOVOLTAIC SHINGLES. A *roof covering* resembling shingles that incorporates *photovoltaic modules*.

[F] PHYSICAL HAZARD. A chemical for which there is evidence that it is a *combustible liquid, cryogenic fluid, explosive, flammable (solid, liquid or gas), organic peroxide (solid or liquid), oxidizer (solid or liquid), oxidizing gas, pyrophoric (solid, liquid or gas), unstable (reactive) material (solid, liquid or gas) or water-reactive material (solid or liquid).*

[F] PHYSIOLOGICAL WARNING THRESHOLD LEVEL. A concentration of airborne contaminants, normally expressed in parts per million (ppm) or milligrams per cubic meter (mg/m³), that represents the concentration at which persons can sense the presence of the contaminant due to odor, irritation or other quick-acting physiological response. When used in conjunction with the permissible exposure limit (PEL) the physiological warning threshold levels are those consistent with the classification system used to establish the PEL. See the definition of “*Permissible exposure limit (PEL)*” in the *International Fire Code*.

[S] PIER. A structure, usually of greater length than width, of timber, stone, concrete or other material, having a deck and projecting from the shore into waters so that boats may be moored alongside for loading, unloading, storage, repairs or commercial uses.

PLACE OF RELIGIOUS WORSHIP. See “*Religious worship, place of.*”

[BF] PLASTIC COMPOSITE. A generic designation that refers to wood/plastic composites, plastic lumber and similar materials.

[BF] PLASTIC GLAZING. Plastic materials that are glazed or set in a frame or sash or are otherwise supported.

OCCUPANCY CLASSIFICATION AND USE

[BF] PLASTIC LUMBER. A manufactured product made primarily of plastic materials (filled or unfilled) which is generally rectangular in cross section.

[BG] PLATFORM. A raised area within a building used for worship, the presentation of music, plays or other entertainment; the head table for special guests; the raised area for lecturers and speakers; boxing and wrestling rings; theater-in-the-round *stages*; and similar purposes wherein, other than horizontal sliding curtains, there are no overhead hanging curtains, drops, scenery or stage effects other than lighting and sound. A temporary platform is one installed for not more than 30 days.

[BG] PLAY STRUCTURE. A structure composed of one or more components, where the user enters a play environment.

[BF] POLYPROPYLENE SIDING. A shaped material, made principally from polypropylene homopolymer, or copolymer, which in some cases contains fillers or reinforcements, that is used to clad *exterior walls* of buildings.

[BS] PORCELAIN TILE. Ceramic tile having an absorption of 0.5 percent or less in accordance with Table 10 of ANSI A137.1, or Tables 4 or 5 of ANSI A137.3.

[W] PORTABLE SCHOOL CLASSROOM. A prefabricated structure consisting of one or more rooms with direct exterior egress from the classroom(s). The structure is transportable in one or more sections and is designed to be used as an educational space with or without a permanent foundation. The structure shall be capable of being demounted and relocated to other locations as needs arise.

[BS] POSITIVE ROOF DRAINAGE. A design that accounts for deflections from all *design loads* and has sufficient additional slope to ensure that drainage of the roof occurs within 48 hours of precipitation.

[BE] POWER-ASSISTED DOOR. Swinging door which opens by reduced pushing or pulling force on the door-operating hardware. The door closes automatically after the pushing or pulling force is released and functions with decreased forces. See “*Low-energy power-operated door*” and “*Power-operated door*.”

[BE] POWER-OPERATED DOOR. Swinging, sliding, or folding door which opens automatically when approached by a pedestrian or opens automatically upon an action by a pedestrian. The door closes automatically and includes provisions such as presence sensors to prevent entrapment. See “*Low energy power-operated door*” and “*Power-assisted door*.”

[BS] PREFABRICATED WOOD I-JOIST. Structural member manufactured using sawn or *structural composite lumber* flanges and *wood structural panel* webs bonded together with exterior exposure adhesives, which forms an “I” cross-sectional shape.

[BS] PRESERVATIVE-TREATED WOOD. Wood products that, when impregnated with chemicals by a pressure process or other means during manufacture, exhibit reduced susceptibility to damage by fungi, insects or marine borers.

[BS] PRESTRESSED MASONRY. *Masonry* in which internal stresses have been introduced to counteract potential tensile stresses in *masonry* resulting from applied *loads*.

[BG] PRIMARY STRUCTURAL FRAME. The primary structural frame shall include all of the following structural members:

1. The columns.
2. Structural members having direct connections to the columns, including girders, beams, trusses and spandrels.
3. Members of the floor construction and roof construction having direct connections to the columns.
4. Members that are essential to the vertical stability of the *primary structural frame* under gravity loading.

[BG] PRIVATE GARAGE. A building or portion of a building in which motor vehicles used by the *owner* or tenants of the building or buildings on the premises are stored or kept, without provisions for repairing or servicing such vehicles for profit.

[S] PRIVATE TRANSFORMER VAULT. A vault that contains transformer equipment that is not owned by Seattle City Light or other electric power utility.

[S] PROJECTING SIGN. A sign other than a wall sign, which projects from and is supported by a wall of a building or structure.

[BG] PROSCENIUM WALL. The wall that separates the *stage* from the auditorium or assembly seating area.

PSYCHIATRIC HOSPITALS. See “*Hospitals and psychiatric hospitals*.”

[BE] PUBLIC ENTRANCE. An entrance that is not a *service entrance* or a *restricted entrance*.

[A] PUBLIC WAY. A street, alley or other parcel of land open to the outside air leading to a street, that has been deeded, dedicated or otherwise permanently appropriated to the public for public use and which has a clear width and height of not less than 10 feet (3048 mm).

[BE] PUBLIC-USE AREAS. Interior or exterior rooms or spaces that are made available to the general public.

[BG] PUZZLE ROOM. A puzzle room is a type of *special amusement area* in which occupants are encouraged to solve a challenge to escape from a room or series of rooms.

- [F] **PYROPHORIC.** A chemical with an auto-ignition temperature in air, at or below a temperature of 130°F (54.4°C).
- [F] **PYROTECHNIC COMPOSITION.** A chemical mixture that produces visible light displays or sounds through a self-propagating, heat-releasing chemical reaction which is initiated by ignition.
- [BF] **RADIANT BARRIER.** A material having a low-emittance surface of 0.1 or less installed in building assemblies.
- [BE] **RAMP.** A walking surface that has a running slope steeper than one unit vertical in 20 units horizontal (5-percent slope).
- RAMP, EXIT ACCESS.** See “Exit access ramp.”
- RAMP, EXTERIOR EXIT.** See “Exterior exit ramp.”
- RAMP, INTERIOR EXIT.** See “Interior exit ramp.”
- [BG] **RAMP-ACCESS OPEN PARKING GARAGES.** *Open parking garages* employing a series of continuously rising floors or a series of interconnecting ramps between floors permitting the movement of vehicles under their own power from and to the street level.
- [A] **RECORD DRAWINGS.** Drawings (“as built”) that document the location of all devices, appliances, wiring sequences, wiring methods and connections of the components of a *fire alarm system* as installed.
- [BF] **REFLECTIVE PLASTIC CORE INSULATION.** An insulation material packaged in rolls, that is less than 1/2 inch (12.7 mm) thick, with not less than one exterior low-emittance surface (0.1 or less) and a core material containing voids or cells.
- [A] **REGISTERED DESIGN PROFESSIONAL.** An individual who is registered or licensed to practice their respective design profession as defined by the statutory requirements of the professional registration laws of the state or *jurisdiction* in which the project is to be constructed.
- [A] **REGISTERED DESIGN PROFESSIONAL IN RESPONSIBLE CHARGE.** A *registered design professional* engaged by the owner or the owner’s authorized agent to review and coordinate certain aspects of the project, as determined by the *building official*, for compatibility with the design of the building or structure, including submittal documents prepared by others, deferred submittal documents and phased submittal documents.
- [BG] **RELIGIOUS WORSHIP, PLACE OF.** A building or portion thereof intended for the performance of religious services.
- [A] **RELOCATABLE BUILDING.** A partially or completely assembled building constructed and designed to be reused multiple times and transported to different building sites.
- [A] **REPAIR.** The reconstruction, replacement or renewal of any part of an existing building for the purpose of its maintenance or to correct damage.
- [S][BG] **REPAIR GARAGE.** ~~((A building, structure or portion thereof used for servicing or repairing motor vehicles.))~~
- Major repair garage. A building or portions of a building where major repairs, such as engine overhauls, painting, body and fender work, and repairs that require draining of the motor vehicle fuel tank are performed on motor vehicles, including associated floor space used for offices, parking, or showrooms.
- Minor repair garage. A building or portions of a building used for lubrication, inspection, and minor automotive maintenance work, such as engine tune-ups, replacement of parts, fluid changes (e.g., oil, antifreeze, transmission fluid, brake fluid, air conditioning refrigerants, etc.), brake system repairs, tire rotation, and similar routine maintenance work, including associated floor space used for offices, parking, or showrooms.
- [BS] **REROOFING.** The process of recovering or replacing an existing *roof covering*. See “Roof recover” and “Roof replacement.”
- [BG] **RESIDENTIAL AIRCRAFT HANGAR.** An accessory building less than 2,000 square feet (186 m²) and 20 feet (6096 mm) in *building height* constructed on a one- or two-family property where aircraft are stored. Such use will be considered as a residential accessory use incidental to the dwelling.
- [W] RESIDENTIAL SLEEPING SUITES. A unit that provides multiple rooms or spaces for up to five residents, includes provisions for sleeping and can include provisions for living, eating, sanitation, and kitchen facilities.
- [BS] **RESISTANCE FACTOR.** A factor that accounts for deviations of the actual strength from the *nominal strength* and the manner and consequences of failure (also called “strength reduction factor”).
- [BE] **RESTRICTED ENTRANCE.** An entrance that is made available for common use on a controlled basis, but not public use, and that is not a *service entrance*.
- [S] ~~(([BG] RETRACTABLE AWNING. A retractable *awning* is a cover with a frame that retracts against a building or other structure to which it is entirely supported.))~~
- [BS] **RISK CATEGORY.** A categorization of buildings and *other structures* for determination of *flood*, wind, snow, ice and earthquake *loads* based on the risk associated with unacceptable performance.

OCCUPANCY CLASSIFICATION AND USE

[BS] RISK-TARGETED MAXIMUM CONSIDERED EARTHQUAKE (MCE_R) GROUND MOTION RESPONSE ACCELERATIONS. The most severe earthquake effects considered by this code, determined for the orientation that results in the largest maximum response to horizontal ground motions and with adjustment for targeted risk.

[BS] ROOF ASSEMBLY (For application to Chapter 15 only). A system designed to provide weather protection and resistance to design loads. The system consists of a *roof covering* and roof deck or a single component serving as both the *roof covering* and the roof deck. A roof assembly can include an *underlayment*, a thermal barrier, insulation or a *vapor retarder*.

[BS] ROOF COATING. A fluid-applied, adhered coating used for roof maintenance or *roof repair*, or as a component of a *roof covering* system or *roof assembly*.

[BS] ROOF COVERING. The covering applied to the roof deck for weather resistance, fire classification or appearance.

ROOF COVERING SYSTEM. See “*Roof assembly*.”

[BS] ROOF DECK. The flat or sloped surface constructed on top of the *exterior walls* of a building or other supports for the purpose of enclosing the *story* below, or sheltering an area, to protect it from the elements, not including its supporting members or vertical supports.

ROOF DRAINAGE, POSITIVE. See “*Positive roof drainage*.”

[BS] ROOF RECOVER. The process of installing an additional *roof covering* over a prepared existing *roof covering* without removing the existing *roof covering*.

[BS] ROOF REPAIR. Reconstruction or renewal of any part of an existing roof for the purposes of correcting damage or restoring pre-damage condition.

[BS] ROOF REPLACEMENT. The process of removing the existing *roof covering*, repairing any damaged substrate and installing a new *roof covering*.

[S] ROOF SIGN. A sign erected upon or above a roof or parapet of a building or structure.

[BG] ROOF VENTILATION. The natural or mechanical process of supplying conditioned or unconditioned air to, or removing such air from, *attics*, cathedral ceilings or other enclosed spaces over which a roof assembly is installed.

[BG] ROOFTOP STRUCTURE. A structure erected on top of the roof deck or on top of any part of a building.

[BS] RUNNING BOND. The placement of *masonry units* such that *head joints* in successive courses are horizontally offset at least one-quarter the unit length.

[BG] SALLYPORT. A security vestibule with two or more doors or gates where the intended purpose is to prevent continuous and unobstructed passage by allowing the release of only one door or gate at a time.

[BE] SCISSOR STAIRWAY. Two interlocking *stairways* providing two separate paths of egress located within one *exit* enclosure.

[BS] SCUPPER. An opening in a wall or parapet that allows water to drain from a roof.

[S][BG] SECONDARY STRUCTURAL MEMBERS. The following structural members shall be considered secondary members and not part of the *primary structural frame*:

1. Structural members not having direct connections to the columns.
2. Members of the floor construction and roof construction not having direct connections to the columns.
3. Bracing members that are not designated as part of a *primary structural frame* or bearing wall.

Interpretation I202S: A *secondary member* (component or subsystem) is a structurally significant portion of the building that is supported by the *primary structural frame*, but which does not contribute to the strength or stability of the primary structure. *Secondary members* have internal structural integrity to perform their function and have their interactions with and attachments to, the *primary structural frame* analyzed and designed to assure proper integration within the total structure.

[BS] SEISMIC DESIGN CATEGORY. A classification assigned to a structure based on its *risk category* and the severity of the *design earthquake ground motion* at the site.

[BS] SEISMIC FORCE-RESISTING SYSTEM. That part of the structural system that has been considered in the design to provide the required resistance to the prescribed seismic forces.

[BF] SELF-CLOSING. As applied to a *fire door* or other opening protective, means equipped with a device that will ensure closing after having been opened.

[BE] SELF-LUMINOUS. Illuminated by a self-contained power source, other than batteries, and operated independently of external power sources.

SELF-PRESERVATION, INCAPABLE OF. See “*Incapable of self-preservation.*”

[BG] SELF-SERVICE STORAGE FACILITY. Real property designed and used for the purpose of renting or leasing individual storage spaces to customers for the purpose of storing and removing personal property on a self-service basis.

[F] SERVICE CORRIDOR. A fully enclosed passage used for transporting *HPM* and purposes other than required *means of egress*.

[BE] SERVICE ENTRANCE. An entrance intended primarily for delivery of goods or services.

[BF] SHAFT. An enclosed space extending through one or more *stories* of a building, connecting vertical openings in successive floors, or floors and roof.

[BF] SHAFT ENCLOSURE. The walls or construction forming the boundaries of a *shaft*.

[BS] SHALLOW FOUNDATION. A *shallow foundation* is an individual or strip footing, a mat foundation, a slab-on-grade foundation or a similar foundation element.

[BS] SHEAR WALL. This definition applies only to Chapter 23.

A wall designed to resist lateral forces parallel to the plane of a wall.

Shear wall, perforated. A *wood structural panel* sheathed wall with openings, that has not been specifically designed and detailed for force transfer around openings.

Shear wall segment, perforated. A section of shear wall with full-height sheathing that meets the height-to-width ratio limits of Section 4.3.4 of AWC SDPWS.

[BS] SHINGLE FASHION. A method of installing roof or wall coverings, *water-resistive barriers*, flashing or other building components such that upper layers of material are placed overlapping lower layers of material to provide for drainage via gravity and moisture control.

[S] SIGN STRUCTURE. Any structure which supports or is designed to support any sign display surface.

[BS] SINGLE-PLY MEMBRANE. A roofing membrane that is field applied using one layer of membrane material (either homogeneous or composite) rather than multiple layers.

[F] SINGLE-STATION SMOKE ALARM. An assembly incorporating the detector, the control equipment and the alarm-sounding device in one unit, operated from a power supply either in the unit or obtained at the point of installation.

[BG] SITE. A parcel of land bounded by a *lot line* or a designated portion of a public right-of-way.

[BS] SITE CLASS. A classification assigned to a site based on the types of soils present and their engineering properties as defined in Section 1613.2.2.

[BS] SITE COEFFICIENTS. The values of F_a and F_v indicated in Table 1613.2.3(1) and Table 1613.2.3(2), respectively.

[BG] SITE-FABRICATED STRETCH SYSTEM. A system, fabricated on site and intended for acoustical, tackable or aesthetic purposes, that is composed of three elements:

1. A frame (constructed of plastic, wood, metal or other material) used to hold fabric in place.
2. A core material (infill, with the correct properties for the application).
3. An outside layer, composed of a textile, fabric or vinyl, that is stretched taut and held in place by tension or mechanical fasteners via the frame.

[BS] SKYLIGHT, UNIT. A factory-assembled, glazed *fenestration* unit, containing one panel of glazing material that allows for natural lighting through an opening in the *roof assembly* while preserving the weather-resistant barrier of the roof.

[BS] SKYLIGHTS AND SLOPED GLAZING. Glass or other transparent or translucent glazing material installed at a slope of 15 degrees (0.26 rad) or more from vertical. *Unit skylights, tubular daylighting devices, glazing materials, solariums, sunrooms, roofs and sloped walls* are included in this definition.

[A] SLEEPING UNIT. A single unit that provides rooms or spaces for one or more persons, includes permanent provisions for sleeping and can include provisions for living, eating and either sanitation or kitchen facilities but not both. Such rooms and spaces that are also part of a dwelling unit are not sleeping units.

[S] SLIP. A berthing space between or adjacent to *piers, wharves, or docks*; the water areas associated with boat moorage.

[W] SMALL BUSINESS. Any business entity (including a sole proprietorship, corporation, partnership or other legal entity) which is owned and operated independently from all other businesses, which has the purpose of making a profit, and which has 50 or fewer employees.

[F] SMOKE ALARM. A single- or multiple-station alarm responsive to smoke. See “*Multiple-station smoke alarm*” and “*Single-station smoke alarm.*”

[BF] SMOKE BARRIER. A continuous membrane, either vertical or horizontal, such as a wall, floor or ceiling assembly, that is designed and constructed to restrict the movement of smoke.

[BG] SMOKE COMPARTMENT. A space within a building separated from other interior areas of the building by *smoke barriers*, including interior walls and *horizontal assemblies*.

[BF] SMOKE DAMPER. A *listed* device installed in ducts and air transfer openings designed to resist the passage of smoke. The device is installed to operate automatically, controlled by a smoke detection system, and where required, is capable of being positioned from a *fire command center*.

[F] SMOKE DETECTOR. A *listed* device that senses visible or invisible particles of combustion.

[BF] SMOKE PARTITION. A wall assembly that extends from the top of the foundation or floor below to the underside of the floor or roof sheathing, deck or slab above or to the underside of the ceiling above where the ceiling membrane is constructed to limit the transfer of smoke.

[BF] SMOKE-DEVELOPED INDEX. A comparative measure, expressed as a dimensionless number, derived from measurements of smoke obscuration versus time for a material tested in accordance with ASTM E84.

~~**[S] ((**[BF] SMOKEPROOF ENCLOSURE.** An *exit stairway* or *ramp* designed and constructed so that the movement of the products of combustion produced by a fire occurring in any part of the building into the enclosure is limited.))**~~

[BE] SMOKE-PROTECTED ASSEMBLY SEATING. Seating served by *means of egress* that is not subject to smoke accumulation within or under a structure for a specified design time by means of passive design or by mechanical ventilation.

[BG] SOFT CONTAINED PLAY EQUIPMENT STRUCTURE. A play structure containing one or more components where the user enters a play environment that utilizes pliable materials.

[F] SOLID. A material that has a melting point, decomposes or sublimates at a temperature greater than 68°F (20°C).

[BG] SPECIAL AMUSEMENT AREA. A special amusement area is any temporary or permanent building or portion thereof that is occupied for amusement, entertainment or educational purposes and is arranged in a manner that:

1. Makes the means of egress path not readily apparent due to visual or audio distractions.
2. Intentionally confounds identification of the means of egress path.
3. Otherwise makes the means of egress path not readily available because of the nature of the attraction or mode of conveyance through the building or structure.

[BG] SPECIAL EVENT STRUCTURE. Any ground-supported structure, *platform*, *stage*, *stage scaffolding* or rigging, canopy, tower or similar structure supporting entertainment-related equipment or signage.

[BS] SPECIAL FLOOD HAZARD AREA. The land area subject to flood hazards and shown on a *Flood Insurance Rate Map* or other flood hazard map as Zone A, AE, A1-30, A99, AR, AO, AH, V, VO, VE or V1-30.

[BS] SPECIAL INSPECTION. Inspection of construction requiring the expertise of an *approved special inspector* in order to ensure compliance with this code and the approved *construction documents*.

Continuous special inspection. *Special inspection* by the *special inspector* who is present continuously when and where the work to be inspected is being performed.

Periodic special inspection. *Special inspection* by the *special inspector* who is intermittently present where the work to be inspected has been or is being performed.

[BS] SPECIAL INSPECTOR. A qualified person employed or retained by an *approved agency* and *approved* by the *building official* as having the competence necessary to inspect a particular type of construction requiring *special inspection*.

[BS] SPECIFIED COMPRESSIVE STRENGTH OF MASONRY, f'_m . Minimum compressive strength, expressed as force per unit of net cross-sectional area, required of the *masonry* used in construction by the *approved construction documents*, and upon which the project design is based. Whenever the quantity f'_m is under the radical sign, the square root of numerical value only is intended and the result has units of pounds per square inch (psi) (MPa).

[BF] SPLICE. The result of a factory and/or field method of joining or connecting two or more lengths of a *fire-resistant joint system* into a continuous entity.

SPORT ACTIVITY, AREA OF. See “*Area of sport activity.*”

[F] SPRAY ROOM. A room designed to accommodate spraying operations.

[BF] SPRAY-APPLIED FOAM PLASTIC. Single- and multiple-component, spray-applied foam plastic insulation used in nonstructural applications that are installed at locations wherein the material is applied in a liquid or frothed state, permitted to free rise and cure in situ.

[BF] SPRAYED FIRE-RESISTANT MATERIALS. Cementitious or fibrous materials that are sprayed to provide fire-resistant protection of the substrates.

[BG] STAGE. A space within a building utilized for entertainment or presentations, which includes overhead hanging curtains, drops, scenery or stage effects other than lighting and sound.

[W] STAGED EVACUATION. A method of emergency response that engages building components and trained staff to provide occupant safety during an emergency. Emergency response involves moving or holding certain occupants at temporary locations for a brief period of time before evacuating the building. This response is used by ambulatory surgery facility and assisted living facilities to protect the health and safety of fragile occupants and residents.

[BE] STAIR. A change in elevation, consisting of one or more risers.

[BE] STAIRWAY. One or more *flights of stairs*, either exterior or interior, with the necessary landings and platforms connecting them, to form a continuous and uninterrupted passage from one level to another.

STAIRWAY, EXIT ACCESS. See “*Exit access stairway.*”

STAIRWAY, EXTERIOR EXIT. See “*Exterior exit stairway.*”

STAIRWAY, INTERIOR EXIT. See “*Interior exit stairway.*”

STAIRWAY, SCISSOR. See “*Scissor stairway.*”

[BE] STAIRWAY, SPIRAL. A *stairway* having a closed circular form in its plan view with uniform section-shaped treads attached to and radiating from a minimum-diameter supporting column.

~~**[F] STANDBY POWER SYSTEM.** A source of *automatic* electric power of a required capacity and duration to operate required building, hazardous materials or ventilation systems in the event of a failure of the primary power. Standby power systems are required for electrical loads where interruption of the primary power could create hazards or hamper rescue or fire-fighting operations:)~~

[S] STANDBY POWER SYSTEM, LEGALLY REQUIRED. An electrical power system that complies with *Seattle Electrical Code* Article 701, *Legally Required Standby Systems*, and Chapter 27.

[F] STANDPIPE, TYPES OF. Standpipe types are as follows:

Automatic dry. A dry standpipe system, normally filled with pressurized air, that is arranged through the use of a device, such as dry pipe valve, to admit water into the system piping *automatically* upon the opening of a hose valve. The water supply for an *automatic* dry standpipe system shall be capable of supplying the system demand.

Automatic wet. A wet standpipe system that has a water supply that is capable of supplying the system demand *automatically*.

Manual dry. A dry standpipe system that does not have a permanent water supply attached to the system. Manual dry standpipe systems require water from a fire department pumper to be pumped into the system through the fire department connection in order to meet the system demand.

Manual wet. A wet standpipe system connected to a water supply for the purpose of maintaining water within the system but does not have a water supply capable of delivering the system demand attached to the system. Manual-wet standpipe systems require water from a fire department pumper (or the like) to be pumped into the system in order to meet the system demand.

Semiautomatic dry. A dry standpipe system that is arranged through the use of a device, such as a deluge valve, to admit water into the system piping upon activation of a remote control device located at a hose connection. A remote control activation device shall be provided at each hose connection. The water supply for a semiautomatic dry standpipe system shall be capable of supplying the system demand.

[F] STANDPIPE SYSTEM, CLASSES OF. Standpipe classes are as follows:

Class I system. A system providing 2-1/2-inch (64 mm) hose connections to supply water for use by fire departments and those trained in handling heavy fire streams.

Class II system. A system providing 1-1/2-inch (38 mm) hose stations to supply water for use primarily by the building occupants or by the fire department during initial response.

Class III system. A system providing 1-1/2-inch (38 mm) hose stations to supply water for use by building occupants and 2-1/2-inch (64 mm) hose connections to supply a larger volume of water for use by fire departments and those trained in handling heavy fire streams.

[BS] STEEL CONSTRUCTION, COLD-FORMED. That type of construction made up entirely or in part of *steel structural members* cold formed to shape from sheet or strip steel such as roof deck, floor and wall panels, studs, floor joists, roof joists and other structural elements.

[BS] STEEL ELEMENT, STRUCTURAL. Any *steel structural member* of a building or structure consisting of rolled shapes, pipe, hollow structural sections, plates, bars, sheets, rods or steel castings other than cold-formed steel or *steel joist* members.

OCCUPANCY CLASSIFICATION AND USE

[BS] STEEL JOIST. Any *steel structural member* of a building or structure made of hot-rolled or cold-formed solid or open-web sections, or riveted or welded bars, strip or sheet steel members, or slotted and expanded, or otherwise deformed rolled sections.

[BF] STEEP SLOPE. A roof slope 2 units vertical in 12 units horizontal (17-percent slope) or greater.

[BS] STONE MASONRY. *Masonry* composed of field, quarried or *cast stone* units bonded by *mortar*.

[F] STORAGE, HAZARDOUS MATERIALS. The keeping, retention or leaving of hazardous materials in closed containers, tanks, cylinders, or similar vessels; or vessels supplying operations through closed connections to the vessel.

[BS] STORAGE RACKS, STEEL. Cold-formed or hot-rolled steel structural members which are formed into *steel storage racks*, including pallet storage racks, movable-shelf racks, rack-supported systems, automated storage and retrieval systems (stacker racks), push-back racks, pallet-flow racks, case-flow racks, pick modules and rack-supported platforms. Other types of racks, such as drive-in or drive-through racks, cantilever racks, portable racks or racks made of materials other than steel, are not considered storage racks for the purpose of this code.

[BS] STORAGE RACKS, STEEL CANTILEVERED. A framework or assemblage composed of cold-formed or hot-rolled steel structural members, primarily in the form of vertical columns, extended bases, horizontal arms projecting from the faces of the columns, and longitudinal (down-aisle) bracing between columns. There may be shelf beams between the arms, depending on the products being stored; this definition does not include other types of racks such as pallet storage racks, drive-in racks, drive-through racks, or racks made of materials other than steel.

[BG] STORM SHELTER. A building, structure or portions thereof, constructed in accordance with ICC 500 and designated for use during a severe wind storm event, such as a hurricane or tornado.

Community storm shelter. A storm shelter not defined as a “Residential storm shelter.”

Residential storm shelter. A storm shelter serving occupants of *dwelling units* and having an *occupant load* not exceeding 16 persons.

[S][BG] STORY. That portion of a building, ~~((included))~~ including basements, located between the upper surface of a floor and the upper surface of the next floor or roof (~~((next))~~) above (see “*Basement*,” “*Building height*,” “*Grade plane*” and “*Mezzanine*”). A story is measured as the vertical distance from top to top of two successive tiers of beams or finished floor surfaces and, for the topmost story, from the top of the floor finish to the top of the ceiling joists or, where there is not a ceiling, to the top of the roof rafters.

[S][BG] STORY ABOVE GRADE PLANE. Any *story* having its finished floor surface entirely above *grade plane*, or in which the finished surface of the next floor (~~((next))~~) above is:

1. More than 6 feet (1829 mm) above *grade plane*; or
2. More than 12 feet (3658 mm) above the finished ground level (~~((at any point))~~) for more than 25 feet (7620 mm) of the perimeter. Required driveways up to 22 feet (6706 mm) wide shall not be considered in calculating the 25-foot distance if there is at least 10 feet (3048 mm) between the driveway and all portions of the 25-foot area. See Figure 202S.

FIGURE 202S
STORY ABOVE GRADE PLANE

[BS] **STRENGTH.** This term is defined two ways, the first for use in Chapter 16 and the second for use in Chapter 21.

For Chapter 16:

Nominal strength. The capacity of a structure or member to resist the effects of loads, as determined by computations using specified material strengths and dimensions and equations derived from accepted principles of structural mechanics or by field tests or laboratory tests of scaled models, allowing for modeling effects and differences between laboratory and field conditions.

Required strength. Strength of a member, cross section or connection required to resist factored loads or related internal moments and forces in such combinations as stipulated by these provisions.

Strength design. A method of proportioning structural members such that the computed forces produced in the members by factored loads do not exceed the member design strength [also called “load and resistance factor design” (LRFD)]. The term “strength design” is used in the design of concrete and masonry structural elements.

For Chapter 21:

Design strength. Nominal strength multiplied by a strength reduction factor.

Nominal strength. Strength of a member or cross section calculated in accordance with these provisions before application of any strength-reduction factors.

Required strength. Strength of a member or cross section required to resist factored loads.

[BS] **STRUCTURAL COMPOSITE LUMBER.** Structural member manufactured using wood elements bonded together with exterior adhesives. Examples of *structural composite lumber* are:

Laminated strand lumber (LSL). A composite of wood strand elements with wood fibers primarily oriented along the length of the member, where the least dimension of the wood strand elements is 0.10 inch (2.54 mm) or less and their average lengths not less than 150 times the least dimension of the wood strand elements.

Laminated veneer lumber (LVL). A composite of wood *veneer* sheet elements with wood fibers primarily oriented along the length of the member, where the *veneer* element thicknesses are 0.25 inches (6.4 mm) or less.

Oriented strand lumber (OSL). A composite of wood strand elements with wood fibers primarily oriented along the length of the member, where the least dimension of the wood strand elements is 0.10 inches (2.54 mm) or less and their average lengths not less than 75 times and less than 150 times the least dimension of the strand elements.

OCCUPANCY CLASSIFICATION AND USE

Parallel strand lumber (PSL). A composite of wood strand elements with wood fibers primarily oriented along the length of the member where the least dimension of the wood strand elements is 0.25 inches (6.4 mm) or less and their average lengths not less than 300 times the least dimension of the wood strand elements.

[S] STRUCTURAL ENGINEER IN RESPONSIBLE CHARGE. A structural engineer licensed to practice under the laws of the State of Washington who is engaged by the owner to review and coordinate structural design aspects of the project, as determined by the *building official*, for compatibility with the design of the building or structure, including submittal documents prepared by others, *deferred submittal* documents and *phased submittal* documents.

[BS] STRUCTURAL GLUED-LAMINATED TIMBER. An engineered, stress-rated product of a timber laminating plant, composed of assemblies of specially selected and prepared wood laminations in which the grain of all laminations is approximately parallel longitudinally and the laminations are bonded with adhesives.

[BS] STRUCTURAL OBSERVATION. The visual observation of the structural system by a *registered design professional* for general conformance to the *approved construction documents*.

[S] STRUCTURALLY QUALIFIED PRODUCTS. Products that have been prequalified based on current acceptance and certification by an accepted authority such as International Code Council (ICC), American Society for Testing and Materials (ASTM), American Concrete Institute (ACI), American Institute of Steel Construction (AISC), or others widely accepted in the engineering field.

[A] STRUCTURE. That which is built or constructed.

[BS] SUBSTANTIAL DAMAGE. Damage of any origin sustained by a structure whereby the cost of restoring the structure to its before-damaged condition would equal or exceed 50 percent of the market value of the structure before the damage occurred.

[S][BS] SUBSTANTIAL IMPROVEMENT. Any *repair*, reconstruction, rehabilitation, *alteration*, *addition* or other improvement of a building or structure, the cost of which, in any five-year period, equals or exceeds 50 percent of the market value of the structure before the improvement or repair is started. If the structure has sustained *substantial damage*, any repairs are considered *substantial improvement* regardless of the actual *repair* work performed. The term does not, however, include either:

1. Any project for improvement of a building required to correct existing health, sanitary or safety code violations identified by the *building official* and that are the minimum necessary to assure safe living conditions.
2. Any *alteration* of a historic structure provided that the *alteration* will not preclude the structure's continued designation as a historic structure.

[S] SUBSTRUCTURE. The portion of the construction below and including the deck immediately above the water.

[BG] SUNROOM. A one-story structure attached to a building with a glazing area in excess of 40 percent of the gross area of the structure's *exterior walls* and roof.

[S] SUPERSTRUCTURE. The portion of construction above the deck.

Exception: *Covered boat moorage.*

[F] SUPERVISING STATION. A facility that receives signals and at which personnel are in attendance at all times to respond to these signals.

[F] SUPERVISORY SERVICE. The service required to monitor performance of guard tours and the operative condition of fixed suppression systems or other systems for the protection of life and property.

[F] SUPERVISORY SIGNAL. A signal indicating the need of action in connection with the supervision of guard tours, the fire suppression systems or equipment or the maintenance features of related systems.

[F] SUPERVISORY SIGNAL-INITIATING DEVICE. An initiation device, such as a valve supervisory switch, water-level indicator or low-air pressure switch on a dry-pipe sprinkler system, whose change of state signals an off-normal condition and its restoration to normal of a fire protection or life safety system, or a need for action in connection with guard tours, fire suppression systems or equipment or maintenance features of related systems.

[BS] SUSCEPTIBLE BAY. A roof or portion thereof with either of the following:

1. A slope less than 1/4-inch per foot (0.0208 rad).
2. On which water is impounded, in whole or in part, and the secondary drainage system is functional but the primary drainage system is blocked.

A roof surface with a slope of 1/4-inch per foot (0.0208 rad) or greater towards points of free drainage is not a susceptible bay.

[BG] SWIMMING POOL. Any structure intended for swimming, recreational bathing or wading that contains water over 24 inches (610 mm) deep. This includes in-ground, above-ground and on-ground pools; hot tubs; spas and fixed-in-place wading pools.

[BF] T RATING. The time period that the *penetration firestop system*, including the penetrating item, limits the maximum temperature rise to 325°F (163°C) above its initial temperature through the penetration on the nonfire side when tested in accordance with ASTM E814 or UL 1479.

[BG] TECHNICAL PRODUCTION AREA. Open elevated areas or spaces intended for entertainment technicians to walk on and occupy for servicing and operating entertainment technology systems and equipment. Galleries, including fly and lighting galleries, gridirons, catwalks, and similar areas are designed for these purposes.

[BG] TENSILE MEMBRANE STRUCTURE. A membrane structure having a shape that is determined by tension in the membrane and the geometry of the support structure. Typically, the structure consists of both flexible elements (e.g., membrane and cables), nonflexible elements (e.g., struts, masts, beams and arches) and the anchorage (e.g., supports and foundations). This includes frame-supported *tensile membrane structures*.

[F] TENT. A structure, enclosure, *umbrella structure* or shelter, with or without sidewalls or drops, constructed of fabric or pliable material supported in any manner except by air or the contents it protects (see “*Umbrella structure*”).

[BF] TERMINATED STOPS. Factory feature of a door frame where the stops of the door frame are terminated not more than 6 inches (152 mm) from the bottom of the door frame. Terminated stops are also known as “hospital stops” or “sanitary stops.”

[BG] THERMAL ISOLATION. A separation of conditioned spaces, between a *sunroom* and a *dwelling unit*, consisting of existing or new walls, doors or windows.

[BF] THERMOPLASTIC MATERIAL. A plastic material that is capable of being repeatedly softened by increase of temperature and hardened by decrease of temperature.

[BF] THERMOSETTING MATERIAL. A plastic material that is capable of being changed into a substantially nonreformable product when cured.

[BF] THROUGH PENETRATION. A breach in both sides of a floor, floor-ceiling or wall assembly to accommodate an item passing through the breaches.

[BF] THROUGH-PENETRATION FIRESTOP SYSTEM. An assemblage consisting of a fire-resistance-rated floor, floor-ceiling, or wall assembly, one or more penetrating items passing through the breaches in both sides of the assembly and the materials or devices, or both, installed to resist the spread of fire through the assembly for a prescribed period of time.

[BS] TIE, WALL. Metal connector that connects *wythes* of *masonry* walls together.

[BS] TIE-DOWN (HOLD-DOWN). A device used to resist uplift of the chords of *shear walls*.

[BS] TILE, STRUCTURAL CLAY. A hollow *masonry unit* composed of burned clay, shale, fire clay or mixture thereof, and having parallel cells.

[F] TIRES, BULK STORAGE OF. Storage of tires where the area available for storage exceeds 20,000 cubic feet (566 m³).

[S][A] TOWNHOUSE. A ~~((single-family dwelling unit constructed in a group of))~~ building that contains three or more attached townhouse units. ((in which each unit extends from the foundation to roof and with open space on at least two sides.))

[S] TOWNHOUSE UNIT. A single-family dwelling unit in a townhouse that extends from foundation to roof and that has a yard or public way on not less than two sides that extends at least 50 percent of the length of each of these two sides.

[F] TOXIC. A chemical falling within any of the following categories:

1. A chemical that has a median lethal dose (LD₅₀) of more than 50 milligrams per kilogram, but not more than 500 milligrams per kilogram of body weight when administered orally to albino rats weighing between 200 and 300 grams each.
2. A chemical that has a median lethal dose (LD₅₀) of more than 200 milligrams per kilogram, but not more than 1,000 milligrams per kilogram of body weight when administered by continuous contact for 24 hours (or less if death occurs within 24 hours) with the bare skin of albino rabbits weighing between 2 and 3 kilograms each.
3. A chemical that has a median lethal concentration (LC₅₀) in air of more than 200 parts per million, but not more than 2,000 parts per million by volume of gas or vapor, or more than 2 milligrams per liter but not more than 20 milligrams per liter of mist, fume or dust, when administered by continuous inhalation for 1 hour (or less if death occurs within 1 hour) to albino rats weighing between 200 and 300 grams each.

[BG] TRANSIENT. Occupancy of a *dwelling unit* or *sleeping unit* for not more than 30 days.

[BG] TRANSIENT AIRCRAFT. Aircraft based at another location and that is at the transient location for not more than 90 days.

[W] TRANSIENT LODGING. A building, facility or portion thereof, excluding inpatient medical care facilities and long-term care facilities, that contains one or more dwelling units or sleeping units. Examples of transient lodging include, but are not limited to, resorts, group homes, hotels, motels, dormitories, homeless shelters, halfway houses and social service lodging.

TREATED WOOD. See “*Fire-retardant-treated wood*” and “*Preservative-treated wood*.”

OCCUPANCY CLASSIFICATION AND USE

[BF] TRIM. Picture molds, chair rails, baseboards, *handrails*, door and window frames and similar decorative or protective materials used in fixed applications.

[F] TROUBLE SIGNAL. A signal initiated by the *fire alarm system* or device indicative of a fault in a monitored circuit or component.

[BS] TSUNAMI DESIGN GEODATABASE. The ASCE database (version 2016-1.0) of *Tsunami Design Zone* maps and associated design data for the states of Alaska, California, Hawaii, Oregon and Washington.

[BS] TSUNAMI DESIGN ZONE. An area identified on the *Tsunami Design Zone* map between the shoreline and the inundation limit, within which certain structures designated in Chapter 16 are designed for or protected from inundation.

[BS] TUBULAR DAYLIGHTING DEVICE (TDD). A non-operable *fenestration* unit primarily designed to transmit daylight from a roof surface to an interior ceiling via a tubular conduit. The basic unit consists of an exterior glazed weathering surface, a light-transmitting tube with a reflective interior surface, and an interior-sealing device such as a translucent ceiling panel. The unit can be factory assembled, or field-assembled from a manufactured kit.

[BE] TYPE A UNIT. A *dwelling unit* or *sleeping unit* designed and constructed for accessibility in accordance with this code and the provisions for *Type A units* in ICC A117.1.

[BE] TYPE B UNIT. A *dwelling unit* or *sleeping unit* designed and constructed for accessibility in accordance with this code and the provisions for *Type B units* in ICC A117.1, consistent with the design and construction requirements of the federal Fair Housing Act.

[F] UMBRELLA STRUCTURE. A structure, enclosure or shelter with or without sidewalls or drops, constructed of fabric or pliable material supported by a central pole or poles (see “*Tent*”).

[BS] UNDERLAYMENT. One or more layers of a material that is applied to a steep-slope *roof covering* deck under the *roof covering* and resists liquid water that penetrates the *roof covering*.

[BS] UNDERPINNING. The alteration of an existing foundation to transfer *loads* to a lower elevation using new piers, piles or other permanent structural support elements installed below the existing foundation.

UNIT SKYLIGHT. See “*Skylight, unit.*”

[SI] UNSAFE. Structurally unsound, provided with inadequate egress, constituting a fire hazard, or otherwise dangerous to human life, or constituting a hazard to safety, health or public welfare.

[F] UNSTABLE (REACTIVE) MATERIAL. A material, other than an *explosive*, which in the pure state or as commercially produced, will vigorously polymerize, decompose, condense or become self-reactive and undergo other violent chemical changes, including *explosion*, when exposed to heat, friction or shock, or in the absence of an inhibitor, or in the presence of contaminants, or in contact with *incompatible materials*. Unstable (reactive) materials are subdivided as follows:

Class 1. Materials that in themselves are normally stable but which can become unstable at elevated temperatures and pressure.

Class 2. Materials that in themselves are normally unstable and readily undergo violent chemical change but do not detonate. This class includes materials that can undergo chemical change with rapid release of energy at *normal temperatures and pressures*, and that can undergo violent chemical change at elevated temperatures and pressures.

Class 3. Materials that in themselves are capable of *detonation* or of explosive decomposition or explosive reaction but which require a strong initiating source or which must be heated under confinement before initiation. This class includes materials that are sensitive to thermal or mechanical shock at elevated temperatures and pressures.

Class 4. Materials that in themselves are readily capable of *detonation* or *explosive* decomposition or explosive reaction at *normal temperatures and pressures*. This class includes materials that are sensitive to mechanical or localized thermal shock at *normal temperatures and pressures*.

[S][F] USE (MATERIAL). Placing a material into action, including *solids, liquids* and gases.

Interpretation I202U: Use, where otherwise mentioned in this code, is equivalent to character of occupancy and not intended to be construed as the definition of “use” in the *Land Use Code*.

[SI] UTILITY TRANSFORMER VAULT. A vault containing transformer equipment owned by Seattle City Light or other electric power utility.

[BG] VAPOR DIFFUSION PORT. An assembly constructed or installed within a roof assembly at an opening in the roof deck to convey water vapor from an unvented *attic* to the outside atmosphere.

[BF] VAPOR PERMEABLE. The property of having a moisture vapor permeance rating of 5 perms (2.9×10^{-10} kg/Pa \times s \times m²) or greater, when tested in accordance with Procedure A or Procedure B of ASTM E96. A vapor permeable material permits the passage of moisture vapor.

OCCUPANCY CLASSIFICATION AND USE

3. Ceiling and roof soffits located a minimum horizontal distance of 10 feet (3048 mm) from the outer edges of the ceiling or roof soffits.

[F] WET-CHEMICAL EXTINGUISHING SYSTEM. A solution of water and potassium-carbonate-based chemical, potassium-acetate-based chemical or a combination thereof, forming an extinguishing agent.

[S] WHARF. A structure or bulkhead constructed of wood, stone, concrete or similar material built at the shore of a harbor, lake or river for vessels to lie alongside of, and to anchor piers or floats.

[BE] WHEELCHAIR SPACE. A space for a single wheelchair and its occupant.

[BS] WIND SPEED, V. Basic design wind speeds.

[BS] WIND SPEED, V_{asd} . Allowable stress design wind speeds.

[BS] WINDBORNE DEBRIS REGION. Areas within *hurricane-prone regions* located:

1. Within 1 mile (1.61 km) of the mean high-water line where an Exposure D condition exists upwind at the waterline and the basic design wind speed, V , is 130 mph (58 m/s) or greater; or
2. In areas where the basic design wind speed is 140 mph (63 m/s) or greater.

For *Risk Category II* buildings and structures and *Risk Category III* buildings and structures, except health care facilities, the windborne debris region shall be based on Figure 1609.3.(1). For *Risk Category IV* buildings and structures and *Risk Category III* health care facilities, the windborne debris region shall be based on Figure 1609.3(2).

[BE] WINDER. A tread with nonparallel edges.

WINDFORCE-RESISTING SYSTEM, MAIN. See “*Main windforce-resisting system.*”

[BS] WIRE BACKING. Horizontal strands of tautened wire attached to surfaces of vertical supports which, when covered with the building paper, provide a backing for *cement plaster*.

[F] WIRELESS PROTECTION SYSTEM. A system or a part of a system that can transmit and receive signals without the aid of wire.

[BS] WOOD SHEAR PANEL. A wood floor, roof or wall component sheathed to act as a *shear wall* or *diaphragm*.

[BS] WOOD STRUCTURAL PANEL. A panel manufactured from *veneers*, wood strands or wafers or a combination of *veneer* and wood strands or wafers bonded together with waterproof synthetic resins or other suitable bonding systems. Examples of *wood structural panels* are:

Composite panels. A wood structural panel that is comprised of wood *veneer* and reconstituted wood-based material and bonded together with waterproof adhesive.

Oriented strand board (OSB). A mat-formed wood structural panel comprised of thin rectangular wood strands arranged in cross-aligned layers with surface layers normally arranged in the long panel direction and bonded with waterproof adhesive.

Plywood. A wood structural panel comprised of plies of wood *veneer* arranged in cross-aligned layers. The plies are bonded with waterproof adhesive that cures on application of heat and pressure.

[BS] WOOD/PLASTIC COMPOSITE. A composite material made primarily from wood or cellulose-based materials and plastic.

[F] WORKSTATION. A defined space or an independent principal piece of equipment using *HPM* within a *fabrication area* where a specific function, laboratory procedure or research activity occurs. *Approved* or *listed hazardous materials storage cabinets*, *flammable liquid storage cabinets* or *gas cabinets* serving a workstation are included as part of the workstation. A workstation is allowed to contain *ventilation* equipment, fire protection devices, detection devices, electrical devices and other processing and scientific equipment.

[BS] WYTHER. Each continuous, vertical section of a wall, one *masonry unit* in thickness.

[BG] YARD. An open space, other than a *court*, unobstructed from the ground to the sky, except where specifically provided by this code, on the lot on which a building is situated.

[F] ZONE. A defined area within the protected premises. A zone can define an area from which a signal can be received, an area to which a signal can be sent or an area in which a form of control can be executed.

[F] ZONE, NOTIFICATION. An area within a building or facility covered by notification appliances which are activated simultaneously.

CHAPTER 3

OCCUPANCY CLASSIFICATION AND USE

User note:

***About this chapter:** Chapter 3 provides the criteria by which buildings and structures are classified into use groups and occupancies. Through the balance of the code, occupancy classification is fundamental in the setting of features of construction; occupant safety requirements, especially building limitations; means of egress; fire protection systems; and interior finishes.*

SECTION 301 SCOPE

301.1 General. The provisions of this chapter shall control the classification of all buildings and structures as to occupancy and use. Different classifications of occupancy and use represent varying levels of hazard and risk to building occupants and adjacent properties.

SECTION 302 OCCUPANCY CLASSIFICATION AND USE DESIGNATION

[S] **302.1 Occupancy classification.** Occupancy classification is the formal designation of the primary purpose of the building, structure or portion thereof. Structures shall be classified into one or more of the occupancy groups specified in this section based on the nature of the hazards and risks to building occupants generally associated with the intended purpose of the building or structure. An area, room or space that is intended to be occupied at different times for different purposes shall comply with all applicable requirements associated with such potential multipurpose. Structures containing multiple occupancy groups shall comply with Section 508. Where a structure is proposed for a purpose that is not specified in this section, such structure shall be classified in the occupancy it most nearly resembles based on the fire safety and relative hazard. Occupied roofs shall be classified in the group that the occupancy most nearly resembles, according to the fire safety and relative hazard, and shall comply with Section 503.1.4.

1. Assembly (see Section 303): Groups A-1, A-2, A-3, A-4 and A-5.
2. Business (see Section 304): Group B.
3. Educational (see Section 305): Group E.
4. Factory and Industrial (see Section 306): Groups F-1 and F-2.
5. High Hazard (see Section 307): Groups H-1, H-2, H-3, H-4 and H-5.
6. Institutional (see Section 308): Groups I-1, I-2, I-3 and I-4.
7. Mercantile (see Section 309): Group M.
8. Residential (see Section 310): Groups R-1, R-2, and R-3. ~~((and R-4.))~~
9. Storage (see Section 311): Groups S-1 and S-2.
10. Utility and Miscellaneous (see Section 312): Group U.

302.2 Use designation. Occupancy groups contain subordinate uses having similar hazards and risks to building occupants. Uses include, but are not limited to, those functional designations specified within the occupancy group descriptions in Section 302.1. Certain uses require specific limitations and controls in accordance with the provisions of Chapter 4 and elsewhere in this code.

SECTION 303 ASSEMBLY GROUP A

303.1 Assembly Group A. Assembly Group A occupancy includes, among others, the use of a building or structure, or a portion thereof, for the gathering of persons for purposes such as civic, social or religious functions; recreation, food or drink consumption or awaiting transportation.

303.1.1 Small buildings and tenant spaces. A building or tenant space used for assembly purposes with an *occupant load* of less than 50 persons shall be classified as a Group B occupancy.

OCCUPANCY CLASSIFICATION AND USE

303.1.2 Small assembly spaces. The following rooms and spaces shall not be classified as Assembly occupancies:

1. A room or space used for assembly purposes with an *occupant load* of less than 50 persons and accessory to another occupancy shall be classified as a Group B occupancy or as part of that occupancy.
2. A room or space used for assembly purposes that is less than 750 square feet (70 m²) in area and accessory to another occupancy shall be classified as a Group B occupancy or as part of that occupancy.

303.1.3 Associated with Group E occupancies. A room or space used for assembly purposes that is associated with a Group E occupancy is not considered a separate occupancy.

303.1.4 Accessory to places of religious worship. Accessory religious educational rooms and religious auditoriums with *occupant loads* of less than 100 per room or space are not considered separate occupancies.

303.1.5 Special amusement areas. *Special amusement areas* shall comply with Section 411.

303.2 Assembly Group A-1. Group A-1 occupancy includes assembly uses, usually with fixed seating, intended for the production and viewing of the performing arts or motion pictures including, but not limited to:

Motion picture theaters
Symphony and concert halls
Television and radio studios admitting an audience
Theaters

303.3 Assembly Group A-2. Group A-2 occupancy includes assembly uses intended for food and/or drink consumption including, but not limited to:

Banquet halls
Casinos (*gaming areas*)
Nightclubs
Restaurants, cafeterias and similar dining facilities (including associated commercial kitchens)
Taverns and bars

[W] 303.4 Assembly Group A-3. Group A-3 occupancy includes assembly uses intended for worship, recreation or amusement and other assembly uses not classified elsewhere in Group A including, but not limited to:

Amusement arcades
Art galleries more than 3,000 gross square feet
Bowling alleys
Community halls
Courtrooms
Dance halls (not including food or drink consumption)
Exhibition halls
Funeral parlors
Greenhouses for the conservation and exhibition of plants that provide public access
Gymnasiums (without spectator seating)
Indoor *swimming pools* (without spectator seating)
Indoor tennis courts (without spectator seating)
Lecture halls
Libraries
Museums
Places of religious worship
Pool and billiard parlors
Waiting areas in transportation terminals

303.5 Assembly Group A-4. Group A-4 occupancy includes assembly uses intended for viewing of indoor sporting events and activities with spectator seating including, but not limited to:

Arenas
Skating rinks
Swimming pools

Tennis courts

303.6 Assembly Group A-5. Group A-5 occupancy includes assembly uses intended for participation in or viewing outdoor activities including, but not limited to:

Amusement park structures

Bleachers

Grandstands

Stadiums

SECTION 304 BUSINESS GROUP B

[S] **304.1 Business Group B.** Business Group B occupancy includes, among others, the use of a building or structure, or a portion thereof, for office, professional or service-type transactions, including storage of records and accounts. Business occupancies shall include, but not be limited to, the following:

Airport traffic control towers

Ambulatory care facilities

Animal hospitals, kennels and pounds

Banks

Barber and beauty shops

Car wash

Civic administration

Clinic, outpatient

Dry cleaning and laundries: pick-up and delivery stations and self-service

Educational occupancies for students above the 12th grade including *higher education laboratories*

Electronic data processing

Food processing establishments and commercial kitchens not associated with restaurants, cafeterias and similar dining facilities, and not more than 2,500 square feet (232 m²) in area

Laboratories: testing and research

Motor vehicle showrooms

Post offices

Print shops

Professional services (architects, attorneys, dentists, physicians, engineers, etc.)

Radio and television stations

Telephone exchanges

Training and skill development not in a school or academic program (this shall include, but not be limited to, tutoring centers, martial arts studios, gymnastics and similar uses regardless of the ages served, and where not classified as a Group A occupancy)

304.2 Airport traffic control towers. Airport traffic control towers shall comply with Section 412.2.

304.3 Ambulatory care facilities. *Ambulatory care facilities* shall comply with Section 422.

304.4 Higher education laboratories. *Higher education laboratories* shall comply with Section 428.

SECTION 305 EDUCATIONAL GROUP E

305.1 Educational Group E. Educational Group E occupancy includes, among others, the use of a building or structure, or a portion thereof, by six or more persons at any one time for educational purposes through the 12th grade.

305.1.1 Accessory to places of religious worship. Religious educational rooms and religious auditoriums, which are accessory to *places of religious worship* in accordance with Section 303.1.4 and have *occupant loads* of less than 100 per room or space, shall be classified as Group A-3 occupancies.

OCCUPANCY CLASSIFICATION AND USE

305.2 Group E, day care facilities. This group includes buildings and structures or portions thereof occupied by more than five children older than 2-1/2 years of age who receive educational, supervision or *personal care services* for fewer than 24 hours per day.

305.2.1 Within places of religious worship. Rooms and spaces within *places of religious worship* providing such day care during religious functions shall be classified as part of the primary occupancy.

305.2.2 Five or fewer children. A facility having five or fewer children receiving such day care shall be classified as part of the primary occupancy.

305.2.3 Five or fewer children in a dwelling unit. A facility such as the above within a *dwelling unit* and having five or fewer children receiving such day care shall be classified as a Group R-3 occupancy or shall comply with the *International Residential Code*.

[W] 305.2.4 Family home child care. *Family home child care* licensed by Washington State for the care of twelve or fewer children shall be classified as Group R-3 or shall comply with the *International Residential Code*.

305.3 Storm shelters in Group E occupancies. *Storm shelters* shall be provided for Group E occupancies where required by Section 423.5.

SECTION 306 FACTORY GROUP F

306.1 Factory Industrial Group F. Factory Industrial Group F occupancy includes, among others, the use of a building or structure, or a portion thereof, for assembling, disassembling, fabricating, finishing, manufacturing, packaging, repair or processing operations that are not classified as a Group H hazardous or Group S storage occupancy.

[W][S] 306.2 Moderate-hazard factory industrial, Group F-1. Factory industrial uses that are not classified as Factory Industrial F-2 Low Hazard shall be classified as F-1 Moderate Hazard and shall include, but not be limited to, the following:

- Aircraft (manufacturing, not to include repair)
- Appliances
- Athletic equipment
- Automobiles and other motor vehicles
- Bakeries
- Beverages: over 16-percent alcohol content
- Bicycles
- Boats
- Brooms or brushes
- Business machines
- Cameras and photo equipment
- Canvas or similar fabric
- Carpets and rugs (includes cleaning)
- Clothing
- Construction and agricultural machinery
- Disinfectants
- Dry cleaning and dyeing
- Electric generation plants
- Electronics
- Energy storage systems (ESS) in dedicated use buildings
- Engines (including rebuilding)
- Food processing establishments and commercial kitchens not associated with restaurants, cafeterias and similar dining facilities, and more than 2,500 square feet (232 m²) in area
- Furniture
- Hemp products
- Jute products
- Laundries

Leather products
Machinery
Marijuana processing
Metals
Millwork (sash and door)
Motion pictures and television filming (without spectators)
Musical instruments
Optical goods
Paper mills or products
Photographic film
Plastic products
Printing or publishing
Recreational vehicles
Refuse incineration
Shoes
Soaps and detergents
Textiles
Tobacco
Trailers
Upholstering
Water/sewer treatment facilities
Wood; distillation
Woodworking (cabinet)

306.2.1 Aircraft manufacturing facilities. Aircraft manufacturing facilities shall comply with Section 412.6.

306.3 Low-hazard factory industrial, Group F-2. Factory industrial uses that involve the fabrication or manufacturing of noncombustible materials that during finishing, packing or processing do not involve a significant fire hazard shall be classified as F-2 occupancies and shall include, but not be limited to, the following:

Beverages: up to and including 16-percent alcohol content
Brick and masonry
Ceramic products
Foundries
Glass products
Gypsum
Ice
Metal products (fabrication and assembly)

SECTION 307 HIGH-HAZARD GROUP H

[F] **307.1 High-hazard Group H.** High-hazard Group H occupancy includes, among others, the use of a building or structure, or a portion thereof, that involves the manufacturing, processing, generation or storage of materials that constitute a physical or *health hazard* in quantities in excess of those allowed in *control areas* complying with Section 414, based on the maximum allowable quantity limits for *control areas* set forth in Tables 307.1(1) and 307.1(2). Hazardous occupancies are classified in Groups H-1, H-2, H-3, H-4 and H-5 and shall be in accordance with this section, the requirements of Section 415 and the *International Fire Code*. *Hazardous materials* stored, or used on top of roofs or canopies, shall be classified as outdoor storage or use and shall comply with the *International Fire Code*.

OCCUPANCY CLASSIFICATION AND USE

Consumer fireworks, 1.4G (Class C, Common)

Cryogenic fluids, oxidizing

Flammable solids

Organic peroxides, Class II and III

Oxidizers, Class 2

Oxidizers, Class 3, that are used or stored in normally closed containers or systems pressurized at 15 pounds per square inch gauge (103 kPa) or less

Oxidizing gases

Unstable (reactive) materials, Class 2

Water-reactive materials, Class 2

[F] 307.6 High-hazard Group H-4. Buildings and structures containing materials that are *health hazards* shall be classified as Group H-4. Such materials shall include, but not be limited to, the following:

Corrosives

Highly toxic materials

Toxic materials

[F] 307.7 High-hazard Group H-5. Semiconductor fabrication facilities and comparable research and development areas in which hazardous production materials (HPM) are used and the aggregate quantity of materials is in excess of those specified in Table 307.1(1) and [F] Table 307.1(2) shall be classified as Group H-5. Such facilities and areas shall be designed and constructed in accordance with Section 415.11.

[F] 307.8 Multiple hazards. Buildings and structures containing a material or materials representing hazards that are classified in one or more of Groups H-1, H-2, H-3 and H-4 shall conform to the code requirements for each of the occupancies so classified.

SECTION 308 INSTITUTIONAL GROUP I

308.1 Institutional Group I. Institutional Group I occupancy includes, among others, the use of a building or structure, or a portion thereof, in which care or supervision is provided to persons who are or are *incapable of self-preservation* without physical assistance or in which persons are detained for penal or correctional purposes or in which the liberty of the occupants is restricted. Institutional occupancies shall be classified as Group I-1, I-2, I-3 or I-4.

[W] 308.2 Institutional Group I-1. Institutional Group I-1 occupancy shall include buildings, structures or portions thereof for more than 16 persons, excluding staff, who reside on a *24-hour basis* in a supervised environment and receive *custodial care*. Buildings of Group I-1 shall be classified as one of the occupancy conditions specified in Section 308.2.1 or 308.2.2 and shall comply with Section 420. This group shall include, but not be limited to, the following:

Alcohol and drug centers

Assisted living facilities as licensed by Washington state under chapter 388-78A WAC

Congregate care facilities

Group homes

Halfway houses

Residential board and care facilities

Residential treatment facilities as licensed by Washington state under chapter 246-337 WAC

Social rehabilitation facilities

308.2.1 Condition 1. This occupancy condition shall include buildings in which all persons receiving *custodial care* who, without any assistance, are capable of responding to an emergency situation to complete building evacuation.

308.2.2 Condition 2. This occupancy condition shall include buildings in which there are any persons receiving *custodial care* who require limited verbal or physical assistance while responding to an emergency situation to complete building evacuation.

308.2.3 Six to 16 persons receiving custodial care. A facility housing not fewer than six and not more than 16 persons receiving *custodial care* shall be classified as Group R-4.

308.2.4 Five or fewer persons receiving custodial care. A facility with five or fewer persons receiving *custodial care* shall be classified as Group R-3 or shall comply with the *International Residential Code* provided an *automatic sprinkler system* is installed in accordance with Section 903.3.1.3 or Section P2904 of the *International Residential Code*.

[W] 308.2.5 Adult family homes. *Adult family homes* licensed by Washington State shall be classified as Group R-3 or shall comply with the *International Residential Code*.

[W] 308.2.6 Assisted living facilities. Assisted living facilities as licensed by Washington State under chapter 388-78A WAC shall be classified as Group I-1, Condition 2.

[W] 308.3 Institutional Group I-2. Institutional Group I-2 occupancy shall include buildings and structures used for *medical care* on a 24-hour basis for more than five persons who are *incapable of self-preservation*. This group shall include, but not be limited to, the following:

Foster care facilities

Detoxification facilities

Hospice care centers

Hospitals

Nursing homes

Psychiatric hospitals

308.3.1 Occupancy conditions. Buildings of Group I-2 shall be classified as one of the occupancy conditions specified in Section 308.3.1.1 or 308.3.1.2 and shall comply with Section 407.

308.3.1.1 Condition 1. This occupancy condition shall include facilities that provide nursing and *medical care* but do not provide emergency care, surgery, obstetrics or in-patient stabilization units for psychiatric or detoxification, including but not limited to *nursing homes* and *foster care facilities*.

308.3.1.2 Condition 2. This occupancy condition shall include facilities that provide nursing and *medical care* and could provide emergency care, surgery, obstetrics or in-patient stabilization units for psychiatric or detoxification, including but not limited to *hospitals*.

308.3.2 Five or fewer persons receiving medical care. A facility with five or fewer persons receiving *medical care* shall be classified as Group R-3 or shall comply with the *International Residential Code* provided an *automatic sprinkler system* is installed in accordance with Section 903.3.1.3 or Section P2904 of the *International Residential Code*.

308.4 Institutional Group I-3. Institutional Group I-3 occupancy shall include buildings and structures that are inhabited by more than five persons who are under restraint or security. A Group I-3 facility is occupied by persons who are generally *incapable of self-preservation* due to security measures not under the occupants' control. This group shall include, but not be limited to, the following:

Correctional centers

Detention centers

Jails

Prerelease centers

Prisons

Reformatories

Buildings of Group I-3 shall be classified as one of the occupancy conditions specified in Sections 308.4.1 through 308.4.5 and shall comply with Section 408.

308.4.1 Condition 1. This occupancy condition shall include buildings in which free movement is allowed from sleeping areas, and other spaces where access or occupancy is permitted, to the exterior via *means of egress* without restraint. A Condition 1 facility is permitted to be constructed as Group R.

308.4.2 Condition 2. This occupancy condition shall include buildings in which free movement is allowed from sleeping areas and any other occupied *smoke compartment* to one or more other *smoke compartments*. Egress to the exterior is impeded by locked exits.

308.4.3 Condition 3. This occupancy condition shall include buildings in which free movement is allowed within individual *smoke compartments*, such as within a residential unit composed of individual *sleeping units* and group activity spaces, where egress is impeded by remote-controlled release of *means of egress* from such a *smoke compartment* to another *smoke compartment*.

308.4.4 Condition 4. This occupancy condition shall include buildings in which free movement is restricted from an occupied space. Remote-controlled release is provided to permit movement from *sleeping units*, activity spaces and other occupied areas within the *smoke compartment* to other *smoke compartments*.

308.4.5 Condition 5. This occupancy condition shall include buildings in which free movement is restricted from an occupied space. Staff-controlled manual release is provided to permit movement from *sleeping units*, activity spaces and other occupied areas within the *smoke compartment* to other *smoke compartments*.

OCCUPANCY CLASSIFICATION AND USE

308.5 Institutional Group I-4, day care facilities. Institutional Group I-4 occupancy shall include buildings and structures occupied by more than five persons of any age who receive *custodial care* for fewer than 24 hours per day by persons other than parents or guardians; relatives by blood, marriage or adoption; and in a place other than the home of the person cared for. This group shall include, but not be limited to, the following:

Adult day care

Child day care

308.5.1 Classification as Group E. A child day care facility that provides care for more than five but not more than 100 children 2-1/2 years or less of age, where the rooms in which the children are cared for are located on a *level of exit discharge* serving such rooms and each of these child care rooms has an *exit* door directly to the exterior, shall be classified as Group E.

308.5.2 Within a place of religious worship. Rooms and spaces within *places of religious worship* providing such care during religious functions shall be classified as part of the primary occupancy.

308.5.3 Five or fewer persons receiving care. A facility having five or fewer persons receiving *custodial care* shall be classified as part of the primary occupancy.

308.5.4 Five or fewer persons receiving care in a dwelling unit. A facility such as the above within a *dwelling unit* and having five or fewer persons receiving *custodial care* shall be classified as a Group R-3 occupancy or shall comply with the *International Residential Code*.

[W] 308.5.5 Family home child care. Family home child care licensed by Washington state for the care of 12 or fewer children shall be classified as Group R-3 or shall comply with the *International Residential Code*.

SECTION 309 MERCANTILE GROUP M

[W] 309.1 Mercantile Group M. Mercantile Group M occupancy includes, among others, the use of a building or structure or a portion thereof for the display and sale of merchandise, and involves stocks of goods, wares or merchandise incidental to such purposes and where the public has access. Mercantile occupancies shall include, but not be limited to, the following:

Art galleries, 3,000 gross square feet or less

Department stores

Drug stores

Markets

Greenhouses for display and sale of plants that provide public access.

Motor fuel-dispensing facilities

Retail or wholesale stores

Sales rooms

309.2 Quantity of hazardous materials. The aggregate quantity of nonflammable solid and nonflammable or noncombustible liquid *hazardous materials* stored or displayed in a single *control area* of a Group M occupancy shall not exceed the quantities in Table 414.2.5(1).

309.3 Motor fuel-dispensing facilities. Motor fuel-dispensing facilities shall comply with Section 406.7.

SECTION 310 RESIDENTIAL GROUP R

310.1 Residential Group R. Residential Group R includes, among others, the use of a building or structure, or a portion thereof, for sleeping purposes when not classified as an Institutional Group I or when not regulated by the *International Residential Code*. Group R occupancies not constructed in accordance with the *International Residential Code* as permitted by Sections 310.4.1 and 310.4.2 shall comply with Section 420.

310.2 Residential Group R-1. Residential Group R-1 occupancies containing *sleeping units* where the occupants are primarily *transient* in nature, including:

Boarding houses (transient) with more than 10 occupants

Congregate living facilities (transient) with more than 10 occupants

Hotels (*transient*)

Motels (*transient*)

[S] **310.3 Residential Group R-2.** Residential Group R-2 occupancies containing *sleeping units* or more than two *dwelling units* where the occupants are primarily permanent in nature, including:

- Apartment houses
- Congregate living facilities* (nontransient) with more than 16 occupants
 - Boarding houses* (nontransient)
- Convents
- Dormitories*
- Fraternities and sororities
- Monasteries
- Hotels (nontransient)
- ~~((Live/work))~~ Buildings that contain three or more live/work units
- Motels (nontransient)
- Vacation timeshare properties

[S] **310.4 Residential Group R-3.** Residential Group R-3 occupancies where the occupants are primarily permanent in nature and not classified as Group R-1, R-2, R-4 or I, including:

- Buildings that do not contain more than two *dwelling units*
- Buildings that do not contain more than two live/work units
- Care facilities that provide accommodations for five or fewer persons receiving care
- Congregate living facilities* (nontransient) with 16 or fewer occupants
 - Boarding houses* (nontransient)
 - Convents
 - Dormitories*
 - Fraternities and sororities
 - Monasteries
- Congregate living facilities* (transient) with 10 or fewer occupants
 - Boarding houses* (transient)
- Lodging houses* (transient) with five or fewer *guest rooms* and 10 or fewer occupants

310.4.1 Care facilities within a dwelling. Care facilities for five or fewer persons receiving care that are within a single-family dwelling are permitted to comply with the *International Residential Code* provided an *automatic sprinkler system* is installed in accordance with Section 903.3.1.3 or Section P2904 of the *International Residential Code*.

310.4.2 Lodging houses. Owner-occupied *lodging houses* with five or fewer *guest rooms* and 10 or fewer total occupants shall be permitted to be constructed in accordance with the *International Residential Code*, provided that an *automatic sprinkler system* is installed in accordance with Section 903.3.1.3 or Section P2904 of the *International Residential Code*.

[W] 310.4.3 Adult family homes, family home child care. Adult family homes and family home child care facilities that are within a single-family home are permitted to comply with the *International Residential Code*.

[W] 310.4.4 Foster family care homes. Foster family care homes licensed by Washington State are permitted to comply with the *International Residential Code*, as an accessory use to a *dwelling*, for six or fewer children including those of the resident family.

[W] **310.5 Residential Group R-4.** Residential Group R-4 occupancy shall include buildings, structures or portions thereof for more than five but not more than 16 persons, excluding staff, who reside on a *24-hour basis* in a supervised residential environment and receive *custodial care*. Buildings of Group R-4 shall be classified as one of the occupancy conditions specified in Section 310.5.1 or 310.5.2. This group shall include, but not be limited to, the following:

- Alcohol and drug centers
- Assisted living facilities
- Congregate care facilities
- Group homes*
- Halfway houses
- Residential board and care facilities
- Social rehabilitation facilities

OCCUPANCY CLASSIFICATION AND USE

Group R-4 occupancies shall meet the requirements for construction as defined for Group R-3, except as otherwise provided for in this code.

310.5.1 Condition 1. This occupancy condition shall include buildings in which all persons receiving *custodial care*, without any assistance, are capable of responding to an emergency situation to complete building evacuation.

310.5.2 Condition 2. This occupancy condition shall include buildings in which there are any persons receiving *custodial care* who require limited verbal or physical assistance while responding to an emergency situation to complete building evacuation.

SECTION 311 STORAGE GROUP S

311.1 Storage Group S. Storage Group S occupancy includes, among others, the use of a building or structure, or a portion thereof, for storage that is not classified as a hazardous occupancy.

311.1.1 Accessory storage spaces. A room or space used for storage purposes that is accessory to another occupancy shall be classified as part of that occupancy.

311.1.2 Combustible storage. High-piled stock or rack storage, or *attic*, under-floor and concealed spaces used for storage of combustible materials, shall be in accordance with Section 413.

311.2 Moderate-hazard storage, Group S-1. Storage Group S-1 occupancies are buildings occupied for storage uses that are not classified as Group S-2, including, but not limited to, storage of the following:

Aerosol products, Levels 2 and 3

Aircraft hangar (storage and repair)

Bags: cloth, burlap and paper

Bamboos and rattan

Baskets

Belting: canvas and leather

Beverages over 16-percent alcohol content

Books and paper in rolls or packs

Boots and shoes

Buttons, including cloth covered, pearl or bone

Cardboard and cardboard boxes

Clothing, woolen wearing apparel

Cordage

Dry boat storage (indoor)

Furniture

Furs

Glues, mucilage, pastes and size

Grains

Horns and combs, other than celluloid

Leather

Linoleum

Lumber

Motor vehicle *repair garages* complying with the maximum allowable quantities of *hazardous materials* specified in Table 307.1(1) (see Section 406.8)

Photo engravings

Resilient flooring

Self-service storage facility (mini-storage)

Silks

Soaps

Sugar

Tires, bulk storage of

Tobacco, cigars, cigarettes and snuff
Upholstery and mattresses
Wax candles

311.2.1 Aircraft hangers. Aircraft hangars used for storage or repair shall comply with Section 412.3.

311.2.2 Motor vehicle repair garages Motor vehicle *repair garages* shall comply with Section 406.8.

[S] **311.3 Low-hazard storage, Group S-2.** Storage Group S-2 occupancies include, among others, buildings used for the storage of noncombustible materials such as products on wood pallets or in paper cartons with or without single thickness divisions; or in paper wrappings. Such products are permitted to have a negligible amount of plastic *trim*, such as knobs, handles or film wrapping. Group S-2 storage uses shall include, but not be limited to, storage of the following:

Asbestos
Beverages up to and including 16-percent alcohol
Cement in bags
Chalk and crayons
Covered boat moorage not classified as Group U
Dairy products in nonwaxed coated paper containers
Dry cell batteries
Electrical coils
Electrical motors
Empty cans
Food products
Foods in noncombustible containers
Fresh fruits and vegetables in nonplastic trays or containers
Frozen foods
Glass
Glass bottles, empty or filled with noncombustible liquids
Gypsum board
Inert pigments
Ivory
Meats
Metal cabinets
Metal desks with plastic tops and *trim*
Metal parts
Metals
Mirrors
Oil-filled and other types of distribution transformers
Public parking garages, open or enclosed
Porcelain and pottery
Stoves
Talc and soapstones
Washers and dryers

311.3.1 Public parking garages. Public parking garages shall comply with Section 406.4 and the additional requirements of Section 406.5 for *open parking garages* or Section 406.6 for enclosed parking garages.

SECTION 312 UTILITY AND MISCELLANEOUS GROUP U

[S] **312.1 General.** Buildings and structures of an accessory character and miscellaneous structures not classified in any specific occupancy shall be constructed, equipped and maintained to conform to the requirements of this code commensurate with the fire and life hazard incidental to their occupancy. Group U shall include, but not be limited to, the following:

OCCUPANCY CLASSIFICATION AND USE

Agricultural buildings

Aircraft hangars, accessory to a one- or two-family residence (see Section 412.4)

Barns

Carports

Communication equipment structures with a *gross floor area* of less than 1,500 square feet (139 m²)

Covered boat moorage accessory to Group R-3 dwelling unit

Fences more than 7 feet (2134 mm) in height

Grain silos, accessory to a residential occupancy

Livestock shelters

Private garages that comply with Section 406.3

Retaining walls

Sheds

Stables

Tanks

Towers

312.1.1 Greenhouses. *Greenhouses* not classified as another occupancy shall be classified as Use Group U.

312.2 Private garages and carports. *Private garages* and carports shall comply with Section 406.3.

312.3 Residential aircraft hangars. Aircraft hangars accessory to a one- or two-family residence shall comply with Section 412.4.

CHAPTER 4

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

User note:

About this chapter: Chapter 4 provides detailed criteria for special uses and occupancies. The unique characteristics of a live/work unit as opposed to a 30-story high-rise building call for specific standards for each. Twenty-seven sections address covered and open mall buildings, atriums, hospitals, stages, buildings where hazardous materials are used and stored, jails and prisons, ambulatory care facilities and storm shelters, among other special occupancy issues.

SECTION 401 SCOPE

401.1 Detailed occupancy and use requirements. In addition to the occupancy and construction requirements in this code, the provisions of this chapter apply to the occupancies and use described herein.

SECTION 402 COVERED MALL AND OPEN MALL BUILDINGS

402.1 Applicability. The provisions of this section shall apply to buildings or structures defined herein as *covered or open mall buildings* not exceeding three floor levels at any point nor more than three *stories above grade plane*. Except as specifically required by this section, *covered and open mall buildings* shall meet applicable provisions of this code.

Exceptions:

1. Foyers and lobbies of Group B, R-1 and R-2 occupancies are not required to comply with this section.
2. Buildings need not comply with the provisions of this section where they totally comply with other applicable provisions of this code.

402.1.1 Open mall building perimeter line. For the purpose of this code, a perimeter line shall be established. The perimeter line shall encircle all buildings and structures that comprise the *open mall building* and shall encompass any open-air interior walkways, open-air courtyards or similar open-air spaces. The perimeter line shall define the extent of the *open mall building*. *Anchor buildings* and parking structures shall be outside of the perimeter line and are not considered as part of the *open mall building*.

402.2 Open space. A *covered mall building* and attached *anchor buildings* and parking garages shall be surrounded on all sides by a permanent open space or not less than 60 feet (18 288 mm). An *open mall building* and *anchor buildings* and parking garages adjoining the perimeter line shall be surrounded on all sides by a permanent open space of not less than 60 feet (18 288 mm).

Exception: The permanent open space of 60 feet (18 288 mm) shall be permitted to be reduced to not less than 40 feet (12 192 mm), provided that the following requirements are met:

1. The reduced open space shall not be allowed for more than 75 percent of the perimeter of the *covered or open mall building* and *anchor buildings*.
2. The *exterior wall* facing the reduced open space shall have a *fire-resistance rating* of not less than 3 hours.
3. Openings in the *exterior wall* facing the reduced open space shall have opening protectives with a *fire protection rating* of not less than 3 hours.
4. Group E, H, I or R occupancies are not located within the *covered or open mall building* or *anchor buildings*.

[S] (~~402.3 Lease plan. Each owner of a covered mall building or of an open mall building shall provide both the building and fire departments with a lease plan showing the location of each occupancy and its exits after the certificate of occupancy has been issued. Modifications or changes in occupancy or use from that shown on the lease plan shall not be made without prior approval of the building official.~~)

402.4 Construction. The construction of *covered and open mall buildings*, *anchor buildings* and parking garages associated with a mall building shall comply with Sections 402.4.1 through 402.4.3.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] 402.7.2 Smoke control. *Atriums* connecting three or more *stories* in a *covered mall building* shall be provided with a smoke control system in accordance with Section 909.

[S][F] 402.7.3 Emergency power system. *Covered mall buildings* greater than 50,000 square feet (4645 m²) in area and *open mall buildings* greater than 50,000 square feet (4645 m²) within the established perimeter line shall be provided with emergency power systems that is capable of operating the *emergency voice/alarm communication system* in accordance with Section 2702.

[F] 402.7.4 Emergency voice/alarm communication system. Where the total floor area is greater than 50,000 square feet (4645 m²) within either a *covered mall building* or within the perimeter line of an *open mall building*, an *emergency voice/alarm communication system* shall be provided.

The fire department shall have access to any *emergency voice/alarm communication systems* serving a *mall*, required or otherwise. The systems shall be provided in accordance with Section 907.5.2.2.

[F] 402.7.5 Fire department access to equipment. Rooms or areas containing controls for air-conditioning systems or *fire protection systems* shall be identified for use by the fire department.

402.8 Means of egress. *Covered mall buildings*, *open mall buildings* and each tenant space within a *mall building* shall be provided with *means of egress* as required by this section and this code. Where there is a conflict between the requirements of this code and the requirements of Sections 402.8.1 through 402.8.8, the requirements of Sections 402.8.1 through 402.8.8 shall apply.

402.8.1 Mall width. For the purpose of providing required egress, *malls* are permitted to be considered as corridors but need not comply with the requirements of Section 1005.1 of this code where the width of the *mall* is as specified in this section.

402.8.1.1 Minimum width. The aggregate clear egress width of the *mall* in either a *covered or open mall building* shall be not less than 20 feet (6096 mm). The *mall* width shall be sufficient to accommodate the *occupant load* served. Any portion of the minimum required aggregate egress width shall be not less than 10 feet (3048 mm) measured to a height of 8 feet (2438 mm) between any projection of a tenant space bordering the *mall* and the nearest kiosk, vending machine, bench, display opening, *food court* or other obstruction to *means of egress* travel.

402.8.2 Determination of occupant load. The *occupant load* permitted in any individual tenant space in a *covered or open mall building* shall be determined as required by this code. *Means of egress* requirements for individual tenant spaces shall be based on the *occupant load* thus determined.

402.8.2.1 Occupant formula. In determining required *means of egress* of the *mall*, the number of occupants for whom *means of egress* are to be provided shall be based on *gross leasable area* of the *covered or open mall building* (excluding *anchor buildings*) and the *occupant load factor* as determined by Equation 4-1.

$$OLF = (0.00007)(GLA) + 25$$

(Equation 4-1)

where:

OLF = The *occupant load factor* (square feet per person).

GLA = The *gross leasable area* (square feet).

Exception: Tenant spaces attached to a *covered or open mall building* but with a *means of egress* system that is totally independent of the open mall of an *open mall building* or of a *covered mall building* shall not be considered as *gross leasable area* for determining the required *means of egress* for the *mall building*.

402.8.2.2 OLF range. The *occupant load factor (OLF)* is not required to be less than 30 and shall not exceed 50.

402.8.2.3 Anchor buildings. The *occupant load* of *anchor buildings* opening into the *mall* shall not be included in computing the total number of occupants for the *mall*.

402.8.2.4 Food courts. The *occupant load* of a *food court* shall be determined in accordance with Section 1004. For the purposes of determining the *means of egress* requirements for the *mall*, the *food court occupant load* shall be added to the *occupant load* of the *covered or open mall building* as calculated in Section 402.8.2.1.

402.8.3 Number of means of egress. Wherever the distance of travel to the *mall* from any location within a tenant space used by persons other than employees is greater than 75 feet (22 860 mm) or the tenant space has an *occupant load* of 50 or more, not fewer than two *means of egress* shall be provided.

402.8.4 Arrangements of means of egress. Assembly occupancies with an *occupant load* of 500 or more located within a *covered mall building* shall be so located such that their entrance will be immediately adjacent to a principal entrance to the mall and shall have not less than one-half of their required *means of egress* opening directly to the exterior of the *covered mall building*. Assembly occupancies located within the perimeter line of an *open mall building* shall be permitted to have their main *exit* open to the *open mall*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

402.8.4.1 Anchor building means of egress. Required *means of egress* for *anchor buildings* shall be provided independently from the *mall means of egress* system. The *occupant load* of *anchor buildings* opening into the *mall* shall not be included in determining *means of egress* requirements for the *mall*. The path of egress travel of *malls* shall not exit through *anchor buildings*. *Malls* terminating at an *anchor building* where other *means of egress* has not been provided shall be considered as a dead-end *mall*.

402.8.5 Distance to exits. Within each individual tenant space in a *covered* or *open mall building*, the distance of travel from any point to an *exit* or entrance to the *mall* shall be not greater than 200 feet (60 960 mm).

The distance of travel from any point within a *mall* of a *covered mall building* to an *exit* shall be not greater than 200 feet (60 960 mm). The maximum distance of travel from any point within an *open mall* to the perimeter line of the *open mall building* shall be not greater than 200 feet (60 960 mm).

402.8.6 Access to exits. Where more than one *exit* is required, they shall be so arranged that it is possible to travel in either direction from any point in a *mall* of a *covered mall building* to separate *exits* or from any point in an *open mall* of an *open mall building* to two separate locations on the perimeter line, provided that neither location is an *exterior wall* of an *anchor building* or parking garage. The width of an *exit passageway* or *corridor* from a *mall* shall be not less than 66 inches (1676 mm).

Exception: Access to *exits* is permitted by way of a dead-end *mall* that does not exceed a length equal to twice the width of the *mall* measured at the narrowest location within the dead-end portion of the *mall*.

402.8.6.1 Exit passageways. Where *exit passageways* provide a secondary *means of egress* from a tenant space, the *exit passageways* shall be constructed in accordance with Section 1024.

402.8.7 Service areas fronting on exit passageways. Mechanical rooms, electrical rooms, building service areas and service elevators are permitted to open directly into *exit passageways*, provided that the *exit passageway* is separated from such rooms with not less than 1-hour *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both. The *fire protection rating* of openings in the *fire barriers* shall be not less than 1 hour.

402.8.8 Security grilles and doors. Horizontal sliding or vertical security grilles or doors that are a part of a required *means of egress* shall conform to the following:

1. Doors and grilles shall remain in the full open position during the period of occupancy by the general public.
2. Doors or grilles shall not be brought to the closed position when there are 10 or more persons occupying spaces served by a single *exit* or 50 or more persons occupying spaces served by more than one *exit*.
3. The doors or grilles shall be openable from within without the use of any special knowledge or effort where the space is occupied.
4. Where two or more *exits* are required, not more than one-half of the *exits* shall be permitted to include either a horizontal sliding or vertical rolling grille or door.

SECTION 403 HIGH-RISE BUILDINGS

Note: High rise projects over 240 feet in structural height or using an alternative lateral force resisting system are subject to peer review, in accordance with Section 1613. Peer reviews require lengthy lead time prior to permit application and issuance. Applicants should contact the *building official* prior to the start of structural design.

[S] **403.1 Applicability.** *High-rise buildings* shall comply with Sections 403.2 through ((403.6)) 403.8.

Exceptions: The provisions of Sections 403.2 through 403.6 shall not apply to the following buildings and structures:

1. Airport traffic control towers in accordance with Section 412.2.
2. *Open parking garages* in accordance with Section 406.5.
3. The portion of a building containing a Group A-5 occupancy in accordance with Section 303.6.
4. Special industrial occupancies in accordance with Section 503.1.1.

((5. Buildings containing any one of the following:

- 5.1. A Group H-1 occupancy.
- 5.2. A Group H-2 occupancy in accordance with Section 415.8, 415.9.2, 415.9.3 or 426.1.
- 5.3. A Group H-3 occupancy in accordance with Section 415.8.))

Interpretation I403.1a: Item 2 only includes buildings in which parking is the principal use.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Interpretation I403.1b: For the purpose of this section, occupied roofs are considered floors used for human occupancy if the occupant load of the roof is ten or more on a building not equipped with an *automatic sprinkler system* or where the occupant load is 50 or more on the roof of a building that is equipped with an *automatic sprinkler system*.

403.1.1 Presubmittal conferences. The applicant shall arrange two presubmittal conferences with the design team, the *building official* and the *fire code official* in accordance with Sections 403.1.1.1 and 403.1.1.2.

403.1.1.1 High rise presubmittal conference. The applicant shall arrange a high rise presubmittal conference at least 60 days prior to submittal of a building permit application that contains the construction documents for any structural component of the building. The purpose of this presubmittal conference is to obtain conceptual approval of the design team approach to compliance with key provisions of this code related to high rise construction, excluding smoke control. The documentation of the high rise presubmittal meetings shall be reflected on the plans for the building and become a permanent part of the records of the Department of Construction and Inspections.

403.1.1.2 Smoke control presubmittal conference. The applicant shall arrange a smoke control presubmittal conference in accordance with Section 909.1.1.

[S] 403.2 Construction. The construction of *high-rise buildings* shall comply with the provisions of Sections 403.2.1 through 403.2.3.

403.2.1 Reduction in fire-resistance rating. The *fire-resistance rating* reductions specified in Sections 403.2.1.1 and 403.2.1.2 shall be allowed in buildings that have sprinkler control valves equipped with supervisory initiating devices and water-flow initiating devices for each floor.

403.2.1.1 Type of construction. The following reductions in the minimum *fire-resistance rating* of the *building elements* in TABLE 601 shall be permitted as follows:

1. For buildings not greater than 420 feet (128 m) in *building height*, the *fire-resistance rating* of the *building elements* in Type IA construction shall be permitted to be reduced to the minimum *fire-resistance ratings* for the *building elements* in Type IB.

Exception: The required *fire-resistance rating* of (~~columns supporting floors~~) primary structural frame and bearing walls shall not be reduced.

2. In other than Group F-1, H-2, H-3, H-5, M and S-1 occupancies, the *fire-resistance rating* of the *building elements* in Type IB construction shall be permitted to be reduced to the *fire-resistance ratings* in Type IIA.
3. The *building height* and *building area* limitations of a building containing *building elements* with reduced *fire-resistance ratings* shall be permitted to be the same as the building without such reductions.

403.2.1.2 Shaft enclosures. For buildings not greater than 420 feet (128 m) in *building height*, the required *fire-resistance rating* of the *fire barriers* enclosing vertical *shafts*, other than *interior exit stairway* and elevator hoistway enclosures, is permitted to be reduced to 1 hour where *automatic sprinklers* are installed within the *shafts* at the top and at alternate floor levels.

[S][BS] 403.2.2 Structural integrity of interior exit stairways and elevator hoistway enclosures. Enclosures of fire service access elevators per Section 403.6.1 shall comply with Sections 403.2.2.1 through 403.2.2.4. For *high-rise buildings of Risk Category III* or *IV* in accordance with Section 1604.5, and for all buildings that are more than 420 feet (128 m) in *building height*, enclosures for *interior exit stairways* and elevator hoistway enclosures shall comply with Sections 403.2.2.1 through 403.2.2.4.

[BS] 403.2.2.1 Wall assembly materials—soft body impact. The panels making up the enclosures for *interior exit stairways* and elevator hoistway enclosures shall meet or exceed Soft Body Impact Classification Level 2 as measured by the test method described in ASTM C1629/C1629M when tested from the exterior side of the enclosure.

[BS] 403.2.2.2 Wall assembly materials—hard body impact. The panels making up the enclosures for *interior exit stairways* and elevator hoistway enclosures that are not exposed to the interior of the enclosure shall be in accordance with one of the following:

1. The wall assembly shall incorporate not fewer than two layers of impact-resistant panels, each of which meets or exceeds Hard Body Impact Classification Level 2 as measured by the test method described in ASTM C1629/C1629M.
2. The wall assembly shall incorporate not fewer than one layer of impact-resistant panels that meet or exceed Hard Body Impact Classification Level 3 as measured by the test method described in ASTM C1629/C1629M.
3. The wall assembly incorporates multiple layers of any material, tested in tandem, that meets or exceeds Hard Body Impact Classification Level 3 as measured by the test method described in ASTM C1629/C1629M.

[BS] 403.2.2.3 Concrete and masonry walls. Concrete or masonry walls shall be deemed to satisfy the requirements of Sections 403.2.2.1 and 403.2.2.2.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[BS] 403.2.2.4 Other wall assemblies. Any other wall assembly that provides impact resistance equivalent to that required by Sections 403.2.2.1 for Soft Body Impact Classification Level 2 and 403.2.2.2 for Hard Body Impact Classification Level 3, as measured by the test method described in ASTM C1629/C1629M, shall be permitted.

403.2.3 Sprayed fire-resistant materials (SFRM). The bond strength of the SFRM installed throughout the building shall be in accordance with Table 403.2.3.

**TABLE 403.2.3
MINIMUM BOND STRENGTH**

HEIGHT OF BUILDING ^a	SFRM MINIMUM BOND STRENGTH
Up to 420 feet	430 psf
Greater than 420 feet	1,000 psf

For SI: 1 foot = 304.8 mm, 1 pound per square foot (psf) = 0.0479 kW/m².

a. Above the lowest level of fire department vehicle access.

[S][F] 403.3 Automatic sprinkler system. Buildings and structures shall be equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1 and a secondary water supply where required by Section 403.3.3. See Section 903.3.1.1.3 for additional requirements for sprinkler systems in high-rise buildings.

Exception: An *automatic sprinkler system* shall not be required in spaces or areas of telecommunications equipment buildings used exclusively for telecommunications equipment, associated electrical power distribution equipment, batteries and standby engines, provided that those spaces or areas are equipped throughout with an *automatic fire detection system* in accordance with Section 907.2 and are separated from the remainder of the building by not less than 1-hour *fire barriers* constructed in accordance with Section 707 or not less than 2-hour *horizontal assemblies* constructed in accordance with Section 711, or both.

[S][F] (~~403.3.1 Number of sprinkler risers and system design.~~ Each sprinkler system zone in buildings that are more than 420 feet (128 m) in *building height* shall be supplied by not fewer than two risers. Each riser shall supply sprinklers on alternate floors. ~~If more than two risers are provided for a zone, sprinklers on adjacent floors shall not be supplied from the same riser.))~~

[S][F] 403.3.1 Automatic sprinkler system design. High-rise building sprinkler systems shall be combination standpipe/sprinkler systems incorporating the following features:

1. Each floor sprinkler system shall be connected between standpipe risers.
2. Shut-off valves, water-flow devices and check valves (or pressure reducing valves) shall be provided on each floor at the sprinkler system connection to each standpipe.
3. Two four-way fire department connections serving the combination system shall be provided on separate streets well separated from each other.
4. When a mid-level fire pump is required to meet pressure requirements, two pumps with the same rating shall be installed.
5. Dry-pipe sprinkler systems serving parking garages may use a separate two-way fire department connection. The dry-pipe sprinkler system shall be supplied by the on-site water tank.
6. The standpipe risers in each required stair shall be a minimum pipe size of 6 inches (152 mm).
7. Two 2-1/2-inch (64 mm) hose connections shall be provided on every floor level landing in every required stairway. If pressure reducing valves (PRV) are required, each hose connection shall be provided with its own PRV.
8. The system shall be designed to provide a minimum flow of 300 gpm (19 L/s) at a minimum pressure of 150 psi [1034 kPa [maximum 205 psi (1379 kPa)] at each standpipe connection in addition to the flow and pressure requirements contained in NFPA 14.

[F] 403.3.1.1 Riser location. Sprinkler risers shall be placed in *interior exit stairways* and *ramps* that are remotely located in accordance with Section 1007.1.

[F] 403.3.2 Water supply to required fire pumps. In all buildings that are more than 420 feet (128 m) in *building height* and buildings of Type IVA and IVB construction that are more than 120 feet (36 576 mm) in *building height*, required fire pumps shall be supplied by connections to not fewer than two water mains located in different streets. Separate supply piping shall be provided between each connection to the water main and the pumps. Each connection and the supply piping between the connection and the pumps shall be sized to supply the flow and pressure required for the pumps to operate.

Exception: Two connections to the same main shall be permitted provided that the main is valved such that an interruption can be isolated so that the water supply will continue without interruption through not fewer than one of the connections.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[S][F] **403.3.3 Secondary water supply.** An *automatic* secondary on-site water supply having a capacity providing the lesser of a net volume of 33,000 gallons or a volume that is not less than the hydraulically calculated sprinkler demand, including the hose stream requirement, shall be provided for high-rise buildings assigned to Seismic Design Category C, D, E or F as determined by Section 1613. An additional fire pump shall not be required for the secondary water supply unless needed to provide the minimum design intake pressure at the suction side of the fire pump supplying the *automatic sprinkler system*. The secondary water supply shall have a duration of not less than 30 minutes as determined by the occupancy hazard classification in accordance with NFPA 13.

[F] **403.3.4 Fire pump room.** Fire pumps shall be located in rooms protected in accordance with Section 913.2.1.

[F] **403.4 Emergency systems.** The detection, alarm and emergency systems of *high-rise buildings* shall comply with Sections 403.4.1 through 403.4.8.

[F] **403.4.1 Smoke detection.** Smoke detection shall be provided in accordance with Section 907.2.13.1.

[F] **403.4.2 Fire alarm system.** A *fire alarm* system shall be provided in accordance with Section 907.2.13.

[F] **403.4.3 Standpipe system.** A *high-rise building* shall be equipped with a *standpipe system* as required by Section 905.3.

[F] **403.4.4 Emergency voice/alarm communication system.** An *emergency voice/alarm communication system* shall be provided in accordance with Section 907.5.2.2.

[F] **403.4.5 Emergency communication coverage.** In-building, two-way emergency responder communication coverage shall be provided in accordance with Section 510 of the *International Fire Code*.

[F] **403.4.6 Fire command.** A *fire command center* complying with Section 911 shall be provided in a location *approved* by the fire code official.

[S][F] **403.4.7 ((Smoke removal)) No requirements.** ((To facilitate smoke removal in post fire salvage and overhaul operations, buildings and structures shall be equipped with natural or mechanical ventilation for removal of products of combustion in accordance with one of the following:

1. Easily identifiable, manually operable windows or panels shall be distributed around the perimeter of each floor at not more than 50 foot (15 240 mm) intervals. The area of operable windows or panels shall be not less than 40 square feet (3.7 m²) per 50 linear feet (15 240 mm) of perimeter.

Exceptions:

1. In Group R-1 occupancies, each *sleeping unit* or suite having an *exterior wall* shall be permitted to be provided with 2 square feet (0.19 m²) of venting area in lieu of the area specified in Item 1.
2. Windows shall be permitted to be fixed provided that glazing can be cleared by fire fighters.
2. Mechanical air handling equipment providing one exhaust air change every 15 minutes for the area involved. Return and exhaust air shall be moved directly to the outside without recirculation to other portions of the building.
3. Any other *approved* design that will produce equivalent results.))

[S][F] **403.4.8 ((Standby and emergency)) Emergency power.** ((A *standby power system* complying with Section 2702 and Section 3003 shall be provided for the standby power loads specified in Section 403.4.8.3.)) An *emergency power system* complying with Section 2702 shall be provided for the emergency power loads specified in Section 403.4.8.4.

[F] **403.4.8.1 Equipment room.** If the ((*standby or*)) *emergency power system* includes a generator set inside a building, the system shall be located in a separate room enclosed with 2-hour *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both. System supervision with manual start and transfer features shall be provided at the *fire command center*.

Exceptions:

1. In Group I-2, Condition 2, manual start and transfer features for the critical branch of the emergency power are not required to be provided at the *fire command center*.
2. Where located within a sprinklered parking garage of Type I or II construction, emergency power and legally required standby power systems with fixed fuel quantities meeting the limits of Section 605.4.2.2 of the International Fire Code, and their transfer switches, are not required to be in a separate room. Other occupancies located in the story where the system is located shall be separated from the system by fire barriers with a minimum 1-hour fire-resistance rating.
3. Combustion and radiator intake air are permitted to be transferred from the adjacent garage. Radiator discharge air is permitted to be transferred to the adjacent garage. Radiator ventilation intake and discharge air locations shall be separated to maintain the radiator ventilation intake air temperature below the maximum temperature allowed to meet the emergency and legally required standby power system loads.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[S][F] 403.4.8.2 Fuel line piping protection. Fuel lines supplying a generator set inside a building shall be separated from areas of the building other than the room the generator is located in by one of the following methods:

1. A fire-resistant pipe-protection system that has been tested in accordance with UL 1489. The system shall be installed as tested and in accordance with the manufacturer's installation instructions, and shall have a rating of not less than ~~((2 hours. Where the building is protected throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1, the required rating shall be reduced to))~~ 1 hour.
2. An assembly that has a *fire-resistance rating* of not less than 2 hours. Where the building is protected throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1, ~~((or 903.3.1.2,))~~ the required fire-resistance rating shall be reduced to 1 hour.
3. Other approved methods.

[S] (~~[F]~~) 403.4.8.3 Standby power loads. The following are classified as standby power loads:

1. ~~Ventilation and automatic fire detection equipment for smokeproof enclosures.~~
2. ~~Elevators.~~
3. ~~Where elevators are provided in a high-rise building for accessible means of egress, fire service access or occupant self evacuation, the standby power system shall also comply with Sections 1009.4, 3007 or 3008, as applicable.)~~

[S][F] 403.4.8.4 Emergency power loads. The following are classified as emergency power loads:

1. Exit signs and *means of egress* illumination required by Chapter 10.
2. Elevator car lighting.
~~((3. Emergency voice/alarm communications systems.))~~
4. *Automatic* fire detection systems.
5. *Fire alarm* systems.
6. Electrically powered fire pumps.
7. Power and lighting for mechanical equipment rooms and the fire command center required by Section 403.4.6.
8. Lighting for elevator cars, machine rooms, machine spaces and control rooms.
9. Ventilation and cooling equipment for elevator machine rooms, machine spaces and control rooms.
10. Ventilation and automatic fire detection equipment for pressurized stairways and elevator hoistways.
11. Smoke control system.
12. A selected elevator in each elevator group, in accordance with Section 3016.9. All elevators shall be transferable to an emergency power system.

Note: No more than four cars are permitted within a hoistway. See Section 3016.10.

13. For fire service access and occupant evacuation elevators:
 - 13.1. Operation of all fire service access elevator cars.
 - 13.2. Operation of all occupant evacuation elevators until they are recalled.
 - 13.3. Elevator controller cooling equipment.
 - 13.4. For fire service access elevators only, elevator hoistway lighting.
 - 13.5. Sump pumps in elevator pits, where provided.
14. Emergency responder radio coverage.

[S] 403.5 Means of egress and evacuation. The *means of egress* in *high-rise buildings* shall comply with Sections 403.5.1 through ~~((403.5.5))~~ 403.5.7.

403.5.1 Remoteness of interior exit stairways. Required *interior exit stairways* shall be separated by a distance not less than 30 feet (9144 mm) or not less than one-fourth of the length of the maximum overall diagonal dimension of the building or area to be served, whichever is less. The distance shall be measured in a straight line between the nearest points of the enclosure surrounding the *interior exit stairways*. In buildings with three or more *interior exit stairways*, not fewer than two of the *interior exit stairways* shall comply with this section. Interlocking or *scissor stairways* shall be counted as one *interior exit stairway*.

Exception: In buildings containing primarily Group R occupancies, required interior exit stairways are permitted to be separated by a distance not less than 15 feet (4572 mm).

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

403.5.2 Additional interior exit stairway. For buildings other than Group R-2 and their ancillary spaces that are more than 420 feet (128 m) in *building height*, one additional *interior exit stairway* meeting the requirements of Sections 1011 and 1023 shall be provided in addition to the minimum number of *exits* required by Section 1006.3. The stairway need only serve floors above the lowest level of exit discharge. The total capacity of any combination of remaining *interior exit stairways* with one *interior exit stairway* removed shall be not less than the total capacity required by Section 1005.1. *Scissor stairways* shall not be considered the additional *interior exit stairway* required by this section.

Interpretation I403.5.2 An additional interior exit stairway is not required when the building above the 420-foot level contains only Group R-2 occupancy. If the building above the 420-foot level contains a Group R-2 and another occupancy, or if the building does not contain a Group R-2 above the 420-foot level, then an additional interior exit stairway is required.

Exceptions:

1. ~~((An))~~ Subject to the approval of the *building official*, an additional *interior exit stairway* shall not be required to be installed in buildings having elevators used for occupant self-evacuation in accordance with Section ~~((3008))~~ 403.6.2.
2. An additional *interior exit stairway* shall not be required for other portions of the building where the highest occupiable floor level in those areas is less than 420 feet (128 m) in *building height*.

403.5.3 Stairway door operation. *Stairway* doors other than the exit discharge doors shall be permitted to be locked from the *stairway* side. *Stairway* doors that are locked from the *stairway* side shall be capable of being unlocked simultaneously without unlatching upon a signal from the *fire command center* and shall be capable of being unlocked simultaneously and automatically upon a signal from a fire alarm originating anywhere in the building. When stairway doors are installed that are not locked from the stairway side, wiring shall be installed to facilitate future installations of locking hardware.

403.5.3.1 Stairway communication system. A telephone or other two-way communications system connected to an *approved constantly attended station* shall be provided at not less than every fifth floor in each *stairway*. ~~((where the doors to the stairway are locked.))~~

403.5.4 ~~((Smokeproof enclosures))~~ Smoke control in exit stairways. Every required *interior exit stairway* serving floors more than 75 feet (22 860 mm) above the lowest level of fire department vehicle access shall ~~((be a smokeproof enclosure in accordance))~~ comply with Sections 909.20 and 1023.12.

Exception: Unless required by other sections of this code, portions of such stairways which serve floors below the level of exit discharge are not required to comply with Sections 909.20 and 1023.11 if the portion of the stairway below the level of exit discharge is separated from the pressurized stairway with not less than 1 hour fire barriers or horizontal assemblies or both.

403.5.5 Luminous egress path markings. Luminous egress path markings shall be provided in accordance with Section 1025.

403.5.6 Access to roofs. Access to all roof levels with a slope less than 4:12 shall be provided by stairways.

Exception: Access to unoccupied roofs is permitted to be provided by ship's ladders or alternating tread devices.

403.5.7 Termination of required stairways. All required interior exit stairways shall terminate at the roof level with an exterior door complying with Sections 1010.1.1 and 1010.1.2, unless an alternate method in accordance with Section 104.5 is approved by the *building official*.

[S] **403.6 Elevators.** Elevator installation and operation in *high-rise buildings* shall comply with Chapter 30 and ~~((Sections 403.6.1 and 403.6.2))~~ this section.

[S] **403.6.1 Fire service access elevator.** In buildings with an occupied floor more than 120 feet (36 576 mm) above the lowest level of fire department vehicle access, every floor of the building shall be served by not fewer than two fire service access elevators ~~((, or all elevators, whichever is less, shall be provided))~~ in accordance with ~~((Section 3007))~~ this section. Each fire service access elevator shall have a capacity of not less than 3,500 pounds (1588 kg) and shall comply with Section ~~((3002.4))~~ 3016.15.

Exceptions:

1. Buildings with one elevator shall be provided with one fire service access elevator.
2. Floors below the lowest level of fire department vehicle access are not required to be served by fire service access elevators.
3. Elevators serving only floors less than 75 feet above the lowest street-level building entrance are not required to be fire service access elevators.
4. The elevator shall not be required to serve the top floor of a building where that floor is utilized only for equipment for building systems.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

403.6.1.1 Machine rooms. Each fire service access elevator shall be served by a different machine or control room. Each room shall be accessed independently.

403.6.1.2 Water protection. Lobbies serving the fire service access elevator hoistways shall be protected by an approved method to prevent water from infiltrating into the hoistway enclosure from the activation of the automatic sprinkler system outside the lobbies.

403.6.1.3 Hoistway enclosures. The fire service access elevator hoistway shall be located in a shaft enclosure complying with Section 713.

403.6.1.4 Hoistway lighting. When fire-fighters' emergency operation is active, the entire height of the hoistway shall be illuminated at not less than 1 footcandle (11 lux) as measured from the top of the car of each fire service access elevator.

403.6.1.5 Fire service access elevator lobby. The fire service access elevator shall open into a fire service access elevator lobby in accordance with Sections 403.6.1.5 through 403.6.1.5.5. Egress is permitted through the elevator lobby in accordance with Item 1 of Section 1016.2.

Exception: Where a fire service access elevator has two entrances onto a floor, the second entrance shall be permitted to open into an elevator lobby in accordance with Section 713.14.1.

403.6.1.5.1 Access to interior exit stairway or ramp. The fire service access elevator lobby shall have direct access from the enclosed elevator lobby to an enclosure for an interior exit stairway or ramp.

Exception: Access to an interior exit stairway or ramp shall be permitted to be through a protected path of travel that has a level of fire protection not less than the elevator lobby enclosure. The protected path shall be separated from the enclosed elevator lobby through an opening protected by a smoke and draft control assembly in accordance with Section 716.2.2.1.

403.6.1.5.2 Lobby enclosure. The fire service access elevator lobby shall be enclosed with a smoke barrier having a fire-resistance rating of not less than 1 hour, except that lobby doorways shall comply with Section 716.2.2.1.

Exceptions:

1. Enclosed fire service access elevator lobbies are not required at the levels of exit discharge.
2. Enclosed fire service access elevator lobbies are not required for elevators with pressurized hoistways.

403.6.1.5.3 Lobby doorways. Other than doors to the hoistway or elevator control room, each doorway to a fire service access elevator lobby shall be provided with a 3/4-hour fire door assembly complying with Section 716.2. The fire door assembly shall also comply with the smoke and draft control door assembly requirements of Section 716.2.2.1.1 with the UL 1784 test conducted without the artificial bottom seal.

403.6.1.5.4 Lobby size. Regardless of the number of fire service access elevators served by the same elevator lobby, the enclosed fire service access elevator lobby shall be not less than 150 square feet (14 m²) in area with a minimum dimension of 8 feet (2440 mm).

403.6.1.5.5 Fire service access elevator symbol. A pictorial symbol of a standardized design designating which elevators are fire service access elevators shall be installed on each side of the hoistway door frame on the portion of the frame at right angles to the fire service access elevator lobby. The fire service access elevator symbol shall be designed as shown in Figure 403.6.1.5.5 and shall comply with the following:

1. The fire service access elevator symbol shall be not less than 3 inches (76 mm) in height.
2. The helmet shall contrast with the background, with either a light helmet on a dark background or a dark helmet on a light background.
3. The vertical center line of the fire service access elevator symbol shall be centered on the hoistway door frame. Each symbol shall be not less than 78 inches (1981 mm), and not more than 84 (2134 mm) inches above the finished floor at the threshold.

**FIGURE 403.6.1.5.5
FIRE SERVICE ACCESS ELEVATOR SYMBOL**

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

403.6.1.6 Elevator system monitoring. The fire service access elevator shall be continuously monitored at the fire command center by a standard emergency service interface system meeting the requirements of NFPA 72.

403.6.1.7 Protection of wiring or cables. Wires or cables that are located outside of the elevator hoistway and machine room and that provide normal or emergency power, control signals, communication with the car, lighting, heating, air conditioning, ventilation and fire-detecting systems to fire service access elevators shall be protected by construction having a fire-resistance rating of not less than 2 hours, shall be a circuit integrity cable having a fire-resistance rating of not less than 2 hours or shall be protected by a listed electrical protective system having a fire-resistance rating of not less than 2 hours.

Exception: Wiring and cables to control signals are not required to be protected provided that wiring and cables do not serve Phase II emergency in-car operations.

403.6.1.8 Standpipe hose connection. A Class I standpipe hose connection in accordance with Section 905 shall be provided in the interior exit stairway and ramp having direct access from the fire service access elevator lobby.

403.6.1.8.1 Access. The exit enclosure containing the standpipe shall have access to the floor without passing through the fire service access elevator lobby.

403.6.2 Occupant evacuation elevators. ~~((Where))~~ Elevators installed ~~((in accordance with Section 3008, passenger elevators for general public use))~~ for compliance with Section 403.5.2, shall ~~((be permitted to be used for occupant self-evacuation))~~ comply with Sections 403.6.2.1 through 403.6.2.10.1. Where other elevators are used for occupant self-evacuation, they shall also comply with these sections.

403.6.2.1 Number of occupant evacuation elevators. The number of elevators available for occupant evacuation shall be determined based on an egress analysis that addresses both of the following scenarios:

1. Full building evacuation where the analysis demonstrates that the number of elevators provided for evacuation results in an evacuation time less than one hour.
2. Evacuation of the 4 consecutive floors with the highest cumulative occupant load where the analysis demonstrates that the number of elevators provided for evacuation results in an evacuation time less than 15 minutes. Floors that are not atmospherically separated are considered one floor.

A minimum of one elevator in each elevator group shall be designated for occupant evacuation. Not less than two shall be provided in each occupant evacuation elevator lobby where more than one elevator opens into the lobby. Signage shall be provided to denote which elevators are available for occupant evacuation.

403.6.2.2 Fire safety and evacuation plan. The building shall have a fire safety and evacuation plan in accordance with the applicable requirements of Section 404 of the International Fire Code. The fire safety and evacuation plan shall incorporate specific procedures for the occupants using evacuation elevators.

403.6.2.3 Operation. The occupant evacuation elevators shall be used for occupant self-evacuation in accordance with the occupant evacuation operation requirements in ASME A17.1/CAS B44 and the building's fire safety and evacuation plan.

403.6.2.4 Water protection. Lobbies serving the occupant evacuation elevator hoistways shall be protected by an approved method to prevent water from infiltrating into the hoistway enclosure from the activation of the automatic sprinkler system outside the lobbies.

403.6.2.5 Hoistway enclosure protection. Occupant evacuation elevator hoistways shall be located in shaft enclosures complying with Section 713.

403.6.2.6 Occupant evacuation elevator lobby. The occupant evacuation elevators shall open into an elevator lobby in accordance with Sections 403.6.2.6 through 403.6.2.6.6. Egress is permitted through the elevator lobby in accordance with Item 1 of Section 1016.2.

403.6.2.6.1 Access to interior exit stairway or ramp. The occupant evacuation elevator lobby shall have direct access from the enclosed elevator lobby to an interior exit stairway or ramp.

Exceptions:

1. Access to an interior exit stairway or ramp shall be permitted to be through a protected path of travel that has a level of fire protection not less than the elevator lobby enclosure. The protected path shall be separated from the enclosed elevator lobby through an opening protected by a smoke and draft control assembly in accordance with Section 716.2.2.1.
2. Elevators that only service an open parking garage and the lobby of the building shall not be required to provide direct access in accordance with this section.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

403.6.2.6.2 Lobby enclosure. The occupant evacuation elevator lobby shall be enclosed with a smoke barrier having a fire-resistance rating of not less than 1 hour, except that lobby doorways shall comply with Section 403.6.2.6.3.

Exception: Enclosed occupant evacuation elevator lobbies are not required at the levels of exit discharge.

403.6.2.6.3 Lobby doorways. Other than the doors to the hoistway, elevator machine rooms, machinery spaces and control rooms within the lobby enclosure smoke barrier, each doorway to an occupant evacuation elevator lobby shall be provided with a 3/4-hour fire door assembly complying with Section 716.2. The fire door assembly shall comply with the smoke and draft control assembly requirements of Section 716.2.2.1.1 with the UL 1784 test conducted without the artificial bottom seal.

403.6.2.6.3.1 Vision panel. A vision panel shall be installed in each fire door assembly protecting the lobby doorway. The vision panel shall consist of fire-protection-rated glazing and shall be located to furnish clear vision of the occupant evacuation elevator lobby.

403.6.2.6.3.2 Door closing. Each fire door assembly protecting the lobby doorway shall be automatic-closing upon receipt of any fire alarm signal from the emergency voice/alarm communication system serving the building.

403.6.2.6.4 Lobby size. Each occupant evacuation elevator lobby shall have minimum floor area as follows:

1. The occupant evacuation elevator lobby floor area shall accommodate, at 3 square feet (0.28 m²) per person, not less than 25 percent of the occupant load of the floor area served by the lobby.
2. The occupant evacuation elevator lobby floor area also shall accommodate one wheelchair space of 30 inches by 52 inches (760 mm by 1220 mm) for each 50 persons, or portion thereof, of the occupant load of the floor area served by the lobby.

Exception: The size of lobbies serving multiple banks of elevators shall have the minimum floor area approved on an individual basis and shall be consistent with the building's fire safety and evacuation plan.

403.6.2.6.5 Signage. An approved sign indicating elevators are suitable for occupant self-evacuation shall be posted on all floors adjacent to each elevator call station serving occupant evacuation elevators.

403.6.2.6.6 Two-way communication system. A two-way communication system shall be provided in each occupant evacuation elevator lobby for the purpose of initiating communication with the fire command center or an alternate location approved by the fire department. The two-way communication system shall be designed and installed in accordance with Sections 1009.8.1 and 1009.8.2.

403.6.2.7 Elevator system monitoring. The occupant evacuation elevators shall be continuously monitored at the fire command center or a central control point approved by the fire department and arranged to display all of the following information:

1. Floor location of each elevator car.
2. Direction of travel of each elevator car.
3. Status of each elevator car with respect to whether it is occupied.
4. Status of normal power to the elevator equipment, elevator machinery and electrical apparatus cooling equipment where provided, elevator machine room and control room ventilation and cooling equipment.
5. Status of the emergency power system that provides backup power to the elevator equipment, elevator machinery and electrical cooling equipment where provided, elevator machine room and control room ventilation and cooling equipment.
6. Activation of any fire alarm initiating device in any elevator lobby, elevator machine room, machine space containing a motor controller or electric driving machine, control room or elevator hoistway.

403.6.2.8 Elevator recall. The fire command center or an alternate location approved by the fire department shall be provided with the means to manually initiate a Phase I Emergency Recall of the occupant evacuation elevators in accordance with ASME A17.1/CSA B44.

403.6.2.9 Protection of wiring or cables. Wires or cables that are located outside of the elevator hoistway, and machine room and control room and that provide normal or emergency power, control signals, communication with the car, lighting, heating, air conditioning, ventilation and fire-detecting systems to occupant evacuation elevators shall be protected by construction having a fire-resistance rating of not less than 2 hours, shall be circuit integrity cable having a fire-resistance rating of not less than 2 hours or shall be protected by a listed electrical circuit protective system having a fire-resistance rating of not less than 2 hours.

Exception: Wiring and cables to control signals that do not serve Phase II emergency in-car operations are not required to be protected.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

403.6.2.10 Emergency voice/alarm communication system. The building shall be provided with an emergency voice/alarm communication system. The emergency voice/alarm communication system shall be accessible to the fire department. The system shall be provided in accordance with Section 907.5.2.2.

403.6.2.10.1 Notification appliances. No fewer than one audible and one visible notification appliance shall be installed within each occupant evacuation elevator lobby.

[S] 403.7 Signs. Signs complying with Sections 403.7.1 through 403.7.4 shall be provided in *high-rise buildings*.

403.7.1 Elevator lobbies. A sign shall be posted in every elevator lobby above each hall call fixture noting that the elevators will be recalled to the building lobby on fire alarm.

Exception: If *approved* by the *building official*, signs need not be posted in lobbies at the main egress level if the means of egress are obviously identifiable.

403.7.2 Recall floor lobbies. A sign indicating the number of each elevator shall be posted and maintained in the elevator lobby at each designated recall floor and at alternate floors of recall, if provided.

403.7.3 Stair re-entry signs. A sign shall be posted on each floor landing within a stairway indicating where re-entry is provided into the building or indicating the location of telephones or other means of two-way communication.

403.7.4 Other signs. Other signs required by this code, including but not limited to stairway identification signs required by Section 1023.9 and exit signs required by Section 1013, shall be provided.

[S] 403.8 Emergency operational plan. Prior to the issuance of a Certificate of Occupancy, the owner-occupant of the building shall assign a responsible person as the building's Fire Safety Director to establish an operational plan for the building. The operational plan shall contain the guidelines and procedures to be followed and responsibilities of the building employees and tenants under emergency conditions, including special provisions for persons with disabilities. The plan shall also include procedures for operation, maintenance and testing of the life safety systems and the allowable use and occupancy of each portion of the building. One copy of the operational plan shall be stored in the fire command center prior to issuance of the Certificate of Occupancy.

SECTION 404 ATRIUMS

404.1 General. The provisions of Sections 404.1 through 404.11 shall apply to buildings containing *atriums*. *Atriums* are not permitted in buildings or structures classified as Group H.

Exception: Vertical openings that comply with Sections 712.1.1 through 712.1.3, and Sections 712.1.9 through 712.1.14.

[S] 404.1.1 Presubmittal conference. The applicant shall arrange two presubmittal conferences with the design team, the *building official* and the *fire code official* in accordance with Sections 404.1.1.1 and 404.1.1.2. The purpose of the meeting is to obtain conceptual approval from the *building official* and the *fire code official*. The documentation of the presubmittal meeting shall be reflected on the plans for the building and become a permanent part of the Department of Construction and Inspection's records.

404.1.1.1 Atrium presubmittal conference. The applicant shall arrange an atrium presubmittal conference at least 60 days prior to submittal of a building permit application that contains the construction documents for any structural component of the building. The purpose of this presubmittal conference is to obtain conceptual approval of the design team approach to compliance with key provisions of this code related to atrium construction, excluding smoke control. The documentation of the atrium presubmittal meetings shall be reflected on the plans for the building and become a permanent part of the records of the Department of Construction and Inspections.

404.1.1.2 Smoke control presubmittal conference. The applicant shall arrange a smoke control presubmittal conference in accordance with Section 909.1.1.

404.2 Use. The floor of the *atrium* shall not be used for other than low fire hazard uses and only *approved* materials and decorations in accordance with the *International Fire Code* shall be used in the *atrium* space.

Exception: The *atrium* floor area is permitted to be used for any *approved* use where the individual space is provided with an *automatic sprinkler system* in accordance with Section 903.3.1.1.

[S][F] 404.3 Automatic sprinkler protection. An *approved automatic sprinkler system* shall be installed throughout the entire building.

Exceptions:

1. That area of a building adjacent to or above the *atrium* need not be sprinklered provided that portion of the building is separated from the *atrium* portion by not less than 2-hour *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

2. Where the ceiling of the *atrium* is more than 55 feet (16 764 mm) above ~~((the floor))~~ any floor area open to the *atrium*, sprinkler protection at the ceiling of the *atrium* is not required.

[F] 404.4 Fire alarm system. A *fire alarm* system shall be provided in accordance with Section 907.2.14.

404.5 Smoke control. A smoke control system shall be installed in accordance with Section 909.

Exceptions:

1. In other than Group I-2, and Group I-1, Condition 2, smoke control is not required for *atriums* that connect only two *stories*.
2. A smoke control system is not required for *atriums* connecting more than two *stories* when all of the following are met:
 - 2.1. Only the two lowest *stories* shall be permitted to be open to the *atrium*.
 - 2.2. All *stories* above the lowest two *stories* shall be separated from the *atrium* in accordance with the provisions for a *shaft* in Section 713.4.

[S] 404.6 Enclosure of atriums. *Atrium* spaces shall be separated from adjacent spaces by a 1-hour *fire barrier* constructed in accordance with Section 707 or a *horizontal assembly* constructed in accordance with Section 711, or both.

Exceptions:

1. A *fire barrier* is not required where a glass wall forming a *smoke partition* is provided. The glass wall shall comply with all of the following:
 - 1.1. *Automatic* sprinklers are provided along both sides of the separation wall and doors, or on the room side only if there is not a walkway on the *atrium* side. The sprinklers shall be located between 4 inches and 12 inches (102 mm and 305 mm) away from the glass and at intervals along the glass not greater than 6 feet (1829 mm). The sprinkler system shall be designed so that the entire surface of the glass is wet upon activation of the sprinkler system without obstruction;
 - 1.2. The glass wall shall be installed in a gasketed frame in a manner that the framing system deflects without breaking (loading) the glass before the sprinkler system operates; and
 - 1.3. Where glass doors are provided in the glass wall, they shall be either *self-closing* or automatic-closing.
2. A *fire barrier* is not required where a glass-block wall assembly complying with Section 2110 and having a 3/4-hour *fire protection rating* is provided.
3. A *fire barrier* is not required between the *atrium* and the adjoining spaces of up to three floors of the *atrium* provided that such spaces are accounted for in the design of the smoke control system.
4. A *fire barrier* is not required between the *atrium* and the adjoining spaces where the *atrium* is not required to be provided with a smoke control system.
5. A *horizontal assembly* is not required between the *atrium* and openings for escalators complying with Section 712.1.3.
6. A *horizontal assembly* is not required between the *atrium* and openings for *exit access stairways* and *ramps* complying with Item 4 of Section 1019.3.
7. A *fire barrier* is not required between the *atrium* and the adjoining spaces for *atriums* that connect only two *stories*.

Code Alternate CA404.6: The separation between the *atrium* and tenant spaces that are not guest rooms or *dwelling units* is permitted to be omitted on four floors when:

1. The building is of Type IA or IB construction;
2. The perimeter of the opening is protected by draft curtains and a row of automatic sprinklers not more than 6 feet (1829 mm) on center as required for escalator protection;
3. All spaces of the building separated from the atrium by less than 1-hour fire-resistive construction are equipped with an automatic smoke detection system;
4. Tenant spaces open to the atrium have access to two interior exit stairways separated by one-half the building diagonal with one exit located so that occupants can exit in a direction away from the atrium. For the purpose of this requirement “away from the atrium” means not being forced to exit parallel and adjacent to the atrium opening. “Areas open to the atrium” are those areas that are not separated from the atrium with at least a 1-hour fire barrier.

[S][F] 404.7 ((Standby)) Emergency power system. Equipment required to provide smoke control shall be provided with ~~((standby))~~ an emergency power system in accordance with Section 909.11.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Code Alternate CA404.7: An *emergency power system* is not required for smoke control systems in buildings that have at least two *exits* and *atriums* with a total volume of less than 40,000 cubic feet (1133 m³).

404.8 Interior finish. The *interior finish* of walls and ceilings of the *atrium* shall be not less than Class B. Sprinkler protection shall not result in a reduction in class.

404.9 Exit access travel distance. *Exit access* travel distance for areas open to an *atrium* shall comply with the requirements of Section 1017.

404.10 Exit stairways in an atrium. Where an *atrium* contains an *interior exit stairway* all the following shall be met:

1. The entry to the exit stairway is the edge of the closest riser of the exit stairway.
2. The entry of the exit stairway shall have access from a minimum of two directions.
3. The distance between the entry to an exit stairway in an atrium and the entrance to a minimum of one exit stairway enclosed in accordance with Section 1023.2 shall comply with the separation required by Section 1007.1.1.
4. Exit access travel distance shall be measured to the closest riser of the exit stairway.
5. Not more than 50 percent of the exit stairways shall be located in the same atrium.

404.11 Interior exit stairway discharge. Discharge of *interior exit stairways* through an *atrium* shall be in accordance with Section 1028.

SECTION 405 UNDERGROUND BUILDINGS

[S] 405.1 General. The provisions of Sections 405.2 through 405.9 apply to building spaces having a floor level used for human occupancy more than 30 feet (9144 mm) below the finished floor of the lowest *level of exit discharge*.

Exceptions: The provisions of Section 405 are not applicable to the following buildings or portions of buildings:

1. One- and two-family *dwelling*s, sprinklered in accordance with Section 903.3.1.3.
2. Parking garages provided with *automatic sprinkler systems* in compliance with Section 405.3.
3. Fixed guideway transit systems that comply with NFPA 130 as amended.
4. *Grandstands, bleachers*, stadiums, arenas and similar facilities.
5. Where the lowest *story* is the only *story* that would qualify the building as an underground building and has an area not greater than 1,500 square feet (139 m²) and has an *occupant load* less than 10.
6. Pumping stations and other similar mechanical spaces intended only for limited periodic use by service or maintenance personnel.

405.2 Construction requirements. The underground portion of the building shall be of Type I construction.

[F] 405.3 Automatic sprinkler system. The highest *level of exit discharge* serving the underground portions of the building and all levels below shall be equipped with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1. Water-flow switches and control valves shall be supervised in accordance with Section 903.4.

405.4 Compartmentation. Compartmentation shall be in accordance with Sections 405.4.1 through 405.4.3.

405.4.1 Number of compartments. A building having a floor level more than 60 feet (18 288 mm) below the finished floor of the lowest *level of exit discharge* shall be divided into not fewer than two compartments of approximately equal size. Such compartmentation shall extend through the highest *level of exit discharge* serving the underground portions of the building and all levels below.

Exception: The lowest *story* need not be compartmented where the area is not greater than 1,500 square feet (139 m²) and has an *occupant load* of less than 10.

405.4.2 Smoke barrier penetration. The compartments shall be separated from each other by a *smoke barrier* in accordance with Section 709. Penetrations between the two compartments shall be limited to plumbing and electrical piping and conduit that are firestopped in accordance with Section 714. Doorways shall be protected by *fire door assemblies* that comply with Section 716, automatic-closing by smoke detection in accordance with Section 716.2.6.6 and installed in accordance with NFPA 105 and Section 716.2.2.1. Where provided, each compartment shall have an air supply and an exhaust system independent of the other compartments.

405.4.3 Elevators. Where elevators are provided, each compartment shall have direct access to an elevator. Where an elevator serves more than one compartment, an enclosed elevator lobby shall be provided and shall be separated from each compartment by a *smoke barrier* in accordance with Section 709. Doorways in the *smoke barrier* shall be protected by *fire door assemblies* that comply with Section 716, shall comply with the smoke and draft control assembly requirements of

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Section 716.2.2.1 with the UL 1784 test conducted without an artificial bottom seal, and shall be automatic-closing by smoke detection in accordance with Section 716.2.6.6.

[S] **405.5 Smoke control system.** A smoke control system shall be provided in accordance with Sections 405.5.1 and 405.5.2. The applicant shall arrange a smoke control presubmittal conference in accordance with Section 909.1.1.

405.5.1 Control system. A smoke control system is required to control the migration of products of combustion in accordance with Section 909 and the provisions of this section. Smoke control shall restrict movement of smoke to the general area of fire origin and maintain *means of egress* in a usable condition.

405.5.2 Compartment smoke control system. Where compartmentation is required, each compartment shall have an independent smoke control system. The system shall be automatically activated and capable of manual operation in accordance with Sections 907.2.18 and 907.2.19.

[F] **405.6 Fire alarm systems.** A *fire alarm* system shall be provided where required by Sections 907.2.18 and 907.2.19.

[S] **405.7 Means of egress.** *Means of egress* shall be in accordance with Sections 405.7.1 and 405.7.2.

405.7.1 Number of exits. Each floor level shall be provided with not fewer than two *exits*. Where compartmentation is required by Section 405.4, each compartment shall have not fewer than one *exit* and not fewer than one *exit access* doorway into the adjoining compartment.

405.7.2 ((Smokeproof enclosure)) Smoke control in exit stairways. Every required *stairway* serving floor levels more than 30 feet (9144 mm) below the finished floor of its *level of exit discharge* shall comply with ((the requirements for a *smokeproof enclosure* as provided in)) Section 1023.12.

[S][F] **405.8 ((Standby and emergency)) Emergency power system.** ((A *standby power system* complying with Section 2702 shall be provided for the standby power loads specified in Section 405.8.1-)) An *emergency power system* complying with Section 2702 shall be provided for the emergency power loads specified in Section ((405.8.2)) 405.8.1.

(([F] **405.8.1 Standby power loads.** The following are classified as standby power loads:

1. ~~Smoke control system.~~
2. ~~Ventilation and automatic fire detection equipment for *smokeproof enclosures*.~~
3. ~~Elevators, as required in Section 3003-.)~~

[F] ((405.8.2)) **405.8.1 Emergency power loads.** The following are classified as emergency power loads:

1. *Emergency voice/alarm communications systems.*
2. *Fire alarm systems.*
3. *Automatic fire detection systems.*
4. *Elevator car lighting.*
5. *Means of egress and exit sign illumination as required by Chapter 10.*
6. *Smoke control systems.*
7. *Ventilation and automatic fire detection equipment for pressurized interior exit stairways.*
- ((6)) 8. *Fire pumps.*
9. *Lighting for elevator cars, machine rooms, machine spaces and control rooms.*
10. *Ventilation and automatic fire detection equipment for pressurized stairways and elevator hoistways.*
11. *A selected elevator in each bank in accordance with Section 3016.9. A bank of elevators is a group of elevators or a single elevator controlled by a common operating system. All elevators that respond to a single call button constitute a bank of elevators. All elevators shall be transferable to an *emergency power system*.*

Note: There is no limit on the number of cars that are permitted to be in a bank, but no more than four cars are permitted within a common hoistway. See Section 3016.10.

[F] **405.9 Standpipe system.** The underground building shall be equipped throughout with a *standpipe system* in accordance with Section 905.

**SECTION 406
MOTOR-VEHICLE-RELATED OCCUPANCIES**

406.1 General. All motor-vehicle-related occupancies shall comply with Section 406.2. *Private garages* and carports shall also comply with Section 406.3. Open public parking garages shall also comply with Sections 406.4 and 406.5. Enclosed

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

public parking garages shall also comply with Sections 406.4 and 406.6. Motor fuel-dispensing facilities shall also comply with Section 406.7. *Repair garages* shall also comply with Section 406.8.

Note: The Seattle Electrical Code requires that all new parking spaces provided on a lot when a new building is constructed be “EV-ready” as defined by Seattle Municipal Code Chapter 23.84A. See Seattle Electrical Code Sections 220.57 and 625.27.

➔ [S] **406.2 Design.** *Private garages* and carports, open and enclosed public parking garages, motor fuel-dispensing facilities and *repair garages* shall comply with Sections 406.2.1 through 406.2.9.

406.2.1 Automatic garage door openers and vehicular gates. Automatic garage door openers shall be listed and labeled in accordance with UL 325. Where provided, *automatic vehicular gates* shall comply with Section 3110.

406.2.2 Clear height. The clear height of each floor level in vehicle and pedestrian traffic areas shall be not less than ((7 feet (2134 mm))) 6 feet 6 inches (1981 mm). Canopies under which fuels are dispensed shall have a clear height in accordance with Section 406.7.2.

Exception: A lower clear height is permitted for a parking tier in *mechanical-access open parking garages* where approved by the *building official*.

406.2.3 Accessible parking spaces. Where parking is provided, accessible parking spaces, access aisles and vehicular routes serving accessible parking shall be provided in accordance with Section 1106.

406.2.4 Floor surfaces. Floor surfaces shall be of concrete or similar approved noncombustible and nonabsorbent materials. (~~The area of floor used for the parking of automobiles or other vehicles shall be sloped to facilitate the movement of liquids to a drain or toward the main vehicle entry doorway.~~) The surface of vehicle fueling pads in motor fuel-dispensing facilities shall be in accordance with Section 406.7.1.

Exceptions:

- ➔
1. Asphalt parking surfaces shall be permitted at ground level for public parking garages and private carports.
 2. Slip-resistant, nonabsorbent, *interior floor finishes* having a critical radiant flux not more than 0.45 W/cm², as determined by ASTM E648 or NFPA 253, shall be permitted in *repair garages*.

406.2.5 Sleeping rooms. Openings between a motor vehicle-related occupancy and a room used for sleeping purposes shall not be permitted.

406.2.6 Fuel dispensing. The dispensing of fuel shall only be permitted in motor fuel-dispensing facilities in accordance with Section 406.7.

■ **406.2.7 Electric vehicle charging stations and systems.** Where provided, electric vehicle charging systems shall be installed in accordance with NFPA 70. Electric vehicle charging system equipment shall be *listed* and labeled in accordance with UL 2202. Electric vehicle supply equipment shall be *listed* and labeled in accordance with UL 2594. Accessibility to *electric vehicle charging stations* shall be provided in accordance with Section 1107.

■ **406.2.8 Mixed occupancies and uses.** Mixed uses shall be allowed in the same building as public parking garages and *repair garages* in accordance with Section 508.1. Mixed uses in the same building as an *open parking garage* are subject to Sections 402.4.2.3, 406.5.11, 508.1, 510.3, 510.4 and 510.7.

406.2.9 Equipment and appliances. Equipment and appliances shall be installed in accordance with Sections 406.2.9.1 through 406.2.9.3 and the *International Mechanical Code*, *International Fuel Gas Code* and NFPA 70.

406.2.9.1 Elevation of ignition sources. Equipment and appliances having an ignition source and located in hazardous locations and public garages, *private garages*, *repair garages*, automotive motor fuel-dispensing facilities and parking garages shall be elevated such that the source of ignition is not less than 18 inches (457 mm) above the floor surface on which the equipment or appliance rests. For the purpose of this section, rooms or spaces that are not part of the living space of a *dwelling unit* and that communicate directly with a *private garage* through openings shall be considered to be part of the *private garage*.

Exception: Elevation of the ignition source is not required for appliances that are listed as flammable vapor ignition resistant.

406.2.9.1.1 Parking garages. Connection of a parking garage with any room in which there is a fuel-fired appliance shall be by means of a vestibule providing a two-doorway separation, except that a single door is permitted where the sources of ignition in the appliance are elevated in accordance with Section 406.2.9.

Exception: This section shall not apply to appliance installations complying with Section 406.2.9.2 or 406.2.9.3.

406.2.9.2 Public garages. Appliances located in public garages, motor fuel-dispensing facilities, *repair garages* or other areas frequented by motor vehicles shall be installed not less than 8 feet (2438 mm) above the floor. Where motor vehi-

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

2. Cooktops and ranges used for care recipient training or nutritional counseling are not required to comply with Item 3 of this section.

407.3 Corridor wall construction. *Corridor* walls shall be constructed as *smoke partitions* in accordance with Section 710.

407.3.1 Corridor doors. *Corridor* doors, other than those in a wall required to be rated by Section 509.4 or for the enclosure of a vertical opening or an *exit*, shall not have a required *fire protection rating* and shall not be required to be equipped with *self-closing* or automatic-closing devices, but shall provide an effective barrier to limit the transfer of smoke and shall be equipped with positive latching. Roller latches are not permitted. Other doors shall conform to Section 716.

407.3.1.1 Door construction. Doors in *corridors* not required to have a *fire protection rating* shall comply with the following:

1. Solid doors shall have close-fitting operational tolerances, head and jamb stops.
2. Dutch-style doors shall have an astragal, rabbet or bevel at the meeting edges of the upper and lower door sections. Both the upper and lower door sections shall have latching hardware. Dutch-style doors shall have hardware that connects the upper and lower sections to function as a single leaf.
3. To provide makeup air for exhaust systems in accordance with Section 1020.6, Exception 1, doors are permitted to have louvers or to have a clearance between the bottom of the door and the floor surface that is 2/3 inch (19.1 mm) maximum.

407.4 Means of egress. Group I-2 occupancies shall be provided with *means of egress* complying with Chapter 10 and Sections 407.4.1 through 407.4.4. The fire safety and evacuation plans provided in accordance with Section 1002.2 shall identify the building components necessary to support a *defend-in-place* emergency response in accordance with Sections 403 and 404 of the *International Fire Code*.

407.4.1 Direct access to a corridor. Habitable rooms in Group I-2 occupancies shall have an exit access door leading directly to a *corridor*.

Exceptions:

1. Rooms with *exit* doors opening directly to the outside at ground level.
2. Rooms arranged as *care suites* complying with Section 407.4.4.

407.4.1.1 Locking devices. Locking devices that restrict access to a care recipient's room from the *corridor* and that are operable only by staff from the corridor side shall not restrict the *means of egress* from the care recipient's room.

Exceptions:

1. This section shall not apply to rooms in psychiatric treatment and similar care areas.
2. Locking arrangements in accordance with Section 1010.2.14.

407.4.2 Distance of travel. The distance of travel between any point in a Group I-2 occupancy sleeping room, not located in a *care suite*, and an *exit access* door in that room shall be not greater than 50 feet (15 240 mm).

407.4.3 Projections in nursing home corridors. In Group I-2, Condition 1 occupancies, where the *corridor* width is not less than 96 inches (2440 mm), projections shall be permitted for furniture where all of the following criteria are met:

1. The furniture is attached to the floor or to the wall.
2. The furniture does not reduce the clear width of the *corridor* to less than 72 inches (1830 mm) except where other encroachments are permitted in accordance with Section 1005.7.
3. The furniture is positioned on only one side of the *corridor*.
4. Each arrangement of furniture is 50 square feet (4.6 m²) maximum in area.
5. Furniture arrangements are separated by 10 feet (3048 mm) minimum.
6. Placement of furniture is considered as part of the fire and safety plans in accordance with Section 1002.2.

407.4.4 Group I-2 care suites. *Care suites* in Group I-2 shall comply with Sections 407.4.4.1 through 407.4.4.4 and either Section 407.4.4.5 or 407.4.4.6.

407.4.4.1 Exit access through care suites. *Exit* access from all other portions of a building not classified as a *care suite* shall not pass through a *care suite*.

[W] 407.4.4.2 Separation. *Care suites* shall be separated from other portions of the building, including other *care suites*, by a *smoke partition* complying with Section 710. Partitions within suites are not required to be smoke resistant or fire resistance rated unless required by another section of this code.

407.4.4.3 Access to corridor. Every *care suite* shall have a door leading directly to an *exit access corridor* or *horizontal exit*. Movement from habitable rooms within a *care suite* shall not require more than 100 feet (30 480 mm) of travel within the *care suite* to a door leading to the *exit access corridor* or *horizontal exit*. Where a *care suite* is required to

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

2. Not less than 6 square feet (0.56 m²) for each ambulatory care recipient not confined to bed or stretcher and for other occupants.

Areas or spaces permitted to be included in the calculation of refuge area are corridors, sleeping areas, treatment rooms, lounge or dining areas and other low-hazard areas.

407.5.4 Independent egress. A *means of egress* shall be provided from each *smoke compartment* created by *smoke barriers* without having to return through the *smoke compartment* from which *means of egress* originated. *Smoke compartments* that do not contain an *exit* shall be provided with *direct access* to not less than two adjacent *smoke compartments*.

[S] **407.5.5 Horizontal assemblies.** *Horizontal assemblies* supporting *smoke barriers* required by this section shall be designed to resist the movement of smoke. Elevator lobbies shall be in accordance with Section ((3006.2)) 713.14.

407.6 Automatic-closing doors. Automatic-closing doors with hold-open devices shall comply with Sections 709.5 and 716.2.

407.6.1 Activation of automatic-closing doors. Automatic-closing doors on hold-open devices in accordance with Section 716.2.6.6 shall also close upon activation of a *fire alarm system*, an *automatic sprinkler system*, or both. The *automatic* release of the hold-open device on one door shall release all such doors within the same *smoke compartment*.

[F] **407.7 Automatic sprinkler system.** *Smoke compartments* containing sleeping rooms shall be equipped throughout with an *automatic sprinkler system* in accordance with Sections 903.3.1.1 and 903.3.2.

[F] **407.8 Fire alarm system.** A *fire alarm system* shall be provided in accordance with Section 907.2.6.

[F] **407.9 Automatic fire detection.** *Corridors* in Group I-2, Condition 1 occupancies and spaces permitted to be open to the *corridors* by Section 407.2 shall be equipped with an *automatic* fire detection system.

Group I-2, Condition 2 occupancies shall be equipped with smoke detection as required in Section 407.2.

Exceptions:

1. Corridor smoke detection is not required where sleeping rooms are provided with *smoke detectors* that comply with UL 268. Such detectors shall provide a visual display on the corridor side of each sleeping room and an audible and visual alarm at the care provider's station attending each unit.
2. *Corridor* smoke detection is not required where sleeping room doors are equipped with automatic door-closing devices with integral *smoke detectors* on the unit sides installed in accordance with their listing, provided that the integral detectors perform the required alerting function.

407.10 Secured yards. Grounds are permitted to be fenced and gates therein are permitted to be equipped with locks, provided that safe dispersal areas having 30 net square feet (2.8 m²) for bed and stretcher care recipients and 6 net square feet (0.56 m²) for ambulatory care recipients and other occupants are located between the building and the fence. Such provided safe dispersal areas shall be located not less than 50 feet (15 240 mm) from the building they serve.

[F] **407.11 Electrical systems.** In Group I-2 occupancies, the essential electrical system for electrical components, equipment and systems shall be designed and constructed in accordance with the provisions of Chapter 27 and NFPA 99.

SECTION 408 GROUP I-3

408.1 General. Occupancies in Group I-3 shall comply with the provisions of Sections 408.1 through 408.11 and other applicable provisions of this code (see Section 308.5).

408.2 Other occupancies. Buildings or portions of buildings in Group I-3 occupancies where security operations necessitate the locking of required *means of egress* shall be permitted to be classified as a different occupancy. Occupancies classified as other than Group I-3 shall meet the applicable requirements of this code for that occupancy where provisions are made for the release of occupants at all times.

Means of egress from detention and correctional occupancies that traverse other use areas shall, as a minimum, conform to requirements for detention and correctional occupancies.

Exception: It is permissible to exit through a *horizontal exit* into other contiguous occupancies that do not conform to detention and correctional occupancy egress provisions but that do comply with requirements set forth in the appropriate occupancy, as long as the occupancy is not a Group H use.

408.3 Means of egress. Except as modified or as provided for in this section, the *means of egress* provisions of Chapter 10 shall apply.

408.3.1 Door width. Doors to resident *sleeping units* shall have a clear width of not less than 28 inches (711 mm).

TABLE 412.2.1.1
HEIGHT LIMITATIONS FOR AIRPORT TRAFFIC CONTROL TOWERS

TYPE OF CONSTRUCTION	HEIGHT ^a (feet)
IA	Unlimited
IB	240
IIA	100
IIB	85
IIIA	65

For SI: 1 foot = 304.8 mm, 1 square foot = 0.0929 m².

a. Height to be measured from *grade plane* to cab floor.

[BS] 412.2.1.2 Structural integrity of interior exit stairways and elevator hoistway enclosures. Enclosures for *interior exit stairways* and elevator hoistway enclosures shall comply with Section 403.2.2 in airport traffic control towers where the control cab is located more than 75 feet (22 860 mm) above the lowest level of fire department vehicle access.

412.2.1.3 Sprayed fire-resistant materials (SFRM). The bond strength of the SFRM installed in airport traffic control towers shall be in accordance with Section 403.2.3 where the control cab is located more than 75 feet (22 860 mm) above the lowest level of fire department vehicle access.

412.2.2 Means of egress and evacuation. The *means of egress* in airport traffic control towers shall comply with Sections 412.2.2.1 through 412.2.2.3.

[S] 412.2.2.1 Stairways. *Stairways* in airport traffic control towers shall be in accordance with Section 1011. *Exit stairways* shall be (~~*smokeproof enclosures* complying with one of the alternatives provided in Section 909.20~~) pressurized in accordance with Section 909.20 or 909.21.

Exception: *Stairways* in airport traffic control towers are not required to comply with Section 1011.12.

412.2.2.2 Exit access. From observation levels, airport traffic control towers shall be permitted to have a single means of *exit access* for a distance of travel not greater than 100 feet (30 480 mm). *Exit access stairways* from the observation level need not be enclosed.

412.2.2.3 Number of exits. Not less than one *exit stairway* shall be permitted for airport traffic control towers of any height provided that the *occupant load* per floor is not greater than 15 and the area per floor does not exceed 1,500 square feet (140 m²).

412.2.2.3.1 Interior finish. Where an airport traffic control tower is provided with only one *exit stairway*, *interior wall and ceiling finishes* shall be either Class A or Class B.

412.2.2.3.2 Exit separation. Where an airport traffic control tower is equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1 and two *exits* are required, the exit separation distance required by Section 1007 shall be not less than one-fourth of the length of the maximum overall dimension of the area served.

[F] 412.2.3 Emergency systems. The detection, alarm and emergency systems of airport traffic control towers shall comply with Sections 412.2.3.1 through 412.2.3.3.

[F] 412.2.3.1 Automatic smoke detection systems. Airport traffic control towers shall be provided with an *automatic smoke detection system* installed in accordance with Section 907.2.22.

[F] 412.2.3.2 Fire command center. A *fire command center* shall be provided in airport traffic control towers where the control cab is located more than 75 feet (22 860 mm) above the lowest level of fire department vehicle access. The *fire command center* shall comply with Section 911.

Exceptions:

1. The *fire command center* shall be located in the airport control tower or an adjacent contiguous building where building functions are interdependent.
2. The room shall be not less than 150 square feet (14 m²) in area with a minimum dimension of 10 feet (3048 mm).
3. The following features shall not be required in an airport traffic control tower *fire command center*.
 - 3.1. Emergency voice/alarm control unit.
 - 3.2. Public address system.
 - 3.3. Status indicators and controls for the air distributions centers.
 - 3.4. Generator supervision devices, manual start and transfer features.
 - 3.5. Elevator emergency or standby power switches where emergency or standby power is provided.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] **412.2.3.3 Smoke removal.** Smoke removal in airport traffic control towers shall be provided in accordance with Section 403.4.7.

[F] **412.2.4 Automatic sprinkler system.** Where an occupied floor is located more than 35 feet (10 668 mm) above the lowest level of fire department vehicle access, airport traffic control towers shall be equipped with an *automatic sprinkler system* in accordance with Section 903.3.1.1.

[F] **412.2.4.1 Fire pump room.** Fire pumps shall be located in rooms that are separated from all other areas of the building by 2-hour *fire barriers* constructed in accordance with Section 707 or 2-hour *horizontal assemblies* constructed in accordance with Section 711, or both.

Exception: Separation is not required for fire pumps physically separated in accordance with NFPA 20.

[S][F] **412.2.5 Protection of elevator wiring and cables.** Wiring and cables serving elevators in airport traffic control towers shall be protected in accordance with Section ((3007.8.1)) 403.6.2.9.

412.2.5.1 Elevators for occupant evacuation. Where provided in addition to an exit stairway, occupant evacuation elevators shall be in accordance with Section ((3008)) 403.6.2.

412.2.6 Accessibility. Airport traffic control towers shall be *accessible* except as specified in Section 1104.4.

412.3 Aircraft hangars. Aircraft hangars shall be in accordance with Sections 412.3.1 through 412.3.6.

412.3.1 Exterior walls. *Exterior walls* located less than 30 feet (9144 mm) from *lot lines* or a *public way* shall have a *fire-resistance rating* not less than 2 hours.

412.3.2 Basements. Where hangars have *basements*, floors over *basements* shall be of Type IA construction and shall be made tight against seepage of water, oil or vapors. There shall not be openings or communication between *basements* and the hangar. Access to *basements* shall be from outside only.

412.3.3 Floor surface. Floors shall be graded and drained to prevent water or fuel from remaining on the floor. Floor drains shall discharge through an oil separator to the sewer or to an outside vented sump.

Exception: Aircraft hangars with individual lease spaces not exceeding 2,000 square feet (186 m²) each in which servicing, repairing or washing is not conducted and fuel is not dispensed shall have floors that are graded toward the door, but shall not require a separator.

412.3.4 Heating equipment. Heating equipment shall be placed in another room separated by 2-hour *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both. Entrance shall be from the outside or by means of a vestibule providing a two-doorway separation.

Exceptions:

1. Unit heaters and vented infrared radiant heating equipment suspended not less than 10 feet (3048 mm) above the upper surface of wings or engine enclosures of the highest aircraft that are permitted to be housed in the hangar need not be located in a separate room provided that they are mounted not less than 8 feet (2438 mm) above the floor in shops, offices and other sections of the hangar communicating with storage or service areas.
2. Entrance to the separated room shall be permitted by a single interior door provided that the sources of ignition in the appliances are not less than 18 inches (457 mm) above the floor.

412.3.5 Finishing. The process of “doping,” involving use of a volatile flammable solvent, or of painting, shall be carried on in a separate *detached building* equipped with *automatic fire-extinguishing equipment* in accordance with Section 903.

[F] **412.3.6 Fire suppression.** Aircraft hangars shall be provided with a fire suppression system designed in accordance with NFPA 409, based on the classification for the hangar given in Table 412.3.6.

Exception: Where a *fixed base operator* has separate repair facilities on site, Group II hangars operated by a *fixed base operator* used for storage of *transient aircraft* only shall have a fire suppression system, but the system is exempt from foam requirements.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] TABLE 412.3.6
HANGAR FIRE SUPPRESSION REQUIREMENTS^{a, b, c}

MAXIMUM SINGLE FIRE AREA (square feet)	TYPE OF CONSTRUCTION								
	IA	IB	IIA	IIB	IIIA	IIIB	IV	VA	VB
≥ 40,001	Group I	Group I	Group I	Group I	Group I	Group I	Group I	Group I	Group I
40,000	Group II	Group II	Group II	Group II	Group II	Group II	Group II	Group II	Group II
30,000	Group III	Group II	Group II	Group II	Group II	Group II	Group II	Group II	Group II
20,000	Group III	Group III	Group II	Group II	Group II	Group II	Group II	Group II	Group II
15,000	Group III	Group III	Group III	Group II	Group III	Group II	Group III	Group II	Group II
12,000	Group III	Group III	Group III	Group III	Group III	Group III	Group III	Group II	Group II
8,000	Group III	Group III	Group III	Group III	Group III	Group III	Group III	Group III	Group II
5,000	Group III	Group III	Group III	Group III	Group III	Group III	Group III	Group III	Group III

For SI: 1 foot = 304.8 mm, 1 square foot = 0.0929 m².

- a. Aircraft hangars with a door height greater than 28 feet shall be provided with fire suppression for a Group I hangar regardless of maximum fire area.
- b. Groups shall be as classified in accordance with NFPA 409.
- c. Membrane structures complying with Section 3102 shall be classified as a Group IV hangar.

[F] 412.3.6.1 **Hazardous operations.** Any Group III aircraft hangar according to Table 412.3.6 that contains hazardous operations including, but not limited to, the following shall be provided with a Group I or II fire suppression system in accordance with NFPA 409 as applicable:

1. Doping.
2. Hot work including, but not limited to, welding, torch cutting and torch soldering.
3. Fuel transfer.
4. Fuel tank repair or maintenance not including defueled tanks in accordance with NFPA 409, inerted tanks or tanks that have never been fueled.
5. Spray finishing operations.
6. Total fuel capacity of all aircraft within the unsprinklered single *fire area* in excess of 1,600 gallons (6057 L).
7. Total fuel capacity of all aircraft within the maximum single *fire area* in excess of 7,500 gallons (28 390 L) for a hangar with an *automatic sprinkler system* in accordance with Section 903.3.1.1.

[F] 412.3.6.2 **Separation of maximum single fire areas.** Maximum single *fire areas* established in accordance with hangar classification and construction type in Table 412.3.6 shall be separated by 2-hour *fire walls* constructed in accordance with Section 706. In determining the maximum single *fire area* as set forth in Table 412.3.6, ancillary uses that are separated from aircraft servicing areas by a *fire barrier* of not less than 1 hour, constructed in accordance with Section 707, shall not be included in the area.

[S] 412.3.6.3 **Restrictions in the Fire District.** Aircraft hangars shall not be located in the *Fire District* unless work is limited to exchange of parts and maintenance requiring no open flame or welding.

412.4 Residential aircraft hangars. Residential aircraft hangars shall comply with Sections 412.4.1 through 412.4.5.

412.4.1 **Fire separation.** A hangar shall not be attached to a *dwelling* unless separated by a *fire barrier* having a *fire-resistance rating* of not less than 1 hour. Such separation shall be continuous from the foundation to the underside of the roof and unpierced except for doors leading to the *dwelling unit*. Doors into the *dwelling unit* shall be equipped with *self-closing* devices and conform to the requirements of Section 716 with a noncombustible raised sill not less than 4 inches (102 mm) in height. Openings from a hangar directly into a room used for sleeping purposes shall not be permitted.

412.4.2 **Egress.** A hangar shall provide two *means of egress*. One of the doors into the dwelling shall be considered as meeting only one of the two *means of egress*.

[F] 412.4.3 **Smoke alarms.** *Smoke alarms* shall be provided within the hangar in accordance with Section 907.2.22.

412.4.4 **Independent systems.** Electrical, mechanical and plumbing drain, waste and vent (DWV) systems installed within the hangar shall be independent of the systems installed within the dwelling. Building sewer lines shall be permitted to be connected outside the structures.

Exception: *Smoke detector* wiring and feed for electrical subpanels in the hangar.

412.4.5 **Height and area limits.** Residential aircraft hangars shall be not greater than 2,000 square feet (186 m²) in area and 20 feet (6096 mm) in *building height*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

sions shall be made to drain such spillage away from any *exit* or *stairway* serving the helicopter landing area or from a structure housing such *exit* or *stairway*. For structural design requirements, see Section 1607.6.

[W] 412.7.3 Means of egress. The *means of egress* from *heliports*, *helipads*, and *helistops* shall comply with the provisions of Chapter 10. Landing areas located on buildings or structures shall have two or more *exits* or *access to exits*. For landing areas less than 60 feet (18 288 mm) in length or less than 2,000 square feet (186 m²) in area, the second *means of egress* is permitted to be a fire escape, *alternating tread device* or ladder leading to the floor below. On Group I-2 roofs with heliports or helipads and helistops, rooftop structures enclosing exit stair enclosures or elevator shafts shall be enclosed with fire barriers and opening protectives that match the rating of their respective shaft enclosures below.

[F] 412.7.4 Rooftop heliports and helistops. Rooftop *heliports* and *helistops* shall comply with NFPA 418.

[F] 412.7.5 Standpipe system. In buildings equipped with a *standpipe system*, the standpipe shall extend to the roof level in accordance with Section 905.3.6.

[S] 412.7.6 Restrictions in the Fire District. Heliports shall not be located in the *Fire District*.

SECTION 413 COMBUSTIBLE STORAGE

413.1 General. High-piled stock or rack storage in any occupancy group shall comply with the *International Fire Code*.

413.2 Attic, under-floor and concealed spaces. *Attic*, under-floor and concealed spaces used for storage of combustible materials shall be protected on the storage side as required for 1-hour fire-resistance-rated construction. Openings shall be protected by assemblies that are *self-closing* and are of noncombustible construction or solid wood core not less than 1-3/4 inches (45 mm) in thickness.

Exception: Neither fire-resistance-rated construction nor opening protectives are required in any of the following locations:

1. Areas protected by *approved automatic sprinkler systems*.
2. Group R-3 and U occupancies.

[S] 413.3 Mini-storage warehouses. In mini-storage warehouse buildings, individual storage lockers shall be separated from each other with fire partitions.

Exception: The separation between individual storage lockers is permitted to be non-rated in rooms 500 square feet (46 m²) or less in area and in sprinklered rooms of any size.

[S] 413.4 Basement storage and sale of combustible materials. Storage and sale of combustible material in basements shall be in accordance with Sections 413.4.1 through 413.4.5.

Exception: Areas protected with an *approved automatic sprinkler system* that are separated from other areas in the basement by fire barriers with at least a one-hour fire resistance rating are not required to comply with this section.

413.4.1 Storage room size. Combustible material being stored or available for sales shall be placed in rooms no larger than 500 square feet (46.5 m²).

413.4.2 Storage room construction. Each storage room shall be separated from other areas by fire barriers with at least a one hour fire-resistance rating.

413.4.3 Number of storage rooms. There shall be a maximum of three storage rooms within any one basement.

413.4.4 Storage room access. Each storage room shall be provided with access directly from the building exterior, or through a one-hour fire resistance rated corridor between each room and an exterior door or *exit* enclosure.

413.4.5 Storage room restrictions. Storage rooms shall not contain any material classified as a flammable liquid, hazardous material, or highly combustible material.

SECTION 414 HAZARDOUS MATERIALS

[F] 414.1 General. The provisions of Sections 414.1 through 414.6 shall apply to buildings and structures occupied for the manufacturing, processing, dispensing, use or storage of *hazardous materials*.

[F] 414.1.1 Other provisions. Buildings and structures with an occupancy in Group H shall comply with this section and the applicable provisions of Section 415 and the *International Fire Code*.

[F] 414.1.2 Materials. The safe design of hazardous material occupancies is material dependent. Individual material requirements are found in Sections 307 and 415, the *International Mechanical Code* and the *International Fire Code*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] 414.1.2.1 Aerosol products, aerosol cooking spray products and plastic aerosol 3 products. Level 2 and 3 aerosol products, aerosol cooking spray products and plastic aerosol 3 products shall be stored and displayed in accordance with the *International Fire Code*. See Section 311.2 and the *International Fire Code* for occupancy group requirements.

[F] 414.1.3 Information required. A report shall be submitted to the *building official* identifying the maximum expected quantities of *hazardous materials* to be stored, used in a *closed system* and used in an *open system*, and subdivided to separately address *hazardous material* classification categories based on Tables 307.1(1) and 307.1(2). The methods of protection from such hazards, including but not limited to *control areas*, fire protection systems and Group H occupancies shall be indicated in the report and on the *construction documents*. The opinion and report shall be prepared by a qualified person, firm or corporation *approved* by the *building official* and provided without charge to the enforcing agency.

For buildings and structures with an occupancy in Group H, separate floor plans shall be submitted identifying the locations of anticipated contents and processes so as to reflect the nature of each occupied portion of every building and structure.

414.1.4 Presubmittal conference. Prior to application for a permit for a Group H-5 Occupancy, the applicant shall arrange a presubmittal conference with the design team, the building official and fire code official to review the proposed emergency life safety systems for the building and the appropriate protection of the life safety systems. For Group H-4 occupancies, a presubmittal conference is recommended. The purpose of the meeting is to obtain conceptual approval from the building official and the fire code official of the proposed systems.

Applicants shall bring to the conference preliminary building plans and a draft of the Hazardous Materials Management Plan. The building permit shall not be issued until the building official and fire code official have approved, in writing, the emergency life safety systems for the building and the protection of the life safety systems. The documentation of the presubmittal meeting shall be reflected on the plans for the building and become a permanent part of the Department of Construction and Inspection’s records.

414.1.5 Hazardous material areas in buildings over 420 feet in building height. In buildings in which an occupant evacuation elevator is used to comply with Section 403.6.2, no building areas shall contain hazardous materials exceeding the maximum allowable quantities per control area as addressed in Section 414.2.

[S][F] 414.2 Control areas. *Control areas* shall comply with Sections 414.2.1 through 414.2.5 and the *International Fire Code*.

Exception: *Higher education laboratories* in accordance with Section 428 and Chapter 38 of the *International Fire Code*.

[F] 414.2.1 Construction requirements. *Control areas* shall be separated from each other by *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both.

[F] 414.2.2 Percentage of maximum allowable quantities. The percentage of maximum allowable quantities of *hazardous materials* per *control area* permitted at each floor level within a building shall be in accordance with Table 414.2.2.

Exception: *Non-production laboratory facilities* are permitted to be in accordance with Section 414.7.

**[F] TABLE 414.2.2
DESIGN AND NUMBER OF CONTROL AREAS**

STORY		PERCENTAGE OF THE MAXIMUM ALLOWABLE QUANTITY PER CONTROL AREA ^a	NUMBER OF CONTROL AREAS PER STORY	FIRE-RESISTANCE RATING FOR FIRE BARRIERS IN HOURS ^b
Above grade plane	Higher than 9	5	1	2
	7–9	5	2	2
	6	12.5	2	2
	5	12.5	2	2
	4	12.5	2	2
	3	50	2	1
	2	75	3	1
Below grade plane	1	100	4	1
	1	75	3	1
	2	50	2	1
	Lower than 2	Not Allowed	Not Allowed	Not Allowed

a. Percentages shall be of the maximum allowable quantity per control area shown in Tables 307.1(1) and 307.1(2), with all increases allowed in the notes to those tables.

b. Separation shall include fire barriers and horizontal assemblies as necessary to provide separation from other portions of the building.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] 414.2.3 Number. The maximum number of *control areas* within a building shall be in accordance with Table 414.2.2. For the purposes of determining the number of *control areas* within a building, each portion of a building separated by one or more *fire walls* complying with Section 706 shall be considered a separate building.

Exception: *Non-production laboratory facilities* are permitted to be in accordance with Section 414.7.

[F] 414.2.4 Fire-resistance rating requirements. The required *fire-resistance rating* for *fire barriers* shall be in accordance with Table 414.2.2 or Table 414.7 for *non-production laboratory facilities*. The floor assembly of the *control area* and the construction supporting the floor of the *control area* shall have a *fire-resistance rating* of not less than 2 hours.

Exception: The floor assembly of the *control area* and the construction supporting the floor of the *control area* are allowed to be 1-hour fire-resistance-rated in buildings of Types IIA, IIIA, IV and VA construction, provided that both of the following conditions exist:

1. The building is equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1.
2. The building is three or fewer *stories above grade plane*.

[F] 414.2.5 Hazardous material in Group M display and storage areas and in Group S storage areas. *Hazardous materials* located in Group M and Group S occupancies shall be in accordance with Sections 414.2.5.1 through 414.2.5.3.

[F] 414.2.5.1 Nonflammable solids and nonflammable and noncombustible liquids. The aggregate quantity of nonflammable solid and nonflammable or noncombustible liquid hazardous materials permitted within a single *control area* of a Group M display and storage area, a Group S storage area or an outdoor *control area* is permitted to exceed the maximum allowable quantities per *control area* specified in Tables 307.1(1) and 307.1(2) without classifying the building or use as a Group H occupancy, provided that the materials are displayed and stored in accordance with the *International Fire Code* and quantities do not exceed the maximum allowable specified in Table 414.2.5(1).

**[F] TABLE 414.2.5(1)
MAXIMUM ALLOWABLE QUANTITY PER INDOOR AND OUTDOOR CONTROL AREA IN
GROUP M AND S OCCUPANCIES OF NONFLAMMABLE SOLIDS AND NONFLAMMABLE AND NONCOMBUSTIBLE LIQUIDS^{d, e, f}**

CONDITION		MAXIMUM ALLOWABLE QUANTITY PER CONTROL AREA	
Material ^a	Class	Solids (pounds)	Liquids (gallons)
A. Health-hazard materials—nonflammable and noncombustible solids and liquids			
1. Corrosives ^{b, c}	Not Applicable	9,750	975
2. Highly toxics	Not Applicable	20 ^{b, c}	2 ^{b, c}
3. Toxics ^{b, c}	Not Applicable	1,000 ^k	100
B. Physical-hazard materials—nonflammable and noncombustible solids and liquids			
1. Oxidizers ^{b, c}	4	Not Allowed	Not Allowed
	3	1,350 ^g	115
	2	2,250 ^h	225
	1	18,000 ^{i, j}	1,800 ^{i, j}
2. Unstable (reactives) ^{b, c}	4	Not Allowed	Not Allowed
	3	550	55
	2	1,150	115
	1	Not Limited	Not Limited
3. Water reactives	3 ^{b, c}	550	55
	2 ^{b, c}	1,150	115
	1	Not Limited	Not Limited

For SI: 1 pound = 0.454 kg, 1 gallon = 3.785 L.

- a. Hazard categories are as specified in the *International Fire Code*.
- b. Maximum allowable quantities shall be increased 100 percent in buildings that are sprinklered in accordance with Section 903.3.1.1. Where Note c also applies, the increase for both notes shall be applied accumulatively.
- c. Maximum allowable quantities shall be increased 100 percent where stored in approved storage cabinets, in accordance with the *International Fire Code*. Where Note b also applies, the increase for both notes shall be applied accumulatively.
- d. See Table 414.2.2 for design and number of control areas.
- e. Allowable quantities for other hazardous material categories shall be in accordance with Section 307.
- f. Maximum quantities shall be increased 100 percent in outdoor control areas.
- g. Maximum amounts shall be increased to 2,250 pounds where individual packages are in the original sealed containers from the manufacturer or packager and do not exceed 10 pounds each.
- h. Maximum amounts shall be increased to 4,500 pounds where individual packages are in the original sealed containers from the manufacturer or packager and do not exceed 10 pounds each.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

- i. The permitted quantities shall not be limited in a building equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.
- j. Quantities are unlimited in an outdoor control area.
- k. Maximum allowable quantities of consumer products shall be increased to 10,000 pounds where individual packages are in the original, sealed containers from the manufacturer and the toxic classification is exclusively based on the LC threshold and no other hazardous materials classifications apply.

[F] 414.2.5.2 Flammable and combustible liquids. In Group M occupancy wholesale and retail sales uses, indoor storage of *flammable and combustible liquids* shall not exceed the maximum allowable quantities per *control area* as indicated in Table 414.2.5(2), provided that the materials are displayed and stored in accordance with the *International Fire Code*.

**[F] TABLE 414.2.5(2)
MAXIMUM ALLOWABLE QUANTITY OF FLAMMABLE AND
COMBUSTIBLE LIQUIDS IN WHOLESALE AND RETAIL SALES OCCUPANCIES PER CONTROL AREA^a**

TYPE OF LIQUID	MAXIMUM ALLOWABLE QUANTITY PER CONTROL AREA (gallons)		
	Sprinklered in accordance with Note b densities and arrangements	Sprinklered in accordance with Tables 5704.3.6.3(4) through 5704.3.6.3(8) and 5704.3.7.5.1 of the <i>International Fire Code</i>	Nonsprinklered
Class IA	60	60	30
Class IB, IC, II and IIIA	7,500 ^c	15,000 ^c	1,600
Class IIIB	Unlimited	Unlimited	13,200

For SI: 1 foot = 304.8 mm, 1 square foot = 0.0929 m², 1 gallon = 3.785 L, 1 gallon per minute per square foot = 40.75 L/min/m².

- a. Control areas shall be separated from each other by not less than a 1-hour *fire barrier* wall.
- b. To be considered as sprinklered, a building shall be equipped throughout with an approved automatic sprinkler system with a design providing minimum densities as follows:
 1. For uncartoned commodities on shelves 6 feet or less in height where the ceiling height does not exceed 18 feet, quantities are those permitted with a minimum sprinkler design density of Ordinary Hazard Group 2.
 2. For cartoned, palletized or racked commodities where storage is 4 feet 6 inches or less in height and where the ceiling height does not exceed 18 feet, quantities are those permitted with a minimum sprinkler design density of 0.21 gallon per minute per square foot over the most remote 1,500-square-foot area.
- c. Where wholesale and retail sales or storage areas exceed 50,000 square feet in area, the maximum allowable quantities are allowed to be increased by 2 percent for each 1,000 square feet of area in excess of 50,000 square feet, up to not more than 100 percent of the table amounts. A control area separation is not required. The cumulative amounts, including amounts attained by having an additional control area, shall not exceed 30,000 gallons.

[F] 414.2.5.3 Aerosol products, aerosol cooking spray products or plastic aerosol 3 products. The maximum quantity of *aerosol products*, aerosol cooking spray products or plastic aerosol 3 products in Group M occupancy retail display areas, storage areas adjacent to retail display areas and retail storage areas shall be in accordance with the *International Fire Code*.

[F] 414.3 Ventilation. Rooms, areas or spaces in which *explosive, corrosive, combustible, flammable or highly toxic* dusts, mists, fumes, vapors or gases are or have the potential to be emitted due to the processing, *use*, handling or storage of materials shall be mechanically ventilated where required by this code, the *International Fire Code* or the *International Mechanical Code*.

Emissions generated at workstations shall be confined to the area in which they are generated as specified in the *International Fire Code* and the *International Mechanical Code*.

[F] 414.4 Hazardous material systems. Systems involving *hazardous materials* shall be suitable for the intended application. Controls shall be designed to prevent materials from entering or leaving process or reaction systems at other than the intended time, rate or path. *Automatic* controls, where provided, shall be designed to be fail safe.

[S][F] 414.5 Inside storage, dispensing and use. The inside storage, dispensing and *use* of *hazardous materials* shall be in accordance with Sections 414.5.1 through 414.5.3 of this code and the *International Fire Code*.

[F] 414.5.1 Explosion control. *Explosion* control shall be provided in accordance with the *International Fire Code* as required by Table 414.5.1 where quantities of *hazardous materials* specified in that table exceed the maximum allowable quantities in Table 307.1(1) or where a structure, room or space is occupied for purposes involving *explosion* hazards as required by Section 415 or the *International Fire Code*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Liquefied petroleum gas-distribution facilities	—	Not Required	Required
Where explosion hazards exist ^f	Detonation	Required	Not Permitted
	Deflagration	Not Required	Required

- a. See Section 414.1.3.
- b. See the International Fire Code.
- c. Combustible dusts where manufactured, generated or used in such a manner that the concentration and conditions create a fire or explosion hazard based on information prepared in accordance with Section 104.8.2 of the International Fire Code. See definition of “Combustible dust” in Chapter 2.
- d. Storage or use.
- e. In open use or dispensing.
- f. Rooms containing dispensing and use of hazardous materials where an explosive environment can occur because of the characteristics or nature of the hazardous materials or as a result of the dispensing or use process.
- g. A method of explosion control shall be provided where Class 2 water-reactive materials can form potentially explosive mixtures.
- h. Explosion venting is not required for Group H-5 fabrication areas complying with Section 415.11.1 and the International Fire Code.
- i. Where explosion control is required in Section 1207 of the *International Fire Code*.

[F] 414.5.2 **Emergency or standby power.** Where required by the *International Fire Code* or this code, mechanical ventilation, treatment systems, temperature control, alarm, detection or other electrically operated systems shall be provided with emergency or legally required standby power in accordance with Section 2702 and the *International Fire Code*. For storage and use areas for *highly toxic or toxic* materials, see Sections 6004.2.2.8 and 6004.3.4.2 of the *International Fire Code*.

[F] 414.5.2.1 **Exempt applications.** Emergency or standby power is not required for the mechanical ventilation systems provided for any of the following:

1. Storage of Class IB and IC flammable and combustible liquids in closed containers not exceeding 6.5 gallons (25 L) capacity.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

2. Storage of Class 1 and 2 oxidizers.
3. Storage of Class II, III, IV and V organic peroxides.
4. Storage of asphyxiant, irritant and radioactive gases.

[F] **414.5.2.2 Fail-safe engineered systems.** Standby power for mechanical ventilation, treatment systems and temperature control systems shall not be required where an approved fail-safe engineered system is installed.

[F] **414.5.3 Spill control, drainage and containment.** Rooms, buildings or areas occupied for the storage of solid and liquid *hazardous materials* shall be provided with a means to control spillage and to contain or drain off spillage and fire protection water discharged in the storage area where required in the *International Fire Code*. The methods of spill control shall be in accordance with the *International Fire Code*.

[F] **414.6 Outdoor storage, dispensing and use.** The outdoor storage, dispensing and use of *hazardous materials* shall be in accordance with the *International Fire Code*.

[F] **414.6.1 Weather protection.** Where weather protection is provided for sheltering outdoor *hazardous material* storage or use areas, such areas shall be considered outdoor storage or *use* where the weather protection structure complies with Sections 414.6.1.1 through 414.6.1.3.

[F] **414.6.1.1 Walls.** Walls shall not obstruct more than one side of the structure.

Exception: Walls shall be permitted to obstruct portions of multiple sides of the structure, provided that the obstructed area is not greater than 25 percent of the structure’s perimeter.

[F] **414.6.1.2 Separation distance.** The distance from the structure to buildings, *lot lines*, *public ways* or *means of egress* to a *public way* shall be not less than the distance required for an outside *hazardous material* storage or use area without weather protection.

[F] **414.6.1.3 Noncombustible construction.** The overhead structure shall be of *approved* noncombustible construction with a maximum area of 1,500 square feet (140 m²).

Exception: The maximum area is permitted to be increased as provided by Section 506.

[S] **414.7 Non-production laboratory facilities.** *Non-production laboratory facilities* are permitted to comply with Sections 414.7.1 through 414.7.4.

414.7.1 Maximum allowable quantity per control area. The aggregate amount of hazardous materials in a *control area* shall not exceed the percentage specified in Table 414.7.

414.7.2 Fire-resistance-rating requirements. The required fire-resistance rating for fire barriers shall be in accordance with Table 414.7 for *non-production laboratory facilities*.

414.7.3 Storage. Storage in control areas shall be in accordance with this code and Sections 414.7.3.1 through 414.7.3.2.

414.7.3.1 Density. Storage of Class I flammable liquids shall not exceed 4 gallons per 100 square feet (0.13 L/m²) of floor area above floor level 6.

414.7.3.2 Container size. Individual containers in storage shall not exceed 1 gallon (3.8 L) for Class I flammable liquids.

414.7.4 Automatic sprinkler system. An *approved automatic sprinkler system* shall be installed throughout a building containing a *non-production laboratory facility*. The sprinkler system shall be designed to protect an ordinary hazard group 2 occupancy.

[S] TABLE 414.7
DESIGN AND NUMBER OF CONTROL AREAS IN NON-PRODUCTION LABORATORY FACILITIES^a

FLOOR LEVEL		PERCENTAGE OF THE MAXIMUM ALLOWABLE QUANTITY PER CONTROL AREA ^b	NUMBER OF CONTROL AREAS PER FLOOR	FIRE-RESISTANCE RATING FOR FIRE BARRIERS IN HOURS ^{c,d}
Above Grade Plane	Higher than 20	Not Allowed	Not Allowed	Not Allowed
	6-20	15	2	2
	5	25	2	2
	4	25	2	2
	3	50	2	2
	2	75	2	1
	1	100	2	1
Below Grade Plane	1	75	2	1
	2	50	2	1
	Lower than 2	Not Allowed	Not Allowed	Not Allowed

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

- a. Table 414.7 applies to non-production laboratory facilities meeting the criteria of Section 414.7.
- b. Percentages shall be of the maximum allowable quantity per control area shown in Tables 307.1(1) and 307.1(2) with all increases allowed in the footnotes to those tables.
- c. Fire barriers shall include walls and floors as necessary to provide separation from other portions of the building.
- d. Vertical fire barriers separating control areas from other spaces on the same floor may be one-hour rated.

SECTION 415
GROUPS H-1, H-2, H-3, H-4 AND H-5

[F] 415.1 General. The provisions of Sections 415.1 through 415.11 shall apply to the storage and use of hazardous materials in excess of the maximum allowable quantities per *control area* listed in Section 307.1.

[F] 415.2 Compliance. Buildings and structures with an occupancy in Group H shall comply with the applicable provisions of Section 414 and the *International Fire Code*.

[F] 415.3 Automatic fire detection systems. Group H occupancies shall be provided with an automatic fire detection system in accordance with Section 907.2.

[F] 415.4 Automatic sprinkler system. Group H occupancies shall be equipped throughout with an *automatic sprinkler system* in accordance with Section 903.2.5.

[F] 415.5 Emergency alarms. Emergency alarms for the detection and notification of an emergency condition in Group H occupancies shall be provided as set forth herein.

[F] 415.5.1 Storage. An approved manual emergency alarm system shall be provided in buildings, rooms or areas used for storage of hazardous materials. Emergency alarm-initiating devices shall be installed outside of each interior *exit* or exit access door of storage buildings, rooms or areas. Activation of an emergency alarm-initiating device shall sound a local alarm to alert occupants of an emergency situation involving hazardous materials.

[F] 415.5.2 Dispensing, use and handling. Where hazardous materials having a hazard ranking of 3 or 4 in accordance with NFPA 704 are transported through *corridors, interior exit stairways or ramps*, or exit passageways, there shall be an emergency telephone system, a local manual alarm station or an approved alarm-initiating device at not more than 150-foot (45 720 mm) intervals and at each exit and *exit access doorway* throughout the transport route. The signal shall be relayed to an approved central, proprietary or remote station service or constantly attended on-site location and shall initiate a local audible alarm.

[F] 415.5.3 Supervision. Emergency alarm systems required by Section 415.5.1 or 415.5.2 shall be electrically supervised and monitored by an approved central, proprietary or remote station service or shall initiate an audible and visual signal at a constantly attended on-site location.

[F] 415.5.4 Emergency alarm systems. *Emergency alarm systems* required by Section 415.5.1 or 415.5.2 shall be provided with emergency or standby power in accordance with Section 2702.2.

[F] 415.6 Fire separation distance. Group H occupancies shall be located on property in accordance with the other provisions of this chapter. In Groups H-2 and H-3, not less than 25 percent of the perimeter wall of the occupancy shall be an *exterior wall*.

[F] 415.6.1 Rooms for flammable or combustible liquid use, dispensing or mixing in open systems. Rooms for *flammable or combustible liquid use*, dispensing or mixing in open systems having a floor area of not more than 500 square feet (46.5 m²) need not be located on the outer perimeter of the building where they are in accordance with the *International Fire Code* and NFPA 30.

[F] 415.6.2 Liquid storage rooms and rooms for flammable or combustible liquid use in closed systems. *Liquid storage rooms* and rooms for *flammable or combustible liquid use* in closed systems, having a floor area of not more than 1,000 square feet (93 m²) need not be located on the outer perimeter where they are in accordance with the *International Fire Code* and NFPA 30.

[F] 415.6.3 Spray paint booths. Spray paint booths that comply with the *International Fire Code* need not be located on the outer perimeter.

[S][F] 415.6.4 Group H occupancy minimum fire separation distance. Regardless of any other provisions, buildings containing Group H occupancies shall be set back to the *minimum fire separation distance* as set forth in Sections 415.6.4.1 through 415.6.4.4. Distances shall be measured from the walls enclosing the occupancy to *lot lines*, including those on a public way. Distances to assumed *lot lines* established for the purpose of determining *exterior wall* and opening protection are not to be used to establish the *minimum fire separation distance* for buildings on sites where explosives are manufactured or used where separation is provided in accordance with the quantity distance tables specified for *explosive* materials in the *International Fire Code*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] **415.6.4.1 Group H-1.** Group H-1 occupancies shall be set back not less than 75 feet (22 860 mm) and not less than required by the *International Fire Code*.

~~((Exception: Fireworks manufacturing buildings separated in accordance with NFPA 1124.))~~

415.6.4.1.1 Restrictions in the Fire District. Group H-1 occupancies shall not be located in the *Fire District*.

[F] **415.6.4.2 Group H-2.** Group H-2 occupancies shall be set back not less than 30 feet (9144 mm) where the area of the occupancy is greater than 1,000 square feet (93 m²) and it is not required to be located in a *detached building*.

415.6.4.2.1 Restrictions in the Fire District. Group H-2 occupancies having a floor area in excess of 500 square feet (46 m²) are not permitted in the *Fire District*. Group H-3 occupancies having a floor area in excess of 1,500 square feet (139 m²) are not permitted in the *Fire District*.

[F] **415.6.4.3 Groups H-2 and H-3.** Group H-2 and H-3 occupancies shall be set back not less than 50 feet (15 240 mm) where a *detached building* is required (see Table 415.6.5).

[F] **415.6.4.4 Explosive materials.** Group H-2 and H-3 occupancies containing materials with *explosive* characteristics shall be separated as required by the *International Fire Code*. Where separations are not specified, the distances required shall be determined by a technical report issued in accordance with Section 414.1.3.

[F] **415.6.5 Detached buildings for Group H-1, H-2 or H-3 occupancy.** The storage or use of hazardous materials in excess of those amounts specified in Table 415.6.5 shall be in accordance with the applicable provisions of Sections 415.7 and 415.8.

[F] **415.6.5.1 Wall and opening protection.** Where a *detached building* is required by Table 415.6.5, wall and opening protection based on *fire separation distance* is not required.

[F] **TABLE 415.6.5
DETACHED BUILDING REQUIRED**

A DETACHED BUILDING IS REQUIRED WHERE THE QUANTITY OF MATERIAL EXCEEDS THAT SPECIFIED HEREIN			
Material	Class	Solids and Liquids (tons) ^{a, b}	Gases (cubic feet) ^{a, b}
Explosives	Division 1.1	Maximum Allowable Quantity	Not Applicable
	Division 1.2	Maximum Allowable Quantity	
	Division 1.3	Maximum Allowable Quantity	
	Division 1.4	Maximum Allowable Quantity	
	Division 1.4 ^c	1	
	Division 1.5	Maximum Allowable Quantity	
	Division 1.6	Maximum Allowable Quantity	
Oxidizers	Class 4	Maximum Allowable Quantity	Maximum Allowable Quantity
Unstable (reactives) detonable	Class 3 or 4	Maximum Allowable Quantity	Maximum Allowable Quantity
Oxidizer, liquids and solids	Class 3	1,200	Not Applicable
	Class 2	2,000	Not Applicable
Organic peroxides	Detonable	Maximum Allowable Quantity	Not Applicable
	Class I	Maximum Allowable Quantity	Not Applicable
	Class II	25	Not Applicable
	Class III	50	Not Applicable
Unstable (reactives) nondetonable	Class 3	1	2,000
	Class 2	25	10,000
Water reactives	Class 3	1	Not Applicable
	Class 2	25	Not Applicable
Pyrophoric gases ^d	Not Applicable	Not Applicable	2,000

For SI: 1 ton = 906 kg, 1 cubic foot = 0.02832 m³, 1 pound = 0.454 kg.

- a. For materials that are detonable, the distance to other buildings or lot lines shall be in accordance with Section 415.6 of this code or Chapter 56 of the *International Fire Code* based on trinitrotoluene (TNT) equivalence of the material, whichever is greater.
- b. "Maximum Allowable Quantity" means the maximum allowable quantity per control area set forth in Table 307.1(1).
- c. Limited to Division 1.4 materials and articles, including articles packaged for shipment, that are not regulated as an explosive under Bureau of Alcohol, Tobacco, Firearms and Explosives (BATF) regulations or unpackaged articles used in process operations that do not propagate a detonation or deflagration between articles, provided that the net explosive weight of individual articles does not exceed 1 pound.
- d. Detached buildings are not required, for gases in gas rooms that support H-5 fabrication facilities where the gas room is separated from other areas by a fire barrier with a fire-resistance rating of not less than 2 hours and the gas is located in a gas cabinet that is internally sprinklered, equipped with continuous leak detection, automatic shutdown and is not manifolded upstream of pressure controls. Additionally, the gas supply is limited to cylinders that do not exceed 125 pounds (57 kg) water capacity in accordance with 49 CFR 173.192 for Hazard Zone A toxic gases.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] **415.9.1.6 Tank vent.** Storage tank vents for Class I, II or IIIA liquids shall terminate to the outdoor air in accordance with the *International Fire Code*.

[F] **415.9.1.7 Room ventilation.** Storage tank areas storing Class I, II or IIIA liquids shall be provided with mechanical *ventilation*. The mechanical *ventilation* system shall be in accordance with the *International Mechanical Code* and the *International Fire Code*.

[F] **415.9.1.8 Explosion venting.** Where Class I liquids are being stored, explosion venting shall be provided in accordance with the *International Fire Code*.

[F] **415.9.1.9 Tank openings other than vents.** Tank openings other than vents from tanks inside buildings shall be designed to ensure that liquids or vapor concentrations are not released inside the building.

[F] **415.9.2 Liquefied petroleum gas facilities.** The construction and installation of liquefied petroleum gas facilities shall be in accordance with the requirements of this code, the *International Fire Code*, the *International Fuel Gas Code*, the *International Mechanical Code* and NFPA 58.

[S][F] **415.9.3 Dry cleaning plants.** The construction and installation of dry cleaning plants shall be in accordance with the requirements of this code, the *International Mechanical Code*, the (~~*International*~~) *Uniform Plumbing Code* and NFPA 32. Dry cleaning solvents and systems shall be classified in accordance with the *International Fire Code*.

[F] **415.10 Groups H-3 and H-4.** Groups H-3 and H-4 shall be constructed in accordance with the applicable provisions of this code and the *International Fire Code*.

[F] **415.10.1 Flammable and combustible liquids.** The storage, handling, processing and transporting of flammable and combustible liquids in Group H-3 occupancies shall be in accordance with Section 415.9.1.

[F] **415.10.2 Gas rooms.** Where gas rooms are provided, such rooms shall be separated from other areas by not less than 1-hour *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both.

[F] **415.10.3 Floors in storage rooms.** Floors in storage areas for *corrosive* liquids and *highly toxic* or toxic materials shall be of liquid-tight, noncombustible construction.

[F] **415.10.4 Separation of highly toxic solids and liquids.** *Highly toxic* solids and liquids not stored in *approved* hazardous materials storage cabinets shall be isolated from other hazardous materials storage by not less than 1-hour *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both.

[F] **415.11 Group H-5.** In addition to the requirements set forth elsewhere in this code, Group H-5 shall comply with the provisions of Sections 415.11.1 through 415.11.12 and the *International Fire Code*.

[F] **415.11.1 Fabrication areas.** *Fabrication areas* shall comply with Sections 415.11.1.1 through 415.11.1.8.

[F] **415.11.1.1 Hazardous materials.** Hazardous materials and hazardous production materials (HPM) shall comply with Sections 415.11.1.1.1 and 415.11.1.1.2.

[F] **415.11.1.1.1 Aggregate quantities.** The aggregate quantities of hazardous materials stored and used in a single *fabrication area* shall not exceed the quantities set forth in Table 415.11.1.1.1.

Exception: The quantity limitations for any hazard category in Table 415.11.1.1.1 shall not apply where the *fabrication area* contains quantities of hazardous materials not exceeding the maximum allowable quantities per *control area* established by Tables 307.1(1) and 307.1(2).

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

- c. Densely packed baled cotton that complies with the packing requirements of ISO 8115 shall not be included in this material class.
- d. The aggregate quantity of flammable, pyrophoric, toxic and highly toxic gases shall not exceed the greater of 0.2 cubic feet at NTP/square foot or 9,000 cubic feet at NTP.
- e. The aggregate quantity of pyrophoric gases in the building shall not exceed the amounts set forth in Table 415.6.5.
- f. Quantity of Class 3 water-reactive solids in a single tool shall not exceed 1 pound.

[F] 415.11.1.1.2 Hazardous production materials. The maximum quantities of hazardous production materials (HPM) stored in a single *fabrication area* shall not exceed the maximum allowable quantities per *control area* established by Table 307.1(1) and Table 307.1(2).

[F] 415.11.1.2 Separation. *Fabrication areas*, whose sizes are limited by the quantity of hazardous materials allowed by Table 415.11.1.1.1, shall be separated from each other, from *corridors* and from other parts of the building by not less than 1-hour *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both.

Exceptions:

1. Doors within such *fire barrier* walls, including doors to *corridors*, shall be only *self-closing fire door assemblies* having a *fire protection rating* of not less than 3/4 hour.
2. Windows between *fabrication areas* and *corridors* are permitted to be fixed glazing *listed* and labeled for a *fire protection rating* of not less than 3/4 hour in accordance with Section 716.

[F] 415.11.1.3 Location of occupied levels. Occupied levels of *fabrication areas* shall be located at or above the first *story above grade plane*.

[F] 415.11.1.4 Floors. Except for surfacing, floors within *fabrication areas* shall be of noncombustible construction.

Openings through floors of *fabrication areas* are permitted to be unprotected where the interconnected levels are used solely for mechanical equipment directly related to such *fabrication areas* (see Section 415.11.1.5).

Floors forming a part of an occupancy separation shall be liquid tight.

[F] 415.11.1.5 Shafts and openings through floors. Elevator hoistways, vent *shafts* and other openings through floors shall be enclosed where required by Sections 712 and 713. Mechanical, duct and piping penetrations within a *fabrication area* shall not extend through more than two floors. The *annular space* around penetrations for cables, cable trays, tubing, piping, conduit or ducts shall be sealed at the floor level to restrict the movement of air. The *fabrication area*, including the areas through which the ductwork and piping extend, shall be considered to be a single conditioned environment.

[F] 415.11.1.6 Ventilation. Mechanical exhaust *ventilation* at the rate of not less than 1 cubic foot per minute per square foot [$0.0051 \text{ m}^3/(\text{s} \times \text{m}^2)$] of floor area shall be provided throughout the portions of the *fabrication area* where HPM are used or stored. The exhaust air duct system of one *fabrication area* shall not connect to another duct system outside that *fabrication area* within the building.

A *ventilation* system shall be provided to capture and exhaust gases, fumes and vapors at workstations.

Two or more operations at a *workstation* shall not be connected to the same exhaust system where either one or the combination of the substances removed could constitute a fire, explosion or hazardous chemical reaction within the exhaust duct system.

Exhaust ducts penetrating *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711 shall be contained in a *shaft* of equivalent fire-resistance-rated construction. Exhaust ducts shall not penetrate *fire walls*.

Fire dampers shall not be installed in exhaust ducts.

[F] 415.11.1.7 Transporting hazardous production materials to fabrication areas. HPM shall be transported to *fabrication areas* through enclosed piping or tubing systems that comply with Section 415.11.7, through *service corridors* complying with Section 415.11.3, or in *corridors* as permitted in the exception to Section 415.11.2. The handling or transporting of HPM within *service corridors* shall comply with the *International Fire Code*.

[S][F] 415.11.1.8 Electrical. Electrical equipment and devices within the *fabrication area* shall comply with ((NFPA 70)) the *Seattle Electrical Code*. The requirements for hazardous locations need not be applied where the average air change is not less than four times that set forth in Section 415.11.1.6 and where the number of air changes at any location is not less than three times that required by Section 415.11.1.6. The use of recirculated air shall be permitted.

[F] 415.11.1.8.1 Workstations. Workstations shall not be energized without adequate exhaust *ventilation*. See Section 415.11.1.6 for workstation exhaust *ventilation requirements*.

[F] 415.11.2 Corridors. *Corridors* shall comply with Chapter 10 and shall be separated from *fabrication areas* as specified in Section 415.11.1.2. *Corridors* shall not contain HPM and shall not be used for transporting such materials except through closed piping systems as provided in Section 415.11.7.4.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] 415.11.8.2.2 Shutoff of gas supply. The gas detection system shall automatically close the shutoff valve at the source on gas supply piping and tubing related to the system being monitored for which gas is detected when a short-term hazard condition is detected. Automatic closure of shutoff valves shall comply with the following:

1. Where the gas detection sampling point initiating the gas detection system alarm is within a *gas cabinet* or *exhausted enclosure*, the shutoff valve in the *gas cabinet* or *exhausted enclosure* for the specific gas detected shall automatically close.
2. Where the gas detection sampling point initiating the gas detection system alarm is within a room and compressed gas containers are not in gas cabinets or an *exhausted enclosure*, the shutoff valves on all gas lines for the specific gas detected shall automatically close.
3. Where the gas detection sampling point initiating the gas detection system alarm is within a piping distribution manifold enclosure, the shutoff valve supplying the manifold for the compressed gas container of the specific gas detected shall automatically close.

Exception: Where the gas detection sampling point initiating the gas detection system alarm is at the use location or within a gas valve enclosure of a branch line downstream of a piping distribution manifold, the shutoff valve for the branch line located in the piping distribution manifold enclosure shall automatically close.

[F] 415.11.9 Manual fire alarm system. An *approved manual fire alarm* system shall be provided throughout buildings containing Group H-5. Activation of the alarm system shall initiate a local alarm and transmit a signal to the *emergency control station*. The *fire alarm* system shall be designed and installed in accordance with Section 907.

[F] 415.11.10 Emergency control station. An *emergency control station* shall be provided in accordance with Sections 415.11.10.1 through 415.11.10.3.

[F] 415.11.10.1 Location. The *emergency control station* shall be located on the premises at an *approved* location outside the *fabrication area*.

[F] 415.11.10.2 Staffing. Trained personnel shall continuously staff the *emergency control station*.

[F] 415.11.10.3 Signals. The *emergency control station* shall receive signals from emergency equipment and alarm and detection systems. Such emergency equipment and alarm and detection systems shall include, but not be limited to, the following where such equipment or systems are required to be provided either in this chapter or elsewhere in this code:

1. *Automatic sprinkler system* alarm and monitoring systems.
2. *Manual fire alarm* systems.
3. *Emergency alarm* systems.
4. *Gas detection* systems.
5. Smoke detection systems.
6. Emergency power system.
7. Automatic detection and alarm systems for *pyrophoric* liquids and Class 3 water-reactive liquids required in Section 2705.2.3.4 of the *International Fire Code*.
8. Exhaust *ventilation* flow alarm devices for *pyrophoric* liquids and Class 3 water-reactive liquids cabinet exhaust *ventilation* systems required in Section 2705.2.3.4 of the *International Fire Code*.

[F] 415.11.11 Emergency power system. An emergency power system shall be provided in Group H-5 occupancies in accordance with Section 2702. The emergency power system shall supply power automatically to the electrical systems specified in Section 415.11.11.1 when the normal electrical supply system is interrupted.

[S][F] 415.11.11.1 Required electrical systems. ((Emergency)) An *emergency* power *system* shall be provided for electrically operated equipment and connected control circuits for the following systems:

1. HPM exhaust *ventilation* systems.
2. HPM *gas cabinet ventilation* systems.
3. HPM *exhausted enclosure ventilation* systems.
4. HPM *gas room ventilation* systems.
5. HPM gas detection systems.
6. *Emergency alarm* systems.
7. Manual and automatic *fire alarm* systems.
8. *Automatic sprinkler system* monitoring and alarm systems.
9. Automatic alarm and detection systems for *pyrophoric* liquids and Class 3 water-reactive liquids required in Section 2705.2.3.4 of the *International Fire Code*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

SECTION 417 DRYING ROOMS

[F] **417.1 General.** A drying room or dry kiln installed within a building shall be constructed entirely of *approved* noncombustible materials or assemblies of such materials regulated by the *approved* rules or as required in the general and specific sections of this chapter for special occupancies and where applicable to the general requirements of the *International Mechanical Code*.

[F] **417.2 Piping clearance.** Overhead heating pipes shall have a clearance of not less than 2 inches (51 mm) from combustible contents in the dryer.

[F] **417.3 Insulation.** Where the operating temperature of the dryer is 175°F (79°C) or more, metal enclosures shall be insulated from adjacent combustible materials by not less than 12 inches (305 mm) of airspace, or the metal walls shall be lined with 1/4-inch (6.4 mm) insulating mill board or other approved equivalent insulation.

[F] **417.4 Fire protection.** Drying rooms designed for high-hazard materials and processes, including special occupancies as provided for in Chapter 4, shall be protected by an *approved automatic fire-extinguishing system* complying with the provisions of Chapter 9.

SECTION 418 ORGANIC COATINGS

[F] **418.1 Building features.** Manufacturing of organic coatings shall be done only in buildings that do not have pits or basements.

[F] **418.2 Location.** Organic coating manufacturing operations and operations incidental to or connected therewith shall not be located in buildings having other occupancies.

[F] **418.3 Process mills.** Mills operating with close clearances and that process flammable and heat-sensitive materials, such as nitrocellulose, shall be located in a *detached building* or noncombustible structure.

[F] **418.4 Tank storage.** Storage areas for *flammable and combustible liquid* tanks inside of structures shall be located at or above grade and shall be separated from the processing area by not less than 2-hour *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both.

[F] **418.5 Nitrocellulose storage.** Nitrocellulose storage shall be located on a detached pad or in a separate structure or a room enclosed with not less than 2-hour *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both.

[F] **418.6 Finished products.** Storage rooms for finished products that are *flammable or combustible liquids* shall be separated from the processing area by not less than 2-hour *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both.

*

SECTION 419 ARTIFICIAL DECORATIVE VEGETATION

[F] **419.1 Artificial decorative vegetation.** Artificial decorative vegetation exceeding 6 feet (1830 mm) in height and permanently installed outdoors within 5 feet (1524 mm) of a building, or on the roof of a building, shall comply with Section 321.1 of the *International Fire Code*.

Exception: Artificial decorative vegetation located more than 30 feet (9144 mm) from the exterior wall of a building.

SECTION 420 GROUPS I-1, R-1, R-2, R-3 AND R-4

[S] **420.1 General.** Occupancies in Groups I-1, R-1, R-2, R-3 and R-4 shall comply with the provisions of Sections 420.1 through ((420.14)) 420.15 and other applicable provisions of this code.

[W] **420.2 Separation walls.** Walls separating *dwelling units* in the same building, walls separating *sleeping units* in the same building and walls separating *dwelling or sleeping units* from other occupancies contiguous to them in the same building shall be constructed as *fire partitions* in accordance with Section 708. Buildings containing multiple sleeping units with common use or central kitchens shall not be classified as a single dwelling.

Interpretation I420: Separation provisions of Section 508 apply in addition to the separation requirements of Section 420.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

420.3 Horizontal separation. Floor assemblies separating *dwelling units* in the same buildings, floor assemblies separating *sleeping units* in the same building and floor assemblies separating dwelling or *sleeping units* from other occupancies contiguous to them in the same building shall be constructed as *horizontal assemblies* in accordance with Section 711.

[F] 420.4 Automatic sprinkler system. Group R occupancies shall be equipped throughout with an *automatic sprinkler system* in accordance with Section 903.2.8. Group I-1 occupancies shall be equipped throughout with an *automatic sprinkler system* in accordance with Section 903.2.6. Quick-response or residential *automatic* sprinklers shall be installed in accordance with Section 903.3.2.

[F] 420.5 Fire alarm systems and smoke alarms. *Fire alarm* systems and smoke alarms shall be provided in Group I-1, R-1 and R-2 occupancies in accordance with Sections 907.2.6, 907.2.8 and 907.2.9, respectively. Single- or multiple-station smoke alarms shall be provided in Groups I-1, R-2, R-3 and R-4 in accordance with Section 907.2.11.

420.6 Smoke barriers in Group I-1, Condition 2. *Smoke barriers* shall be provided in Group I-1, Condition 2 to subdivide every *story* used by persons receiving care, treatment or sleeping and to provide other *stories* with an *occupant load* of 50 or more persons, into not fewer than two *smoke compartments*. Such *stories* shall be divided into *smoke compartments* with an area of not more than 22,500 square feet (2092 m²) and the distance of travel from any point in a *smoke compartment* to a *smoke barrier* door shall not exceed 200 feet (60 960 mm). The *smoke barrier* shall be in accordance with Section 709.

420.6.1 Refuge area. Refuge areas shall be provided within each *smoke compartment*. The size of the refuge area shall accommodate the occupants and care recipients from the adjoining *smoke compartment*. Where a *smoke compartment* is adjoined by two or more *smoke compartments*, the minimum area of the refuge area shall accommodate the largest occupant load of the adjoining compartments. The size of the refuge area shall provide the following:

1. Not less than 15 net square feet (1.4 m²) for each care recipient.
2. Not less than 6 net square feet (0.56 m²) for other occupants.

Areas or spaces permitted to be included in the calculation of the refuge area are corridors, lounge or dining areas and other low-hazard areas.

420.7 Group I-1 assisted living housing units. In Group I-1 occupancies, where a *fire-resistance corridor* is provided in areas where assisted living residents are housed, shared living spaces, group meeting or multipurpose therapeutic spaces open to the *corridor* shall be in accordance with all of the following criteria:

1. The walls and ceilings of the space are constructed as required for *corridors*.
2. The spaces are not occupied as resident sleeping rooms, treatment rooms, incidental uses in accordance with Section 509, or hazardous uses.
3. The open space is protected by an *automatic* fire detection system installed in accordance with Section 907.
4. In Group I-1, Condition 1, the *corridors* onto which the spaces open are protected by an *automatic* fire detection system installed in accordance with Section 907, or the spaces are equipped throughout with quick-response sprinklers in accordance with Section 903.3.2.
5. In Group I-1, Condition 2, the *corridors* onto which the spaces open, in the same *smoke compartment*, are protected by an *automatic* fire detection system installed in accordance with Section 907, or the *smoke compartment* in which the spaces are located is equipped throughout with quick-response sprinklers in accordance with Section 903.3.2.
6. The space is arranged so as not to obstruct access to the required *exits*.

420.8 Group I-1 cooking facilities. In Group I-1 occupancies, rooms or spaces that contain a cooking facility with domestic cooking appliances shall be permitted to be open to the *corridor* where all of the following criteria are met:

1. In Group I-1, Condition 1 occupancies, the number of care recipients served by one cooking facility shall not be greater than 30.
2. In Group I-1, Condition 2 occupancies, the number of care recipients served by one cooking facility and within the same *smoke compartment* shall not be greater than 30.
3. The space containing the cooking facilities shall be arranged so as not to obstruct access to the required *exit*.
4. The cooking appliances shall comply with Section 420.9.

420.9 Domestic cooking appliances. In Group I-1 occupancies, installation of cooking appliance used in domestic cooking facilities shall comply with all of the following:

1. The types of cooking appliances permitted shall be limited to ovens, cooktops, ranges, warmers and microwaves.
2. Domestic cooking hoods installed and constructed in accordance with Section 505 of the International Mechanical Code shall be provided over cooktops or ranges.
3. Cooktops and ranges shall be protected in accordance with Section 904.14.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

4. A shutoff for the fuel and electrical supply to the cooking equipment shall be provided in a location to which only staff has access.
5. A timer shall be provided that automatically deactivates the cooking appliances within a period of not more than 120 minutes.
6. A portable fire extinguisher shall be provided. Installation shall be in accordance with Section 906 and the extinguisher shall be located within a 30-foot (9144 mm) distance of travel from each domestic cooking appliance.

Exceptions:

1. Cooking facilities provided within care recipients' individual dwelling units are not required to comply with this section.
2. Cooktops and ranges used for care-recipient training or nutritional counseling are not required to comply with Item 3 of this section

420.10 Group R cooking facilities. In Group R occupancies, cooking appliances used for domestic cooking operations shall be in accordance with Section 917.2 of the *International Mechanical Code*.

420.11 Group R-2 dormitory cooking facilities. Domestic cooking appliances for use by residents of Group R-2 college dormitories shall be in accordance with Sections 420.11.1 and 420.11.2.

420.11.1 Cooking appliances. Where located in Group R-2 college dormitories, domestic cooking appliances for use by residents shall be in compliance with all of the following:

1. The types of domestic cooking appliances shall be limited to ovens, cooktops, ranges, warmers, coffee makers and microwaves.
2. Domestic cooking appliances shall be limited to approved locations.
3. Cooktops and ranges shall be protected in accordance with Section 904.14.
4. Cooktops and ranges shall be provided with a domestic cooking hood installed and constructed in accordance with Section 505 of the *International Mechanical Code*.

420.11.2 Cooking appliances in sleeping rooms. Cooktops, ranges and ovens shall not be installed or used in sleeping rooms.

[W] 420.12 Adult family homes. This section shall apply to all newly constructed adult family homes and all existing single-family homes being converted to adult family homes. This section shall not apply to those adult family homes licensed by the state of Washington Department of Social and Health Services prior to July 1, 2001.

420.12.1 Sleeping room classification. Each sleeping room in an adult family home shall be classified as one of the following:

1. Type S – Where the means of egress contains stairs, elevators or platform lifts.
2. Type NS1 – Where one means of egress is at grade level or a ramp constructed in accordance with Section 1012 is provided.
3. Type NS2 – Where two means of egress are at grade level or ramps constructed in accordance with Section 1012 are provided.

420.12.2 Types of locking devices and door activation. All bedrooms and bathroom doors shall be operable from the outside when locked. Every closet door shall be readily operable from the inside. Operable parts of door handles, pulls, latches, locks and other devices installed in adult family homes shall be operable with one hand and shall not require tight grasping, pinching, or twisting of the wrist. Pocket doors shall have graspable hardware available when in the closed or open position.

The force required to activate operable parts shall be 5.0 pounds (22.2 N) maximum. Required exit door(s) shall have no additional locking devices. Required exit door hardware shall unlock inside and out-side mechanisms when exiting the building allowing reentry into the adult family home without the use of a key, tool or special knowledge.

420.12.3 Smoke and carbon monoxide alarm requirements. Alarms shall be installed in such a manner so that the detection device warning is audible from all areas of the dwelling upon activation of a single alarm.

420.12.4 Escape windows and doors. Every sleeping room shall be provided with emergency escape and rescue windows as required by Section 1031. No alternatives to the sill height such as steps, raised platforms or other devices placed by the openings will be approved as meeting this requirement.

420.12.5 Grab bar general requirements. Where facilities are designated for use by adult family home clients, grab bars for water closets, bathtubs and shower stalls shall be installed according to ICC A117.1.

420.12.6 Shower stalls. Where provided to meet the requirements for bathing facilities, the minimum size of shower stalls for an adult family home shall be 30 inches deep by 48 inches long.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[W] 420.13 Licensed care cooking facilities. In Group I-1, Condition 2 assisted living facilities licensed under chapter 388-78A WAC and residential treatment facilities licensed under chapter 246-337 WAC, rooms or spaces that contain a cooking facility with domestic cooking appliances shall be permitted to be open to the corridor where all of the following criteria are met:

1. The number of care recipients housed in the smoke compartment is not greater than 30.
2. The number of care recipients served by the cooking facility is not greater than 30.
3. Only one cooking facility area is permitted in a smoke compartment.
4. The types of domestic cooking appliances permitted are limited to ovens, cooktops, ranges, warmers and microwaves.
5. The corridor is a clearly identified space delineated by construction or floor pattern, material or color.
6. The space containing the domestic cooking facility shall be arranged so as not to obstruct access to the required exit.
7. A domestic cooking hood installed and constructed in accordance with Section 505 of the International Mechanical Code is provided over the cooktop or range.
8. The domestic cooking hood provided over the cooktop or range shall be equipped with an automatic fire-extinguishing system of a type recognized for protection of domestic cooking equipment. Pre-engineered automatic extinguishing systems shall be tested in accordance with UL 300A and listed and labeled for the intended application. The system shall be installed in accordance with this code, its listing and the manufacturer's instructions.
9. A manual actuation device for the hood suppression system shall be installed in accordance with Sections 904.12.1 and 904.12.2.
10. An interlock device shall be provided such that upon activation of the hood suppression system, the power or fuel supply to the cooktop or range will be turned off.
11. A shut-off for the fuel and electrical power supply to the cooking equipment shall be provided in a location that is accessible only to staff.
12. A timer shall be provided that automatically deactivates the cooking appliances within a period of not more than 120 minutes.
13. A portable fire extinguisher shall be installed in accordance with Section 906 of the International Fire Code.

[W] 420.14 Lofts. Where provided in Group R occupancies, lofts shall comply with this code as modified by Sections 420.14.1 through 420.14.5. Lofts constructed in compliance with this section shall be considered a portion of the story below. Such lofts shall not contribute to either the building area or number of stories as regulated by Section 503.1. The loft floor area shall be included in determining the fire area.

Exception: Lofts need not comply with Section 420.14 where they meet any of the following conditions:

1. The loft has a maximum depth of less than 3 feet (914 mm).
2. The loft has a floor area of less than 35 square feet (3.3 m²).
3. The loft is not provided with a permanent means of egress.

420.14.1 Loft limitations. Lofts shall comply with the following conditions:

1. The loft floor area shall be less than 70 square feet (6.5 m²).
2. The loft ceiling height shall not exceed 7 feet (2134 mm) for more than one-half of the loft floor area.

The provisions of Sections 420.14.2 through 420.14.5 shall not apply to lofts that do not comply with Items 1 and 2.

420.14.2 Loft ceiling height. The ceiling height below a loft shall not be less than 7 feet (2134 mm). The ceiling height above the finished floor of the loft shall not be less than 3 feet (914 mm). Portions of the loft with a sloped ceiling measuring less than 3 feet (914 mm) from the finished floor to the finished ceiling shall not contribute to the loft floor area.

420.14.3 Loft area. The aggregate area of all lofts and mezzanines within a room shall comply with Section 505.2.1.

Exception: The area of a single loft shall not be greater than two-thirds of the area of the room in which it is located, provided that no other lofts or mezzanines are open to the room in which the loft is located.

420.14.4 Permanent egress for lofts. Where a permanent means of egress is provided for lofts, the means of egress shall comply with Chapter 10 as modified by Section 420.14.4.1.

420.14.4.1 Ceiling height at loft means of egress. A minimum ceiling height of 3 feet shall be provided for the entire width of the means of egress from the loft.

420.14.5 Smoke alarms. Single- or multiple-station smoke alarms shall be installed in all lofts in accordance with Section 907.2.11.1 or 907.2.11.2.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

* **[S] 420.15 Security from criminal activity in Group R.**

420.15.1 Group R occupancies other than one- and two-family dwellings. All housing units except one- and two-family dwellings shall comply with Section 420.15.1.

420.15.1.1 Definition. For the purposes of this section, “housing unit” is any *dwelling unit* or guest room.

420.15.1.2 Building entrance doors and locks. Building entrance doors shall be without openings and shall be as capable of resisting forcible entry as a flush solid core wood door 1-3/8 inches (35 mm) thick.

Exceptions:

1. Building entrance doors are permitted to have visitor-observation ports that do not impair the fire resistance of the door.
2. Main entrance doors are permitted to be framed or unframed non-shattering glass, framed 1/4-inch (6 mm) plate glass or other security glazing.
3. Building entrance doors other than main entrance doors are permitted to have glazed openings. Glazed openings shall have wire, grilles or security glazing to prevent operation of the door latch from outside by hand or instrument.

Building entrance doors shall be self-closing, self-locking and equipped with a dead-locking latch bolt with at least a 1/2-inch (13 mm) throw that shall penetrate the striker at least 1/4 inch (6 mm).

Exceptions:

1. Building entrance doors that open directly into a housing unit shall comply with Section 420.15.1.4.
2. Garage-to-building doors need not be self-locking when the garage-to-exterior door is equipped with an electrically-operated remote control device for opening and automatically closing.
3. When either the garage-to-exterior doors or garage-to-building doors are equipped for self-closing and self-locking, the other need not be so equipped.

420.15.1.3 Locks. All *exit* doors, including those from individual housing units, shall be openable from the interior without use of keys or special knowledge or effort.

420.15.1.4 Housing unit doors and locks. Doors from interior *corridors* to individual housing units shall not have glass openings and shall be as capable of resisting forcible entry as a flush solid core wood door 1-3/8 (35 mm) inches thick.

Every entrance door to a housing unit shall have a dead bolt or dead-locking latch bolt with at least a 1/2-inch (13 mm) throw that penetrates the striker not less than 1/4 inch (6 mm). In hotels and other multi-unit buildings that provide housing for rent on a daily or weekly basis, every entrance door to a housing unit shall also be provided with a chain door guard or barrel bolt on the inside.

420.15.1.5 Observation ports. Every entrance door to a housing unit, other than transparent doors, shall have a visitor-observation port. The port shall not impair the fire resistance of the door. Observation ports shall be installed not less than 54 inches (1372 mm) and not more than 66 inches (1676 mm) above the floor.

420.15.1.6 Non-exit doors. Doors to storage, maintenance and building service rooms shall be self-closing and self-locking.

420.15.1.7 Sliding doors. Dead bolts or other *approved* locking devices shall be provided on all sliding doors. These locks shall be installed so that the mounting screws for the lock cases are inaccessible from the outside.

420.15.1.8 Windows. Openable windows shall have operable inside latching devices.

Exception: Windows with sills located 10 feet (3048 mm) or more above grade, or 10 feet (3048 mm) or more above a deck, balcony or porch that is not readily accessible from grade except through a housing unit need not have operable inside latching devices.

420.15.2 One- and two-family dwellings. One- and two-family *dwellings* shall comply with Section 420.15.2.

420.15.2.1 Building entrance locks. Building entrance doors, including garage doors, shall be capable of locking. They shall be equipped with a dead-locking latch bolt with at least a 1/2-inch (13 mm) throw that penetrates the striker not less than 1/4 inch (6 mm). Building entrance doors shall be openable from the inside without use of a key or special knowledge or effort.

Exception: Garage-to-exterior doors are permitted to be equipped with an electronically-operated remote control device for opening and closing in lieu of a dead-locking latch bolt. When garage-to-exterior doors are equipped with remote control devices, garage-to-building doors need not be capable of locking.

420.15.2.2 Observation ports. Every building entrance door, other than garage doors, shall have a visitor observation port or glass side light. Observation ports shall be installed at a height of not less than 54 inches (1372 mm) and not more than 66 inches (1676 mm) from the floor.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

420.15.2.3 Windows and sliding doors. Dead bolts or other *approved* locking devices shall be provided on all sliding doors and openable windows. The lock shall be installed so that the mounting screws for the lock case are inaccessible from the outside.

Exception: Windows with sills located 10 feet (3048 mm) or more above grade, or 10 feet (3048 mm) or more above a deck, balcony or porch that is not readily accessible from grade except through a housing unit need not have operable inside latching devices.

420.15.3 Alternate security devices. Subject to the approval of the *building official*, alternate security devices are permitted to be substituted for those required by this Section 420.15. Alternate devices shall have equal capability to resist illegal entry. The installation of the device shall not conflict with other requirements of this code and other ordinances regulating the safety of exiting.

[S] 420.16 Roof-ceiling soffits. Roof-ceiling soffits in *dwelling units* and sleeping units shall be provided with a minimum of 1/2-inch (13 mm) gypsum wallboard in buildings of Types IIB, IIIB and VB construction.

**

SECTION 421
HYDROGEN FUEL GAS ROOMS

[F] 421.1 General. Where required by the *International Fire Code*, *hydrogen fuel gas rooms* shall be designed and constructed in accordance with Sections 421.1 through 421.7.

[F] 421.2 Location. *Hydrogen fuel gas rooms* shall not be located below grade.

[F] 421.3 Design and construction. *Hydrogen fuel gas rooms* not classified as Group H shall be separated from other areas of the building in accordance with Section 509.1.

[F] 421.3.1 Pressure control. *Hydrogen fuel gas rooms* shall be provided with a ventilation system designed to maintain the room at a negative pressure in relation to surrounding rooms and spaces.

[F] 421.3.2 Windows. Operable windows in interior walls shall not be permitted. Fixed windows shall be permitted where in accordance with Section 716.

[F] 421.4 Exhaust ventilation. *Hydrogen fuel gas rooms* shall be provided with mechanical exhaust *ventilation* in accordance with the applicable provisions of Section 502.16.1 of the *International Mechanical Code*.

[F] 421.5 Gas detection system. *Hydrogen fuel gas rooms* shall be provided with a *gas detection system* that complies with Sections 421.5.1, 421.5.2, and 916.

[F] 421.5.1 System activation. Activation of a gas detection alarm shall result in both of the following:

1. Initiation of distinct audible and visible alarm signals both inside and outside of the *hydrogen fuel gas room*.
2. *Automatic* activation of the mechanical exhaust ventilation system.

[F] 421.5.2 Failure of the gas detection system. Failure of the *gas detection system* shall automatically activate the mechanical exhaust *ventilation* system, stop hydrogen generation, and cause a trouble signal to sound at an *approved* location.

[F] 421.6 Explosion control. *Explosion* control shall be provided where required by Section 414.5.1.

[S][F] 421.7 ((Standby)) Legally required standby power. Mechanical *ventilation* and *gas detection systems* shall be provided with a *standby power system* in accordance with Section 2702.

SECTION 422
AMBULATORY CARE ((FACILITIES)) FACILITIES

422.1 General. Occupancies classified as *ambulatory care facilities* shall comply with the provisions of Sections 422.1 through 422.7 and other applicable provisions of this code.

422.2 Separation. *Ambulatory care facilities* where the potential for four or more care recipients are to be *incapable of self-preservation* at any time shall be separated from adjacent spaces, *corridors* or tenants with a *fire partition* installed in accordance with Section 708.

422.3 Smoke compartments. Where the aggregate area of one or more *ambulatory care facilities* is greater than 10,000 square feet (929 m²) on one *story*, the *story* shall be provided with a *smoke barrier* to subdivide the *story* into not fewer than two *smoke compartments*. The area of any one such *smoke compartment* shall be not greater than 22,500 square feet (2092 m²). The distance of travel from any point in a *smoke compartment* to a *smoke barrier* door shall be not greater than 200 feet (60 960 mm). The *smoke barrier* shall be installed in accordance with Section 709 with the exception that *smoke barriers* shall

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

be continuous from outside wall to an outside wall, a floor to a floor, or from a *smoke barrier* to a *smoke barrier* or a combination thereof.

[W] 422.3.1 Means of egress. Where *ambulatory care facilities* require smoke compartmentation in accordance with Section 422.3, the fire safety evacuation plans provided in accordance with Section 1002.2 shall identify the building components necessary to support ~~((a defend-in-place emergency response in accordance with))~~ Sections 403 and 404 of the *International Fire Code*.

422.3.2 Refuge area. Not less than 30 net square feet (2.8 m²) for each nonambulatory care recipient shall be provided within the aggregate area of *corridors*, care recipient rooms, treatment rooms, lounge or dining areas and other low-hazard areas within each *smoke compartment*. Each occupant of an *ambulatory care facility* shall be provided with access to a refuge area without passing through or utilizing adjacent tenant spaces.

422.3.3 Independent egress. A *means of egress* shall be provided from each *smoke compartment* created by *smoke barriers* without having to return through the *smoke compartment* from which *means of egress* originated.

[F] 422.4 Automatic sprinkler systems. *Automatic sprinkler systems* shall be provided for *ambulatory care facilities* in accordance with Section 903.2.2.

[F] 422.5 Fire alarm systems. A *fire alarm system* shall be provided for *ambulatory care facilities* in accordance with Section 907.2.2.

[F] 422.6 Electrical systems. In *ambulatory care facilities*, the essential electrical system for electrical components, equipment and systems shall be designed and constructed in accordance with the provisions of Chapter 27 and NFPA 99.

422.7 Domestic cooking. Installation of cooking appliances used in domestic cooking facilities shall comply with all of the following:

1. The types of cooking appliances permitted are limited to ovens, cooktops, ranges, warmers and microwaves.
2. Domestic cooking hoods installed and constructed in accordance with Section 505 of the International Mechanical Code shall be provided over cooktops or ranges.
3. A shutoff for the fuel and electrical supply to the cooking equipment shall be provided in a location to which only staff has access.
4. A timer shall be provided that automatically deactivates the cooking appliances within a period of not more than 120 minutes.
5. A portable fire extinguisher shall be provided. Installation shall be in accordance with Section 906 and the extinguisher shall be located within a 30-foot (9144 mm) distance of travel from each domestic cooking appliance.

SECTION 423 STORM SHELTERS

423.1 General. This section applies to the construction of storm shelters constructed as separate detached buildings or constructed as rooms or spaces within buildings for the purpose of providing protection from storms that produce high winds, such as tornadoes and hurricanes, during the storm. This section specifies where *storm shelters* are required and provides requirements for the design and construction of *storm shelters*. Design of facilities for use as emergency shelters after the storm are outside the scope of ICC 500 and shall comply with Table 1604.5 as a *Risk Category IV Structure*.

423.2 Construction. *Storm shelters* shall be constructed in accordance with this code and ICC 500 and shall be designated as hurricane shelters, tornado shelters, or combined hurricane and tornado shelters. Buildings or structures that are also designated as emergency shelters shall also comply with Table 1604.5 as *Risk Category IV structures*.

Any *storm shelter* not required by this section shall be permitted to be constructed, provided that such structures meet the requirements of this code and ICC 500.

423.3 Occupancy classification. The occupancy classification for a *storm shelter* shall be determined in accordance with this section.

423.3.1 Dedicated storm shelters. A facility designed to be occupied solely as a *storm shelter* shall be classified as Group A-3 for the determination of requirements other than those covered in ICC 500.

Exceptions:

1. The occupancy category for dedicated storm shelters with an occupant load of fewer than 50 persons as determined in accordance with ICC 500 shall be in accordance with Section 303.
2. The occupancy category for a dedicated residential storm shelter shall be the Group R occupancy served.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] **426.1.3 Conveyors.** Conveyors, chutes, piping and similar equipment passing through the enclosures of rooms or spaces shall be constructed dirt tight and vapor tight, and be of *approved* noncombustible materials complying with Chapter 30.

[F] **426.1.4 Explosion control.** *Explosion* control shall be provided as specified in the *International Fire Code*, or spaces shall be equipped with the equivalent mechanical *ventilation* complying with the *International Mechanical Code*.

[F] **426.1.5 Grain elevators.** Grain elevators, malt houses and buildings for similar occupancies shall not be located within 30 feet (9144 mm) of interior *lot lines* or structures on the same *lot*, except where erected along a railroad right-of-way.

[F] **426.1.6 Coal pockets.** Coal pockets located less than 30 feet (9144 mm) from interior *lot lines* or from structures on the same *lot* shall be constructed of not less than Type IB construction. Where more than 30 feet (9144 mm) from interior *lot lines*, or where erected along a railroad right-of-way, the minimum type of construction of such structures not more than 65 feet (19 812 mm) in *building height* shall be Type IV.

[F] **426.1.7 Tire rebuilding.** Buffing operations shall be located in a room separated from the remainder of the building housing the tire rebuilding or tire recapping operation by a 1-hour *fire barrier*.

Exception: Buffing operations are not required to be separated where all of the following conditions are met:

1. Buffing operations are equipped with an *approved* continuous automatic water-spray system directed at the point of cutting action.
2. Buffing machines are connected to particle-collecting systems providing a minimum air movement of 1,500 cubic feet per minute (cfm) (0.71 m³/s) in volume and 4,500 feet per minute (fpm) (23 m/s) in-line velocity.
3. The collecting system shall discharge the rubber particles to an *approved* outdoor noncombustible or fire-resistant container, which is emptied at frequent intervals to prevent overflow.

SECTION 427
MEDICAL GAS SYSTEMS

[S][F] **427.1 General.** Medical gases at health care-related facilities intended for patient (~~or veterinary~~) care, inhalation or sedation, including but not limited to analgesia systems for dentistry, podiatry, veterinary and similar uses, shall comply with Sections 427.2 through 427.2.3 in addition to ~~other~~ requirements of this code and Chapter 53 of the *International Fire Code*.

[S][F] **427.2 Interior supply location.** Medical gases shall be (~~located~~) stored in areas dedicated to the storage of such gases without other storage or uses. Where containers of medical gases in quantities greater than the permitted amount are located inside the buildings, they shall be located in a 1-hour exterior room, 1-hour interior room or a *gas cabinet* in accordance with Section 427.2.1, 427.2.2 or 427.2.3, respectively. Rooms or areas where medical gases are stored or used in quantities exceeding the maximum allowable quantity per control area as set forth in (~~TABLE 307.1(1) and [F] TABLE 307.1(2))~~ International Fire Code Section 5003.1 shall (~~be in accordance~~) comply with the requirements for Group H occupancies.

[F] **427.2.1 One-hour exterior room.** A 1-hour exterior room shall be a room or enclosure separated from the remainder of the building by *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both, with a *fire-resistance rating* of not less than 1 hour. Openings between the room or enclosure and interior spaces shall be provided with *self-closing* smoke- and draft-control assemblies having a *fire protection rating* of not less than 1 hour. Rooms shall have not less than one *exterior wall* that is provided with not less than two vents. Each vent shall have a minimum free (~~air~~) opening area of (~~not less than 36~~) 24 square inches (~~((232)) 155~~) cm² for each 1,000 cubic feet (28 m³) at normal temperature and pressure (NTP) of gas stored in the room and shall be not less than 72 square inches (465 cm²) in aggregate free opening area. One vent shall be within 6 inches (152 mm) of the floor and one shall be within 6 inches (152 mm) of the ceiling. Rooms shall be provided with not fewer than one automatic fire sprinkler to provide container cooling in case of fire.

[F] **427.2.2 One-hour interior room.** Where an *exterior wall* cannot be provided for the room, (~~a 1-hour interior room shall be provided and shall be a room or enclosure separated from the remainder of the building by fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 711, or both, with a fire-resistance rating of not less than 1 hour. Openings~~) openings between the room or enclosure and interior spaces shall be provided with *self-closing* (~~smoke and draft control~~) assemblies, (~~having a fire protection rating of not less than 1 hour. An automatic~~) Automatic sprinklers (~~system~~) shall be installed within the room. The room shall be exhausted through a duct to the exterior. Supply and exhaust ducts shall be enclosed in a 1-hour rated (~~shaft~~) enclosure from the room to the exterior. Approved mechanical *ventilation* shall comply with the *International Mechanical Code* and be provided with a minimum rate of 1 cubic foot per minute per square foot (0.00508 m³/s/m²) of the area of the room.

Exception: A 1-hour rated enclosure to the exterior is not required where the building is equipped with an automatic sprinkler system throughout.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] 427.2.3 Gas cabinets. Gas cabinets shall be constructed in accordance with Section 5003.8.6 of the *International Fire Code* and shall comply with the following:

- ~~(1. Cabinets shall be exhausted to the exterior through a dedicated exhaust duct system installed in accordance with Chapter 5 of the *International Mechanical Code*.~~
- 2)) ~~1. ((Supply and exhaust ducts shall be enclosed in a 1-hour rated shaft enclosure from the cabinet to the exterior.))~~
The average velocity of *ventilation* at the face of access ports or windows shall be not less than 200 feet per minute (1.02 m/s) with a minimum of 150 feet per minute (0.76 m/s) at any point of the access port or window.
- 2. They shall be connected to an exhaust system.
- 3. Cabinets shall be provided with an *automatic sprinkler system* internal to the cabinet.

[S] 427.3 Exterior supply locations. Oxidizer medical gas systems located on the exterior of a building with quantities greater than the permit amount shall be located in accordance with *International Fire Code* Section 6304.2.1.

**SECTION 428
HIGHER EDUCATION LABORATORIES**

[F] 428.1 Scope. *Higher education laboratories* complying with the requirements of Sections 428.1 through 428.4 shall be permitted to exceed the maximum allowable quantities of *hazardous materials* in *control areas* set forth in Tables 307.1(1) and [F] 307.1(2) without requiring classification as a Group H occupancy. Except as specified in Section 428, such laboratories shall comply with all applicable provisions of this code and the *International Fire Code*.

[F] 428.2 Application. The provisions of Section 428 shall be applied as exceptions or additions to applicable requirements of this code. Unless specifically modified by Section 428, the storage, *use* and handling of *hazardous materials* shall comply with all other provisions in Chapters 38 and 50 through 67 of the *International Fire Code* and this code for quantities not exceeding the maximum allowable quantity.

[F] 428.3 Laboratory suite construction. Where *laboratory suites* are provided, they shall be constructed in accordance with this section and Chapter 38 of the *International Fire Code*. The number of *laboratory suites* and percentage of maximum allowable quantities of *hazardous materials* in *laboratory suites* shall be in accordance with Table 428.3.

**[F] TABLE 428.3
DESIGN AND NUMBER OF LABORATORY SUITES PER FLOOR**

FLOOR LEVEL		PERCENTAGE OF THE MAXIMUM ALLOWABLE QUANTITY PER LAB SUITE ^a	NUMBER OF LAB SUITES PER FLOOR	FIRE-RESISTANCE RATING FOR FIRE BARRIERS IN HOURS ^b
Above Grade Plane	21+	Not allowed	Not Permitted	Not Permitted
	16-20	25	1	2 ^c
	11-15	50	1	2 ^c
	7-10	50	2	2 ^c
	4-6	75	4	1
	3	100	4	1
	1-2	100	6	1
Below Grade Plane	1	75	4	1
	2	50	2	1
	Lower than 2	Not Allowed	Not Allowed	Not Allowed

a. Percentages shall be of the maximum allowable quantity per control area shown in Tables 307.1(1) and 307.1(2), with all increases allowed in the footnotes to those tables.

b. Fire barriers shall include walls, floors and ceilings necessary to provide separation from other portions of the building.

c. Vertical fire barriers separating laboratory suites from other spaces on the same floor shall be permitted to be 1-hour fire-resistance rated.

[F] 428.3.1 Separation from other nonlaboratory areas. *Laboratory suites* shall be separated from other portions of the building in accordance with the most restrictive of the following:

- 1. *Fire barriers* and *horizontal assemblies* as required in Table 428.3. *Fire barriers* shall be constructed in accordance with Section 707 and *horizontal assemblies* constructed in accordance with Section 711.

Exception: Where an individual *laboratory suite* occupies more than one *story*, the *fire-resistance rating* of intermediate floors contained within the *laboratory suite* shall comply with the requirements of this code.

- 2. Separations as required by Section 508.

[F] 428.3.2 Separation from other laboratory suites. *Laboratory suites* shall be separated from other *laboratory suites* in accordance with Table 428.3.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] **428.3.3 Floor assembly fire resistance.** The floor assembly supporting *laboratory suites* and the construction supporting the floor of *laboratory suites* shall have a *fire-resistance rating* of not less than 2 hours.

Exception: The floor assembly of the *laboratory suites* and the construction supporting the floor of the *laboratory suites* are allowed to be 1-hour *fire-resistance* rated in buildings of Types IIA, IIIA and VA construction, provided that the building is three or fewer *stories*.

[F] **428.3.4 Maximum number.** The maximum number of *laboratory suites* shall be in accordance with Table 428.3. Where a building contains both *laboratory suites* and *control areas*, the total number of *laboratory suites* and *control areas* within a building shall not exceed the maximum number of *laboratory suites* in accordance with Table 428.3.

[F] **428.3.5 Means of egress.** *Means of egress* shall be in accordance with Chapter 10.

[F] **428.3.6 Standby or emergency power.** Standby or emergency power shall be provided in accordance with Section 414.5.2 where *laboratory suites* are located above the sixth *story above grade plane* or located in a *story* below *grade plane*.

[F] **428.3.7 Ventilation.** *Ventilation* shall be in accordance with Chapter 7 of NFPA 45, and the *International Mechanical Code*.

[F] **428.3.8 Liquid-tight floor.** Portions of *laboratory suites* where *hazardous materials* are present shall be provided with a liquid-tight floor.

[F] **428.3.9 Automatic sprinkler systems.** Buildings containing *laboratory suites* shall be equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1.

[F] **428.4 Percentage of maximum allowable quantity in each laboratory suite.** The percentage of maximum allowable quantities of *hazardous materials* in each *laboratory suite* shall be in accordance with Table 428.3.

[S] SECTION 429

WATERFRONT STRUCTURES: PIERS, WHARVES AND BUILDINGS

429.1 Scope. Structures with at least 20 percent or 8,000 square feet (743 m²), whichever is greater, of their area over water shall comply with Section 429. They shall also comply with all other requirements of this code unless otherwise specified in Section 429. Unless otherwise specified, all wood dimensions are nominal size as defined in Section 202.

Exceptions:

1. Fire-resistance-rated walls specified in Section 429.6.6 are permitted to be used as one-hour fire-resistance-rated fire barriers and as a separation between repair garages not classified as Group S-1 and occupancies in Group A, including the specified opening protection in buildings of Types IIB, IV and VB construction.
2. Structures accessory to Group R-3 occupancies.
3. Floating homes that comply with the Seattle Residential Code.

See Chapter 36 of the Fire Code for additional requirements for fire protection systems for *marinas*.

429.2 Allowable area and height for waterfront structures. The height of structures to be built over water shall be measured as provided in Title 23 of the Seattle Municipal Code for Shoreline Districts. Height and area shall comply with the requirements of Chapter 5, except that the increases allowed in Section 507 are not applicable to waterfront structures.

Exceptions:

1. In covered boat moorages, the areas in Table 506.2 are permitted to be increased not more than 400 percent when an approved automatic sprinkler system is provided throughout.
2. Each covered area of a boat moorage is permitted to be considered a separate building subject to the following conditions:
 - 2.1. Maximum individual areas shall be 8,000 square feet (743 m²). The maximum width of connecting walkways shall be 10 feet (3048 mm).
 - 2.2. Walkways, finger piers and other decked areas shall not exceed 30 percent of the area of the roof that extends over water.
 - 2.3. Covered areas shall be separated by not less than 16 feet (4877 mm). The intervening areas are permitted to be used for moorage provided the adjacent covered areas comply with Item 2.4 below.
 - 2.4. Covered roof areas constructed in a manner that would trap smoke or hot gases shall be provided with the following:
 - 2.4.1. Vents or monitors of not less than 5 percent of the roof area.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

2.4.2. A draft stop of splined or tongue-and-groove planking not less than 1 inch (25 mm) in thickness, 1/2-inch (13 mm) exterior-type plywood or 26 gauge steel shall extend across the end of each roof area when the roof is closer than 30 feet (9144 mm) to an adjacent building. The draft stop shall extend to not less than 24 inches (610 mm) below the lower edge of the roof. A draft stop constructed in accordance with Section 429.5.2 shall be provided under the walkway at each location where draft stops are required at the end of roofed areas.

429.3 Accessory uses. Uses accessory to the principal occupancy shall be permitted, provided they are conducted in an area separated from the moorage area by not less than 16 feet (4877 mm) and the exposed side of the moorage area is protected by a one-hour fire-resistance-rated fire barrier extending 2-1/2 feet (762 mm) above the roof line. One-story superstructures shall be permitted for accessory uses but shall not exceed 1,000 square feet (93 m²) in area nor 20 feet (6096 mm) in height.

Exception: Storage is allowed in the moorage area, provided it conforms to the following:

1. One unprotected moorage equipment locker of not more than 150 cubic feet (115 m³) is permitted for each slip.
2. Where groups of three or more lockers are provided, they shall be separated from each other with one-hour fire-resistance-rated fire partitions, and openings in the separation shall have one-hour protection.
3. Storage of flammable liquids shall be in accordance with NFPA 31 and the Fire Code.

429.4 Location on property. Exterior walls shall have fire resistance and opening protection as determined by Section 705.

Exceptions:

1. Fire resistance-rated construction and opening protection required because of proximity to property lines are permitted to be omitted for waterfront structures that are located on the same property, separated by an unobstructed deck not less than 16 feet (4877 mm) wide, and have a draft stop constructed according to Section 429.4.2 installed in the substructure between the buildings.
2. In covered boat moorages, exterior walls that are built entirely over water are permitted to be of tongue-and-groove or splined planks not less than 2 inches (51 mm) in thickness, covered with 26 gauge sheet metal, 3/8-inch (9.5 mm) exterior type plywood or equivalent on both sides, regardless of proximity to property lines. Walls at the substructure are permitted to be constructed as specified in Section 429.5.2 for draft stops. Where such walls (even though part of such covered boat moorage) are built on land, this exception shall not apply.

429.5 Substructure.

429.5.1 Construction. Substructures are permitted to be of any type of construction permitted in this code subject to the area limitations of Section 429.2, except that, when constructed of wood, the members shall not be less than the following in any dimension, exclusive of piling:

MEMBER	SIZE UNLIMITED USE x 25.4 FOR MM	PIERS FOR BOAT MOORAGE ONLY, NOT EXCEEDING 10 FEET (3048 MM) IN WIDTH x 25.4 FOR MM
Caps and girders	8"	6"
Joists, beams and other members	4"	3"
Flooring or deck	3" T & G or splined or 4" square edged	2"
Bracing	3"	2"

For SI: 1 inch = 25.4 mm

429.5.1.1 Flooring for covered piers. If the flooring or deck is under a roof or is used for parking, there shall be applied over the flooring or deck a tight-fitting wearing surface of softwood not less than 2 inches (51 mm) thick and not more than 6 inches (152 mm) wide, 1-inch (25 mm) thick hardwood, 2-inch (51 mm) thick asphaltic concrete or other material of equivalent fire resistance.

Exception: Covered piers used for moorage only need not have a wearing surface.

429.5.2 Draft stops. Draft stops shall be installed in all substructures constructed of combustible materials, exclusive of piling and pile bracing. They shall be placed not more than 100 feet (2540 mm) apart measured along the main axis of the pier or wharf. They shall fit tightly around all joists, beams, etc., and extend from the underside of the deck to city datum if over salt water or to low water if over fresh water. See Section 429.6.7 for draft stops in superstructures.

Substructure draft stops shall be constructed of at least two layers of lumber not less than 2 inches (51 mm) in thickness laid with broken joints or materials of equal fire resistance.

429.6 Superstructure.

429.6.1 Construction. Superstructures are permitted to be of any type of construction permitted by this code subject to the height and area limitations of Section 429.2 and the requirements of this section.

429.6.2 Floors. See Section 429.6.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

429.6.3 Exterior walls. Exterior walls of Types IIA, IIB, III, IV and V buildings, when not subject to the requirements of Section 429.5 because of their proximity to property lines, are permitted to be constructed of matched or lapped lumber not less than 2 inches (51 mm) thick and not more than 6 inches (153 mm) wide, or not less than 1 inch (25 mm) thick with a weather covering of noncombustible material applied directly to the wood. Fireblocking is an assembly having a three-fourths-hour fire-protection rating when fire-resistive openings are required by Sections 705 and 1028.

429.6.4 Roof coverings. Roof coverings shall be fire-retardant as specified in Chapter 15.

429.6.5 Roof construction. In Type IV buildings the roof is permitted to be constructed of corrugated galvanized steel attached directly to wood or steel purlins in lieu of that specified in Section 602.4.

429.6.6 Fire-resistance-rated walls. In Types IIA, IIB, III, IV and V buildings, there shall be at least one fire-resistance-rated wall from the deck to at least 3 feet (914 mm) above the roof for each 500 feet (152 m) of length. Areas greater than 100,000 square feet (9290 m²) shall be divided with such fire-resistance-rated walls. There shall be a draft stop constructed as specified in Section 429.6.2, installed in the *substructure* immediately below every required fire-resistance-rated wall when the deck is of combustible materials.

Fire-resistance-rated walls shall be constructed as required for two-hour fire-resistance-rated walls or are permitted to consist of at least two layers of tongue-and-groove or splined lumber, not less than 2 inches (51 mm) thick and not more than 6 inches (153 mm) wide, with a sheet of not less than No. 26 gauge galvanized steel or 3/8-inch (3.2 mm) exterior type plywood between the two layers, placed vertically with broken joints, or equivalent fire-resistive construction.

Openings in fire-resistance-rated walls shall be protected by opening protectives having a one and one-half hour fire protection rating.

429.6.7 Draft stops. *Superstructure* draft stops shall be installed as specified in Section 718. *Substructure* draft stops constructed as specified in Section 429.5.2 shall be installed in line with the *superstructure* draft stops above. See Section 429.11 for draft curtain requirements.

429.6.8 Means of egress. Means of egress shall be provided as specified in Chapter 10.

Exceptions:

1. Where two means of egress are required from an occupancy, they shall not terminate on the same open deck.
2. An open deck is permitted to be considered an exit court and shall not be less than 10 feet (3048 mm) in width.
3. In Group A occupancies, the maximum travel distance shall not be more than 75 percent of that specified in Section 1017.
4. Boat moorages that have no sales, service or repair facilities are permitted to have a single means of egress not less than 3 feet (914 mm) wide and shall be exempt from the requirements of Section 1017 if a Class I standpipe is provided as specified in Section 429.8.

429.7 Width of piers. Floats, *piers* and walkways shall provide an *aisle* not less than 3 feet 6 inches (1067 mm) in width for the purpose of fire department access.

Exception: Floats, *piers* and walkways that are less than 40 feet (12192 mm) in length and that are not open to the public.

429.8 Standpipe systems. A manual Class I standpipe system (or Class III standpipe system when approved by the fire code official) in accordance with NFPA Standard 14 shall be provided for *piers*, wharves, and floats where the hose lay distance from the fire apparatus to the most remote accessible portion of the *pier*, *wharf* or float exceeds 150 feet (45720 mm). Approved plastic pipe may be used when installed underwater, or other approved method of protection from fire is provided. The standpipe piping shall be a minimum of 4 inches (102 mm), sized to provide a minimum of 500 gpm at 130 psi at the most remote hose connection, with a simultaneous flow of 500 gpm at the third most remote hose connection on the same *pier* while maintaining a maximum system pressure of 175 psi. Existing standpipe systems providing equivalent performance to the specification listed above may be acceptable when approved by the fire code official.

429.8.1 Hose connections. Hose connection stations on required standpipes shall be provided at the water end of the *pier*, *wharf*, or float, and along the entire length of the *pier*, *wharf*, or float at spacing not to exceed 150 feet (45720 mm) and as close as practical to the land end.

Exception: The hose connection at the land end of the *pier*, *wharf* or float may be omitted when a hose connection is located within 150 feet (45,720 mm) of the fire apparatus access road.

Each hose connection shall consist of a valved 2-1/2-inch (64 mm) fire department hose outlet. Outlet caps shall have a predrilled 1/8-inch (3.2 mm) hole for pressure relief and be secured with a short length of chain or cable to prevent falling after removal. Listed equipment shall be used.

429.8.2 Hose stations. Hose stations on required standpipes shall be provided at spacing not to exceed 100 feet, with the first hose station located as close as practicable to the land end of the *pier*. Each hose station shall have 100 feet of 1-1/2-inch hose mounted on a reel or rack and enclosed within an approved cabinet. A valved 2-1/2-inch fire department hose outlet shall be provided at each hose station. Outlet caps shall have a 1/8-inch predrilled hole for pressure relief and be

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

secured with a short length of chain or cable to prevent falling after removal. Listed equipment shall be used. Hose stations shall be labeled FIRE HOSE-EMERGENCY USE ONLY.

429.8.3 Freeze protection. Standpipe systems shall be maintained dry when subject to freezing temperatures, and always from November 1 through March 31. The 1-1/2-inch hose stations shall be tagged out of service when the system is drained. The main water supply control valve shall be readily accessible and clearly labeled so that the system may be quickly restored to full service during periods when the system is drained down.

Exception: Other methods of freeze protection, such as listed freeze valves, are permitted to be provided when approved by the fire code official.

429.9 Automatic sprinklers.

429.9.1 Covered boat moorage. Automatic sprinklers shall be provided for covered boat moorage exceeding 500 square feet in projected roof area per pier, wharf or float.

The sprinkler system shall be designed and installed in accordance with NFPA 13 for Extra Hazard Group 2 occupancy.

If sprinklers are required by this section, they shall be extended to any structure on the pier, wharf or float exceeding 500 square feet in projected roof area.

429.9.2 Substructure. Automatic sprinklers shall be installed under the substructure of every new waterfront structure in accordance with NFPA 307 and as specified in Chapter 9.

Exception: Sprinklers are not required in the following locations:

1. Combustible substructures whose deck area does not exceed 8,000 square feet (743.2 m²) supporting no superstructures.
2. Combustible substructures whose deck area does not exceed 8,000 square feet (743.2 m²) supporting superstructures not required to be provided with an approved automatic sprinkler system as specified in Section 429.9.3.
3. Noncombustible substructures with or without superstructures.
4. Substructures, over other than tidal water, where sprinkler heads cannot be installed with a minimum clearance of 4 feet (1219 mm) above mean high water.
5. Substructures resulting from walkways or finger piers that do not exceed 10 feet (3048 mm) in width.

429.9.3 Superstructure. Automatic sprinklers shall be provided in superstructures as required by Chapter 9.

429.9.4 Monitoring. Sprinkler systems shall be monitored by an approved central station service.

429.10 Smoke and heat vents. Approved automatic smoke and heat vents shall be provided in covered boat moorage areas exceeding 2,500 square feet (232 m²) in area, excluding roof overhangs.

Exception: Smoke and heat vents are not required in areas protected by automatic sprinklers.

429.10.1 Design and installation. Where smoke and heat vents are required they shall be installed near the roof peak, evenly distributed and arranged so that at least one vent is over each covered berth. The effective vent area shall be calculated using a ratio of one square foot of vent to every 15 square feet of covered berth area (1:15). Each vent shall provide a minimum opening size of 4 feet by 4 feet.

429.10.2 Automatic operation. Smoke and heat vents shall operate automatically by actuation of a heat-responsive device rated at between 100°F (56°C) and 220°F (122°C) above ambient.

Exception: Gravity-operated drop out vents.

429.10.3 Gravity-operated drop out vents. Gravity operated dropout vents shall fully open within five minutes after the vent cavity is exposed to a simulated fire represented by a time-temperature gradient that reaches an air temperature of 500°F (260°C) within five minutes.

429.11 Draft curtains. Draft curtains shall be provided in covered boat moorage areas exceeding 2,500 square feet (232 m²) in area, excluding roof overhangs.

Exception: Draft curtains are not required in areas protected by automatic sprinklers.

429.11.1 Draft curtain construction. Draft curtains shall be constructed of sheet metal, gypsum board or other approved materials that provide equivalent performance to resist the passage of smoke. Joints and connections shall be smoke tight.

429.11.2 Draft curtain location and depth. The maximum area protected by draft curtains shall not exceed 2,000 square feet (186 m²) or two slips or berths, whichever is smaller. Draft curtains shall not extend past the piling line. Draft curtains shall have a minimum depth of 2 feet (609 mm) below the lower edge of the roof and shall not extend closer than 8 feet (2438 mm) to the walking surface on the pier.

429.12 Fire department connections. Standpipe and sprinkler systems shall be equipped with not less than a two-way 2-1/2-inch fire department connection, which shall be readily visible and located at the fire department apparatus access. The fire

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

department connection for Class I standpipe systems may be located at the shore end of the pier, wharf, or float if the distance between the fire apparatus access road and fire department connection is less than 150 feet (45 720 mm). See Section 507 of the International Fire Code for requirements for fire hydrants.

429.13 Marina fire protection confidence testing. Standpipe and sprinkler systems shall be inspected and tested in compliance with the *International Fire Code*.

429.14 Fire department access. Fire department apparatus access lanes, not less than 20 feet wide and capable of supporting a 50,000-pound vehicle or 24,000 pounds per axle (HS20 loading), shall be provided and so located as to provide fire department apparatus access to within 50 feet travel distance to the shore end of all piers, wharves and floats.

**[S] SECTION 430
PRIVATE AND UTILITY TRANSFORMER VAULTS**

Note: Seattle City Light may have additional standards that supersede the requirements in this section.

430.1 Scope. Vaults housing private and utility transformers shall comply with the provisions of this chapter and Article 450 of the *Seattle Electrical Code*. The provisions of this chapter are minimum standards for all transformer vaults. Vaults containing utility transformers or equipment are required to comply with additional requirements of Seattle City Light.

430.2 When required.

430.2.1. Utility transformers. Transformer vaults are required for all utility transformers located inside a building. Seattle City Light shall approve the size, location, and layout of all utility vaults.

Exception: Vaults are not required for certain dry-type transformers rated 600 volts or less.

430.2.2 Private transformers. Transformer vaults are required for all oil-insulated private transformers. Vaults are required for other private transformers rated over 35,000 volts that are located inside a building.

Exception: Vaults are not required for certain oil-insulated private transformers in accordance with Sections 450.26 and 450.27 of the *Seattle Electrical Code*.

Note: Article 450, Part II of the *Seattle Electrical Code* contains requirements for transformers not required to be in a vault.

430.3 Access to transformer vaults.

430.3.1 General access. At least one door or hatch shall be provided in every vault. The opening shall be adequate in size to permit the installation and removal of the equipment located in the vault, and shall be kept unobstructed at all times. An unobstructed level area shall be provided at the entrance to all vaults. The level area shall be large enough to allow for movement of the transformer and equipment into and out of the vault.

430.3.2 Utility transformer vault access. *Utility transformer vaults* shall be accessible to Seattle City Light personnel at all times. If it is necessary to pass through locked doors to reach a vault, keys to those doors shall be kept in a key box that can be opened with the key to the transformer vault. The key box shall be mounted near the first door requiring a non-transformer door key. Persons other than Seattle City Light personnel shall not have access to *utility transformer vaults* without Seattle City Light personnel present.

All doors between the vault and the building exterior shall be large enough to accommodate the placement or removal of transformers. See Section 430.6 for doorway requirements.

Utility transformer vaults shall be located so that there is an equipment access path between the vault and the building exterior. The path shall comply with the following.

1. Sufficient horizontal and vertical clearance for the required transformer shall be provided;
2. The floor shall be smooth, without seams or ridges to impede transportation of heavy equipment;
3. There shall not be excessive slope as determined by Seattle City Light; and
4. The floor shall be designed to support the weight of the transformer and all equipment needed to move the transformer.

If Seattle City Light determines that it is infeasible to design a path in the prescribed manner, the building owner shall enter into a Transportation Agreement with Seattle City Light. The Transportation Agreement obligates the building owner to transport equipment between the right of way and the transformer vault whenever the Superintendent of Seattle City Light determines it is necessary, and to pay all costs for equipment transportation.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Note: The Transportation Agreement is a measure of last-resort and permitted only with prior Seattle City Light approval. A viable path for equipment transportation between the right-of-way and the transformer vault should be a primary design consideration.

430.4 Location of transformer vaults. Transformer vaults shall be located where they can be ventilated to the outside air without using flues or ducts wherever such an arrangement is practicable. Transformer vaults shall be dry and not subject to running, standing or infiltration of water.

Transformer vaults shall not be located where they are subject to flooding due to ground water without specific written approval by Seattle City Light.

430.5 Construction.

430.5.1 Private transformer vaults. Private transformer vaults shall comply with the following minimum requirements.

1. All private transformer vaults shall be of at least three-hour fire-resistive construction.

Exception: Subject to the approval of the building official, where the total capacity of private oil-insulated transformers does not exceed 112-1/2 kVA, the vault is permitted to be constructed of reinforced concrete not less than 4 inches (102 mm) thick.

2. Vault floors in contact with the earth shall be of concrete not less than 4 inches thick.
3. The transformer shall be anchored to inserts embedded in the concrete floor.
4. In pre-tensioned or post-tensioned concrete, cable locations shall be permanently marked on the surface of the concrete over the encased tendons.
5. Vault dimensions shall be adequate for required ventilation and working clearances.

430.5.2 Utility transformer vaults. Utility transformer vaults shall comply with the following minimum requirements. The Superintendent of Seattle City Light is authorized to adjust the requirements of this Section 430.5.2 when deemed necessary.

1. Floors, walls and ceilings of utility transformer vaults shall have at least a three-hour fire-resistance rating and shall be constructed of solid concrete or concrete-filled concrete masonry units at least 6 inches (152 mm) thick.
2. Vault floors shall be smooth with no pads.
3. Seismic anchor inserts shall be embedded in the floor and steel support channels shall be embedded in the ceiling when required by the Superintendent of Seattle City Light.
4. Pre-tensioned or post-tensioned concrete shall have the cable locations permanently marked on the surface of the concrete over the encased tendons.
5. Vault dimensions shall depend upon physical size and number of secondary connection devices, working clearances, and shall be approved by the Superintendent of Seattle City Light.

430.6 Openings into transformer vaults. Transformer vault openings shall comply with this section and Sections 705.8.2 and 705.8.3.

430.6.1 Protection of openings. All doorways opening into a transformer vault from the building interior shall be protected by opening protectives having a fire-protection rating equal to that required for the vault.

430.6.2 Doorways. All doors shall be made of three-hour fire-resistance-rated steel and shall swing out of the vault 180 degrees. Doors that may be prevented from swinging 180 degrees outward as a result of blockage by vehicles or mobile equipment shall be protected by bollards. The bollards shall preserve the door swing area and shall not obstruct the doorway. Equipment access doorways shall be sized to accommodate the transformer placement and removal including the equipment necessary to place or remove the transformer.

Equipment access doorways to vaults containing only single-phase utility transformers shall have clear openings no less than 42 inches (1067 mm) wide and 6 feet 8 inches (2057 mm) high. Equipment access doorways for all other utility transformers shall be sized to accommodate the transformer placement and as specified by Seattle City Light to allow equipment installation and removal.

Doorways for personnel access shall have clear openings of at least 36 inches (914 mm) wide and 6 feet 8 inches (2057 mm) high.

430.6.2.1 Locks. All doors shall be equipped with locks and shall be kept locked. Doors to utility transformer vaults shall be equipped with a cylinder capable of accepting the core provided by the utility. Personnel doors shall be equipped with panic bars, pressure plates, or other devices that are normally latched but open under simple pressure.

430.6.2.2 Oil containment sill. A removable oil containment sill shall be as high as necessary to contain the oil of one transformer but in no case less than 4 inches (203 mm) high or as specified by Seattle City Light for utility transformers. A sill shall be installed within the vault at each doorway after the installation of the transformer.

430.7 Ventilation systems for transformer vaults.

430.7.1 General. Ventilation systems shall be provided to dispose of heat from transformer total losses without creating a temperature rise that exceeds the transformer rating.

430.7.2 Method of ventilation. Ventilation shall be provided by either natural circulation or mechanical circulation.

430.7.2.1 Natural circulation. Transformer vaults containing up to three transformers of no more than 75 kVA each are permitted to be ventilated by natural circulation. The combined minimum net intake and exhaust vent area, exclusive of area occupied by screens, grating or louvers, shall not be less than 3 square inches (1935 mm²) per kVA of transformer capacity. The total required area shall be divided roughly equally between intake and exhaust. In no case shall either the intake or exhaust area be less than 72 square inches (46 452 mm²).

Approximately one half the total area required for ventilation openings shall be for intake air. Intake air vents shall be located in one or more openings in the lower portion of the perimeter vault walls. When the vault is located in a garage, any lower openings must be at least 18 inches above the garage floor level. The remaining one-half of the required ventilation area shall be used to exhaust heat through one or more openings in the upper portion of the perimeter walls or roof of the vault. Intake openings shall be located on the opposite side of the vault from exhaust openings allowing air to flow longitudinally over the transformer and out of the vault.

430.7.2.2 Mechanical circulation. Positive or negative pressure ventilation systems shall supply a minimum of 1.6 cfm (0.76 L/s) of air per kVA of transformer capacity. The fans shall be installed outside of the vault and shall be controlled by a thermostat located inside the vault.

The intake vents shall be located in the lower one-half of the perimeter walls of the vault. When the vault is located in a public garage or loading dock, any lower intake openings must be at least 18 inches above the garage floor level and at least 18 inches above the vault floor.

The exhaust vents shall be in the roof or ceiling of the vault. Vents are allowed to be installed in a wall if the top of the vent is not less than 12 inches below the vault ceiling. The top of the outlet on the exterior of the building shall be at least as high as the top of the outlet from the vault.

The ventilation system shall cause air to flow longitudinally across the transformers. The vault ventilation system shall be controlled independently from the rest of the building ventilation.

For utility transformer vaults, mechanical ventilation systems shall be designed by the applicant. The capacity and location of the ventilation system shall be approved by the Superintendent of Seattle City Light.

430.7.2.3 Temperature control. A remote temperature controller shall be installed in utility transformer vaults that have mechanical ventilation systems. The controller shall activate the fan when the temperature in the vault exceeds 70°F (21°C), and shall turn the fan off when the temperature reaches 140°F (60°C).

A visible or audible alarm shall be installed outside each utility transformer vault that will be activated if the fan does not operate when the temperature controller calls for ventilation, or if the fan becomes inoperable. A sign shall be mounted near the alarm stating CALL SEATTLE CITY LIGHT WHEN ALARM SOUNDS or CALL SEATTLE CITY LIGHT WHEN LIGHT IS ON.

430.7.3 Ventilation openings and duct terminations. Ventilation openings and duct terminations shall comply with *International Mechanical Code* Section 501.3.1 item 7, unless otherwise approved by the building official.

430.7.3.1 Location of exhaust ventilation openings and exhaust duct terminations. Exhaust ventilation openings and duct terminations shall be located not less than 10 feet (3048 mm) from fire escapes, required means of egress at the exterior of the building, elements of the exit discharge, combustible exterior wall coverings, openings that are not protected in accordance with Section 705.8, operable openings and property lines other than a public way and above finished walking surfaces. Exhaust outlets shall be located on the exterior of the building.

Interpretation I430.7: For purposes of this section, “property line” includes any property line separating one lot from another lot, but does not include any property line separating a lot from a public street or alley right-of-way. The separation distance may be measured to the opposite side of public streets and alleys.

430.7.3.2 Covering. Ventilation openings shall be covered with durable metal gratings, screens or louvers. If operable intake louvers are provided on mechanically ventilated transformer vaults, the louvers shall be controlled by the fan thermostat; i.e., the louvers shall be opened when the fan is energized.

430.7.3.3 Opening protection. Intake ventilation openings in the vault walls on the interior and exterior of the building shall be protected by automatic closing fire dampers having a fire-protection rating at least equal to that required for the vault. The actuating device on the fire damper shall be made to function at a temperature of 165°F (74°C).

430.7.3.4 Ventilation ducts. Exhaust ventilation ducts, if used, shall be enclosed in construction having a fire-resistance rating at least equal to that required for the vault. Exhaust ducts shall extend from the vault to the outside of the building.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

An exhaust duct for a mechanically ventilated vault shall be used exclusively for ventilating the vault. No fire dampers shall be installed in exhaust ventilation ducts.

430.8 Drainage for vaults.

430.8.1 General. Drains are prohibited in all transformer vaults.

430.8.2 Sumps. All transformer vaults containing oil-insulated transformers shall have a dry sump. All sumps shall have an opening of at least 6 inches (152 mm) diameter, a depth of at least 12 inches (305 mm), and shall be equipped with a removable steel grate that is flush with the floor. Sumps shall have at least an 8 gallon (30 liter) capacity. Sump capacity may be greater where required by the utility. The sump shall have a grouted bottom. The sump shall be located near, but not directly behind, the personnel door and shall be out of the entry path for moving transformers in and out of the vault. The vault floor shall slope at least 1 inch in 10 feet (25 mm in 3048 mm) toward the sump.

430.9 Pipes and ducts in transformer vaults. No pipes or ducts foreign to the electrical installation shall enter or pass through any transformer vault. Electrical conduits terminating at transformer vaults shall be sealed with listed three-hour fire-protection rated firestop material. Electrical conduits terminating at transformer vaults shall be installed to avoid channeling water into the vault. Electrical conduits entering the vault floor shall be rigid galvanized steel and shall extend no less than 18 inches (457 mm) into the vault or to the top of the containment sill, whichever is greater.

430.10 Storage in transformer vaults. No material shall be stored in any transformer vault.

430.11 Sprinkler systems. Sprinkler systems shall not be installed within a transformer vault. The vault must be maintained in a dry condition at all times.

CHAPTER 5

GENERAL BUILDING HEIGHTS AND AREAS

User note:

About this chapter: Chapter 5 establishes the limits to which a building can be built. Building height, number of stories and building area are specified in this chapter. Chapter 5 must be used in conjunction with the occupancies established in Chapter 3 and the types of construction established in Chapter 6. This chapter also specifies the impact that mezzanines, accessory occupancies and mixed occupancies have on the overall size of a building.

SECTION 501 GENERAL

501.1 Scope. The provisions of this chapter control the height and area of structures hereafter erected and *additions to existing structures*.

SECTION 502 BUILDING ADDRESS

[S][F] 502.1 Address identification. New and existing buildings shall be provided with *approved* address identification. The address identification shall be legible and placed in a position that is visible from the street or road fronting the property. Address identification characters shall contrast with their background. Address numbers shall be Arabic numbers or alphabetical letters. Numbers shall not be spelled out. Each character shall be a minimum of 4 inches (102 mm) high with a minimum stroke width of 1/2 inch (12.7 mm). Where required by the fire code official, address identification shall be provided in additional approved locations to facilitate emergency response. Where access is by means of a private road and the building address cannot be viewed from the public way, a monument, pole or other approved sign or means shall be used to identify the structure. Address identification shall be maintained.

502.1.1 Enforcement by building official. The *building official* shall determine the address of any property in the City in accordance with the numbering system established in this chapter.

Whenever the irregularity of plats, the changing direction of streets, avenues, or other highways, the interruption of the continuity of highways or any other condition causes doubt or difference of opinion as to the correct number of any piece of property or any building thereon, the number shall be determined by the *building official*. The *building official* shall be guided by the specific provisions of this chapter as far as they are applicable and when not applicable, by such rules as are established to carry out the intent of this chapter.

502.1.1.1 Owners to affix and maintain building numbers. The owner of any *building* or other structure shall maintain the street number of each *building* and structure in a conspicuous place over or near the principal street entrance or entrances, or in other conspicuous places as is necessary for the easy locating of such address.

Exception: Where there are multiple *buildings* on a site, the *building official* is permitted to waive the requirement for posting an address on appurtenant or accessory buildings where individual identification of each building is not essential.

Where a property has frontage along more than one named street, or for any other property, where there may be confusion regarding the address of a *building* or *structure*, the *building official* is permitted to require the complete address, including street number and street name to be conspicuously posted.

For *buildings* served by a private road or a common driveway, the address number(s) shall be posted at the head of the road or driveway in a manner that can be easily read from the intersecting street. Where the existing street grid may not adequately allow for the assignment of street addresses that will promote the easy locating of such addresses, or for any other reason consistent with the intent of this chapter, the *building official* is permitted to assign a name to the private road or common driveway that shall be used for addressing purposes. In addition, the *building official* is permitted to require one or more property owners along the road or driveway to post a sign displaying the assigned name at a location near the intersection of the road or driveway with a named public street.

If the *building official* finds that a *building*, structure or premises is not provided with numbers as herein required, or is not correctly numbered, the *building official* is permitted to notify the owner, agent or tenant of the correct street number and require that the number be properly placed, in accordance with the provisions of this chapter, within a reasonable length of time. It is a violation of this code for any *person* to fail to comply with such notice.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

502.1.2 Numbering system prescribed. The numerical designation of all doorways and entrances to buildings and lots fronting upon the named right-of-ways of the City are established in accordance with the following system:

Except where otherwise specified, 100 numbers are allotted to each block, provided that where a named right-of-way intervenes between consecutively numbered right-of-ways, 50 numbers shall be allotted for each block. One whole number is allotted to each 20 feet (6096 mm) of frontage in each block; even numbers shall be used on the northerly side of named right-of-ways extending in an easterly and westerly direction and on the easterly side of named right-of-ways extending in a northerly and southerly direction. Odd numbers shall be used on the southerly side of named right-of-ways extending in an easterly and westerly direction and on the westerly side of named right-of-ways extending in a northerly and southerly direction.

In the case of irregular named right-of-ways, the frontages shall be numbered as near as may be according to the uniform series of block numbers with which they most nearly correspond.

502.1.3 Numbering of buildings

502.1.3.1 Numbering of buildings downtown. Between Yesler Way and Denny Way all frontages upon named right-of-ways extending in a northerly and southerly direction and lying west of Broadway, East Union Street, Minor Avenue and Melrose Avenue shall be numbered as follows:

Yesler Way to Fir Street number 100 and upwards, Fir Street to Spruce Street number 150 and upwards, Spruce Street to Alder Street number 200 and upwards, continuing by consecutive hundreds to Pine Street; Pine Street to Olive Way number 1600 and upwards, Olive Way to Howell Street number 1700 and upwards, Howell Street to Stewart Street number 1800 and upwards, Stewart Street to Virginia Street number 1900 and upwards, continuing by consecutive hundreds to Denny Way.

Between East Yesler Way and East Denny Way all frontages upon named right-of-ways extending in a northerly and southerly direction and lying east of Broadway, East Union Street, Minor Avenue and Melrose Avenue shall be numbered as follows:

East Yesler Way to East Fir Street number 100 and upwards, East Fir Street to East Spruce Street number 150 and upwards, East Spruce Street to East Alder Street number 200 and upwards, continuing by consecutive hundreds to East Marion Street; East Marion Street to East Spring Street number 900 and upwards, East Spring Street to East Union Street number 1100 and upwards, East Union Street to East Pike Street number 1400 and upwards, continuing by consecutive hundreds to East Denny Way.

Between East Yesler Way and East Denny Way all frontages upon named right-of-ways extending in an easterly and westerly direction and lying west of Broadway, East Union Street, Minor Avenue and Melrose Avenue shall be numbered as follows:

Southwesterly from Elliott Avenue, or Alaskan Way if south of Lenora Street, number 51 and downwards; Elliott Avenue (or Alaskan Way) to Western Avenue number 52 and upwards; Western Avenue to First Avenue number 76 and upwards; First Avenue to Second Avenue number 100 and upwards, continuing northeasterly to Broadway, East Union Street, Minor Avenue, or Melrose Avenue by consecutive hundreds.

Between East Yesler Way and East Denny Way all frontages upon named right-of-ways extending in an easterly and westerly direction and lying east of Broadway, East Union Street, Minor Avenue and Melrose Avenue shall be numbered as follows:

Melrose Avenue to Bellevue Avenue number 300 and upwards, Bellevue Avenue to Summit Avenue number 400 and upwards, continuing by consecutive hundreds to Broadway.

Broadway to Tenth Avenue number 900 and upwards, Tenth Avenue to Eleventh Avenue number 1000 and upwards, continuing by consecutive hundreds corresponding with the numbered series of avenues eastward to Lake Washington.

On East Olive Way eastward from Melrose Avenue, the street numbers shall run upwards consecutively, eastward from the existing street numbers that are west of the Melrose Avenue intersection.

502.1.3.2 Numbering of buildings south of downtown and east of the East Waterway. South of Yesler Way the frontages upon the named right-of-ways extending in a northerly and southerly direction shall be numbered as follows:

Yesler Way (or East Yesler Way) to South Washington Street number 100 and upwards, South Washington Street to South Main Street number 200 and upwards, South Main Street to South Jackson Street number 300 and upwards, South Jackson Street to South King Street number 400 and upwards, continuing by consecutive hundreds to South Barton Place, with blocks and streets on Rainier Avenue South being taken as the controlling series.

South of South Barton Place, 51st Avenue South shall be taken as the controlling series to the southern City limits.

On Second Avenue Extension South from Fourth Avenue South to Yesler Way, the frontages shall be numbered as follows:

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

From Fourth Avenue South to South Jackson Street number 100 and upwards, South Jackson Street to South Main Street number 200 and upwards, South Main Street to South Washington Street number 300 and upwards, South Washington Street to Yesler Way number 400 and upwards.

South of Yesler Way the frontages upon named right-of-ways extending in an easterly and westerly direction shall be numbered as follows:

Westward from First Avenue South to the Harbor Line or East Waterway number 99 and downwards, First Avenue South to Occidental Avenue South number 100 and upwards, Occidental Avenue South to Second Avenue South number 150 and upwards, Second Avenue South to Third Avenue South number 200 and upwards, continuing by consecutive hundreds to Sixth Avenue South; Sixth Avenue South to Maynard Avenue South number 600 and upwards, Maynard Avenue South to Seventh Avenue South number 650 and upwards, Seventh Avenue South to Eighth Avenue South (or Airport Way south of South Hinds Street) number 700 and upwards, Eighth Avenue South (or Airport Way south of South Hinds Street) to Airport Way South (or Ninth Avenue South of South Hinds Street) number 800 and upwards, Airport Way South (or Ninth Avenue South of South Hinds Street) to Interstate Highway 5 number 900 and upwards, continuing eastward by consecutive hundreds corresponding with the numbered series of avenues to Lake Washington.

502.1.3.3 Numbering of buildings between downtown and the Lake Washington Ship Canal. North of Denny Way, East Denny Way, and East Howell Street east of Madrona Drive the frontages upon the named right-of-ways extending in a northerly and southerly direction shall be numbered as follows:

Denny Way (and East or West Denny Way) to John Street (and East or West John Street) number 100 and upwards, continuing by consecutive hundreds, the blocks and streets on Queen Anne Avenue North being taken as a controlling series for numbering purposes west of Fairview Avenue North (or Fairview Avenue East) and south of Bertona Street (or West Bertona Street); 36th Avenue West being taken as the controlling series for numbering purposes west of Fairview Ave North (or Fairview Ave East) and north of Bertona Street (or West Bertona Street); Tenth Avenue East being taken as the controlling series for numbering purposes east of Fairview Avenue North (or Fairview Avenue East).

Between Queen Anne Avenue North and Eastlake Avenue East (East Galer being the northeast boundary of this subsection) the frontages on the named right-of-ways extending in an easterly and westerly direction shall be numbered as follows:

Queen Anne Avenue North to First Avenue North number 1 and upwards, First Avenue North to Warren Avenue North number 100 and upwards, Warren Avenue North to Second Avenue North number 150 and upwards, Second Avenue North to Third Avenue North number 200 and upwards, continuing by consecutive hundreds corresponding to the numbered series of avenues with half hundreds in the case of Nob Hill, Taylor, Bigelow, Mayfair, and Dexter Avenues North, to Ninth Avenue North; Ninth Avenue North to Westlake Avenue North number 900 and upwards, Westlake Avenue North to Terry Avenue North number 950 and upwards, Terry Avenue North to Boren Avenue North number 1000 and upwards, Boren Avenue North to Fairview Avenue North number 1100 and upwards, Fairview Avenue North to Minor Avenue North number 1150 and upwards, Minor Avenue North to Pontius Avenue North number 1200 and upwards, Pontius Avenue North to Yale Avenue North number 1250 and upwards, Yale Avenue North to Eastlake Avenue East number 1300 and upwards.

East of Eastlake Avenue East (or Fairview Avenue East north of East Galer Street) and North of East Denny Way the frontages upon the named east-west right-of-ways extending in an easterly and westerly direction shall be numbered as follows:

Eastlake Avenue East to Melrose Avenue East number 200 and upwards continuing by consecutive hundreds eastward to Broadway East; Broadway East to Tenth Avenue East number 900 and upwards, Tenth Avenue East to Federal Avenue East number 1000 and upwards, Federal Avenue East to Eleventh Avenue East number 1050 and upwards, Eleventh Avenue East to Twelfth Avenue East number 1100 and upwards, continuing by consecutive hundreds eastward to Lake Washington.

West of Queen Anne Avenue North the frontages upon named east-west right-of-ways extending in an easterly and westerly direction shall be numbered westward as follows:

Queen Anne Avenue North to First Avenue West number 1 and upwards, First Avenue West to Second Avenue West number 100 and upwards, continuing by consecutive hundreds westward.

502.1.3.4 Numbering of buildings north of the Lake Washington Ship Canal. The plan for the numbering of frontages upon the various named right-of-ways in that portion of the City of Seattle lying north of the Lake Washington Ship Canal is established as follows:

The frontages upon the named right-of-ways extending in a northerly and southerly direction shall be numbered in accordance with the designations of the intersecting numbered streets as follows: northward from the State Harbor Line, number 2900 and upwards.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

The frontages upon the named right-of-ways extending in an easterly and westerly direction shall be numbered as follows:

West from First Avenue Northwest, commencing with 100, and continuing west in correspondence with the numbers of the avenues to Puget Sound.

East from First Avenue Northwest, commencing with 100 and continuing as follows: East from Palatine Avenue North, 200 and upwards; from Greenwood Avenue North, 300 and upwards; from Phinney Avenue North, 400 and upwards; from Francis Avenue North, 450 and upwards; from Dayton Avenue North, 500 and upwards; from Evanston Avenue North, 600 and upwards; from Fremont Avenue North, 700 and upwards; from North Park Avenue North, 800 and upwards; from Linden Avenue North, 900 and upwards (800 and upwards south of North 65th Street); from Aurora Avenue North, 900 and upwards (1100 and upwards north of North 65th Street); from Winslow Place North, 950 and upwards; from Whitman Avenue North 1000 and upwards; from Albion Place North, 1050 and upwards; from Woodland Park Avenue North, 1100 and upwards; from Nesbit Avenue North, 1150 and upwards; from Midvale Avenue North, 1200 and upwards; from Lenora Place North, 1250 and upwards; from Stone Avenue North (Stone Way North south of North 46th Street), 1300 and upwards; from Interlake Avenue North, 1400 and upwards; from Ashworth Avenue North, 1500 and upwards; from Carr Place North, 1550 and upwards; from Woodlawn Avenue North, 1600 and upwards, from Densmore Avenue North, 1700 and upwards; from Caroline Avenue North and Courtland Place North, 1750 and upwards; from Wallingford Avenue North, 1800 and upwards; from Burke Avenue North and Canfield Place North, 1900 and upwards; From Stroud Avenue North and Wayne Place North, 2000 and upwards; from Meridian Avenue North, 2100 and upwards; from Bagley Avenue North, 2200 and upwards; from Corliss Avenue North, 2300 and upwards; from Sunnyside Avenue North, 2400 and upwards; and from Eastern Avenue North, 2500 and upwards.

East from First Avenue Northeast, commencing with 100, and continuing east in correspondence with the numbered avenues to Lake Washington.

502.1.3.5 Numbering buildings on Harbor Island. The frontages upon named right-of-ways extending in a northerly and southerly direction shall be numbered as follows:

Southwest Massachusetts Street to Southwest Florida Street, number 1700 and upwards; Southwest Florida Street to Southwest Lander Street, number 2500 and upwards; Southwest Lander Street to Southwest Hanford Street, number 2700 and upwards; Southwest Hanford Street to Southwest Spokane Street, number 3200 and upwards.

The frontages upon named right-of-ways extending in an easterly and westerly direction shall be numbered as follows:

The East Waterway to 11th Avenue Southwest, number 900 and upwards; 11th Avenue Southwest to 13th Avenue Southwest, number 1100 and upwards; 13th Avenue Southwest to 16th Avenue Southwest, number 1300 and upwards; 16th Avenue Southwest to the West Waterway, number 1600 and upwards.

502.1.3.6 Numbering buildings west of the West Waterway and the Duwamish Waterway. The frontages upon named right-of-ways extending in a northerly and southerly direction, shall be numbered as follows:

North of Southwest Andover Street, commencing with 3800 and continuing north to the Duwamish Head by consecutive hundreds, the blocks and streets on California Avenue Southwest being taken as the controlling series for numbering purposes.

South of Southwest Andover Street, commencing with 4000 and continuing south to Southwest Roxbury Street by consecutive hundreds, the blocks and streets of California Avenue Southwest being taken as the controlling series for numbering purposes.

South of Southwest Roxbury Street, commencing with 9600 and continuing south to the south City limits by consecutive hundreds, in correspondence with the numbers of the intersecting streets.

The frontages upon named right-of-ways extending in an easterly and westerly direction, shall be numbered as follows:

West of California Avenue Southwest, commencing with 4300 and continuing westward in correspondence with the numbers of the intersecting avenues to Puget Sound.

East of California Avenue Southwest, commencing with 4200 and continuing eastward in correspondence with the numbers of the intersecting avenues to the Duwamish Waterway.

SECTION 503 GENERAL BUILDING HEIGHT AND AREA LIMITATIONS

503.1 General. Unless otherwise specifically modified in Chapter 4 and this chapter, *building height*, number of *stories* and *building area* shall not exceed the limits specified in Sections 504 and 506 based on the type of construction as determined by Section 602 and the occupancies as determined by Section 302 except as modified hereafter. *Building height*, number of

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

stories and *building area* provisions shall be applied independently. For the purposes of determining area limitations, height limitations and type of construction, each portion of a building separated by one or more *fire walls* complying with Section 706 shall be considered to be a separate building.

503.1.1 Special industrial occupancies. Buildings and structures designed to house special industrial processes that require large areas and unusual *building heights* to accommodate cranes or special machinery and equipment, including, among others, rolling mills; structural metal fabrication shops and foundries; or the production and distribution of electric, gas or steam power, shall be exempt from the *building height*, number of *stories* and *building area* limitations specified in Sections 504 and 506.

503.1.2 Buildings on same lot. Two or more buildings on the same lot shall be regulated as separate buildings or shall be considered as portions of one building where the *building height*, number of *stories* of each building and the aggregate *building area* of the buildings are within the limitations specified in Sections 504 and 506. The provisions of this code applicable to the aggregate building shall be applicable to each *building*.

503.1.3 Type I construction. Buildings of Type I construction permitted to be of unlimited tabular *building heights and areas* are not subject to the special requirements that allow unlimited area buildings in Section 507 or unlimited *building height* in Sections 503.1.1 and 504.3 or increased *building heights and areas* for other types of construction.

503.1.4 Occupied roofs. A roof level or portion thereof shall be permitted to be used as an occupied roof provided the occupancy of the roof is an occupancy that is permitted by Table 504.4 for the *story* immediately below the roof. The area of the occupied roofs shall not be included in the *building area* as regulated by Section 506. An occupied roof shall not be included in the *building height* or number of *stories* as regulated by Section 504, provided that the *penthouses* and other enclosed *rooftop structures* comply with Section 1511.

Exceptions:

1. The occupancy located on an occupied roof shall not be limited to the occupancies allowed on the *story* immediately below the roof where the building is equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1 or 903.3.1.2 and occupant notification in accordance with Sections 907.5.2.1 and 907.5.2.3 is provided in the area of the occupied roof. *Emergency voice/alarm communication* system notification per Section 907.5.2.2 shall also be provided in the area of the occupied roof where such system is required elsewhere in the building.
2. Assembly occupancies shall be permitted on roofs of open parking spaces of Type I or Type II construction, in accordance with the exception to Section 903.2.1.6.

[W][S] 503.1.4.1 ((Enclosures over) Enclosure of occupied roof areas. Elements or structures enclosing the occupied roof areas shall not extend more than 48 inches (1220 mm) above the surface of the occupied roof.

Exceptions:

1. *Penthouses* constructed in accordance with Section 1511.2 and towers, domes, spires and cupolas constructed in accordance with Section 1511.5.
2. *High rise buildings*.

[W] 503.1.4.2 Guards. Occupied roofs shall have guards in accordance with Section 1015.2.

SECTION 504 BUILDING HEIGHT AND NUMBER OF STORIES

504.1 General. The height, in feet, and the number of *stories* of a building shall be determined based on the type of construction, occupancy classification and whether there is an *automatic sprinkler system* installed throughout the building.

Exception: The *building height* of one-story aircraft hangars, aircraft paint hangars and buildings used for the manufacturing of aircraft shall not be limited where the building is provided with an *automatic sprinkler system* or *automatic fire-extinguishing system* in accordance with Chapter 9 and is entirely surrounded by *public ways* or *yards* not less in width than one and one-half times the *building height*.

504.1.1 Unlimited area buildings. The height of unlimited area buildings shall be designed in accordance with Section 507.

504.1.2 Special provisions. The special provisions of Section 510 permit the use of special conditions that are exempt from, or modify, the specific requirements of this chapter regarding the allowable heights of buildings based on the occupancy classification and type of construction, provided the special condition complies with the provisions specified in Section 510.

504.2 Mixed occupancy. In a building containing mixed occupancies in accordance with Section 508, no individual occupancy shall exceed the height and number of *story* limits specified in this section for the applicable occupancies.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

504.3 Height in feet. The maximum height, in feet, of a building shall not exceed the limits specified in Table 504.3.

Exception: Towers, spires, steeples and other *rooftop structures* shall be constructed of materials consistent with the required type of construction of the building except where other construction is permitted by Section 1511.2.4. Such structures shall not be used for habitation or storage. The structures shall be unlimited in height where of noncombustible materials and shall not extend more than 20 feet (6096 mm) above the allowable *building height* where of combustible materials (see Chapter 15 for additional requirements).

	S	UL	180	85	75	85	75	270	180	85	85	70	60

For SI: 1 foot = 304.8 mm.

UL = Unlimited; NS = Buildings not equipped throughout with an automatic sprinkler system; S = Buildings equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1; S13R = Buildings equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.2; S13D = Buildings equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.3.

- a. See Chapters 4 and 5 for specific exceptions to the allowable height in this chapter.
- b. See Section 903.2 for the minimum thresholds for protection by an automatic sprinkler system for specific occupancies.
- c. New Group H occupancies are required to be protected by an automatic sprinkler system in accordance with Section 903.2.5.
- d. The NS value is only for use in evaluation of existing building height in accordance with the *International Existing Building Code*.
- e. New Group I-1 and I-3 occupancies are required to be protected by an automatic sprinkler system in accordance with Section 903.2.6. For new Group I-1 occupancies Condition 1, see Exception 1 of Section 903.2.6.
- f. New and existing Group I-2 occupancies are required to be protected by an automatic sprinkler system in accordance with Section 903.2.6 and Section 1103.5 of the *International Fire Code*.
- g. For new Group I-4 occupancies, see Exceptions 2 and 3 of Section 903.2.6.
- h. New Group R occupancies are required to be protected by an automatic sprinkler system in accordance with Section 903.2.8.
- i. I-1, Condition 2 Assisted living facilities licensed per chapter 388-78A WAC and residential treatment facilities as licensed by Washington State under chapter 246-337 WAC shall be permitted to use the allowable height above grade plane for R-2 occupancies.
- j. A maximum of 12 inches of insulation may be added to the roof of an *existing building* without such additional height contributing to the *building height*.

504.4 Number of stories. The maximum number of *stories above grade plane* of a building shall not exceed the limits specified in Table 504.4.

UL = Unlimited; NP = Not Permitted; NS = Buildings not equipped throughout with an automatic sprinkler system; S = Buildings equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1; S13R = Buildings equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.2; S13D = Buildings equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.3.

- a. See Chapters 4 and 5 for specific exceptions to the allowable height in this chapter.
- b. See Section 903.2 for the minimum thresholds for protection by an automatic sprinkler system for specific occupancies.
- c. New Group H occupancies are required to be protected by an automatic sprinkler system in accordance with Section 903.2.5.
- d. The NS value is only for use in evaluation of existing *building height* in accordance with the *International Existing Building Code*.
- e. New Group I-1 and I-3 occupancies are required to be protected by an automatic sprinkler system in accordance with Section 903.2.6. For new Group I-1 occupancies, Condition 1, see Exception 1 of Section 903.2.6.
- f. New and existing Group I-2 occupancies are required to be protected by an automatic sprinkler system in accordance with Section 903.2.6 and 1103.5 of the *International Fire Code*.
- g. For new Group I-4 occupancies, see Exceptions 2 and 3 of Section 903.2.6.
- h. New Group R occupancies are required to be protected by an automatic sprinkler system in accordance with Section 903.2.8.
- i. Group I-1, Condition 2. Assisted living facilities licensed per chapter 388-78A WAC and residential treatment facilities as licensed by Washington State under chapter 246-337 WAC shall be permitted to use the allowable number of stories above grade plane for R-2 occupancies.

SECTION 505
MEZZANINES AND EQUIPMENT PLATFORMS

[W] 505.1 General. *Mezzanines* shall comply with Section 505.2. *Equipment platforms* shall comply with Section 505.3.

Exception: Lofts in Group R occupancy dwelling units and sleeping units shall be permitted to comply with Section 420.14, subject to the limitations in Section 420.14.1.

Interpretation I505.1: *Mezzanines* within individual *dwelling units* shall not be located above other *dwelling units* or common space other than corridors.

[S] 505.2 Mezzanines. A *mezzanine* or *mezzanines* in compliance with Section 505.2 shall be considered a portion of the *story* below. Such *mezzanines* shall not contribute to either the *building area* or number of *stories* as regulated by Section 503.1. The area of the *mezzanine* shall be included in determining the *fire area*. The clear height above and below the *mezzanine* floor construction shall be not less than 7 feet (2134 mm).

505.2.1 Area limitation. The aggregate area of a *mezzanine* or *mezzanines* within a room shall be not greater than ((one-third)) ~~one-third~~ one-half of the floor area of that room or space in which they are located. The enclosed portion of a room shall not be included in a determination of the floor area of the room in which the *mezzanine* is located. In determining the allowable *mezzanine* area, the area of the *mezzanine* shall not be included in the floor area of the room.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

~~((Exceptions))~~ **Exception:** ~~((1-))~~ The aggregate area of *mezzanines* in buildings and structures of Type I or II construction for special industrial occupancies in accordance with Section 503.1.1 shall be not greater than two-thirds of the floor area of the room.

- ~~((2. The aggregate area of *mezzanines* in buildings and structures of Type I or II construction shall be not greater than one-half of the floor area of the room in buildings and structures equipped throughout with an *approved automatic sprinkler system* in accordance with Section 903.3.1.1 and an *approved emergency voice/alarm communication system* in accordance with Section 907.5.2.2.~~
3. The aggregate area of a *mezzanine* within a *dwelling unit* that is located in a building equipped throughout with an *approved automatic sprinkler system* in accordance with Section 903.3.1.1 or 903.3.1.2 shall not be greater than one-half of the floor area of the room, provided that:
- 3.1. Except for enclosed closets and bathrooms, the *mezzanine* shall be open to the room in which such *mezzanine* is located;
 - 3.2. The opening to the room shall be unobstructed except for walls not more than 42 inches (1067 mm) in height, columns and posts; and
 - 3.3. Exceptions to Section 505.2.3 shall not be permitted.)

Interpretation I505.2: Only the following unenclosed areas of the room or space containing the *mezzanine* shall be used for purposes of calculating the allowable *mezzanine* floor area:

1. Areas with a ceiling height of at least 7 feet located directly below the mezzanine, except that no additional area benefit shall be gained for stacked *mezzanines*; and
2. Areas where the ceiling has a slope of less than 2:12 and with a ceiling height of at least 14 feet plus the thickness of the *mezzanine* floor construction; and
3. Areas where the ceiling has a slope of 2:12 or more and has a ceiling height of at least 12 feet plus the thickness of the *mezzanine* floor construction, provided that the *mezzanine* complies with Section 1208.2, exception 2.

Within a *dwelling unit*, enclosed or unenclosed portions of the entire floor level containing the *mezzanine* that meet requirements of this interpretation for the room area may be used for purposes of calculating the allowable *mezzanine* floor area.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

**Basis for Calculating Allowable Mezzanine Area
When Using Sloped Ceiling Provisions**

FIGURE I505.2(1)

BASIS FOR CALCULATING ALLOWABLE MEZZANINE AREA WHEN USING SLOPED CEILING PROVISIONS

**Basis for Calculating Allowable Mezzanine Area
With Other Conditions**

FIGURE I505.2(2)

BASIS FOR CALCULATING ALLOWABLE MEZZANINE AREA WITH OTHER CONDITIONS

505.2.1.1 Aggregate area of mezzanines and equipment platforms. Where a room contains both a *mezzanine* and an *equipment platform*, the aggregate area of the two raised floor levels shall be not greater than two-thirds of the floor area of that room or space in which they are located. The area of the *mezzanine* shall not exceed the area determined in accordance with Section 505.2.1.

505.2.2 Means of egress. The *means of egress* for *mezzanines* shall comply with the applicable provisions of Chapter 10.

505.2.3 Openness. A *mezzanine* shall be open and unobstructed to the room in which such *mezzanine* is located except for walls not more than 42 inches (1067 mm) in height, columns and posts.

Exceptions:

1. *Mezzanines* or portions thereof are not required to be open to the room in which the *mezzanines* are located, provided that the *occupant load* of the aggregate area of the enclosed space is not greater than 10.
2. A *mezzanine* having two or more exits or access to exits is not required to be open to the room in which the *mezzanine* is located.
3. *Mezzanines* or portions thereof are not required to be open to the room in which the *mezzanines* are located, provided that the aggregate floor area of the enclosed space is not greater than 10 percent of the allowable mezzanine area.
4. In industrial facilities, *mezzanines* used for control equipment are permitted to be glazed on all sides.
5. In occupancies other than Groups H and I, which are no more than two *stories* above grade plane and equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1, a *mezzanine* having two or more *exits* or *access to exits* shall not be required to be open to the room in which the *mezzanine* is located.

[S] 505.3 Equipment platforms. ~~((Equipment platforms in buildings shall not be considered as a portion of the floor below. Such equipment platforms shall not contribute to either the building area or the number of stories as regulated by Section 503.1. The area of the equipment platform shall not be included in determining the fire area in accordance with Section 903. Equipment platforms shall not be a part of any mezzanine and such platforms and the walkways, stairways, alternating tread~~

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

~~devices and ladders providing access to an equipment platform shall not serve as a part of the means of egress from the building.)~~ Equipment platforms and building elements supporting only the platform shall be built of materials permitted for the type of construction of the building. Equipment platforms in building shall not:

1. Be considered as a portion of the floor below.
2. Contribute to either the building area or the number of stories as regulated by Section 503.1.
3. Be included in determining the fire area in accordance with Section 903.
4. Be a part of any mezzanine.
5. Serve as a part of the means of egress from the building, including the walkways, stairs, alternating tread devices and ladders providing access to an equipment platform.

505.3.1 Area limitation. The aggregate area of all *equipment platforms* within a room shall be not greater than two-thirds of the area of the room in which they are located. Where an *equipment platform* is located in the same room as a *mezzanine*, the area of the *mezzanine* shall be determined by Section 505.2.1 and the combined aggregate area of the *equipment platforms* and *mezzanines* shall be not greater than two-thirds of the room in which they are located. The area of the *mezzanine* shall not exceed the area determined in accordance with Section 505.2.1.

505.3.2 Automatic sprinkler system. Where located in a building that is required to be protected by an *automatic sprinkler system*, *equipment platforms* shall be fully protected by sprinklers above and below the platform, where required by the standards referenced in Section 903.3.

505.3.3 Guards. *Equipment platforms* shall have *guards* where required by Section 1015.2.

SECTION 506 BUILDING AREA

[S] 506.1 General. The allowable floor area of a building shall be determined based on the type of construction, occupancy classification, whether there is an *automatic sprinkler system* installed throughout the building and the amount of building frontage on *public way* or open space.

506.1.1 Unlimited area buildings. Unlimited area buildings shall be designed in accordance with Section 507.

506.1.2 Special provisions. The special provisions of Section 510 permit the use of special conditions that are exempt from, or modify, the specific requirements of this chapter regarding the allowable areas of buildings based on the occupancy classification and type of construction, provided the special condition complies with the provisions specified in Section 510.

506.1.3 Basements. *Basements* need not be included in the total allowable floor area of a building provided the total area of such *basements* does not exceed the area permitted for a *one-story above grade plane* building.

506.2 Allowable area determination. The allowable area of a building shall be determined in accordance with the applicable provisions of Sections 506.2.1, 506.2.2 and 506.3.

506.2.1 Single-occupancy buildings. The allowable area of each *story* of a single-occupancy building shall be determined in accordance with Equation 5-1:

$$A_a = A_t + (NS \times I_f) \quad \text{(Equation 5-1)}$$

where:

A_a = Allowable area (square feet).

A_t = Tabular allowable area factor (NS, S1, S13R or S13D value, as applicable) in accordance with Table 506.2.

NS = Tabular allowable area factor in accordance with Table 506.2 for nonsprinklered building (regardless of whether the building is sprinklered).

I_f = Area factor increase due to frontage (percent) as calculated in accordance with Section 506.3.

The allowable area per story of a single-occupancy building with a maximum of three stories above grade shall be determined by Equation 5-1. The total allowable area of a single-occupancy building more than three *stories above grade plane* shall be determined in accordance with Equation 5-2:

$$A_a = [A_t + (NS \times I_f)] \times S_a \quad \text{(Equation 5-2)}$$

where:

A_a = Allowable area (square feet).

A_t = Tabular allowable area factor (NS, S13R, S13D or SM value, as applicable) in accordance with Table 506.2.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

NS = Tabular allowable area factor in accordance with Table 506.2 for a nonsprinklered building (regardless of whether the building is sprinklered).

I_f = Area factor increase due to frontage (percent) as calculated in accordance with Section 506.3.

S_a = 3 where the actual number of stories above grade plane exceeds three, or

S_a = 4 where the building is equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.2.

The actual area of any individual floor shall not exceed the allowable area per Equation 5-1.

For SI: 1 square foot = 0.0929 m².

UL = Unlimited; NP = Not Permitted; NS = Buildings not equipped throughout with an automatic sprinkler system; S1 = Buildings a maximum of one story above grade plane equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1; SM = Buildings two or more stories above grade plane equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1; S13R = Buildings equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.2; S13D = Buildings equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.3.

a. See Chapters 4 and 5 for specific exceptions to the allowable area in this chapter.

b. See Section 903.2 for the minimum thresholds for protection by an automatic sprinkler system for specific occupancies.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

- c. New Group H occupancies are required to be protected by an automatic sprinkler system in accordance with Section 903.2.5.
- d. The NS value is only for use in evaluation of existing building area in accordance with the *International Existing Building Code*.
- e. New Group I-1 and I-3 occupancies are required to be protected by an automatic sprinkler system in accordance with Section 903.2.6. For new Group I-1 occupancies, Condition 1, see Exception 1 of Section 903.2.6.
- f. New and existing Group I-2 occupancies are required to be protected by an automatic sprinkler system in accordance with Section 903.2.6 and Section 1103.5 of the *International Fire Code*.
- g. New Group I-4 occupancies see Exceptions 2 and 3 of Section 903.2.6.
- h. New Group R occupancies are required to be protected by an automatic sprinkler system in accordance with Section 903.2.8.
- i. The maximum allowable area for a single-story nonsprinklered Group U greenhouse is permitted to be 9,000 square feet, or the allowable area shall be permitted to comply with Table C102.1 of Appendix C.

506.2.2 Mixed-occupancy buildings. The allowable area of each *story* of a mixed-occupancy building shall be determined in accordance with the applicable provisions of, Section 508.3.2 for nonseparated occupancies and Section 508.4.2 for separated occupancies.

For buildings with more than three *stories above grade plane*, the total *building area* shall be such that the aggregate sum of the ratios of the actual area of each *story* divided by the allowable area of such stories, determined in accordance with Equation 5-3 based on the applicable provisions of Section 508.1, shall not exceed three.

$$A_a = [A_t + (NS \times I_f)] \tag{Equation 5-3}$$

A_a = Allowable area (square feet).

A_t = Tabular allowable area factor (NS, S13R, S13D or SM value, as applicable) in accordance with Table 506.2.

NS = Tabular allowable area factor in accordance with Table 506.2 for a nonsprinklered building, regardless of whether the building is sprinklered.

I_f = Area factor increase due to frontage (percent) as calculated in accordance with Section 506.3.

Exception: For buildings designed as separated occupancies under Section 508.4 and equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.2, the total building area shall be such that the aggregate sum of the ratios of the actual area of each story divided by the allowable area of such stories determined in accordance with Equation 5-3 based on the applicable provisions of Section 508.1, shall not exceed four.

506.2.2.1 Group H-2 or H-3 mixed occupancies. For a building containing Group H-2 or H-3 occupancies, the allowable area shall be determined in accordance with Section 508.4.2, with the *automatic* sprinkler system increase applicable only to the portions of the building not classified as Group H-2 or H-3.

506.3 Frontage increase. Every building shall adjoin or have access to a *public way* to receive an area factor increase based on frontage. Area factor increase shall be determined in accordance with Sections 506.3.1 through 506.3.3.

506.3.1 Minimum percentage of perimeter. To qualify for an area factor increase based on frontage, a building shall have not less than 25 percent of its perimeter on a *public way* or open space. Such open space shall be either on the same lot or dedicated for public use and shall be accessed from a street or approved *fire lane*.

506.3.2 Minimum frontage distance. To qualify for an area factor increase based on frontage, the *public way* or open space adjacent to the building perimeter shall have a minimum distance (*W*) of 20 feet (6096 mm) measured at right angles from the building face to any of the following:

1. The closest interior lot line.
2. The entire width of a street, alley or *public way*.
3. The exterior face of an adjacent building on the same property.

The frontage increase shall be based on the smallest *public way* or open space that is 20 feet (6096 mm) or greater, and the percentage of building perimeter having a minimum 20 feet (6096 mm) *public way* or open space.

506.3.3 Amount of increase. The area factor increase based on frontage shall be determined in accordance with Table 506.3.3.

**TABLE 506.3.3
FRONTAGE INCREASE FACTOR^a**

PERCENTAGE OF BUILDING PERIMETER	OPEN SPACE (feet)			
	0 to less than 20	20 to less than 25	25 to less than 30	30 or greater
0 to less than 25	0	0	0	0
25 to less than 50	0	0.17	0.21	0.25
50 to less than 75	0	0.33	0.42	0.50
75 to 100	0	0.50	0.63	0.75

a. Interpolation is permitted.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

506.3.3.1 Section 507 buildings. Where a building meets the requirements of Section 507, as applicable, except for compliance with the minimum 60-foot (18 288 mm) *public way* or *yard* requirement, the area factor increase based on frontage shall be determined in accordance with Table 506.3.3.1.

**TABLE 506.3.3.1
SECTION 507 BUILDINGS^a**

PERCENTAGE OF BUILDING PERIMETER	OPEN SPACE (feet)					
	30 to less than 35	35 to less than 40	40 to less than 45	45 to less than 50	50 to less than 55	55 to less than 60
0 to less than 25	0	0	0	0	0	0
25 to less than 50	0.29	0.33	0.38	0.42	0.46	0.50
50 to less than 75	0.58	0.67	0.75	0.83	0.92	1.00
75 to 100	0.88	1.00	1.13	1.25	1.38	1.50

a. Interpolation is permitted.

**SECTION 507
UNLIMITED AREA BUILDINGS**

507.1 General. The area of buildings of the occupancies and configurations specified in Sections 507.1 through 507.13 shall not be limited. Basements not more than one *story* below *grade plane* shall be permitted.

507.1.1 Accessory occupancies. Accessory occupancies shall be permitted in unlimited area buildings in accordance with the provisions of Section 508.2, otherwise the requirements of Sections 507.3 through 507.13 shall be applied, where applicable.

507.2 Measurement of open spaces. Where Sections 507.3 through 507.13 require buildings to be surrounded and adjoined by *public ways* and *yards*, those open spaces shall be determined as follows:

1. *Yards* shall be measured from the building perimeter in all directions to the closest interior *lot lines* or to the exterior face of an opposing building located on the same *lot*, as applicable.
2. Where the building fronts on a *public way*, the entire width of the *public way* shall be used.

507.2.1 Reduced open space. The *public ways* or *yards* of 60 feet (18 288 mm) in width required in Sections 507.3, 507.4, 507.5, 507.6 and 507.12 shall be permitted to be reduced to not less than 40 feet (12 192 mm) in width, provided that the following requirements are met:

1. The reduced width shall not be allowed for more than 75 percent of the perimeter of the building.
2. The *exterior walls* facing the reduced width shall have a *fire-resistance rating* of not less than 3 hours.
3. Openings in the *exterior walls* facing the reduced width shall have opening protectives with a *fire protection rating* of not less than 3 hours.

507.3 Nonsprinklered, one-story buildings. The area of a Group F-2 or S-2 building not more than one *story* in height shall not be limited where the building is surrounded and adjoined by *public ways* or *yards* not less than 60 feet (18 288 mm) in width.

507.4 Sprinklered, one-story buildings. The area of a Group A-4 building not more than one *story above grade plane* of other than Type V construction, or the area of a Group B, F, M or S building no more than one *story above grade plane* of any construction type, shall not be limited where the building is provided with an *automatic sprinkler system* throughout in accordance with Section 903.3.1.1 and is surrounded and adjoined by *public ways* or *yards* not less than 60 feet (18 288 mm) in width.

Exceptions:

1. Buildings and structures of Type I or II construction for rack storage facilities that do not have access by the public shall not be limited in height, provided that such buildings conform to the requirements of Sections 507.4 and 903.3.1.1 and Chapter 32 of the *International Fire Code*.
2. The *automatic sprinkler system* shall not be required in areas occupied for indoor participant sports, such as tennis, skating, swimming and equestrian activities in occupancies in Group A-4, provided that the following criteria are met:
 - 2.1. *Exit* doors directly to the outside are provided for occupants of the participant sports areas.
 - 2.2. The building is equipped with a *fire alarm system* with *manual fire alarm boxes* installed in accordance with Section 907.
 - 2.3. An *automatic sprinkler system* is provided in storage rooms, press boxes, concession booths or other spaces ancillary to the sport activity space.

507.9 Unlimited mixed occupancy buildings with Group H-5. The area of a Group B, F, H-5, M or S building not more than two *stories above grade plane* shall not be limited where the building is equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1, and is surrounded and adjoined by *public ways or yards* not less than 60 feet (18 288 mm) in width, provided that the following criteria are met:

1. Buildings containing Group H-5 occupancy shall be of Type I or II construction.
2. Each area used for Group H-5 occupancy shall be separated from other occupancies as required in Sections 415.11 and 508.4.
3. Each area used for Group H-5 occupancy shall not exceed the maximum allowable area permitted for such occupancies in Section 503.1 including modifications of Section 506.

Exception: Where the Group H-5 occupancy exceeds the maximum allowable area, the Group H-5 shall be subdivided into areas that are separated by 2-hour *fire barriers*.

507.10 Aircraft paint hangar. The area of a Group H-2 aircraft paint hangar not more than one *story above grade plane* shall not be limited where such aircraft paint hangar complies with the provisions of Section 412.5 and is surrounded and adjoined by *public ways or yards* not less in width than one and one-half times the *building height*.

507.11 Group E buildings. The area of a Group E building not more than one *story above grade plane*, of Type II, IIIA or IV construction, shall not be limited provided that the following criteria are met:

1. Each classroom shall have not less than two *means of egress*, with one of the *means of egress* being a direct exit to the outside of the building complying with Section 1022.
2. The building is equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1.
3. The building is surrounded and adjoined by *public ways or yards* not less than 60 feet (18 288 mm) in width.

507.12 Motion picture theaters. In buildings of Type II construction, the area of a motion picture theater located on the first *story above grade plane* shall not be limited where the building is provided with an *automatic sprinkler system* throughout in accordance with Section 903.3.1.1 and is surrounded and adjoined by *public ways or yards* not less than 60 feet (18 288 mm) in width.

507.13 Covered and open mall buildings and anchor buildings. The area of *covered and open mall buildings* and *anchor buildings* not exceeding three *stories* in height that comply with Section 402 shall not be limited.

SECTION 508 MIXED USE AND OCCUPANCY

[S] **508.1 General.** Each portion of a building shall be individually classified in accordance with Section 302.1. Where a building contains more than one occupancy group, the building or portion thereof shall comply with the applicable provisions of Section 508.2, 508.3, 508.4 or 508.5, or a combination of these sections.

Exceptions:

1. Occupancies separated in accordance with Section 510.
2. Where required by Table 415.6.5, areas of Group H-1, H-2 and H-3 occupancies shall be located in a *detached building* or structure.
3. Offices, mercantile, food preparation establishments for off-site consumption, personal care salons or similar uses in Group R dwelling units, which are conducted primarily by the occupants of a dwelling unit and are secondary to the use of the unit for dwelling purposes, and which do not exceed 500 square feet (46.4 m²) are not considered a separate occupancy.

[S] **508.2 Accessory occupancies.** Accessory occupancies are those occupancies that are ancillary to the main occupancy of the building or portion thereof. Accessory occupancies shall comply with the provisions of Sections 508.2.1 through 508.2.4.

508.2.1 Occupancy classification. Accessory occupancies shall be individually classified in accordance with Section 302.1. The requirements of this code shall apply to each portion of the building based on the occupancy classification of that space.

508.2.2 Allowable building height. The allowable height and number of *stories* of the building containing accessory occupancies shall be in accordance with Section 504 for the main occupancy of the building.

508.2.3 Allowable building area. The allowable area of the building shall be based on the applicable provisions of Section 506 for the main occupancy of the building. Aggregate accessory occupancies shall not occupy more than 10 percent of the floor area of the *story* in which they are located and shall not exceed the tabular values for nonsprinklered buildings in Table 506.2 for each such accessory occupancy.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

508.2.4 Separation of accessory occupancies. No separation is required between accessory occupancies and the main occupancy.

Exceptions:

1. Group H-2, H-3, H-4 and H-5 occupancies shall be separated from all other occupancies in accordance with Section 508.4.
2. Group I-1, R-1, R-2 and R-3 *dwelling units* and *sleeping units* shall be separated from other *dwelling* or *sleeping units* and from accessory occupancies contiguous to them in accordance with the requirements of Section 420.

508.3 Nonseparated occupancies. Buildings or portions of buildings that comply with the provisions of this section shall be considered as nonseparated occupancies.

508.3.1 Occupancy classification. Nonseparated occupancies shall be individually classified in accordance with Section 302.1. The requirements of this code shall apply to each portion of the building based on the occupancy classification of that space. In addition, the most restrictive provisions of Chapter 9 that apply to the nonseparated occupancies shall apply to the total nonseparated occupancy area.

508.3.1.1 High-rise buildings. Where nonseparated occupancies occur in a *high-rise building*, the most restrictive requirements of Section 403 that apply to the nonseparated occupancies shall apply throughout the *high-rise building*.

508.3.1.2 Group I-2, Condition 2 occupancies. Where one of the nonseparated occupancies is Group I-2, Condition 2, the most restrictive requirements of Sections 407, 509 and 712 shall apply throughout the *fire area* containing the Group I-2 occupancy. The most restrictive requirements of Chapter 10 shall apply to the path of egress from the Group I-2, Condition 2 occupancy up to and including the *exit discharge*.

508.3.2 Allowable building area, height and number of stories. The allowable *building area*, *height* and number of *stories* of the building or portion thereof shall be based on the most restrictive allowances for the occupancy groups under consideration for the type of construction of the building in accordance with Section 503.1.

508.3.3 Separation. No separation is required between nonseparated occupancies.

Exceptions:

1. Group H-2, H-3, H-4 and H-5 occupancies shall be separated from all other occupancies in accordance with Section 508.4.
2. Group I-1, R-1, R-2 and R-3 *dwelling units* and *sleeping units* shall be separated from other *dwelling* or *sleeping units* and from other occupancies contiguous to them in accordance with the requirements of Section 420.

[S] **508.4 Separated occupancies.** Buildings or portions of buildings that comply with the provisions of this section shall be considered as separated occupancies.

Exceptions:

1. No separation is required between Group A-2 or A-3 and Groups B or M occupancies when both are protected by an automatic sprinkler system.
2. Subject to the approval of the building official, unprotected openings are permitted in separations between parking areas and enclosed portions of buildings such as entry lobbies and similar areas provided:
 - 2.1. The floors of the enclosed building with unprotected openings are protected by an automatic sprinkler system;
 - 2.2. The openings are glazed with either tempered or laminated glazing materials;
 - 2.3. When required by the building official, the glazing is protected on the parking side with a sprinkler system designed to wet the entire glazed surface; and
 - 2.4. The parking areas are used primarily for passenger loading and unloading and vehicle drive-through uses.

508.4.1 Occupancy classification. Separated occupancies shall be individually classified in accordance with Section 302.1. Each separated space shall comply with this code based on the occupancy classification of that portion of the building. The most restrictive provisions of Chapter 9 that apply to the separate occupancies shall apply to the total nonfire-barrier-separated occupancy areas. Occupancy separations that serve to define *fire area* limits established in Chapter 9 for requiring a *fire protection system* shall also comply with Section 901.7.

508.4.2 Allowable building area. In each *story*, the *building area* shall be such that the sum of the ratios of the actual *building area* of each separated occupancy divided by the allowable *building area* of each separated occupancy shall not exceed 1.

508.4.3 Allowable building height and number of stories. Each separated occupancy shall comply with the *building height limitations* and *story limitations* based on the type of construction of the building in accordance with Section 503.1.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Exception: Special provisions of Section 510 shall permit occupancies at *building heights* and number of *stories* other than provided in Section 503.1.

508.4.4 Separation. Individual occupancies shall be separated from adjacent occupancies in accordance with Table 508.4.

508.4.4.1 Construction. Required separations shall be *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both, so as to completely separate adjacent occupancies. *Mass timber* elements serving as *fire barriers* or *horizontal assemblies* to separate occupancies in Type IV-B or IV-C construction shall be separated from the interior of the building with an *approved* thermal barrier consisting of *gypsum board* that is not less than 1/2 inch (12.7 mm) in thickness or a material that is tested in accordance with and meets the acceptance criteria of both the Temperature Transmission Fire Test and the Integrity Fire Test of NFPA 275.

S = Buildings equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1.

NS = Buildings not equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1.

N = No separation requirement.

NP = Not Permitted.

a. See Section 420.

b. The required separation from areas used only for private or pleasure vehicles shall be reduced by 1 hour but not to less than 1 hour.

c. See Sections 406.3.2 and 406.6.4.

d. Separation is not required between occupancies of the same classification.

e. See Section 422.2 for *ambulatory care facilities*.

f. Occupancy separations that serve to define fire area limits established in Chapter 9 for requiring fire protection systems shall also comply with Section 707.3.10 and Table 707.3.10 in accordance with Section 901.7.

[W][S] 508.5 Live/work units. A *live/work unit* shall comply with Sections 508.5 through 508.5.11.

Exception: *Dwelling or sleeping units* that include an office that is less than 10 percent of the area of the *dwelling unit* are permitted to be classified as *dwelling units* with accessory occupancies in accordance with Section 508.2.

508.5.1 Limitations. The following shall apply to live/work areas:

1. The *live/work unit* is permitted to be not greater than 3,000 square feet (279 m²) in area.
2. The nonresidential area is permitted to be not more than 50 percent of the area of each *live/work unit*.
- ~~3. The nonresidential area function shall be limited to the first or main floor only of the *live/work unit*.~~
- ~~4. Not more than five nonresidential workers or employees are allowed to occupy the nonresidential area at any one time.)~~

508.5.2 Occupancies. *Live/work units* shall be classified as a Group R-2 or Group R-3 occupancy. Separation requirements found in ~~(Sections 420 and)~~ Section 508 shall not apply within the *live/work unit* where the *live/work unit* is in compliance with Sections 508.5 and 420. Nonresidential uses that would otherwise be classified as either a Group H or S occupancy shall not be permitted in a *live/work unit*.

Exception: Storage shall be permitted in the *live/work unit* provided that the aggregate area of storage in the nonresidential portion of the *live/work unit* shall be limited to 10 percent of the space dedicated to nonresidential activities.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

508.5.3 Means of egress. Except as modified by this section, the *means of egress* components for a *live/work unit* shall be designed in accordance with Chapter 10 for the function served.

508.5.4 Egress capacity. The egress capacity for each element of the *live/work unit* shall be based on the *occupant load* for the function served in accordance with Table 1004.5.

508.5.5 Spiral stairways. *Spiral stairways* that conform to the requirements of Section 1011.10 shall be permitted.

508.5.6 Vertical openings. Floor openings between floor levels of a *live/work unit* are permitted without enclosure.

[F] 508.5.7 Fire protection. The *live/work unit* shall be provided with a monitored *fire alarm* system where required by Section 907.2.9. ~~(and an)~~ An automatic sprinkler system shall be provided in the live/work unit in accordance with:

1. Section ~~(903.2.8)~~ 903.3.1.2 or 903.3.1.3 for Group R occupancies in buildings with four or fewer dwelling units that do not exceed two stories in height that are less than 5,000 square feet in area; or
2. Section 903.3.1.1 for all other buildings.

508.5.8 Structural. Floors within a *live/work unit* shall be designed for the *live loads* in Table 1607.1, based on the function within the space. The nonresidential portion of the unit shall be designed for a live load of not less than 50 psf.

508.5.9 Accessibility. *Accessibility* shall be designed in accordance with Chapter 11 for the function served.

Interpretation I419.7: Accessibility provisions for Group M occupancies shall be applied unless the applicant specifies another occupancy.

508.5.10 Ventilation. The applicable *ventilation* requirements of the *International Mechanical Code* shall apply to each area within the *live/work unit* for the function within that space.

508.5.11 Plumbing facilities. The nonresidential area of the *live/work unit* shall be provided with minimum plumbing facilities as specified by Chapter 29, based on the function of the nonresidential area. Where the nonresidential area of the *live/work unit* is required to be accessible by Section 1108.6.2.1, the plumbing fixtures specified by Chapter 29 shall be accessible.

**SECTION 509
INCIDENTAL USES**

509.1 General Incidental uses located within single occupancy or mixed occupancy buildings shall comply with the provisions of this section. Incidental uses are ancillary functions associated with a given occupancy that generally pose a greater level of risk to that occupancy and are limited to those uses specified in Table 509.1.

Exception: Incidental uses within and serving a *dwelling unit* are not required to comply with this section.

**[W][S][F]TABLE 509.1
INCIDENTAL USES**

ROOM OR AREA	SEPARATION AND/OR PROTECTION
Furnace room where any piece of equipment is over 400,000 Btu per hour input	1 hour or provide automatic sprinkler system
Rooms with boilers where the largest piece of equipment is over 15 psi and 10 horsepower	1 hour or provide automatic sprinkler system
Refrigerant machinery room	1 hour or provide automatic sprinkler system
Hydrogen fuel gas rooms, not classified as Group H	1 hour in Group B, F, M, S and U occupancies; 2 hours in Group A, E, I and R occupancies.
Incinerator rooms	2 hours and provide automatic sprinkler system
Paint shops, not classified as Group H, located in occupancies other than Group F	2 hours; or 1 hour and provide automatic sprinkler system
In Group E occupancies, laboratories and vocational shops not classified as Group H	1 hour or provide automatic sprinkler system
In Group I-2 occupancies, laboratories not classified as Group H	1 hour and provide automatic sprinkler system
In <i>ambulatory care facilities</i> , laboratories not classified as Group H	1 hour or provide automatic sprinkler system
Laundry rooms over 100 square feet	1 hour or provide automatic sprinkler system
In Group I-2, laundry rooms over 100 square feet	1 hour
Group I-3 cells and Group I-2 patient rooms equipped with padded surfaces	1 hour
In Group I-2, physical plant maintenance shops	1 hour

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

**[W][S][F]TABLE 509.1—continued
INCIDENTAL USES**

ROOM OR AREA	SEPARATION AND/OR PROTECTION
In ambulatory care facilities or Group I-2 occupancies, waste and linen collection rooms with containers that have an aggregate volume of 10 cubic feet or greater	1 hour
In other than ambulatory care facilities and Group I-2 occupancies, waste and linen collection rooms over 100 square feet	1 hour or provide automatic sprinkler system
In ambulatory care facilities or Group I-2 occupancies, storage rooms greater than 100 square feet	1 hour
Electrical installations and transformers	See Sections 110.26 through 110.34 and Sections 450.8 through 450.48 of NFPA 70 for protection and separation requirements.
<u>Dry type transformers over 112.5 kVA and required to be in a fire-resistance-rated room in accordance with Seattle Electrical Code Section 450.21(B)¹</u>	<u>1 hour or provide automatic sprinkler system</u>
<u>Elevator control and machine rooms</u>	<u>See Section 3020.4</u>

For SI: 1 square foot = 0.0929 m², 1 pound per square inch (psi) = 6.9 kPa, 1 British thermal unit (Btu) per hour = 0.293 watts, 1 horsepower = 746 watts, 1 gallon = 3.785 L, 1 cubic foot = 0.0283 m³.

¹ Dry type transformers rated over 35,000 volts and oil-insulated transformers shall be installed in a transformer vault complying with Section 430 and the Seattle Electrical Code.

509.2 Occupancy classification. Incidental uses shall not be individually classified in accordance with Section 302.1. Incidental uses shall be included in the building occupancies within which they are located.

Interpretation I509.2: For the purpose of this section, occupied roofs are considered floors used for human occupancy if the occupant load of the roof is ten or more on a building not equipped with an *automatic sprinkler system* or where the occupant load is 50 or more on the roof of a building that is equipped with an *automatic sprinkler system*.

[S] 509.3 Area limitations. Incidental uses shall not occupy more than 10 percent of the *building area* of the *story* in which they are located. Incidental uses that occupy more than 10 percent of the *building area* of the *story* in which they are located shall comply with either Table 509.1 or Section 508.4, whichever requires a greater separation.

509.4 Separation and protection. The incidental uses specified in Table 509.1 shall be separated from the remainder of the building or equipped with an *automatic sprinkler system*, or both, in accordance with the provisions of that table.

509.4.1 Separation. Where Table 509.1 specifies a fire-resistance-rated separation, the incidental uses shall be separated from the remainder of the *building* by a *fire barrier* constructed in accordance with Section 707 or a *horizontal assembly* constructed in accordance with Section 711, or both. Construction supporting 1-hour *fire barriers* or *horizontal assemblies* used for incidental use separations in buildings of Type IIB, IIIB and VB construction is not required to be fire-resistance rated unless required by other sections of this code.

509.4.1.1 Type IV-B and IV-C construction. Where Table 509.1 specifies a fire-resistance-rated separation, *mass timber* elements serving as *fire barriers* or *horizontal assemblies* in Type IV-B or IV-C construction shall be separated from the interior of the incidental use with an *approved* thermal barrier consisting of *gypsum board* that is not less than 1/2 inch (12.7 mm) in thickness or a material that is tested in accordance with and meets the acceptance criteria of both the Temperature Transmission Fire Test and the Integrity Fire Test of NFPA 275.

509.4.2 Protection. Where Table 509.1 permits an *automatic sprinkler system* without a *fire barrier*, the incidental uses shall be separated from the remainder of the building by construction capable of resisting the passage of smoke. The walls shall extend from the top of the foundation or floor assembly below to the underside of the ceiling that is a component of a fire-resistance-rated floor assembly or roof assembly above or to the underside of the floor or roof sheathing, deck or slab above. Doors shall be self- or automatic-closing upon detection of smoke in accordance with Section 716.2.6.6. Doors shall not have air transfer openings and shall not be undercut in excess of the clearance permitted in accordance with NFPA 80. Walls surrounding the incidental use shall not have air transfer openings unless provided with *smoke dampers* in accordance with Section 710.8.

509.4.2.1 Protection limitation. Where an *automatic sprinkler system* is provided in accordance with Table 509.1, only the space occupied by the incidental use need be equipped with such a system.

SECTION 510 SPECIAL PROVISIONS

[S] **510.1 General.** The provisions in Sections 510.2 through ~~((510.9))~~ 510.10 shall permit the use of special conditions that are exempt from, or modify, the specific requirements of this chapter regarding the allowable *building heights and areas* of buildings based on the occupancy classification and type of construction, provided the special condition complies with the provisions specified in this section for such condition and other applicable requirements of this code. The provisions of Sections 510.2 through ~~((510.8))~~ 510.7 are to be considered independent and separate from each other.

Interpretation I510.1: Sections 510.2 through 510.7 are not permitted to be used in combination with each other. Sections 510.8 through 510.10 are permitted to be used in combination with Section 510.2.

[W][S] **510.2 Horizontal building separation allowance.** A building shall be considered as separate and distinct buildings for the purpose of determining area limitations, continuity of *fire walls*, limitation of number of *stories* and type of construction where the following conditions are met:

1. The buildings are separated with a *horizontal assembly* having a *fire-resistance rating* of not less than 3 hours. Where ~~((vertical offsets are provided as part of))~~ a *horizontal assembly contains vertical offsets*, the vertical offset ~~((and the structure supporting the vertical offset))~~ shall be constructed as a fire barrier in accordance with Section 707 and shall have a *fire-resistance rating* of not less than 3 hours.
2. The building below, including the *horizontal assembly* and any associated vertical offsets, is of Type IA construction.
3. *Shaft, stairway, ramp* and escalator enclosures through the *horizontal assembly* shall have not less than a 2-hour *fire-resistance rating* with opening protectives in accordance with Section 716.

Exception: Where the enclosure walls below the *horizontal assembly* have not less than a 3-hour *fire-resistance rating* with opening protectives in accordance with Section 716, the enclosure walls extending above the *horizontal assembly* shall be permitted to have a 1-hour *fire-resistance rating*, provided that the following conditions are met:

1. The building above the *horizontal assembly* is not required to be of Type I construction.
 2. The enclosure connects fewer than four stories.
 3. The enclosure opening protectives above the *horizontal assembly* have a *fire protection rating* of not less than 1 hour.
4. *Interior exit stairways* located within the Type IA building are permitted to be of combustible materials where the following requirements are met:
 - 4.1. The building above the Type IA building is of Type III, IV, or V construction.
 - 4.2. The *stairway* located in the Type IA building is enclosed by 3-hour fire-resistance-rated construction with opening protectives in accordance with Section 716.
 5. The building or buildings above the *horizontal assembly* shall be permitted to have ~~((multiple Group A occupancy uses, each with an occupant load of less than 300, or Group B, M, R or S occupancies.))~~ any of the following occupancies:
 - 5.1. One or more Group A occupancy uses, each with an occupant load of less than 300;
 - 5.2. Group B;
 - 5.3. Group I-1, Condition 2 licensed care facilities and residential treatment facilities;
 - 5.4. Group M;
 - 5.5. Group R;
 - 5.6. Group S-2 parking garage used for the parking and storage of private motor vehicles; and
 - 5.7. Uses incidental to the operation or serving occupants of the building (including entry lobbies, mechanical rooms, storage areas and similar uses).
 6. The building below the *horizontal assembly* ~~((shall be protected throughout by an approved automatic sprinkler system in accordance with Section 903.3.1.1, and shall be))~~ is permitted to be any occupancy allowed by this code except Group H.
 7. The maximum *building height* in feet (mm) shall not exceed the limits set forth in Section 504.3 for the building having the smaller allowable height as measured from the *grade plane*.
 8. All portions of the buildings above and below the three-hour horizontal assembly shall be protected throughout with an automatic sprinkler system that complies with Section 903.3.1.1.
 9. Where the construction type above the horizontal assembly is of Type V-A, III-A or IV-HT construction, occupied floors shall be not more than 75 feet above the lowest level of fire department vehicle access.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Exception: Where the construction type above the horizontal assembly is of Type III-A construction and is using the provisions of Section 510.10.

Interpretation I510.2: For the purpose of this item, occupied roof decks are considered floors used for human occupancy if the occupant load of the deck is 10 or more on the roof of a building not equipped with an *automatic sprinkler system* or where the occupant load is 50 or more on the roof of a building that is equipped with an *automatic sprinkler system*.

10. Interior exit stairways serving more than 6 stories above grade plane shall be pressurized in accordance with Section 909.20.6 for low-rise stairways.

510.3 Group S-2 enclosed parking garage with Group S-2 open parking garage above. A Group S-2 enclosed parking garage with not more than one *story above grade plane* and located below a Group S-2 *open parking garage* shall be classified as a separate and distinct building for the purpose of determining the type of construction where the following conditions are met:

1. The allowable area of the building shall be such that the sum of the ratios of the actual area divided by the allowable area for each separate occupancy shall not exceed 1.
2. The Group S-2 enclosed parking garage is of Type I or II construction and is at least equal to the *fire-resistance* requirements of the Group S-2 *open parking garage*.
3. The height and the number of tiers of the Group S-2 *open parking garage* shall be limited as specified in Table 406.5.4.
4. The floor assembly separating the Group S-2 enclosed parking garage and Group S-2 *open parking garage* shall be protected as required for the floor assembly of the Group S-2 enclosed parking garage. Openings between the Group S-2 enclosed parking garage and Group S-2 *open parking garage*, except exit openings, shall not be required to be protected.
5. The Group S-2 enclosed parking garage is used exclusively for the parking or storage of private motor vehicles, but shall be permitted to contain an office, waiting room and toilet room having a total area of not more than 1,000 square feet (93 m²) and mechanical equipment rooms associated with the operation of the building.

[S] **510.4 Parking beneath Group R.** Where a maximum one *story above grade plane* Group S-2 parking garage, enclosed or open, or combination thereof, of Type I construction or open of Type IV-HT construction, with grade entrance, is provided under a building of Group R, the number of *stories* to be used in determining the minimum type of construction shall be measured from the floor above such a parking area. The floor assembly between the parking garage and the Group R above shall comply with the type of construction required for the parking garage and shall also provide a *fire-resistance rating* not less than the mixed occupancy separation required in Section 508.4. For purposes of this section, the Group R occupancy shall be no more than four stories in height.

*

~~((510.6))~~ **510.5 Group R-1 and R-2 buildings of Type IIA construction.** The height limitation for buildings of Type IIA construction in Groups R-1 and R-2 shall be increased to nine *stories* and 100 feet (30 480 mm) where the building is separated by not less than 50 feet (15 240 mm) from any other building on the *lot* and from *lot lines*, the *exits* are segregated in an area enclosed by a 2-hour fire-resistance-rated *fire wall* and the first floor assembly has a *fire-resistance rating* of not less than 1-1/2 hours.

~~((510.7))~~ **510.6 Open parking garage beneath Groups A, I, B, M and R.** *Open parking garages* constructed under Groups A, I, B, M and R shall not exceed the height and area limitations permitted under Section 406.5. The height and area of the portion of the building above the *open parking garage* shall not exceed the limitations in Section 503 for the upper occupancy. The height, in both feet and *stories*, of the portion of the building above the *open parking garage* shall be measured from *grade plane* and shall include both the *open parking garage* and the portion of the building above the parking garage.

~~((510.7.1))~~ **510.6.1 Fire separation.** *Fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711 between the parking occupancy and the upper occupancy shall correspond to the required *fire-resistance rating* prescribed in Table 508.4 for the uses involved. The type of construction shall apply to each occupancy individually, except that structural members, including main bracing within the open parking structure, which is necessary to support the upper occupancy, shall be protected with the more restrictive fire-resistance-rated assemblies of the groups involved as shown in Table 601. *Means of egress* for the upper occupancy shall conform to Chapter 10 and shall be separated from the parking occupancy by *fire barriers* having not less than a 2-hour *fire-resistance rating* as required by Section 707 with *self-closing doors* complying with Section 716 or *horizontal assemblies* having not less than a 2-hour *fire-resistance rating* as required by Section 711, with *self-closing doors* complying with Section 716. *Means of egress* from the *open parking garage* shall comply with Section 406.5.

~~((510.8))~~ **510.7 Group B or M buildings with Group S-2 open parking garage above.** Group B or M occupancies located below a Group S-2 *open parking garage* of a lesser type of construction shall be considered as a separate and distinct building from the Group S-2 *open parking garage* for the purpose of determining the type of construction where the following conditions are met:

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

1. The buildings are separated with a *horizontal assembly* having a *fire-resistance rating* of not less than 2 hours.
2. The occupancies in the building below the *horizontal assembly* are limited to Groups B and M.
3. The occupancy above the *horizontal assembly* is limited to a Group S-2 *open parking garage*.
4. The building below the *horizontal assembly* is of Type IA construction.

Exception: The building below the *horizontal assembly* shall be permitted to be of Type IB or II construction, but not less than the type of construction required for the Group S-2 *open parking garage* above, where the building below is not greater than *one story* in height above *grade plane*.

5. The height and area of the building below the *horizontal assembly* does not exceed the limits set forth in Section 503.
6. The height and area of the Group S-2 *open parking garage* does not exceed the limits set forth in Section 406.5. The height, in both feet and *stories*, of the Group S-2 *open parking garage* shall be measured from *grade plane* and shall include the building below the *horizontal assembly*.
7. *Exits* serving the Group S-2 *open parking garage* shall discharge at grade with direct and unobstructed access to a street or *public way* and are separated from the building below the *horizontal assembly* by 2-hour *fire barriers* constructed in accordance with Section 707 or 2-hour *horizontal assemblies* constructed in accordance with Section 711, or both.

((510.9)) 510.8 Multiple buildings above a horizontal assembly. Where two or more buildings are provided above the *horizontal assembly* separating a Group S-2 parking garage or building below from the buildings above in accordance with the special provisions in Section 510.2, 510.3 or ~~((510.8)) 510.7~~, the buildings above the *horizontal assembly* shall be regarded as separate and distinct buildings from each other and shall comply with all other provisions of this code as applicable to each separate and distinct building.

[W][S] ~~((510.5)) 510.9 Group R-1 and R-2 buildings of Type IIIA construction.~~ For buildings of Type IIIA construction in Groups R-1 and R-2, the maximum allowable height in Table 504.3 shall be increased ~~((by 10 feet (3048 mm) and the maximum allowable number of stories in Table 504.4 shall be increased))~~ by one *story* where the first-floor assembly above the *basement* has a *fire-resistance rating* of not less than 3 hours and the floor area is subdivided by 2-hour fire-resistance-rated *fire walls* into areas of not more than 3,000 square feet (279 m²).

**

[S] 510.10 Group R-2 buildings of Type IIIA construction. The height limitation for *buildings* of Type IIIA construction in Group R-2 shall be increased to six *stories* where all of the following conditions are met:

1. The first story of Type IIIA construction is separated from stories above with a *horizontal assembly* having a *fire-resistance rating* of not less than 2 hours. Fire-resistance rated mass timber is permitted in the horizontal assembly and its supporting structure.
2. All stories of Type IIIA construction greater than 6,000 gross square feet shall be subdivided into compartments, by 2-hour fire-resistance rated *fire walls*, with areas of not more than 12,000 gross square feet.
3. Each compartment shall have an enclosed *exit stairway*, and a standpipe in accordance with Section 905.
4. Unprotected vertical openings, including unenclosed interior *exit access stairways*, shall not penetrate floor/ceiling assemblies between stories of Type IIIA construction or between stories of Type IIIA and Type IA construction.
5. Mezzanines shall not be allowed in any story of the Type IIIA construction.
6. The maximum total design *dead load* shall be 50 psf for all roof areas above the sixth story of Type IIIA construction.

Note: The *dead load* shall be calculated as specified in Chapter 2 and Section 1606 of this code.

Note: The maximum total design *dead load* of 50 psf is permitted to be applied over the entire roof area above the sixth story of Type IIIA construction.

CHAPTER 6

TYPES OF CONSTRUCTION

User note:

About this chapter: Chapter 6 establishes five types of construction in which each building must be categorized. This chapter looks at the materials used in the building (combustible or noncombustible) and the extent to which building elements such as the building frame, roof, wall and floor can resist fire. Depending on the type of construction and the specific building element, fire resistance of 1 to 3 hours is specified.

SECTION 601 GENERAL

601.1 Scope. The provisions of this chapter shall control the classification of buildings as to type of construction.

**TABLE 601
FIRE-RESISTANCE RATING REQUIREMENTS FOR BUILDING ELEMENTS (HOURS)**

BUILDING ELEMENT	TYPE I		TYPE II		TYPE III		TYPE IV				TYPE V	
	A	B	A	B	A	B	A	B	C	HT	A	B
Primary structural frame ^f (see Section 202)	3 ^{a, b}	2 ^{a, b, c}	1 ^{b, c}	0 ^c	1 ^{b, c}	0	3 ^a	2 ^a	2 ^a	HT	1 ^{b, c}	0
Bearing walls												
Exterior ^{e, f}	3	2	1	0	2	2	3	2	2	2	1	0
Interior	3 ^a	2 ^a	1	0	1	0	3	2	2	1/HT ^g	1	0
Nonbearing walls and partitions Exterior	See Table 705.5											
Nonbearing walls and partitions Interior ^d	0	0	0	0	0	0	0	0	0	See Section 2304.11.2	0	0
Floor construction and associated secondary structural members (see Section 202)	2 ^h	2 ^h	1	0	1	0	2	2	2	HT	1	0
Roof construction and associated secondary structural members (see Section 202)	1-1/2 ^b	1 ^{b, c}	1 ^{b, c}	0 ^c	1 ^{b, c}	0	1-1/2	1	1	HT	1 ^{b, c}	0

For SI: 1 foot = 304.8 mm.

- a. Roof supports: Fire-resistance ratings of primary structural frame and bearing walls are permitted to be reduced by 1 hour where supporting a roof only.
 - b. Except in Group F-1, H, M and S-1 occupancies, fire protection of structural members in roof construction shall not be required, including protection of primary structural frame members, roof framing and decking where every part of the roof construction is 20 feet or more above any floor immediately below. Fire-retardant-treated wood members shall be allowed to be used for such unprotected members.
 - c. In all occupancies, heavy timber complying with Section 2304.11 shall be allowed for roof construction, including primary structural frame members, where a 1-hour or less fire-resistance rating is required.
 - d. Not less than the fire-resistance rating required by other sections of this code.
 - e. Not less than the fire-resistance rating based on fire separation distance (see Table 705.5).
 - f. Not less than the fire-resistance rating as referenced in Section 704.10.
 - g. Heavy timber bearing walls supporting more than two floors or more than a floor and a roof shall have a fire resistance rating of not less than 1 hour.
- Note:** See Sections 1019, 1023 and 603.1 item 27 for stairway construction.
- h.** The fire-resistance rating for mezzanines constructed in accordance with Section 505.2 need not exceed 1 hour.

SECTION 602 CONSTRUCTION CLASSIFICATION

602.1 General. Buildings and structures erected or to be erected, altered or extended in height or area shall be classified in one of the five *construction types* defined in Sections 602.2 through 602.5. The *building elements* shall have a *fire-resistance rating* not less than that specified in Table 601 and *exterior walls* shall have a *fire-resistance rating* not less than that specified in Table 705.5. Where required to have a *fire-resistance rating* by Table 601, *building elements* shall comply with the applicable provisions of Section 703.2. The protection of openings, ducts and air transfer openings in *building elements* shall not be required unless required by other provisions of this code.

602.1.1 Minimum requirements. A building or portion thereof shall not be required to conform to the details of a type of construction higher than that type which meets the minimum requirements based on occupancy even though certain features of such a building actually conform to a higher type of construction.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

602.2 Types I and II. Types I and II construction are those types of construction in which the *building elements* specified in Table 601 are of noncombustible materials, except as permitted in Section 603 and elsewhere in this code.

602.3 Type III. Type III construction is that type of construction in which the *exterior walls* are of noncombustible materials and the interior *building elements* are of any material permitted by this code. *Fire-retardant-treated wood* framing and sheathing complying with Section 2303.2 shall be permitted within *exterior wall* assemblies of a 2-hour rating or less.

Interpretation I602.3: Type IIIA buildings are permitted to include exposed heavy-timber construction for columns, beams, girders, arches, trusses, floors and roof decks except for fire-resistive construction required by Sections 510 and 713 and Chapter 10. Heavy timber is permitted in concealed spaces in Type IIIA buildings where provided with protection per Section 602.4.4.3.

602.4 Type IV. Type IV construction is that type of construction in which the *building elements* are *mass timber* or noncombustible materials and have *fire-resistance ratings* in accordance with Table 601. *Mass timber* elements shall meet the *fire-resistance-rating* requirements of this section based on either the *fire-resistance rating* of the *noncombustible protection*, the *mass timber*, or a combination of both and shall be determined in accordance with Section 703.2. The minimum dimensions and permitted materials for *building elements* shall comply with the provisions of this section and Section 2304.11. *Mass timber* elements of Types IV-A, IV-B and IV-C construction shall be protected with *noncombustible protection* applied directly to the *mass timber* in accordance with Sections 602.4.1 through 602.4.3. The time assigned to the *noncombustible protection* shall be determined in accordance with Section 703.6 and comply with Section 722.7.

Cross-laminated timber shall be labeled as conforming to ANSI/APA PRG 320 as referenced in Section 2303.1.4.

Exterior *load-bearing walls* and *nonload-bearing walls* shall be *mass timber* construction, or shall be of noncombustible construction.

Exception: Exterior load-bearing walls and nonload-bearing walls of Type IV-HT Construction in accordance with Section 602.4.4.

The interior *building elements*, including *nonload-bearing walls* and partitions, shall be of *mass timber* construction or of noncombustible construction.

Exception: Interior building elements and nonload-bearing walls and partitions of Type IV-HT construction in accordance with Section 602.4.4.

Combustible concealed spaces are not permitted except as otherwise indicated in Sections 602.4.1 through 602.4.4. Combustible stud spaces within light frame walls of Type IV-HT construction shall not be considered concealed spaces, but shall comply with Section 718.

In buildings of Type IV-A, IV-B, and IV-C construction with an occupied floor located more than 75 feet (22 860 mm) above the lowest level of fire department access, up to and including 12 *stories* or 180 feet (54 864 mm) above *grade plane*, *mass timber* interior exit and elevator hoistway enclosures shall be protected in accordance with Section 602.4.1.2. In buildings greater than 12 *stories* or 180 feet (54 864 mm) above *grade plane*, interior exit and elevator hoistway enclosures shall be constructed of noncombustible materials.

602.4.1 Type IV-A. *Building elements* in Type IV-A construction shall be protected in accordance with Sections 602.4.1.1 through 602.4.1.6. The required *fire-resistance rating* of noncombustible elements and protected *mass timber* elements shall be determined in accordance with Section 703.2.

602.4.1.1 Exterior protection. The outside face of *exterior walls* of *mass timber* construction shall be protected with *noncombustible protection* with a minimum assigned time of 40 minutes, as specified in Table 722.7.1(1). Components of the *exterior wall covering* shall be of noncombustible material except *water-resistive barriers* having a peak heat release rate of less than 150kW/m², a total heat release of less than 20 MJ/m² and an effective heat of combustion of less than 18MJ/kg as determined in accordance with ASTM E1354 and having a *flame spread index* of 25 or less and a *smoke-developed index* of 450 or less as determined in accordance with ASTM E84 or UL 723. The ASTM E1354 test shall be conducted on specimens at the thickness intended for use, in the horizontal orientation and at an incident radiant heat flux of 50 kW/m².

602.4.1.2 Interior protection. Interior faces of all *mass timber* elements, including the inside faces of exterior *mass timber* walls and *mass timber* roofs, shall be protected with materials complying with Section 703.3.

602.4.1.2.1 Protection time. *Noncombustible protection* shall contribute a time equal to or greater than times assigned in Table 722.7.1(1), but not less than 80 minutes. The use of materials and their respective protection contributions specified in Table 722.7.1(2) shall be permitted to be used for compliance with Section 722.7.1.

602.4.1.3 Floors. The floor assembly shall contain a noncombustible material not less than 1 inch (25 mm) in thickness above the *mass timber*. Floor finishes in accordance with Section 804 shall be permitted on top of the noncombustible material. The underside of floor assemblies shall be protected in accordance with Section 602.4.1.2.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

602.4.1.4 Roofs. The *interior surfaces* of *roof assemblies* shall be protected in accordance with Section 602.4.1.2. *Roof coverings* in accordance with Chapter 15 shall be permitted on the outside surface of the *roof assembly*.

602.4.1.5 Concealed spaces. Concealed spaces shall not contain combustibles other than electrical, mechanical, fire protection, or plumbing materials and equipment permitted in plenums in accordance with Section 602 of the *International Mechanical Code*, and shall comply with all applicable provisions of Section 718. Combustible construction forming concealed spaces shall be protected in accordance with Section 602.4.1.2.

602.4.1.6 Shafts. *Shafts* shall be permitted in accordance with Sections 713 and 718. Both the *shaft* side and room side of *mass timber* elements shall be protected in accordance with Section 602.4.1.2.

602.4.2 Type IV-B. *Building elements* in Type IV-B construction shall be protected in accordance with Sections 602.4.2.1 through 602.4.2.6. The required *fire-resistance rating* of noncombustible elements or *mass timber* elements shall be determined in accordance with Section 703.2.

602.4.2.1 Exterior protection. The outside face of *exterior walls* of *mass timber* construction shall be protected with *noncombustible protection* with a minimum assigned time of 40 minutes, as specified in Table 722.7.1(1). Components of the *exterior wall covering* shall be of noncombustible material except *water-resistive barriers* having a peak heat release rate of less than 150kW/m², a total heat release of less than 20 MJ/m² and an effective heat of combustion of less than 18MJ/kg as determined in accordance with ASTM E1354, and having a *flame spread index* of 25 or less and a *smoke-developed index* of 450 or less as determined in accordance with ASTM E84 or UL 723. The ASTM E1354 test shall be conducted on specimens at the thickness intended for use, in the horizontal orientation and at an incident radiant heat flux of 50 kW/m².

602.4.2.2 Interior protection. Interior faces of all *mass timber* elements, including the inside face of exterior *mass timber* walls and *mass timber* roofs, shall be protected, as required by this section, with materials complying with Section 707.3.

602.4.2.2.1 Protection time. *Noncombustible protection* shall contribute a time equal to or greater than times assigned in Table 722.7.1(1), but not less than 80 minutes. The use of materials and their respective protection contributions specified in Table 722.7.1(2) shall be permitted to be used for compliance with Section 722.7.1.

[W] **602.4.2.2.2 Protected area.** Interior faces of *mass timber* elements, including the inside face of exterior *mass timber* walls and *mass timber* roofs, shall be protected in accordance with Section 602.4.2.2.1.

Exceptions: Unprotected portions of mass timber ceilings and walls complying with Section 602.4.2.2.4 and the following:

1. Unprotected portions of mass timber ceilings and walls complying with one of the following:
 - 1.1. Unprotected portions of mass timber ceilings, including attached beams, shall be permitted and shall be limited to an area less than or equal to ((20)) 100 percent of the floor area in any dwelling unit or fire area.
 - 1.2. Unprotected portions of mass timber walls, including attached columns, shall be permitted and shall be limited to an area less than or equal to 40 percent of the floor area in any dwelling unit or fire area.
 - 1.3. Unprotected portions of both walls and ceilings of mass timber, including attached columns and beams, in any dwelling unit or fire area shall be permitted in accordance with Section 602.4.2.2.3.
2. Mass timber columns and beams that are not an integral portion of walls or ceilings, respectively, shall be permitted to be unprotected without restriction of either aggregate area or separation from one another.

602.4.2.2.3 Mixed unprotected areas. In each *dwelling unit* or *fire area*, where both portions of ceilings and portions of walls are unprotected, the total allowable unprotected area shall be determined in accordance with Equation 6-1.

$$(U_{tc}/U_{ac}) + (U_{tw}/U_{aw}) \leq 1 \quad \text{(Equation 6-1)}$$

where:

- U_{tc} = Total unprotected mass timber ceiling areas.
- U_{ac} = Allowable unprotected mass timber ceiling area conforming to Exception 1.1 of Section 602.4.2.2.2.
- U_{tw} = Total unprotected mass timber wall areas.
- U_{aw} = Allowable unprotected mass timber wall area conforming to Exception 1.2 of Section 602.4.2.2.2.

[W] **602.4.2.2.4 Separation distance between unprotected mass timber elements.** In each *dwelling unit* or *fire area*, unprotected portions of *mass timber* walls and ceilings shall be not less than 15 feet (4572 mm) from unprotected portions of other walls ((and ceilings, measured horizontally along the ceiling and from other unprotected portions of walls)) measured horizontally along the floor.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[W] **602.4.2.3 Floors.** The floor assembly shall contain a noncombustible material not less than 1 inch (25 mm) in thickness above the *mass timber*. Floor finishes in accordance with Section 804 shall be permitted on top of the noncombustible material. ~~((The))~~ Except where unprotected mass timber ceilings are permitted in Section 602.4.2.2.2, the underside of floor assemblies shall be protected in accordance with Section 602.4.1.2.

602.4.2.4 Roofs. The *interior surfaces* of roof assemblies shall be protected in accordance with Section 602.4.2.2 except, in nonoccupiable spaces, they shall be treated as a concealed space with no portion left unprotected. *Roof coverings* in accordance with Chapter 15 shall be permitted on the outside surface of the roof assembly.

602.4.2.5 Concealed spaces. Concealed spaces shall not contain combustibles other than electrical, mechanical, fire protection, or plumbing materials and equipment permitted in plenums in accordance with Section 602 of the *International Mechanical Code*, and shall comply with all applicable provisions of Section 718. Combustible construction forming concealed spaces shall be protected in accordance with Section 602.4.1.2.

602.4.2.6 Shafts. *Shafts* shall be permitted in accordance with Sections 713 and 718. Both the *shaft* side and room side of *mass timber* elements shall be protected in accordance with Section 602.4.1.2.

602.4.3 Type IV-C. *Building elements* in Type IV-C construction shall be protected in accordance with Sections 602.4.3.1 through 602.4.3.6. The required *fire-resistance rating* of *building elements* shall be determined in accordance with Section 703.2.

602.4.3.1 Exterior protection. The exterior side of walls of combustible construction shall be protected with *noncombustible protection* with a minimum assigned time of 40 minutes, as determined in Table 722.7.1(1). Components of the *exterior wall covering* shall be of noncombustible material except *water-resistive barriers* having a peak heat release rate of less than 150 kW/m², a total heat release of less than 20 MJ/m² and an effective heat of combustion of less than 18 MJ/kg as determined in accordance with ASTM E1354 and having a *flame spread index* of 25 or less and a *smoke-developed index* of 450 or less as determined in accordance with ASTM E84 or UL 723. The ASTM E1354 test shall be conducted on specimens at the thickness intended for use, in the horizontal orientation and at an incident radiant heat flux of 50 kW/m².

602.4.3.2 Interior protection. *Mass timber* elements are permitted to be unprotected.

602.4.3.3 Floors. Floor finishes in accordance with Section 804 shall be permitted on top of the floor construction.

602.4.3.4 Roof coverings. *Roof coverings* in accordance with Chapter 15 shall be permitted on the outside surface of the roof assembly.

602.4.3.5 Concealed spaces. Concealed spaces shall not contain combustibles other than electrical, mechanical, fire protection, or plumbing materials and equipment permitted in plenums in accordance with Section 602 of the *International Mechanical Code*, and shall comply with all applicable provisions of Section 718. Combustible construction forming concealed spaces shall be protected with *noncombustible protection* with a minimum assigned time of 40 minutes, as specified in Table 722.7.1(1).

602.4.3.6 Shafts. *Shafts* shall be permitted in accordance with Sections 713 and 718. *Shafts* and elevator hoistway and *interior exit stairway enclosures* shall be protected with *noncombustible protection* with a minimum assigned time of 40 minutes, as specified in Table 722.7.1(1), on both the inside of the *shaft* and the outside of the *shaft*.

602.4.4 Type IV-HT. Type IV-HT (Heavy Timber) construction is that type of construction in which the *exterior walls* are of noncombustible materials and the interior *building elements* are of solid wood, laminated heavy timber or *structural composite lumber* (SCL), without concealed spaces or with concealed spaces complying with Section 602.4.4.3. The minimum dimensions for permitted materials including solid timber, glued-laminated timber, SCL and *cross-laminated timber* (CLT) and the details of Type IV construction shall comply with the provisions of this section and Section 2304.11. *Exterior walls* complying with Section 602.4.4.1 or 602.4.4.2 shall be permitted. Interior walls and partitions not less than 1-hour fire-resistance rated or heavy timber conforming with Section 2304.11.2.2 shall be permitted.

602.4.4.1 Fire-retardant-treated wood in exterior walls. *Fire-retardant-treated wood* framing and sheathing complying with Section 2303.2 shall be permitted within *exterior wall* assemblies with a 2-hour rating or less.

602.4.4.2 Cross-laminated timber in exterior walls. *Cross-laminated timber* (CLT) not less than 4 inches (102 mm) in thickness complying with Section 2303.1.4 shall be permitted within *exterior wall* assemblies with a 2-hour rating or less. Heavy timber structural members appurtenant to the *CLT exterior wall* shall meet the requirements of Table 2304.11 and be fire-resistance rated as required for the *exterior wall*. The exterior surface of the cross-laminated timber and heavy timber elements shall be protected by one the following:

1. *Fire-retardant-treated wood* sheathing complying with Section 2303.2 and not less than 15/32 inch (12 mm) thick.
2. *Gypsum board* not less than 1/2 inch (12.7 mm) thick.
3. A noncombustible material.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[W] **602.4.4.3 Concealed spaces.** Concealed spaces shall not contain combustible materials other than *building elements* and electrical, mechanical, fire protection, or plumbing materials and equipment permitted in plenums in accordance with Section 602 of the *International Mechanical Code*. Concealed spaces shall comply with applicable provisions of Section 718. Concealed spaces shall be protected in accordance with one or more of the following:

1. The building shall be sprinklered throughout in accordance with Section 903.3.1.1 and automatic sprinklers shall also be provided in the concealed space.
2. The concealed space shall be completely filled with noncombustible insulation.
3. ~~((Surfaces))~~ **Combustible surfaces** within the concealed space shall be fully sheathed with not less than 5/8-inch Type X gypsum board.

Exception: Concealed spaces within interior walls and partitions with a 1-hour or greater fire-resistance rating complying with Section 2304.11.2.2 shall not require additional protection.

602.4.4.4 Exterior structural members. Where a horizontal separation of 20 feet (6096 mm) or more is provided, wood columns and arches conforming to heavy timber sizes complying with Section 2304.11 shall be permitted to be used externally.

602.5 Type V. Type V construction is that type of construction in which the structural elements, *exterior walls* and interior walls are of any materials permitted by this code.

Interpretation I602.5: Type VA buildings are permitted to include exposed heavy-timber construction for columns, beams, girders, arches, trusses, floors and roof decks except for fire-resistive construction required by Sections 510 and 713 and Chapter 10. Heavy timber is permitted in concealed spaces in Type VA buildings where provided with protection per Section 602.4.4.3.

**SECTION 603
COMBUSTIBLE MATERIAL IN TYPES I AND II CONSTRUCTION**

[S] **603.1 Allowable materials.** Combustible materials shall be permitted in buildings of Type I or II construction in the following applications and in accordance with Sections 603.1.1 through 603.1.3:

1. *Fire-retardant-treated wood* shall be permitted in:
 - 1.1. Nonbearing partitions where the required *fire-resistance rating* is 2 hours or less except in *shaft enclosures* within Group I-2 occupancies and *ambulatory care facilities*.
 - 1.2. Nonbearing *exterior walls* where fire-resistance-rated construction is not required.
 - 1.3. Roof construction, including girders, trusses, framing and decking.

Exceptions:

1. In buildings of Type IA construction exceeding two *stories above grade plane*, *fire-retardant-treated wood* is not permitted in roof construction where the vertical distance from the upper floor to the roof is less than 20 feet (6096 mm).
 2. Group I-2, roof construction containing *fire-retardant-treated wood* shall be covered by not less than a Class A *roof covering* or roof assembly, and the roof assembly shall have a *fire-resistance rating* where required by the construction type.
 - 1.4. Balconies, porches, decks and exterior *stairways* not used as required exits on buildings three *stories* or less above grade plane.
2. Thermal and acoustical insulation, other than foam plastics, having a *flame spread index* of not more than 25.

Exceptions:

1. Insulation placed between two layers of noncombustible materials without an intervening airspace shall be allowed to have a *flame spread index* of not more than 100.
 2. Insulation installed between a finished floor and solid decking without intervening airspace shall be allowed to have a *flame spread index* of not more than 200.
3. Foam plastics in accordance with Chapter 26.
 4. *Roof coverings* that have an A, B or C classification.
 5. *Interior floor finish* and floor covering materials installed in accordance with Section 804.
 6. Millwork such as doors, door frames, window sashes and frames.
 7. *Interior wall and ceiling finishes* installed in accordance with Section 803.
 8. *Trim* installed in accordance with Section 806.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

9. Where not installed greater than 15 feet (4572 mm) above grade, show windows, nailing or furring strips and wooden bulkheads below show windows, including their frames, aprons and show cases.
10. Finish flooring installed in accordance with Section 805.
11. Partitions dividing portions of stores, offices or similar places occupied by one tenant only and that do not establish a *corridor* serving an *occupant load* of 30 or more shall be permitted to be constructed of *fire-retardant-treated* wood, 1-hour fire-resistance-rated construction or of wood panels or similar light construction up to 6 feet (1829 mm) in height.
12. *Stages* and *platforms* constructed in accordance with Sections 410.2 and 410.3, respectively.
13. Combustible *exterior wall coverings*, balconies and similar projections and bay or oriel windows in accordance with Chapter 14 and Section 705.2.3.1.
14. Blocking such as for handrails, millwork, cabinets and window and door frames.
15. Light-transmitting plastics as permitted by Chapter 26.
16. Mastics and caulking materials applied to provide flexible seals between components of *exterior wall* construction.
17. Exterior plastic *veneer* installed in accordance with Section 2605.2.
18. Nailing or furring strips as permitted by Section 803.15.
19. Heavy timber as permitted by Note c to Table 601 and Sections 602.4.4.4 and 705.2.3.1.
20. Aggregates, component materials and admixtures as permitted by Section 703.2.1.2.
21. Sprayed fire-resistant materials and intumescent and mastic fire-resistant coatings, determined on the basis of *fire resistance* tests in accordance with Section 703.2 and installed in accordance with Sections 1705.15 and 1705.16, respectively.
22. Materials used to protect penetrations in fire-resistance-rated assemblies in accordance with Section 714.
23. Materials used to protect *joints* in fire-resistance-rated assemblies in accordance with Section 715.
24. Materials allowed in the concealed spaces of buildings of Types I and II construction in accordance with Section 718.5.
25. Materials exposed within plenums complying with Section 602 of the *International Mechanical Code*.
26. Wall construction of freezers and coolers of less than 1,000 square feet (92.9 m²), in size, lined on both sides with noncombustible materials and the building is protected throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1.
27. Wood nailers for parapet flashing and roof cants.
28. Stairways within individual *dwelling units* and stairways serving a single tenant space are permitted to be of fire-retardant-treated wood or heavy-timber construction. In other than Group R occupancies, such stairways shall not serve as a required means of egress.
29. Stairways complying with Section 510.2, item 4.
30. Aluminum is permitted as follows:
 - 30.1. Where combustible materials, including fire retardant treated wood, are allowed by the code;
 - 30.2. For structural members supporting less than 500 square feet that do not have direct connections to columns and bracing members designed to carry gravity loads;
 - 30.3. In curtain walls *approved* or listed for use in non-combustible construction; and
 - 30.4. Unprotected aluminum frames for *awnings* in accordance with Section 3105.5.

603.1.1 Ducts. The use of nonmetallic ducts shall be permitted where installed in accordance with the limitations of the *International Mechanical Code*.

603.1.2 Piping. The use of combustible piping materials shall be permitted where installed in accordance with the limitations of the *International Mechanical Code* and the (~~International~~) *Uniform Plumbing Code*.

603.1.3 Electrical. The use of electrical wiring methods with combustible insulation, tubing, raceways and related components shall be permitted where installed in accordance with the limitations of this code.

CHAPTER 7

FIRE AND SMOKE PROTECTION FEATURES

User note:

About this chapter: Chapter 7 provides detailed requirements for fire-resistance-rated construction, including structural members, walls, partitions and horizontal assemblies. Other portions of the code describe where certain fire-resistance-rated elements are required. This chapter specifies how these elements are constructed, how openings in walls and partitions are protected and how penetrations of such elements are protected.

SECTION 701 GENERAL

[S] **701.1 Scope.** The provisions of this chapter shall govern the materials, systems and assemblies used for structural *fire resistance* and fire-resistance-rated construction separation of adjacent spaces to safeguard against the spread of fire and smoke within a building and the spread of fire to or from buildings.

Exceptions:

1. Carports are not required to comply with this chapter if they satisfy all the following criteria:
 - 1.1. Accessory to Group R-3 occupancies.
 - 1.2. Used to shelter only vehicles, trailers or vessels.
 - 1.3. Constructed of metal, plastic or fabric.
 - 1.4. No more than 3 pounds per square foot in total weight.
 - 1.5. No more than 300 square feet covered area.
2. Temporary tents and similar structures are not required to comply with this chapter if they satisfy all the following criteria:
 - 2.1. The occupant load is less than 100;
 - 2.2. The structure is fully or partially enclosed and 400 square feet or less in area; or is entirely unenclosed and 700 square feet or less in area;
 - 2.3. The structure is constructed of metal, plastic or fabric; and
 - 2.4. The structure is no more than 3 pounds per square foot in total weight.

SECTION 702 MULTIPLE-USE FIRE ASSEMBLIES

702.1 Multiple-use fire assemblies. Fire assemblies that serve multiple purposes in a building shall comply with all of the requirements that are applicable for each of the individual fire assemblies.

SECTION 703 FIRE-RESISTANCE RATINGS AND FIRE TESTS

703.1 Scope. Materials prescribed herein for *fire resistance* shall conform to the requirements of this chapter.

703.2 Fire resistance. The *fire-resistance rating* of building elements, components or assemblies shall be determined in accordance with Section 703.2.1 or 703.2.2 without the use of *automatic* sprinklers or any other fire suppression system being incorporated, or in accordance with Section 703.2.3.

703.2.1 Tested assemblies. A *fire-resistance rating* of building elements, components or assemblies shall be determined by the test procedures set forth in ASTM E119 or UL 263. The *fire-resistance rating* of penetrations and *fire-resistant joint systems* shall be determined in accordance with Sections 714 and 715, respectively.

703.2.1.1 Nonsymmetrical wall construction. Interior walls and partitions of nonsymmetrical construction shall be tested with both faces exposed to the furnace, and the assigned *fire-resistance rating* shall be the shortest duration obtained from the two tests conducted in compliance with ASTM E119 or UL 263. Where evidence is furnished to show

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

that the wall was tested with the least fire-resistant side exposed to the furnace, subject to acceptance of the *building official*, the wall need not be subjected to tests from the opposite side (see Section 705.5 for *exterior walls*).

703.2.1.2 Combustible components. Combustible aggregates are permitted in gypsum and Portland cement concrete mixtures for fire-resistance-rated construction. Any component material or admixture is permitted in assemblies if the resulting tested assembly meets the *fire-resistance* test requirements of this code.

703.2.1.3 Restrained classification. Fire-resistance-rated assemblies tested under ASTM E119 or UL 263 shall not be considered to be restrained unless evidence satisfactory to the *building official* is furnished by the *registered design professional* showing that the construction qualifies for a restrained classification in accordance with ASTM E119 or UL 263. Restrained construction shall be identified on the *construction documents*.

703.2.1.4 Supplemental features. Where materials, systems or devices that have not been tested as part of a fire-resistance-rated assembly are incorporated into the *building element*, component or assembly, sufficient data shall be made available to the *building official* to show that the required *fire-resistance rating* is not reduced.

703.2.1.5 Exterior bearing walls. In determining the *fire-resistance rating* of exterior bearing walls, compliance with the ASTM E119 or UL 263 criteria for unexposed surface temperature rise and ignition of cotton waste due to passage of flame or gases is required only for a period of time corresponding to the required *fire-resistance rating* of an exterior nonbearing wall with the same *fire separation distance*, and in a building of the same group. Where the *fire-resistance rating* determined in accordance with this exception exceeds the *fire-resistance rating* determined in accordance with ASTM E119 or UL 263, the fire exposure time period, water pressure and application duration criteria for the hose stream test of ASTM E119 or UL 263 shall be based on the *fire-resistance rating* determined in accordance with this section.

703.2.2 Analytical methods. The fire resistance of *building elements*, components or assemblies established by an analytical method shall be by any of the methods listed in this section, based on the fire exposure and acceptance criteria specified in ASTM E119 or UL 263.

1. *Fire-resistance* designs documented in approved sources.
2. Prescriptive designs of fire-resistance-rated *building elements*, components or assemblies as prescribed in Section 721.
3. Calculations in accordance with Section 722.
4. Engineering analysis based on a comparison of *building element*, component or assemblies designs having *fire-resistance ratings* as determined by the test procedures set forth in ASTM E119 or UL 263.
5. *Fire-resistance* designs certified by an *approved agency*.

[S] 703.2.3 Approved alternate method. The *fire resistance* of *building elements*, components or assemblies not complying with Section 703.2.1 or 703.2.2 shall be permitted to be established by an alternative protection method in accordance with Section ~~(104.11)~~ 104.5.

703.3 Noncombustibility tests. The tests indicated in Section 703.3.1 shall serve as criteria for acceptance of building materials as set forth in Sections 602.2, 602.3 and 602.4 in Types I, II, III and IV construction. The term “noncombustible” does not apply to the *flame spread* characteristics of *interior finish* or *trim* materials. A material shall not be classified as a noncombustible building construction material if it is subject to an increase in combustibility or *flame spread* beyond the limitations herein established through the effects of age, moisture or other atmospheric conditions.

703.3.1 Noncombustible materials. Materials required to be noncombustible shall be tested in accordance with ASTM E136. Alternately, materials required to be noncombustible shall be tested in accordance with ASTM E2652 using the acceptance criteria prescribed by ASTM E136.

Exception: Materials having a structural base of noncombustible material as determined in accordance with ASTM E136, or with ASTM E2652 using the acceptance criteria prescribed by ASTM E136, with a surfacing of not more than 0.125 inch (3.18 mm) in thickness having a flame spread index not greater than 50 when tested in accordance with ASTM E84 or UL 723 shall be acceptable as noncombustible.

703.4 Fire-resistance-rated glazing. Fire-resistance-rated glazing, when tested in accordance with ASTM E119 or UL 263 and complying with the requirements of Section 707, shall be permitted. Fire-resistance-rated glazing shall bear a *label* marked in accordance with Table 716.1(1) issued by an agency and shall be permanently identified on the glazing.

[S] 703.5 Marking and identification. Where there is an accessible concealed floor, floor-ceiling or *attic* space, *fire walls*, *fire barriers*, *fire partitions*, *smoke barriers* and *smoke partitions* or any other wall required to have protected openings or penetrations shall be effectively and permanently identified with signs or stenciling in the concealed space. Such identification shall:

1. Be located within 15 feet (4572 mm) of the end of each wall and at intervals not exceeding 30 feet (9144 mm) measured horizontally along the wall or partition.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

2. Include lettering not less than 3 inches (76 mm) in height with a minimum 3/8-inch (9.5 mm) stroke in a contrasting color incorporating the suggested wording, “FIRE AND/OR SMOKE BARRIER—PROTECT ALL OPENINGS,” or other similar wording.

703.6 Determination of noncombustible protection time contribution. The time, in minutes, contributed to the *fire-resistance rating* by the *noncombustible protection of mass timber building elements*, components, or assemblies, shall be established through a comparison of assemblies tested using procedures set forth in ASTM E119 or UL 263. The test assemblies shall be identical in construction, loading and materials, other than the *noncombustible protection*. The two test assemblies shall be tested to the same criteria of structural failure with the following conditions:

1. Test Assembly 1 shall be without protection.
2. Test Assembly 2 shall include the representative noncombustible protection. The protection shall be fully defined in terms of configuration details, attachment details, joint sealing details, accessories and all other relevant details.

The *noncombustible protection* time contribution shall be determined by subtracting the *fire-resistance* time, in minutes, of Test Assembly 1 from the *fire-resistance* time, in minutes, of Test Assembly 2.

703.7 Sealing of adjacent mass timber elements. In buildings of Types IV-A, IV-B and IV-C construction, sealant or adhesive shall be provided to resist the passage of air in the following locations:

1. At abutting edges and intersections of mass timber building elements required to be fire-resistance rated.
2. At abutting intersections of mass timber building elements and building elements of other materials where both are required to be fire-resistance rated.

Sealants shall meet the requirements of ASTM C920. Adhesives shall meet the requirements of ASTM D3498.

Exception: Sealants or adhesives need not be provided where they are not a required component of a tested fire-resistance-rated assembly.

SECTION 704 FIRE-RESISTANCE RATING OF STRUCTURAL MEMBERS

704.1 Requirements. The *fire-resistance ratings* of structural members and assemblies shall comply with this section and the requirements for the type of construction as specified in Table 601. The *fire-resistance ratings* shall be not less than the ratings required for the fire-resistance-rated assemblies supported by the structural members.

Exception: *Fire barriers, fire partitions, smoke barriers and horizontal assemblies* as provided in Sections 707.5, 708.4, 709.4 and 711.2, respectively.

704.2 Column protection. Where columns are required to have protection to achieve a *fire-resistance rating*, the entire column shall be provided individual encasement protection by protecting it on all sides for the full column height, including connections to other structural members, with materials having the required *fire-resistance rating*. Where the column extends through a ceiling, the encasement protection shall be continuous from the top of the foundation or floor/ceiling assembly below through the ceiling space to the top of the column.

Exception: Columns that meet the limitations of Section 704.4.1.

704.3 Protection of the primary structural frame other than columns. Members of the *primary structural frame* other than columns that are required to have protection to achieve a *fire-resistance rating* and support more than two floors or one floor and roof, or support a *load-bearing wall* or a *nonload-bearing wall* more than two *stories* high, shall be provided individual encasement protection by protecting them on all sides for the full length, including connections to other structural members, with materials having the required *fire-resistance rating*.

Exception: Individual encasement protection on all sides shall be permitted on all exposed sides provided that the extent of protection is in accordance with the required *fire-resistance rating*, as determined in Section 703.

704.4 Protection of secondary structural members. *Secondary structural members* that are required to have protection to achieve a *fire-resistance rating* shall be protected by individual encasement protection.

704.4.1 Light-frame construction. Studs, columns and boundary elements that are integral elements in *walls of light-frame construction* and are located entirely between the top and bottom plates or tracks shall be permitted to have required *fire-resistance ratings* provided by the membrane protection provided for the *wall*.

[S] **704.4.2 Horizontal assemblies.** (~~Horizontal~~) *Secondary members within horizontal assemblies* are permitted to be protected with a membrane or ceiling where the membrane or ceiling provides the required *fire-resistance rating* and is installed in accordance with Section 711.

704.5 Truss protection. The required thickness and construction of fire-resistance-rated assemblies enclosing trusses shall be based on the results of full-scale tests or combinations of tests on truss components or on *approved* calculations based on such tests that satisfactorily demonstrate that the assembly has the required *fire resistance*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

704.6 Attachments to structural members. The edges of lugs, brackets, rivets and bolt heads attached to structural members shall be permitted to extend to within 1 inch (25 mm) of the surface of the fire protection.

[W] 704.6.1 Secondary (nonstructural) attachments to structural members. Where primary and secondary structural steel members require fire protection, (~~secondary steel attachments to those structural members shall be protected with the same fire-resistive material and thickness as required for the structural member~~) any additional structural steel members having direct connection to the primary structural frame or secondary structural members shall be protected with the same fire-resistive material and thickness as required for the structural member. The protection shall extend away from the structural member a distance of not less than 12 inches (305 mm), or shall be applied to the entire length where the attachment is less than 12 inches (305 mm) long. Where an attachment is hollow and the ends are open, the fire-resistive material and thickness shall be applied to both exterior and interior of the hollow steel attachment.

704.7 Reinforcing. Thickness of protection for concrete or masonry reinforcement shall be measured to the outside of the reinforcement except that stirrups and spiral reinforcement ties are permitted to project not more than 0.5 inch (12.7 mm) into the protection.

704.8 Embedments and enclosures. Pipes, wires, conduits, ducts or other service facilities shall not be embedded in the required fire protective covering of a structural member that is required to be individually encased.

704.9 Impact protection. Where the fire protective covering of a structural member is subject to impact damage from moving vehicles, the handling of merchandise or other activity, the fire protective covering shall be protected by corner guards or by a substantial jacket of metal or other noncombustible material to a height adequate to provide full protection, but not less than 5 feet (1524 mm) from the finished floor.

Exception: Corner protection is not required on concrete columns in parking garages.

704.10 Exterior structural members. Load-bearing structural members located within the *exterior walls* or on the outside of a building or structure shall be provided with the highest *fire-resistance rating* as determined in accordance with the following:

1. As required by Table 601 for the type of *building element* based on the type of construction of the building.
2. As required by Table 601 for exterior bearing walls based on the type of construction.
3. As required by Table 705.5 for *exterior walls* based on the *fire separation distance*.

704.11 Bottom flange protection. Fire protection is not required at the bottom flange of lintels, shelf angles and plates, spanning not more than 6 feet 4 inches (1931 mm) whether part of the *primary structural frame* or not, and from the bottom flange of lintels, shelf angles and plates not part of the structural frame, regardless of span.

704.12 Seismic isolation systems. *Fire-resistance ratings* for the isolation system shall meet the *fire-resistance rating* required for the columns, walls or other structural elements in which the isolation system is installed in accordance with Table 601. Isolation systems required to have a *fire-resistance rating* shall be protected with *approved* materials or construction assemblies designed to provide the same degree of *fire resistance* as the structural element in which the system is installed when tested in accordance with ASTM E119 or UL 263 (see Section 703.2).

Such isolation system protection applied to isolator units shall be capable of retarding the transfer of heat to the isolator unit in such a manner that the required gravity load-carrying capacity of the isolator unit will not be impaired after exposure to the standard time-temperature curve fire test prescribed in ASTM E119 or UL 263 for a duration not less than that required for the *fire-resistance rating* of the structure element in which the system is installed.

Such isolation system protection applied to isolator units shall be suitably designed and securely installed so as not to dislodge, loosen, sustain damage or otherwise impair its ability to accommodate the seismic movements for which the isolator unit is designed and to maintain its integrity for the purpose of providing the required fire-resistance protection.

704.13 Sprayed fire-resistant materials (SFRM). Sprayed fire-resistant materials (SFRM) shall comply with Sections 704.13.1 through 704.13.5.

704.13.1 Fire-resistance rating. The application of SFRM shall be consistent with the *fire-resistance rating* and the listing, including, but not limited to, minimum thickness and dry density of the applied SFRM, method of application, substrate surface conditions and the use of bonding adhesives, sealants, reinforcing or other materials.

704.13.2 Manufacturer's installation instructions. The application of SFRM shall be in accordance with the manufacturer's installation instructions. The instructions shall include, but are not limited to, substrate temperatures and surface conditions and SFRM handling, storage, mixing, conveyance, method of application, curing and *ventilation*.

704.13.3 Substrate condition. The SFRM shall be applied to a substrate in compliance with Sections 704.13.3.1 and 704.13.3.2.

704.13.3.1 Surface conditions. Substrates to receive SFRM shall be free of dirt, oil, grease, release agents, loose scale and any other condition that prevents adhesion. The substrates shall be free of primers, paints and encapsulants other

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

than those fire tested and *listed* by a nationally recognized testing agency. Primed, painted or encapsulated steel shall be allowed, provided that testing has demonstrated that required adhesion is maintained.

704.13.3.2 Primers, paints and encapsulants. Where the SFRM is to be applied over primers, paints or encapsulants other than those specified in the listing, the material shall be field tested in accordance with ASTM E736. Where testing of the SFRM with primers, paints or encapsulants demonstrates that required adhesion is maintained, SFRM shall be permitted to be applied to primed, painted or encapsulated wide flange steel shapes in accordance with the following conditions:

1. The beam flange width does not exceed 12 inches (305 mm); or
2. The column flange width does not exceed 16 inches (400 mm); or
3. The beam or column web depth does not exceed 16 inches (400 mm).
4. The average and minimum bond strength values shall be determined based on not fewer than five bond tests conducted in accordance with ASTM E736. Bond tests conducted in accordance with ASTM E736 shall indicate an average bond strength of not less than 80 percent and an individual bond strength of not less than 50 percent, when compared to the bond strength of the SFRM as applied to clean, uncoated 1/8-inch-thick (3.2 mm) steel plate.

704.13.4 Temperature. A minimum ambient and substrate temperature of 40°F (4.44°C) shall be maintained during and for not fewer than 24 hours after the application of the SFRM, unless the manufacturer’s instructions allow otherwise.

704.13.5 Finished condition. The finished condition of SFRM applied to structural members or assemblies shall not, upon complete drying or curing, exhibit cracks, voids, spalls, delamination or any exposure of the substrate. Surface irregularities of SFRM shall be deemed acceptable.

**SECTION 705
EXTERIOR WALLS AND PROJECTIONS**

705.1 General. *Exterior walls* shall comply with this section.

[S] **705.2 Projections.** *Cornices, eave overhangs, exterior balconies and similar projections extending beyond the (~~exterior wall~~) building area* shall conform to the requirements of this section and Section 1405. Exterior egress balconies and exterior *exit stairways and ramps* shall comply with Sections 1021 and 1027, respectively. Projections shall not extend any closer to the line used to determine the *fire separation distance* than shown in Table 705.2.

Exception: Buildings on the same lot and considered as portions of one building in accordance with Section 705.3 are not required to comply with this section for projections between the buildings.

**TABLE 705.2
MINIMUM DISTANCE OF PROJECTION**

FIRE SEPARATION DISTANCE (FSD) (feet)	MINIMUM DISTANCE FROM LINE USED TO DETERMINE FSD
0 to less than 2	Projections not permitted
2 to less than 3	24 inches
3 to less than 5	Two-thirds of FSD
5 or greater	40 inches

For SI: 1 foot = 304.8 mm; 1 inch = 25.4 mm.

Code Alternate CA705.2: Private balconies and decks constructed with grated metal decking that allows smoke and heat to ventilate are permitted to be considered projections and not floor area. Noncombustible exterior structure supporting only the grated balcony or deck is not required to be fire-resistance rated. Exterior exposed noncombustible columns supporting the grated decks are not required to be fire-resistance rated.

Interpretation I705.2: For purposes of Section 705.2, gutters 6 inches or less in width that are not an integral part of the structure are not considered projections on Group R-3 occupancies and on Group U accessory occupancies.

705.2.1 Types I and II construction. Projections from walls of Type I or II construction shall be of noncombustible materials or combustible materials as allowed by Sections 705.2.3.1 and 705.2.4.

705.2.2 Type III, IV or V construction. Projections from walls of Type III, IV or V construction shall be of any *approved* material.

Eave overhangs from walls of Types IIIA, IV or VA construction or from walls that are otherwise required to be of fire-resistance-rated construction shall be finished on the underside with at least 1/2-inch (13 mm) gypsum sheathing or equiv-

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

alent or shall be heavy timber construction conforming to Section 2304.11. Vents are permitted to be installed if the vent openings are covered with corrosion-resistant metal mesh.

See Section 714.5.2 for allowable vent penetrations.

705.2.3 Projection protection. Projections extending to within 5 feet (1524 mm) of the line used to determine the *fire separation distance* shall be one of the following:

1. Noncombustible materials.
2. Combustible materials of not less than 1-hour fire-resistance-rated construction.
3. Heavy timber construction complying with Section 2304.11.
4. Fire-retardant-treated wood.
5. As permitted by Section 705.2.3.1.

Exceptions:

1. Type VB construction shall be allowed for combustible projections in Group R-3 and U occupancies with a *fire separation distance* greater than or equal to 5 feet (1524 mm).
2. Eave overhangs are permitted to be of less than one-hour construction provided the underside is finished with at least 1/2-inch (13 mm) gypsum sheathing or equivalent.

[S] **705.2.3.1 Balconies and similar projections.** Balconies and similar projections of combustible construction other than *fire-retardant-treated wood* shall be *fire-resistance* rated where required by Table 601 for floor construction or shall be of heavy timber construction in accordance with Section 2304.11. The aggregate length of the projections shall not exceed 50 percent of the building's perimeter on each floor.

Exceptions:

1. On buildings of Types I and II construction, three *stories* or less above *grade plane*, *fire-retardant-treated wood* shall be permitted for balconies, porches, decks and exterior *stairways* not used as required exits.
2. Untreated wood and plastic composites that comply with ASTM D7032 and Section 2612 are permitted for pickets, rails and similar *guard* components that are limited to 42 inches (1067 mm) in height.
3. Balconies and similar projections on buildings of Types III, IV and V construction shall be permitted to be of Type V construction and shall not be required to have a *fire-resistance rating* where sprinkler protection is extended to these areas.
4. Where sprinkler protection is extended to the balcony areas, the aggregate length of the balcony on each floor shall not be limited.

705.2.4 Bay and oriel windows. Bay and oriel windows constructed of combustible materials shall conform to the type of construction required for the building to which they are attached.

Exception: *Fire-retardant-treated wood* shall be permitted on buildings three *stories* or less above *grade plane* of Type I, II, III or IV construction.

[S] **705.3 Buildings on the same lot.** For the purposes of determining the required wall and opening protection, projections and *roof-covering* requirements, buildings on the same lot shall be assumed to have an imaginary line between them.

Where a new building is to be erected on the same lot as an *existing building*, the location of the assumed imaginary line with relation to the existing building shall be such that the *exterior wall* and opening protection of the *existing building* meet the criteria as set forth in Sections 705.5 and 705.8.

Exceptions:

1. Two or more buildings on the same lot shall be either regulated as separate buildings or shall be considered as portions of one building if the aggregate area of such buildings is within the limits specified in Chapter 5 for a single building. Where the buildings contain different occupancy groups or are of different types of construction, the area shall be that allowed for the most restrictive occupancy or construction.
2. Where an S-2 parking garage of Construction Type I or IIA is erected on the same lot as a Group R-2 building, and ~~((there is no fire separation distance between these buildings))~~ where openings are not permitted or are required by this code to be protected, then the adjoining *exterior walls* between the buildings are permitted to have occupant use openings in accordance with Section 706.8. However, opening protectives in such openings shall only be required in the *exterior wall* of the S-2 parking garage, not in the *exterior wall* openings in the R-2 building, and these opening protectives in the *exterior wall* of the S-2 parking garage shall be not less than 1-1/2-hour *fire protection rating*.

705.4 Materials. *Exterior walls* shall be of materials permitted by the building's type of construction.

705.5 Fire-resistance ratings. *Exterior walls* shall be *fire-resistance* rated in accordance with Table 601, based on the type of construction, and Table 705.5, based on the *fire separation distance*. The required *fire-resistance rating* of *exterior walls* with a

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

fire separation distance of greater than 10 feet (3048 mm) shall be rated for exposure to fire from the inside. The required *fire-resistance rating of exterior walls* with a *fire separation distance* of less than or equal to 10 feet (3048 mm) shall be rated for exposure to fire from both sides.

**[W][S] TABLE 705.5
FIRE-RESISTANCE RATING REQUIREMENTS FOR EXTERIOR WALLS BASED ON FIRE SEPARATION DISTANCE^{a, d, g, j}**

FIRE SEPARATION DISTANCE = X (feet)	TYPE OF CONSTRUCTION	OCCUPANCY GROUP H ^e	OCCUPANCY GROUP F-1, M, S-1 ^f	OCCUPANCY GROUP A, B, E, F-2, I, R ⁱ , S-2, U ^h
X < 5 ^b	All	3	2	1
5 ≤ X < 10	IA, IVA	3	2	1
	Others	2	1	1
10 ≤ X < 30	IA, IB, IVA, IVB	2	1	1 ^c
	IIB, VB	1	0	0
	Others	1	1	1 ^c
X ≥ 30	All	0	0	0

For SI: 1 foot = 304.8 mm.

- a. Load-bearing exterior walls shall also comply with the fire-resistance rating requirements of Table 601.
- b. See Section 706.1.1 for party walls.
- c. Open parking garages complying with Section 406 shall not be required to have a fire-resistance rating.
- d. The fire-resistance rating of an exterior wall is determined based upon the fire separation distance of the exterior wall and the story in which the wall is located.
- e. For special requirements for Group H occupancies, see Section 415.6.
- f. For special requirements for Group S aircraft hangars, see Section 412.3.1.
- g. Where Table 705.8 permits nonbearing exterior walls with unlimited area of unprotected openings, the required fire-resistance rating for the exterior walls is 0 hours.
- h. For a building containing only a Group U occupancy private garage or carport, the exterior wall shall not be required to have a fire-resistance rating where the fire separation distance is 5 feet (1523 mm) or greater.
- i. For a Group R-3 building of Type II-B or Type V-B construction, the exterior wall shall not be required to have a fire-resistance rating where the fire separation distance is 5 feet (1523 mm) or greater.
- j. In a mixed occupancy building containing Group R-3 and Group U private garage, the exterior wall fire-resistance rating shall be as required for Group R-3.
- k. Existing buildings may encroach a maximum of 4 inches into the required *fire separation distance*, solely for the purpose of adding insulation to the building exterior.

705.6 Structural stability. Exterior walls shall extend to the height required by Section 705.11. Interior structural elements that brace the exterior wall but that are not located within the plane of the exterior wall shall have the minimum *fire-resistance rating* required in Table 601 for that structural element. Structural elements that brace the exterior wall but are located outside of the exterior wall or within the plane of the exterior wall shall have the minimum *fire-resistance rating* required in Table 601 and Table 705.5 for the exterior wall.

705.7 Unexposed surface temperature. Where protected openings are not limited by Section 705.8, the limitation on the rise of temperature on the unexposed surface of exterior walls as required by ASTM E119 or UL 263 shall not apply. Where protected openings are limited by Section 705.8, the limitation on the rise of temperature on the unexposed surface of exterior walls as required by ASTM E119 or UL 263 shall not apply provided that a correction is made for radiation from the unexposed exterior wall surface in accordance with the following formula:

$$A_e = A + (A_f \times F_{eo}) \tag{Equation 7-1}$$

where:

- A_e = Equivalent area of protected openings.
- A = Actual area of protected openings.
- A_f = Area of exterior wall surface in the story under consideration exclusive of openings, on which the temperature limitations of ASTM E119 or UL 263 for walls are exceeded.
- F_{eo} = An “equivalent opening factor” derived from Figure 705.7 based on the average temperature of the unexposed wall surface and the fire-resistance rating of the wall.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

For SI: $^{\circ}C = [(^{\circ}F) - 32] / 1.8$.

**FIGURE 705.7
EQUIVALENT OPENING FACTOR**

[S] 705.8 Openings. Openings in *exterior walls* shall comply with Sections 705.8.1 through 705.8.6. For spaces that are not provided with *exterior walls*, the vertical plane at the edge of the horizontal projection of the roof or floor is considered an exterior wall.

Interpretation I705.8: For purposes of Section 705.8, where the *fire separation distance* on a lower floor is greater than the *fire separation distance* on the floor above creating an overhang, there are two options for wall, soffit, and opening protection. The fire-resistance rating of the soffit shall be no less than required rating for floor construction by Table 601.

Option 1: The plane that projects vertically from the edge of the *story*, roof or deck above shall comply with the exterior wall and opening protection requirements. The portion of the plane where the wall is recessed is considered an opening. The fire-resistance rating of the soffit shall be no less than required rating for the recessed exterior wall.

Option 2: Recessed *exterior walls* shall comply with the wall fire rating and wall opening protection percentages as if the *fire separation distance* is equal to the *story*, roof or deck above. The soffit shall be fire-resistance rated not less than as required for the recessed exterior wall. The use of the recessed area underneath the protected overhang is restricted to egress or circulation.

See Figures I705.8a and I705.8b.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Interpretation I705.8:
Option 1. Exterior wall protection extends from A to B to C.
Option 2. Exterior wall protection extends from A to B to B1 to C1. Fire-resistance rating and opening protection for wall B-B1-C1, and fire-resistance rating at soffit B-B1-C1-C comply with requirements for wall B-C. The length of the wall segment B-B1 shall be included when calculating the percentage of openings allowed.

Figure I705.8a
Plan View

Note: Opening protection in wall C to C1 isn't considered in Figures I705.8a and I705.8b because it is perpendicular to the property line.

Figure I705.8 b

[S] 705.8.1 Allowable area of openings. The maximum area of unprotected and protected openings permitted in an *exterior wall* in any *story* of a building shall not exceed the percentages specified in Table 705.8 based on the *fire separation distance* of each individual story.

Exceptions:

1. In other than Group H occupancies, unlimited unprotected openings are permitted in the first *story above grade plane* where the wall faces one of the following:
 - 1.1. A street and has a *fire separation distance* of more than ((15 feet (4572 mm))) 30 feet (9144 mm).
 - 1.2. An unoccupied space. The unoccupied space shall be on the same lot or dedicated for public use, shall be not less than 30 feet (9144 mm) in width and shall have access from a street by a posted fire lane in accordance with the *International Fire Code*.
2. Buildings whose exterior bearing walls, exterior nonbearing walls and exterior *primary structural frame* are not required to be fire-resistance rated shall be permitted to have unlimited unprotected openings.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

**[W][S] TABLE 705.8
MAXIMUM AREA OF EXTERIOR WALL OPENINGS BASED ON
FIRE SEPARATION DISTANCE AND DEGREE OF OPENING PROTECTION^l**

FIRE SEPARATION DISTANCE (feet) ^l	DEGREE OF OPENING PROTECTION	ALLOWABLE AREA ^a
0 to less than 3 ^{b, c, k}	Unprotected, Nonsprinklered (UP, NS)	Not Permitted ^k
	Unprotected, Sprinklered (UP, S) ⁱ	Not Permitted ^k
	Protected (P)	Not Permitted ^k
3 to less than 5 ^{d, e}	Unprotected, Nonsprinklered (UP, NS)	Not Permitted
	Unprotected, Sprinklered (UP, S) ⁱ	15%
	Protected (P)	15%
5 to less than 10 ^{e, f, j}	Unprotected, Nonsprinklered (UP, NS)	10% ^h
	Unprotected, Sprinklered (UP, S) ⁱ	25%
	Protected (P)	25%
10 to less than 15 ^{e, f, g, j}	Unprotected, Nonsprinklered (UP, NS)	15% ^h
	Unprotected, Sprinklered (UP, S) ⁱ	45%
	Protected (P)	45%
15 to less than 20 ^{f, g, j}	Unprotected, Nonsprinklered (UP, NS)	25%
	Unprotected, Sprinklered (UP, S) ⁱ	75%
	Protected (P)	75%
20 to less than 25 ^{f, g, j}	Unprotected, Nonsprinklered (UP, NS)	45%
	Unprotected, Sprinklered (UP, S) ⁱ	No Limit
	Protected (P)	No Limit
25 to less than 30 ^{f, g, j}	Unprotected, Nonsprinklered (UP, NS)	70%
	Unprotected, Sprinklered (UP, S) ⁱ	No Limit
	Protected (P)	No Limit
30 or greater	Unprotected, Nonsprinklered (UP, NS)	No Limit
	Unprotected, Sprinklered (UP, S) ⁱ	No Limit
	Protected (P)	No Limit

For SI: 1 foot = 304.8 mm.

UP, NS = Unprotected openings in buildings not equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.

UP, S = Unprotected openings in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.

P = Openings protected with an opening protective assembly in accordance with Section 705.8.2.

a. Values indicated are the percentage of the area of the exterior wall, per story.

b. For the requirements for fire walls of buildings with differing heights, see Section 706.6.1.

c. For openings in a fire wall for buildings on the same lot, see Section 706.8.

d. The maximum percentage of unprotected and protected openings shall be 25 percent for Group R-3 occupancies.

e. Unprotected openings shall not be permitted for openings with a fire separation distance of less than 15 feet for Group H-2 and H-3 occupancies.

f. The area of unprotected and protected openings shall not be limited for Group R-3 occupancies, with a fire separation distance of 5 feet or greater.

g. The area of openings in an open parking structure with a fire separation distance of 10 feet or greater shall not be limited.

h. Includes buildings accessory to Group R-3.

i. Not applicable to Group H-1, H-2 and H-3 occupancies.

j. The area of openings in a building containing only a Group U occupancy private garage or carport with a fire separation distance of 5 feet or greater shall not be limited.

k. For openings between S-2 parking garage and Group R-2 building, see Section 705.3, Exception 2.

l. In a mixed occupancy building containing Group R-3 and Group U private garage, the maximum area of exterior openings shall be as required for Group R-3.

m. For the purpose of calculating the maximum area of exterior wall openings on existing buildings, the fire separation distances indicated in the chart may be reduced by a maximum of 4 inches, solely for the purpose of adding insulation to the building exterior.

705.8.2 Protected openings. Where openings are required to be protected, opening protectives shall comply with Section 716.

Exception: Opening protectives are not required where the building is equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1 and the exterior openings are protected by a water curtain using automatic sprinklers *approved* for that use.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

- 4.1. Where the roof/ceiling framing elements are parallel to the walls, such framing and elements supporting such framing shall not be of less than 1-hour fire-resistance-rated construction for a width of 4 feet (1220 mm) for Groups R and U and 10 feet (3048 mm) for other occupancies, measured from the interior side of the wall.
- 4.2. Where roof/ceiling framing elements are not parallel to the wall, the entire span of such framing and elements supporting such framing shall not be of less than 1-hour fire-resistance-rated construction.
- 4.3. Openings in the roof shall not be located within 5 feet (1524 mm) of the 1-hour fire-resistance-rated *exterior wall* for Groups R and U and 10 feet (3048 mm) for other occupancies, measured from the interior side of the wall.
- 4.4. The entire building shall be provided with not less than a Class B *roof covering*.
5. In Groups R-2 and R-3 where the entire building is provided with a Class C *roof covering*, the *exterior wall* shall be permitted to terminate at the underside of the roof sheathing or deck in Types III, IV and V construction, provided that one or both of the following criteria is met:
 - 5.1. The roof sheathing or deck is constructed of *approved* noncombustible materials or of *fire-retardant-treated wood* for a distance of 4 feet (1220 mm).
 - 5.2. The roof is protected with 0.625-inch (16 mm) Type X *gypsum board* directly beneath the underside of the roof sheathing or deck, supported by not less than nominal 2-inch (51 mm) ledgers attached to the sides of the roof framing members for a minimum distance of 4 feet (1220 mm).
6. Where the wall is permitted to have not less than 25 percent of the *exterior wall* areas containing unprotected openings based on *fire separation distance* as determined in accordance with Section 705.8.

705.11.1 Parapet construction. Parapets shall have the same *fire-resistance rating* as that required for the supporting wall, and on any side adjacent to a roof surface, shall have noncombustible faces for the uppermost 18 inches (457 mm), including counterflashing and coping materials. The height of the parapet shall be not less than 30 inches (762 mm) above the point where the roof surface and the wall intersect. Where the roof slopes toward a parapet at a slope greater than 2 units vertical in 12 units horizontal (16.7-percent slope), the parapet shall extend to the same height as any portion of the roof within a *fire separation distance* where protection of wall openings is required, but the height shall be not less than 30 inches (762 mm).

SECTION 706 FIRE WALLS

706.1 General. *Fire walls* shall be constructed in accordance with Sections 706.2 through 706.11. The extent and location of such *fire walls* shall provide a complete separation. Where a *fire wall* separates occupancies that are required to be separated by a *fire barrier* wall, the most restrictive requirements of each separation shall apply.

706.1.1 Party walls. Any wall located on a *lot line* between adjacent buildings, which is used or adapted for *joint* service between the two buildings, shall be constructed as a *fire wall* in accordance with Section 706. Party walls shall be constructed without openings and shall create separate buildings.

Exceptions:

1. Openings in a party wall separating an *anchor building* and a *mall* shall be in accordance with Section 402.4.2.2.1.
2. Party walls and *fire walls* are not required on *lot lines* dividing a building for ownership purposes where the aggregate height and area of the portions of the building located on both sides of the *lot line* do not exceed the maximum height and area requirements of this code. For the *building official's* review and approval, the official shall be provided with copies of dedicated access easements and contractual agreements that permit the *owners* of portions of the building located on either side of the *lot line* access to the other side for purposes of maintaining fire and *life safety systems* necessary for the operation of the building.

[S] (~~706.2 Structural stability. *Fire walls* shall be designed and constructed to allow collapse of the structure on either side without collapse of the wall under fire conditions. *Fire walls* designed and constructed in accordance with NFPA 221 shall be deemed to comply with this section.~~

~~**Exception:** In *Seismic Design Categories D* through *F*, where *double fire walls* are used in accordance with NFPA 221, floor and roof sheathing not exceeding 3/4 inch (19.05 mm) thickness shall be permitted to be continuous through the wall assemblies of *light frame construction*.)~~

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[W] 706.3 Materials. *Fire walls that separate a building of Type I or II construction from a building of any construction type shall be of any approved noncombustible materials. Other fire walls shall be built of materials consistent with the types permitted for the type of construction of the building.*

~~((Exception: Buildings of Type V construction.))~~

706.4 Fire-resistance rating. *Fire walls shall have a fire-resistance rating of not less than that required by Table 706.4.*

**[W] TABLE 706.4
FIRE WALL FIRE-RESISTANCE RATINGS**

GROUP	FIRE-RESISTANCE RATING (hours)
A, B, E, H-4, I, R-1, R-2, U	3 ^a
F-1, H-3b, H-5, M, S-1	3
H-1, H-2	4 ^b
F-2, S-2, R-3, R-4	2

- a. In Type II, III, IV or V construction, walls shall be permitted to have a 2-hour fire-resistance rating.
- b. For Group H-1, H-2 or H-3 buildings, also see Sections 415.7 and 415.8.

706.5 Horizontal continuity. *Fire walls shall be continuous from exterior wall to exterior wall and shall extend not less than 18 inches (457 mm) beyond the exterior surface of exterior walls.*

Exceptions:

1. *Fire walls shall be permitted to terminate at the interior surface of combustible exterior sheathing or siding provided that the exterior wall has a fire-resistance rating of not less than 1 hour for a horizontal distance of not less than 4 feet (1220 mm) on both sides of the fire wall. Openings within such exterior walls shall be protected by opening protectives having a fire protection rating of not less than 3/4 hour.*
2. *Fire walls shall be permitted to terminate at the interior surface of noncombustible exterior sheathing, exterior siding or other noncombustible exterior finishes provided that the sheathing, siding or other exterior noncombustible finish extends a horizontal distance of not less than 4 feet (1220 mm) on both sides of the fire wall.*
3. *Fire walls shall be permitted to terminate at the interior surface of noncombustible exterior sheathing where the building on each side of the fire wall is protected by an automatic sprinkler system installed in accordance with Section 903.3.1.1 or 903.3.1.2.*

706.5.1 Exterior walls. *Where the fire wall intersects exterior walls, the fire-resistance rating and opening protection of the exterior walls shall comply with one of the following:*

1. *The exterior walls on both sides of the fire wall shall have a 1-hour fire-resistance rating with 3/4-hour protection where opening protection is required by Section 705.8. The fire-resistance rating of the exterior wall shall extend not less than 4 feet (1220 mm) on each side of the intersection of the fire wall to exterior wall. Exterior wall intersections at fire walls that form an angle equal to or greater than 180 degrees (3.14 rad) do not need exterior wall protection.*
2. *Buildings or spaces on both sides of the intersecting fire wall shall assume to have an imaginary lot line at the fire wall and extending beyond the exterior of the fire wall. The location of the assumed line in relation to the exterior walls and the fire wall shall be such that the exterior wall and opening protection meet the requirements set forth in Sections 705.5 and 705.8. Such protection is not required for exterior walls terminating at fire walls that form an angle equal to or greater than 180 degrees (3.14 rad).*

706.5.2 Horizontal projecting elements. *Fire walls shall extend to the outer edge of horizontal projecting elements such as balconies, roof overhangs, canopies, marquees and similar projections that are within 4 feet (1220 mm) of the fire wall.*

Exceptions:

1. *Horizontal projecting elements without concealed spaces, provided that the exterior wall behind and below the projecting element has not less than 1-hour fire-resistance-rated construction for a distance not less than the depth of the projecting element on both sides of the fire wall. Openings within such exterior walls shall be protected by opening protectives having a fire protection rating of not less than 3/4 hour.*
2. *Noncombustible horizontal projecting elements with concealed spaces, provided that a minimum 1-hour fire-resistance-rated wall extends through the concealed space. The projecting element shall be separated from the building by not less than 1-hour fire-resistance-rated construction for a distance on each side of the fire wall equal to the depth of the projecting element. The wall is not required to extend under the projecting element where the building exterior wall is not less than 1-hour fire-resistance rated for a distance on each side of the fire wall equal to the depth of the projecting element. Openings within such exterior walls shall be protected by opening protectives having a fire protection rating of not less than 3/4 hour.*

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

3. For combustible horizontal projecting elements with concealed spaces, the *fire wall* need only extend through the concealed space to the outer edges of the projecting elements. The *exterior wall* behind and below the projecting element shall be of not less than 1-hour fire-resistance-rated construction for a distance not less than the depth of the projecting elements on both sides of the *fire wall*. Openings within such *exterior walls* shall be protected by opening protectives having a *fire protection rating* of not less than 3/4 hour.

[S] **706.6 Vertical continuity.** *Fire walls* shall extend from the foundation to a termination point not less than 30 inches (762 mm) above both adjacent roofs.

Exceptions:

1. Stepped buildings in accordance with Section 706.6.1.
2. Two-hour fire-resistance-rated walls shall be permitted to terminate at the underside of the roof sheathing, deck or slab, provided that:
 - 2.1. The (~~lower~~) *roof assembly* within 4 feet (1220 mm) of the wall has not less than a 1-hour *fire-resistance rating* and the entire length and span of supporting elements for the rated *roof assembly* has a *fire-resistance rating* of not less than 1 hour.
 - 2.2. Openings in the roof shall not be located within 4 feet (1220 mm) of the *fire wall*.
 - 2.3. Each building shall be provided with not less than a Class B *roof covering*.
3. Walls shall be permitted to terminate at the underside of noncombustible roof sheathing, deck or slabs where both buildings are provided with not less than a Class B *roof covering*. Openings in the roof shall not be located within 4 feet (1220 mm) of the *fire wall*.
4. In buildings of Types III, IV and V construction, walls shall be permitted to terminate at the underside of combustible roof sheathing or decks, provided that all of the following requirements are met:
 - 4.1. Roof openings are not less than 4 feet (1220 mm) from the *fire wall*.
 - 4.2. The roof is covered with a minimum Class B *roof covering*.
 - 4.3. The roof sheathing or deck is constructed of *fire-retardant-treated wood* for a distance of 4 feet (1220 mm) on both sides of the wall or the roof is protected with 5/8-inch (15.9 mm) Type X *gypsum board* directly beneath the underside of the roof sheathing or deck, supported by not less than 2-inch (51 mm) nominal ledgers attached to the sides of the roof framing members for a distance of not less than 4 feet (1220 mm) on both sides of the *fire wall*.
5. In buildings designed in accordance with Section 510.2, *fire walls* located above the 3-hour *horizontal assembly* required by Section 510.2, Item 1 shall be permitted to extend from the top of this *horizontal assembly*.
6. Buildings with sloped roofs in accordance with Section 706.6.2.

706.6.1 Stepped buildings. Where a *fire wall* also serves as an *exterior wall* for a building and separates buildings having different roof levels, such wall shall terminate at a point not less than 30 inches (762 mm) above the lower roof level. *Exterior walls* above the *fire wall* extending more than 30 inches (762 mm) above the lower roof shall be of not less than 1-hour fire-resistance-rated construction from both sides with openings protected by fire assemblies having a *fire protection rating* of not less than 3/4 hour. Portions of the *exterior walls* greater than 15 feet (4572 mm) above the lower roof shall be of nonfire-resistance-rated construction unless otherwise rated construction is required by other provisions of this code.

Exception: A *fire wall* serving as part of an *exterior wall* that separates buildings having different roof levels shall be permitted to terminate at the underside of the roof sheathing, deck or slab of the lower roof, provided that Items 1, 2 and 3 are met. The *exterior wall* above the *fire wall* is not required to be of fire-resistance-rated construction unless required by other provisions of this code.

1. The lower *roof assembly* within 10 feet (3048 mm) of the *fire wall* has not less than a 1-hour *fire-resistance rating*.
2. The entire length and span of supporting elements for the rated *roof assembly* shall have a *fire-resistance rating* of not less than 1 hour.
3. Openings in the lower roof shall not be located within 10 feet (3048 mm) of the *fire wall*.

[S] **706.6.2 Buildings with sloped roofs.** Where a *fire wall* also serves as an interior wall for a building, and the roof on one side or both sides of the *fire wall* slopes toward the *fire wall* at a slope greater than 2 units vertical in 12 units horizontal (2:12), the *fire wall* shall extend to a height equal to the height of the roof located 4 feet (1219 mm) from the *fire wall* plus 30 inches (762 mm). The extension of the *fire wall* shall be not less than 30 inches (762 mm).

Exceptions:

1. Two-hour fire-resistance-rated walls shall be permitted to terminate at the underside of the roof sheathing, deck or slab, provided:

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

- 1.1. The roof assembly within 4 feet (1220 mm) of the wall has not less than a 1-hour fire-resistance rating and the entire length and span of supporting elements for the rated roof assembly has a fire-resistance rating of not less than 1 hour.
- 1.2. Openings in the roof shall not be located within 4 feet (1220 mm) of the fire wall.
- 1.3. Each building shall be provided with not less than a Class B roof covering.
2. Walls shall be permitted to terminate at the underside of noncombustible roof sheathing, deck or slabs where both buildings are provided with not less than a Class B roof covering. Openings in the roof shall not be located within 4 feet (1220 mm) of the fire wall.
3. In buildings of Type III, IV and V construction, walls shall be permitted to terminate at the underside of combustible roof sheathing or decks, provided:
 - 3.1. There are no openings in the roof within 4 feet (1220 mm) of the fire wall.
 - 3.2. The roof is covered with a minimum Class B roof covering, and
 - 3.3. The roof sheathing or deck is constructed of fire-retardant-treated wood for a distance of 4 feet (1220 mm) on both sides of the wall or the roof is protected with 5/8-inch (15.9 mm) Type X gypsum board directly beneath the underside of the roof sheathing or deck, supported by a minimum of 2-inch (51 mm) nominal ledgers attached to the sides of the roof framing members for a minimum distance of 4 feet (1220 mm) on both sides of the fire wall.

706.7 Combustible framing in fire walls. Adjacent combustible members entering into a concrete or masonry *fire wall* from opposite sides shall not have less than a 4-inch (102 mm) distance between embedded ends. Where combustible members frame into hollow walls or walls of hollow units, hollow spaces shall be solidly filled for the full thickness of the wall and for a distance not less than 4 inches (102 mm) above, below and between the structural members, with noncombustible materials approved for fireblocking.

706.8 Openings. Each opening through a *fire wall* shall be protected in accordance with Section 716 and shall not exceed 156 square feet (15 m²). The aggregate width of openings at any floor level shall not exceed 25 percent of the length of the wall.

Exceptions:

1. Openings are not permitted in party walls constructed in accordance with Section 706.1.1.
2. Openings shall not be limited to 156 square feet (15 m²) where both buildings are equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1.

706.9 Penetrations. Penetrations of *fire walls* shall comply with Section 714.

706.10 Joints. *Joints* made in or between *fire walls* shall comply with Section 715.

706.11 Ducts and air transfer openings. Ducts and air transfer openings shall not penetrate *fire walls*.

Exception: Penetrations by ducts and air transfer openings of *fire walls* that are not on a *lot line* shall be allowed provided that the penetrations comply with Section 717. The size and aggregate width of all openings shall not exceed the limitations of Section 706.8.

SECTION 707 FIRE BARRIERS

707.1 General. *Fire barriers* installed as required elsewhere in this code or the *International Fire Code* shall comply with this section.

707.2 Materials. *Fire barriers* shall be of materials permitted by the building type of construction.

707.3 Fire-resistance rating. The *fire-resistance rating* of *fire barriers* shall comply with this section.

707.3.1 Shaft enclosures. The *fire-resistance rating* of the *fire barrier* separating building areas from a *shaft* shall comply with Section 713.4.

707.3.2 Interior exit stairway and ramp construction. The *fire-resistance rating* of the *fire barrier* separating building areas from an *interior exit stairway* or *ramp* shall comply with Section 1023.1.

707.3.3 Enclosures for exit access stairways. The *fire-resistance rating* of the *fire barrier* separating building areas from an *exit access stairway* or *ramp* shall comply with Section 713.4.

707.3.4 Exit passageway. The *fire-resistance rating* of the *fire barrier* separating building areas from an *exit passageway* shall comply with Section 1024.3.

FIRE AND SMOKE PROTECTION FEATURES

707.3.5 Horizontal exit. The *fire-resistance rating* of the separation between building areas connected by a *horizontal exit* shall comply with Section 1026.1.

707.3.6 Atriums. The *fire-resistance rating* of the *fire barrier* separating *atriums* shall comply with Section 404.6.

707.3.7 Incidental uses. The *fire barrier* separating incidental uses from other spaces in the building shall have a *fire-resistance rating* of not less than that indicated in Table 509.1.

707.3.8 Control areas. *Fire barriers* separating *control areas* shall have a *fire-resistance rating* of not less than that required in Section 414.2.4.

707.3.9 Separated occupancies. Where the provisions of Section 508.4 are applicable, the *fire barrier* separating mixed occupancies shall have a *fire-resistance rating* of not less than that indicated in Table 508.4 based on the occupancies being separated.

707.3.10 Fire areas. The *fire barriers, fire walls, horizontal assemblies* or combinations thereof separating a single occupancy into different *fire areas* shall have a *fire-resistance rating* of not less than that indicated in Table 707.3.10. The *fire barriers, fire walls, horizontal assemblies* or combinations thereof separating *fire areas* of mixed occupancies shall have a *fire-resistance rating* of not less than the highest value indicated in Table 707.3.10 for the occupancies under consideration.

**TABLE 707.3.10
FIRE-RESISTANCE-RATING REQUIREMENTS FOR FIRE BARRIERS,
FIRE WALLS OR HORIZONTAL ASSEMBLIES BETWEEN FIRE AREAS**

OCCUPANCY GROUP	FIRE-RESISTANCE RATING (hours)
H-1, H-2	4
F-1, H-3, S-1	3
A, B, E, F-2, H-4, H-5, I, M, R, S-2	2
U	1

[S] 707.3.11 Horizontal separation offsets. The *fire-resistance rating* of a *fire barrier* serving as the vertical offset in a horizontal building separation shall comply with Section 510.2.

[S] 707.3.12 Energy storage systems. The *fire barrier* separating *energy storage systems* from other spaces in the building shall have a minimum 2-hour *fire-resistance rating*.

707.4 Exterior walls. Where *exterior walls* serve as a part of a required *fire-resistance-rated shaft*, or separation or enclosure for a *stairway, ramp* or *exit passageway*, such walls shall comply with the requirements of Section 705 for *exterior walls* and the *fire-resistance-rated enclosure* or separation requirements shall not apply.

Exceptions:

1. *Exterior walls* required to be *fire-resistance rated* in accordance with Section 1021 for exterior egress balconies, Section 1023.7 for *interior exit stairways and ramps*, Section 1024.8 for *exit passageways* and Section 1027.6 for *exterior exit stairways and ramps*.
2. *Exterior walls* required to be *fire-resistance rated* in accordance with Section 1207 of the *International Fire Code* for enclosure of energy storage systems.

707.5 Continuity. *Fire barriers* shall extend from the top of the foundation or floor/ceiling assembly below to the underside of the floor or roof sheathing, slab or deck above and shall be securely attached thereto. Such *fire barriers* shall be continuous through concealed space, such as the space above a suspended ceiling. *Joints* and voids at intersections shall comply with Sections 707.8 and 707.9

Exceptions:

1. *Shaft enclosures* shall be permitted to terminate at a top enclosure complying with Section 713.12.
2. *Interior exit stairway* and *ramp* enclosures required by Section 1023 and *exit access stairway* and *ramp* enclosures required by Section 1019 shall be permitted to terminate at a top enclosure complying with Section 713.12.
3. An *exit passageway* enclosure required by Section 1024.3 that does not extend to the underside of the roof sheathing, slab or deck above shall be enclosed at the top with construction of the same *fire-resistance rating* as required for the *exit passageway*.

707.5.1 Supporting construction. The supporting construction for a *fire barrier* shall be protected to afford the required *fire-resistance rating* of the *fire barrier* supported. Hollow vertical spaces within a *fire barrier* shall be fireblocked in accordance with Section 718.2 at every floor level.

Exceptions:

1. The maximum required *fire-resistance rating* for assemblies supporting *fire barriers* separating tank storage as provided for in Section 415.9.1.2 shall be 2 hours, but not less than required by Table 601 for the building construction type.
2. Supporting construction for 1-hour *fire barriers* required by Table 509.1 in buildings of Types IIB, IIIB and VB construction is not required to be *fire-resistance rated* unless required by other sections of this code.

707.6 Openings. Openings in a *fire barrier* shall be protected in accordance with Section 716. Openings shall be limited to a maximum aggregate width of 25 percent of the length of the wall, and the maximum area of any single opening shall not exceed 156 square feet (15 m²). Openings in enclosures for *exit access stairways* and *ramps*, *interior exit stairways* and *ramps* and *exit passageways* shall also comply with Sections 1019, 1023.4 and 1024.5, respectively.

Exceptions:

1. Openings shall not be limited to 156 square feet (15 m²) where adjoining floor areas are equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1.
2. Openings shall not be limited to 156 square feet (15 m²) or an aggregate width of 25 percent of the length of the wall where the opening protective is a *fire door* serving enclosures for *exit access stairways* and *ramps*, and *interior exit stairways* and *ramps*.
3. Openings shall not be limited to 156 square feet (15 m²) or an aggregate width of 25 percent of the length of the wall where the opening protective has been tested in accordance with ASTM E119 or UL 263 and has a minimum *fire-resistance rating* not less than the *fire-resistance rating* of the wall.
4. *Fire window assemblies* permitted in *atrium* separation walls shall not be limited to a maximum aggregate width of 25 percent of the length of the wall.
5. Openings shall not be limited to 156 square feet (15 m²) or an aggregate width of 25 percent of the length of the wall where the opening protective is a *fire door assembly* in a *fire barrier* separating an enclosure for *exit access stairways* and *ramps*, and *interior exit stairways* and *ramps* from an *exit passageway* in accordance with Section 1023.3.1.

707.7 Penetrations. Penetrations of *fire barriers* shall comply with Section 714.

707.7.1 Prohibited penetrations. Penetrations into enclosures for *exit access stairways* and *ramps*, *interior exit stairways* and *ramps*, and *exit passageways* shall be allowed only where permitted by Sections 1019, 1023.5 and 1024.6, respectively.

707.8 Joints. *Joints* made in or between *fire barriers*, and *joints* made at the intersection of *fire barriers* with underside of a fire-resistance-rated floor or roof sheathing, slab or deck above, and the exterior vertical wall intersection shall comply with Section 715.

707.9 Voids at intersections. The voids created at the intersection of a *fire barrier* and a nonfire-resistance-rated *roof assembly* or a nonfire-resistance-rated *exterior wall assembly* shall be filled. An *approved* material or system shall be used to fill the void, and shall be securely installed in or on the intersection for its entire length so as not to dislodge, loosen or otherwise impair its ability to accommodate expected building movements and to retard the passage of fire and hot gases.

707.10 Ducts and air transfer openings. Penetrations in a *fire barrier* by ducts and air transfer openings shall comply with Section 717.

SECTION 708 FIRE PARTITIONS

[S] **708.1 General.** The following wall assemblies shall comply with this section:

1. Separation walls as required by Section 420.2 for Group I-1 and Group R occupancies.
2. Walls separating tenant spaces in *covered and open mall buildings* as required by Section 402.4.2.1.
3. *Corridor* walls as required by Section 1020.3.
4. Enclosed elevator lobby separation as required by Section ((3006.3)) 713.14.
5. Egress balconies as required by Section 1021.2.
6. Walls separating *ambulatory care facilities* from adjacent spaces, *corridors* or tenant as required by Section 422.2.
7. Walls separating *dwelling and sleeping units* in Groups R-1 and R-2 in accordance with Sections 907.2.8.1 and 907.2.9.1.
8. Vestibules in accordance with Section 1028.2, exception 2.
9. Elevator machine rooms and elevator control rooms as required by Section 3020.4 and Table 509.1.

FIRE AND SMOKE PROTECTION FEATURES

708.2 Materials. The walls shall be of materials permitted by the building type of construction.

708.3 Fire-resistance rating. *Fire partitions* shall have a *fire-resistance rating* of not less than 1 hour.

Exceptions:

1. *Corridor* walls permitted to have a 1/2-hour *fire-resistance rating* by Table 1020.2.
2. *Dwelling unit* and *sleeping unit* separations in buildings of Types IIB, IIIB and VB construction shall have *fire-resistance ratings* of not less than 1/2 hour in buildings equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1.

708.4 Continuity. *Fire partitions* shall extend from the top of the foundation or floor/ceiling assembly below and be securely attached to one of the following:

1. The underside of the floor or roof sheathing, deck or slab above.
2. The underside of a floor/ceiling or roof/ceiling assembly having a *fire-resistance rating* that is not less than the *fire-resistance rating* of the *fire partition*.

Exceptions:

1. *Fire partitions* shall not be required to extend into a crawl space below where the floor above the crawl space has a minimum 1-hour *fire-resistance rating*.
2. *Fire partitions* serving as a *corridor* wall shall not be required to extend above the lower membrane of a *corridor* ceiling provided that the *corridor* ceiling membrane is equivalent to *corridor* wall membrane, and either of the following conditions is met:
 - 2.1. The room-side membrane of the *corridor* wall extends to the underside of the floor or roof sheathing, deck or slab of a fire-resistance-rated floor or roof above.
 - 2.2. The building is equipped with an *automatic sprinkler system* installed throughout in accordance with Section 903.3.1.1 or 903.3.1.2, including *automatic* sprinklers installed in the space between the top of the *fire partition* and underside of the floor or roof sheathing, deck or slab above.
3. *Fire partitions* serving as a *corridor* wall shall be permitted to terminate at the upper membrane of the *corridor* ceiling assembly where the *corridor* ceiling is constructed as required for the *corridor* wall.
4. *Fire partitions* separating tenant spaces in a *covered or open mall building* complying with Section 402.4.2.1 shall not be required to extend above the underside of a ceiling. Such ceiling shall not be required to be part of a fire-resistance-rated assembly, and the *attic* or space above the ceiling at tenant separation walls shall not be required to be subdivided by *fire partitions*.

[S] **708.4.1 Supporting construction.** The supporting construction for a *fire partition* shall have a *fire-resistance rating* that is equal to or greater than the required *fire-resistance rating* of the supported *fire partition*.

Exception: In buildings of Types IIB, IIIB and VB construction, the supporting construction requirement shall not apply to *fire partitions* separating tenant spaces in *covered and open mall buildings*, *fire partitions* separating *dwelling units*, *fire partitions* separating *sleeping units*, *fire partitions* serving as *corridor* walls, *fire partitions* separating *ambulatory care facilities* from adjacent spaces or *corridors*, *fire partitions* separating *dwelling and sleeping units* from Group R-1 and R-2 occupancies, ~~(and)~~ *fire partitions* separating vestibules from the *level of exit discharge* and walls enclosing elevator machine rooms and elevator control rooms.

708.4.2 Fireblocks and draftstops in combustibile construction. In combustibile construction where *fire partitions* do not extend to the underside of the floor or roof sheathing, deck or slab above, the space above and along the line of the *fire partition* shall be provided with one of the following:

1. *Fireblocking* up to the underside of the floor or roof sheathing, deck or slab above using materials complying with Section 718.2.1.
2. Draftstopping up to the underside of the floor or roof sheathing, deck or slab above using materials complying with Section 718.3.1 for floors or Section 718.4.1 for *attics*.

Exceptions:

1. Buildings equipped with an *automatic sprinkler system* installed throughout in accordance with Section 903.3.1.1, or in accordance with Section 903.3.1.2 provided that protection is provided in the space between the top of the *fire partition* and underside of the floor or roof sheathing, deck or slab above as required for systems complying with Section 903.3.1.1.
2. Where *corridor* walls provide a *sleeping unit* or *dwelling unit* separation, draftstopping shall only be required above one of the *corridor* walls.
3. In Group R-2 occupancies with fewer than four *dwelling units*, *fireblocking* and draftstopping shall not be required.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

4. In Group R-2 occupancies up to and including four *stories* in height in buildings not exceeding 60 feet (18 288 mm) in height above *grade plane*, the *attic* space shall be subdivided by *draftstops* into areas not exceeding 3,000 square feet (279 m²) or above every two *dwelling units*, whichever is smaller.
5. In Group R-3 occupancies with fewer than three *dwelling units*, *fireblocking* and draftstopping shall not be required in floor assemblies.

708.5 Exterior walls. Where *exterior walls* serve as a part of a required fire-resistance-rated separation, such walls shall comply with the requirements of Section 705 for *exterior walls*, and the fire-resistance-rated separation requirements shall not apply.

Exception: *Exterior walls* required to be fire-resistance rated in accordance with Section 1021.2 for exterior egress balconies, Section 1023.7 for *interior exit stairways* and *ramps* and Section 1027.6 for exterior *exit stairways* and *ramps*.

708.6 Openings. Openings in a *fire partition* shall be protected in accordance with Section 716.

708.7 Penetrations. Penetrations of *fire partitions* shall comply with Section 714.

708.8 Joints. *Joints* made in or between *fire partitions* shall comply with Section 715.

708.9 Ducts and air transfer openings. Penetrations in a *fire partition* by ducts and air transfer openings shall comply with Section 717.

SECTION 709 SMOKE BARRIERS

709.1 General. Vertical and horizontal *smoke barriers* shall comply with this section.

709.2 Materials. *Smoke barriers* shall be of materials permitted by the building type of construction.

709.3 Fire-resistance rating. A 1-hour *fire-resistance rating* is required for *smoke barriers*.

Exception: *Smoke barriers* constructed of minimum 0.10-inch-thick (2.5 mm) steel in Group I-3 buildings.

[S] **709.4 Continuity.** *Smoke barriers* shall form an effective membrane continuous from the top of the foundation or floor/ceiling assembly below to the underside of the floor or roof sheathing, deck or slab above, including continuity through concealed spaces, such as those found above suspended ceilings, and interstitial structural and mechanical spaces. The supporting construction shall be protected to afford the required *fire-resistance rating* of the wall or floor supported in buildings of other than Type IIB, IIIB or VB construction. *Smoke-barrier* walls used to separate *smoke compartments* shall comply with Section 709.4.1. *Smoke-barrier* walls used to enclose *areas of refuge* in accordance with Section 1009.6.4 or to enclose elevator lobbies in accordance with Section 403.6.1.5, 403.6.2.6 or 405.4.3 (~~(, 3007.6.2, or 3008.6.2)~~) shall comply with Section 709.4.2.

Exception: *Smoke-barrier* walls are not required in interstitial spaces where such spaces are designed and constructed with ceilings or *exterior walls* that provide resistance to the passage of fire and smoke equivalent to that provided by the *smoke-barrier* walls.

709.4.1 Smoke-barrier assemblies separating smoke compartments. *Smoke-barrier* assemblies used to separate *smoke compartments* shall form an effective membrane enclosure that is continuous from an outside wall or *smoke barrier* wall to an outside wall or another *smoke barrier* wall and to the *horizontal assemblies*.

[S] **709.4.2 Smoke-barrier walls enclosing areas of refuge or elevator lobbies.** *Smoke-barrier* walls used to enclose *areas of refuge* in accordance with Section 1009.6.4, or to enclose elevator lobbies in accordance with Section 403.6.1.5, 403.6.2.6 or 405.4.3 (~~(, 3007.6.2, or 3008.6.2)~~) shall form an effective membrane enclosure that terminates at a *fire barrier* wall having a level of *fire protection rating* not less than 1 hour, another *smoke barrier* wall or an outside wall. A smoke and draft control door assembly as specified in Section 716.2.2.1.1 shall not be required at each elevator hoistway door opening or at each exit doorway between an *area of refuge* and the exit enclosure.

709.5 Openings. Openings in a *smoke barrier* shall be protected in accordance with Section 716.

Exceptions:

1. In Group I-1, Condition 2, Group I-2 and *ambulatory care facilities*, where a pair of opposite-swinging doors are installed across a corridor in accordance with Section 709.5.1, the doors shall not be required to be protected in accordance with Section 716. The doors shall be close fitting within operational tolerances, and shall not have a center mullion or undercuts in excess of 3/4 inch (19.1 mm), louvers or grilles. The doors shall have head and jamb stops, and astragals or rabbets at meeting edges. Where permitted by the door manufacturer's listing, positive-latching devices are not required. Factory-applied or field-applied protective plates are not required to be labeled.
2. In Group I-1, Condition 2, Group I-2 and *ambulatory care facilities*, special purpose horizontal sliding, accordion or folding doors installed in accordance with Section 1010.3.3 and protected in accordance with Section 716.

SECTION 711 FLOOR AND ROOF ASSEMBLIES

711.1 General. *Horizontal assemblies* shall comply with Section 711.2. Nonfire-resistance-rated floor and *roof assemblies* shall comply with Section 711.3.

711.2 Horizontal assemblies. *Horizontal assemblies* shall comply with Sections 711.2.1 through 711.2.6.

711.2.1 Materials. Assemblies shall be of materials permitted by the building type of construction.

711.2.2 Continuity. Assemblies shall be continuous without vertical openings, except as permitted by this section and Section 712.

711.2.3 Supporting construction. The supporting construction shall be protected to afford the required *fire-resistance rating* of the *horizontal assembly* supported.

Exception: In buildings of Type IIB, IIIB or VB construction, the construction supporting the *horizontal assembly* is not required to be fire-resistance rated at the following:

1. *Horizontal assemblies* at the separations of incidental uses as specified by Table 509.1 provided that the required *fire-resistance rating* does not exceed 1 hour.
2. *Horizontal assemblies* at the separations of *dwelling units* and *sleeping units* as required by Section 420.3.
3. *Horizontal assemblies* at *smoke barriers* constructed in accordance with Section 709.

711.2.4 Fire-resistance rating. The *fire-resistance rating* of *horizontal assemblies* shall comply with Sections 711.2.4.1 through 711.2.4.6 but shall be not less than that required by the building type of construction.

711.2.4.1 Separating mixed occupancies. Where the *horizontal assembly* separates mixed occupancies, the assembly shall have a *fire-resistance rating* of not less than that required by Section 508.4 based on the occupancies being separated.

711.2.4.2 Separating fire areas. Where the *horizontal assembly* separates a single occupancy into different *fire areas*, the assembly shall have a *fire-resistance rating* of not less than that required by Section 707.3.10.

711.2.4.3 Dwelling units and sleeping units. *Horizontal assemblies* serving as *dwelling or sleeping unit* separations in accordance with Section 420.3 shall be not less than 1-hour *fire-resistance-rated* construction.

Exception: *Horizontal assemblies* separating *dwelling units* and *sleeping units* shall be not less than 1/2-hour fire-resistance-rated construction in a building of Types IIB, IIIB and VB construction, where the building is equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1.

711.2.4.4 Separating smoke compartments. Where the *horizontal assembly* is required to be a *smoke barrier*, the assembly shall comply with Section 709.

711.2.4.5 Separating incidental uses. Where the *horizontal assembly* separates incidental uses from the remainder of the building, the assembly shall have a *fire-resistance rating* of not less than that required by Section 509.

711.2.4.6 Other separations. Where a *horizontal assembly* is required by other sections of this code, the assembly shall have a *fire-resistance rating* of not less than that required by that section.

[S] 711.2.4.7 Energy storage systems. Where required by the *International Fire Code*, the *horizontal assembly* separating energy storage systems from the remainder of the building shall have a minimum 2-hour fire-resistance rating.

711.2.5 Ceiling panels. Where the weight of lay-in ceiling panels, used as part of fire-resistance-rated floor/ceiling or roof/ceiling assemblies, is not adequate to resist an upward force of 1 pound per square foot (48 Pa), wire or other *approved* devices shall be installed above the panels to prevent vertical displacement under such upward force.

711.2.6 Unusable space. In 1-hour fire-resistance-rated floor/ceiling assemblies, the ceiling membrane is not required to be installed over unusable crawl spaces. In 1-hour fire-resistance-rated roof assemblies, the floor membrane is not required to be installed where unusable attic space occurs above.

711.3 Nonfire-resistance-rated floor and roof assemblies. Nonfire-resistance-rated floor, floor/ceiling, roof and roof/ceiling assemblies shall comply with Sections 711.3.1 and 711.3.2.

711.3.1 Materials. Assemblies shall be of materials permitted by the building type of construction.

711.3.2 Continuity. Assemblies shall be continuous without vertical openings, except as permitted by Section 712.

SECTION 712 VERTICAL OPENINGS

[S] 712.1 General. Each vertical opening shall comply in accordance with one of the protection methods in Sections 712.1.1 through ((712.1.16)) 712.1.17.

FIRE AND SMOKE PROTECTION FEATURES

712.1.1 Shaft enclosures. Vertical openings contained entirely within a *shaft enclosure* complying with Section 713 shall be permitted. Elevator hoistways shall be protected in accordance with Section 713.14.2.

712.1.2 Individual dwelling unit. Unconcealed vertical openings totally within an individual residential *dwelling unit* and connecting four *stories* or less shall be permitted.

712.1.3 Escalator openings. Where a building is equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1, vertical openings for escalators shall be permitted where protected in accordance with Section 712.1.3.1 or 712.1.3.2.

712.1.3.1 Opening size. Protection by a draft curtain and closely spaced sprinklers in accordance with NFPA 13 shall be permitted where the area of the vertical opening between *stories* does not exceed twice the horizontal projected area of the escalator. In other than Groups B and M, this application is limited to openings that do not connect more than four *stories*.

Note: NFPA 13 requires draft curtains to be at least 18 inches (457 mm) deep, and to be of noncombustible or limited-combustible material.

712.1.3.2 Automatic shutters. Protection of the vertical opening by approved shutters at every penetrated floor shall be permitted in accordance with this section. The shutters shall be of noncombustible construction and have a *fire-resistance rating* of not less than 1.5 hours. The shutter shall be so constructed as to close immediately upon the actuation of a smoke detector installed in accordance with Section 907.3.1 and shall completely shut off the well opening. Escalators shall cease operation when the shutter begins to close. The shutter shall operate at a speed of not more than 30 feet per minute (152.4 mm/s) and shall be equipped with a sensitive leading edge to arrest its progress where in contact with any obstacle, and to continue its progress on release therefrom.

712.1.4 Penetrations. Penetrations, concealed and unconcealed, shall be permitted where protected in accordance with Section 714.

712.1.5 Joints. *Joints* shall be permitted where complying with Section 712.1.5.1 or 712.1.5.2, as applicable.

712.1.5.1 Joints in or between horizontal assemblies. *Joints* made in or between *horizontal assemblies* shall comply with Section 715. The void created at the intersection of a floor/ceiling assembly and an exterior curtain wall assembly shall be permitted where protected in accordance with Section 715.4.

712.1.5.2 Joints in or between nonfire-resistance-rated floor assemblies. *Joints* in or between floor assemblies without a required *fire-resistance rating* shall be permitted where they comply with one of the following:

1. The *joint* shall be concealed within the cavity of a wall.
2. The *joint* shall be located above a ceiling.
3. The *joint* shall be sealed, treated or covered with an *approved* material or system to resist the free passage of flame and the products of combustion.

Exception: *Joints* meeting one of the exceptions specified in Section 715.3.

712.1.6 Ducts and air transfer openings. Penetrations by ducts and air transfer openings shall be protected in accordance with Section 717. Grease ducts shall be protected in accordance with the *International Mechanical Code*.

712.1.7 Atriums. *Atriums* complying with Section 404 that connect two or more *stories* in Group I-2 or I-3 occupancies or three or more *stories* in other occupancies shall be permitted.

Exceptions:

1. *Atriums* shall not be permitted within Group H occupancies.
2. Balconies or stories within Groups A-1, A-4 and A-5 and *mezzanines* that comply with Section 505 shall not be considered a story as it applies to this section

712.1.8 Masonry chimney. Approved vertical openings for masonry chimneys shall be permitted where the *annular space* is fireblocked at each floor level in accordance with Section 718.2.5.

712.1.9 Two-story openings. In other than Groups I-2 and I-3, a vertical opening that is not used as one of the applications specified in this section shall be permitted if the opening complies with all of the following items:

1. Does not connect more than two *stories*.
2. Does not penetrate a *horizontal assembly* that separates *fire areas* or *smoke barriers* that separate *smoke compartments*.
3. Is not concealed within the construction of a wall or a floor/ceiling assembly.
4. Is not open to a *corridor* in Group I and R occupancies.
5. Is not open to a *corridor* on nonsprinklered floors.

6. Is separated from floor openings and air transfer openings serving other floors by construction conforming to required *shaft enclosures*.

712.1.10 Parking garages. Vertical openings in parking garages for automobile ramps, elevators and duct systems shall comply with Section 712.1.10.1, 712.1.10.2 or 712.1.10.3, as applicable.

712.1.10.1 Automobile ramps. Vertical openings for automobile ramps in parking garages shall be permitted where constructed in accordance with Sections 406.5 and 406.6.

[S] 712.1.10.2 Elevators. (~~Vertical~~) Non-fire-resistance rated vertical openings for elevator hoistways in parking garages that serve only the parking garage, and complying with Sections 406.5 and 406.6 (~~(, respectively,)~~) shall be permitted.

Note: When Section 712.1.10.2 is applied, the hoistway will be required to be enclosed, but it is not required to be fire-resistance rated. See Section 3020.1.

712.1.10.3 Duct systems. Vertical openings for mechanical exhaust or supply duct systems in parking garages complying with Sections 406.5 and 406.6 (~~(, respectively,)~~) shall be permitted to be unenclosed where such duct system is contained within and serves only the parking garage.

712.1.11 Mezzanine. Vertical openings between a *mezzanine* complying with Section 505 and the floor below shall be permitted.

712.1.12 Exit access stairways and ramps. Vertical openings containing *exit access stairways* or *ramps* in accordance with Section 1019 shall be permitted.

712.1.13 Openings. Vertical openings for floor fire doors and access doors shall be permitted where protected by Section 712.1.13.1 or 712.1.13.2.

712.1.13.1 Horizontal fire door assemblies. Horizontal *fire door* assemblies used to protect openings in fire-resistance-rated *horizontal assemblies* shall be tested in accordance with NFPA 288, and shall achieve a *fire-resistance rating* not less than the assembly being penetrated. Horizontal *fire door* assemblies shall be labeled by an *approved agency*. The *label* shall be permanently affixed and shall specify the manufacturer, the test standard and the *fire-resistance rating*.

712.1.13.2 Access doors. Access doors shall be permitted in ceilings of fire-resistance-rated floor/ceiling and roof/ceiling assemblies, provided that such doors are tested in accordance with ASTM E119 or UL 263 as *horizontal assemblies* and labeled by an *approved agency* for such purpose.

712.1.14 Group I-3. In Group I-3 occupancies, vertical openings shall be permitted in accordance with Section 408.5.

712.1.15 Skylights. *Skylights* and other penetrations through a fire-resistance-rated roof deck or slab are permitted to be unprotected, provided that the structural integrity of the fire-resistance-rated *roof assembly* is maintained. Unprotected *skylights* shall not be permitted in *roof assemblies* required to be fire-resistance rated in accordance with Section 705.8.6. The supporting construction shall be protected to afford the required *fire-resistance rating* of the *horizontal assembly* supported.

[S] 712.1.16 Gas vents and piping. Vertical openings for penetrations of floors inside a wall cavity by gas vents and piping in buildings of Types III, IV, and V construction shall be permitted.

~~(712.1.16)~~ **712.1.17 Openings otherwise permitted.** Vertical openings shall be permitted where allowed by other sections of this code.

SECTION 713 SHAFT ENCLOSURES

713.1 General. The provisions of this section shall apply to *shafts* required to protect openings and penetrations through floor/ceiling and roof/ceiling assemblies. *Interior exit stairways* and *ramps* shall be enclosed in accordance with Section 1023.

713.2 Construction. *Shaft enclosures* shall be constructed as *fire barriers* in accordance with Section 707 or *horizontal assemblies* in accordance with Section 711, or both.

713.3 Materials. *Shaft enclosures* shall be of materials permitted by the building type of construction.

[S] 713.4 Fire-resistance rating. *Shaft enclosures* shall have a *fire-resistance rating* of not less than 2 hours where connecting more than four *stories*, (~~(or more,)~~) and not less than 1 hour where connecting (~~(less than)~~) four *stories* or less. The number of *stories* connected by the *shaft enclosure* shall include any *basements* but not any *mezzanines*. *Shaft enclosures* shall have a *fire-resistance rating* not less than the floor assembly penetrated, but need not exceed 2 hours. *Shaft enclosures* shall meet the requirements of Section 703.2.1.1.

FIRE AND SMOKE PROTECTION FEATURES

713.5 Continuity. *Shaft enclosures* shall be constructed as *fire barriers* in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both, and shall have continuity in accordance with Section 707.5 for *fire barriers* or Section 711.2.2 for *horizontal assemblies*, as applicable.

713.6 Exterior walls. Where *exterior walls* serve as a part of a required *shaft enclosure*, such walls shall comply with the requirements of Section 705 for *exterior walls* and the fire-resistance-rated enclosure requirements shall not apply.

Exception: *Exterior walls* required to be fire-resistance rated in accordance with Section 1021.2 for exterior egress balconies, Section 1023.7 for *interior exit stairways* and *ramps* and Section 1027.6 for exterior *exit stairways* and *ramps*.

713.7 Openings. Openings in a *shaft enclosure* shall be protected in accordance with Section 716 as required for *fire barriers*. Doors shall be self- or automatic-closing by smoke detection in accordance with Section 716.2.6.6.

713.7.1 Prohibited openings. Openings other than those necessary for the purpose of the *shaft* shall not be permitted in *shaft enclosures*.

[S] 713.8 Penetrations. Penetrations in a *shaft enclosure* shall be protected in accordance with Section 714 as required for *fire barriers*. Structural elements, such as beams or joists, where protected in accordance with Section 714 shall be permitted to penetrate a *shaft enclosure*. See Section 3022 for installation of pipes and ducts in elevator hoistways.

713.8.1 Prohibited penetrations. Penetrations other than those necessary for the purpose of the *shaft* shall not be permitted in *shaft enclosures*.

Exception: *Membrane penetrations* shall be permitted on the outside of *shaft enclosures*. Such penetrations shall be protected in accordance with Section 714.4.2.

713.9 Joints. *Joints* in a *shaft enclosure* shall comply with Section 715.

713.10 Duct and air transfer openings. Penetrations of a *shaft enclosure* by ducts and air transfer openings shall comply with Section 717.

713.11 Enclosure at the bottom. *Shafts* that do not extend to the bottom of the building or structure shall comply with one of the following:

1. Be enclosed at the lowest level with construction of the same *fire-resistance rating* as the *lowest floor* through which the *shaft* passes, but not less than the rating required for the *shaft enclosure*.
2. Terminate in a room having a use related to the purpose of the *shaft*. The room shall be separated from the remainder of the building by *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both. The *fire-resistance rating* and opening protectives shall be not less than the protection required for the *shaft enclosure*.
3. Be protected by *approved fire dampers* installed in accordance with their listing at the *lowest floor* level within the *shaft enclosure*.

Exceptions:

1. The fire-resistance-rated room separation is not required, provided that the only openings in or penetrations of the *shaft enclosure* to the interior of the building occur at the bottom. The bottom of the *shaft* shall be closed off around the penetrating items with materials permitted by Section 718.3.1 for draftstopping, or the room shall be provided with an *approved automatic sprinkler system*.
2. A *shaft enclosure* containing a waste or linen chute shall not be used for any other purpose and shall discharge in a room protected in accordance with Section 713.13.4.
3. The fire-resistance-rated room separation and the protection at the bottom of the *shaft* are not required provided that there are no combustibles in the *shaft* and there are no openings or other penetrations through the *shaft enclosure* to the interior of the building.

713.12 Enclosure at top. The top of *shaft enclosures* shall comply with one of the following:

1. Extend to the underside of the roof sheathing, deck or slab of the building, and the *roof assembly* shall comply with the requirements for the type of construction as specified in Table 601.
2. Terminate below the *roof assembly* and be enclosed at the top with construction of the same *fire-resistance rating* as the topmost floor penetrated by the shaft, but not less than the *fire-resistance rating* required for the shaft enclosure.
3. Extend past the *roof assembly* and comply with the requirements of Section 1511.

713.12.1 Penthouse mechanical rooms. A *fire/smoke damper* shall not be required at the penetration of the *rooftop structure* where *shaft enclosures* extend up through the *roof assembly* into a *rooftop structure* conforming to Section 1511. Ductwork in the *shaft* shall be connected directly to HVAC equipment.

713.13 Waste, recycling and linen chutes and incinerator rooms. Waste, recycling and linen chutes shall comply with the provisions of NFPA 82, Chapter 6 and shall meet the requirements of Sections 712 and 713.13.1 through 713.13.6. Incinerator rooms shall meet the provisions of Sections 713.13.4 and 713.13.5.

Exception: Chutes serving and contained within a single *dwelling unit*.

713.13.1 Waste, recycling and linen chute enclosures. A *shaft enclosure* containing a recycling, waste or linen chute shall not be used for any other purpose and shall be enclosed in accordance with Section 713.4. A *shaft enclosure* shall be permitted to contain recycling and waste chutes. Openings into the *shaft*, from access rooms and discharge rooms, shall be protected in accordance with this section and Section 716. Openings into chutes shall not be located in *corridors*. Doors into chutes shall be *self-closing*. Discharge doors shall be self- or automatic-closing upon the actuation of a smoke detector in accordance with Section 716.2.6.6, except that heat-activated closing devices shall be permitted between the *shaft* and the discharge room.

713.13.2 Materials. A *shaft enclosure* containing a waste, recycling, or linen chute shall be constructed of materials as permitted by the building type of construction.

713.13.3 Chute access rooms. Access openings for waste, recycling or linen chutes shall be located in rooms or compartments enclosed by not less than 1-hour *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both. Openings into the access rooms shall be protected by opening protectives having a *fire protection rating* of not less than 3/4 hour. Doors shall be self- or automatic-closing upon the detection of smoke in accordance with Section 716.2.6.6. The room or compartment shall be configured to allow the access door to the room or compartment to close and latch with the access panel to the chute in any position.

[S] 713.13.4 Chute discharge room. (~~Table 509.1~~) Waste, recycling or linen chutes shall discharge into an enclosed room separated by *fire barriers* with a *fire-resistance rating* not less than the required fire rating of the *shaft enclosure* and constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both. Openings into the discharge room from the remainder of the building shall be protected by opening protectives having a *fire protection rating* equal to the protection required for the *shaft enclosure*. Through penetrations of piping and conduit not necessary for the purpose of the chute discharge room are permitted as long as they are protected in accordance with Section 714 and do not impact the operation of the trash collection system. Doors shall be self- or automatic-closing upon the detection of smoke in accordance with Section 716.2.6.6. Waste chutes shall not terminate in an incinerator room. Waste and linen rooms that are not provided with chutes need only comply with Table 509.1.

713.13.5 Incinerator room. Incinerator rooms shall comply with Table 509.1.

713.13.6 Automatic sprinkler system. An *approved automatic sprinkler system* shall be installed in accordance with Section 903.2.11.2.

[S] 713.13.7 Chute venting and roof termination. The full diameter of waste and linen chutes shall extend a minimum of 3 feet (0.92 m) above the building roof and be gravity vented per NFPA 82.

Exceptions:

1. Waste and linen chutes are permitted to be mechanically ventilated by an exhaust fan in lieu of gravity venting. The exhaust fan shall be located outside the building at the top of the chute.
2. Where the trash chute does not extend to the highest floor of the building below the roof the trash chute shall be permitted to vent to a sidewall louver termination by gravity venting or mechanical venting. The horizontal extension of the trash chute shall have the same cross-sectional area as the chute and shall be enclosed in rated construction equal to the rating of the shaft enclosure. No operable openings shall be located within 10 feet of the sidewall louver termination.

[S] 713.14 Elevator, dumbwaiter and other hoistways. Elevator, dumbwaiter and other hoistway enclosures shall be constructed in accordance with (~~Sections 712 and 713, and Chapter 30~~) this section.

713.14.1 General. Elevator hoistway openings and enclosed elevator lobbies shall be provided in accordance with the following:

1. Where hoistway opening protection is required by Section 713.14.2, such protection shall be in accordance with Section 713.14.3.
2. Where enclosed elevator lobbies are required for underground buildings, such lobbies shall comply with Section 405.4.3.
3. Where an area of refuge is required and an enclosed elevator lobby is provided to serve as an area of refuge, the enclosed elevator lobby shall comply with Section 1009.6.
4. Where fire service access elevators are provided, enclosed elevator lobbies shall comply with Section 403.6.1.5.
5. Where occupant evacuation elevators are provided, enclosed elevator lobbies shall comply with Section 403.6.2.6.

Exception: Elevators in parking garages are permitted to comply with Section 712.1.10.

713.14.2 Hoistway opening protection required. Elevator hoistway door openings shall be protected in accordance with Section 713.14.3 where an elevator hoistway connects more than three *stories*, is required to be enclosed within a shaft enclosure in accordance with Section 712.1.1, and any of the following conditions apply:

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

1. The building is not protected throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1 or 903.3.1.2.
2. The building contains a Group I-1 Condition 2 occupancy.
3. The building contains a Group I-2 occupancy.
4. The building contains a Group I-3 occupancy.
5. The building is a high rise and the elevator hoistway is more than 75 feet (22 860 mm) in height. The height of the hoistway shall be measured from the lowest floor to the highest floor of the floors served by the hoistway.

Exceptions:

1. Protection of elevator hoistway door openings is not required where the elevator serves only open parking garages in accordance with Section 406.5.
2. Protection of elevator hoistway door openings is not required at the level(s) of exit discharge, provided the level(s) of exit discharge is equipped with an *automatic sprinkler system* in accordance with Section 903.3.1.1.
3. Enclosed elevator lobbies and protection of elevator hoistway door openings are not required on levels where the elevator hoistway opens to the exterior.

713.14.2.1 Rated corridors. Where *corridors* are required to be fire resistance rated in accordance with Section 1020.1, elevator hoistway openings shall be protected in accordance with Section 713.14.3.

713.14.3 Hoistway opening protection. Where Section 713.14.2 requires protection of the elevator hoistway door opening, the protection shall be provided by one of the following:

1. An enclosed elevator lobby shall be provided at each floor to separate the elevator hoistway shaft enclosure doors from each floor by fire partitions in accordance with Section 708. In addition, doors protecting openings in the elevator lobby enclosure walls shall comply with Section 716.2.2.1 as required for *corridor* walls and shall be automatic-closing by actuation of a smoke detector in accordance with Section 716.2.6.6. Penetrations of the enclosed elevator lobby by ducts and air transfer openings shall be protected as required for *corridors* in accordance with Section 717.5.4.1.
2. An enclosed elevator lobby shall be provided at each floor to separate the elevator hoistway shaft enclosure doors from each floor by smoke partitions in accordance with Section 710 where the building is equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1 or 903.3.1.2. In addition, doors protecting openings in the smoke partitions shall comply with Sections 710.5.2, 710.5.2.3 and 716.2.6. Penetrations of the enclosed elevator lobby by ducts and air transfer openings shall be protected as required for *corridors* in accordance with Section 717.5.4.1.
3. Additional doors shall be provided at each elevator hoistway door opening at the point of access to the elevator car. Such door shall comply with the smoke and draft control door assembly requirements in Section 716.2.2.1.1 when tested in accordance with UL 1784 without an artificial bottom seal. They shall be maintained automatic closing by actuation of a smoke detector in accordance with Section 716.2.6.6. Doors that latch shall be provided with panic hardware, operable from inside the elevator car. The doors shall be readily operable from the car side without a key, tool, or special knowledge or effort.
4. The elevator hoistway shall be pressurized in accordance with Section 909.21.

713.14.4 Means of egress. Elevator lobbies shall be provided with at least one means of egress complying with Chapter 10 and other provisions in this code. Egress through an elevator lobby shall be permitted in accordance with Item 1 of Section 1016.2.

[S] 713.15 Chimneys and fireplaces. *Approved* factory-built chimneys shall be installed within shafts as required by Section 713.

Exception: Factory-built chimneys that are exposed to the exterior in an *approved* manner are not required to be installed in shafts.

Approved chimneys serving multiple dwelling units are permitted to be installed within the same shaft, provided approved metal draft stops are installed at each floor level. All combustible construction shall be protected as required for fire-resistance-rated shaft construction. Interior shaft wall joints shall be fire-taped where required and where space allows, but fire-taping is permitted to be omitted from joints on the final closure wall provided the joints are installed in a tight manner.

The back of listed manufactured fireplace boxes is permitted to replace that portion of the shaft wall where they are located, provided the joint between the box and the adjacent shaft wall is tightly constructed and installed according to manufacturer's specification. Fresh air make-up ducts required by the Energy or Mechanical codes are permitted to pene-

trate the shaft at the fire box. Fresh air make-up ducts which pass through any portion of the building other than the shaft shall be at least 26 gage metal.

SECTION 714 PENETRATIONS

714.1 Scope. The provisions of this section shall govern the materials and methods of construction used to protect *through penetrations* and *membrane penetrations* of *horizontal assemblies* and fire-resistance-rated wall assemblies.

714.1.1 Ducts and air transfer openings. Penetrations of fire-resistance-rated walls by ducts that are not protected with *dampers* shall comply with Sections 714.3 through 714.4.3. Penetrations of *horizontal assemblies* not protected with a *shaft* as permitted by Section 717.6, and not required to be protected with *fire dampers* by other sections of this code, shall comply with Sections 714.5 through 714.6.2. Ducts and air transfer openings that are protected with *dampers* shall comply with Section 717.

714.2 Installation. A listed *penetration firestop* system shall be installed in accordance with the manufacturer's installation instructions and the listing criteria.

714.3 Installation details. Where sleeves are used, they shall be securely fastened to the assembly penetrated. The space between the item contained in the sleeve and the sleeve itself and any space between the sleeve and the assembly penetrated shall be protected in accordance with this section. Insulation and coverings on or in the penetrating item shall not penetrate the assembly unless the specific material used has been tested as part of the assembly in accordance with this section.

714.4 Fire-resistance-rated walls. Penetrations into or through *fire walls*, *fire barriers*, *smoke barrier* walls and *fire partitions* shall comply with Sections 714.4.1 through 714.4.3. Penetrations in *smoke barrier* walls shall also comply with Section 714.5.4.

714.4.1 Through penetrations. *Through penetrations* of fire-resistance-rated walls shall comply with Section 714.4.1.1 or 714.4.1.2.

Exception: Where the penetrating items are steel, ferrous or copper pipes, tubes or conduits, the *annular space* between the penetrating item and the fire-resistance-rated wall is permitted to be protected by either of the following measures:

1. In concrete or masonry walls where the penetrating item is a maximum 6-inch (152 mm) nominal diameter and the area of the opening through the wall does not exceed 144 square inches (0.0929 m²), concrete, grout or *mortar* is permitted where installed the full thickness of the wall or the thickness required to maintain the *fire-resistance rating*.
2. The material used to fill the *annular space* shall prevent the passage of flame and hot gases sufficient to ignite cotton waste when subjected to ASTM E119 or UL 263 time-temperature fire conditions under a minimum positive pressure differential of 0.01 inch (2.49 Pa) of water at the location of the penetration for the time period equivalent to the *fire-resistance rating* of the construction penetrated.

714.4.1.1 Fire-resistance-rated assemblies. *Through penetrations* shall be protected using systems installed as tested in the *approved* fire-resistance-rated assembly.

714.4.1.2 Through-penetration firestop system. *Through penetrations* shall be protected by an *approved penetration firestop* system installed as tested in accordance with ASTM E814 or UL 1479, with a minimum positive pressure differential of 0.01 inch (2.49 Pa) of water and shall have an *F rating* of not less than the required *fire-resistance rating* of the wall penetrated.

714.4.2 Membrane penetrations. *Membrane penetrations* shall comply with Section 714.4.1. Where walls or partitions are required to have a *fire-resistance rating*, recessed fixtures shall be installed such that the required *fire resistance* will not be reduced.

Exceptions:

1. *Membrane penetrations* of maximum 2-hour fire-resistance-rated walls and partitions by steel electrical boxes that do not exceed 16 square inches (0.0103 m²) in area, provided that the aggregate area of the openings through the membrane does not exceed 100 square inches (0.0645 m²) in any 100 square feet (9.29 m²) of wall area. The *annular space* between the wall membrane and the box shall not exceed 1/8 inch (3.2 mm). Such boxes on opposite sides of the wall or partition shall be separated by one of the following:
 - 1.1. By a horizontal distance of not less than 24 inches (610 mm) where the wall or partition is constructed with individual noncommunicating stud cavities.
 - 1.2. By a horizontal distance of not less than the depth of the wall cavity where the wall cavity is filled with cellulose loose-fill, rockwool or slag *mineral wool* insulation.
 - 1.3. By solid *fireblocking* in accordance with Section 718.2.1.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Exceptions:

1. Floor penetrations contained and located within the cavity of a wall above the floor or below the floor do not require a *T rating*.
2. Floor penetrations by floor drains, tub drains or shower drains contained and located within the concealed space of a *horizontal assembly* do not require a *T rating*.
3. Floor penetrations of maximum 4-inch (102 mm) nominal diameter metal conduit or tubing penetrating directly into metal-enclosed electrical power switchgear do not require a *T rating*.

[S] 714.5.2 Membrane penetrations. Penetrations of membranes that are part of a *horizontal assembly* shall comply with Section 714.5.1.1 or 714.5.1.2. Where floor/ceiling assemblies are required to have a *fire-resistance rating*, recessed fixtures shall be installed such that the required *fire resistance* will not be reduced.

Exceptions:

1. *Membrane penetrations* by steel, ferrous or copper conduits, pipes, tubes or vents, or concrete or masonry items where the *annular space* is protected either in accordance with Section 714.5.1 or to prevent the free passage of flame and the products of combustion. The aggregate area of the openings through the membrane shall not exceed 100 square inches (64 500 mm²) in any 100 square feet (9.3 m²) of ceiling area in assemblies tested without penetrations.
2. Ceiling *membrane penetrations* of maximum 2-hour *horizontal assemblies* by steel electrical boxes that do not exceed 16 square inches (10 323 mm²) in area, provided that the aggregate area of such penetrations does not exceed 100 square inches (44 500 mm²) in any 100 square feet (9.29 m²) of ceiling area, and the *annular space* between the ceiling membrane and the box does not exceed 1/8 inch (3.2 mm).
3. *Membrane penetrations* by electrical boxes of any size or type, that have been *listed* as part of an opening protective material system for use in *horizontal assemblies* and are installed in accordance with the instructions included in the listing.
4. *Membrane penetrations* by *listed* electrical boxes of any material, provided that such boxes have been tested for use in fire-resistance-rated assemblies and are installed in accordance with the instructions included in the listing. The *annular space* between the ceiling membrane and the box shall not exceed 1/8 inch (3.2 mm) unless *listed* otherwise.
5. The *annular space* created by the penetration of a fire sprinkler, provided that it is covered by a metal escutcheon plate.
6. Noncombustible items that are cast into concrete *building elements* and that do not penetrate both top and bottom surfaces of the element.
7. The ceiling membrane of a maximum 2-hour fire-resistance-rated *horizontal assembly* is permitted to be interrupted with the double wood top plate of a wall assembly that is sheathed with Type X *gypsum wallboard*, provided that all penetrating items through the double top plates are protected in accordance with Section 714.5.1.1 or 714.5.1.2 and the ceiling membrane is tight to the top plates.
8. Ceiling *membrane penetrations* by listed luminaires (light fixtures) or by luminaires protected with *listed* materials, which have been tested for use in fire-resistance-rated assemblies and are installed in accordance with the instructions included in the listing.
9. Natural ventilation openings are permitted in the enclosed underside of combustibles balconies and decks provided the closest edge of the vent opening is not more than 12 inches from the outer edge of the balcony or deck. Such vents must be covered with non-combustible corrosion resistant metal mesh. Solid blocking shall be installed between projecting framing members at the exterior building wall.

714.5.3 Dissimilar materials. Noncombustible penetrating items shall not connect to combustible materials beyond the point of firestopping unless it can be demonstrated that the *fire-resistance* integrity of the *horizontal assembly* is maintained.

714.5.4 Penetrations in smoke barriers. Penetrations in *smoke barriers* shall be protected by an approved *through-penetration firestop system* installed and tested in accordance with the requirements of UL 1479 for air leakage. The *L rating* of the system measured at 0.30 inch (7.47 Pa) of water in both the ambient temperature and elevated temperature tests shall not exceed either of the following:

1. 5.0 cfm per square foot (0.025 m³/s × m²) of penetration opening for each *through-penetration firestop system*.
2. A total cumulative leakage of 50 cfm (0.024 m³/s) for any 100 square feet (9.3 m²) of wall area, or floor area.

714.6 Nonfire-resistance-rated assemblies. Penetrations of nonfire-resistance-rated floor or floor/ceiling assemblies or the ceiling membrane of a nonfire-resistance-rated roof/ceiling assembly shall meet the requirements of Section 713 or shall comply with Section 714.6.1 or 714.6.2.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

715.5 Exterior curtain wall/nonfire-resistance-rated floor assembly intersections. Voids created at the intersection of exterior curtain wall assemblies and nonfire-resistance-rated floor or floor/ceiling assemblies shall be filled with an *approved* material or system to retard the interior spread of fire and hot gases between *stories*.

715.6 Exterior curtain wall/vertical fire barrier intersections. Voids created at the intersection of nonfire-resistance-rated exterior curtain wall assemblies and vertical *fire barriers* shall be filled with an approved material or system to retard the interior spread of fire and hot gases.

715.7 Curtain wall spandrels. Height and *fire-resistance* requirements for curtain wall spandrels shall comply with Section 705.8.5. Where Section 705.8.5 does not require fire-resistance-rated curtain wall spandrels, the requirements of Sections 715.4 and 715.5 shall still apply to the intersection between the curtain wall spandrels and the floor.

715.8 Joints and voids in smoke barriers. *Fire-resistant joint systems* protecting *joints in smoke barriers*, and perimeter fire containment systems protecting voids at the intersection of a horizontal *smoke barrier* and an exterior curtain wall, shall be tested in accordance with the requirements of UL 2079 for air leakage. The L rating of the joint system shall not exceed 5 cubic feet per minute per linear foot (0.00775 m³/s m) of joint at 0.30 inch (74.7 Pa) of water for both the ambient temperature and elevated temperature tests.

**SECTION 716
OPENING PROTECTIVES**

716.1 General. Opening protectives required by other sections of this code shall comply with the provisions of this section and shall be installed in accordance with NFPA 80.

[S] 716.1.1 Alternative methods for determining fire protection ratings. The application of any of the alternative methods specified in this section shall be based on the fire exposure and acceptance criteria specified in NFPA 252, NFPA 257, UL 9, UL 10B or UL 10C. The required *fire resistance* of an opening protective shall be permitted to be established by any of the following methods or procedures:

1. Designs documented in *approved* sources.
2. Calculations performed in an *approved* manner.
3. Engineering analysis based on a comparison of opening protective designs having *fire protection ratings* as determined by the test procedures set forth in NFPA 252, NFPA 257, UL 9, UL 10B or UL 10C.
4. Alternative protection methods as allowed by Section ((404.14)) 104.5.

716.1.2 Glazing. Glazing used in *fire door assemblies* and *fire window assemblies* shall comply with this section in addition to the requirements of Sections 716.2 and 716.3, respectively.

716.1.2.1 Safety glazing. *Fire-protection-rated* glazing and fire-resistance-rated glazing installed in *fire door assemblies* and *fire window assemblies* shall comply with the safety glazing requirements of Chapter 24 where applicable.

716.1.2.2 Marking fire-rated glazing assemblies. *Fire-rated glazing* assemblies shall be marked in accordance with Tables 716.1(1), 716.1(2) and 716.1(3).

**TABLE 716.1(1)
MARKING FIRE-RATED GLAZING ASSEMBLIES**

FIRE TEST STANDARD	MARKING	DEFINITION OF MARKING
ASTM E119 or UL 263	W	Meets wall assembly criteria.
ASTM E119 or UL 263	FC	Meets floor/ceiling criteria ^a
NFPA 257 or UL 9	OH	Meets fire window assembly criteria including the hose stream test.
NFPA 252 or UL 10B or UL 10C	D	Meets fire door assembly criteria.
	H	Meets fire door assembly hose stream test.
	T	Meets 450°F temperature rise criteria for 30 minutes
—	XXX	The time in minutes of the fire resistance or fire protection rating of the glazing assembly.

For SI: °C = [(°F) – 32]/1.8.

a. See Section 2409.1

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

716.2.5.1.1 Fire-resistance-rated glazing in door assemblies in fire walls and fire barriers rated greater than 1 hour. Fire-resistance-rated glazing tested to ASTM E119 or UL 263 and NFPA 252, UL 10B or UL 10C shall be permitted in *fire door assemblies* located in *fire walls* and in *fire barriers* in accordance with Table 716.1(2) to the maximum size tested and in accordance with their listings.

716.2.5.1.2 Fire-protection-rated glazing in door assemblies in fire walls and fire barriers rated greater than 1 hour. Fire-protection-rated glazing shall be prohibited in *fire walls* and *fire barriers* except as provided in Sections 716.2.5.1.2.1 and 716.2.5.1.2.2.

716.2.5.1.2.1 Horizontal exits. Fire-protection-rated glazing shall be permitted as vision panels in *self-closing* swinging *fire door assemblies* serving as horizontal exits in *fire walls* where limited to 100 square inches (0.065 m²).

716.2.5.1.2.2 Fire barriers. Fire-protection-rated glazing shall be permitted in *fire doors* having a 1-1/2-hour *fire protection rating* intended for installation in *fire barriers*, where limited to 100 square inches (0.065 m²).

716.2.5.2 Elevator, stairway and ramp protectives. Approved fire-protection-rated glazing used in *fire door assemblies* in elevator, *stairway and ramp enclosures* shall be so located as to furnish clear vision of the passageway or approach to the elevator, *stairway* or *ramp*.

716.2.5.3 Glazing in door assemblies in corridors and smoke barriers. In a 20-minute *fire door assembly*, the glazing material in the door itself shall have a minimum fire-protection-rated glazing of 20 minutes and shall be exempt from the hose stream test.

716.2.5.4 Fire door frames with transom lights and sidelights. Fire-protection-rated glazing shall be permitted in door frames with transom lights, sidelights or both, where a 3/4-hour *fire protection rating* or less is required and in 2-hour fire-resistance-rated *exterior walls* in accordance with Table 716.1(2). *Fire door* frames with transom lights, sidelights or both, installed with fire-resistance-rated glazing tested as an assembly in accordance with ASTM E119 or UL 263 shall be permitted where a *fire protection rating* exceeding 3/4 hour is required in accordance with Table 716.1(2).

716.2.5.4.1 Energy storage system separation. Fire-protection-rated glazing shall not be permitted in *fire door* frames with transom lights and sidelights in *fire barriers* required by Section 1207 of the *International Fire Code* to enclose energy storage systems.

[W] **716.2.6 Fire door hardware and closures.** *Fire door* hardware and closures shall be installed on *fire door assemblies* in accordance with the requirements of this section.

716.2.6.1 Door closing. *Fire doors* shall be latching and self- or automatic-closing in accordance with this section.

Exceptions:

1. *Fire doors* located in common walls separating *sleeping units* in Group R-1 shall be permitted without automatic- or *self-closing* devices.
2. The elevator car doors and the associated hoistway enclosure doors at the floor level designated for recall in accordance with ((Section 3003.2)) Chapter 30 shall be permitted to remain open during Phase I emergency recall operation.
3. In Group I-1, Condition 2 Assisted living facilities licensed under chapter 388-78A WAC and residential treatment facilities licensed under chapter 246-337 WAC, fire doors in dwelling and sleeping units opening to the corridor shall be permitted without automatic or self-closing devices when all of the following conditions exist:
 - 3.1. Each floor is constantly attended by staff on a 24-hour basis and stationed on that floor;
 - 3.2. The facility is provided with an NFPA 13 sprinkler system throughout;
 - 3.3. Doors shall be equipped with positive latching;
 - 3.4. Dwelling and sleeping units are not equipped with cooking appliances;
 - 3.5. Dwelling and sleeping units shall be equipped with a smoke detection system interconnected with the smoke detection system required by Section 907.2.6.1.

716.2.6.2 Latch required. Unless otherwise specifically permitted, single side-hinged *swinging fire doors* and both leaves of pairs of side-hinged *swinging fire doors* shall be provided with an active latch bolt that will secure the door when it is closed.

716.2.6.3 Chute intake door latching. Chute intake doors shall be positive latching, remaining latched and closed in the event of latch spring failure during a fire emergency.

716.2.6.4 Automatic-closing fire door assemblies. Automatic-closing *fire door assemblies* shall be *self-closing* in accordance with NFPA 80.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

716.2.6.5 Delayed-action closers. Doors required to be *self-closing* and not required to be automatic closing shall be permitted to be equipped with *delayed-action closers*.

[S] 716.2.6.6 Smoke-activated doors. Automatic-closing doors installed in the following locations shall be permitted to have hold-open devices. Doors shall automatically close by the actuation of *smoke detectors* installed in accordance with Section 907.3 or by loss of power to the *smoke detector* or hold-open device. Doors that are automatic-closing by smoke detection shall not have more than a 10-second delay before the door starts to close after the smoke detector is actuated. Automatic-closing doors that protect openings installed in the following locations shall comply with this section:

1. In walls that separate incidental uses in accordance with Section 509.4.
2. In *fire walls* in accordance with Section 706.8.
3. In *fire barriers* in accordance with Section 707.6.
4. In *fire partitions* in accordance with Section 708.6.
5. In *smoke barriers* in accordance with Section 709.5.
6. In *smoke partitions* in accordance with Section 710.5.2.3.
7. In *shaft enclosures* in accordance with Section 713.7.
8. In waste and linen chutes, discharge openings and access and discharge rooms in accordance with Section 713.13. Loading doors installed in waste and linen chutes shall meet the requirements of Sections 716.2.6.1 and 716.2.6.3.
9. Additional doors provided at elevator hoistway door openings installed in accordance with Section 713.14.3 item 3.

716.2.6.7 Doors in pedestrian ways. Vertical sliding or vertical rolling steel *fire doors* in openings through which pedestrians travel shall be heat activated or activated by smoke detectors with alarm verification.

716.2.7 Swinging fire shutters. Where fire shutters of the swinging type are installed in exterior openings, not less than one row in every three vertical rows shall be arranged to be readily opened from the outside, and shall be identified by distinguishing marks or letters not less than 6 inches (152 mm) high.

716.2.8 Rolling fire shutters. Where fire shutters of the rolling type are installed, such shutters shall include *approved* automatic-closing devices.

716.2.9 Labeled protective assemblies. *Fire door* assemblies shall be labeled by an *approved agency*. The *labels* shall comply with NFPA 80, and shall be permanently affixed to the door or frame.

716.2.9.1 Fire door labeling requirements. *Fire doors* shall be *labeled* showing the name of the manufacturer or other identification readily traceable back to the manufacturer, the name or trademark of the third-party inspection agency, the *fire protection rating* and, where required for *fire doors* in *interior exit stairways and ramps* and *exit passageways* by Section 716.2.2.3, the maximum transmitted temperature end point. Smoke and draft control doors complying with UL 1784 shall be *labeled* as such and shall comply with Section 716.2.9.3. *Labels* shall be *approved* and permanently affixed. The *label* shall be applied at the factory or location where fabrication and assembly are performed.

716.2.9.1.1 Light kits, louvers and components. *Listed* light kits and louvers and their required preparations shall be considered as part of the *labeled* door where such installations are done under the listing program of the third-party agency. *Fire doors* and *fire door assemblies* shall be permitted to consist of components, including glazing, vision light kits and hardware that are *listed* or classified and *labeled* for such use by different third-party agencies.

716.2.9.2 Oversized doors. Oversized *fire doors* shall bear an oversized *fire door label* by an *approved agency* or shall be provided with a certificate of inspection furnished by an *approved* testing agency. Where a certificate of inspection is furnished by an *approved* testing agency, the certificate shall state that the door conforms to the requirements of design, materials and construction, but has not been subjected to the fire test.

716.2.9.3 Smoke and draft control door labeling requirements. Smoke and draft control doors complying with UL 1784 shall be *labeled* in accordance with Section 716.2.9.1 and shall show the letter “S” on the fire-rating *label* of the door. This marking shall indicate that the door and frame assembly are in compliance where *listed or labeled* gasketing is installed.

716.2.9.4 Fire door frame labeling requirements. *Fire door* frames shall be labeled showing the names of the manufacturer and the third-party inspection agency.

716.2.9.5 Labeling. *Fire-rated glazing* shall bear a *label* or other identification showing the name of the manufacturer, the test standard and information required in Table 716.1(1) that shall be issued by an *approved agency* and shall be permanently identified on the glazing.

716.2.9.6 Fire door operator labeling requirements. *Fire door* operators for horizontal sliding doors shall be *labeled* and *listed* for use with the assembly.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

**TABLE 717.3.2.1
FIRE DAMPER RATING**

TYPE OF PENETRATION	MINIMUM DAMPER RATING (hours)
Less than 3-hour fire-resistance-rated assemblies	1.5
3-hour or greater fire-resistance-rated assemblies	3

717.3.2.2 Smoke damper ratings. *Smoke damper* leakage ratings shall be Class I or II. Elevated temperature ratings shall be not less than 250°F (121°C).

717.3.2.3 Combination fire/smoke damper ratings. *Combination fire/smoke dampers* shall have the minimum rating specified for *fire dampers* in Table 717.3.2.1 and shall have the minimum rating specified for *smoke dampers* in Section 717.3.2.2.

717.3.2.4 Corridor damper ratings. *Corridor dampers* shall have the following minimum ratings:

1. One-hour *fire-resistance rating*.
2. Class I or II leakage rating as specified in Section 717.3.2.2.

717.3.3 Damper actuation. *Damper* actuation shall be in accordance with Sections 717.3.3.1 through 717.3.3.5 as applicable.

717.3.3.1 Fire damper actuation. Primary heat responsive devices used to actuate *fire dampers* shall meet one of the following requirements:

1. The operating temperature shall be approximately 50°F (10°C) above the normal temperature within the duct system, but not less than 160°F (71°C).
2. The operating temperature shall be not more than 350°F (177°C) where located in a smoke control system complying with Section 909.

Interpretation I717.3: Dampers associated with exhaust fans used for hoistway and stair pressurization are permitted to comply with Section 717.3.3.1, item 2.

717.3.3.2 Smoke damper actuation. The *smoke damper* shall close upon actuation of a *listed smoke detector* or detectors installed in accordance with Section 907.3 and one of the following methods, as applicable:

1. Where a *smoke damper* is installed within a duct, a *smoke detector* shall be installed inside the duct or outside the duct with sampling tubes protruding into the duct. The detector or tubes within the duct shall be within 5 feet (1524 mm) of the *damper*. Air outlets and inlets shall not be located between the detector or tubes and the *damper*. The detector shall be *listed* for the air velocity, temperature and humidity anticipated at the point where it is installed. Other than in mechanical smoke control systems, *dampers* shall be closed upon fan shutdown where local smoke detectors require a minimum velocity to operate.
2. Where a *smoke damper* is installed above *smoke barrier* doors in a *smoke barrier*, a spot-type detector shall be installed on either side of the *smoke barrier* door opening. The detector shall be *listed* for releasing service if used for direct interface with the *damper*.
3. Where a *smoke damper* is installed within an air transfer opening in a wall, a spot-type detector shall be installed within 5 feet (1524 mm) horizontally of the *damper*. The detector shall be *listed* for releasing service if used for direct interface with the *damper*.
4. Where a *smoke damper* is installed in a corridor wall or ceiling, the *damper* shall be permitted to be controlled by a smoke detection system installed in the *corridor*.
5. Where a smoke detection system is installed in all areas served by the duct in which the *damper* will be located, the *smoke dampers* shall be permitted to be controlled by the smoke detection system.

717.3.3.3 Combination fire/smoke damper actuation. *Combination fire/smoke damper* actuation shall be in accordance with Sections 717.3.3.1 and 717.3.3.2. *Combination fire/smoke dampers* installed in smoke control system *shaft* penetrations shall not be activated by local area smoke detection unless it is secondary to the smoke management system controls.

717.3.3.4 Ceiling radiation damper actuation. The operating temperature of a *ceiling radiation damper* actuation device shall be 50°F (27.8°C) above the normal temperature within the duct system, but not less than 160°F (71°C).

717.3.3.5 Corridor damper actuation. *Corridor damper* actuation shall be in accordance with Sections 717.3.3.1 and 717.3.3.2.

717.4 Access and identification. Access and identification of fire and *smoke dampers* shall comply with Sections 717.4.1 through 717.4.2.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

717.4.1 Access. *Fire and smoke dampers* shall be provided with an approved means of access that is large enough to permit inspection and maintenance of the *damper* and its operating parts. *Dampers* equipped with fusible links, internal operators, or both shall be provided with an access door that is not less than 12 inches (305 mm) square or provided with a removable duct section.

717.4.1.1 Access openings. The access shall not affect the integrity of *fire-resistance-rated* assemblies. The access openings shall not reduce the *fire-resistance rating* of the assembly. Access doors in ducts shall be tight fitting and suitable for the required duct construction.

717.4.1.2 Restricted access. Where space constraints or physical barriers restrict access to a damper for periodic inspection and testing, the *damper* shall be a single- or multi-blade type *damper* and shall comply with the remote inspection requirements of NFPA 80 or NFPA 105.

717.4.2 Identification. Access points shall be permanently identified on the exterior by a label having letters not less than 1/2 inch (12.7 mm) in height reading: “FIRE/SMOKE DAMPER,” “SMOKE DAMPER” or “FIRE DAMPER.”

717.5 Where required. *Fire dampers, smoke dampers, combination fire/smoke dampers, ceiling radiation dampers and corridor dampers* shall be provided at the locations prescribed in Sections 717.5.1 through 717.5.7 and 717.6. Where an assembly is required to have both *fire dampers* and *smoke dampers, combination fire/smoke dampers* or a *fire damper* and a *smoke damper* shall be provided.

717.5.1 Fire walls. Ducts and air transfer openings permitted in *fire walls* in accordance with Section 706.11 shall be protected with *listed fire dampers* installed in accordance with their listing.

717.5.1.1 Horizontal exits. A *listed smoke damper* designed to resist the passage of smoke shall be provided at each point a duct or air transfer opening penetrates a *fire wall* that serves as a *horizontal exit*.

717.5.2 Fire barriers. Ducts and air transfer openings of *fire barriers* shall be protected with *listed fire dampers* installed in accordance with their listing. Ducts and air transfer openings shall not penetrate enclosures for *interior exit stairways* and *ramps* and *exit passageways*, except as permitted by Sections 1023.5 and 1024.6, respectively.

Exceptions: *Fire dampers* are not required at penetrations of *fire barriers* where any of the following apply:

1. Penetrations are tested in accordance with ASTM E119 or UL 263 as part of the fire-resistance-rated assembly.
2. Ducts are used as part of an *approved* smoke control system in accordance with Section 909 and where the use of a *fire damper* would interfere with the operation of a smoke control system.
3. Such walls are penetrated by fully ducted HVAC systems, have a required *fire-resistance rating* of 1 hour or less, are in areas of other than Group H and are in buildings equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1 or 903.3.1.2. For the purposes of this exception, a fully ducted HVAC system shall be a duct system for conveying supply, return or exhaust air as part of the structure’s HVAC system. Such a duct system shall be constructed of sheet steel not less than No. 26 gage thickness and shall be continuous from the air-handling appliance or equipment to the air outlet and inlet terminals. Nonmetal flexible air connectors shall be permitted in the following locations:
 - 3.1. At the duct connection to the air handling unit or equipment located within the mechanical room in accordance with Section 603.9 of the *International Mechanical Code*.
 - 3.2. From an overhead metal duct to a ceiling diffuser within the same room in accordance with Section 603.6.2 of the *International Mechanical Code*.

717.5.2.1 Horizontal exits. A *listed smoke damper* designed to resist the passage of smoke shall be provided at each point a duct or air transfer opening penetrates a *fire barrier* that serves as a *horizontal exit*.

[S] **717.5.3 Shaft enclosures.** Shaft enclosures that are permitted to be penetrated by ducts and air transfer openings shall be protected with *listed fire and smoke dampers* installed in accordance with their listing.

Exceptions:

1. *Fire dampers* are not required at penetrations of *shafts* where any of the following criteria are met:
 - 1.1. Steel exhaust subducts having a wall thickness of not less than 0.0187 inch (0.4712 mm) are extended not less than 22 inches (559 mm) vertically in exhaust *shafts*, and an exhaust fan is installed at the upper terminus of the *shaft* that is powered continuously in accordance with Section 909.11, so as to maintain a continuous upward airflow to the outdoors.
 - 1.2. Penetrations are tested in accordance with ASTM E119 or UL 263 as part of the fire-resistance-rated assembly.
 - 1.3. Ducts are used as part of an *approved* smoke control system designed and installed in accordance with Section 909 and where the *fire damper* will interfere with the operation of the smoke control system.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

- 1.4. The penetrations are in parking garage exhaust or supply *shafts* that are separated from other building *shafts* by not less than 2-hour fire-resistance-rated construction.
2. In Group B and R occupancies equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1, *smoke dampers* are not required at penetrations of *shafts* where all of the following criteria are met:
 - 2.1. Kitchen, clothes dryer, bathroom, ~~((and))~~ toilet room, accessory storage, and accessory trash room exhaust openings are installed with steel exhaust subducts, having a wall thickness of not less than 0.0187 inch (0.4712 mm).
 - 2.2. The subducts extend not less than 22 inches (559 mm) vertically.
 - 2.3. An exhaust fan is installed at the upper terminus of the *shaft* that is ~~((powered continuously in accordance with the provisions of Section 909.11.))~~ provided with a legally required standby power system in accordance with Seattle Electrical Code Section 701 so as to maintain a continuous upward airflow to the outdoors.
3. *Smoke dampers* are not required at penetration of exhaust or supply *shafts* in parking garages that are separated from other building *shafts* by not less than 2-hour fire-resistance-rated construction.
4. *Smoke dampers* are not required at penetrations of *shafts* where ducts are used as part of an *approved* mechanical smoke control system designed in accordance with Section 909 and where the *smoke damper* will interfere with the operation of the smoke control system.
5. *Fire dampers* and *combination fire/smoke dampers* are not required in kitchen and clothes dryer exhaust systems where *dampers* are prohibited by the *International Mechanical Code*.

717.5.3.1 Continuous upward airflow. *Fire dampers* and *smoke dampers* shall not be installed in *shafts* that are required to maintain a continuous upward airflow path where closure of the *damper* would result in the loss of the airflow.

[S] 717.5.4 Fire partitions. Ducts and air transfer openings that penetrate *fire partitions* shall be protected with *listed fire dampers* installed in accordance with their listing.

Exceptions: In occupancies other than Group H, *fire dampers* are not required where any of the following apply:

1. *Corridor* walls in buildings equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1 or 903.3.1.2 and the duct is protected as a *through penetration* in accordance with Section 714.
2. Tenant partitions in *covered and open mall buildings* where the walls are not required by provisions elsewhere in the code to extend to the underside of the floor or roof sheathing, slab or deck above.
3. The duct system is constructed of *approved* materials in accordance with the *International Mechanical Code* and the duct penetrating the wall complies with all of the following requirements:
 - 3.1. The duct shall not exceed 100 square inches (0.06 m²).
 - 3.2. The duct shall be constructed of steel not less than 0.0217 inch (0.55 mm) in thickness.
 - 3.3. The duct shall not have openings that communicate the *corridor* with adjacent spaces or rooms.
 - 3.4. The duct shall be installed above a ceiling.
 - 3.5. The duct shall not terminate at a wall register in the fire-resistance-rated wall.
 - 3.6. A minimum 12-inch-long (305 mm) by 0.060-inch-thick (1.52 mm) steel sleeve shall be centered in each duct opening. The sleeve shall be secured to both sides of the wall and all four sides of the sleeve with minimum 1-1/2-inch by 1-1/2-inch by 0.060-inch (38 mm by 38 mm by 1.52 mm) steel retaining angles. The retaining angles shall be secured to the sleeve and the wall with No. 10 (M5) screws. The *annular space* between the steel sleeve and the wall opening shall be filled with mineral wool batting on all sides.
4. Such walls are penetrated by ducted HVAC systems, have a required *fire-resistance rating* of 1 hour or less, and are in buildings equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1 or 903.3.1.2. For the purposes of this exception, a ducted HVAC system shall be a duct system for conveying supply, return or exhaust air as part of the structure's HVAC system. Such a duct system shall be constructed of sheet steel not less than No. 26 gage thickness and shall be continuous from the air-handling appliance or equipment to the air outlet and inlet terminals. Nonmetal flexible air connectors shall be permitted in the following locations:
 - 4.1. At the duct connection to the air handling unit or equipment located within the mechanical room in accordance with Section 603.9 of the International Mechanical Code.
 - 4.2. From an overhead metal duct to a ceiling diffuser within the same room in accordance with Section 603.6.2 of the International Mechanical Code.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

shall be installed with a material specifically tested in the form and manner intended for use to demonstrate its ability to remain in place and resist the free passage of flame and the products of combustion.

718.2.5.1 Factory-built chimneys and fireplaces. Factory-built chimneys and fireplaces shall be fireblocked in accordance with UL 103 and UL 127.

718.2.6 Exterior wall coverings. *Fireblocking* shall be installed within concealed spaces of *exterior wall coverings* and other exterior architectural elements where permitted to be of combustible construction as specified in Section 1405 or where erected with combustible frames. *Fireblocking* shall be installed at maximum intervals of 20 feet (6096 mm) in either dimension so that there will be no concealed space exceeding 100 square feet (9.3 m²) between *fireblocking*. Where wood furring strips are used, they shall be of *approved* wood of natural decay resistance or *preservative-treated wood*. If noncontinuous, such elements shall have closed ends, with not less than 4 inches (102 mm) of separation between sections.

Exceptions:

1. *Fireblocking* of *cornices* is not required in single-family *dwelling*s. *Fireblocking* of *cornices* of a two-family *dwelling* is required only at the line of *dwelling unit* separation.
2. *Fireblocking* shall not be required where the *exterior wall covering* is installed on noncombustible framing and the face of the *exterior wall covering* exposed to the concealed space is covered by one of the following materials:
 - 2.1. Aluminum having a minimum thickness of 0.019 inch (0.5 mm).
 - 2.2. Corrosion-resistant steel having a base metal thickness not less than 0.016 inch (0.4 mm) at any point.
 - 2.3. Other *approved* noncombustible materials.
3. *Fireblocking* shall not be required where the *exterior wall covering* has been tested in accordance with, and complies with the acceptance criteria of, NFPA 285. The *exterior wall covering* shall be installed as tested in accordance with NFPA 285.

718.2.7 Concealed sleeper spaces. Where wood sleepers are used for laying wood flooring on masonry or concrete fire-resistance-rated floors, the space between the floor slab and the underside of the wood flooring shall be filled with an *approved* material to resist the free passage of flame and products of combustion or fireblocked in such a manner that open spaces under the flooring shall not exceed 100 square feet (9.3 m²) in area and such space shall be filled solidly under permanent partitions so that communication under the flooring between adjoining rooms shall not occur.

Exceptions:

1. *Fireblocking* is not required for slab-on-grade floors in gymnasiums.
2. *Fireblocking* is required only at the juncture of each alternate lane and at the ends of each lane in a bowling facility.

718.3 Draftstopping in floors. Draftstopping shall be installed to subdivide floor/ceiling assemblies where required by Section 708.4.2. In other than Group R occupancies, draftstopping shall be installed to subdivide combustible floor/ceiling assemblies so that horizontal floor areas do not exceed 1,000 square feet (93 m²).

Exception: Buildings equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1.

718.3.1 Draftstopping materials. Draftstopping materials shall be not less than 1/2-inch (12.7 mm) *gypsum board*, 3/8-inch (9.5 mm) *wood structural panel*, 3/8-inch (9.5 mm) *particleboard*, 1-inch (25-mm) nominal lumber, cement *fiberboard*, batts or blankets of mineral wool or glass fiber, or other *approved* materials adequately supported. The integrity of *draftstops* shall be maintained.

718.4 Draftstopping in attics. Draftstopping shall be installed to subdivide *attic* spaces where required by Section 708.4.2. In other than Group R, draftstopping shall be installed to subdivide combustible *attic* spaces and combustible concealed roof spaces such that any horizontal area does not exceed 3,000 square feet (279 m²). *Ventilation* of concealed roof spaces shall be maintained in accordance with Section 1202.2.1.

Exception: Buildings equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1.

718.4.1 Draftstopping materials. Materials utilized for draftstopping of *attic* spaces shall comply with Section 718.3.1.

718.4.1.1 Openings. Openings in the partitions shall be protected by *self-closing* doors with automatic latches constructed as required for the partitions.

[S] 718.5 Combustible materials in concealed spaces in Type I or II construction. Combustible materials shall not be permitted in concealed spaces of buildings of Type I or II construction.

Exceptions:

1. Combustible materials in accordance with Section 603.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

2. Combustible materials exposed within plenums complying with Section 602 of the *International Mechanical Code*.
3. Class A *interior finish* materials classified in accordance with Section 803.
4. Combustible piping within partitions or shaft enclosures installed in accordance with the provisions of this code.
5. Combustible piping within concealed ceiling spaces installed in accordance with the *International Mechanical Code* and the (~~*International*~~) *Uniform Plumbing Code*.
6. Combustible insulation and covering on pipe and tubing, installed in concealed spaces other than plenums, complying with Section 720.7.

SECTION 719 FIRE-RESISTANCE REQUIREMENTS FOR PLASTER

719.1 Thickness of plaster. The minimum thickness of *gypsum plaster* or *Portland cement plaster* used in a fire-resistance-rated system shall be determined by the prescribed fire tests. The plaster thickness shall be measured from the face of the lath where applied to gypsum lath or metal lath.

719.2 Plaster equivalents. For *fire-resistance* purposes, 1/2 inch (12.7 mm) of unsanded *gypsum plaster* shall be deemed equivalent to 3/4 inch (19.1 mm) of one-to-three gypsum sand plaster or 1 inch (25 mm) of Portland cement sand plaster.

719.3 Noncombustible furring. In buildings of Types I and II construction, plaster shall be applied directly on concrete or masonry or on *approved* noncombustible plastering base and furring.

719.4 Double reinforcement. Plaster protection more than 1 inch (25 mm) in thickness shall be reinforced with an additional layer of *approved* lath embedded not less than 3/4 inch (19.1 mm) from the outer surface and fixed securely in place.

Exception: Solid plaster partitions or where otherwise determined by fire tests.

719.5 Plaster alternatives for concrete. In reinforced concrete construction, *gypsum plaster* or *Portland cement plaster* is permitted to be substituted for 1/2 inch (12.7 mm) of the required poured concrete protection, except that a minimum thickness of 3/8 inch (9.5 mm) of poured concrete shall be provided in reinforced concrete floors and 1 inch (25 mm) in reinforced concrete columns in addition to the plaster finish. The concrete base shall be prepared in accordance with Section 2510.7.

SECTION 720 THERMAL- AND SOUND-INSULATING MATERIALS

720.1 General. Insulating materials shall comply with the requirements of this section. Where a *flame spread index* or a *smoke-developed index* is specified in this section, such index shall be determined in accordance with ASTM E84 or UL 723. Any material that is subject to an increase in *flame spread index* or *smoke-developed index* beyond the limits herein established through the effects of age, moisture or other atmospheric conditions shall not be permitted. Insulating materials, when tested in accordance with the requirements of this section, shall include facings, when used, such as vapor retarders, vapor permeable membranes and similar coverings, and all layers of single and multilayer reflective foil insulation and similar materials.

Exceptions:

1. *Fiberboard* insulation shall comply with Chapter 23.
2. Foam plastic insulation shall comply with Chapter 26.
3. Duct and pipe insulation and duct and pipe coverings and linings in plenums shall comply with the *International Mechanical Code*.
4. All layers of single and multilayer reflective plastic core insulation shall comply with Section 2614.

720.2 Concealed installation. Insulating materials, where concealed as installed in buildings of any type of construction, shall have a *flame spread index* of not more than 25 and a *smoke-developed index* of not more than 450.

Exception: Cellulosic fiber loose-fill insulation complying with the requirements of Section 720.6 shall not be required to meet a *flame spread index* requirement but shall be required to meet a *smoke-developed index* of not more than 450 when tested in accordance with CAN/ULC S102.2.

720.2.1 Facings. Where such materials are installed in concealed spaces in buildings of Type III, IV or V construction, the *flame spread* and *smoke-developed* limitations do not apply to facings, coverings, and layers of reflective foil insulation that are installed behind and in substantial contact with the unexposed surface of the ceiling, wall or floor finish.

Exception: All layers of single and multilayer reflective plastic core insulation shall comply with Section 2614.

720.3 Exposed installation. Insulating materials, where exposed as installed in buildings of any type of construction, shall have a *flame spread index* of not more than 25 and a *smoke-developed index* of not more than 450.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

SECTION 804
INTERIOR FLOOR FINISH

804.1 General. *Interior floor finish* and floor covering materials shall comply with Sections 804.2 through 804.4.2.

Exception: Floor finishes and coverings of a traditional type, such as wood, vinyl, linoleum or terrazzo, and resilient floor covering materials that are not composed of fibers.

804.2 Classification. *Interior floor finish* and floor covering materials required by Section 804.4.2 to be of Class I or II materials shall be classified in accordance with ASTM E648 or NFPA 253. The classification referred to herein corresponds to the classifications determined by ASTM E648 or NFPA 253 as follows: Class I, 0.45 watts/cm² or greater; Class II, 0.22 watts/cm² or greater.

804.3 Testing and identification. *Interior floor finish* and floor covering materials shall be tested by an agency in accordance with ASTM E648 or NFPA 253 and identified by a hang tag or other suitable method so as to identify the manufacturer or supplier and style, and shall indicate the *interior floor finish* or floor covering classification in accordance with Section 804.2. Carpet-type floor coverings shall be tested as proposed for use, including underlayment. Test reports confirming the information provided in the manufacturer's product identification shall be furnished to the building official on request.

804.4 Interior floor finish requirements. Interior floor covering materials shall comply with Sections 804.4.1 and 804.4.2 and *interior floor finish* materials shall comply with Section 804.4.2.

804.4.1 Test requirement. In all occupancies, interior floor covering materials shall comply with the requirements of the DOC FF-1 "pill test" (CPSC 16 CFR Part 1630) or with ASTM D2859.

804.4.2 Minimum critical radiant flux. In all occupancies, *interior floor finish* and floor covering materials in enclosures for *stairways* and *ramps*, exit passageways, *corridors* and rooms or spaces not separated from corridors by partitions extending from the floor to the underside of the ceiling shall withstand a minimum critical radiant flux. The minimum critical radiant flux shall be not less than Class I in Groups I-1, I-2 and I-3 and not less than Class II in Groups A, B, E, H, I-4, M, R-1, R-2 and S.

Exception: Where a building is equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 or 903.3.1.2, Class II materials are permitted in any area where Class I materials are required, and materials complying with DOC FF-1 "pill test" (CPSC 16 CFR Part 1630) or with ASTM D2859 are permitted in any area where Class II materials are required.

SECTION 805
COMBUSTIBLE MATERIALS IN TYPES I AND II CONSTRUCTION

805.1 Application. Combustible materials installed on or embedded in floors of buildings of Type I or II construction shall comply with Sections 805.1.1 through 805.1.3.

Exception: *Stages* and *platforms* constructed in accordance with Sections 410.2 and 410.3, respectively.

805.1.1 Subfloor construction. Floor sleepers, bucks and nailing blocks shall not be constructed of combustible materials, unless the space between the fire-resistance-rated floor assembly and the flooring is either solidly filled with noncombustible materials or fireblocked in accordance with Section 718, and provided that such open spaces shall not extend under or through permanent partitions or walls.

[S] **805.1.2 Wood finish flooring.** Wood finish flooring or wood sheathing used as flooring is permitted to be attached directly to the embedded or fireblocked wood sleepers and shall be permitted where cemented directly to the top surface of fire-resistance-rated floor assemblies or directly to a wood subfloor attached to sleepers as provided for in Section 805.1.1.

805.1.3 Insulating boards. Combustible insulating boards not more than 1/2 inch (12.7 mm) thick and covered with finish flooring are permitted where attached directly to a noncombustible floor assembly or to wood subflooring attached to sleepers as provided for in Section 805.1.1.

SECTION 806
DECORATIVE MATERIALS AND TRIM

[F] **806.1 General.** The following requirements shall apply to all occupancies:

1. Furnishings or *decorative materials* of an *explosive* or highly flammable character shall not be used.
2. Fire-retardant coatings in existing buildings shall be maintained so as to retain the effectiveness of the treatment under service conditions encountered in actual use.
3. Furnishings or other objects shall not be placed to obstruct exits, access thereto, egress therefrom or visibility thereof.
4. The permissible amount of decorative vegetation and noncombustible *decorative materials* shall not be limited.

CHAPTER 9

FIRE PROTECTION AND LIFE SAFETY SYSTEMS

User note:

About this chapter: Chapter 9 prescribes the minimum requirements for active fire protection equipment systems to perform the functions of detecting a fire, alerting the occupants or fire department of a fire emergency, mass notification, gas detection, controlling smoke and controlling or extinguishing the fire. Generally, the requirements are based on the occupancy, the height and the area of the building, because these are the factors that most affect fire-fighting capabilities and the relative hazard of a specific building or portion thereof. This chapter parallels and is substantially duplicated in Chapter 9 of the International Fire Code®.

SECTION 901 GENERAL

901.1 Scope. The provisions of this chapter shall specify where fire protection and *life safety systems* are required and shall apply to the design, installation and operation of *fire protection and life safety systems*.

901.2 Fire protection and life safety systems. *Fire protection and life safety systems* shall be installed, repaired, operated and maintained in accordance with this code and the *International Fire Code*.

Any *fire protection or life safety system* for which an exception or reduction to the provisions of this code has been granted shall be considered to be a required system.

Exception: Any *fire protection or life safety system* or portion thereof not required by this code shall be permitted to be installed for partial or complete protection provided that such system meets the requirements of this code.

[S] 901.2.1 Certificates required. Individuals who install, inspect, test or maintain *fire protection and life safety systems* shall obtain the proper certificate from the *fire code official* as required by the *International Fire Code*.

901.3 Modifications. Persons shall not remove or modify any *fire protection system* installed or maintained under the provisions of this code or the *International Fire Code* without approval by the *building official*.

901.4 Threads. Threads provided for fire department connections to sprinkler systems, standpipes, yard hydrants or any other fire hose connection shall be compatible with the connections used by the local fire department.

[S] 901.5 Acceptance tests. *Fire protection and life safety systems* shall be tested in accordance with the requirements of this code and the *International Fire Code*. Where required, the tests shall be conducted in the presence of the *building official*. Tests required by this code, the *International Fire Code* and the standards listed in this code shall be conducted at the expense of the owner or the owner's authorized agent. It shall be unlawful to occupy portions of a structure until the systems required (~~(*fire protection systems*)~~) by this code and the International Fire Code within that portion of the structure have been tested and approved.

901.6 Supervisory service. Where required, *fire protection systems* shall be monitored by an approved supervising station in accordance with NFPA 72.

901.6.1 Automatic sprinkler systems. *Automatic sprinkler systems* shall be monitored by an *approved* supervising station.

Exceptions:

1. A supervising station is not required for *automatic sprinkler systems* protecting one- and two-family dwellings.
2. Limited area systems in accordance with Section 903.3.8.

[F] 901.6.2 Integrated testing. Where two or more *fire protection or life safety systems* are interconnected, the intended response of subordinate *fire protection and life safety systems* shall be verified when required testing of the initiating system is conducted. In addition, integrated testing shall be performed in accordance with Sections 901.6.2.1 and 901.6.2.2.

[F] 901.6.2.1 High-rise buildings. For high-rise buildings, integrated testing shall comply with NFPA 4, with an integrated test performed prior to issuance of the certificate of occupancy and at intervals not exceeding 10 years, unless otherwise specified by an integrated system test plan prepared in accordance with NFPA 4. If an equipment failure is detected during integrated testing, a repeat of the integrated test shall not be required, except as necessary to verify operation of *fire protection or life safety functions* that are initiated by equipment that was repaired or replaced.

[F] 901.6.2.2 Smoke control systems. Where a fire alarm system is integrated with a smoke control system as outlined in Section 909, integrated testing shall comply with NFPA 4, with an integrated test performed prior to issuance of the certificate of occupancy and at intervals not exceeding 10 years, unless otherwise specified by an integrated system test plan prepared in accordance with NFPA 4. If an equipment failure is detected during integrated testing, a repeat of the

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

integrated test shall not be required, except as necessary to verify operation of fire protection or life safety functions that are initiated by equipment that was repaired or replaced.

[S] 901.6.3 Fire alarm systems. Fire alarm systems required by the provisions of Section 907.2 of this code and Sections 907.2 and 907.9 of the *International Fire Code* shall be monitored by an *approved* supervising station in accordance with Section 907.6.6 of this code.

Exceptions:

1. Single- and multiple-station smoke alarms required by Section 907.2.11.
2. Smoke detectors in Group I-3 occupancies.
3. Supervisory service is not required for *automatic sprinkler systems* in one- and two-family dwellings and townhouses.

901.6.4 Group H. Supervision and monitoring of emergency alarm, detection and automatic fire-extinguishing systems in Group H occupancies shall be in accordance with the *International Fire Code*.

901.7 Fire areas. Where buildings, or portions thereof, are divided into *fire areas* so as not to exceed the limits established for requiring a *fire protection system* in accordance with this chapter, such *fire areas* shall be separated by *fire walls* constructed in accordance with Section 706, *fire barriers* constructed in accordance with Section 707, or *horizontal assemblies* constructed in accordance with Section 711, or a combination thereof having a *fire-resistance rating* of not less than that determined in accordance with Section 707.3.10.

SECTION 902 FIRE PUMP AND RISER ROOM SIZE

[F] 902.1 Pump and riser room size. Where provided, fire pump rooms and *automatic sprinkler system* riser rooms shall be designed with adequate space for all equipment necessary for the installation, as defined by the manufacturer, with sufficient working room around the stationary equipment. Clearances around equipment to elements of permanent construction, including other installed equipment and appliances, shall be sufficient to allow inspection, service, repair or replacement without removing such elements of permanent construction or disabling the function of a required fire-resistance-rated assembly. Fire pump and *automatic sprinkler system* riser rooms shall be provided with doors and unobstructed passageways large enough to allow removal of the largest piece of equipment.

[F] 902.1.1 Access. Automatic sprinkler system risers, fire pumps and controllers shall be provided with ready access. Where located in a fire pump room or *automatic sprinkler system* riser room, the door shall be permitted to be locked provided that the key is available at all times.

[S] 902.1.1.1 Access to other spaces. No other rooms or spaces not related to the operation of the fire pump and its equipment shall be accessed through or by way of the fire pump room.

Exception: Equipment related to domestic water distribution are permitted to have access hatches to equipment or components for maintenance needs.

[S] [F] 902.1.2 Marking on access doors. Access doors for *automatic sprinkler system* riser rooms and fire pump rooms shall be labeled with an *approved* sign stating “FIRE SPRINKLER RISER ROOM” or “FIRE PUMP AND RISER ROOM”. The lettering shall be in contrasting color to the background. Letters shall have a minimum height of 2 inches (51 mm) with a minimum stroke of 3/8 inch (10 mm).

[F] 902.1.3 Environment. Automatic sprinkler system riser rooms and fire pump rooms shall be maintained at a temperature of not less than 40°F (4°C). Heating units shall be permanently installed.

[F] 902.1.4 Lighting. Permanently installed artificial illumination shall be provided in the *automatic sprinkler system* riser rooms and fire pump rooms.

SECTION 903 AUTOMATIC SPRINKLER SYSTEMS

[F] 903.1 General. *Automatic sprinkler systems* shall comply with this section.

[F] 903.1.1 Alternative protection. Alternative *automatic fire-extinguishing systems* complying with Section 904 shall be permitted instead of *automatic sprinkler systems* protection where recognized by the applicable standard and *approved* by the fire code official.

[W][S][F] 903.2 Where required. Approved *automatic sprinkler systems* in new buildings and structures shall be provided in the locations described in Sections 903.2.1 through 903.2.12.

Exceptions:

1. ~~((Spaces))~~ Where allowed, spaces or areas in telecommunications buildings used exclusively for telecommunications equipment, associated electrical power distribution equipment, batteries and standby engines, provided that those spaces or areas are equipped throughout with an *automatic smoke detection system* in accordance with Section 907.2 and are separated from the remainder of the building by not less than 1-hour *fire barriers* constructed in accordance with Section 707 or not less than 2-hour *horizontal assemblies* constructed in accordance with Section 711, or both.
2. Bottom of the elevator hoistway in an enclosed and noncombustible elevator shaft per Joint Administrative Ruling 9.06.14 and any future revisions.

[F] **903.2.1 Group A.** An *automatic sprinkler system* shall be provided throughout buildings and portions thereof used as Group A occupancies as provided in this section.

[F] **903.2.1.1 Group A-1.** An *automatic sprinkler system* shall be provided throughout stories containing Group A-1 occupancies and throughout all stories from the Group A-1 occupancy to and including the *levels of exit discharge* serving that occupancy where one of the following conditions exists:

1. The *fire area* exceeds 12,000 square feet (1115 m²).
2. The *fire area* has an *occupant load* of 300 or more.
3. The *fire area* is located on a floor other than a *level of exit discharge* serving such occupancies.
4. The *fire area* contains a multitheater complex.

[S][F] **903.2.1.2 Group A-2.** An *automatic sprinkler system* shall be provided throughout stories containing Group A-2 occupancies and throughout all stories from the Group A-2 occupancy to and including the *levels of exit discharge* serving that occupancy where one of the following conditions exists:

1. The *fire area* exceeds 5,000 square feet (464 m²).
2. The *fire area* has an *occupant load* of 100 or more.
3. The *fire area* is located on a floor other than a *level of exit discharge* serving such occupancies.

Exception: Item 3 does not apply to fire areas that include space located one floor above the level of exit discharge if the occupant load of the upper floor is less than 50.

[W][S][F] **903.2.1.3 Group A-3.** An *automatic sprinkler system* shall be provided throughout stories containing Group A-3 occupancies and throughout all stories from the Group A-3 occupancy to and including the *levels of exit discharge* serving that occupancy where one of the following conditions exists:

1. The *fire area* exceeds 12,000 square feet (1115 m²).
2. The *fire area* has an *occupant load* of 300 or more.
3. The *fire area* is located on a floor other than a *level of exit discharge* serving such occupancies.

Exceptions:

1. Item 3 does not apply to fire areas that include space located one floor above the level of exit discharge if the occupant load of the upper floor is less than 50.
2. For fixed guideway transit and passenger rail system stations, an automatic sprinkler system shall be provided in accordance with Section 3116.

[F] **903.2.1.4 Group A-4.** An *automatic sprinkler system* shall be provided throughout stories containing Group A-4 occupancies and throughout all stories from the Group A-4 occupancy to and including the *levels of exit discharge* serving that occupancy where one of the following conditions exists:

1. The *fire area* exceeds 12,000 square feet (1115 m²).
2. The *fire area* has an *occupant load* of 300 or more.
3. The *fire area* is located on a floor other than a *level of exit discharge* serving such occupancies.

[F] **903.2.1.5 Group A-5.** An *automatic sprinkler system* shall be provided for all enclosed Group A-5 accessory use areas in excess of 1,000 square feet (93 m²).

[F] **903.2.1.5.1 Spaces under grandstands or bleachers.** Enclosed spaces under *grandstands* or *bleachers* shall be equipped with an *automatic sprinkler system* in accordance with Section 903.3.1.1 where either of the following exist:

1. The enclosed area is 1,000 square feet (93 m²) or less and is not constructed in accordance with Section 1030.1.1.1.
2. The enclosed area exceeds 1,000 square feet (93 m²).

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[W][F] 903.2.1.6 Assembly occupancies on roofs. Where an occupied roof has an assembly occupancy with an *occupant load* exceeding 100 for Group A-2, and 300 for other Group A occupancies, ~~((all floors between the occupied roof and the level of exit discharge))~~ the building shall be equipped with an *automatic sprinkler system* in accordance with Section 903.3.1.1 or 903.3.1.2.

Exception: *Open parking garages* of Type I or Type II construction.

903.2.1.7 Multiple fire areas. An *automatic sprinkler system* shall be provided where multiple *fire areas* of Group A-1, A-2, A-3 or A-4 occupancies share *exit* or exit access components and the combined *occupant load* of these *fire areas* is 300 or more.

[W] 903.2.1.8 Nightclubs. An *automatic sprinkler system* shall be provided throughout *nightclubs*.

[F] 903.2.2 Ambulatory care facilities. An *automatic sprinkler system* shall be installed throughout the entire floor containing an *ambulatory care facility* where either of the following conditions exist at any time:

1. Four or more care recipients are *incapable of self-preservation*.
2. One or more care recipients that are *incapable of self-preservation* are located at other than the *level of exit discharge* serving such a facility.

In buildings where ambulatory care is provided on levels other than the *level of exit discharge*, an *automatic sprinkler system* shall be installed throughout the entire floor as well as all floors below where such care is provided, and all floors between the level of ambulatory care and the nearest *level of exit discharge*, the *level of exit discharge*, and all floors below the level of *exit discharge*.

Exception: Floors classified as an *open parking garage* are not required to be sprinklered.

[W][F] 903.2.3 Group E. An *automatic sprinkler system* shall be provided for fire areas containing Group E ~~((occupancies as follows:))~~ where the fire area has an occupant load of 51 or more, calculated in accordance with Table 1004.5.

~~((1. Throughout all Group E fire areas greater than 12,000 square feet (1115 m²) in area.~~

~~2. The Group E fire area is located on a floor other than a level of exit discharge serving such occupancies.~~

Exception: In buildings where every classroom has not fewer than one exterior *exit door* at ground level, an *automatic sprinkler system* is not required in any area below the lowest *level of exit discharge* serving that area.

~~3. The Group E fire area has an occupant load of 300 or more.)~~

Exceptions:

1. *Portable school classrooms* with an occupant load of 50 or less calculated in accordance with Table 1004.5, provided that the aggregate area of any cluster of *portable school classrooms* does not exceed 6,000 square feet (557 m²); and clusters of *portable school classrooms* shall be separated as required by the building code.
2. *Portable school classrooms* with an occupant load from 51 through 98, calculated in accordance with Table 1004.5, and provided with two means of direct independent exterior egress from each classroom in accordance with Chapter 10, and one exit from each classroom shall be accessible, provided that the aggregate area of any cluster of *portable classrooms* does not exceed 6,000 square feet (557 m²), and clusters of *portable school classrooms* shall be separated as required by the building code.
3. *Fire areas containing day care and preschool facilities* with a total occupant load of 100 or less located at the level of exit discharge where every room in which care is provided has not fewer than one exit discharge door.

[F] 903.2.4 Group F-1. An *automatic sprinkler system* shall be provided throughout all buildings containing a Group F-1 occupancy where one of the following conditions exists:

1. A Group F-1 *fire area* exceeds 12,000 square feet (1115 m²).
2. A Group F-1 *fire area* is located more than three stories above *grade plane*.
3. The combined area of all Group F-1 *fire areas* on all floors, including any *mezzanines*, exceeds 24,000 square feet (2230 m²).

[F] 903.2.4.1 Woodworking operations. An *automatic sprinkler system* shall be provided throughout all Group F-1 occupancy *fire areas* that contain woodworking operations in excess of 2,500 square feet (232 m²) in area that generate finely divided combustible waste or use finely divided combustible materials.

[F] 903.2.4.2 Group F-1 distilled spirits. An *automatic sprinkler system* shall be provided throughout a Group F-1 *fire area* used for the manufacture of distilled spirits.

[F] 903.2.4.3 Group F-1 upholstered furniture or mattresses. An *automatic sprinkler system* shall be provided throughout a Group F-1 *fire area* that exceeds 2,500 square feet (232 m²) used for the manufacture of upholstered furniture or mattresses.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] **903.2.5 Group H.** *Automatic sprinkler systems* shall be provided in high-hazard occupancies as required in Sections 903.2.5.1 through 903.2.5.3.

[F] **903.2.5.1 General.** An *automatic sprinkler system* shall be installed in Group H occupancies.

[F] **903.2.5.2 Group H-5 occupancies.** An *automatic sprinkler system* shall be installed throughout buildings containing Group H-5 occupancies. The design of the sprinkler system shall be not less than that required by this code for the occupancy hazard classifications in accordance with Table 903.2.5.2.

Where the design area of the sprinkler system consists of a *corridor* protected by one row of sprinklers, the maximum number of sprinklers required to be calculated is 13.

[F] **TABLE 903.2.5.2
GROUP H-5 SPRINKLER DESIGN CRITERIA**

LOCATION	OCCUPANCY HAZARD CLASSIFICATION
Fabrication areas	Ordinary Hazard Group 2
Service corridors	Ordinary Hazard Group 2
Storage rooms without dispensing	Ordinary Hazard Group 2
Storage rooms with dispensing	Extra Hazard Group 2
Corridors	Ordinary Hazard Group 2

[F] **903.2.5.3 Pyroxylin plastics.** An *automatic sprinkler system* shall be provided in buildings, or portions thereof, where cellulose nitrate film or pyroxylin plastics are manufactured, stored or handled in quantities exceeding 100 pounds (45 kg).

[W][S][F] **903.2.6 Group I.** An *automatic sprinkler system* in accordance with Section 903.3.1.1 shall be provided throughout buildings with a Group I *fire area* as required in Sections 903.2.6 through 903.2.6.1.1.

Exceptions:

1. An *automatic sprinkler system* installed in accordance with Section 903.3.1.2 shall be permitted in Group I-1, Condition 1 facilities, when located in buildings that are within the scope of Section 903.3.1.2.
- ~~(2. An *automatic sprinkler system* is not required where Group I 4 day care facilities are at the level of exit discharge and where every room where care is provided has not fewer than one exterior exit door.~~
- ~~3. In buildings where Group I 4 day care is provided on levels other than the level of exit discharge, an *automatic sprinkler system* in accordance with Section 903.3.1.1 shall be installed on the entire floor where care is provided, all floors between the level of care and the level of exit discharge, and all floors below the level of exit discharge other than areas classified as an open parking garage.)~~
2. Where new construction or additions house less than 16 persons receiving care, an *automatic sprinkler system* installed in accordance with the scope of Section 903.3.1.2 shall be permitted for Group I-1, Condition 2, assisted living facilities licensed under chapter 388-78A WAC and residential treatment facilities licensed under chapter 246-337 WAC.
3. An *automatic sprinkler system* installed in accordance with Section 903.3.1.2 shall be permitted in additions to existing buildings where both of the following situations are true:
 - 3.1. The addition is made to a building previously approved as Group LC or Group R-2 that houses either an assisted living facility licensed under chapter 388-78A WAC or residential treatment facility licensed under chapter 246-337 WAC.
 - 3.2. The addition contains spaces for 16 or fewer persons receiving care.

[W] **903.2.6.1 Group I-4.** An *automatic sprinkler system* shall be provided in fire areas containing Group I-4 occupancies where the fire area has an occupant load of 51 or more, calculated in accordance with Table 1004.5.

Exception: An *automatic sprinkler system* is not required for Group I-4 day care facilities with a total occupant load of 100 or less, and located at the level of exit discharge and where every room where care is provided has not fewer than one exterior exit door.

903.2.6.1.1 Group I-4 daycare located other than level of discharge. In buildings where Group I-4 day care is provided on levels other than the level of exit discharge, an *automatic sprinkler system* in accordance with Section 903.3.1.1 shall be installed on the entire floor where care is provided, including the level of exit discharge, and all floors between the level of care and the level of exit discharge and all floors below the level of exit discharge other than areas classified as an open parking garage.

[F] **903.2.7 Group M.** An *automatic sprinkler system* shall be provided throughout buildings containing a Group M occupancy where one of the following conditions exists:

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

1. A Group M *fire area* exceeds 12,000 square feet (1115 m²).
2. A Group M *fire area* is located more than three stories above *grade plane*.
3. The combined area of all Group M *fire areas* on all floors, including any *mezzanines*, exceeds 24,000 square feet (2230 m²).

➔ [F] **903.2.7.1 High-piled storage.** An *automatic sprinkler system* shall be provided in accordance with the *International Fire Code* in all buildings of Group M where storage of merchandise is in high-piled or rack storage arrays.

[F] **903.2.7.2 Group M upholstered furniture or mattresses.** An *automatic sprinkler system* shall be provided throughout a Group M *fire area* where the area used for the display and sale of upholstered furniture or mattresses exceeds 5,000 square feet (464 m²).

[W][S][F] **903.2.8 Group R.** An *automatic sprinkler system* installed in accordance with Section 903.3 shall be provided throughout all buildings with a Group R *fire area*.

Exception: Group R-1 if all of the following conditions apply:

1. The Group R *fire area* is no more than 500 square feet and is used for recreational use only.
2. The Group R *fire area* is on only one story.
3. The Group R *fire area* does not include a basement.
4. The Group R *fire area* is no closer than 30 feet from another structure.
5. Cooking is not allowed within the Group R *fire area*.
6. The Group R *fire area* has an occupant load of no more than eight.
7. A hand-held (portable) fire extinguisher is in every Group R *fire area*.

[F] **903.2.8.1 Group R-3.** An *automatic sprinkler system* installed in accordance with Section 903.3.1.3 shall be permitted in Group R-3 occupancies.

[F] **903.2.8.2 Group R-4, Condition 1.** An *automatic sprinkler system* installed in accordance with Section 903.3.1.3 shall be permitted in Group R-4, Condition 1 occupancies.

[F] **903.2.8.3 Group R-4, Condition 2.** An *automatic sprinkler system* installed in accordance with Section 903.3.1.2 shall be permitted in Group R-4, Condition 2 occupancies.

[F] **903.2.8.4 Care facilities.** An *automatic sprinkler system* installed in accordance with Section 903.3.1.3 shall be permitted in care facilities with five or fewer individuals in a single-family dwelling.

[W] **903.2.8.5 Adult family home.** An *adult family home* with a capacity of seven or eight that serves residents who require assistance during an evacuation must install an *automatic sprinkler system* that meets the requirements of NFPA 13D.

[S][F] **903.2.9 Group S-1.** An *automatic sprinkler system* shall be provided throughout all buildings containing a Group S-1 occupancy where one of the following conditions exists:

1. A Group S-1 *fire area* exceeds 12,000 square feet (1115 m²).
2. A Group S-1 *fire area* is located more than three stories above *grade plane*.
3. The combined area of all Group S-1 *fire areas* on all floors, including any *mezzanines*, exceeds 24,000 square feet (2230 m²).
4. A Group S-1 *fire area* used for the storage of commercial motor vehicles where the *fire area* exceeds 5,000 square feet (464 m²).
5. A Group S-1 occupancy used for self-storage where the *fire area* exceeds 2,500 square feet (232 m²).

➔ [F] **903.2.9.1 ((Repair)) Major repair garages.** An *automatic sprinkler system* shall be provided throughout all buildings used as *major repair garages* in accordance with Section 406, as shown:

1. Buildings having two or more *stories above grade plane*, including basements, with a *fire area* containing a *major repair garage* exceeding 10,000 square feet (929 m²).
2. Buildings not more than one *story above grade plane*, with a *fire area* containing a *major repair garage* exceeding 12,000 square feet (1115 m²).
3. Buildings with *major repair garages* servicing vehicles parked in basements.
4. A Group S-1 *fire area* used for the *major* repair of commercial motor vehicles where the *fire area* exceeds 5,000 square feet (464 m²).

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] **903.2.9.2 Bulk storage of tires.** Buildings and structures where the area for the storage of tires exceeds 20,000 cubic feet (566 m³) shall be equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1.

[S][F] **903.2.9.3 Group S-1 Distilled spirits or wine.** An *automatic sprinkler system* shall be provided throughout a Group S-1 *fire area* used for the ~~((bulk))~~ storage of distilled spirits or wine.

[F] **903.2.9.4 Group S-1 upholstered furniture and mattresses.** An *automatic sprinkler system* shall be provided throughout a Group S-1 *fire area* where the area used for the storage of upholstered furniture or mattresses exceeds 2,500 square feet (232 m²).

Exception: Self-service storage facilities not greater than one story above grade plane where all storage spaces can be accessed directly from the exterior.

[F] **903.2.10 Group S-2 parking garages.** An *automatic sprinkler system* shall be provided throughout buildings classified as parking garages where any of the following conditions exists:

1. Where the fire area of the enclosed parking garage in accordance with Section 406.6 exceeds 12,000 square feet (1115 m²).
2. Where the enclosed parking garage in accordance with Section 406.6 is located beneath other groups.

Exception: Enclosed parking garages located beneath Group R-3 occupancies.

3. Where the *fire area* of the *open parking garage* in accordance with Section 406.5 exceeds 48,000 square feet (4460 m²).

[F] **903.2.10.1 Commercial parking garages.** An *automatic sprinkler system* shall be provided throughout buildings used for storage of commercial motor vehicles where the *fire area* exceeds 5,000 square feet (464 m²).

[S][F] **903.2.10.2 Mechanical-access enclosed parking garages.** An *approved automatic sprinkler system* shall be provided throughout buildings used for the storage of motor vehicles in a *mechanical-access enclosed parking garage*. The portion of the building that contains the *mechanical-access enclosed parking garage* shall be protected with a specially engineered *automatic sprinkler system* designed by a registered design professional. Enclosed parking garages in high rises that have mechanical access shall increase the secondary water tank size per Administrative Rule 9.03.20. Automatic Sprinkler and Standpipe Systems, and any future revisions of this rule adopted by the fire code official.

[S] **903.2.10.3 Car-stacking equipment located in parking garages.** The equipment footprint and immediate access area for car-stacking equipment shall be protected by a specially engineered automatic sprinkler system designed by a registered design professional, when the number of cars stacked vertically exceeds two. The design shall be supported by an engineered report complying with Section 104.8 or 104.10 submitted to the fire code official.

[W][F] **903.2.11 Specific building areas and hazards.** In all occupancies other than Group U, an *automatic sprinkler system* shall be installed for building design or hazards in the locations set forth in Sections 903.2.11.1 through ~~((903.2.11.6))~~ 903.2.11.7.

[F] **903.2.11.1 Stories without openings.** An *automatic sprinkler system* shall be installed throughout all stories, including basements, of all buildings where the floor area exceeds 1,500 square feet (139.4 m²) and where the *story* does not comply with the following criteria for *exterior wall* openings:

1. Openings below grade that lead directly to ground level by an exterior *stairway* complying with Section 1011 or an outside *ramp* complying with Section 1012. Openings shall be located in each 50 linear feet (15 240 mm), or fraction thereof, of *exterior wall* in the *story* on not fewer than one side. The required openings shall be distributed such that the lineal distance between adjacent openings does not exceed 50 feet (15 240 mm).
2. Openings entirely above the adjoining ground level totaling not less than 20 square feet (1.86 m²) in each 50 linear feet (15 240 mm), or fraction thereof, of *exterior wall* in the *story* on not fewer than one side. The required openings shall be distributed such that the lineal distance between adjacent openings does not exceed 50 feet (15 240 mm). The height of the bottom of the clear opening shall not exceed 44 inches (1118 mm) measured from the floor.

[F] **903.2.11.1.1 Opening dimensions and access.** Openings shall have a minimum dimension of not less than 30 inches (762 mm). Access to such openings shall be provided for the fire department from the exterior and shall not be obstructed in a manner such that fire fighting or rescue cannot be accomplished from the exterior.

[F] **903.2.11.1.2 Openings on one side only.** Where openings in a *story* are provided on only one side and the opposite wall of such *story* is more than 75 feet (22 860 mm) from such openings, the *story* shall be equipped throughout with an *approved automatic sprinkler system*, or openings shall be provided on not fewer than two sides of the *story*.

[W][F] **903.2.11.1.3 Basements.** Where any portion of a *basement* is located more than 75 feet (22 860 mm) from openings required by Section 903.2.11.1, or where new walls, partitions or other similar obstructions are installed that

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

~~((restrict the application of water from hose streams))~~ increase the exit access travel distance to more than 75 feet, the basement shall be equipped throughout with an approved automatic sprinkler system.

[F] 903.2.11.2 Rubbish and linen chutes. An *automatic sprinkler system* shall be installed at the top of rubbish and linen chutes and in their terminal rooms. Chutes shall have additional sprinkler heads installed at alternate floors and at the lowest intake. Where a rubbish chute extends through a building more than one floor below the lowest intake, the extension shall have sprinklers installed that are recessed from the drop area of the chute and protected from freezing in accordance with Section 903.3.1.1. Such sprinklers shall be installed at alternate floors, beginning with the second level below the last intake and ending with the floor above the discharge. *Access* to sprinklers in chutes shall be provided for servicing.

[F] 903.2.11.3 Buildings 55 feet or more in height. An *automatic sprinkler system* shall be installed throughout buildings that have one or more stories with an *occupant load* of 30 or more located 55 feet (16 764 mm) or more above the lowest level of fire department vehicle access, measured to the finished floor.

Exception: Occupancies in Group F-2.

[F] 903.2.11.4 Ducts conveying hazardous exhausts. Where required by the *International Mechanical Code*, automatic sprinklers shall be provided in ducts conveying hazardous exhaust or flammable or combustible materials.

Exception: Ducts where the largest cross-sectional diameter of the duct is less than 10 inches (254 mm).

[W][F] 903.2.11.5 Commercial cooking operations. An *automatic sprinkler system* shall be installed in commercial kitchen exhaust hood and duct systems where an *automatic sprinkler system* is used to comply with Section 904.

Exception: An automatic fire sprinkler system is not required to protect the ductwork that is in excess of 75 feet when the commercial kitchen exhaust hood is protected by a system listed per UL 300.

[F] 903.2.11.6 Other required fire protection systems. In addition to the requirements of Section 903.2, the provisions indicated in Table 903.2.11.6 require the installation of a fire protection system for certain buildings and areas.

**[S][F] TABLE 903.2.11.6
ADDITIONAL REQUIRED FIRE PROTECTION SYSTEMS**

SECTION	SUBJECT
<u>322.4.2.3</u>	<u>Lithium-ion and lithium metal battery storage</u>
402.5, 402.6.2	Covered and open mall buildings
403.3	High-rise buildings
404.3	Atriums
405.3	Underground structures
407.7	Group I-2
410.6	Stages
411.3	Special amusement buildings
412.2.4	Airport traffic control towers
412.3.6, 412.3.6.1, 412.5.6	Aircraft hangars
415.11.11	Group H-5 HPM exhaust ducts
416.5	Flammable finishes
417.4	Drying rooms
424.3	Play structures
428	Buildings containing laboratory suites
507	Unlimited area buildings
508.5.7	Live/work units
509.4	Incidental uses
1030.6.2.3	Smoke-protected assembly seating
IFC	Sprinkler system requirements as set forth in Section 903.2.11.6 of the <i>International Fire Code</i>

[W] 903.2.11.7 Relocatable buildings within buildings. Relocatable buildings or structures located within a building with an approved fire sprinkler system shall be provided with fire sprinkler protection within the occupiable space of the building and the space underneath the relocatable building.

Exceptions:

1. Sprinkler protection is not required underneath the building when the space is separated from the adjacent space by construction resisting the passage of smoke and heat and combustible storage will not be located there.
2. If the building or structure does not have a roof or ceiling obstructing the overhead sprinklers.
3. Construction trailers and temporary offices used during new building construction prior to occupancy.
4. Movable shopping mall kiosks with a roof or canopy dimension of less than 4 feet on the smallest side.

[F] 903.2.12 During construction. *Automatic sprinkler systems* required during construction, alteration and demolition operations shall be provided in accordance with Chapter 33 of the *International Fire Code*.

[S] 903.2.13 Privacy booths and temporarily occupied small enclosures. Enclosures shall not be required to provide automatic fire sprinkler protection when the enclosure does not extend to within the horizontal plane 18 inches below the sprinkler deflector, the enclosure does not exceed 4 feet in length or width, and the enclosures are separated from building wall construction and other such enclosures by not less than 6 inches.

[F] 903.3 Installation requirements. *Automatic sprinkler systems* shall be designed and installed in accordance with Sections 903.3.1 through 903.3.8.

[S][F] 903.3.1 Standards. Sprinkler systems shall be designed and installed in accordance with Section 903.3.1.1 and rules promulgated by the *building official or fire code official* unless otherwise permitted by Sections 903.3.1.2 and 903.3.1.3 and other chapters of this code, as applicable.

[F] 903.3.1.1 NFPA 13 sprinkler systems. Where the provisions of this code require that a building or portion thereof be equipped throughout with an *automatic sprinkler system* in accordance with this section, sprinklers shall be installed throughout in accordance with NFPA 13 except as provided in Sections 903.3.1.1.1 and ~~((903.3.1.1.2))~~ 903.3.1.1.3.

[S][F] 903.3.1.1.1 Exempt locations. Automatic sprinklers shall not be required in the following rooms or areas where such rooms or areas are protected with an *approved* automatic fire detection system in accordance with Section 907.2 that will respond to visible or invisible particles of combustion. Sprinklers shall not be omitted from a room merely because it is damp, of fire-resistance-rated construction or contains electrical equipment.

1. A room where the application of water, or flame and water, constitutes a serious life or fire hazard, when approved by the fire code official.
2. A room or space where sprinklers are considered undesirable because of the nature of the contents, where *approved* by the fire code official.
3. ~~((Generator and transformer rooms))~~ Transformer vaults separated from the remainder of the building by walls and floor/ceiling or roof/ceiling assemblies having a *fire-resistance rating* of not less than ~~((2))~~ 3 hours.
4. Rooms or areas that are of noncombustible construction with wholly noncombustible contents.
~~((5- Fire service access elevator machine rooms and machinery spaces.~~
- 6) 5. Machine rooms, machinery spaces, control rooms and control spaces ~~((associated with occupant evacuation elevators designed in accordance with Section 3008))~~ in accordance with rules promulgated by the building official and fire code official.

[F] 903.3.1.1.2 Bathrooms. In Group R occupancies sprinklers shall not be required in bathrooms that do not exceed 55 square feet (5 m²) in area and are located within individual *dwelling units* or *sleeping units*, provided that walls and ceilings, including the walls and ceilings behind a shower enclosure or tub, are of noncombustible or limited-combustible materials with a 15-minute thermal barrier rating.

[S] 903.3.1.1.3 High-rise building sprinkler system design. High-rise building automatic fire sprinkler systems shall be combination standpipe/sprinkler systems incorporating the following features:

1. Each floor automatic fire sprinkler system shall be connected between standpipe risers.
2. Shut-off valves, water-flow devices and check valves (or pressure reducing valves) shall be provided on each floor at the sprinkler system connection to each standpipe.
3. Two four-way fire department connections serving the combination system shall be provided on separate streets well separated from each other per Section 912.2.3.
4. At least one of the fire department connections shall be connected to the riser above a riser isolation valve. At least one fire department connection shall be located on the address side of the building.
5. When a mid-level fire pump is required to meet pressure requirements, two pumps with the same rating shall be installed.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

6. Dry-pipe sprinkler systems serving parking garages may use separate two-way fire department connection. The dry-pipe sprinkler system shall be supplied by the on-site water tank.
7. The standpipe risers in each required stair shall be a minimum pipe size of 6 inches (152 mm).
8. Two 2-1/2-inch (64 mm) hose connections shall be provided on every floor level landing in every required stairway. If pressure reducing valves (PRV) are required, each hose connection shall be provided with its own PRV.
9. The system shall be designed to provide a minimum flow of 300 gpm (19 L/s) at a minimum pressure of 150 psi (1034 kPa) [maximum 205 psi (1379 kPa)] at each standpipe connection in addition to the flow and pressure requirements contained in NFPA 14.

[W][F] 903.3.1.2 NFPA 13R sprinkler systems. *Automatic sprinkler systems* in Group R occupancies up to and including four stories in height in buildings not exceeding 60 feet (18 288 mm) in height above grade plane shall be permitted to be installed throughout in accordance with NFPA 13R. ~~((where the Group R occupancy meets all of the following conditions:~~

1. ~~Four stories or fewer above grade plane.~~
2. ~~The floor level of the highest story is 30 feet (9144 mm) or less above the lowest level of fire department vehicle access.~~
3. ~~The floor level of the lowest story is 30 feet (9144 mm) or less below the lowest level of fire department vehicle access.))~~

The number of stories of Group R occupancies constructed in accordance with Sections 510.2 and 510.4 shall be measured from ~~((grade plane))~~ the horizontal assembly creating separate buildings.

[S][F] 903.3.1.2.1 Balconies and decks. Sprinkler protection shall be provided for exterior balconies, decks and ground floor patios of *dwelling units* and *sleeping units* in accordance with rules promulgated by the building official or fire code official. ~~((where))~~ Where either of the following conditions exists:

1. The building is of Type V construction, provided that there is a roof or deck above.
2. Exterior balconies, decks and ground floor patios of dwelling units and sleeping units are constructed in accordance with Section 705.2.3.1, Exception 3.

Sidewall sprinklers that are used to protect such areas shall be permitted to be located such that their deflectors are within 1 inch (25 mm) to 6 inches (152 mm) below the structural members and a maximum distance of 14 inches (356 mm) below the deck of the exterior balconies and decks that are constructed of open wood joist construction.

[F] 903.3.1.2.2 Corridors and balconies in the means of egress. Sprinkler protection shall be provided in *corridors* and for balconies in the *means of egress* where any of the following conditions apply:

1. Corridors with combustibile floor or walls.
2. Corridors with an interior change of direction exceeding 45 degrees (0.79 rad).
3. Corridors that are less than 50 percent open to the outside atmosphere at the ends.
4. Open-ended corridors and associated exterior stairways and ramps as specified in Section 1027.6, Exception 3.
5. Egress balconies not complying with Sections 1021.2 and 1021.3.

[F] 903.3.1.2.3 Attics. *Attic* protection shall be provided as follows:

1. *Attics* that are used or intended for living purposes or storage shall be protected by an *automatic sprinkler system*.
2. Where fuel-fired equipment is installed in an unsprinklered *attic*, not fewer than one quick-response intermediate temperature sprinkler shall be installed above the equipment.
3. Where located in a building of Type III, Type IV or Type V construction designed in accordance with Section 510.2 or 510.4, attics not required by Item 1 to have sprinklers shall comply with one of the following if the roof assembly is located more than 55 feet (16 764 mm) above the lowest level of fire department vehicle access needed to meet the provisions in Section 503.
 - 3.1. Provide *automatic sprinkler system* protection.
 - 3.2. Construct the *attic* using noncombustible materials.
 - 3.3. Construct the *attic* using *fire-retardant-treated wood* complying with Section 2303.2.
 - 3.4. Fill the *attic* with noncombustible insulation.

The height of the roof assembly shall be determined by measuring the distance from the lowest required fire vehicle access road surface adjacent to the building to the eave of the highest pitched roof, the intersection of the highest

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

roof to the exterior wall, or the top of the highest parapet, whichever yields the greatest distance. For the purpose of this measurement, required fire vehicle access roads shall include only those roads that are necessary for compliance with Section 503 of the *International Fire Code*:

4. Group R-4, Condition 2 occupancy *attics* not required by Item 1 to have sprinklers shall comply with one of the following:
 - 4.1. Provide *automatic sprinkler system* protection.
 - 4.2. Provide a heat detection system throughout the *attic* that is arranged to activate the building fire alarm system.
 - 4.3. Construct the *attic* using non-combustible materials.
 - 4.4. Construct the *attic* using *fire-retardant-treated wood* complying with Section 2303.2.
 - 4.5. Fill the *attic* with noncombustible insulation.

[S][F] 903.3.1.3 NFPA 13D sprinkler systems. *Automatic sprinkler systems* installed in one- and two-family *dwelling*s; Group R-3; Group R-4, Condition 1; and *townhouses three stories or less, or when approved by the fire code official.* shall be permitted to be installed throughout in accordance with NFPA 13D.

[F] 903.3.2 Quick-response and residential sprinklers. Where *automatic sprinkler systems* are required by this code, quick-response or residential automatic sprinklers shall be installed in all of the following areas in accordance with Section 903.3.1 and their listings:

1. Throughout all spaces within a *smoke compartment* containing care recipient *sleeping units* in Group I-2 in accordance with this code.
2. Throughout all spaces within a *smoke compartment* containing gas fireplace appliances and decorative gas appliances in Group I-2.
3. Throughout all spaces within a *smoke compartment* containing treatment rooms in *ambulatory care facilities*.
4. *Dwelling units* and *sleeping units* in Group I-1 and R occupancies.
5. Light-hazard occupancies as defined in NFPA 13.

[S][F] 903.3.3 Obstructed locations. Automatic sprinklers shall be installed ~~((with regard to obstructions that will delay activation or obstruct the water distribution pattern))~~ in accordance with NFPA 13 obstruction criteria and the listing requirements of the sprinkler and shall be in accordance with the applicable *automatic sprinkler system* standard that is being used. Automatic sprinklers shall be installed in or under covered kiosks, displays, booths, concession stands, or equipment that exceeds 4 feet (1219 mm) in width and depth. Not less than a 3-foot (914 mm) clearance shall be maintained between automatic sprinklers and the top of piles of *combustible fibers*.

Exception: Kitchen equipment under exhaust hoods protected with a fire-extinguishing system in accordance with Section 904.

[F] 903.3.4 Actuation. *Automatic sprinkler systems* shall be automatically actuated unless specifically provided for in this code.

[S][F] 903.3.5 Water supplies. Water supplies for *automatic sprinkler systems* shall comply with this section and the standards referenced in Section 903.3.1. The potable water supply shall be protected against backflow in accordance with the requirements of this section and the ~~((International))~~ *Uniform Plumbing Code*. For connections to public waterworks systems, the water supply test report provided by Seattle Public Utilities and used for design of fire protection systems shall be adjusted ~~((to account for seasonal and daily pressure fluctuations based on information from the water supply authority and as approved by the fire code official))~~ in accordance with rules promulgated by the fire code official.

[S][F] 903.3.5.1 Domestic services. ~~((Where the domestic service provides the water supply for the automatic sprinkler system, the supply shall be))~~ Both NFPA 13R and NFPA 13D sprinkler systems can be supplied by a domestic service in accordance with this section.

[S][F] 903.3.5.2 ((Residential combination)) Combined fire/domestic services. A single combination water supply shall be allowed for all types of sprinkler systems provided that, when required by the applicable sprinkler standard, the domestic demand is added to the sprinkler demand ~~((as required by))~~ in accordance with the domestic demand tables in NFPA 13R.

[S] 903.3.5.3 Fire service. A fire service utility connection shall be allowed for all types of sprinkler piping.

[W][S] 903.3.5.4 Underground portions of fire protection system water supply piping. The installation or modification of an underground water main, public or private, supplying a water-based fire protection system shall be in accordance with NFPA 24 and RCW 18.160. Piping and appurtenances downstream of the first control valve on the lateral or service line from the distribution main to one foot above finished floor shall be approved by the fire code official. Such underground piping shall be installed by a fire sprinkler contractor licensed in accordance with chapter 18.160

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

RCW and holding either a Level U or a Level 3 license. For underground piping supplying systems installed in accordance with Section 903.3.1.2, a Level 2, 3, or U licensed contractor is acceptable.

Exceptions:

1. Portions of underground piping supplying automatic sprinkler systems installed in accordance with Section 903.3.1.3.
2. Portions of underground water mains serving sprinkler systems that are designed and installed in accordance with Section 903.3.1.2 and are less than four inches (100 mm) in nominal diameter.

[F] 903.3.6 Hose threads. Fire hose threads and fittings used in connection with *automatic sprinkler systems* shall be as prescribed by the fire code official.

[F] 903.3.7 Fire department connections. Fire department connections for *automatic sprinkler systems* shall be installed in accordance with Section 912.

[F] 903.3.8 Limited area sprinkler systems. Limited area sprinkler systems shall be in accordance with the standards listed in Section 903.3.1 except as provided in Sections 903.3.8.1 through 903.3.8.5.

903.3.8.1 Number of sprinklers. Limited area sprinkler systems shall not exceed six sprinklers in any single *fire area*.

903.3.8.2 Occupancy hazard classification. Only areas classified by NFPA 13 as Light Hazard or Ordinary Hazard Group 1 shall be permitted to be protected by limited area sprinkler systems.

903.3.8.3 Piping arrangement. Where a limited area sprinkler system is installed in a building with an automatic wet standpipe system, sprinklers shall be supplied by the standpipe system. Where a limited area sprinkler system is installed in a building without an automatic wet standpipe system, water shall be permitted to be supplied by the plumbing system provided that the plumbing system is capable of simultaneously supplying domestic and sprinkler demands.

903.3.8.4 Supervision. Control valves shall not be installed between the water supply and sprinklers unless the valves are of an *approved* indicating type that are supervised or secured in the open position.

903.3.8.5 Calculations. Hydraulic calculations in accordance with NFPA 13 shall be provided to demonstrate that the available water flow and pressure are adequate to supply all sprinklers installed in any single *fire area* with discharge densities corresponding to the hazard classification.

[S][F] 903.4 Sprinkler system supervision and alarms. Valves controlling the water supply for *automatic sprinkler systems*, pumps, tanks, water levels and temperatures, critical air pressures and waterflow switches on all sprinkler systems shall be electrically supervised by a *listed* fire alarm control unit.

Exceptions:

1. *Automatic sprinkler systems* protecting one- and two-family *dwelling*s and *townhouses* where each *townhouse unit* is provided with a dedicated sprinkler system, or if approved by the *fire code official*.
2. Limited area sprinkler systems in accordance with Section 903.3.8.
3. *Automatic sprinkler systems* installed in accordance with NFPA 13R where a common supply main is used to supply both domestic water and the *automatic sprinkler system*, and a separate shutoff valve for the *automatic sprinkler system* is not provided.
4. Jockey pump control valves that are sealed or locked in the open position.
5. Control valves to commercial kitchen hoods, paint spray booths or dip tanks that are sealed or locked in the open position.
6. Valves controlling the fuel supply to fire pump engines that are sealed or locked in the open position.
7. Trim valves to pressure switches in dry, preaction and deluge sprinkler systems that are sealed or locked in the open position.
8. ~~((Underground key or hub gate valves in roadway boxes.))~~ Valves provided by the municipality or public utility are not required to be monitored.

[F] 903.4.1 Monitoring. Alarm, supervisory and trouble signals shall be distinctly different and shall be automatically transmitted to an *approved* supervising station or, where *approved* by the fire code official, shall sound an audible signal at a *constantly attended location*.

Exception: Backflow prevention device test valves located in limited area sprinkler system supply piping shall be locked in the open position. In occupancies required to be equipped with a fire alarm system, the backflow preventer valves shall be electrically supervised by a tamper switch installed in accordance with NFPA 72 and separately annunciated.

[F] 903.4.2 Alarms. An approved audible device, located on the exterior of the building in an approved location, shall be connected to each *automatic sprinkler system*. Such sprinkler waterflow alarm devices shall be activated by water flow

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

equivalent to the flow of a single sprinkler of the smallest orifice size installed in the system. Where a fire alarm system is installed, actuation of the *automatic sprinkler system* shall actuate the building fire alarm system.

[F] **903.4.3 Floor control valves.** *Approved* supervised indicating control valves shall be provided at the point of connection to the riser on each floor in high-rise buildings.

[F] **903.5 Testing and maintenance.** Automatic sprinkler systems shall be tested and maintained in accordance with the *International Fire Code*.

SECTION 904 ALTERNATIVE AUTOMATIC FIRE-EXTINGUISHING SYSTEMS

[F] **904.1 General.** Automatic fire-extinguishing systems, other than *automatic sprinkler systems*, shall be designed, installed, inspected, tested and maintained in accordance with the provisions of this section and the applicable referenced standards.

[F] **904.2 Where permitted.** Automatic fire-extinguishing systems installed as an alternative to the required *automatic sprinkler systems* of Section 903 shall be *approved* by the fire code official.

[F] **904.2.1 Restriction on using automatic sprinkler system exceptions or reductions.** Automatic fire-extinguishing systems shall not be considered alternatives for the purposes of exceptions or reductions allowed for *automatic sprinkler systems* or by other requirements of this code.

[F] **904.2.2 Commercial hood and duct systems.** Each required commercial kitchen exhaust hood and duct system required by Section 606 of the *International Fire Code* or Chapter 5 of the *International Mechanical Code* to have a Type I hood shall be protected with an approved automatic fire-extinguishing system installed in accordance with this code.

[S][F] **904.3 Installation.** Automatic fire-extinguishing systems shall be installed in accordance with this section.

[F] **904.3.1 Electrical wiring.** Electrical wiring shall be in accordance with (~~NFPA 70~~) the *Seattle Electrical Code*.

[F] **904.3.2 Actuation.** Automatic fire-extinguishing systems shall be automatically actuated and provided with a manual means of actuation in accordance with Section 904.11.1. Where more than one hazard could be simultaneously involved in fire due to their proximity, all hazards shall be protected by a single system designed to protect all hazards that could become involved.

Exception: Multiple systems shall be permitted to be installed if they are designed to operate simultaneously.

[F] **904.3.3 System interlocking.** Automatic equipment interlocks with fuel shutoffs, ventilation controls, door closers, window shutters, conveyor openings, smoke and heat vents and other features necessary for proper operation of the fire-extinguishing system shall be provided as required by the design and installation standard utilized for the hazard.

[F] **904.3.4 Alarms and warning signs.** Where alarms are required to indicate the operation of automatic fire-extinguishing systems, distinctive audible and visible alarms and warning signs shall be provided to warn of pending agent discharge. Where exposure to automatic-extinguishing agents poses a hazard to persons and a delay is required to ensure the evacuation of occupants before agent discharge, a separate warning signal shall be provided to alert occupants once agent discharge has begun. Audible signals shall be in accordance with Section 907.5.2.

[F] **904.3.5 Monitoring.** Where a building fire alarm system is installed, automatic fire-extinguishing systems shall be monitored by the building fire alarm system in accordance with NFPA 72.

[F] **904.4 Inspection and testing.** Automatic fire-extinguishing systems shall be inspected and tested in accordance with the provisions of this section prior to acceptance.

[F] **904.4.1 Inspection.** Prior to conducting final acceptance tests, all of the following items shall be inspected:

1. Hazard specification for consistency with design hazard.
2. Type, location and spacing of automatic- and manual-initiating devices.
3. Size, placement and position of nozzles or discharge orifices.
4. Location and identification of audible and visible alarm devices.
5. Identification of devices with proper designations.
6. Operating instructions.

[F] **904.4.2 Alarm testing.** Notification appliances, connections to fire alarm systems and connections to *approved* supervising stations shall be tested in accordance with this section and Section 907 to verify proper operation.

[F] **904.4.2.1 Audible and visible signals.** The audibility and visibility of notification appliances signaling agent discharge or system operation, where required, shall be verified.

[F] **904.4.3 Monitor testing.** Connections to protected premises and supervising station fire alarm systems shall be tested to verify proper identification and retransmission of alarms from automatic fire-extinguishing systems.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] **904.5 Wet-chemical systems.** Wet-chemical extinguishing systems shall be installed, maintained, periodically inspected and tested in accordance with NFPA 17A and their listing. Records of inspections and testing shall be maintained.

[F] **904.6 Dry-chemical systems.** Dry-chemical extinguishing systems shall be installed, maintained, periodically inspected and tested in accordance with NFPA 17 and their listing. Records of inspections and testing shall be maintained.

[F] **904.7 Foam systems.** Foam-extinguishing systems shall be installed, maintained, periodically inspected and tested in accordance with NFPA 11 and NFPA 16 and their listing. Records of inspections and testing shall be maintained.

[F] **904.8 Carbon dioxide systems.** Carbon dioxide extinguishing systems shall be installed, maintained, periodically inspected and tested in accordance with NFPA 12 and their listing. Records of inspections and testing shall be maintained.

[F] **904.9 Halon systems.** Halogenated extinguishing systems shall be installed, maintained, periodically inspected and tested in accordance with NFPA 12A and their listing. Records of inspections and testing shall be maintained.

[F] **904.10 Clean-agent systems.** Clean-agent fire-extinguishing systems shall be installed, maintained, periodically inspected and tested in accordance with NFPA 2001 and their listing. Records of inspections and testing shall be maintained.

[F] **904.11 Automatic water mist systems.** *Automatic water mist systems* shall be permitted in applications that are consistent with the applicable listing or approvals and shall comply with Sections 904.11.1 through 904.11.3.

[F] **904.11.1 Design and installation requirements.** *Automatic water mist systems* shall be designed and installed in accordance with Sections 904.11.1.1 through 904.11.1.4.

[F] **904.11.1.1 General.** *Automatic water mist systems* shall be designed and installed in accordance with NFPA 750 and the manufacturer's instructions.

[F] **904.11.1.2 Actuation.** *Automatic water mist systems* shall be automatically actuated.

[F] **904.11.1.3 Water supply protection.** Connections to a potable water supply shall be protected against backflow in accordance with the *International Plumbing Code*.

[F] **904.11.1.4 Secondary water supply.** Where a secondary water supply is required for an *automatic sprinkler system*, an *automatic water mist system* shall be provided with an *approved* secondary water supply.

[F] **904.11.2 Water mist system supervision and alarms.** Supervision and alarms shall be provided as required for *automatic sprinkler systems* in accordance with Section 903.4.

[F] **904.11.2.1 Monitoring.** Monitoring shall be provided as required for *automatic sprinkler systems* in accordance with Section 903.4.1.

[F] **904.11.2.2 Alarms.** Alarms shall be provided as required for *automatic sprinkler systems* in accordance with Section 903.4.2.

[F] **904.11.2.3 Floor control valves.** Floor control valves shall be provided as required for *automatic sprinkler systems* in accordance with Section 903.4.3.

[F] **904.11.3 Testing and maintenance.** *Automatic water mist systems* shall be tested and maintained in accordance with the *International Fire Code*.

*

**

[F] **904.12 Aerosol fire-extinguishing systems.** Aerosol fire-extinguishing systems shall be installed, maintained, periodically inspected and tested in accordance with NFPA 2010, and their listing.

Such devices and appurtenances shall be listed and installed in compliance with manufacturers' instructions.

**

[W][S][F] **904.13 Commercial cooking systems.** The automatic fire-extinguishing system for commercial cooking systems shall be of a type recognized for protection of commercial cooking equipment and exhaust systems of the type and arrangement protected. Preengineered automatic dry- and wet-chemical extinguishing systems shall be tested in accordance with UL 300 and *listed* and *labeled* for the intended application. Other types of automatic fire-extinguishing systems shall be *listed* and *labeled* for specific use as protection for commercial cooking operations. The system shall be installed in accordance with this code, NFPA 96, its listing and the manufacturer's installation instructions. Additional protection is not required for ductwork beyond 75 feet when the hood suppression system complies with UL 300. Signage shall be provided on the exhaust hood or system cabinet, indicating the type and arrangement of cooking appliances protected by the automatic fire extinguishing system. Signage shall indicate appliances from left to right, be durable, and the size, color and lettering shall be approved. Automatic fire-extinguishing systems of the following types shall be installed in accordance with the referenced standard indicated, as follows:

1. Carbon dioxide extinguishing systems, NFPA 12.
2. *Automatic sprinkler systems*, NFPA 13.
3. Automatic water mist systems, NFPA 750.
4. Foam-water sprinkler system or foam-water spray systems, NFPA 16.
5. Dry-chemical extinguishing systems, NFPA 17.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

6. Wet-chemical extinguishing systems, NFPA 17A.

Exceptions:

1. Factory-built commercial cooking recirculating systems that are tested in accordance with UL 710B and *listed, labeled* and installed in accordance with Section 304.1 of the *International Mechanical Code*.
2. Protection of duct systems beyond 75 feet when the commercial kitchen exhaust hood is protected by a system listed in accordance with UL 300.

[F] 904.13.1 Manual system operation. A manual actuation device shall be located at or near a *means of egress* from the cooking area not less than 10 feet (3048 mm) and not more than 20 feet (6096 mm) from the kitchen exhaust system. The manual actuation device shall be installed not more than 48 inches (1200 mm) or less than 42 inches (1067 mm) above the floor and shall clearly identify the hazard protected. The manual actuation shall require a maximum force of 40 pounds (178 N) and a maximum movement of 14 inches (356 mm) to actuate the fire suppression system.

Exception: *Automatic sprinkler systems* shall not be required to be equipped with manual actuation means.

[F] 904.13.2 System interconnection. The actuation of the fire suppression system shall automatically shut down the fuel or electrical power supply to the cooking equipment. The fuel and electrical supply reset shall be manual.

[F] 904.13.3 Carbon dioxide systems. Where carbon dioxide systems are used, there shall be a nozzle at the top of the ventilating duct. Additional nozzles that are symmetrically arranged to give uniform distribution shall be installed within vertical ducts exceeding 20 feet (6096 mm) and horizontal ducts exceeding 50 feet (15 240 mm). *Dampers* shall be installed at either the top or the bottom of the duct and shall be arranged to operate automatically upon activation of the fire-extinguishing system. Where the *damper* is installed at the top of the duct, the top nozzle shall be immediately below the *damper*. Automatic carbon dioxide fire-extinguishing systems shall be sufficiently sized to protect against all hazards venting through a common duct simultaneously.

[F] 904.13.3.1 Ventilation system. Commercial-type cooking equipment protected by an automatic carbon dioxide-extinguishing system shall be arranged to shut off the ventilation system upon activation.

[F] 904.13.4 Special provisions for automatic sprinkler systems. *Automatic sprinkler systems* protecting commercial-type cooking equipment shall be supplied from a separate, indicating-type control valve that is identified. Access to the control valve shall be provided.

[F] 904.13.4.1 Listed sprinklers. Sprinklers used for the protection of fryers shall be tested in accordance with UL 199E, *listed* for that application and installed in accordance with their listing.

*

[F] 904.14 Domestic cooking facilities. Cooktops and ranges installed in the following occupancies shall be protected in accordance with Section 904.14.1:

1. In Group I-1 occupancies where domestic cooking facilities are installed in accordance with Section 420.9.
2. In Group I-2 occupancies where domestic cooking facilities are installed in accordance with Section 407.2.7.
3. In Group R-2 college *dormitories* where domestic cooking facilities are installed in accordance with Section 420.11.

[F] 904.14.1 Protection from fire. Cooktops and ranges shall be protected in accordance with Section 904.14.1.1 or 904.14.1.2.

[F] 904.14.1.1 Automatic fire-extinguishing system. The domestic recirculating or exterior vented cooking hood provided over the cooktop or range shall be equipped with an approved automatic fire-extinguishing system complying with the following:

1. The automatic fire-extinguishing system shall be of a type recognized for protection of domestic cooking equipment. Preengineered automatic fire-extinguishing systems shall be listed and labeled in accordance with UL 300A and installed in accordance with the manufacturer's instructions.
2. Manual actuation of the fire-extinguishing system shall be provided in accordance with Section 904.13.1.
3. Interconnection of the fuel and electric power supply shall be in accordance with Section 904.13.2.

[F] 904.14.1.2 Ignition prevention. Cooktops and ranges shall include burners that have been tested and listed to prevent ignition of cooking oil with burners turned on to their maximum heat settings and allowed to operate for 30 minutes.

**SECTION 905
STANDPIPE SYSTEMS**

[F] 905.1 General. Standpipe systems shall be provided in new buildings and structures in accordance with Sections 905.2 through 905.11. In buildings used for high-piled combustible storage, fire protection shall be in accordance with the *International Fire Code*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

~~[S][F]~~ **905.2 Installation standard.** Standpipe systems shall be installed in accordance with this section, ~~(and)~~ NFPA 14 and rules promulgated by the building or fire code official. Fire department connections for standpipe systems shall be in accordance with Section 912.

~~[S][F]~~ **905.3 Required installations.** Standpipe systems shall be installed where required by Sections 905.3.1 through ~~(905.3.8)~~ 905.3.7. Standpipe systems are allowed to be combined with *automatic sprinkler systems*.

Exception: Standpipe systems are not required in ~~(Group R-3 occupancies)~~ one- and two-family dwellings and townhouses.

[F] 905.3.1 Height. Class III standpipe systems shall be installed throughout buildings where any of the following conditions exist:

1. Four or more stories are above or below *grade plane*.
- ~~(2. The floor level of the highest story is located more than 30 feet (9144 mm) above the lowest level of fire department vehicle access.~~
- 3) 2. The floor level of the lowest *story* is located more than 30 feet (9144 mm) below the highest level of fire department vehicle access.

Exceptions:

1. Class I standpipes are allowed in buildings equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1 or 903.3.1.2.
2. Class I standpipes are allowed in Group B and E occupancies.
3. Class I standpipes are allowed in parking garages.
4. Class I standpipes are allowed in basements equipped throughout with an *automatic sprinkler system*.
5. Class I standpipes are allowed in buildings where occupant-use hose lines will not be utilized by trained personnel or the fire department.
6. In determining the lowest level of fire department vehicle access, it shall not be required to consider either of the following:
 - 6.1. Recessed loading docks for four vehicles or less.
 - 6.2. Conditions where topography makes access from the fire department vehicle to the building impractical or impossible.

[F] 905.3.2 Group A. Class I automatic wet standpipes shall be provided in nonsprinklered Group A buildings having an *occupant load* exceeding 1,000 persons.

Exceptions:

1. Open-air-seating spaces without enclosed spaces.
2. Class I automatic dry and semiautomatic dry standpipes or manual wet standpipes are allowed in buildings that are not high-rise buildings.

~~[S][F]~~ **905.3.3 Covered and open mall buildings.** Covered mall and *open mall buildings* shall be equipped throughout with a Class I standpipe system ~~(where required by Section 905.3.1. Mall buildings not required to be equipped with a standpipe system by Section 905.3.1 shall be equipped with Class I hose connections connected to the automatic sprinkler system sized to deliver water at 250 gallons per minute (946.4 L/min) at the hydraulically most remote hose connection while concurrently supplying the automatic sprinkler system demand. The standpipe system shall be designed to not exceed a 50 pounds per square inch (psi) (345 kPa) residual pressure loss with a flow of 250 gallons per minute (946.4 L/min) from the fire department connection to the hydraulically most remote hose connection. Hose)~~ with hose connections ~~(shall be)~~ provided at each of the following locations:

1. Within the mall at the entrance to each *exit passageway* or *corridor*.
2. At each floor-level landing within *interior exit stairways* opening directly on the mall.
3. At exterior public entrances to the mall of a *covered mall building*.
4. At public entrances at the perimeter line of an *open mall building*.
5. At other locations as necessary so that the distance to reach all portions of a tenant space does not exceed 200 feet (60 960 mm) from a hose connection.

~~([F] 905.3.4 Stages.~~ *Stages* greater than 1,000 square feet in area (93 m²) shall be equipped with a Class III wet standpipe system with 1 1/2-inch and 2 1/2-inch (38 mm and 64 mm) hose connections on each side of the stage.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Exception: Where the building or area is equipped throughout with an *automatic sprinkler system*, a 1-1/2-inch (38 mm) hose connection shall be installed in accordance with NFPA 13 or in accordance with NFPA 14 for Class II or III standpipes.

~~[F] 905.3.4.1 Hose and cabinet.~~ The 1-1/2-inch (38 mm) hose connections shall be equipped with sufficient lengths of 1-1/2-inch (38 mm) hose to provide fire protection for the stage area. ~~Hose connections shall be equipped with an approved adjustable fog nozzle and be mounted in a cabinet or on a rack.)~~

[F] ~~((905.3.5))~~ **905.3.4 Underground buildings.** Underground buildings shall be equipped throughout with a Class I automatic wet or manual wet standpipe system.

[F] ~~((905.3.6))~~ **905.3.5 Helistops and heliports.** Buildings with a rooftop *helistop* or *heliport* shall be equipped with a Class I or III standpipe system extended to the roof level on which the *helistop* or *heliport* is located in accordance with Section 2007.5 of the *International Fire Code*.

[F] ~~((905.3.7))~~ **905.3.6 Marinas and boatyards.** Standpipes in marinas and boatyards shall comply with Chapter 36 of the *International Fire Code*.

[S][F] ~~((905.3.8))~~ **905.3.7 Landscaped roofs.** Buildings or structures that have landscaped roofs and that are equipped with a standpipe system shall have the standpipe system extended to the roof level on which the landscaped roof is located.

Exception: The standpipe system shall not be required to be extended when in compliance with subsection 905.4(6).

[S][F] **905.4 Location of Class I standpipe hose connections.** Class I standpipe hose connections shall be provided in all of the following locations:

1. In every required (~~interior~~) *exit stairway*, a hose connection shall be provided for each story above and below *grade plane*. Hose connections shall be located at the main floor landing or intermediate landing throughout the building, unless otherwise *approved* by the fire code official.

Exception: A single hose connection shall be permitted to be installed in the open corridor or open breezeway between open *stairs* that are not greater than 75 feet (22 860 mm) apart.

2. On each side of the wall adjacent to the exit opening of a *horizontal exit*.

Exception: Where floor areas adjacent to a *horizontal exit* are reachable from an *interior exit stairway* hose connection by a 30-foot (9144 mm) hose stream from a nozzle attached to 100 feet (30 480 mm) of hose, a hose connection shall not be required at the *horizontal exit*.

3. In every *exit passageway*, at the entrance from the *exit passageway* to other areas of a building.

Exception: Where floor areas adjacent to an *exit passageway* are reachable from an *interior exit stairway* hose connection by a 30-foot (9144 mm) hose stream from a nozzle attached to 100 feet (30 480 mm) of hose, a hose connection shall not be required at the entrance from the *exit passageway* to other areas of the building.

4. In covered mall buildings, adjacent to each exterior public entrance to the mall and adjacent to each entrance from an *exit passageway* or *exit corridor* to the mall. In *open mall buildings*, adjacent to each public entrance to the mall at the perimeter line and adjacent to each entrance from an *exit passageway* or *exit corridor* to the mall.

5. Where the roof has a slope less than 4 units vertical in 12 units horizontal (33.3-percent slope), a hose connection shall be located to serve the roof or at the highest landing of an *interior exit stairway* with access to the roof provided in accordance with Section 1011.12. Hose connections on a roof shall be at least 10 feet (3048 mm) from the roof edge, skylight, light well or other opening, unless protected by an approved 42-inch-high (1067 mm) guard or equivalent.

6. Where the most remote portion of a nonsprinklered floor or *story* is more than 150 feet (45 720 mm) from a hose connection or the most remote portion of a sprinklered floor or *story* or roof is more than 200 feet (60 960 mm) from a hose connection, the fire code official is authorized to require that additional hose connections be provided in *approved* locations.

[F] **905.4.1 Protection.** Risers and laterals of Class I standpipe systems not located within an *interior exit stairway* shall be protected by a degree of *fire resistance* equal to that required for vertical enclosures in the building in which they are located.

Exception: In buildings equipped throughout with an *approved automatic sprinkler system*, laterals that are not located within an *interior exit stairway* are not required to be enclosed within fire-resistance-rated construction.

[F] **905.4.2 Interconnection.** In buildings where more than one standpipe is provided, the standpipes shall be interconnected in accordance with NFPA 14.

[S][F] **905.5 Location of Class II standpipe hose connections.** Class II standpipe hose connections located so that all portions of the building are within 30 feet (9144 mm) of a nozzle attached to 100 feet (30 480 mm) of hose. Class II standpipe hose connections shall be located where they will have *ready access*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

~~((F) 905.5.1 Groups A-1 and A-2. In Group A-1 and A-2 occupancies having *occupant loads* exceeding 1,000 persons, hose connections shall be located on each side of any stage, on each side of the rear of the auditorium, on each side of the balcony and on each tier of dressing rooms.))~~

[F] ~~((905.5.2))~~ **905.5.1 Protection.** Fire-resistance-rated protection of risers and laterals of Class II standpipe systems is not required.

[F] ~~((905.5.3))~~ **905.5.2 Class II system 1-inch hose.** A minimum 1-inch (25 mm) hose shall be allowed to be used for hose stations in light-hazard occupancies where investigated and *listed* for this service and where *approved* by the fire code official.

[F] **905.6 Location of Class III standpipe hose connections.** Class III standpipe systems shall have hose connections located as required for Class I standpipes in Section 905.4 and shall have Class II hose connections as required in Section 905.5.

[F] **905.6.1 Protection.** Risers and laterals of Class III standpipe systems shall be protected as required for Class I systems in accordance with Section 905.4.1.

[F] **905.6.2 Interconnection.** In buildings where more than one Class III standpipe is provided, the standpipes shall be interconnected in accordance with NFPA 14.

[F] **905.7 Cabinets.** Cabinets containing fire-fighting equipment such as standpipes, fire hoses, fire extinguishers or fire department valves shall not be blocked from use or obscured from view.

[F] **905.7.1 Cabinet equipment identification.** Cabinets shall be identified in an *approved* manner by a permanently attached sign with letters not less than 2 inches (51 mm) high in a color that contrasts with the background color, indicating the equipment contained therein.

Exceptions:

1. Doors not large enough to accommodate a written sign shall be marked with a permanently attached pictogram of the equipment contained therein.
2. Doors that have either an *approved* visual identification clear glass panel or a complete glass door panel are not required to be marked.

[F] **905.7.2 Locking cabinet doors.** Cabinets shall be unlocked.

Exceptions:

1. Visual identification panels of glass or other *approved* transparent frangible material that is easily broken and allows access.
2. *Approved* locking arrangements.
3. Group I-3 occupancies.

[F] **905.8 Dry standpipes.** Dry standpipes shall not be installed.

Exception: Where subject to freezing and in accordance with NFPA 14.

[S][F] **905.9 Valve supervision.** Valves controlling water supplies shall be supervised in the open position so that a change in the normal position of the valve will generate a supervisory signal at the supervising station required by Section 903.4. Where a fire alarm system is provided, a signal shall be transmitted to the control unit.

Exceptions:

1. Valves ~~((to underground key or hub valves in roadway boxes))~~ do not require supervision.
2. Valves locked in the normal position and inspected as provided in this code in buildings not equipped with a fire alarm system or approved supervising station.

[F] **905.10 During construction.** Standpipe systems required during construction and demolition operations shall be provided in accordance with Section 3311.

[S][F] **905.11 Locking standpipe outlet caps.** The *fire code official* is authorized to require locking caps on the outlets on standpipes where the responding fire department carries key wrenches for the removal that are compatible with locking Fire Department Connection (FDC) connection caps.

SECTION 906 PORTABLE FIRE EXTINGUISHERS

[S][F] **906.1 Where required.** Portable fire extinguishers shall be installed in all of the following locations:

1. In Group A, B, E, F, H, I, M, R-1, R-2, R-4 and S occupancies.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Exceptions:

1. In Group R-2 occupancies, portable fire extinguishers shall be required only in locations specified in Items 2 through 6 where each dwelling unit is provided with a portable fire extinguisher having a minimum rating of 1-A:10-B:C.
2. In Group E occupancies, portable fire extinguishers shall be required only in locations specified in Items 2 through 6 where each classroom is provided with a portable fire extinguisher having a minimum rating of 2-A:20-B:C.
3. In storage areas of Group S Occupancies where forklift, powered industrial truck or powered cart operators are the primary occupants, fixed extinguishers, as specified in NFPA 10, shall not be required where in accordance with all of the following:
 - 3.1. Use of vehicle-mounted extinguishers shall be approved by the fire code official.
 - 3.2. Each vehicle shall be equipped with a 10-pound, ~~((40A:80B:C))~~ 4A:80B:C extinguisher affixed to the vehicle using a mounting bracket approved by the extinguisher manufacturer or the fire code official for vehicular use.
 - 3.3. Not less than two spare extinguishers of equal or greater rating shall be available on site to replace a discharged extinguisher.
 - 3.4. Vehicle operators shall be trained in the proper operation, use and inspection of extinguishers.
 - 3.5. Inspections of vehicle-mounted extinguishers shall be performed daily.
2. Within 30 feet (9144 mm) distance of travel from commercial cooking equipment and from domestic cooking equipment in Group I-1; I-2, Condition 1; and R-2 college *dormitory* occupancies.
3. In areas where flammable or *combustible liquids* are stored, used or dispensed.
4. On each floor of structures under construction, except Group R-3 occupancies, in accordance with Section 3315.1 of the *International Fire Code*.
5. Where required by the *International Fire Code* sections indicated in Table 906.1.
6. Special-hazard areas, including but not limited to laboratories, computer rooms and generator rooms, where required by the fire code official.

Exception: Portable fire extinguishers are not required at normally unmanned Group U occupancy buildings or structures where a portable fire extinguisher suitable to the hazard of the location is provided on the vehicle of visiting personnel.

**[S][F] TABLE 906.1
ADDITIONAL REQUIRED PORTABLE FIRE EXTINGUISHERS IN THE INTERNATIONAL FIRE CODE**

IFC SECTION	SUBJECT
303.5	Asphalt kettles
307.5	Open burning
308.1.3	Open flames—torches
309.4	Powered industrial trucks

6108.2	LP-gas

[F] 906.2 General requirements. Portable fire extinguishers shall be selected and installed in accordance with this section and NFPA 10.

Exceptions:

1. The distance of travel to reach an extinguisher shall not apply to the spectator seating portions of Group A-5 occupancies.
2. In Group I-3, portable fire extinguishers shall be permitted to be located at staff locations.

[F] 906.3 Size and distribution. The size and distribution of portable fire extinguishers shall be in accordance with Sections 906.3.1 through 906.3.4.

**[F] TABLE 906.3(1)
FIRE EXTINGUISHERS FOR CLASS A FIRE HAZARDS**

	LIGHT (Low) HAZARD OCCUPANCY	ORDINARY (Moderate) HAZARD OCCUPANCY	EXTRA (High) HAZARD OCCUPANCY
Minimum-rated single extinguisher	2-A ^c	2-A	4-A ^a
Maximum floor area per unit of A	3,000 square feet	1,500 square feet	1,000 square feet
Maximum floor area for extinguisher ^b	11,250 square feet	11,250 square feet	11,250 square feet
Maximum distance of travel to extinguisher	75 feet	75 feet	75 feet

For SI: 1 foot = 304.8 mm, 1 square foot = 0.0929 m², 1 gallon = 3.785 L.

- a. Two 2-1/2-gallon water-type extinguishers shall be deemed the equivalent of one 4-A rated extinguisher.
- b. Annex E.3.3 of NFPA 10 provides more details concerning application of the maximum floor area criteria.
- c. Two water-type extinguishers each with a 1-A rating shall be deemed the equivalent of one 2-A rated extinguisher for Light (Low) Hazard Occupancies.

**[F] TABLE 906.3(2)
FIRE EXTINGUISHERS FOR FLAMMABLE OR COMBUSTIBLE LIQUIDS WITH DEPTHS LESS THAN OR EQUAL TO 0.25 INCH^a**

TYPE OF HAZARD	BASIC MINIMUM EXTINGUISHER RATING	MAXIMUM DISTANCE OF TRAVEL TO EXTINGUISHERS (feet)
Light (Low)	5-B	30
	10-B	50
Ordinary (Moderate)	10-B	30
	20-B	50

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

TYPE OF HAZARD	BASIC MINIMUM EXTINGUISHER RATING	MAXIMUM DISTANCE OF TRAVEL TO EXTINGUISHERS (feet)
Extra (High)	40-B	30
	80-B	50

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm.

a. For requirements on water-soluble flammable liquids and alternative sizing criteria, see Section 5.5 of NFPA 10.

[F] 906.3.1 Class A fire hazards. The minimum sizes and distribution of portable fire extinguishers for occupancies that involve primarily Class A fire hazards shall comply with Table 906.3(1).

[F] 906.3.2 Class B fire hazards. Portable fire extinguishers for occupancies involving flammable or combustible liquids with depths less than or equal to 0.25-inch (6.4 mm) shall be selected and placed in accordance with Table 906.3(2).

Portable fire extinguishers for occupancies involving flammable or combustible liquids with a depth of greater than 0.25-inch (6.4 mm) shall be selected and placed in accordance with NFPA 10.

[F] 906.3.3 Class C fire hazards. Portable fire extinguishers for Class C fire hazards shall be selected and placed on the basis of the anticipated Class A or B hazard.

[F] 906.3.4 Class D fire hazards. Portable fire extinguishers for occupancies involving combustible metals shall be selected and placed in accordance with NFPA 10.

[F] 906.4 Cooking equipment fires. Fire extinguishers provided for the protection of cooking equipment shall be of an *approved* type compatible with the automatic fire-extinguishing system agent. Cooking equipment involving solid fuels or vegetable or animal oils and fats shall be protected by a Class K-rated portable extinguisher in accordance with Sections 906.1, Item 2, 906.4.1 and 906.4.2 of the *International Fire Code*, as applicable.

[F] 906.5 Conspicuous location. Portable fire extinguishers shall be located in conspicuous locations where they will have *ready access* and be immediately available for use. These locations shall be along normal paths of travel, unless the fire code official determines that the hazard posed indicates the need for placement away from normal paths of travel.

[F] 906.6 Unobstructed and unobscured. Portable fire extinguishers shall not be obstructed or obscured from view. In rooms or areas in which visual obstruction cannot be completely avoided, means shall be provided to indicate the locations of extinguishers.

[F] 906.7 Hangers and brackets. Hand-held portable fire extinguishers, not housed in cabinets, shall be installed on the hangers or brackets supplied. Hangers or brackets shall be securely anchored to the mounting surface in accordance with the manufacturer’s installation instructions.

[F] 906.8 Cabinets. Cabinets used to house portable fire extinguishers shall not be locked.

Exceptions:

1. Where portable fire extinguishers subject to malicious use or damage are provided with a means of ready access.
2. In Group I-3 occupancies and in mental health areas in Group I-2 occupancies, access to portable fire extinguishers shall be permitted to be locked or to be located in staff locations provided that the staff has keys.

[F] 906.9 Extinguisher installation. The installation of portable fire extinguishers shall be in accordance with Sections 906.9.1 through 906.9.3.

[F] 906.9.1 Extinguishers weighing 40 pounds or less. Portable fire extinguishers having a gross weight not exceeding 40 pounds (18 kg) shall be installed so that their tops are not more than 5 feet (1524 mm) above the floor.

[F] 906.9.2 Extinguishers weighing more than 40 pounds. Hand-held portable fire extinguishers having a gross weight exceeding 40 pounds (18 kg) shall be installed so that their tops are not more than 3.5 feet (1067 mm) above the floor.

[F] 906.9.3 Floor clearance. The clearance between the floor and the bottom of installed hand-held portable fire extinguishers shall be not less than 4 inches (102 mm).

[F] 906.10 Wheeled units. Wheeled fire extinguishers shall be conspicuously located in a designated location.

**SECTION 907
FIRE ALARM AND DETECTION SYSTEMS**

[S][F] 907.1 General. This section covers the application, installation, performance and maintenance of fire alarm systems and their components. The requirements of Section 907.2 are applicable to new buildings and structures. The requirements of Section 907.9 are applicable to existing buildings and structures.

[S][F] 907.1.1 Construction documents. *Construction documents* for fire alarm systems shall be of sufficient clarity to indicate the location, nature and extent of the work proposed and show in detail that it will conform to the provisions of this code, the (~~International~~) *Seattle Fire Code* and *NFPA 72*; and relevant laws, ordinances, rules and regulations, as deter-

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

mined by the fire code official. The construction documents shall include but not be limited to the items, where applicable, listed in Sections 7.2, 7.4.1 through 7.4.10, and 18.4.1.5.4 of NFPA 72. Emergency voice/alarm communication system construction documents shall also indicate acoustically distinguished spaces per Section 907.5.2.2.6.

[S][F] 907.1.2 Fire alarm shop drawings. All construction documents shall be reviewed by a NICET III or IV in fire alarms, an ESA/NTS Certified Fire Alarm Designer (CFAD) Level III Fire in fire alarms or a professional engineer licensed in the state of Washington prior to being submitted for permitting. The reviewing professional shall submit a stamped, signed and dated letter; or a verification method approved by the fire code official indicating the system has been reviewed and meets or exceeds the design requirements of the state of Washington and the fire code official.

~~((Shop drawings for fire alarm systems shall be prepared in accordance with NFPA 72 and submitted for review and approval prior to system installation.))~~

[F] 907.1.3 Equipment. Systems and components shall be *listed* and *approved* for the purpose for which they are installed.

[F] 907.2 Where required—new buildings and structures. An *approved* fire alarm system installed in accordance with the provisions of this code and NFPA 72 shall be provided in new buildings and structures in accordance with Sections 907.2.1 through 907.2.23 and provide occupant notification in accordance with Section 907.5, unless other requirements are provided by another section of this code.

Not fewer than one manual fire alarm box shall be provided in an *approved* location to initiate a fire *alarm signal* for fire alarm systems employing automatic fire detectors or waterflow detection devices. Where other sections of this code allow elimination of fire alarm boxes due to sprinklers, a single fire alarm box shall be installed.

Exceptions:

1. The manual fire alarm box is not required for fire alarm systems dedicated to elevator recall control and supervisory service.
2. The manual fire alarm box is not required for Group R-2 occupancies unless required by the *fire code official* to provide a means for fire watch personnel to initiate an alarm during a sprinkler system impairment event. Where provided, the manual fire alarm box shall not be located in an area that is open to the public.

[F] 907.2.1 Group A. A manual fire alarm system that activates the occupant notification system in accordance with Section 907.5 shall be installed in Group A occupancies where the *occupant load* due to the assembly occupancy is 300 or more, or where the Group A *occupant load* is more than 100 persons above or below the *lowest level of exit discharge*. Group A occupancies not separated from one another in accordance with Section 707.3.10 shall be considered as a single occupancy for the purposes of applying this section. Portions of Group E occupancies occupied for assembly purposes shall be provided with a fire alarm system as required for the Group E occupancy.

Exception: Manual fire alarm boxes are not required where the building is equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1 and the occupant notification appliances will activate throughout the notification zones upon sprinkler water flow.

[F] 907.2.1.1 System initiation in Group A occupancies with an occupant load of 1,000 or more. Activation of the fire alarm in Group A occupancies with an *occupant load* of 1,000 or more shall initiate a signal using an emergency voice/alarm communications system in accordance with Section 907.5.2.2.

Exception: Where *approved*, the prerecorded announcement is allowed to be manually deactivated for a period of time, not to exceed 3 minutes, for the sole purpose of allowing a live voice announcement from an *approved, constantly attended location*.

[F] 907.2.1.2 Emergency voice/alarm communication captions. Stadiums, arenas and *grandstands* required to caption audible public announcements shall be in accordance with Section 907.5.2.2.4.

[F] 907.2.2 Group B. A manual fire alarm system, which activates the occupant notification system in accordance with Section 907.5, shall be installed in Group B occupancies where one of the following conditions exists:

1. The combined Group B *occupant load* of all floors is 500 or more.
2. The Group B *occupant load* is more than 100 persons above or below the *lowest level of exit discharge*.
3. The *fire area* contains an *ambulatory care facility*.

Exception: Manual fire alarm boxes are not required where the building is equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1 and the occupant notification appliances will activate throughout the notification zones upon sprinkler water flow.

[F] 907.2.2.1 Ambulatory care facilities. *Fire areas* containing *ambulatory care facilities* shall be provided with an electronically supervised automatic smoke detection system installed within the ambulatory care facility and in *public use areas* outside of tenant spaces, including public *corridors* and elevator lobbies.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Exception: Buildings equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1, provided that the occupant notification appliances will activate throughout the notification zones upon sprinkler waterflow.

~~[W][F] 907.2.3 Group E. ((A manual fire alarm system that initiates the occupant notification signal utilizing an emergency voice/alarm communication system meeting the requirements of Section 907.5.2.2 and installed in accordance with Section 907.6 shall be installed in Group E occupancies. Where *automatic sprinkler systems* or smoke detectors are installed, such systems or detectors shall be connected to the building fire alarm system.))~~ Group E occupancies shall be provided with a manual fire alarm system that initiates the occupant notification signal utilizing one of the following:

1. An emergency voice/alarm communication system meeting the requirements of Section 907.5.2.2 and installed in accordance with Section 907.6; or
2. A system developed as part of a safe school plan adopted in accordance with RCW 28A.320.125 or developed as part of an emergency response system consistent with the provisions of RCW 28A.320.126. The system must achieve all of the following performance standards:
 - 2.1 The ability to broadcast voice messages or customized announcements;
 - 2.2 Includes a feature for multiple sounds, including sounds to initiate a lock down;
 - 2.3 The ability to deliver messages to the interior of a building, areas outside of a building as designated pursuant to the safe school plan, and to personnel;
 - 2.4 The ability for two-way communications;
 - 2.5 The ability for individual room calling;
 - 2.6 The ability for a manual override;
 - 2.7 Installation in accordance with NFPA 72;
 - 2.8 Provide 15 minutes of battery backup for alarm and 24 hours of battery backup for standby; and
 - 2.9 Includes a program for annual inspection and maintenance in accordance with NFPA 72.

Exceptions:

1. A manual fire alarm system shall not be required in Group E occupancies with an *occupant load* of 50 or less.
2. Emergency voice/alarm communication systems meeting the requirements of Section 907.5.2.2 and installed in accordance with Section 907.6 shall not be required in Group E occupancies with *occupant loads* of 100 or less, provided that activation of the manual fire alarm system initiates an *approved* occupant notification signal in accordance with Section 907.5.
3. Where an existing approved alarm system is in place, an emergency voice/alarm system is not required in any portion of an existing Group E building undergoing any one of the following repairs, alteration or addition:
 - 3.1. Alteration or repair to an existing building including, without limitation, alterations to rooms and systems, and/or corridor configurations, not exceeding 35 percent of the fire area of the building (or the fire area undergoing the alteration or repair if the building is comprised of two or more fire areas); or
 - 3.2. An addition to an existing building, not exceeding 35 percent of the fire area of the building (or the fire area to which the addition is made if the building is comprised of two or more fire areas).
- ~~(3)~~ 4. Manual fire alarm boxes shall not be required in Group E occupancies where all of the following apply:
 - ~~((3.1))~~ 4.1. Interior *corridors* are protected by smoke detectors.
 - ~~((3.2))~~ 4.2. Auditoriums, cafeterias, gymnasiums and similar areas are protected by *heat detectors* or other *approved* detection devices.
 - ~~((3.3))~~ 4.3. Shops and laboratories involving dusts or vapors are protected by *heat detectors* or other *approved* detection devices.
 - ~~((3.4))~~ Manual activation is provided from a normally occupied location.
- ~~(4)~~ 5. Manual fire alarm boxes shall not be required in Group E occupancies where all of the following apply:
 - ~~((4.1))~~ 5.1. The building is equipped throughout with an *approved automatic sprinkler system* installed in accordance with Section 903.3.1.1.
 - ~~((4.2))~~ 5.2. The emergency voice/alarm communication system will activate on sprinkler waterflow.
 - ~~((4.3))~~ 5.3. Manual activation is provided from a normally occupied location.

~~[W][F] 907.2.3.1 Sprinkler systems or detection.~~ When *automatic sprinkler systems* or *smoke detectors* are installed, such systems or detectors shall be connected to the *building fire alarm system*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] 907.2.4 Group F. A manual fire alarm system that activates the occupant notification system in accordance with Section 907.5 shall be installed in Group F occupancies where both of the following conditions exist:

1. The Group F occupancy is two or more *stories* in height.
2. The Group F occupancy has a combined *occupant load* of 500 or more above or below the lowest *level of exit discharge*.

Exception: Manual fire alarm boxes are not required where the building is equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1 and the occupant notification appliances will activate throughout the notification zones upon sprinkler water flow.

[F] 907.2.5 Group H. A manual fire alarm system that activates the occupant notification system in accordance with Section 907.5 shall be installed in Group H-5 occupancies and in occupancies used for the manufacture of organic coatings. An automatic smoke detection system shall be installed for *highly toxic* gases, organic peroxides and oxidizers in accordance with Chapters 60, 62 and 63, respectively, of the *International Fire Code*.

[S][F] 907.2.6 Group I. A manual fire alarm system that activates the occupant notification system in accordance with Section 907.5 shall be installed in Group I occupancies. An automatic smoke detection system that activates the occupant notification system in accordance with Section 907.5 shall be provided in accordance with Sections 907.2.6.1, 907.2.6.2, 907.2.6.4, and 907.2.6.3.3.

Exceptions:

1. Manual fire alarm boxes in sleeping units of Group I-1 and I-2 occupancies shall not be required at *exits* if located at all care providers' control stations or other constantly attended staff locations, provided that such manual fire alarm boxes are visible and provided with *ready access*, and the distances of travel required in Section 907.4.2.1 are not exceeded.
2. Occupant notification systems are not required to be activated where private mode signaling installed in accordance with NFPA 72 is *approved* by the fire code official and staff evacuation responsibilities are included in the fire safety and evacuation plan required by Section 404 of the *International Fire Code*.

[S][F] 907.2.6.1 Group I-1. In Group I-1 occupancies, an automatic smoke detection system shall be installed in *corridors*, waiting areas open to corridors and *habitable spaces* other than *sleeping units* and kitchens. The system shall be activated in accordance with Section (~~907.5~~) 907.4.

Exceptions:

1. For Group I-1, Condition 1 occupancies, smoke detection in *habitable spaces* is not required where the facility is equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1.
2. Smoke detection is not required for exterior balconies.

[F] 907.2.6.1.1 Smoke alarms. Single- and multiple-station smoke alarms shall be installed in accordance with Section 907.2.11.

[F] 907.2.6.2 Group I-2. An automatic smoke detection system shall be installed in *corridors* in Group I-2, Condition 1 facilities and spaces permitted to be open to the corridors by Section 407.2. The system shall be activated in accordance with Section 907.4. Group I-2, Condition 2 occupancies shall be equipped with an automatic smoke detection system as required in Section 407.

Exceptions:

1. Corridor smoke detection is not required in *smoke compartments* that contain sleeping units where such units are provided with smoke detectors that comply with UL 268. Such detectors shall provide a visual display on the corridor side of each sleeping unit and shall provide an audible and visual alarm at the care providers' station attending each unit.
2. Corridor smoke detection is not required in *smoke compartments* that contain sleeping units where sleeping unit doors are equipped with automatic door-closing devices with integral smoke detectors on the unit sides installed in accordance with their listing, provided that the integral detectors perform the required alerting function.

[F] 907.2.6.3 Group I-3 occupancies. Group I-3 occupancies shall be equipped with a manual fire alarm system and automatic smoke detection system installed for alerting staff.

[F] 907.2.6.3.1 System initiation. Actuation of an automatic fire-extinguishing system, *automatic sprinkler system*, a manual fire alarm box or a fire detector shall initiate an approved fire *alarm signal* that automatically notifies staff.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] **907.2.6.3.2 Manual fire alarm boxes.** Manual fire alarm boxes are not required to be located in accordance with Section 907.4.2 where the fire alarm boxes are provided at staff-attended locations having direct supervision over areas where manual fire alarm boxes have been omitted.

[F] **907.2.6.3.2.1 Manual fire alarm boxes in detainee areas.** Manual fire alarm boxes are allowed to be locked in areas occupied by detainees, provided that staff members are present within the subject area and have keys readily available to operate the manual fire alarm boxes.

[F] **907.2.6.3.3 Automatic smoke detection system.** An automatic smoke detection system shall be installed throughout resident housing areas, including *sleeping units* and contiguous day rooms, group activity spaces and other common spaces normally open to residents.

Exceptions:

1. Other *approved* smoke detection arrangements providing equivalent protection, including, but not limited to, placing detectors in exhaust ducts from cells or behind protective guards *listed* for the purpose, are allowed where necessary to prevent damage or tampering.
2. *Sleeping units* in Use Conditions 2 and 3 as described in Section 308.
3. Smoke detectors are not required in *sleeping units* with four or fewer occupants in *smoke compartments* that are equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1.

[W] 907.2.6.4 Group I-4 occupancies. A manual fire alarm system that initiates the occupant notification signal using an emergency voice/alarm communication system meeting the requirements of Section 907.5.2.2 and installed in accordance with Section 907.6 shall be installed in Group I-4 occupancies. When automatic sprinkler systems or smoke detectors are installed, such systems or detectors shall be connected to the building fire alarm system.

Exceptions:

1. A manual fire alarm system is not required in Group I-4 occupancies with an occupant load of 50 or less.
2. Emergency voice alarm communication systems meeting the requirements of Section 907.5.2.2 and installed in accordance with Section 907.6 shall not be required in Group I-4 occupancies with occupant loads of 100 or less, provided that activation of the manual fire alarm system initiates an approved occupant notification signal in accordance with Section 907.5.

[F] **907.2.7 Group M.** A manual fire alarm system that activates the occupant notification system in accordance with Section 907.5 shall be installed in Group M occupancies where one of the following conditions exists:

1. The combined Group M *occupant load* of all floors is 500 or more persons.
2. The Group M *occupant load* is more than 100 persons above or below the lowest *level of exit discharge*.

Exceptions:

1. A manual fire alarm system is not required in *covered or open mall buildings* complying with Section 402.
2. Manual fire alarm boxes are not required where the building is equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1 and the occupant notification appliances will automatically activate throughout the notification zones upon sprinkler water flow.

~~[S] (([F] 907.2.7.1 Occupant notification. During times that the building is occupied, the initiation of a signal from a manual fire alarm box or from a waterflow switch shall not be required to activate the alarm notification appliances when an alarm signal is activated at a constantly attended location from which evacuation instructions shall be initiated over an emergency voice/alarm communication system installed in accordance with Section 907.5.2.2.))~~

[F] **907.2.8 Group R-1.** Fire alarm systems and smoke alarms shall be installed in Group R-1 occupancies as required in Sections 907.2.8.1 through 907.2.8.3.

[F] **907.2.8.1 Manual fire alarm system.** A manual fire alarm system that activates the occupant notification system in accordance with Section 907.5 shall be installed in Group R- 1 occupancies.

Exceptions:

1. A manual fire alarm system is not required in buildings not more than two *stories* in height where all individual *sleeping units* and contiguous *attic* and crawl spaces to those units are separated from each other and public or common areas by not less than 1-hour *fire partitions* and each individual *sleeping unit* has an *exit* directly to a *public way, egress court* or *yard*.
2. Manual fire alarm boxes are not required throughout the building where all of the following conditions are met:

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

- 2.1. The building is equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1 or 903.3.1.2.
- 2.2. The notification appliances will activate upon sprinkler water flow.
- 2.3. Not fewer than one manual fire alarm box is installed at an *approved* location.

[S][F] 907.2.8.2 Automatic ((smoke)) detection system. An automatic smoke detection system that activates the occupant notification system in accordance with Section 907.5 shall be installed throughout all interior *corridors* serving *sleeping units*. Automatic heat detectors shall be provided in any non-sprinklered interior areas outside guestrooms other than attics and crawl spaces.

Exception: An automatic smoke detection system is not required in buildings that do not have interior *corridors* serving *sleeping units* and where each *sleeping unit* has a *means of egress* door opening directly to an *exit* or to an exterior *exit access* that leads directly to an *exit*.

Note: Smoke detectors may be required throughout corridors in accordance with Seattle Mechanical Code Section 606.2, depending on design details of the mechanical systems.

[F] 907.2.8.3 Smoke alarms. Single- and multiple-station smoke alarms shall be installed in accordance with Section 907.2.11.

[F] 907.2.9 Group R-2. Fire alarm systems and smoke alarms shall be installed in Group R-2 occupancies as required in Sections 907.2.9.1 through 907.2.9.3.

[S][F] 907.2.9.1 Manual fire alarm system. A manual fire alarm system that activates the occupant notification system in accordance with Section 907.5 shall be installed in Group R-2 occupancies where any of the following conditions apply:

1. Any *dwelling unit* or *sleeping unit* is located three or more *stories* above the lowest *level of exit discharge*.
2. Any *dwelling unit* or *sleeping unit* is located more than one *story* below the highest *level of exit discharge* of exits serving the *dwelling unit* or *sleeping unit*.
3. The building contains more than 16 *dwelling units* or *sleeping units*.

Exceptions:

1. A fire alarm system is not required in buildings not more than two stories in height where all *dwelling units* or *sleeping units* and contiguous *attic* and *crawl spaces* are separated from each other and public or common areas by not less than 1-hour *fire partitions* and each *dwelling unit* or *sleeping unit* has an *exit* directly to a *public way*, *egress court* or *yard*.
2. Manual fire alarm boxes are not required where the building is equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1 or 903.3.1.2 and the occupant notification appliances will automatically activate throughout the notification zones upon a sprinkler water flow.
3. A fire alarm system is not required in buildings that do not have interior *corridors* serving dwelling units and are protected by an approved *automatic sprinkler system* installed in accordance with Section 903.3.1.1 or 903.3.1.2, provided that *dwelling units* either have a *means of egress* door opening directly to an exterior *exit access* that leads directly to the exits or are served by open-ended *corridors* designed in accordance with Section 1027.6, Exception 3.
4. A fire alarm system is not required in townhouses where each townhouse unit is provided with a dedicated sprinkler system or approved by the fire code official.
5. In boarding homes licensed by the state of Washington, manual fire alarm boxes in resident sleeping areas are not required at exits if located at all constantly attended staff locations if such staff locations are visible, continuously accessible, located on each floor, and positioned so no portion of the story exceeds a horizontal travel distance of 200 feet to a manual fire alarm box.

[F] 907.2.9.2 Smoke alarms. Single- and multiple-station smoke alarms shall be installed in accordance with Section 907.2.11.

[F] 907.2.9.3 Group R-2 college and university buildings. An automatic smoke detection system that activates the occupant notification system in accordance with Section 907.5 shall be installed in Group R-2 occupancies operated by a college or university for student or staff housing in all of the following locations:

1. Common spaces outside of *dwelling units* and *sleeping units*.
2. Laundry rooms, mechanical equipment rooms and storage rooms.
3. All interior *corridors* serving *sleeping units* or *dwelling units*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Exception: An automatic smoke detection system is not required in buildings that do not have interior *corridors* serving *sleeping units* or *dwelling units* and where each *sleeping unit* or *dwelling unit* either has a *means of egress* door opening directly to an exterior *exit access* that leads directly to an *exit* or a *means of egress* door opening directly to an *exit*.

Required smoke alarms in *dwelling units* and *sleeping units* in Group R-2 occupancies operated by a college or university for student or staff housing shall be interconnected with the fire alarm system in accordance with NFPA 72.

[S] 907.2.9.4 Automatic heat detection. An automatic heat detection system that activates the occupant notification system in accordance with Section 907.6 shall be installed throughout all unsprinklered interior areas outside dwelling or sleeping units other than *attics* and crawl spaces.

[F] 907.2.10 Group S. A manual fire alarm system that activates the occupant notification system in accordance with Section 907.5 shall be installed in Group S public- and self-storage occupancies three stories or greater in height for interior corridors and interior common areas. Visible notification appliances are not required within storage units. A manual fire alarm system that activates the occupant notification system in accordance with Section 907.5 shall be installed in Group S occupancies where the combined area of all Group S fire areas on all floors, including any mezzanines, exceeds 24,000 square feet (2230 m²).

Exception: Manual fire alarm boxes are not required where the building is equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1, and the occupant notification appliances will activate throughout the notification zones upon sprinkler water flow.

[F] 907.2.11 Single- and multiple-station smoke alarms. Listed single- and multiple-station smoke alarms complying with UL 217 shall be installed in accordance with Sections 907.2.11.1 through 907.2.11.7 and NFPA 72.

[W][F] 907.2.11.1 Group R-1. Single- or multiple-station smoke alarms shall be installed in all of the following locations in Group R-1:

1. In sleeping areas.
2. In each loft constructed in accordance with Section 420.14.
- ~~(2)~~ 3. In every room in the path of the *means of egress* from the sleeping area to the door leading from the *sleeping unit*.
- ~~(3)~~ 4. In each *story* within the *sleeping unit*, including basements. For *sleeping units* with split levels and without an intervening door between the adjacent levels, a smoke alarm installed on the upper level shall suffice for the adjacent lower level provided that the lower level is less than one full *story* below the upper level.

[W][F] 907.2.11.2 Groups R-2, R-3, R-4 and I-1. Single- or multiple-station smoke alarms shall be installed and maintained in Groups R-2, R-3, R-4 and I-1 regardless of *occupant load* at all of the following locations:

1. On the ceiling or wall outside of each separate sleeping area in the immediate vicinity of bedrooms.
2. In each room used for sleeping purposes.
3. In each loft constructed in accordance with Section 420.14.
- ~~(3)~~ 4. In each *story* within a *dwelling unit*, including basements but not including crawl spaces and uninhabitable *attics*. In *dwellings* or *dwelling units* with split levels and without an intervening door between the adjacent levels, a smoke alarm installed on the upper level shall suffice for the adjacent lower level provided that the lower level is less than one full *story* below the upper level.

[F] 907.2.11.3 Installation near cooking appliances. Smoke alarms shall not be installed in the following locations unless this would prevent placement of a smoke alarm in a location required by Section 907.2.11.1 or 907.2.11.2:

1. Ionization smoke alarms shall not be installed less than 20 feet (6096 mm) horizontally from a permanently installed cooking appliance.
2. Ionization smoke alarms with an alarm-silencing switch shall not be installed less than 10 feet (3048 mm) horizontally from a permanently installed cooking appliance.
3. Photoelectric smoke alarms shall not be installed less than 6 feet (1829 mm) horizontally from a permanently installed cooking appliance.

[F] 907.2.11.4 Installation near bathrooms. Smoke alarms shall be installed not less than 3 feet (914 mm) horizontally from the door or opening of a bathroom that contains a bathtub or shower unless this would prevent placement of a smoke alarm required by Section 907.2.11.1 or 907.2.11.2.

[F] 907.2.11.5 Interconnection. Where more than one smoke alarm is required to be installed within an individual *dwelling unit* or *sleeping unit* in Group R or I-1 occupancies, the smoke alarms shall be interconnected in such a manner that the activation of one alarm will activate all of the alarms in the individual unit. Physical interconnection of smoke alarms

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

shall not be required where *listed* wireless alarms are installed and all alarms sound upon activation of one alarm. The alarm shall be clearly audible in all bedrooms over background noise levels with all intervening doors closed.

[S][F] 907.2.11.6 Power source. In new construction, required smoke alarms shall receive their primary power from the building wiring where such wiring is served from a commercial source and shall be equipped with a battery backup. Smoke alarms with integral strobes that are not equipped with battery backup shall be connected to an emergency (~~electrical~~) system in accordance with Section 2702. Smoke alarms shall emit a signal when the batteries are low. Wiring shall be permanent and without a disconnecting switch other than as required for overcurrent protection.

Exception: Smoke alarms are not required to be equipped with battery backup where they are connected to an emergency (~~electrical~~) system that complies with Section 2702.

[F] 907.2.11.7 Smoke detection system. Smoke detectors listed in accordance with UL 268 and provided as part of the building *fire alarm system* shall be an acceptable alternative to single- and multiple-station *smoke alarms* and shall comply with the following:

1. The *fire alarm system* shall comply with all applicable requirements in Section 907.
2. Activation of a smoke detector in a *dwelling unit* or *sleeping unit* shall initiate alarm notification in the *dwelling unit* or *sleeping unit* in accordance with Section 907.5.2.
3. Activation of a smoke detector in a *dwelling unit* or *sleeping unit* shall not activate alarm notification appliances outside of the *dwelling unit* or *sleeping unit*, provided that a supervisory signal is generated and monitored in accordance with Section 907.6.6.

[S][F] 907.2.12 Special amusement buildings. (~~A#~~) When required by the fire code official, an automatic smoke detection system shall be provided in *special amusement buildings* in accordance with Sections 907.2.12.1 through 907.2.12.3.

[F] 907.2.12.1 Alarm. Activation of any single smoke detector, the *automatic sprinkler system* or any other automatic fire detection device shall immediately activate an audible and visible alarm at the building at a *constantly attended location* from which emergency action can be initiated, including the capability of manual initiation of requirements in Section 907.2.12.2.

[F] 907.2.12.2 System response. The activation of two or more smoke detectors, a single smoke detector equipped with an *alarm verification feature*, the *automatic sprinkler system* or other *approved* fire detection device shall automatically do all of the following:

1. Cause illumination of the *means of egress* with light of not less than 1 footcandle (11 lux) at the walking surface level.
2. Stop any conflicting or confusing sounds and visual distractions.
3. Activate an *approved* directional exit marking that will become apparent in an emergency.
4. Activate a prerecorded message, audible throughout the *special amusement building*, instructing patrons to proceed to the nearest exit. Alarm signals used in conjunction with the prerecorded message shall produce a sound that is distinctive from other sounds used during normal operation.

[F] 907.2.12.3 Emergency voice/alarm communication system. An emergency voice/alarm communication system, which is allowed to serve as a public address system, shall be installed in accordance with Section 907.5.2.2 and be audible throughout the entire *special amusement building*.

[S][F] 907.2.13 High-rise buildings. High-rise buildings shall be provided with an automatic smoke detection system in accordance with Section 907.2.13.1, a fire department communication system in accordance with Section 907.2.13.2 and an emergency voice/alarm communication system in accordance with Section 907.5.2.2.

Exceptions:

1. Airport traffic control towers in accordance with Sections 412 and 907.2.22.
2. *Open parking garages* in accordance with Section 406.5.
3. Buildings with an occupancy in Group A-5 in accordance with Section 303.1.
4. Low-hazard special occupancies in accordance with Section 503.1.1.
- ~~(5. Buildings with an occupancy in Group H-1, H-2 or H-3 in accordance with Section 415.~~
- 6) 5. In Group I-1 and I-2 occupancies, the alarm shall sound at a *constantly attended location* and occupant notification shall be broadcast by the emergency voice/alarm communication system.

[F] 907.2.13.1 Automatic smoke detection. Automatic smoke detection in high-rise buildings shall be in accordance with Sections 907.2.13.1.1 and 907.2.13.1.2.

[F] 907.2.13.1.1 Area smoke detection. Area smoke detectors shall be provided in accordance with this section. Smoke detectors shall be connected to an automatic fire alarm system. The activation of any detector required by this

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

section shall activate the emergency voice/alarm communication system in accordance with Section 907.5.2.2. In addition to smoke detectors required by Sections 907.2.1 through 907.2.9, smoke detectors shall be located as follows:

1. In each mechanical equipment, electrical, transformer, telephone equipment or similar room that is not provided with sprinkler protection.
2. In each elevator machine room, machinery space, control room and control space and in elevator lobbies.

[F] 907.2.13.1.2 Duct smoke detection. Duct smoke detectors complying with Section 907.3.1 shall be located as follows:

1. In the main return air and exhaust air plenum of each air-conditioning system having a capacity greater than 2,000 cubic feet per minute (cfm) (0.94 m³/s). Such detectors shall be located in a serviceable area downstream of the last duct inlet.
2. At each connection to a vertical duct or riser serving two or more stories from a return air duct or plenum of an air-conditioning system. In Group R-1 and R-2 occupancies, a smoke detector is allowed to be used in each return air riser carrying not more than 5,000 cfm (2.4 m³/s) and serving not more than 10 air-inlet openings.

[S][F] 907.2.13.2 Fire department communication system. Where a wired communication system is *approved* in lieu of an in-building two-way emergency responder communication coverage system in accordance with Section 510 of the *International Fire Code*, the wired fire department communication system shall be designed and installed in accordance with NFPA 72 and shall operate between a fire command center complying with Section 911, elevators, elevator lobbies, emergency and standby power rooms, fire pump rooms, *areas of refuge* and inside *interior exit stairways*. The fire department communication device shall be provided at each floor level within the *interior exit stairway*. Eight portable handsets for the communication system shall be provided in the fire command center.

[F] 907.2.13.3 Multiple-channel voice evacuation. In buildings with an occupied floor more than 120 feet (36 576 mm) above the lowest level of fire department vehicle access, voice evacuation systems for high-rise buildings shall be multiple-channel systems.

[F] 907.2.14 Atriums connecting more than two stories. A fire alarm system shall be installed in occupancies with an *atrium* that connects more than two *stories*, with smoke detection installed in locations required by a rational analysis in Section 909.4 and in accordance with the system operation requirements in Section 909.17. The system shall be activated in accordance with Section 907.5. Such occupancies in Group A, E or M shall be provided with an emergency voice/alarm communication system complying with the requirements of Section 907.5.2.2.

[S][F] 907.2.15 High-piled combustibile storage areas. An automatic ((~~smoke~~) fire) detection system shall be installed throughout high-piled combustibile storage areas where required by Section 3206.5 of the *International Fire Code*.

[F] 907.2.16 Aerosol storage uses. *Aerosol product* rooms and general-purpose warehouses containing aerosol products shall be provided with an *approved* manual fire alarm system where required by the *International Fire Code*.

[F] 907.2.17 Lumber, wood structural panel and veneer mills. Lumber, *wood structural panel* and *veneer* mills shall be provided with a manual fire alarm system.

[F] 907.2.18 Underground buildings with smoke control systems. Where a smoke control system is installed in an underground building in accordance with this code, automatic smoke detectors shall be provided in accordance with Section 907.2.18.1.

[F] 907.2.18.1 Smoke detectors. Not fewer than one smoke detector *listed* for the intended purpose shall be installed in all of the following areas:

1. Mechanical equipment, electrical, transformer, telephone equipment, elevator machine or similar rooms.
2. Elevator lobbies.
3. The main return and exhaust air plenum of each air-conditioning system serving more than one *story* and located in a serviceable area downstream of the last duct inlet.
4. Each connection to a vertical duct or riser serving two or more floors from return air ducts or plenums of heating, ventilating and air-conditioning systems, except that in Group R occupancies, a *listed* smoke detector is allowed to be used in each return air riser carrying not more than 5,000 cubic feet per minute (2.4 m³/s) and serving not more than 10 air-inlet openings.

[F] 907.2.18.2 Alarm required. Activation of the smoke control system shall activate an audible alarm at a *constantly attended location*.

[F] 907.2.19 Deep underground buildings. Where the lowest level of a structure is more than 60 feet (18 288 mm) below the finished floor of the lowest *level of exit discharge*, the structure shall be equipped throughout with a manual fire alarm system, including an emergency voice/alarm communication system installed in accordance with Section 907.5.2.2.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] 907.2.20 Covered and open mall buildings. Where the total floor area exceeds 50,000 square feet (4645 m²) within either a *covered mall building* or within the perimeter line of an *open mall building*, an emergency voice/alarm communication system shall be provided. Access to emergency voice/alarm communication systems serving a mall, required or otherwise, shall be provided for the fire department. The system shall be provided in accordance with Section 907.5.2.2.

[F] 907.2.21 Residential aircraft hangars. Not fewer than one single-station smoke alarm shall be installed within a *residential aircraft hangar* as defined in Chapter 2 and shall be interconnected into the residential smoke alarm or other sounding device to provide an alarm that will be audible in all sleeping areas of the *dwelling*.

[F] 907.2.22 Airport traffic control towers. An automatic smoke detection system that activates the occupant notification system in accordance with Section 907.5 shall be provided in airport control towers in accordance with Sections 907.2.22.1 and 907.2.22.2.

Exception: Audible appliances shall not be installed within the control tower cab.

[F] 907.2.22.1 Airport traffic control towers with multiple exits and automatic sprinklers. Airport traffic control towers with multiple *exits* and equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1 shall be provided with smoke detectors in all of the following locations:

1. Airport traffic control cab.
2. Electrical and mechanical equipment rooms.
3. Airport terminal radar and electronics rooms.
4. Outside each opening into *interior exit stairways*.
5. Along the single *means of egress* permitted from observation levels.
6. Outside each opening into the single *means of egress* permitted from observation levels.

[F] 907.2.22.2 Other airport traffic control towers. Airport traffic control towers with a single exit or where sprinklers are not installed throughout shall be provided with smoke detectors in all of the following locations:

1. Airport traffic control cab.
2. Electrical and mechanical equipment rooms.
3. Airport terminal radar and electronics rooms.
4. Office spaces incidental to the tower operation.
5. Lounges for employees, including sanitary facilities.
6. *Means of egress*.
7. *Utility shafts* where access to smoke detectors can be provided.

[F] 907.2.23 Energy storage systems. An automatic smoke detection system or radiant-energy detection system shall be installed in rooms, areas and walk-in units containing energy storage systems as required in Section 1207.5.4 of the *International Fire Code*.

[F] 907.3 Fire safety functions. Automatic fire detectors utilized for the purpose of performing fire safety functions shall be connected to the building's fire alarm control unit where a fire alarm system is required by Section 907.2. Detectors shall, upon actuation, perform the intended function and activate the alarm notification appliances or activate a visible and audible supervisory signal at a *constantly attended location*. In buildings not equipped with a fire alarm system, the automatic fire detector shall be powered by normal electrical service and, upon actuation, perform the intended function. The detectors shall be located in accordance with NFPA 72.

[S][F] 907.3.1 Duct smoke detectors. Smoke detectors installed in ducts shall be *listed* for the air velocity, temperature and humidity present in the duct. Duct smoke detectors shall be connected to the building's fire alarm control unit where a fire alarm system is required by Section 907.2. Activation of a duct smoke detector shall initiate a visible and audible supervisory signal at a *constantly attended location* and shall perform the intended fire safety function in accordance with this code and the *International Mechanical Code*. In facilities that are required to be monitored by a supervising station, duct smoke detectors shall report only as a supervisory signal and not as a fire alarm. They shall not be used as a substitute for required open area detection and shall not activate the occupant notification system.

((Exceptions:

1. ~~The supervisory signal at a *constantly attended location* is not required where duct smoke detectors activate the building's alarm notification appliances.~~

2-)) **Exception:** In occupancies not required to be equipped with a fire alarm system, actuation of a smoke detector shall activate a visible and an audible signal in an *approved* location. Smoke detector trouble conditions shall activate a visible or audible signal in an *approved* location and shall be identified as air duct detector trouble.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] **907.3.2 Special locking systems.** Where special locking systems are installed on *means of egress* doors in accordance with Sections 1010.2.13 or 1010.2.14, an automatic detection system shall be installed as required by that section.

[S][F] **907.3.3 Elevator emergency operation.** Automatic fire detectors installed for elevator emergency operation shall be installed in accordance with the provisions of ((ASME A17.1/CSA B44 and NFPA 72)) rules promulgated by the build-
ing official or fire code official.

[F] **907.3.4 Wiring.** The wiring to the auxiliary devices and equipment used to accomplish the fire safety functions shall be monitored for integrity in accordance with NFPA 72.

[F] **907.4 Initiating devices.** Where a fire alarm system is required by another section of this code, occupant notification in accordance with Section 907.5 shall be initiated by one or more of the following. Initiating devices shall be installed in accordance with Sections 907.4.1 through 907.4.3.1.

1. Manual fire alarm boxes.
2. Automatic fire detectors.
3. *Automatic sprinkler system* waterflow devices.
4. Automatic fire-extinguishing systems.

[F] **907.4.1 Protection of fire alarm control unit.** In areas that are not continuously occupied, a single smoke detector shall be provided at the location of each fire alarm control unit, notification appliance circuit power extenders, and supervising station transmitting equipment.

Exception: Where ambient conditions prohibit installation of a smoke detector, a *heat detector* shall be permitted.

[F] **907.4.2 Manual fire alarm boxes.** Where a manual fire alarm system is required by another section of this code, it shall be activated by fire alarm boxes installed in accordance with Sections 907.4.2.1 through 907.4.2.6.

[F] **907.4.2.1 Location.** Manual fire alarm boxes shall be located not more than 5 feet (1524 mm) from the entrance to each *exit*. In buildings not protected by an *automatic sprinkler system* in accordance with Section 903.3.1.1 or 903.3.1.2, additional manual fire alarm boxes shall be located so that the distance of travel to the nearest box does not exceed 200 feet (60 960 mm).

[F] **907.4.2.2 Height.** The height of the manual fire alarm boxes shall be not less than 42 inches (1067 mm) and not more than 48 inches (1372 mm) measured vertically, from the floor level to the activating handle or lever of the box.

[F] **907.4.2.3 Color.** Manual fire alarm boxes shall be red in color.

[F] **907.4.2.4 Signs.** Where fire alarm systems are not monitored by an *approved* supervising station in accordance with Section 907.6.6, an *approved* permanent sign shall be installed adjacent to each manual fire alarm box that reads: WHEN ALARM SOUNDS CALL FIRE DEPARTMENT.

Exception: Where the manufacturer has permanently provided this information on the manual fire alarm box.

[F] **907.4.2.5 Protective covers.** The fire code official is authorized to require the installation of *listed* manual fire alarm box protective covers to prevent malicious false alarms or to provide the manual fire alarm box with protection from physical damage. The protective cover shall be transparent or red in color with a transparent face to permit visibility of the manual fire alarm box. Each cover shall include proper operating instructions. A protective cover that emits a local *alarm signal* shall not be installed unless *approved*. Protective covers shall not project more than that permitted by Section 1003.3.3.

[F] **907.4.2.6 Unobstructed and unobscured.** Manual fire alarm boxes shall be provided with ready access, unobstructed, unobscured and visible at all times.

[F] **907.4.3 Automatic smoke detection.** Where an automatic smoke detection system is required, it shall utilize smoke detectors unless ambient conditions prohibit such an installation. In spaces where smoke detectors cannot be utilized due to ambient conditions, *approved* automatic *heat detectors* shall be permitted.

[F] **907.4.3.1 Automatic sprinkler system.** For conditions other than specific fire safety functions noted in Section 907.3, in areas where ambient conditions prohibit the installation of smoke detectors, an *automatic sprinkler system* installed in such areas in accordance with Section 903.3.1.1 or 903.3.1.2 and that is connected to the fire alarm system shall be *approved* as automatic heat detection.

[F] **907.5 Occupant notification.** Occupant notification by fire alarms shall be in accordance with Sections 907.5.1 through 907.5.2.3.3. Occupant notification by smoke alarms in Group R-1 and R-2 occupancies shall comply with Section 907.5.2.1.3.2.

907.5.1 Alarm activation and annunciation. Upon activation, fire alarm systems shall initiate occupant notification and shall annunciate at the fire alarm control unit, or where allowed elsewhere by Section 907, at a *constantly attended location*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

907.5.1.1 Presignal feature. A presignal feature shall be provided only where *approved*. The presignal shall be annunciated at an approved, *constantly attended location*, having the capability to activate the occupant notification system in the event of fire or other emergency.

[F] 907.5.2 Alarm notification appliances. Alarm notification appliances shall be provided and shall be *listed* for their purpose.

[S][F] 907.5.2.1 Audible alarms. Audible alarm notification appliances shall be provided and emit a distinctive sound that is not to be used for any purpose other than that of a fire alarm.

Exceptions:

1. Audible alarm notification appliances are not required in critical care areas of Group I-2, Condition 2 occupancies that are in compliance with Section 907.2.6, Exception 2.
2. A visible *alarm notification appliance* installed in a nurses' control station or other continuously attended staff location in a Group I-2, Condition 2 suite shall be an acceptable alternative to the installation of audible alarm notification appliances throughout a suite or unit in Group I-2, Condition 2 occupancies that are in compliance with Section 907.2.6, Exception 2.
3. Where provided, audible notification appliances located in each enclosed occupant evacuation elevator lobby in accordance with Section ~~((3008.9.1))~~ 403.6.2.10.1 shall be connected to a separate notification zone for manual paging only.

[S][F] 907.5.2.1.1 Average sound pressure. The audible alarm notification appliances shall provide a sound pressure level of 15 decibels (dBA) above the *average ambient sound level* or 5 dBA above the maximum sound level having a duration of not less than 60 seconds, whichever is greater, in every *occupiable space* within the building. The minimum sound pressure levels shall be: 75 dBA in occupancies in Groups R and I-Condition 1; 90 dBA in mechanical equipment rooms; and 60 dBA in other occupancies.

Exceptions:

1. Private mode signaling in accordance with NFPA 72 is allowed in areas of I-2 and I-3 occupancies if occupants are not expected to self-evacuate.
2. Alarm systems installed in selected parts of a building are required to meet sound pressure requirements within the selected area of the building only.

[W][S][F] 907.5.2.1.2 Maximum sound pressure. The ~~((total))~~ maximum sound pressure level ~~((produced by combining the ambient sound pressure level with all))~~ for audible notification appliances ~~((operating))~~ shall ~~((not exceed))~~ be 110 dBA at the minimum hearing distance from the audible appliance. For systems operating in the public mode, the maximum sound pressure level shall not exceed 30 dBA over the average ambient sound level. Where the average ambient noise is greater than ~~((405))~~ 95 dBA, visible alarm notification appliances shall be provided in accordance with NFPA 72 and audible alarm notification appliances shall not be required.

[F] 907.5.2.1.3 Audible signal frequency in Group R-1 and R-2 sleeping rooms. Audible signal frequency in Group R-1 and R-2 occupancies shall be in accordance with Sections 907.5.2.1.3.1 and 907.5.2.1.3.2.

[F] 907.5.2.1.3.1 Fire alarm system signal. In sleeping rooms of Group R-1 and R-2 occupancies, the audible alarm activated by a fire alarm system shall be a 520-Hz low-frequency signal complying with NFPA 72.

[F] 907.5.2.1.3.2 Smoke alarm signal in sleeping rooms. In sleeping rooms of Group R-1 and R-2 occupancies that are required by Section 907.2.8 or 907.2.9 to have a fire alarm system, the audible *alarm signal* activated by single- or multiple-station smoke alarms in the *dwelling unit* or *sleeping unit* shall be a 520-Hz signal complying with NFPA 72. Where a sleeping room smoke alarm is unable to produce a 520-Hz signal, the 520-Hz *alarm signal* shall be provided by a *listed* notification appliance or a smoke detector with an integral 520-Hz sounder.

[S][F] 907.5.2.2 Emergency voice/alarm communication systems. Emergency voice/alarm communication systems required by this code shall be designed and installed in accordance with NFPA 72. The operation of any automatic fire detector, sprinkler waterflow device or manual fire alarm box shall automatically sound an alert tone followed by voice instructions giving *approved* information and directions for a general or staged evacuation in accordance with the building's fire safety and evacuation plans required by Section 404 of the *International Fire Code*. In high-rise buildings, the system shall operate on at least the alarming floor, the floor above and ~~((the floor))~~ two floors below. Speakers shall be provided throughout the building by paging zones. At a minimum, paging zones shall be provided as follows:

1. Elevator groups.
2. *Interior exit stairways*.
3. Each floor.
4. *Areas of refuge* as defined in Chapter 2.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Exception: In Group I-1 and I-2 occupancies, the alarm shall sound in a constantly attended area and a general occupant notification shall be broadcast over the overhead page.

[F] **907.5.2.2.1 Manual override.** A manual override for emergency voice communication shall be provided on a selective and all-call basis for all paging zones.

[F] **907.5.2.2.2 Live voice messages.** The emergency voice/alarm communication system shall have the capability to broadcast live voice messages by paging zones on a selective and all-call basis.

[F] **907.5.2.2.3 Alternative uses.** The emergency voice/alarm communication system shall be allowed to be used for other announcements, provided that the manual fire alarm use takes precedence over any other use.

[F] **907.5.2.2.4 Emergency voice/alarm communication captions.** Where stadiums, arenas and *grandstands* have 15,000 fixed seats or more and provide audible public announcements, the emergency/voice alarm communication system shall provide prerecorded or real-time captions. Prerecorded or live emergency captions shall be from an *approved* location constantly attended by personnel trained to respond to an emergency.

[S][F] **907.5.2.2.5 Standby power.** Emergency voice/alarm communications systems shall be provided with *legally required standby power* in accordance with Section 2702.

[S] **907.5.2.2.6 Voice intelligibility.** Voice intelligibility is required in acoustically distinguished spaces, such as interior dwelling and sleeping units. Voice intelligibility is not required in acoustically distinguished spaces that meet the following conditions:

1. The alert tone within such spaces provides audible levels meeting the requirements of Section 907.5.2.1.1 of the *Seattle Fire Code*.
2. Such spaces are within 30 feet travel distance to a space that does meet voice intelligibility requirements.

[S][F] **907.5.2.3 Visible alarms.** Visible alarm notification appliances shall be provided in accordance with Sections 907.5.2.3.1 through 907.5.2.3.3 and rules promulgated by the *building official* or *fire code official*.

Exceptions:

1. Visible alarm notification appliances are not required in *alterations*, except where an existing fire alarm system is upgraded or replaced, or a new fire alarm system is installed.
2. Visible alarm notification appliances shall not be required in *exits* as defined in Chapter 2.
3. Visible alarm notification appliances shall not be required in elevator cars.
4. Visual alarm notification appliances are not required in critical care areas of Group I-2, Condition 2 occupancies that are in compliance with Section 907.2.6, Exception 2.
5. A visible *alarm notification appliance* installed in a nurses' control station or other continuously attended staff location in a Group I-2, Condition 2 suite shall be an acceptable alternative to the installation of visible alarm notification appliances throughout the suite or unit in Group I-2, Condition 2 occupancies that are in compliance with Section 907.2.6, Exception 2.
6. Alarm systems installed in selected parts of a building are required to meet sound pressure requirements within the selected area of the building only.

[F] **907.5.2.3.1 Public use areas and common use areas.** Visible alarm notification appliances shall be provided in *public use areas* and *common use areas*.

Exception: Where *employee work areas* have audible alarm coverage, the notification appliance circuits serving the *employee work areas* shall be initially designed with not less than 20-percent spare capacity to account for the potential of adding visible notification appliances in the future to accommodate hearing-impaired employee(s).

[F] **907.5.2.3.2 Groups I-1 and R-1.** *Habitable spaces* in *dwelling units* and *sleeping units* in Group I-1 and R-1 occupancies in accordance with Table 907.5.2.3.2 shall be provided with visible alarm notification. Visible alarms shall be activated by the in-room smoke alarm and the building fire alarm system.

[F] TABLE 907.5.2.3.2

76 to 100	9
101 to 150	12

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

**[F] TABLE 907.5.2.3.2—continued
VISIBLE ALARMS**

NUMBER OF SLEEPING UNITS	SLEEPING ACCOMMODATIONS WITH VISIBLE ALARMS
151 to 200	14
201 to 300	17
301 to 400	20
401 to 500	22
501 to 1,000	5% of total
1,001 and over	50 plus 3 for each 100 over 1,000

[F] 907.5.2.3.3 Group R-2. In Group R-2 occupancies required by Section 907 to have a fire alarm system, each *story* that contains *dwelling units* and *sleeping units* shall be provided with the capability to support future visible alarm notification appliances in accordance with Chapter 11 of ICC A117.1. Such capability shall accommodate wired or wireless equipment.

[F] 907.5.2.3.3.1 Wired equipment. Where wired equipment is used to comply with the future capability required by Section 907.5.2.3.3, the system shall include one of the following capabilities:

1. The replacement of audible appliances with combination audible/visible appliances or additional visible notification appliances.
2. The future extension of the existing wiring from the unit smoke alarm locations to required locations for visible appliances.
3. For wired equipment, the fire alarm power supply and circuits shall have not less than 5-percent excess capacity to accommodate the future addition of visible alarm notification appliances, and a single access point to such circuits shall be available on every story. Such circuits shall not be required to be extended beyond a single access point on a story. The fire alarm system shop drawings required by Section 907.1.2 shall include the power supply and circuit documentation to accommodate the future addition of visible notification appliances.

[F] 907.6 Installation and monitoring. A fire alarm system shall be installed and monitored in accordance with Sections 907.6.1 through 907.6.6.3 and NFPA 72.

[S][F] 907.6.1 Wiring. Wiring shall comply with the requirements of (~~NFPA 70~~) the *Seattle Electrical Code* and NFPA 72. Wireless protection systems utilizing radio-frequency transmitting devices shall comply with the special requirements for supervision of low-power wireless systems in NFPA 72.

[F] 907.6.2 Power supply. The primary and secondary power supply for the fire alarm system shall be provided in accordance with NFPA 72.

Exception: Back-up power for single-station and multiple-station smoke alarms as required in Section 907.2.11.6.

[F] 907.6.3 Initiating device identification. The fire alarm system shall identify the specific *initiating device* address, location, device type, floor level where applicable and status including indication of normal, alarm, trouble and supervisory status, as appropriate.

Exceptions:

1. Fire alarm systems in single-story buildings less than 22,500 square feet (2090 m²) in area.
2. Fire alarm systems that only include manual fire alarm boxes, waterflow initiating devices and not more than 10 additional alarm-initiating devices.
3. Special initiating devices that do not support individual device identification.
4. Fire alarm systems or devices that are replacing existing equipment.

[F] 907.6.3.1 Annunciation. The *initiating device* status shall be annunciated at an *approved* on-site location.

[S][F] 907.6.4 Zones. Each floor shall be zoned separately and a zone shall not exceed 22,500 square feet (2090 m²). The length of any zone shall not exceed 300 feet (91 440 mm) in any direction.

Exception: *Automatic sprinkler system* zones shall not exceed the area permitted by NFPA 13.

[F] 907.6.4.1 (~~Zoning indicator~~) Annunciator panel. (~~A zoning indicator panel and the associated controls shall be provided in an approved location.~~) All fire alarm systems in buildings without a fire command center shall be provided with an annunciator panel (or the main fire alarm control panel) located inside the building at the main building entrance. The visual zone indication shall lock in until the system is reset and shall not be canceled by the operation of an audible-alarm silencing switch.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[S][F] 907.6.4.2 High-rise buildings. In high-rise buildings, a separate zone by floor shall be provided for each of the following types of alarm-initiating devices where provided:

1. Smoke detectors.
2. Sprinkler waterflow devices.
3. Manual fire alarm boxes other than the manual fire alarm box located in the fire command center.
4. Other *approved* types of automatic *fire protection systems*.

[F] 907.6.5 Access. Access shall be provided to each fire alarm device and notification appliance for periodic inspection, maintenance and testing.

[S][F] 907.6.6 Monitoring. Fire alarm systems required by this chapter or by the *International Fire Code* shall be monitored by an *approved* supervising station in accordance with NFPA 72.

Exception: Monitoring by a supervising station is not required for:

1. Single- and multiple-station smoke alarms required by Section 907.2.11.
2. Smoke detectors in Group I-3 occupancies.
3. *Automatic sprinkler systems* in one- and two-family dwellings and townhouses where each townhouse unit is provided with a dedicated sprinkler system.

[F] 907.6.6.1 Transmission of alarm signals. Transmission of alarm signals to a supervising station shall be in accordance with NFPA 72.

[F] 907.6.6.2 MIY Monitoring. Direct transmission of alarms associated with monitor it yourself (MIY) transmitters to a public safety answering point (PSAP) shall not be permitted unless *approved* by the *fire code official*.

[F] 907.6.6.3 Termination of monitoring service. Termination of fire alarm monitoring services shall be in accordance with Section 901.9 of the *International Fire Code*.

[S][F] 907.7 Acceptance tests and completion. Upon completion of the installation or portion thereof, and after the electrical inspector has approved the installation or portion thereof, the fire alarm system and all fire alarm components or portion thereof shall be tested in accordance with NFPA 72.

[F] 907.7.1 Single- and multiple-station alarm devices. When the installation of the alarm devices is complete, each device and interconnecting wiring for multiple-station alarm devices shall be tested in accordance with the smoke alarm provisions of NFPA 72.

[F] 907.7.2 Record of completion. A record of completion in accordance with NFPA 72 verifying that the system or portion thereof has been installed and tested in accordance with the *approved* plans and specifications shall be provided.

[F] 907.7.3 Instructions. Operating, testing and maintenance instructions and *record drawings* (“as-builts”) and equipment specifications shall be provided at an *approved* location.

[F] 907.8 Inspection, testing and maintenance. The maintenance and testing schedules and procedures for fire alarm and fire detection systems shall be in accordance with Section 907.8 of the *International Fire Code*.

SECTION 908 EMERGENCY ALARM SYSTEMS

[F] 908.1 Group H occupancies. Emergency alarms for the detection and notification of an emergency condition in Group H occupancies shall be provided in accordance with Section 415.5.

[F] 908.2 Group H-5 occupancy. Emergency alarms for notification of an emergency condition in an HPM facility shall be provided as required in Section 415.11.4.

[S][F] 908.3 Fire alarm system interface. Where an emergency alarm system is interfaced with a building’s fire alarm system, the signal produced at the fire alarm control unit shall be a supervisory signal by the fire code official.

SECTION 909 SMOKE CONTROL SYSTEMS

[F] 909.1 Scope and purpose. This section applies to mechanical or passive smoke control systems where they are required by other provisions of this code. The purpose of this section is to establish minimum requirements for the design, installation and acceptance testing of smoke control systems that are intended to provide a tenable environment for the evacuation or relocation of occupants. These provisions are not intended for the preservation of contents, the timely restoration of operations or for assistance in fire suppression or overhaul activities. Smoke control systems regulated by this section serve a different

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

purpose than the smoke- and heat-removal provisions found in Section 910. Mechanical smoke control systems shall not be considered exhaust systems under Chapter 5 of the *International Mechanical Code*.

[S] 909.1.1 Smoke control presubmittal conference. The applicant shall arrange a smoke control presubmittal conference at least 60 days prior to submittal of a building permit application that contains the construction documents for any architectural components of the building. The purpose of this presubmittal conference is to obtain conceptual approval of the design team approach to compliance with the smoke control provisions in this section.

[F] 909.2 General design requirements. Buildings, structures or parts thereof required by this code to have a smoke control system or systems shall have such systems designed in accordance with the applicable requirements of Section 909 and the generally accepted and well-established principles of engineering relevant to the design. The *construction documents* shall include sufficient information and detail to adequately describe the elements of the design necessary for the proper implementation of the smoke control systems. These documents shall be accompanied by sufficient information and analysis to demonstrate compliance with these provisions.

[F] 909.3 Special inspection and test requirements. In addition to the ordinary inspection and test requirements that buildings, structures and parts thereof are required to undergo, smoke control systems subject to the provisions of Section 909 shall undergo *special inspections* and tests sufficient to verify the proper commissioning of the smoke control design in its final installed condition. The design submission accompanying the *construction documents* shall clearly detail procedures and methods to be used and the items subject to such inspections and tests. Such commissioning shall be in accordance with generally accepted engineering practice and, where possible, based on published standards for the particular testing involved. The *special inspections* and tests required by this section shall be conducted under the same terms in Section 1704.

[F] 909.4 Analysis. A rational analysis supporting the types of smoke control systems to be employed, their methods of operation, the systems supporting them and the methods of construction to be utilized shall accompany the submitted *construction documents* and shall include, but not be limited to, the items indicated in Sections 909.4.1 through 909.4.7.

[F] 909.4.1 Stack effect. The system shall be designed such that the maximum probable normal or reverse stack effect will not adversely interfere with the system's capabilities. In determining the maximum probable stack effect, altitude, elevation, weather history and interior temperatures shall be used.

[F] 909.4.2 Temperature effect of fire. Buoyancy and expansion caused by the design fire in accordance with Section 909.9 shall be analyzed. The system shall be designed such that these effects do not adversely interfere with the system's capabilities.

[F] 909.4.3 Wind effect. The design shall consider the adverse effects of wind. Such consideration shall be consistent with the wind-loading provisions of Chapter 16.

[F] 909.4.4 HVAC systems. The design shall consider the effects of the heating, ventilating and air-conditioning (HVAC) systems on both smoke and fire transport. The analysis shall include all permutations of systems status. The design shall consider the effects of the fire on the HVAC systems.

[F] 909.4.5 Climate. The design shall consider the effects of low temperatures on systems, property and occupants. Air inlets and exhausts shall be located so as to prevent snow or ice blockage.

[F] 909.4.6 Duration of operation. All portions of active or engineered smoke control systems shall be capable of continued operation after detection of the fire event for a period of not less than either 20 minutes or 1.5 times the calculated egress time, whichever is greater.

909.4.7 Smoke control system interaction. The design shall consider the interaction effects of the operation of multiple smoke control systems for all design scenarios.

[F] 909.5 Smoke barrier construction. *Smoke barriers* required for passive smoke control and a smoke control system using the pressurization method shall comply with Section 709. The maximum allowable leakage area shall be the aggregate area calculated using the following leakage area ratios:

1. Walls $A/A_w = 0.00100$
2. Interior *exit stairways* and *ramps* and *exit passageways*: $A/A_w = 0.00035$
3. Enclosed *exit access stairways* and *ramps* and all other *shafts*: $A/A_w = 0.00150$
4. Floors and roofs: $A/A_F = 0.00050$

where:

A = Total leakage area, square feet (m²).

A_F = Unit floor or roof area of barrier, square feet (m²).

A_w = Unit wall area of barrier, square feet (m²).

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

The leakage area ratios shown do not include openings due to gaps around doors and operable windows. The total leakage area of the *smoke barrier* shall be determined in accordance with Section 909.5.1 and tested in accordance with Section 909.5.2.

[F] 909.5.1 Total leakage area. Total leakage area of the barrier is the product of the *smoke barrier* gross area multiplied by the allowable leakage area ratio, plus the area of other openings such as gaps around doors and operable windows.

[S][F] 909.5.2 Testing of leakage area. Compliance with the maximum total leakage area shall be determined by achieving the minimum air pressure difference across the barrier with the system in the smoke control mode for mechanical smoke control systems utilizing the pressurization method. Compliance with the maximum total leakage area of passive smoke control systems shall be verified through methods such as door fan testing or other methods, as *approved* by the ((~~fire code~~) *building official*).

[F] 909.5.3 Opening protection. Openings in *smoke barriers* shall be protected by automatic-closing devices actuated by the required controls for the mechanical smoke control system. Door openings shall be protected by *fire door assemblies* complying with Section 716.

Exceptions:

1. Passive smoke control systems with automatic-closing devices actuated by spot-type smoke detectors *listed* for releasing service installed in accordance with Section 907.3.
2. Fixed openings between smoke zones that are protected utilizing the airflow method.
3. In Group I-1, Condition 2; Group I-2; and *ambulatory care facilities*, where a pair of opposite-swinging doors are installed across a *corridor* in accordance with Section 909.5.3.1, the doors shall not be required to be protected in accordance with Section 716. The doors shall be close-fitting within operational tolerances and shall not have a center mullion or undercuts in excess of 3/4 inch (19.1 mm), louvers or grilles. The doors shall have head and jamb stops and astragals or rabbets at meeting edges and, where permitted by the door manufacturer’s listing, positive-latching devices are not required.
4. In Group I-2 and *ambulatory care facilities*, where such doors are special-purpose horizontal sliding, accordion or folding door assemblies installed in accordance with Section 1010.3.3 and are automatic closing by smoke detection in accordance with Section 716.2.6.5.
5. Group I-3.
6. Openings between smoke zones with clear ceiling heights of 14 feet (4267 mm) or greater and bank-down capacity of greater than 20 minutes as determined by the design fire size.

909.5.3.1 Group I-1, Condition 2; Group I-2; and ambulatory care facilities. In Group I-1, Condition 2; Group I-2; and *ambulatory care facilities*, where doors are installed across a *corridor*, the doors shall be automatic closing by smoke detection in accordance with Section 716.2.6.5 and shall have a vision panel with fire-protection-rated glazing materials in fire protection-rated frames, the area of which shall not exceed that tested.

[F] 909.5.3.2 Ducts and air transfer openings. Ducts and air transfer openings are required to be protected with a minimum Class II, 250°F (121°C) *smoke damper* complying with Section 717.

[F] 909.6 Pressurization method. The primary mechanical means of controlling smoke shall be by pressure differences across *smoke barriers*. Maintenance of a tenable environment is not required in the smoke control zone of fire origin.

[F] 909.6.1 Minimum pressure difference. The pressure difference across a *smoke barrier* used to separate smoke zones shall be not less than 0.05-inch water gage (0.0124 kPa) in fully sprinklered buildings.

In buildings permitted to be other than fully sprinklered, the smoke control system shall be designed to achieve pressure differences not less than two times the maximum calculated pressure difference produced by the design fire.

[F] 909.6.2 Maximum pressure difference. The maximum air pressure difference across a *smoke barrier* shall be determined by required door-opening or closing forces. The actual force required to open exit doors when the system is in the smoke control mode shall be in accordance with Section 1010.1.3. Opening and closing forces for other doors shall be determined by standard engineering methods for the resolution of forces and reactions. The calculated force to set a side-hinged, swinging door in motion shall be determined by:

$$F = F_{dc} + K(WA\Delta P)/2(W-d) \tag{Equation 9-1}$$

where:

- A = Door area, square feet (m²).
- d = Distance from door handle to latch edge of door, feet (m).
- F = Total door opening force, pounds (N).
- F_{dc} = Force required to overcome closing device, pounds (N).

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

- K = Coefficient 5.2 (1.0).
 W = Door width, feet (m).
 ΔP = Design pressure difference, inches of water (Pa).

[S][F] 909.6.3 Pressurized stairways and elevator hoistways. Where *stairways* or elevator hoistways are pressurized, such pressurization systems shall comply with Section 909 as smoke control systems, in addition to the requirements of Sections 909.20 ~~((of this code))~~ and 909.21 ~~((of the International Fire Code.))~~

[S][F] 909.7 Airflow design method. Where *approved* by the ~~((fire code))~~ building official, smoke migration through openings fixed in a permanently open position, which are located between smoke control zones by the use of the airflow method, shall be permitted. The design airflow shall be in accordance with this section. Airflow shall be directed to limit smoke migration from the fire zone. The geometry of openings shall be considered to prevent flow reversal from turbulent effects. Smoke control systems using the airflow method shall be designed in accordance with NFPA 92.

[F] 909.7.1 Prohibited conditions. This method shall not be employed where either the quantity of air or the velocity of the airflow will adversely affect other portions of the smoke control system, unduly intensify the fire, disrupt plume dynamics or interfere with exiting. Airflow toward the fire shall not exceed 200 feet per minute (1.02 m/s). Where the calculated airflow exceeds this limit, the airflow method shall not be used.

[S][F] 909.8 Exhaust method. Where *approved* by the ~~((fire code))~~ building official, mechanical smoke control for large enclosed volumes, such as in *atriums* or malls, shall be permitted to utilize the exhaust method. Smoke control systems using the exhaust method shall be designed in accordance with NFPA 92.

[F] 909.8.1 Smoke layer. The height of the lowest horizontal surface of the smoke layer interface shall be maintained not less than 6 feet (1829 mm) above a walking surface that forms a portion of a required egress system within the smoke zone.

[S][F] 909.9 Design fire. The design fire shall be based on a rational analysis performed by the *registered design professional* and *approved* by the ~~((fire code))~~ building official. The design fire shall be based on the analysis in accordance with Section 909.4 and this section. A design fire is not required for stairway and elevator hoistway pressurization system designs.

[F] 909.9.1 Factors considered. The engineering analysis shall include the characteristics of the fuel, fuel load, effects included by the fire and whether the fire is likely to be steady or unsteady.

[F] 909.9.2 Design fire fuel. Determination of the design fire shall include consideration of the type of fuel, fuel spacing and configuration.

[F] 909.9.3 Heat-release assumptions. The analysis shall make use of best available data from *approved* sources and shall not be based on excessively stringent limitations of combustible material.

[F] 909.9.4 Sprinkler effectiveness assumptions. A documented engineering analysis shall be provided for conditions that assume fire growth is halted at the time of sprinkler activation.

[S][F] 909.10 Equipment. Equipment including, but not limited to, fans, ducts, automatic *dampers* and balance *dampers*, shall be ~~((suitable))~~ listed for its intended use, ~~((suitable))~~ listed for the probable exposure temperatures that the rational analysis indicates and as *approved* by the ~~((fire code))~~ building official.

[F] 909.10.1 Exhaust fans. Components of exhaust fans shall be rated and certified by the manufacturer for the probable temperature rise to which the components will be exposed. This temperature rise shall be computed by:

Exception: An elevated temperature rating is not required for ventilation system fans used to assist in achieving stairway and elevator hoistway pressure differential relationships.

$$T_s = (Q_c/mc) + (T_a) \quad \text{(Equation 9-2)}$$

where:

- c = Specific heat of smoke at smoke layer temperature, Btu/lb°F (kJ/kg × K).
 m = Exhaust rate, pounds per second (kg/s).
 Q_c = Convective heat output of fire, Btu/s (kW).
 T_a = Ambient temperature, °F (K).
 T_s = Smoke temperature, °F (K).

Exception: Reduced T_s as calculated based on the assurance of adequate dilution air.

[F] 909.10.2 Ducts. Duct materials and joints shall be capable of withstanding the probable temperatures and pressures to which they are exposed as determined in accordance with Section 909.10.1. Ducts shall be constructed and supported in accordance with the *International Mechanical Code*. Ducts shall be leak tested to 1.5 times the maximum design pressure in accordance with nationally accepted practices. Measured leakage shall not exceed 5 percent of design flow. Results of

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

such testing shall be a part of the documentation procedure. Ducts shall be supported directly from fire-resistance-rated structural elements of the building by substantial, noncombustible supports.

Exceptions:

1. Duct leakage testing is not required for stairway or elevator hoistway pressurization systems.
2. Noncombustible supports are not required in low-rise buildings of combustile construction.
3. Flexible connections, for the purpose of vibration isolation, complying with the *International Mechanical Code* and that are constructed of *approved* fire-resistance-rated materials.

[F] 909.10.3 Equipment, inlets and outlets. Equipment shall be located so as to not expose uninvolved portions of the building to an additional fire hazard. Outside air inlets shall be located ((sø)) as required by Sections 909.20.5 and 909.20.6, to minimize the potential for introducing smoke or flame into the building. Exhaust outlets shall be so located as to minimize reintroduction of smoke into the building and to limit exposure of the building or adjacent buildings to an additional fire hazard.

[F] 909.10.4 Automatic dampers. Automatic *dampers*, regardless of the purpose for which they are installed within the smoke control system, shall be listed and conform to the requirements of *approved*, recognized standards.

[F] 909.10.5 Fans. In addition to other requirements, belt-driven fans shall have 1.5 times the number of belts required for the design duty, with the minimum number of belts being two. Fans shall be selected for stable performance based on normal temperature and, where applicable, elevated temperature. Calculations and manufacturer's fan curves shall be part of the documentation procedures. Fans shall be supported and restrained by noncombustible devices in accordance with the requirements of Chapter 16.

Exceptions:

1. An elevated temperature rating is not required for stairway and elevator hoistway pressurization supply air fans or for ventilation system fans used to assist in achieving stairway and elevator hoistway pressure differential relationships.
2. Noncombustible supports are not required in low-rise buildings of combustile construction.

Motors driving fans shall not be operated beyond their nameplate horsepower (kilowatts), as determined from measurement of actual current draw, and shall have a minimum service factor of 1.15.

[S][F] 909.11 ((Standby)) Emergency power. Smoke control systems shall be provided with ((standby)) emergency power in accordance with Section 2702.

Exceptions:

1. Stairway pressurization systems for low-rise buildings are permitted to be provided with legally required standby power in accordance with Section 909.20.6.
2. Hoistway pressurization systems for low-rise buildings are permitted to be provided with legally required standby power in accordance with Section 909.21.5.

Interpretation I909.11: Other building ventilation system fans used to achieve stairway or elevator hoistway pressure differential relationships are considered to be part of the smoke control system and are required to be provided with emergency power in high-rise buildings.

909.11.1 Equipment room. The ((standby)) emergency power source and its transfer switches shall be in a room separate from the normal power transformers and switch gears and ventilated directly to and from the exterior. The room shall be enclosed with not less than 1-hour *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both.

Exceptions:

1. Where located within a sprinklered parking garage of Type I or II construction, emergency power and *legally required standby power systems* with fixed fuel quantities meeting the limits of Section 603.3 of the *International Fire Code*, and their transfer switches, are not required to be in a separate room. Other occupancies located in the story where the system is located shall be separated from the system by fire barriers with a minimum 1 hour fire-resistance rating.
2. Combustion and radiator intake air are permitted to be transferred from the adjacent garage. Radiator discharge air is permitted to be transferred to the adjacent garage. Radiator ventilation intake and discharge air locations shall be separated to maintain the radiator ventilation intake air temperature below the maximum temperature allowed to meet the emergency and *legally required standby power system* loads.

[F] 909.11.2 Power sources and power surges. Elements of the smoke control system relying on volatile memories or the like shall be supplied with uninterruptable power sources of sufficient duration to span 15-minute primary power interrup-

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

tion. Elements of the smoke control system susceptible to power surges shall be suitably protected by conditioners, suppressors or other *approved* means.

909.11.3 Wiring. In addition to meeting requirements of the *Seattle Electrical Code*, all wiring, regardless of voltage, shall have fire-resistance-rated protection of at least two hours or as required in rules promulgated by the *building official*.

Exceptions:

1. Subject to the approval of the *building official*, fire-resistance rating is not required for wiring located in a parking garage.
2. Wiring serving building ventilation system fans used to achieve stairway or elevator hoistway pressure differential relationships need not be protected unless protection is required by other provisions in this or other codes.
3. Wiring serving stairway or elevator hoistway pressurization systems in low-rise buildings is permitted to have fire-resistance-rated protection consistent with the fire-resistance rating of the stairway or elevator hoistway.

[S][F] 909.12 Detection and control systems. Fire detection systems providing control input or output signals to mechanical smoke control systems or elements thereof shall comply with the requirements of Section 907. Such systems shall be equipped with a control unit complying with UL 864 and *listed* as smoke control equipment.

909.12.1 Verification. Control systems for mechanical smoke control systems shall include provisions for verification. Verification shall include positive confirmation of actuation, testing, manual override and the presence of power downstream of all disconnects. A preprogrammed weekly test sequence shall report abnormal conditions audibly, visually and by printed report. The preprogrammed weekly test shall operate all devices, equipment and components used for smoke control.

Exceptions:

1. Where verification of individual components tested through the preprogrammed weekly testing sequence will interfere with, and produce unwanted effects to, normal building operation, such individual components are permitted to be bypassed from the preprogrammed weekly testing, where *approved* by the building official and in accordance with both of the following:
 - 1.1. Where the operation of components is bypassed from the preprogrammed weekly test, presence of power downstream of all disconnects shall be verified weekly by a *listed* control unit.
 - 1.2. Testing of all components bypassed from the preprogrammed weekly test shall be in accordance with Section ~~((909.20.6))~~ 909.22.6 of the *International Fire Code*.
2. Weekly testing is not required for stairway and hoistway pressurization systems.

[F] 909.12.2 Wiring. ~~((In addition to meeting requirements of NFPA 70, all wiring, regardless of voltage, shall be fully enclosed within continuous raceways.))~~ See Section 909.11.3.

[F] 909.12.3 Activation. Smoke control systems shall be activated in accordance with this section.

[F] 909.12.3.1 Pressurization, airflow or exhaust method. Mechanical smoke control systems using the pressurization, airflow or exhaust method shall have completely automatic control.

[F] 909.12.3.2 Passive method. Passive smoke control systems actuated by *approved* spot-type detectors *listed* for releasing service shall be permitted.

[F] 909.12.4 Automatic control. Where completely automatic control is required or used, the automatic-control sequences shall be initiated from an appropriately zoned *automatic sprinkler system* complying with Section 903.3.1.1, manual controls provided with *ready access* for the fire department and any smoke detectors required by engineering analysis.

[F] 909.13 Control air tubing. Control air tubing shall be of sufficient size to meet the required response times. Tubing shall be flushed clean and dry prior to final connections and shall be adequately supported and protected from damage. Tubing passing through concrete or masonry shall be sleeved and protected from abrasion and electrolytic action.

[S][F] 909.13.1 Materials. Control-air tubing shall be hard-drawn copper, Type L, ACR in accordance with ASTM B42, ASTM B43, ASTM B68/B68M, ASTM B88, ASTM B251 and ASTM B280. Fittings shall be wrought copper or brass, solder type in accordance with ASME B16.18 or ASME B16.22. Changes in direction shall be made with appropriate tool bends. Brass compression-type fittings shall be used at final connection to devices; other joints shall be brazed using a BCuP-5 brazing alloy with solidus above 1,100°F (593°C) and liquids below 1,500°F (816°C). Brazing flux shall be used on copper-to-brass joints only.

Exception: Nonmetallic tubing used within control panels and at the final connection to devices provided that all of the following conditions are met:

1. Tubing shall comply with the requirements of Section 602.2.1.3 of the ~~((*International*))~~ *Seattle Mechanical Code*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

2. Tubing and connected devices shall be completely enclosed within a galvanized or paint-grade steel enclosure having a minimum thickness of 0.0296 inch (0.7534 mm) (No. 22 gage). Entry to the enclosure shall be by copper tubing with a protective grommet of neoprene or Teflon or by suitable brass compression to male barbed adapter.
3. Tubing shall be identified by appropriately documented coding.
4. Tubing shall be neatly tied and supported within the enclosure. Tubing bridging cabinets and doors or moveable devices shall be of sufficient length to avoid tension and excessive stress. Tubing shall be protected against abrasion. Tubing connected to devices on doors shall be fastened along hinges.

[F] 909.13.2 Isolation from other functions. Control tubing serving other than smoke control functions shall be isolated by automatic isolation valves or shall be an independent system.

[F] 909.13.3 Testing. Control air tubing shall be tested at three times the operating pressure for not less than 30 minutes without any noticeable loss in gauge pressure prior to final connection to devices.

[F] 909.14 Marking and identification. The detection and control systems shall be clearly marked at all junctions, accesses and terminations.

[S][F] 909.15 Control diagrams. Identical control diagrams showing all devices in the system and identifying their location and function shall be maintained current and kept on file ~~((with the fire code official, the fire department and))~~ in the fire command center, ~~((in a format and manner approved by the fire code official.))~~

Exception: Control diagrams for stairway or elevator hoistway pressurization systems in low-rise buildings shall be located at the fire alarm control panel.

[S][F] 909.16 Fire fighter's smoke control panel. A fire fighter's smoke control panel for fire department emergency response purposes only shall be provided and shall include manual control or override of automatic control for mechanical smoke control systems. The panel shall be located in a fire command center complying with Section 911 in high-rise buildings or buildings with smoke-protected assembly seating. In all other buildings, the fire fighter's smoke control panel shall be installed in an *approved* location adjacent to the fire alarm control panel. The fire fighter's smoke control panel shall comply with Sections 909.16.1 through 909.16.3.

The smoke control panel for high rise buildings shall include a visual depiction of the building showing typical floor plan(s) with locations of interior exit stairways and elevator hoistways. The panel shall also include section views of the building to show the extent of travel for each interior exit stairway and elevator. Interior exit stairways and elevator hoistways shall be labeled on the plan section views to match the labeling used in the building itself.

Exception: For buildings that use only stairway and elevator hoistway pressurization for smoke control, pressurization fan status and controls in accordance with Section 909.16.2 (or equivalent) may be installed on the main fire alarm control panel (FACP) in lieu of installing a dedicated fire fighter's smoke control panel. The building graphics normally provided on the smoke control panel shall be laminated and mounted in the vicinity of the FACP for quick reference by emergency responders.

Note: This exception may be applied to ventilation systems other than interior exit stairway supply air systems to exhaust air from adjacent space.

[F] 909.16.1 Smoke control systems. Fans within the building shall be shown on the fire fighter's control panel. Fan control switches shall be located on the panel in the vicinity of the location where the shaft supplied by each fan is depicted. A clear indication of the direction of airflow and the relationship of components shall be displayed. Status indicators shall be provided for all ~~((smoke control equipment, annunciated by fan and zone, and by pilot lamp type indicators))~~ fans as follows:

1. Fans ~~((, dampers and other operating equipment))~~ in ~~((their normal))~~ a ready/non-operating status—WHITE.
2. Fans ~~((, dampers and other operating equipment))~~ in their off ~~((or closed))~~ status—RED.
3. Fans ~~((, dampers and other operating equipment))~~ in ~~((their on or open status))~~ operation—GREEN.
4. Fans ~~((, dampers and other operating equipment))~~ in a fault ~~((status))~~ condition—YELLOW/AMBER.

[F] 909.16.2 Smoke control panel. The fire fighter's control panel shall provide control capability over the complete smoke control system equipment within the building as follows:

1. ON-AUTO-OFF control over each ~~((individual piece of operating smoke control equipment that can be controlled from other sources within the building))~~ shaft pressurization fan. ~~((This includes stairway pressurization fans; smoke exhaust fans; supply, return and exhaust fans; elevator shaft fans and other operating equipment used or intended for smoke control purposes.~~
2. OPEN-AUTO-CLOSE control over individual dampers relating to smoke control and that are controlled from other sources within the building.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

3. ~~ON-OFF or OPEN-CLOSE control over smoke control and other critical equipment associated with a fire or smoke emergency and that can only be controlled from the fire fighter's control panel.))~~
2. AUTO-OFF-POSITIVE PRESSURE-NEGATIVE PRESSURE control over each smoke control zone designed with such features. Individual control of each damper and fan used to achieve the positive or negative pressure condition is not required.
3. AUTO-EXHAUST-OFF control over each smoke control zone using the exhaust method of smoke control.

Exceptions:

1. Complex systems, where *approved*, where the controls and indicators are combined to control and indicate all elements of a single smoke zone as a unit.
2. Complex systems, where *approved*, where the control is accomplished by computer interface using *approved*, plain English commands.

[S][F] 909.16.3 Control action and priorities. The fire-fighter's control panel actions shall be as follows:

1. ON-OFF and OPEN-CLOSE control actions shall have the highest priority of any control point within the building. Once issued from the fire fighter's control panel, automatic or manual control from any other control point within the building shall not contradict the control action. Where automatic means are provided to interrupt normal, non-emergency equipment operation or produce a specific result to safeguard the building or equipment including, but not limited to, duct freezestats, duct smoke detectors, high-temperature cutouts, temperature-actuated linkage and similar devices, such means shall be capable of being overridden by the fire fighter's control panel. The last control action as indicated by each fire fighter's control panel switch position shall prevail. Control actions shall not require the smoke control system to assume more than one configuration at any one time.

Exception: Power disconnects required by ((NFPA-70)) the Seattle Electrical Code.

2. Only the AUTO position of each three-position fire-fighter's control panel switch shall allow automatic or manual control action from other control points within the building. The AUTO position shall be the NORMAL, non-emergency, building control position. Where a fire fighter's control panel is in the AUTO position, the actual status of the device (on, off, open, closed) shall continue to be indicated by the status indicator described in Section 909.16.1. Where directed by an automatic signal to assume an emergency condition, the NORMAL position shall become the emergency condition for that device or group of devices within the zone. Control actions shall not require the smoke control system to assume more than one configuration at any one time.

[F] 909.17 System response time. Smoke-control system activation shall be initiated immediately after receipt of an appropriate automatic or manual activation command. Smoke control systems shall activate individual components (such as *dampers* and fans) in the sequence necessary to prevent physical damage to the fans, *dampers*, ducts and other equipment. For purposes of smoke control, the fire fighter's control panel response time shall be the same for automatic or manual smoke control action initiated from any other building control point. The total response time, including that necessary for detection, shutdown of operating equipment and smoke control system startup, shall allow for full operational mode to be achieved before the conditions in the space exceed the design smoke condition. Upon receipt of an alarm condition at the fire alarm control panel, fans, dampers and automatic doors shall have achieved their proper operating state and the final status shall be indicated at the smoke control panel within 90 seconds. The system response time for each component and their sequential relationships shall be detailed in the required rational analysis and verification of their installed condition reported in the required final report.

[S][F] 909.18 Acceptance testing. Devices, equipment, components and sequences shall be individually tested. These tests, in addition to those required by other provisions of this code, or as required in rules promulgated by the building official, shall consist of determination of function, sequence and, where applicable, capacity of their installed condition.

[F] 909.18.1 Detection devices. Smoke or fire detectors that are a part of a smoke control system shall be tested in accordance with Chapter 9 in their installed condition. Where applicable, this testing shall include verification of airflow in both minimum and maximum conditions.

Note: Verification of airflow in stairway or elevator hoistway pressurization systems is only required to verify compliance with duct detector listing.

[F] 909.18.2 Ducts. Ducts that are part of a smoke control system shall be traversed using generally accepted practices to determine actual air quantities.

Exception: Ducts that are part of a stairway or elevator hoistway pressurization system need not be traversed.

[F] 909.18.3 Dampers. *Dampers* shall be tested for function in their installed condition.

[F] 909.18.4 Inlets and outlets. Inlets and outlets shall be read using generally accepted practices to determine air quantities.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Exception: Air quantities are not required to be determined for stairway or elevator hoistway pressurization systems unless specifically required by other sections in this code.

[F] **909.18.5 Fans.** Fans shall be examined for correct rotation. Measurements of voltage, amperage, revolutions per minute (rpm) and belt tension shall be made.

[F] **909.18.6 Smoke barriers.** Measurements using inclined manometers or other *approved* calibrated measuring devices shall be made of the pressure differences across *smoke barriers*. Such measurements shall be conducted for each possible smoke control condition.

[F] **909.18.7 Controls.** Each smoke zone equipped with an automatic-initiation device shall be put into operation by the actuation of one such device. Each additional device within the zone shall be verified to cause the same sequence without requiring the operation of fan motors in order to prevent damage. Control sequences shall be verified throughout the system, including verification of override from the fire fighter's control panel and simulation of (~~standby~~) emergency power conditions.

[S][F] **909.18.8 Testing for smoke control.** Smoke control systems shall be tested by a *special inspector for compliance with the approved design* in accordance with Section (~~(1705.19)~~) 1705.18.

[S][F] **909.18.8.1 Scope of testing.** Testing shall be conducted (~~(in accordance with the following:)~~) prior to occupancy and after sufficient completion for the purposes of pressure-difference testing, flow measurements, and detection and control verification.

- ~~(1. During erection of ductwork and prior to concealment for the purposes of leakage testing and recording of device location.~~
2. ~~Prior to occupancy and after sufficient completion for the purposes of pressure-difference testing, flow measurements, and detection and control verification.)~~

[F] **909.18.8.2 Qualifications.** *Approved* agencies for smoke control testing shall have expertise in fire protection engineering, mechanical engineering and certification as air balancers.

[S][F] **909.18.8.3 Reports.** A complete report of testing and a maintenance and operational testing program per *Seattle Fire Code* Section 909.22 shall be prepared by the *approved* agency. The report shall include identification of all devices by manufacturer, nameplate data, design values, measured values and identification tag or *mark*. The report shall be reviewed by the responsible *registered design professional* and, when satisfied that the design intent has been achieved, the responsible *registered design professional* shall sign, seal and date the report.

[S][F] **909.18.8.3.1 Report filing.** (~~A copy~~) Copies of the final report and the maintenance and operational testing program per Section 909.22.1 shall be filed with the building official and the fire code official. (~~and an~~) An identical copy shall be maintained in an *approved* location at the building and shall be made available to the fire department on request.

Exception: A copy of the final report need not be maintained at low-rise buildings using stairway or elevator hoistway pressurization.

[F] **909.18.9 Identification and documentation.** Charts, drawings and other documents identifying and locating each component of the smoke control system, and describing its proper function and maintenance requirements, shall be maintained on file at the building as an attachment to the report required by Section 909.18.8.3. Devices shall have an *approved* identifying tag or *mark* on them consistent with the other required documentation and shall be dated indicating the last time they were successfully tested and by whom.

[S][F] **909.19 System acceptance.** Buildings, or portions thereof, required by this code to comply with this section shall not be issued a certificate of occupancy until such time that the (~~fire code~~) *building official* determines that the provisions of this section have been fully (~~complied with and that the fire department has received satisfactory instruction on the operation, both automatic and manual, of the system and a written maintenance program complying with the requirements of Section 909.20.1 of the *International Fire Code* has been submitted and approved by the fire code official~~) met.

Exception: In buildings of phased construction, a temporary certificate of occupancy, as *approved* by the (~~fire code~~) *building official*, shall be allowed provided that those portions of the building to be occupied meet the requirements of this section and that the remainder does not pose a significant hazard to the safety of the proposed occupants or adjacent buildings.

[S] **909.20 (~~Smokeproof enclosures~~) Reserved.** (~~Where required by Section 1023.12, a *smokeproof enclosure* shall be constructed in accordance with this section. A *smokeproof enclosure* shall consist of an interior exit stairway or ramp that is enclosed in accordance with the applicable provisions of Section 1023 and an open exterior balcony, ventilated vestibule or pressurized stair and pressurized entrance vestibule meeting the requirements of this section. Where access to the roof is required by the *International Fire Code*, such access shall be from the *smokeproof enclosure* where a *smokeproof enclosure* is required.)~~)

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

909.20.1 ((Access)) Reserved. ((Access to the *stairway* or *ramp* shall be by way of a vestibule or an open exterior balcony. The minimum dimension of the vestibule shall be not less than the required width of the *corridor* leading to the vestibule but shall not have a width of less than 44 inches (1118 mm) and shall not have a length of less than 72 inches (1829 mm) in the direction of egress travel.))

909.20.2 ((Construction)) Reserved. ((The *smokeproof enclosure* shall be separated from the remainder of the building by not less than 2-hour *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both. Openings are not permitted other than the required *means of egress* doors. The vestibule shall be separated from the *stairway* or *ramp* by not less than 2-hour *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both. The open exterior balcony shall be constructed in accordance with the *fire resistance rating* requirements for floor assemblies.

909.20.2.1 Door closers. Doors in a *smokeproof enclosure* shall be self- or automatic closing by actuation of a smoke detector in accordance with Section 716.2.6.6 and shall be installed at the floor-side entrance to the *smokeproof enclosure*. The actuation of the smoke detector on any door shall activate the closing devices on all doors in the *smokeproof enclosure* at all levels. Smoke detectors shall be installed in accordance with Section 907.3.))

909.20.3 ((Natural ventilation alternative)) Reserved. ((The provisions of Sections 909.20.3.1 through 909.20.3.3 shall apply to ventilation of *smokeproof enclosures* by natural means.

909.20.3.1 Balcony doors. Where access to the *stairway* or *ramp* is by way of an open exterior balcony, the door assembly into the enclosure shall be a *fire door assembly* in accordance with Section 716.

909.20.3.2 Vestibule doors. Where access to the *stairway* or *ramp* is by way of a vestibule, the door assembly into the vestibule shall be a *fire door assembly* complying with Section 716. The door assembly from the vestibule to the *stairway* shall have not less than a 20-minute *fire protection rating* complying with Section 716.

909.20.3.3 Vestibule ventilation. Each vestibule shall have a minimum net area of 16 square feet (1.5 m²) of opening in a wall facing an outer *court*, *yard* or *public way* that is not less than 20 feet (6096 mm) in width.))

909.20.4 ((Mechanical ventilation alternative)) Reserved. ((The provisions of Sections 909.20.4.1 through 909.20.4.4 shall apply to ventilation of *smokeproof enclosures* by mechanical means.

909.20.4.1 Vestibule doors. The door assembly from the building into the vestibule shall be a *fire door assembly* complying with Section 716.2.2.1. The door assembly from the vestibule to the *stairway* or *ramp* shall not have less than a 20-minute *fire protection rating* and shall meet the requirements for a smoke door assembly in accordance with Section 716.2.2.1. The door shall be installed in accordance with NFPA 105.

909.20.4.2 Vestibule ventilation. The vestibule shall be supplied with not less than one air change per minute and the exhaust shall be not less than 150 percent of supply. Supply air shall enter and exhaust air shall discharge from the vestibule through separate, tightly constructed ducts used only for that purpose. Supply air shall enter the vestibule within 6 inches (152 mm) of the floor level. The top of the exhaust register shall be located at the top of the smoke trap but not more than 6 inches (152 mm) down from the top of the trap, and shall be entirely within the smoke trap area. Doors in the open position shall not obstruct duct openings. Duct openings with controlling *dampers* are permitted where necessary to meet the design requirements, but *dampers* are not otherwise required.

909.20.4.2.1 Engineered ventilation system. Where a specially engineered system is used, the system shall exhaust a quantity of air equal to not less than 90 air changes per hour from any vestibule in emergency operation mode and shall be sized to handle three vestibules simultaneously. Smoke detectors shall be located at the floor-side entrance to each vestibule and shall activate the system for the affected vestibule. Smoke detectors shall be installed in accordance with Section 907.3.

909.20.4.3 Smoke trap. The vestibule ceiling shall be not less than 20 inches (508 mm) higher than the door opening into the vestibule to serve as a smoke and heat trap and to provide an upward-moving air column. The height shall not be decreased unless *approved* and justified by design and test.

909.20.4.4 Stairway or ramp shaft air movement system. The *stairway* or *ramp shaft* shall be provided with a dampened relief opening and supplied with sufficient air to maintain a minimum positive pressure of 0.10 inch of water (25 Pa) in the *shaft* relative to the vestibule with all doors closed.))

909.20.5 Stairway and ramp pressurization ((alternative)) for high-rise and underground buildings. Where ((the building is equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1, the vestibule is not required, provided that)) required by Section 403.5.4 or 405.7.2, each *interior exit stairway* or *ramp* ((is)) shall be pressurized to not less than 0.10 inch of water (25 Pa) and not more than 0.35 inches of water (87 Pa) in the *shaft* relative to the building measured with all *interior exit stairway* and *ramp* doors closed under maximum anticipated conditions of stack effect and wind effect. The pressure differential shall be measured between the *interior exit stairway* and the adjacent area. In residential buildings, the pressure differential is permitted to be measured between the *interior exit stairway* and the *dwelling units*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Exceptions:

1. Positive pressure with respect to the elevator recall floor is required where elevator cars are at the floor of recall with the elevator doors open, but need not comply with the 0.10 inch of water minimum pressure differential.
2. The pressure differential is permitted to be measured relative to outdoor atmosphere on floors other than the following:
 - 2.1. The fire floor;
 - 2.2. The two floors immediately below the fire floor; and
 - 2.3. The floor immediately above the fire floor.

Interpretation 1909.20.5: For the purposes of measuring pressure differentials, smoke zones consisting of floors interconnected by unenclosed vertical openings shall constitute a single floor.

909.20.5.1 Supply air. Air for stairway pressurization shall be supplied at intervals sufficient to maintain the required pressure throughout the interior exit stairway.

Note: The performance goal for Section 909.20.5.1 is compliance with minimum and maximum pressures at all levels of the shaft.

909.20.5.2 Supply air. Supply air shall be taken directly from an outside, uncontaminated source at least 20 feet (6096 mm) from any mechanical exhaust outlet and the dampered relief opening required by Section 909.20.5.3. The supply air intake shall be located at the exterior of the building. The intake shall be continuous to the exterior of the building. The fan system shall be equipped with two smoke detectors located in accordance with NFPA 72 arranged to automatically shut down the fan system only when both smoke detectors activate. The detectors shall be located downstream of the fan and shall be connected to the fire alarm as a supervisory signal.

Exception: The supply air intake need not be located 20 feet from the dampered relief outlet serving the same stairway.

Dampers other than motorized dampers required by the *International Energy Conservation Code* are not permitted in the stairway pressurization system air supply unless *approved* by the *building official*.

909.20.5.3 Dampered relief opening. The interior exit stairway shall be equipped with a relief opening at the top. The relief opening shall be equipped with a barometric relief damper and a motorized damper that complies with the *International Energy Conservation Code*. The motorized damper shall be of the normally open type (open with the power off). Activation of the damper shall be initiated by the building fire alarm system and by actuation of the *automatic sprinkler system*.

The pressurization system shall be capable of maintaining the differential pressure required by Section 909.20.5 while discharging 2,500 cubic feet per minute (1180 L/s) of air through the relief opening.

The relief outlet shall be located at least 20 feet from elevator hoistway and stairway pressurization system supply air intake locations.

Exception: The relief outlet need not be located 20 feet from the supply air intake for the stairway served by the relief outlet.

~~((909.20.6 Pressurized stair and vestibule alternative.~~ The provisions of Sections 909.20.6.1 through 909.20.6.3 shall apply to *smokeproof enclosures* using a pressurized *stair* and pressurized entrance vestibule.

~~**909.20.6.1 Vestibule doors.** The door assembly from the building into the vestibule shall be a *fire door assembly* complying with Section 716.2.2.1. The door assembly from the vestibule to the *stairway* shall have not less than a 20-minute *fire protection rating* and meet the requirements for a smoke door assembly in accordance with Section 716.2.2.1. The door shall be installed in accordance with NFPA 105.~~

~~**909.20.6.2 Pressure difference.** The stair enclosure shall be pressurized to not less than 0.05 inch of water gage (12.44 Pa) positive pressure relative to the vestibule with all *stairway* doors closed under the maximum anticipated stack pressures. The vestibule, with doors closed, shall have not less than 0.05 inch of water gage (12.44 Pa) positive pressure relative to the fire floor. The pressure difference across doors shall not exceed 30 pounds (133 N) maximum force to begin opening the door.~~

~~**909.20.6.3 Dampered relief opening.** A controlled relief vent having the capacity to discharge not less than 2,500 cubic feet per minute (1180 L/s) of air at the design pressure difference shall be located in the upper portion of the pressurized exit enclosure.~~

[S] ~~((909.20.7))~~ **909.20.5.4 ((Ventilating)) Activation of pressurization equipment.** ~~((The activation of ventilating equipment required by the alternatives in Sections 909.20.4, 909.20.5 and 909.20.6 shall be by smoke detectors installed at each floor level at an *approved* location at the entrance to the *smokeproof enclosure*. When the closing device for the~~

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

~~stairway and ramp shaft and vestibule doors is activated by smoke detection or power failure, the mechanical equipment shall activate and operate at the required performance levels.))~~ The pressurization equipment required by Section 909.20.5 shall be activated by a fire alarm signal originating anywhere in the building. Smoke detectors shall be installed in accordance with Section 907.3. Activation of the pressurization equipment shall be independent of the position of any dampers in the stairway pressurization air supply system.

~~((909.20.7.1))~~ **909.20.5.5 ((Ventilation)) Independence of pressurization systems.** ~~((Smokeproof enclosure ventilation))~~ Stairway pressurization systems shall be independent of other building ventilation systems.

Exception: Building ventilation systems, other than interior exit stairway supply air systems, are permitted to be used to exhaust air from adjacent space where necessary to maintain the differential pressure relationships. Building ventilation systems used to achieve stairway pressurization are not required to comply with Sections 909.10.1 and 909.11.3.

909.20.5.6 Protection of equipment. The equipment, control wiring, power wiring and ductwork shall comply with one of the following:

1. Equipment, control wiring, power wiring and ductwork shall be located exterior to the building and directly connected to the ~~((smokeproof enclosure))~~ interior exit stairway or connected to the ~~((smokeproof enclosure))~~ interior exit stairway by ductwork enclosed by ~~((not less than 2-hour))~~ fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 711, or both.
2. Equipment, control wiring, power wiring and ductwork shall be located within the ~~((smokeproof enclosure))~~ interior exit stairway with intake or exhaust directly from and to the outside or through ductwork enclosed by not less than 2-hour fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 711, or both.
3. Equipment, control wiring, power wiring and ductwork shall be located within the building if separated from the remainder of the building, including other mechanical equipment, by not less than 2-hour fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 711, or both.

Exceptions:

1. Control wiring and power wiring located outside of a 2-hour fire barrier construction shall be protected using any one of the following methods:
 - 1.1. Cables used for survivability of required critical circuits shall be listed in accordance with UL 2196 and shall have a fire-resistance rating of not less than 2 hours.
 - 1.2. Where encased with not less than 2 inches (51 mm) of concrete.
 - 1.3. Electrical circuit protective systems shall have a fire-resistance rating of not less than 2 hours. Electrical circuit protective systems shall be installed in accordance with their listing requirements.
2. Equipment, control wiring, power wiring, and ductwork serving building ventilation systems other than interior exit stairway supply air systems used to achieve the differential pressure relationships need not be protected.

~~((909.20.7.2))~~ **909.20.5.7 ((Standby)) Emergency power.** ~~((Mechanical vestibule and stairway and ramp shaft ventilation))~~ Pressurization systems and automatic fire detection systems shall be provided with ~~((standby))~~ emergency power in accordance with Section 2702.

Interpretation I909.20.5.7: Building ventilation system fans used to achieve pressure differential relationships are considered to be part of the pressurization system and are required to be provided with emergency power.

~~((909.20.7.3 Acceptance and testing. Before the mechanical equipment is approved, the system shall be tested in the presence of the building official to confirm that the system is operating in compliance with these requirements.))~~

909.20.6 Stairway pressurization for low-rise buildings. Where stairway pressurization is provided in accordance with Section 1006.3.4 item 7 or Section 510.2 item 10, the pressurization system shall comply with the following:

1. Stairways shall be pressurized to a minimum positive pressure of 0.15 inch of water column (37 Pa) relative to the main occupied area on each floor, and a maximum pressure that complies with Section 1010.1.3.

Interpretation I909.20.6: For the purposes of measuring pressure differentials, smoke zones consisting of floors interconnected by unenclosed vertical openings shall constitute a single floor.

2. The stairway pressurization shall be activated by a fire alarm originating anywhere in the building.
3. Pressurization equipment and its duct work located within the building shall be separated from other portions of the building by construction equal to that required for the interior exit stairway.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

4. Supply air shall be taken directly from an outside, uncontaminated source at least 20 feet (6096 mm) from any air exhaust system or outlet. Air ducts shall be continuous to the exterior of the building. Two smoke detectors shall be located in the duct in accordance with NFPA 72 arranged to automatically shut down the fan system only when both smoke detectors activate. The detectors shall be located downstream of the fan and shall be connected to the fire alarm as a supervisory signal.
5. A legally required standby power system shall be provided for the pressurization system according to Seattle Electrical Code Section 701. A connection ahead of the service disconnecting means shall be permitted as the sole source of power to the pressurization system.
6. Other measures to prevent loss of pressurization shall be provided in the design and construction of interior exit stairways, such as doors and door closers, quality of workmanship and caulking of penetrations and joints.
7. Stairway pressurization systems in low-rise buildings shall comply with Sections 909.2, 909.3, 909.10, 909.12, 909.13, 909.14, 909.17, 909.18, and 909.19 in addition to Section 909.20.6.

Note: A rational analysis complying with Section 909.4 is not required.

[S] **909.21 Elevator hoistway pressurization alternative.** Where elevator hoistway pressurization is provided in lieu of required enclosed elevator lobbies, the pressurization system shall comply with Sections 909.21.1 through ~~((909.21.11))~~ 909.21.7.

909.21.1 Pressurization requirements. Elevator hoistways shall be pressurized to maintain a minimum positive pressure of 0.10 inch of water (25 Pa) and a maximum positive pressure of 0.25 inch of water (67 Pa) with respect to adjacent occupied space on all floors. This pressure shall be measured at the midpoint of each hoistway door, with all elevator cars at the floor of recall and all hoistway doors on the floor of recall open and all other hoistway doors closed. The pressure differentials shall be measured between the hoistway and the adjacent elevator landing. The opening and closing of hoistway doors at each level must be demonstrated during this test. ~~((The supply air intake shall be from an outside, uncontaminated source located a minimum distance of 20 feet (6096 mm) from any air exhaust system or outlet.))~~

Exceptions:

1. On floors containing only Group R occupancies, the pressure differential is permitted to be measured between the hoistway and a *dwelling unit* or *sleeping unit*.
2. Where an elevator opens into a lobby enclosed in accordance with ~~((Section 3007.6 or 3008.6))~~ 403.6.1.5 or 403.6.2.6, the pressure differential is permitted to be measured between the hoistway and the space immediately outside the door(s) from the floor to the enclosed lobby.
3. The pressure differential is permitted to be measured relative to the outdoor atmosphere on floors other than the following:
 - 3.1. The fire floor.
 - 3.2. The two floors immediately below the fire floor.
 - 3.3. The floor immediately above the fire floor.
4. The minimum positive pressure of 0.10 inch of water (25 Pa) and a maximum positive pressure of 0.25 inch of water (67 Pa) with respect to occupied floors are not required at the floor of recall with the doors open.
5. Subject to the approval of the *building official*, pressurization is not required for elevators in high-rise buildings with less than 75 feet (22 860 mm) from the lowest floor to the highest ceiling of the *stories* served by the elevator.
6. Maximum and minimum pressures are permitted to comply with rules promulgated by the *building official*.

Interpretation 1909.21: For the purposes of measuring pressure differentials, smoke zones consisting of floors interconnected by unenclosed vertical openings shall constitute a single floor.

909.21.1.1 Supply air. The supply air shall be taken from an outside, uncontaminated source located a minimum distance of 20 feet (6096 mm) from any mechanical exhaust outlet and dampered relief openings required by Section 909.20.5.3. The supply air intake may be located within the building provided it is located no more than 20 feet (6096 mm) from major openings in the building exterior such as loading docks and vehicular entrances. There shall be no obstruction to the flow of air to the intake.

Dampers other than motorized dampers required by the *International Energy Conservation Code* are not permitted in the elevator hoistway pressurization system air supply unless *approved* by the *building official*.

~~((909.21.1.1))~~ **909.21.1.2 Use of ventilation systems.** Ventilation systems, other than hoistway supply air systems, are permitted to be used to exhaust air from adjacent spaces ~~((on the fire floor, two floors immediately below and one floor immediately above the fire floor))~~ to the building's exterior where necessary to maintain positive pressure relationships

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

as required in Section 909.21.1 during operation of the elevator *shaft* pressurization system. Ventilation systems used to achieve elevator hoistway pressurization are not required to comply with Section 909.21.4.

909.21.2 Rational analysis. A rational analysis complying with Section 909.4 shall be submitted with the *construction documents*.

Exception: A rational analysis is not required for elevator hoistway pressurization in low-rise buildings.

909.21.3 Ducts for system. Any duct system that is part of the pressurization system shall be protected with the same *fire-resistance rating* as required for the elevator *shaft* enclosure.

909.21.4 Fan system. The fan system provided for the pressurization system shall be as required by Sections 909.21.4.1 through 909.21.4.4.

909.21.4.1 Fire resistance. Where located within the building, the fan system that provides the pressurization shall be protected with the same *fire-resistance rating* required for the elevator (~~*shaft*~~) hoistway enclosure.

909.21.4.2 Smoke detection. The fan system shall be equipped with ~~((a))~~ two smoke detectors ~~((that will))~~ located in accordance with NFPA 72 arranged to automatically shut down the fan system only when both smoke detectors activate. ~~((is detected within the system-))~~ The detectors shall be located downstream of the fan and shall be connected to the fire alarm as a supervisory signal.

909.21.4.3 Separate systems. A separate fan system shall be used for each elevator hoistway.

909.21.4.4 Fan capacity. The ~~((supply))~~ fan system shall be ~~((either adjustable with a capacity of not less than 1,000 cubic feet per minute (0.4719 m³/s) per door, or that specified by a registered design professional to meet the requirements of a designed pressurization system))~~ provided with the capacity to pressurize the elevator hoistway as determined by a registered design professional. The fan system shall be provided with a means to balance or modulate the airflow to the elevator hoistway to meet the differential pressure requirements on all floors for each condition identified by the rational analysis.

909.21.5 ~~((Standby))~~ Legally required standby and emergency power. Pressurization systems shall be powered by an approved emergency or legally required standby power system. ~~((The))~~ An emergency power system conforming to Section 909.11 shall be provided for pressurization systems in high-rise and underground buildings. Legally required standby power shall be provided ((with)) for the pressurization system in all other buildings. The emergency and legally required standby power shall be in accordance with Section 2702. For other than high-rise or underground buildings, connection ahead of the service disconnecting means in accordance with Seattle Electrical Code Section 701.12(E) is permitted as a source of legally required standby power.

909.21.6 Activation of pressurization system. The elevator pressurization system shall be activated upon activation of either the building fire alarm system or the elevator lobby smoke detectors. Where both a building fire alarm system and elevator lobby smoke detectors are present, each shall be independently capable of activating the pressurization system. Activation of the fan serving the hoistway is permitted to be delayed by up to 30 seconds so that elevator recall can be initiated prior to pressurizing the hoistway. Activation of the pressurization equipment shall be independent of the position of any dampers in the elevator hoistway air supply system.

Note: Activation of fans serving occupant evacuation elevators is allowed to be delayed, but the elevators must begin occupant evacuation activities and may not be immediately recalled.

~~((909.21.7 Testing. Testing for performance shall be required in accordance with Section 909.18.8. System acceptance shall be in accordance with Section 909.19.))~~

909.21.7 Machine and control rooms. Elevator machine and control rooms shall be pressurized in accordance with this section unless separated from the elevator hoistway by construction in accordance with Section 713.

~~((909.21.8 Marking and identification. Detection and control systems shall be marked in accordance with Section 909.14.))~~

909.21.9 Control diagrams. Control diagrams shall be provided in accordance with Section 909.15.

909.21.10 Control panel. A control panel complying with Section 909.16 shall be provided.

~~909.21.11 System response time. Hoistway pressurization systems shall comply with the requirements for smoke control system response time in Section 909.17.))~~

SECTION 910 SMOKE AND HEAT REMOVAL

[F] 910.1 General. Where required by this code, smoke and heat vents or mechanical smoke removal systems shall conform to the requirements of this section.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

910.4.1 Automatic sprinklers required. The building shall be equipped throughout with an *approved automatic sprinkler system* in accordance with Section 903.3.1.1.

910.4.2 Exhaust fan construction. Exhaust fans that are part of a mechanical smoke removal system shall be rated for operation at 221°F (105°C). Exhaust fan motors shall be located outside of the exhaust fan air stream.

910.4.3 System design criteria. The mechanical smoke removal system shall be sized to exhaust the building at a minimum rate of two air changes per hour based on the volume of the building or portion thereof without contents. The capacity of each exhaust fan shall not exceed 30,000 cubic feet per minute (14.2 m³/s).

910.4.3.1 Makeup air. Makeup air openings shall be provided within 6 feet (1829 mm) of the floor level. Operation of makeup air openings shall be manual or automatic. The minimum gross area of makeup air inlets shall be 8 square feet per 1,000 cubic feet per minute (0.74 m² per 0.4719 m³/s) of smoke exhaust.

910.4.4 Activation. The mechanical smoke removal system shall be activated by manual controls only.

910.4.5 Manual control location. Manual controls shall be located where they are able to be accessed by the fire service from an exterior door of the building and separated from the remainder of the building by not less than 1-hour *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both.

[S][F] 910.4.6 Control wiring. Wiring for operation and control of mechanical smoke removal systems shall be connected ahead of the main disconnect in accordance with Section 701.12E of (~~NFPA 70~~) the Seattle Electrical Code and be protected against interior fire exposure to temperatures in excess of 1,000°F (538°C) for a period of not less than 15 minutes.

[F] 910.4.7 Controls. Where building air-handling and mechanical smoke removal systems are combined or where independent building air-handling systems are provided, fans shall automatically shut down in accordance with the *International Mechanical Code*. The manual controls provided for the smoke removal system shall have the capability to override the automatic shutdown of fans that are part of the smoke removal system.

910.5 Maintenance. Smoke and heat vents and mechanical smoke removal systems shall be maintained in accordance with the *International Fire Code*.

SECTION 911 FIRE COMMAND CENTER

[F] 911.1 General. Where required by other sections of this code, in buildings classified as high-rise buildings by this code and in all F-1 and S-1 occupancies with a building footprint of over 500,000 square feet (46 452 m²), a fire command center for fire department operations shall be provided and shall comply with Sections 911.1.1 through 911.1.7.

[F] 911.1.1 Location and access. The location and access to the fire command center shall be *approved* by the *fire code official*.

[W][F] 911.1.2 Separation. The fire command center shall be separated from the remainder of the building by not less than ((a+)) one 2-hour fire barrier constructed in accordance with Section 707 or *horizontal assembly* constructed in accordance with Section 711, or both.

[F] 911.1.3 Size. The fire command center shall be not less than 0.015 percent of the total building area of the facility served or 200 square feet (19 m²) in area, whichever is greater, with a minimum dimension of 0.7 times the square root of the room area or 10 feet (3048 mm), whichever is greater. Where a fire command is required for Group F-1 and S-1 occupancies with a building footprint greater than 500,000 square feet (46 452 m²) in area, the fire command center shall have a minimum size of 96 square feet (9 m²) with a minimum dimension of 8 feet (2348 mm) where *approved* by the *fire code official*.

[F] 911.1.4 Layout approval. A layout of the fire command center and all features required by this section to be contained therein shall be submitted for approval prior to installation.

[F] 911.1.5 Storage. Storage unrelated to operation of the fire command center shall be prohibited.

[S][F] 911.1.6 Required features. The fire command center shall comply with NFPA 72 and shall contain all of the following features:

1. The emergency voice/alarm communication system control unit.
2. The fire department communications system.
3. Fire detection and alarm system *annunciator*.
4. *Annunciator* unit visually indicating the location of the elevators and whether they are operational.
5. Status indicators and controls for air distribution systems.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

6. The fire fighter's control panel required by Section 909.16 for smoke control systems installed in the building.
7. Controls for unlocking *interior exit stairway* doors simultaneously.
8. Sprinkler valve and waterflow detector display panels.
9. Emergency and legally required standby power status indicators.
10. A telephone for fire department use with controlled access to the public telephone system.
11. Fire pump status indicators.
12. Schematic building plans indicating the typical floor plan and detailing the building core, *means of egress*, fire protection systems, fire fighter air replenishment system, fire-fighting equipment and fire department access and the location of *fire walls, fire barriers, fire partitions, smoke barriers* and *smoke partitions*.
13. An *approved* Building Information Card that contains, but is not limited to, the following information:
 - 13.1. General building information that includes: property name, address, the number of floors in the building above and below grade, use and occupancy classification (for mixed uses, identify the different types of occupancies on each floor), and the estimated building population during the day, night and weekend.
 - 13.2. Building emergency contact information that includes: a list of the building's emergency contacts including but not limited to building manager and building engineer and their respective work phone number, cell phone number, e-mail address.
 - 13.3. Building construction information that includes: the type of building construction including but not limited to floors, walls, columns, and roof assembly.
 - 13.4. *Exit access* and *exit stairway* information that includes: number of *exit access* and *exit stairways* in the building, each *exit access* and *exit stairway* designation and floors served, location where each *exit access* and *exit stairway* discharges, *interior exit stairways* that are pressurized, *exit stairways* provided with emergency lighting, each *exit stairway* that allows reentry, *exit stairways* providing roof access; elevator information that includes: number of elevator banks, elevator bank designation, elevator car numbers and respective floors that they serve; location of elevator machine rooms, control rooms and control spaces; location of sky lobby, location of freight elevator banks.
 - 13.5. Building services and system information that includes: location of mechanical rooms, location of building management system, location and capacity of all fuel oil tanks, location of emergency generator, location of natural gas service.
 - 13.6. Fire protection system information that includes: location of standpipes, location of fire pump room, location of fire department connections, floors protected by automatic sprinklers, location of different types of *automatic sprinkler systems* installed including, but not limited to, dry, wet and pre-action.
 - 13.7. Hazardous material information that includes: location of hazardous material, quantity of hazardous material.
14. Work table.
15. Generator supervision devices, manual start and (~~transfer~~) stop features.
16. Public address system, where specifically required by other sections of this code.
17. Elevator fire recall switch in accordance with ASME A17.1/CSA B44.
18. Elevator emergency or legally required standby power selector switch(es), where emergency or standby power is provided.
19. On-site fire protection water tank fill-valve control switch, tank level indicators, tank low-level alarm and tank fill signal.

[F] 911.1.7 Fire command center identification. The *fire command center* shall be identified by a permanent easily visible sign reading "FIRE COMMAND CENTER" located on the door to the *fire command center*.

SECTION 912 FIRE DEPARTMENT CONNECTIONS

[F] 912.1 Installation. Fire department connections shall be installed in accordance with the NFPA standard applicable to the system design and shall comply with Sections 912.2 through 912.6.

[S][F] 912.2 Location. With respect to hydrants, driveways, buildings and landscaping, fire department connections shall be so located that fire apparatus and hose connected to supply the system will not obstruct access to the buildings for other fire apparatus. The location of fire department connections shall be *approved* by the *fire code official*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] 912.2.1 Visible location. Fire department connections shall be located on the ((street)) address side of buildings or facing approved fire apparatus access roads, fully visible and recognizable from the street, fire apparatus access road or nearest point of fire department vehicle access or as otherwise *approved* by the *fire code official*.

[F] 912.2.2 Existing buildings. On existing buildings, wherever the fire department connection is not visible to approaching fire apparatus, the fire department connection shall be indicated by an *approved* sign mounted on the street front or on the side of the building. Such sign shall have the letters “FDC” not less than 6 inches (152 mm) high and words in letters not less than 2 inches (51 mm) high or an arrow to indicate the location. Such signs shall be subject to the approval of the *fire code official*.

912.2.3 High-rise buildings. Fire department connections for high-rise buildings shall be placed a distance apart not less than three-quarters of the length of the maximum overall diagonal dimension of the building served measured in a straight-line between the connections, or as otherwise *approved* by the *fire code official*.

[F] 912.3 Fire hose threads. Fire hose threads used in connection with standpipe systems shall be *approved* and shall be compatible with fire department hose threads.

[F] 912.4 Access. Immediate access to fire department connections shall be maintained at all times and without obstruction by fences, bushes, trees, walls or any other fixed or moveable object. Access to fire department connections shall be *approved* by the *fire code official*.

Exception: Fences, where provided with an access gate equipped with a sign complying with the legend requirements of this section and a means of emergency operation. The gate and the means of emergency operation shall be *approved* by the *fire code official* and maintained operational at all times.

[F] 912.4.1 Locking fire department connection caps. The fire code official is authorized to require locking caps on fire department connections for water-based *fire protection systems* where the responding fire department carries appropriate key wrenches for removal.

[F] 912.4.2 Clear space around connections. A working space of not less than 36 inches (762 mm) in width, 36 inches (914 mm) in depth and 78 inches (1981 mm) in height shall be provided and maintained in front of and to the sides of wall-mounted fire department connections and around the circumference of free-standing fire department connections, except as otherwise required or *approved* by the *fire code official*.

[F] 912.4.3 Physical protection. Where fire department connections are subject to impact by a motor vehicle, vehicle impact protection shall be provided in accordance with Section 312 of the *International Fire Code*.

[S][F] 912.5 Signs. A metal sign with raised letters not less than 1 inch (25 mm) in size shall be mounted on all fire department connections serving automatic sprinklers, standpipes or fire pump connections. Such signs shall read: “AUTOMATIC SPRINKLERS,” “STANDPIPES,” or “TEST CONNECTION,” or a combination thereof as applicable per NFPA 14. Where the fire department connection does not serve the entire building, a sign shall be provided indicating the portions of the building served.

[S] 912.5.1 Signs for high-rise buildings. An additional sign with letters at least 1 inch in size shall be provided at the fire department connections of high-rise buildings that indicate the building fire pump static (churn) discharge pressure. Where the pump is more than two *stories* above or below the fire department connections, the pump static/churn discharge pressure on the signage shall be adjusted to correct for the elevation difference.

[S][P] 912.6 Backflow protection. The potable water supply to automatic sprinkler and standpipe systems shall be protected against backflow as required by the ((*International*)) *Uniform Plumbing Code*.

SECTION 913 FIRE PUMPS

[F] 913.1 General. Where provided, fire pumps for fire protection systems shall be installed in accordance with this section and NFPA 20.

Exception: Pumps for automatic sprinkler systems installed in accordance with Section 903.3.1.3, or Section P2904 of the *International Residential Code*.

[F] 913.2 Protection against interruption of service. The fire pump, driver and controller shall be protected in accordance with NFPA 20 against possible interruption of service through damage caused by explosion, fire, *flood*, earthquake, rodents, insects, windstorm, freezing, vandalism and other adverse conditions.

[W][S] 913.2.1 Protection of fire pump rooms. Fire pumps shall be located in rooms that are separated from all other areas of the building by 2-hour *fire barriers* constructed in accordance with Section 707 or 2-hour *horizontal assemblies* constructed in accordance with Section 711, or both.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

((Exceptions:

- ~~1. In other than high-rise buildings, separation by 1-hour fire barriers constructed in accordance with Section 707 or 1-hour horizontal assemblies constructed in accordance with Section 711, or both, shall be permitted in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 or 903.3.1.2.~~
- ~~2. Separation is not required for fire pumps physically separated in accordance with NFPA 20.)~~

[F] 913.2.2 Circuits supplying fire pumps. Cables used for survivability of circuits supplying fire pumps shall be protected using one of the following methods:

1. Cables used for survivability of required critical circuits shall be *listed* in accordance with UL 2196 and shall have a *fire-resistance rating* of not less than 1 hour.
2. *Electrical circuit protective systems* shall have a *fire-resistance rating* of not less than 1 hour. *Electrical circuit protective systems* shall be installed in accordance with their listing requirements.
3. Construction having a *fire-resistance rating* of not less than 1 hour.
4. The cable or raceway is encased in a minimum of 2 inches (51 mm) of concrete.

Exception: This section shall not apply to cables, or portions of cables, located within a fire pump room or generator room which is separated from the remainder of the occupancy with *fire-resistance-rated* construction.

[F] 913.3 Temperature of pump room. Suitable means shall be provided for maintaining the temperature of a pump room or pump house, where required, above 40°F (5°C).

[F] 913.3.1 Engine manufacturer's recommendation. Temperature of the pump room, pump house or area where engines are installed shall never be less than the minimum recommended by the engine manufacturer. The engine manufacturer's recommendations for oil heaters shall be followed.

[F] 913.4 Valve supervision. Where provided, the fire pump suction, discharge and bypass valves, and isolation valves on the backflow prevention device or assembly shall be supervised open by one of the following methods:

1. Central-station, proprietary or remote-station signaling service.
2. Local signaling service that will cause the sounding of an audible signal at a *constantly attended location*.
3. Locking valves open.
4. Sealing of valves and *approved* weekly recorded inspection where valves are located within fenced enclosures under the control of the owner.

[F] 913.4.1 Test outlet valve supervision. Fire pump test outlet valves shall be supervised in the closed position.

[F] 913.5 Acceptance test. Acceptance testing shall be done in accordance with the requirements of NFPA 20.

**SECTION 914
EMERGENCY RESPONDER SAFETY FEATURES**

[F] 914.1 Shaftway markings. Vertical *shafts* shall be identified as required by Sections 914.1.1 and 914.1.2.

[F] 914.1.1 Exterior access to shaftways. Outside openings accessible to the fire department and that open directly on a hoistway or shaftway communicating between two or more floors in a building shall be plainly marked with the word "SHAFTWAY" in red letters not less than 6 inches (152 mm) high on a white background. Such warning signs shall be placed so as to be readily discernible from the outside of the building.

[F] 914.1.2 Interior access to shaftways. Door or window openings to a hoistway or shaftway from the interior of the building shall be plainly marked with the word "SHAFTWAY" in red letters not less than 6 inches (152 mm) high on a white background. Such warning signs shall be placed so as to be readily discernible.

Exception: Markings shall not be required on shaftway openings that are readily discernible as openings onto a shaftway by the construction or arrangement.

[F] 914.2 Equipment room identification. Fire protection equipment shall be identified in an *approved* manner. Rooms containing controls for air-conditioning systems, sprinkler risers and valves or other fire detection, suppression or control elements shall be identified for the use of the fire department. *Approved* signs required to identify fire protection equipment and equipment location shall be constructed of durable materials, permanently installed and readily visible.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

SECTION 915
CARBON MONOXIDE DETECTION

[F] **915.1 General.** Carbon monoxide detection shall be installed in new buildings in accordance with Sections 915.1.1 through 915.6. Carbon monoxide detection shall be installed in existing buildings in accordance with Chapter 11 of the *International Fire Code*.

[W][F] **915.1.1 Where required.** Carbon monoxide detection shall be provided in Group ((~~I-1, I-2, I-4~~) I and R occupancies and in classrooms in Group E occupancies in the locations specified in Section 915.2 where any of the conditions in Sections 915.1.2 through 915.1.6 exist.

Exceptions:

1. R-2 occupancies, with the exception of R-2 college dormitories, are required to install carbon monoxide detectors without exception.
2. Sleeping units or dwelling units in I and R-1 occupancies and R-2 college dormitories, hotels, DOC prisons and work releases and DSHS licensed boarding home and residential treatment facility occupancies which do not themselves contain a fuel-burning appliance, a fuel-burning fireplace, or have an attached garage, need not be provided with carbon monoxide alarms provided that they comply with the exceptions of Section 915.1.4.

[F] **915.1.2 Fuel-burning appliances and fuel-burning fireplaces.** Carbon monoxide detection shall be provided in *dwelling units, sleeping units* and classrooms that contain a fuel-burning appliance or a fuel-burning fireplace.

[F] **915.1.3 Fuel burning, forced-air furnaces.** Carbon monoxide detection shall be provided in *dwelling units, sleeping units* and classrooms served by a fuel-burning, forced-air furnace.

Exception: Carbon monoxide detection shall not be required in *dwelling units, sleeping units* and classrooms if a carbon monoxide detector is provided in the first room or area served by each main duct leaving the furnace, and the carbon monoxide alarm signals are automatically transmitted to an approved location.

[F] **915.1.4 Fuel-burning appliances outside of dwelling units, sleeping units and classrooms.** Carbon monoxide detection shall be provided in *dwelling units, sleeping units* and classrooms located in buildings that contain fuel-burning appliances or fuel-burning fireplaces.

Exceptions:

1. Carbon monoxide detection shall not be required in *dwelling units, sleeping units* and classrooms without communicating openings between the fuel-burning appliance or fuel-burning fireplace and the *dwelling unit, sleeping unit* or classroom.
2. Carbon monoxide detection shall not be required in *dwelling units, sleeping units* and classrooms where a carbon monoxide detector is provided in one of the following locations:
 - 2.1. In an *approved* location between the fuel-burning appliance or fuel-burning fireplace and the *dwelling unit, sleeping unit* or classroom.
 - 2.2. On the ceiling of the room containing the fuel-burning appliance or fuel-burning fireplace.

[F] **915.1.5 Private garages.** Carbon monoxide detection shall be provided in *dwelling units, sleeping units* and classrooms in buildings with attached *private garages*.

Exceptions:

1. Carbon monoxide detection shall not be required in *dwelling units, sleeping units* and classrooms without communicating openings between the *private garage* and the *dwelling unit, sleeping unit* or classroom.
2. Carbon monoxide detection shall not be required in *dwelling units, sleeping units* and classrooms located more than one *story* above or below a *private garage*.
3. Carbon monoxide detection shall not be required where the *private garage* connects to the building through an *open-ended corridor*.
4. Where a carbon monoxide detector is provided in an *approved* location between openings to a *private garage* and *dwelling units, sleeping units* or classrooms.

[F] **915.1.6 Exempt garages.** For determining compliance with Section 915.1.5, an *open parking garage* complying with Section 406.5 or an enclosed parking garage complying with Section 406.6 shall not be considered a *private garage*.

[W][F] **915.2 Locations.** Where required by Section 915.1.1, carbon monoxide detection shall be installed in the locations specified in Sections 915.2.1 through 915.2.3.

[W][F] **915.2.1 Dwelling units.** Carbon monoxide detection shall be installed in *dwelling units* outside of each separate sleeping area in the immediate vicinity of the bedrooms and on each level of the dwelling. Where a fuel-burning appliance

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

or a fuel-burning fireplace is located within a bedroom or its attached bathroom, carbon monoxide detection shall be installed within the bedroom.

[W][F] 915.2.2 Sleeping units. Carbon monoxide detection shall be installed in *sleeping units*.

Exception: Carbon monoxide detection shall be allowed to be installed outside of each separate sleeping area in the immediate vicinity of the *sleeping unit* where the *sleeping unit* or its attached bathroom does not contain a fuel-burning appliance or a fuel-burning fireplace and is not served by a forced air furnace.

[W][F] 915.2.3 Group E occupancies. ~~((Carbon))~~ When required by Section 915.1 in new buildings or by Chapter 11 of the International Fire Code, carbon monoxide ~~((detectors))~~ detection shall be installed in classrooms in Group E occupancies. Carbon monoxide alarm signals shall be automatically transmitted to an on-site location that is staffed by school personnel.

Exceptions:

1. Carbon monoxide alarm signals shall not be required to be automatically transmitted to an on-site location that is staffed by school personnel in Group E occupancies with an *occupant load* of ~~((30))~~ 50 or less.
2. Carbon monoxide alarm signals shall not be required to be automatically transmitted to an on-site location that is staffed by school personnel in Group E occupancies where an exception contained in Section 915.1 applies, or in Group E occupancies where signals are transmitted to an off-site service monitored by a third party, such as a service that monitors fire protection systems in the building.

[F] 915.3 Carbon monoxide detection. Carbon monoxide detection required by Sections 915.1 through 915.2.3 shall be provided by carbon monoxide alarms complying with Section 915.4 or carbon monoxide detection systems complying with Section 915.5.

[F] 915.4 Carbon monoxide alarms. Carbon monoxide alarms shall comply with Sections 915.4.1 through 915.4.4.

[F] 915.4.1 Power source. Carbon monoxide alarms shall receive their primary power from the building wiring where such wiring is served from a commercial source, and when primary power is interrupted, shall receive power from a battery. Wiring shall be permanent and without a disconnecting switch other than that required for overcurrent protection.

Exception: Where installed in buildings without commercial power, battery-powered carbon monoxide alarms shall be an acceptable alternative.

[F] 915.4.2 Listings. Carbon monoxide alarms shall be listed in accordance with UL 2034.

[F] 915.4.3 Locations. Carbon monoxide alarms shall only be installed in *dwelling units* and in *sleeping units*. They shall not be installed in locations where the code requires carbon monoxide detectors to be used.

[F] 915.4.4 Combination alarms. Combination carbon monoxide/smoke alarms shall be an acceptable alternative to carbon monoxide alarms. Combination carbon monoxide/smoke alarms shall be listed in accordance with UL 217 and UL 2034.

[W][F] 915.5 Carbon monoxide detection systems. Carbon monoxide detection systems shall be an acceptable alternative to carbon monoxide alarms and shall comply with Sections 915.5.1 through 915.5.3.

[F] 915.5.1 General. Carbon monoxide detection systems shall comply with NFPA ~~((720))~~ 72. Carbon monoxide detectors shall be *listed* in accordance with UL 2075.

[F] 915.5.2 Locations. Carbon monoxide detectors shall be installed in the locations specified in Section 915.2. These locations supersede the locations specified in NFPA ~~((720))~~ 72.

[F] 915.5.3 Combination detectors. Combination carbon monoxide/smoke detectors installed in carbon monoxide detection systems shall be an acceptable alternative to carbon monoxide detectors, provided that they are listed in accordance with UL 268 and UL 2075.

[F] 915.6 Maintenance. Carbon monoxide alarms and carbon monoxide detection systems shall be maintained in accordance with the *International Fire Code*.

SECTION 916 GAS DETECTION SYSTEMS

[F] 916.1 Gas detection systems. Gas detection systems required by this code shall comply with Sections 916.2 through 916.11.

[F] 916.2 Permits. Permits shall be required as set forth in Section 105.6.10 of the *International Fire Code*.

[F] 916.2.1 Construction documents. Documentation of the gas detection system design and equipment to be used that demonstrates compliance with the requirements of this code and the *International Fire Code* shall be provided with the application for permit.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[F] 916.3 Equipment. Gas detection system equipment shall be designed for use with the gases being detected and shall be installed in accordance with manufacturer's instructions.

[F] 916.4 Power connections. Gas detection systems shall be permanently connected to the building electrical power supply or shall be permitted to be cord connected to an unswitched receptacle using an *approved* restraining means that secures the plug to the receptacle.

[F] 916.5 Emergency and standby power. Standby or emergency power shall be provided or the gas detection system shall initiate a trouble signal at an *approved* location if the power supply is interrupted.

[F] 916.6 Sensor locations. Sensors shall be installed in *approved* locations where leaking gases are expected to accumulate.

[F] 916.7 Gas sampling. Gas sampling shall be performed continuously. Sample analysis shall be processed immediately after sampling, except as follows:

1. For HPM gases, sample analysis shall be performed at intervals not exceeding 30 minutes.
2. For toxic gases that are not HPM, sample analysis shall be performed at intervals not exceeding 5 minutes in accordance with Section 6004.2.2.7 of the *International Fire Code*.
3. Where a less frequent or delayed sampling interval is *approved*.

[F] 916.8 System activation. A gas detection alarm shall be initiated where any sensor detects a concentration of gas exceeding the following thresholds:

1. For flammable gases, a gas concentration exceeding 25 percent of the lower flammability limit (LFL).
2. For nonflammable gases, a gas concentration exceeding one-half of the IDLH, unless a different threshold is specified by the section of this code requiring a gas detection system.

Upon activation of a gas detection alarm, alarm signals or other required responses shall be as specified by the section of this code requiring a gas detection system. Audible and visible alarm signals associated with a gas detection alarm shall be distinct from fire alarm and carbon monoxide alarm signals.

[F] 916.9 Signage. Signs shall be provided adjacent to gas detection system alarm signaling devices that advise occupants of the nature of the signals and actions to take in response to the signal.

[F] 916.10 Fire alarm system connections. Gas sensors and gas detection systems shall not be connected to fire alarm systems unless approved and connected in accordance with the fire alarm equipment manufacturer's instructions.

[F] 916.11 Inspection, testing and sensor calibration. Gas detection systems and sensors shall be inspected, tested and calibrated in accordance with the *International Fire Code*.

SECTION 917 MASS NOTIFICATION SYSTEMS

[F] 917.1 College and university campuses. Prior to construction of a new building requiring a fire alarm system on a multiple-building college or university campus having a cumulative building *occupant load* of 1,000 or more, a mass notification risk analysis shall be conducted in accordance with NFPA 72. Where the risk analysis determines a need for mass notification, an *approved* mass notification system shall be provided in accordance with the findings of the risk analysis.

SECTION 918 EMERGENCY RESPONDER COMMUNICATION COVERAGE

[W][F] 918.1 General. In-building (~~two-way~~) emergency responder communication (~~coverage~~) enhancement system shall be provided in all new buildings in accordance with Section 510 of the *International Fire Code*.

CHAPTER 10

MEANS OF EGRESS

User notes:

About this chapter: Chapter 10 provides the general criteria for designing the means of egress established as the primary method for protection of people in buildings by allowing timely relocation or evacuation of building occupants. Both prescriptive and performance language is utilized in this chapter to provide for a basic approach in the determination of a safe exiting system for all occupancies. It addresses all portions of the egress system (exit access, exits and exit discharge) and includes design requirements as well as provisions regulating individual components. The requirements detail the size, arrangement, number and protection of means of egress components. Functional and operational characteristics that will permit the safe use of components without special knowledge or effort are specified.

The means of egress protection requirements work in coordination with other sections of the code, such as protection of vertical openings (see Chapter 7), interior finish (see Chapter 8), fire suppression and detection systems (see Chapter 9) and numerous others, all having an impact on life safety. Chapter 10 is subdivided into four main sections: general (Sections 1003–1015), exit access (Sections 1016–1021), exit (Sections 1022–1027) and exit discharge (Sections 1028–1029). Special allowances for the unique requirements for assembly spaces (Section 1030) and emergency escape and rescue openings (Section 1031) complete the chapter. Chapter 10 of this code is duplicated in Chapter 10 of the International Fire Code®; however, the International Fire Code contains one additional section on maintenance of the means of egress system in existing buildings.

Section 1010 was extensively reorganized for the 2021 edition. For complete information, see the moved sections table in the preface information for the International Building Code.

SECTION 1001 ADMINISTRATION

1001.1 General. Buildings or portions thereof shall be provided with a *means of egress* system as required by this chapter. The provisions of this chapter shall control the design, construction and arrangement of *means of egress* components required to provide an *approved means of egress* from structures and portions thereof.

1001.2 Minimum requirements. It shall be unlawful to alter a building or structure in a manner that will reduce the number of *exits* or the minimum width or required capacity of the *means of egress* to less than required by this code.

[F] SECTION 1002 MAINTENANCE AND PLANS

[F] **1002.1 Maintenance.** *Means of egress* shall be maintained in accordance with the *International Fire Code*.

[F] **1002.2 Fire safety and evacuation plans.** Fire safety and evacuation plans shall be provided for all occupancies and buildings where required by the *International Fire Code*. Such fire safety and evacuation plans shall comply with the applicable provisions of Sections 401.2 and 404 of the *International Fire Code*.

SECTION 1003 GENERAL MEANS OF EGRESS

1003.1 Applicability. The general requirements specified in Sections 1003 through 1015 shall apply to all three elements of the *means of egress* system, in addition to those specific requirements for the *exit access*, the *exit* and the *exit discharge* detailed elsewhere in this chapter.

[S] **1003.2 Ceiling height.** The *means of egress* shall have a ceiling height of not less than 7 feet 6 inches (2286 mm) above the finished floor.

Exceptions:

1. ~~((Sloped ceilings))~~ Ceilings in accordance with Section 1208.2.
- ~~((2. Ceilings of dwelling units and sleeping units within residential occupancies in accordance with Section 1207.2.~~
- 3) 2. Allowable projections in accordance with Section 1003.3.
- ~~((4))~~ 3. Stair headroom in accordance with Section 1011.3.
- ~~((5))~~ 4. Door height in accordance with Section 1010.1.1.
- ~~((6))~~ 5. Ramp headroom in accordance with Section 1012.5.2.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

((7)) 6. The clear height of floor levels in vehicular and pedestrian traffic areas of public and private parking garages in accordance with Section 406.2.2.

((8)) 7. Areas above and below *mezzanine* floors in accordance with Section 505.2.

1003.3 Protruding objects. Protruding objects on *circulation paths* shall comply with the requirements of Sections 1003.3.1 through 1003.3.4.

1003.3.1 Headroom. Protruding objects are permitted to extend below the minimum ceiling height required by Section 1003.2 where a minimum headroom of 80 inches (2032 mm) is provided over any circulation paths, including walks, *corridors*, *aisles* and passageways. Not more than 50 percent of the ceiling area of a *means of egress* shall be reduced in height by protruding objects.

Exception: Door closers and stops shall not reduce headroom to less than 78 inches (1981 mm).

A barrier shall be provided where the vertical clearance above a *circulation path* is less than 80 inches (2032 mm) high above the finished floor. The leading edge of such a barrier shall be located 27 inches (686 mm) maximum above the finished floor.

1003.3.2 Post-mounted objects. A free-standing object mounted on a post or pylon shall not overhang that post or pylon more than 4 inches (102 mm) where the lowest point of the leading edge is more than 27 inches (686 mm) and less than 80 inches (2032 mm) above the finished floor. Where a sign or other obstruction is mounted between posts or pylons and the clear distance between the posts or pylons is greater than 12 inches (305 mm), the lowest edge of such sign or obstruction shall be 27 inches (686 mm) maximum or 80 inches (2032 mm) minimum above the finished floor or ground.

Exception: These requirements shall not apply to sloping portions of *handrails* between the top and bottom riser of *stairs* and above the *ramp* run.

1003.3.3 Horizontal projections. Objects with leading edges more than 27 inches (685 mm) and not more than 80 inches (2030 mm) above the finished floor shall not project horizontally more than 4 inches (102 mm) into the *circulation path*.

Exception: *Handrails* are permitted to protrude 4-1/2 inches (114 mm) from the wall or *guard*.

1003.3.4 Clear width. Protruding objects shall not reduce the minimum clear width of *accessible routes*.

1003.4 Slip-resistant surface. Circulation paths of the *means of egress* shall have a slip-resistant surface and be securely attached.

[S] **1003.5 Elevation change.** Where changes in elevation of less than 12 inches (305 mm) exist in the *means of egress*, sloped surfaces shall be used. Where the slope is greater than one unit vertical in 20 units horizontal (5-percent slope), *ramps* complying with Section 1012 shall be used. Where the difference in elevation is 6 inches (152 mm) or less, the *ramp* shall be equipped with either *handrails* or floor finish materials that contrast with adjacent floor finish materials.

Exceptions:

1. Steps at exterior doors complying with Section 1010.1.4.
2. A *stair* with a single riser or with two risers and a tread is permitted at locations not required to be *accessible* by Chapter 11 and not within a stairway with two or more flights of stairs, where the risers and treads comply with Section 1011.5, the minimum depth of the tread is 13 inches (330 mm) and not less than one *handrail* complying with Section 1014 is provided within 30 inches (762 mm) of the centerline of the normal path of egress travel on the *stair*.
3. A step is permitted in *aisles* serving seating that has a difference in elevation less than 12 inches (305 mm) at locations not required to be *accessible* by Chapter 11, provided that the risers and treads comply with Section 1030.14 and the *aisle* is provided with a *handrail* complying with Section 1030.16.

Throughout a *story* in a Group I-2 occupancy, any change in elevation in portions of the *means of egress* that serve nonambulatory persons shall be by means of a *ramp* or sloped walkway.

1003.6 Means of egress continuity. The path of egress travel along a *means of egress* shall not be interrupted by a building element other than a *means of egress* component as specified in this chapter. Obstructions shall not be placed in the minimum width or required capacity of a *means of egress* component except projections permitted by this chapter. The minimum width or required capacity of a *means of egress* system shall not be diminished along the path of egress travel.

[W] **1003.7 Elevators, escalators and moving walks.** Elevators, escalators and moving walks shall not be used as a component of a required *means of egress* from any other part of the building.

Exceptions:

1. Elevators used as an *accessible* means of egress in accordance with Section 1009.4.
2. Escalators used as a means of egress for fixed transit and passenger rail system accordance with Section 3116.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

**SECTION 1004
OCCUPANT LOAD**

1004.1 Design occupant load. In determining *means of egress* requirements, the number of occupants for whom *means of egress* facilities are provided shall be determined in accordance with this section.

Interpretation I1004.1: The occupant load factor for occupied roofs is 15 net unless the *construction documents* indicate use other than unconcentrated assembly.

1004.2 Cumulative occupant loads. Where the path of egress travel includes intervening rooms, areas or spaces, cumulative *occupant loads* shall be determined in accordance with this section.

1004.2.1 Intervening spaces or accessory areas. Where occupants egress from one or more rooms, areas or spaces through others, the design *occupant load* shall be the combined *occupant load* of interconnected accessory or intervening spaces. Design of egress path capacity shall be based on the cumulative portion of *occupant loads* of all rooms, areas or spaces to that point along the path of egress travel.

1004.2.2 Adjacent levels for mezzanines. That portion of the *occupant load* of a *mezzanine* with required egress through a room, area or space on an adjacent level shall be added to the *occupant load* of that room, area or space.

1004.2.3 Adjacent stories. Other than for the egress components designed for convergence in accordance with Section 1005.6, the *occupant load* from separate stories shall not be added.

1004.3 Multiple function occupant load. Where an area under consideration contains multiple functions having different *occupant load* factors, the design *occupant load* for such area shall be based on the floor area of each function calculated independently.

1004.4 Multiple occupancies. Where a building contains two or more occupancies, the *means of egress* requirements shall apply to each portion of the building based on the occupancy of that space. Where two or more occupancies utilize portions of the same *means of egress* system, those egress components shall meet the more stringent requirements of all occupancies that are served.

1004.5 Areas without fixed seating. The number of occupants shall be computed at the rate of one occupant per unit of area as prescribed in Table 1004.5. For areas without *fixed seating*, the *occupant load* shall be not less than that number determined by dividing the floor area under consideration by the *occupant load* factor assigned to the function of the space as set forth in Table 1004.5. Where an intended function is not *listed* in Table 1004.5, the *building official* shall establish a function based on a *listed* function that most nearly resembles the intended function.

Exception: Where *approved* by the *building official*, the actual number of occupants for whom each occupied space, floor or building is designed, although less than those determined by calculation, shall be permitted to be used in the determination of the design *occupant load*.

1004.5.1 Increased occupant load. The *occupant load* permitted in any building, or portion thereof, is permitted to be increased from that number established for the occupancies in Table 1004.5, provided that all other requirements of the code are met based on such modified number and the *occupant load* does not exceed one occupant per 7 square feet (0.65 m²) of occupiable floor space. Where required by the *building official*, an *approved aisle*, seating or fixed equipment diagram substantiating any increase in *occupant load* shall be submitted. Where required by the *building official*, such diagram shall be posted.

Warehouses	500 gross

For SI: 1 foot = 304.8 mm, 1 square foot = 0.0929 m².

a. Floor area in square feet per occupant.

b. For electrical equipment areas, see also Sections 110.26 and 110.32 through 110.34 of the Seattle Electrical Code.

1004.6 Fixed seating. For areas having *fixed seats* and *aisles*, the *occupant load* shall be determined by the number of *fixed seats* installed therein. The *occupant load* for areas in which *fixed seating* is not installed, such as waiting spaces, shall be determined in accordance with Section 1004.5 and added to the number of *fixed seats*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

The *occupant load* of *wheelchair spaces* and the associated companion seat shall be based on one occupant for each *wheelchair space* and one occupant for the associated companion seat provided in accordance with Section 1109.2.3.

For areas having *fixed seating* without dividing arms, the *occupant load* shall be not less than the number of seats based on one person for each 18 inches (457 mm) of seating length.

The *occupant load* of seating booths shall be based on one person for each 24 inches (610 mm) of booth seat length measured at the backrest of the seating booth.

1004.7 Outdoor areas. *Yards*, patios, occupied roofs, *courts* and similar outdoor areas accessible to and usable by the building occupants shall be provided with *means of egress* as required by this chapter. The *occupant load* of such outdoor areas shall be assigned by the *building official* in accordance with the anticipated use. Where outdoor areas are to be used by persons in addition to the occupants of the building, and the path of egress travel from the outdoor areas passes through the building, *means of egress* requirements for the building shall be based on the sum of the *occupant loads* of the building plus the outdoor areas.

Exceptions:

1. Outdoor areas used exclusively for service of the building need only have one *means of egress*.
2. Both outdoor areas associated with Group R-3 and individual dwelling units of Group R-2.

1004.8 Concentrated business use areas. The *occupant load* factor for concentrated business use shall be applied to telephone call centers, trading floors, electronic data processing centers and similar business use areas with a higher density of occupants than would normally be expected in a typical business occupancy environment. Where approved by the *building official*, the *occupant load* for concentrated business use areas shall be the actual *occupant load*, but not less than one occupant per 50 square feet (4.65 m²) of gross occupiable floor space.

1004.9 Posting of occupant load. Every room or space that is an assembly occupancy shall have the *occupant load* of the room or space posted in a conspicuous place, near the main *exit* or *exit access doorway* from the room or space, for the intended configurations. Posted signs shall be of an approved legible permanent design and shall be maintained by the owner or the owner's authorized agent.

SECTION 1005 MEANS OF EGRESS SIZING

[W] **1005.1 General.** All portions of the *means of egress* system shall be sized in accordance with this section.

Exceptions:

1. *Aisles* and *aisle accessways* in rooms or spaces used for assembly purposes complying with Section 1030.
2. The capacity in inches, of means of egress components for fixed guideway transit and passenger rail stations, shall meet the requirements of Section 3116.

[S] **1005.2 Minimum width based on component.** The minimum width, in inches (mm), of any *means of egress* components shall be not less than that specified for such component, elsewhere in this code. The width at any point in the path of egress travel shall not be less than the width required for doors in Section 1010.

Exceptions:

1. *Aisles* and *aisle accessways* complying with Section 1018.
2. Corridors complying with Section 1020.2.
3. Stage stairways and catwalks complying with Section 410.6.

1005.3 Required capacity based on occupant load. The required capacity, in inches (mm), of the *means of egress* for any room, area, space or *story* shall be not less than that determined in accordance with Sections 1005.3.1 and 1005.3.2.

1005.3.1 Stairways. The capacity, in inches, of means of egress *stairways* shall be calculated by multiplying the *occupant load* served by such *stairways* by a *means of egress* capacity factor of 0.3 inch (7.6 mm) per occupant. Where *stairways* serve more than one *story*, only the *occupant load* of each *story* considered individually shall be used in calculating the required capacity of the *stairways* serving that *story*.

Exceptions:

1. For other than Group H and I-2 occupancies, the capacity, in inches, of means of egress *stairways* shall be calculated by multiplying the *occupant load* served by such *stairways* by a means of egress capacity factor of 0.2 inch (5.1 mm) per occupant in buildings equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1 or 903.3.1.2 and an *emergency voice/alarm communication system* in accordance with Section 907.5.2.2.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

2. Facilities with *smoke-protected assembly seating* shall be permitted to use the capacity factors in Table 1030.6.2 indicated for stepped *aisles* for *exit access* or *exit stairways* where the entire path for *means of egress* from the seating to the *exit discharge* is provided with a smoke control system complying with Section 909.
3. Facilities with *open-air assembly seating* shall be permitted to the capacity factors in Section 1030.6.3 indicated for stepped *aisles* for *exit access* or *exit stairways* where the entire path for *means of egress* from the seating to the *exit discharge* is open to the outdoors.

1005.3.2 Other egress components. The capacity, in inches, of *means of egress* components other than *stairways* shall be calculated by multiplying the *occupant load* served by such component by a means of egress capacity factor of 0.2 inch (5.1 mm) per occupant.

Exceptions:

1. For other than Group H and I-2 occupancies, the capacity, in inches, of *means of egress* components other than *stairways* shall be calculated by multiplying the *occupant load* served by such component by a means of egress capacity factor of 0.15 inch (3.8 mm) per occupant in buildings equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1 or 903.3.1.2 and an emergency voice/alarm communication system in accordance with Section 907.5.2.2.
2. Facilities with *smoke-protected assembly seating* shall be permitted to use the capacity factors in Table 1030.6.2 indicated for level or ramped *aisles* for *means of egress* components other than *stairways* where the entire path for *means of egress* from the seating to the *exit discharge* is provided with a smoke control system complying with Section 909.
3. Facilities with *open-air assembly seating* shall be permitted to the capacity factors in Section 1030.6.3 indicated for level or ramped *aisles* for *means of egress* components other than *stairways* where the entire path for *means of egress* from the seating to the *exit discharge* is open to the outdoors.

1005.4 Continuity. The minimum width or required capacity of the *means of egress* required from any *story* of a building shall not be reduced along the path of egress travel until arrival at the *public way*.

1005.5 Distribution of minimum width and required capacity. Where more than one *exit*, or access to more than one *exit*, is required, the *means of egress* shall be configured such that the loss of any one *exit*, or access to one *exit*, shall not reduce the available capacity or width to less than 50 percent of the required capacity or width.

[S] **1005.6 Egress convergence.** Where the *means of egress* from stories above and below converge at an intermediate level, the capacity of the *means of egress* from the point of convergence shall be not less than the largest minimum width or the sum of the required capacities for the *stairways* or *ramps* serving the two adjacent stories, whichever is larger.

Exception: The capacity necessary for parking uses need not be considered.

1005.7 Encroachment. Encroachments into the required *means of egress* width shall be in accordance with the provisions of this section.

1005.7.1 Doors. Doors, when fully opened, shall not reduce the required width by more than 7 inches (178 mm). Doors in any position shall not reduce the required width by more than one-half.

Exceptions:

1. Surface-mounted latch release hardware shall be exempt from inclusion in the 7-inch maximum (178 mm) encroachment where both of the following conditions exist:
 - 1.1. The hardware is mounted to the side of the door facing away from the adjacent wall where the door is in the open position.
 - 1.2. The hardware is mounted not less than 34 inches (865 mm) nor more than 48 inches (1219 mm) above the finished floor.
2. The restrictions on door swing shall not apply to doors within individual *dwelling units* and *sleeping units* of Group R-2 occupancies and *dwelling units* of Group R-3 occupancies.

1005.7.2 Other projections. *Handrail* projections shall be in accordance with the provisions of Section 1014.8. Other nonstructural projections such as *trim* and similar decorative features shall be permitted to project into the required width not more than 1-1/2 inches (38 mm) on each side.

Exception: Projections are permitted in *corridors* within Group I-2, Condition 1 in accordance with Section 407.4.3.

1005.7.3 Protruding objects. Protruding objects shall comply with the applicable requirements of Section 1003.3.

**SECTION 1006
NUMBER OF EXITS AND EXIT ACCESS DOORWAYS**

1006.1 General. The number of *exits* or *exit access doorways* required within the *means of egress* system shall comply with the provisions of Section 1006.2 for spaces, including *mezzanines*, and Section 1006.3 for *stories* or occupied roofs.

1006.2 Egress from spaces. Rooms, areas or spaces, including *mezzanines*, within a *story* or *basement* shall be provided with the number of *exits* or access to *exits* in accordance with this section.

[W] 1006.2.1 Egress based on occupant load and common path of egress travel distance. Two *exits* or *exit access doorways* from any space shall be provided where the design *occupant load* or the *common path of egress* travel distance exceeds the values *listed* in Table 1006.2.1. The cumulative *occupant load* from adjacent rooms, areas or spaces shall be determined in accordance with Section 1004.2.

Exceptions:

1. The number of *exits* from foyers, lobbies, vestibules or similar spaces need not be based on cumulative *occupant loads* for areas discharging through such spaces, but the capacity of the *exits* from such spaces shall be based on applicable cumulative *occupant loads*.
2. *Care suites* in Group I-2 occupancies complying with Section 407.4.
3. Unoccupied mechanical rooms and *penthouses* are not required to comply with the common path of egress travel distance measurement.
4. The common path of travel for fixed transit and passenger rail system stations shall be in accordance with Section 3116.

[W] 1006.2.1.1 Three or more exits or exit access doorways. Three *exits* or *exit access doorways* shall be provided from any space with an *occupant load* of 501 to 1,000. Four *exits* or *exit access doorways* shall be provided from any space with an *occupant load* greater than 1,000.

Exception: The number of required *exits* for fixed transit and passenger rail systems may be reduced by one at open stations.

**[W] TABLE 1006.2.1
SPACES WITH ONE EXIT OR EXIT ACCESS DOORWAY**

OCCUPANCY	MAXIMUM OCCUPANT LOAD OF SPACE	MAXIMUM COMMON PATH OF EGRESS TRAVEL DISTANCE (feet)		
		Without Sprinkler System (feet)		With Sprinkler System (feet)
		Occupant Load		
		OL ≤ 30	OL > 30

S ^f	29	100	75	100 ^a
U	49	100	75	75 ^a

For SI: 1 foot = 304.8 mm.

NP = Not Permitted.

- a. Buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 or 903.3.1.2. See Section 903 for occupancies where automatic sprinkler systems are permitted in accordance with Section 903.3.1.2.
- b. Group H occupancies equipped throughout with an automatic sprinkler system in accordance with Section 903.2.5.
- c. For a room or space used for assembly purposes having fixed seating, see Section 1030.8.
- d. For the travel distance limitations in Group I-2, see Section 407.4.
- e. The common path of egress travel distance shall only apply in a Group R-3 occupancy located in a mixed occupancy building.
- f. The length of common path of egress travel distance in a Group S-2 open parking garage shall be not more than 100 feet.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

- g. For the travel distance limitations in Groups R-3 and R-4 equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.3, see Section 1006.2.2.6.
- h. Day care facilities, rooms or spaces where care is provided for more than 10 children that are 2-1/2 years of age or less, shall have access to not less than two exits or exit access doorways.

1006.2.2 Egress based on use. The numbers, configuration and types of components of *exits* or access to *exits* shall be provided in the uses described in Sections 1006.2.2.1 through 1006.2.2.6.

1006.2.2.1 Boiler, incinerator and furnace rooms. Two *exit access doorways* are required in boiler, incinerator and furnace rooms where the area is over 500 square feet (46 m²) and any fuel-fired equipment exceeds 400,000 British thermal units (Btu) (422 000 KJ) input capacity. Where two *exit access doorways* are required, one is permitted to be a fixed ladder or an *alternating tread device*. *Exit access doorways* shall be separated by a horizontal distance equal to one-half the length of the maximum overall diagonal dimension of the room.

1006.2.2.2 Refrigeration machinery rooms. Machinery rooms larger than 1,000 square feet (93 m²) shall have not less than two *exits* or exit access doorways. Where two *exit access doorways* are required, one such doorway is permitted to be served by a fixed ladder or an *alternating tread device*. *Exit access doorways* shall be separated by a horizontal distance equal to one-half the maximum horizontal dimension of the room.

All portions of machinery rooms shall be within 150 feet (45 720 mm) of an *exit* or *exit access doorway*. An increase in *exit access* travel distance is permitted in accordance with Section 1017.1.

Exit and *exit access doorways* shall swing in the direction of egress travel and shall be equipped with *panic hardware*, regardless of the *occupant load* served. *Exit* and *exit access doorways* shall be tight fitting and *self-closing*.

1006.2.2.3 Refrigerated rooms or spaces. Rooms or spaces having a floor area larger than 1,000 square feet (93 m²), containing a refrigerant evaporator and maintained at a temperature below 68°F (20°C), shall have access to not less than two *exits* or exit access doorways.

Exit access travel distance shall be determined as specified in Section 1017.1, but all portions of a refrigerated room or space shall be within 150 feet (45 720 mm) of an *exit* or *exit access doorway* where such rooms are not protected by an *approved automatic sprinkler system*. Egress is allowed through adjoining refrigerated rooms or spaces.

Exception: Where using refrigerants in quantities limited to the amounts based on the volume set forth in the *International Mechanical Code*.

[S] **1006.2.2.4 Electrical rooms.** The location and number of *exit* or *exit access doorways* shall be provided for electrical rooms in accordance with Section 110.26 of ((NFPA 70)) *the Seattle Electrical Code* for electrical equipment rated 1,000 volts or less, and Section 110.33 of ((NFPA 70)) *the Seattle Electrical Code* for electrical equipment rated over 1,000 volts. *Panic hardware* shall be provided where required in accordance with Section 1010.2.9.2.

Note: See Seattle Electrical Code Sections 110.26.C.2 and 110.33.A.1 for conditions where two exits shall be provided from required working space containing large equipment.

1006.2.2.5 Vehicular ramps. Vehicular *ramps* shall not be considered as an *exit access ramp* unless pedestrian facilities are provided.

[W] **1006.2.2.6 Groups R-3 and R-4.** Where Group R-3 occupancies are permitted by Section 903.2.8 to be protected by an *automatic sprinkler system* installed in accordance with Section 903.3.1.3, the *exit access* travel distance for Group R-3 shall be not more than 125 feet (38 100 mm). Where Group R-4 occupancies are permitted by Section 903.2.8 to be protected by an *automatic sprinkler system* installed in accordance with Section 903.3.1.3, the *exit access* travel distance for Group R-4 shall be not more than 75 feet (22 860 mm).

[S] **1006.3 Egress from stories or occupied roofs.** The *means of egress* system serving any *story* or occupied roof shall be provided with the number of separate and distinct *exits* or access to *exits* based on the aggregate *occupant load* served in accordance with this section. Horizontal exits shall not count toward the required number of exits from the story or roof.

1006.3.1 Occupant load. Where *stairways* serve more than one *story*, or more than one *story* and an occupied roof, only the *occupant load* of each *story* or occupied roof, considered individually, shall be used when calculating the required number of *exits* or access to *exits* serving that *story*.

Note: In high-rise buildings required to have an additional exit stairway by Section 403.5.2, all exit stairways must be accessible to all tenants on a floor without having to pass through another tenant space.

1006.3.2 Path of egress travel. The path of egress travel to an *exit* shall not pass through more than one adjacent *story*.

Exception: The path of egress travel to an *exit* shall be permitted to pass through more than one adjacent *story* in any of the following:

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

1. In Group R-1, R-2 or R-3 occupancies, *exit access stairways* and *ramps* connecting four stories or less serving and contained within an individual dwelling unit, sleeping unit or live/work unit.
2. *Exit access stairways* serving and contained within a Group R-3 congregate residence or a Group R-4 facility.
3. *Exit access stairways* and *ramps* within an *atrium* complying with Section 404.
4. *Exit access stairways* and *ramps* in *open parking garages* that serve only the parking garage.
5. *Exit access stairways* and *ramps* serving *open-air assembly seating* complying with the exit access travel distance requirements of Section 1030.7.
6. *Exit access stairways* and *ramps* between the balcony, gallery or press box and the main assembly floor in occupancies such as theaters, *places of religious worship*, auditoriums and sports facilities.
7. Exterior *exit access stairways* and *ramps* between occupied roofs.

1006.3.3 Egress based on occupant load. Each *story* and occupied roof shall have the minimum number of separate and distinct *exits*, or access to *exits*, as specified in Table 1006.3.3. A single *exit* or access to a single *exit* shall be permitted in accordance with Section 1006.3.4. The required number of *exits*, or *exit access stairways* or *ramps* providing access to *exits*, from any *story* or occupied roof shall be maintained until arrival at the *exit discharge* or a *public way*.

**TABLE 1006.3.3
MINIMUM NUMBER OF EXITS OR ACCESS TO EXITS PER STORY**

OCCUPANT LOAD PER STORY	MINIMUM NUMBER OF EXITS OR ACCESS TO EXITS FROM STORY
1-500	2
501-1,000	3
More than 1,000	4

[W][S] 1006.3.4 Single exits. A single *exit* or access to a single *exit* shall be permitted from any *story* or occupied roof where one of the following conditions exists:

1. The *occupant load*, number of *dwelling units* and exit access travel distance within the portion of the building served by the single exit do not exceed the values in Table 1006.3.4(1) or 1006.3.4(2).
2. Rooms, areas and spaces complying with Section 1006.2.1 with *exits* that discharge directly to the exterior at the *level of exit discharge*, are permitted to have one *exit* or access to a single *exit*.
3. Parking garages where vehicles are mechanically parked shall be permitted to have one *exit* or access to a single *exit*.
4. Group R-3 and R-4 occupancies shall be permitted to have one *exit* or access to a single *exit*.
5. Individual single-story or multistory *dwelling units* shall be permitted to have a single *exit* or access to a single *exit* from the *dwelling unit* provided that both of the following criteria are met:
 - 5.1. The *dwelling unit* complies with Section 1006.2.1 as a space with one *means of egress*.
 - 5.2. Either the exit from the *dwelling unit* discharges directly to the exterior at the *level of exit discharge*, or the *exit access* outside the *dwelling unit's* entrance door provides access to not less than two *approved independent exits*.
6. Occupied roofs with an occupant load of ten or less are permitted to have a single exit or access to a single exit.
7. Not more than 5 stories of Group R-2 occupancy are permitted to be served by a single exit under the following conditions:
 - 7.1. The building has not more than six stories above grade plane.
 - 7.2. The building does not contain a boarding house.
 - 7.3. There shall be no more than four dwelling units on any floor.
 - 7.4. The building shall be of not less than one hour fire-resistive construction and shall also be equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1. Residential-type sprinklers shall be used in all habitable spaces in each dwelling unit.
 - 7.5. There shall be no more than two single exit stairway conditions on the same property.
 - 7.6. An exterior stairway or interior exit stairway shall be provided. The interior exit stairway, including any related exit passageway, shall be pressurized in accordance with Section 909.20.6. Doors in the stairway shall swing into the interior exit stairway regardless of the occupant load served, provided that doors from the interior exit stairway to the building exterior are permitted to swing in the direction of exit travel.
 - 7.7. A corridor shall separate each dwelling unit entry/exit door from the door to an interior exit stairway, including any related exit passageway, on each floor. Dwelling unit doors shall not open directly into an interior exit stairway. Dwelling unit doors are permitted to open directly into an exterior stairway.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

- 7.8. There shall be no more than 20 feet (6096 mm) of travel to the exit stairway from the entry/exit door of any dwelling unit.
- 7.9. Travel distance measured in accordance with Section 1017 shall not exceed 125 feet.
- 7.10. The exit shall not terminate in an egress court where the court depth exceeds the court width unless it is possible to exit in either direction to the public way.
- 7.11. Elevator hoistways shall be pressurized in accordance with Section 909.21 or shall open into elevator lobbies that comply with Section 713.14. Where approved by the building official, natural ventilation is permitted to be substituted for pressurization where the ventilation would prevent the accumulation of smoke or toxic gases.
- 7.12. Other occupancies are permitted in the same building provided they comply with all the requirements of this code. Other occupancies shall not communicate with the Group R occupancy portion of the building or with the single-exit stairway.
Exception: Parking garages and occupied roofs accessory to the Group R occupancy are permitted to communicate with the exit stairway.
- 7.13. The exit serving the Group R occupancy shall not discharge through any other occupancy, including an accessory parking garage.
- 7.14. There shall be no openings within 10 feet (3048 mm) of unprotected openings into the stairway other than required exit doors having a one-hour fire-resistance rating.

1006.3.4.1 Mixed occupancies. Where one exit, or exit access stairway or ramp providing access to exits at other stories, is permitted to serve individual stories, mixed occupancies shall be permitted to be served by single exits provided that each individual occupancy complies with the applicable requirements of Table 1006.3.4(1) or 1006.3.4(2) for that occupancy. Where applicable, cumulative occupant loads from adjacent occupancies shall be considered to be in accordance with the provisions of Section 1004.1. In each story of a mixed occupancy building, the maximum number of occupants served by a single exit shall be such that the sum of the ratios of the calculated number of occupants of the space divided by the allowable number of occupants indicated in Table 1006.3.4(2) for each occupancy does not exceed one. Where dwelling units are located on a story with other occupancies, the actual number of dwelling units divided by four plus the ratio from the other occupancy does not exceed one.

**TABLE 1006.3.4(1)
STORIES WITH ONE EXIT OR ACCESS TO ONE EXIT FOR R-2 OCCUPANCIES**

STORY	OCCUPANCY	MAXIMUM NUMBER OF DWELLING UNITS	MAXIMUM EXIT ACCESS TRAVEL DISTANCE
Basement, first, second or third story above grade plane	R-2 ^{a, b}	4 dwelling units	125 feet
Fourth story above grade plane and higher	NP	NA	NA

For SI: 1 foot = 304.8 mm.

NP = Not Permitted.

NA = Not Applicable.

a. Buildings classified as Group R-2 equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 or 903.3.1.2 and provided with emergency escape and rescue openings in accordance with Section 1031.

b. This table is used for R-2 occupancies consisting of dwelling units. For R-2 occupancies consisting of sleeping units, use Table 1006.3.4(2).

**TABLE 1006.3.4(2)
STORIES WITH ONE EXIT OR ACCESS TO ONE EXIT FOR OTHER OCCUPANCIES**

STORY	OCCUPANCY	MAXIMUM OCCUPANT LOAD PER STORY	MAXIMUM EXIT ACCESS TRAVEL DISTANCE (feet)
First story above or below grade plane	A, B ^b , E, F ^b , M, U	49	75
	H-2, H-3	3	25
	H-4, H-5, I, R-1, R-2 ^{a, c}	10	75
	S ^{b, d}	29	75
Second story above grade plane	B, F, M, S ^d	29	75
Third story above grade plane and higher	NP	NA	NA

For SI: 1 foot = 304.8 mm.

NP = Not Permitted.

NA = Not Applicable.

a. Buildings classified as Group R-2 equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 or 903.3.1.2 and provided with emergency escape and rescue openings in accordance with Section 1031.

b. Group B, F and S occupancies in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 shall have a maximum exit access travel distance of 100 feet.

c. This table is used for R-2 occupancies consisting of sleeping units. For R-2 occupancies consisting of dwelling units, use Table 1006.3.4(1).

d. The length of exit access travel distance in a Group S-2 open parking garage shall be not more than 100 feet.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

**SECTION 1007
EXIT AND EXIT ACCESS DOORWAY CONFIGURATION**

[S] **1007.1 General.** *Exits, exit access doorways, and exit access stairways and ramps* serving spaces, including individual building *stories*, shall be separated in accordance with the provisions of this section. Interlocking or scissor stairs and stairways that share a wall with other exit stairways shall be counted as one exit or exit access.

1007.1.1 Two exits or exit access doorways. Where two *exits, exit access doorways, exit access stairways or ramps*, or any combination thereof, are required from any portion of the *exit access*, they shall be placed a distance apart equal to not less than one-half of the length of the maximum overall diagonal dimension of the building or area to be served measured in a straight line between them. (~~Interlocking or scissor stairways shall be counted as one exit stairway.~~)

Exceptions:

1. Where interior *exit stairways or ramps* are interconnected by a 1-hour fire-resistance-rated *corridor* conforming to the requirements of Section 1020, the required exit separation shall be measured along the shortest direct line of travel within the corridor.

Interpretation I1007.1: Exception 1 applies only where *corridors* have a one-hour fire-resistance-rating even where Section 1020 would allow non-rated *corridors*.

2. Where a building is equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1 or 903.3.1.2, the separation distance shall be not less than one-third of the length of the maximum overall diagonal dimension of the area served.
3. Where it is not practical to separate exits by one-half the diagonal dimension, exits from retail and office tenant spaces in Group B and M occupancies and within dwelling units shall be as far apart as reasonably practicable as determined by the building official.

Note: Interior exit stairways in high-rise buildings shall also meet the requirements of Section 403.5.1.

1007.1.1.1 Measurement point. The separation distance required in Section 1007.1.1 shall be measured in accordance with the following:

1. The separation distance to *exit or exit access doorways* shall be measured to any point along the width of the doorway.
2. The separation distance to *exit access stairways* shall be measured to any point along the width of the closest riser.
3. The separation distance to *exit access ramps* shall be measured to any point along the width of the start of the ramp run.

Interpretation I1007.1.1.1: In items 1 through 3, separation distance is permitted to be measured to the farthest point.

1007.1.2 Three or more exits or exit access doorways. Where access to three or more *exits* is required, not less than two *exit or exit access doorways* shall be arranged in accordance with the provisions of Section 1007.1.1. Additional required *exit or exit access doorways* shall be arranged a reasonable distance apart so that if one becomes blocked, the others will be available.

1007.1.3 Remoteness of exit access stairways or ramps. Where two *exit access stairways or ramps* provide the required *means of egress to exits* at another *story*, the required separation distance shall be maintained for all portions of such *exit access stairways or ramps*.

1007.1.3.1 Three or more exit access stairways or ramps. Where more than two *exit access stairways or ramps* provide the required *means of egress*, not less than two shall be arranged in accordance with Section 1007.1.3.

**SECTION 1008
MEANS OF EGRESS ILLUMINATION**

[S] **1008.1 Means of egress illumination.** Illumination shall be provided at every point in the *means of egress* in accordance with Section 1008.2. Under emergency power, *means of egress illumination* shall comply with Section 1008.3.

1008.2 Illumination required. The *means of egress* serving a room or space shall be illuminated at all times that the room or space is occupied.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Exceptions:

1. Occupancies in Group U.
2. *Aisle accessways* in Group A.
3. *Dwelling units* and *sleeping units* in Groups R-1, R-2 and R-3.
4. *Sleeping units* of Group I occupancies.

[S] **1008.2.1 Illumination level under normal power.** The *means of egress* illumination level shall be not less than 1 foot-candle (11 lux) at the walking surface. Luminaires shall be installed whenever exit signs are required by Section 1013. Along *exit access stairways*, exit stairways and at their required landings, the illumination level shall not be less than 10 footcandles (108 lux) at the walking surface when the *stairway* is in use.

Exception: For auditoriums, theaters, concert or opera halls and similar assembly occupancies, the illumination at the walking surface is permitted to be reduced during performances by one of the following methods provided that the required illumination is automatically restored upon activation of a premises' *fire alarm system*:

1. Externally illuminated walking surfaces shall be permitted to be illuminated to not less than 0.2 footcandle (2.15 lux).
2. Steps, landings and the sides of *ramps* shall be permitted to be marked with *self-luminous* materials in accordance with Sections 1025.2.1, 1025.2.2 and 1025.2.4 by systems *listed* in accordance with UL 1994.

1008.2.2 Group I-2. In Group I-2 occupancies where two or more *exits* are required, on the exterior landings required by Section 1010.1.5, means of egress illumination levels for the exit discharge shall be provided such that failure of a single lamp in a luminaire shall not reduce the illumination level on that landing to less than 1 footcandle (11 lux).

Code Alternate CA1008.2: Compliance with the following paragraphs will be deemed to satisfy the requirement for means of egress illumination at every point in the means of egress. Means of egress illumination systems that comply with this Code Alternate shall also comply with Section 1008.3.

1. **Location and fixture placement.** Means of egress illumination shall be located in stairways, *corridors*, halls, passenger elevator cars, lobbies, rooms with an occupant load of 100 or more, and other areas required to provide safe egress from the premises and immediately outside of the building exit when required by the *building official*. Fixtures shall be installed to not less than the following schedule:

1.1 Interior and exterior stairways and landings and outside building exit	At least one per landing
1.2 Corridors and halls and designated means of egress paths in parking garages	At least one for each 40 lineal feet
1.3 Lobbies, vestibules, foyers, elevator cars and other similar areas as required	At least one for each 250 square feet
1.4 Warehouses	See Item 2 below.

These fixtures are permitted to be included in the watts per square foot calculation for means of egress illumination.

2. **Amount of Illumination.** Where means of egress illumination is required, illumination shall be provided at the rate of 0.1 watts of fluorescent or 0.05 watts of LED illumination per square foot of area. Installations using incandescent lamps shall have a minimum wattage of at least 3 times the fluorescent requirements. Use of other light sources is subject to the approval of the *building official*.

Exceptions:

1. In warehouses, the allowable minimum illumination is permitted to be 0.1 watt per square foot (0.03 watts for fluorescent or 0.02 watts for LED) provided fixtures are placed either:
 - 1.1 Where means of egress pathways are not designated, fixtures shall be placed to cover an area not larger than 1,600 square feet, or
 - 1.2 Where means of egress pathways are designated, fixtures shall be placed at least one for every 40 lineal feet.
2. In theaters, auditoriums or other places of assembly where motion pictures or other projections are made by means of directed light, the minimum allowable illumination is permitted to be reduced to 0.05 watts per square foot of floor area (0.02 watts for fluorescent or 0.01 watts for LED). The higher level of required illumination shall be automatically restored upon activation of a premises fire alarm system where such system is provided.
3. In Groups B, F-1, M and S-1 occupancies, when approved by the building official, the minimum allowable illumination in the exit access is permitted to be reduced to 0.05 watts per square foot (0.02 watts for fluorescent or 0.01 watts for LED) of floor area.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

~~[W] ((1008.2.3 Exit discharge. Illumination shall be provided along the path of travel for the exit discharge from each exit to the public way.~~

~~Exception: Illumination shall not be required where the path of the exit discharge meets both of the following requirements:~~

- ~~1. The path of exit discharge is illuminated from the exit to a safe dispersal area complying with Section 1028.5.~~
- ~~2. A dispersal area shall be illuminated to a level not less than 1 footcandle (11 lux) at the walking surface.)~~

[S] 1008.3 ((Emergency power)) **Power supply for illumination.** The power supply for *means of egress* illumination shall normally be provided by the premises' electrical supply.

1008.3.1 General. In the event of power supply failure in rooms and spaces that require two or more *exits* or access to exits, an emergency ((electrical)) power system shall automatically illuminate all of the following areas:

1. *Aisles.*
2. *Corridors.*
3. *Exit access stairways and ramps.*

1008.3.2 Buildings. In the event of power supply failure in buildings that require two or more *exits* or access to exits, an emergency electrical system shall automatically illuminate all of the following areas:

1. *Interior exit access stairways and ramps.*
2. *Interior and exterior exit stairways and ramps.*
3. *Exit passageways.*
4. Vestibules and areas on the level of discharge used for *exit discharge* in accordance with Section 1028.2.
5. Exterior landings as required by Section 1010.1.5 for *exit doorways* that lead directly to the *exit discharge*.

1008.3.3 Rooms and spaces. In the event of power supply failure, an emergency electrical system shall automatically illuminate all of the following areas:

1. Electrical equipment rooms.
2. Fire command centers.
3. Fire pump rooms.
4. Generator rooms.
5. Public restrooms with an area greater than 300 square feet (27.87 m²).

1008.3.4 Duration. The emergency power system shall provide power for a duration of not less than 90 minutes and shall consist of storage batteries, unit equipment or an on-site generator. The installation of the emergency power system shall be in accordance with Section 2702.

1008.3.5 Illumination level under emergency power. Emergency lighting facilities shall be arranged to provide initial illumination that is not less than an average of 1 footcandle (11 lux) and a minimum at any point of 0.1 footcandle (1 lux) measured along the path of egress at floor level. Illumination levels shall be permitted to decline to 0.6 footcandle (6 lux) average and a minimum at any point of 0.06 footcandle (0.6 lux) at the end of the emergency lighting time duration. A maximum-to-minimum illumination uniformity ratio of 40 to 1 shall not be exceeded. In Group I-2 occupancies, failure of a single lamp in a luminaire shall not reduce the illumination level to less than 0.2 footcandle (2.2 lux).

**SECTION 1009
ACCESSIBLE MEANS OF EGRESS**

[W] 1009.1 **Accessible means of egress required.** *Accessible* means of egress shall comply with this section. *Accessible* spaces shall be provided with not less than one accessible means of egress. Where more than one *means of egress* is required by Section 1006.2 or 1006.3 from any accessible space, each *accessible* portion of the space shall be served by not less than two accessible means of egress.

Exceptions:

1. Accessible means of egress are not required to be provided in existing buildings.
- ((1)) 2. One *accessible means of egress* is required from an *accessible mezzanine* level in accordance with Section 1009.3, 1009.4 or 1009.5.
- ((2)) 3. In assembly areas with ramped *aisles* or stepped *aisles*, one *accessible means of egress* is permitted where the *common path of egress travel* is *accessible* and meets the requirements in Section 1030.8.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

4. In parking garages, accessible means of egress are not required to serve parking areas that do not contain accessible parking spaces.

[S] 1009.2 Continuity and components. Each required *accessible means of egress* shall be continuous to a *public way* and shall consist of one or more of the following components:

1. *Accessible routes* complying with Section 1104.
2. *Interior exit stairways* complying with Sections 1009.3 and 1023.
3. *Exit access stairways* complying with Sections 1009.3 and 1019.3 or 1019.4.
4. *Exterior exit stairways* complying with Sections 1009.3 and 1027 and serving levels other than the *level of exit discharge*.
5. Elevators complying with Section 1009.4.

Interpretation I1009.2a: An exit passageway is not required on the level of exit discharge to connect the elevator with the exterior exit door.

6. Platform lifts complying with Section 1009.5.
7. *Horizontal exits* complying with Section 1026.
8. *Ramps* complying with Section 1012.
9. *Areas of refuge* complying with Section 1009.6.
10. Exterior areas for assisted rescue complying with Section 1009.7 serving *exits* at the *level of exit discharge*.

[W][S] 1009.2.1 Elevators required. In buildings where a required accessible floor or accessible occupied roof is four or more stories above or below a *level of exit discharge*, not less than one required *accessible means of egress* shall be an elevator complying with Section 1009.4.

Interpretation I1009.2b: The level of exit discharge is not counted when determining whether an accessible floor is four stories above or below a level of exit discharge. See Figure 1009.2.b.

Exceptions:

1. In buildings equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1 or 903.3.1.2, the elevator shall not be required on floors provided with a *horizontal exit* and located at or above the *levels of exit discharge*.
2. In buildings equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1 or 903.3.1.2, the elevator shall not be required on floors provided with a *ramp* conforming to the provisions of Section 1012.

Interpretation I1009.2c: In exception 2, the ramp shall be part of an accessible means of egress.

FIGURE 1009.2.b

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

1009.3 Stairways. In order to be considered part of an *accessible means of egress*, a *stairway* between *stories* shall comply with Sections 1009.3.1 through 1009.3.3.

1009.3.1 Exit access stairways. *Exit access stairways* that connect levels in the same *story* are not permitted as part of an *accessible means of egress*.

Exception: *Exit access stairways* providing *means of egress* from *mezzanines* are permitted as part of an *accessible means of egress*.

1009.3.2 Stairway width. *Stairways* shall have a clear width of 48 inches (1219 mm) minimum between *handrails*.

Exceptions:

1. The clear width of 48 inches (1219 mm) between *handrails* is not required in buildings equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1 or 903.3.1.2.
2. The clear width of 48 inches (1219 mm) between *handrails* is not required for *stairways* accessed from a refuge area in conjunction with a *horizontal exit*.

1009.3.3 Area of refuge. *Stairways* shall either incorporate an *area of refuge* within an enlarged floor-level landing or shall be accessed from an *area of refuge* complying with Section 1009.6.

Exceptions:

1. *Areas of refuge* are not required at *exit access stairways* where two-way communication is provided at the elevator landing in accordance with Section 1009.8.
2. *Areas of refuge* are not required at *stairways* in buildings equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1 or 903.3.1.2.
3. *Areas of refuge* are not required at *stairways* serving *open parking garages*.
4. *Areas of refuge* are not required for *smoke-protected or open-air assembly seating* areas complying with Sections 1030.6.2 and 1030.6.3.
5. *Areas of refuge* are not required at *stairways* in Group R-2 occupancies.
6. *Areas of refuge* are not required for *stairways* accessed from a refuge area in conjunction with a *horizontal exit*.

1009.4 Elevators. In order to be considered part of an *accessible means of egress*, an elevator shall comply with Sections 1009.4.1 and 1009.4.2.

[S] **1009.4.1 Standby power.** The elevator shall meet the emergency operation and signaling device requirements of Section 2.27 of ASME A17.1/CSA B44. ~~((Standby))~~ An emergency or legally required standby power system shall be provided in accordance with Chapter 27 and ((Section 3003)) the Seattle Electrical Code for the operation of the elevator, the shunt trip and lighting for elevator cars, control rooms, machine rooms, and machinery spaces.

1009.4.2 Area of refuge. The elevator shall be accessed from an *area of refuge* complying with Section 1009.6.

Exceptions:

1. *Areas of refuge* are not required at the elevator in *open parking garages*.
2. *Areas of refuge* are not required in buildings and facilities equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1 or 903.3.1.2.
3. *Areas of refuge* are not required at elevators not required to be located in a *shaft* in accordance with Section 712.
4. *Areas of refuge* are not required at elevators serving *smoke-protected or open-air assembly seating* areas complying with Sections 1030.6.2 and 1030.6.3.
5. *Areas of refuge* are not required for elevators accessed from a refuge area in conjunction with a *horizontal exit*.

[S] **1009.5 Platform lifts.** Platform lifts shall be permitted to serve as part of an *accessible means of egress* where allowed as part of a required *accessible route* in Section 1110.9 except for Item 10. ~~((Standby))~~ A legally required standby power system for the platform lift shall be provided in accordance with Chapter 27.

1009.6 Areas of refuge. Every required *area of refuge* shall be accessible from the space it serves by an *accessible means of egress*.

1009.6.1 Travel distance. The maximum travel distance from any accessible space to an *area of refuge* shall not exceed the *exit access* travel distance permitted for the occupancy in accordance with Section 1017.1.

1009.6.2 Stairway or elevator access. Every required *area of refuge* shall have *direct access* to a *stairway* complying with Sections 1009.3 and 1023 or an elevator complying with Section 1009.4.

Exception: An interior area of refuge at the level of exit discharge that provides direct access to an exterior exit door.

1009.6.3 Size. Each *area of refuge* shall be sized to accommodate one *wheelchair space* of 30 inches by 52 inches (762 mm by 1320 mm) for each 200 occupants or portion thereof, based on the *occupant load* of the *area of refuge* and areas served

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

by the *area of refuge*. Such *wheelchair spaces* shall not reduce the *means of egress* minimum width or required capacity. Access to any of the required *wheelchair spaces* in an *area of refuge* shall not be obstructed by more than one adjoining *wheelchair space*.

1009.6.4 Separation. Each *area of refuge* shall be separated from the remainder of the *story* by a *smoke barrier* complying with Section 709 or a *horizontal exit* complying with Section 1026. Each *area of refuge* shall be designed to minimize the intrusion of smoke.

Exceptions:

1. *Areas of refuge* located within an enclosure for *interior exit stairways* complying with Section 1023.
2. *Areas of refuge* in outdoor facilities where *exit access* is essentially open to the outside.

1009.6.5 Two-way communication. *Areas of refuge* shall be provided with a two-way communication system complying with Sections 1009.8.1 and 1009.8.2.

1009.7 Exterior areas for assisted rescue. Exterior areas for assisted rescue shall be accessed by an *accessible route* from the area served.

Where the *exit discharge* does not include an *accessible route* from an exit located on the *level of exit discharge* to a *public way*, an exterior area of assisted rescue shall be provided on the exterior landing in accordance with Sections 1009.7.1 through 1009.7.4.

1009.7.1 Size. Each exterior area for assisted rescue shall be sized to accommodate *wheelchair spaces* in accordance with Section 1009.6.3.

1009.7.2 Separation. Exterior walls separating the exterior area of assisted rescue from the interior of the building shall have a minimum *fire-resistance rating* of 1 hour, rated for exposure to fire from the inside. The fire-resistance-rated *exterior wall* construction shall extend horizontally not less than 10 feet (3048 mm) beyond the landing on either side of the landing or equivalent fire-resistance-rated construction is permitted to extend out perpendicular to the *exterior wall* not less than 4 feet (1219 mm) on the side of the landing. The *fire-resistance-rated* construction shall extend vertically from the ground to a point not less than 10 feet (3048 mm) above the floor level of the area for assisted rescue or to the roof line, whichever is lower. Openings within such *fire-resistance-rated exterior walls* shall be protected in accordance with Section 716.

Exception: The *fire-resistance rating* and opening protectives are not required in the *exterior wall* where the building is equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1 or 903.3.1.2.

1009.7.3 Openness. The exterior area for assisted rescue shall be open to the outside air. The sides other than the separation walls shall be not less than 50 percent open, and the open area shall be distributed so as to minimize the accumulation of smoke or toxic gases.

1009.7.4 Stairways. *Stairways* that are part of the *means of egress* for the exterior area for assisted rescue shall provide a minimum clear width of 48 inches (1219 mm) between *handrails*.

Exception: The minimum clear width of 48 inches (1219 mm) between *handrails* is not required at *stairways* serving buildings equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1 or 903.3.1.2.

[W] 1009.8 Two-way communication. A two-way communication system complying with Sections 1009.8.1 and 1009.8.2 shall be provided at the landing serving each elevator or bank of elevators on each accessible floor that is one or more stories above or below the *level of exit discharge*.

Exceptions:

1. Two-way communication systems are not required at the landing serving each elevator or bank of elevators where the two-way communication system is provided within *areas of refuge* in accordance with Section 1009.6.5.
2. Two-way communication systems are not required on floors provided with *ramps that provide a direct path of egress travel to grade or the level of exit discharge* conforming to the provisions of Section 1012.
3. Two-way communication systems are not required at the landings serving only service elevators that are not designated as part of the *accessible means of egress* or serve as part of the required *accessible route* into a facility.
4. Two-way communication systems are not required at the landings serving only freight elevators.
5. Two-way communication systems are not required at the landing serving a private residence elevator.
6. Two-way communication systems are not required in Group I-2 or I-3 facilities.

[W] 1009.8.1 System requirements. Two-way communication systems shall provide communication between each required location and the *fire command center* or a central control point location *approved* by the fire department. Where the central control point is not a *constantly attended location*, the two-way communication system shall have timed, automatic telephone dial-out capability that provides two-way communication with an approved supervising station. (~~or 9-1-1~~)

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

4-) The two-way communication system shall include both audible and visible signals. The two-way communication system shall have a battery backup or an approved alternate source of power that is capable of 90 minutes' use upon failure of the normal power source.

1009.8.2 Directions. Directions for the use of the two-way communication system, instructions for summoning assistance via the two-way communication system and written identification of the location shall be posted adjacent to the two-way communication system. Signage shall comply with the ICC A117.1 requirements for visual characters.

1009.9 Signage. Signage indicating special accessibility provisions shall be provided as shown:

1. Each door providing access to an *area of refuge* from an adjacent floor area shall be identified by a sign stating, "AREA OF REFUGE."
2. Each door providing access to an exterior area for assisted rescue shall be identified by a sign stating, "EXTERIOR AREA FOR ASSISTED RESCUE."

Signage shall comply with the ICC A117.1 requirements for visual characters and include the International Symbol of Accessibility. Where exit sign illumination is required by Section 1013.3, the signs shall be illuminated. Additionally, visual characters, raised character and braille signage complying with ICC A117.1 shall be located at each door to an *area of refuge* and exterior area for assisted rescue in accordance with Section 1013.4.

1009.10 Directional signage. Directional signage indicating the location of all other *means of egress* and which of those are *accessible* means of egress shall be provided at the following:

1. At *exits* serving a required accessible space but not providing an *approved accessible means of egress*.
2. At elevator landings.
3. Within *areas of refuge*.

1009.11 Instructions. In *areas of refuge* and exterior areas for assisted rescue, instructions on the use of the area under emergency conditions shall be posted. Signage shall comply with the ICC A117.1 requirements for visual characters. The instructions shall include all of the following:

1. Persons able to use the *exit stairway* do so as soon as possible, unless they are assisting others.
2. Information on planned availability of assistance in the use of *stairs* or supervised operation of elevators and how to summon such assistance.
3. Directions for use of the two-way communication system where provided.

SECTION 1010 DOORS, GATES AND TURNSTILES

[S] **1010.1 General.** Doors in the *means of egress* shall comply with the requirements of Sections 1010.1.1 through 1010.3.4. Exterior *exit* doors shall also comply with the requirements of Section 1022.2. Gates in the *means of egress* shall comply with the requirements of Sections 1010.4 and 1010.4.1. Turnstiles in the *means of egress* shall comply with the requirements of Sections 1010.5 through 1010.5.4.

Doors, gates and turnstiles provided for egress purposes in numbers greater than required by this code shall comply with the requirements of this section. See Section 3201 for doors swinging over public property.

Doors in the *means of egress* shall be readily distinguishable from the adjacent construction and finishes such that the doors are easily recognizable as doors. Mirrors or similar reflecting materials shall not be used on *means of egress* doors. *Means of egress* doors shall not be concealed by curtains, drapes, decorations or similar materials.

1010.1.1 Size of doors. The required capacity of each door opening shall be sufficient for the *occupant load* thereof and shall provide a minimum clear opening width of 32 inches (813 mm). The clear opening width of doorways with swinging doors shall be measured between the face of the door and the stop, with the door open 90 degrees (1.57 rad). Where this section requires a minimum clear opening width of 32 inches (813 mm) and a door opening includes two door leaves without a mullion, one leaf shall provide a minimum clear opening width of 32 inches (813 mm). In Group I-2, doors serving as means of egress doors where used for the movement of beds shall provide a minimum clear opening width of 41-1/2 inches (1054 mm). The minimum clear opening height of doors shall be not less than 80 inches (2032 mm).

Exceptions:

1. In Group R-2 and R-3 *dwelling and sleeping units* that are not required to be an *Accessible unit*, *Type A unit* or *Type B unit*, the minimum width shall not apply to door openings that are not part of the required *means of egress*.
2. In Group I-3, door openings to resident *sleeping units* that are not required to be an *Accessible unit* shall have a minimum clear opening width of 28 inches (711 mm).

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

1010.1.3.2 Manual horizontal sliding doors. Where a manual horizontal sliding door is required to latch, the latch or other mechanism shall prevent the door from rebounding into a partially open position when the door is closed.

[S] 1010.1.4 Floor elevation. There shall be a floor or landing on each side of a door. Such floor or landing shall be at the same elevation on each side of the door. Landings shall be level except for exterior landings, which are permitted to have a slope not to exceed 0.25 unit vertical in 12 units horizontal (2-percent slope).

Exceptions:

1. At doors serving individual dwelling units or sleeping units in Groups R-2 and R-3: a door is permitted to open at the top step of ~~((an interior))~~ a flight of stairs, provided that the door does not swing over the top step.
2. At exterior doors serving Groups F, H, R-2 and S and where such doors are not part of an accessible route, the landing at an exterior door shall not be more than 7 inches (178 mm) below the landing on the egress side of the door, provided that the door, other than an exterior storm or screen door, does not swing over the landing.
3. At exterior doors serving Group U and individual dwelling units and sleeping units in Groups R-2 and R-3, and where such units are not required to be Accessible units, Type A units or Type B units, the landing at an exterior doorway shall be not more than 7-3/4 inches (197 mm) below the landing on the egress side of the door. Such doors, including storm or screen doors, shall be permitted to swing over either landing.
4. Variations in elevation due to differences in finish materials, but not more than 1/2 inch (12.7 mm).
5. Exterior decks, patios or balconies that are part of Type B *dwelling units* or sleeping units, that have impervious surfaces and that are not more than 4 inches (102 mm) below the finished floor level of the adjacent interior space of the *dwelling unit* or *sleeping unit*.
6. Doors serving equipment spaces not required to be *accessible* in accordance with Section 1103.2.9 and serving an *occupant load* of five or less shall be permitted to have a landing on one side to be not more than 7 inches (178 mm) above or below the landing on the egress side of the door.

[S] 1010.1.5 Landings at doors. Landings shall have a width not less than the width of the *stairway* or the door, whichever is greater. Doors in the fully open position shall not reduce a required dimension by more than 7 inches (178 mm). Where a landing serves an *occupant load* of 50 or more, doors in any position shall not reduce the landing to less than one-half its required width. When doors open over landings, doors in any position shall not reduce the landing length to less than 12 inches (305 mm). Landings shall have a length measured in the direction of travel of not less than 44 inches (1118 mm).

Exception: Landing length in the direction of travel in Groups R-3 and U and within individual units of Group R-2 need not exceed 36 inches (914 mm).

Interpretation I1010.1.5: Landing length, width and slope shall be measured as specified in Section 1011.6 and 1011.7.1. See Figures 1010.1.5(1), 1010.1.5(2) and 1010.1.5(3) for illustrations of the requirements of this section.

**FIGURE 1010.1.5(1)
LANDING DIMENSIONS ONLY**

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

FIGURE 1010.1.5(2)
LANDING DIMENSIONS ONLY

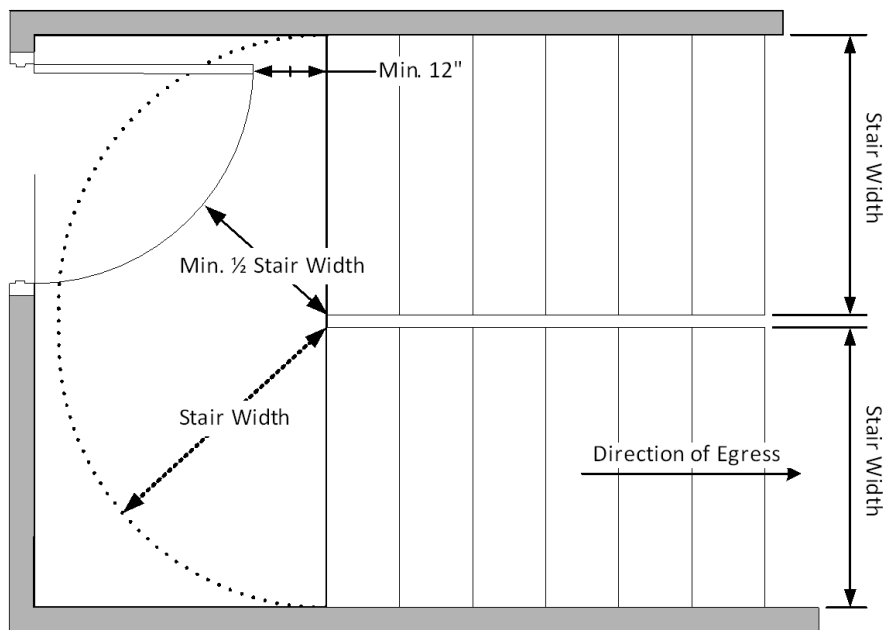

FIGURE 1010.1.5(3)
LANDING DIMENSIONS ONLY

1010.1.6 Thresholds. Thresholds at doorways shall not exceed 3/4 inch (19.1 mm) in height above the finished floor or landing for sliding doors serving *dwelling units* or 1/2 inch (12.7 mm) above the finished floor or landing for other doors. Raised thresholds and floor level changes greater than 1/4 inch (6.4 mm) at doorways shall be beveled with a slope not greater than one unit vertical in two units horizontal (50-percent slope).

Exceptions:

1. In occupancy Group R-2 or R-3, threshold heights for sliding and side-hinged exterior doors shall be permitted to be up to 7-3/4 inches (197 mm) in height if all of the following apply:
 - 1.1. The door is not part of the required *means of egress*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

- 1.2. The door is not part of an *accessible route* as required by Chapter 11.
- 1.3. The door is not part of an *Accessible unit, Type A unit* or *Type B unit*.
2. In *Type B units*, where Exception 5 to Section 1010.1.4 permits a 4-inch (102 mm) elevation change at the door, the threshold height on the exterior side of the door shall not exceed 4-3/4 inches (120 mm) in height above the exterior deck, patio or balcony for sliding doors or 4-1/2 inches (114 mm) above the exterior deck, patio or balcony for other doors.

1010.1.7 Door arrangement. Space between two doors in a series shall be 48 inches (1219 mm) minimum plus the width of a door swinging into the space. Doors in a series shall swing either in the same direction or away from the space between the doors.

Exceptions:

1. The minimum distance between horizontal sliding *power-operated* doors in a series shall be 48 inches (1219 mm).
2. Storm and screen doors serving individual *dwelling units* in Groups R-2 and R-3 need not be spaced 48 inches (1219 mm) from the other door.
3. Doors within individual *dwelling units* in Groups R-2 and R-3 other than within *Type A dwelling units*.

[S] **1010.2 Door operations.** Except as specifically permitted by this section, egress doors shall be readily openable from the egress side without the use of a key or special knowledge or effort.

Note: Stairway doors shall also comply with Section 1010.2.15.

1010.2.1 Unlatching. The unlatching of any door or leaf for egress shall require not more than one motion in a single linear or rotational direction to release all latching and all locking devices.

Exceptions:

1. Places of detention or restraint.
2. Where manually operated bolt locks are permitted by Section 1010.2.5.
3. Doors with automatic flush bolts as permitted by Section 1010.2.4, Item 4.
4. Doors from individual *dwelling units* and *sleeping units* of Group R occupancies as permitted by Section 1010.2.4, Item 5.

1010.2.2 Hardware. Door handles, pulls, latches, locks and other operating devices on doors required to be *accessible* by Chapter 11 shall not require tight grasping, tight pinching or twisting of the wrist to operate.

1010.2.3 Hardware height. Door handles, pulls, latches, locks and other operating devices shall be installed 34 inches (864 mm) minimum and 48 inches (1219 mm) maximum above the finished floor. Locks used only for security purposes and not used for normal operation are permitted at any height.

Exception: Access doors or gates in barrier walls and fences protecting pools, spas and hot tubs shall be permitted to have operable parts of the latch release on self-latching devices at 54 inches (1370 mm) maximum above the finished floor or ground, provided that the self-latching devices are not also self-locking devices operated by means of a key, electronic opener or integral combination lock.

[W][S] **1010.2.4 Locks and latches.** Locks and latches shall be permitted to prevent operation of doors where any of the following exist:

1. Places of detention or restraint as approved by the building official.
(~~2. In Group I-1, Condition 2 and Group I-2 occupancies where the clinical needs of persons receiving care require containment or where persons receiving care pose a security threat, provided that all clinical staff can readily unlock doors at all times, and all such locks are keyed to keys carried by all clinical staff at all times or all clinical staff have the codes or other means necessary to operate the locks at all times.~~)
2. Approved, listed locks without delayed egress shall be permitted in Group I-1 condition 2 assisted living facilities licensed by the state of Washington, provided that:
 - 2.1. The clinical needs of one or more patients require specialized security measures for their safety.
 - 2.2. The doors unlock upon actuation of the automatic sprinkler system or automatic fire detection system.
 - 2.3. The doors unlock upon loss of electrical power controlling the lock or lock mechanism.
 - 2.4. The lock shall be capable of being deactivated by a signal from a switch located in an approved location.
 - 2.5. There is a system, such as a keypad and code, in place that allows visitors, staff persons and appropriate residents to exit. Instructions for exiting shall be posted within six feet of the door.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

3. In buildings in occupancy Group A having an *occupant load* of 300 or less, Groups B, F, M and S, and in *places of religious worship*, the main door or doors are permitted to be equipped with key-operated locking devices from the egress side provided:
 - 3.1. The locking device is readily distinguishable as locked.
 - 3.2. A readily visible durable sign is posted on the egress side on or adjacent to the door stating: THIS DOOR TO REMAIN UNLOCKED (~~WHEN THIS SPACE IS OCCUPIED~~) DURING BUSINESS HOURS. The sign shall be in letters 1 inch (25 mm) high on a contrasting background; (⊖) and
 - 3.3. The use of the key-operated locking device is revocable by the *building official* for due cause.
4. Where egress doors are used in pairs, *approved* automatic flush bolts shall be permitted to be used, provided that the door leaf having the automatic flush bolts does not have a doorknob or surface-mounted hardware on the egress side of the door.
5. Doors from individual *dwelling* or *sleeping units* of Group R occupancies having an *occupant load* of 10 or less are permitted to be equipped with a night latch, dead bolt or security chain, provided such devices are openable from the inside without the use of a key or tool.
6. *Fire doors* after the minimum elevated temperature has disabled the unlatching mechanism in accordance with *listed fire door* test procedures.
7. Doors serving roofs not intended to be occupied shall be permitted to be locked preventing entry to the building from the roof.
8. Other than egress *courts*, where occupants must egress from an exterior space through the building for *means of egress*, exit access doors shall be permitted to be equipped with an approved locking device where installed and operated in accordance with all of the following:
 - 8.1. The maximum *occupant load* shall be posted where required by Section 1004.9. Such signage shall be permanently affixed inside the building and shall be posted in a conspicuous space near all the exit access doorways.
 - 8.2. A weatherproof telephone or two-way communication system installed in accordance with Sections 1009.8.1 and 1009.8.2 shall be located adjacent to not less than one required exit access door on the exterior side.
 - 8.3. The egress door locking device is readily distinguishable as locked and shall be a key-operated locking device.
 - 8.4. A clear window or glazed door opening, not less than 5 square feet (0.46 m²) in area, shall be provided at each exit access door to determine if there are occupants using the outdoor area.
 - 8.5. A readily visible, durable sign shall be posted on the interior side on or adjacent to each locked required exit access door serving the exterior area stating, "THIS DOOR TO REMAIN UNLOCKED WHEN THE OUTDOOR AREA IS OCCUPIED." The letters on the sign shall be not less than 1 inch (25.4 mm) high on a contrasting background.
 - 8.6. The *occupant load* of the occupied exterior area shall not exceed 300 occupants in accordance with Section 1004.
9. Locking devices are permitted on doors to balconies, decks or other exterior spaces serving individual dwelling or sleeping units.
10. Locking devices are permitted on doors to balconies, decks or other exterior spaces of 250 square feet (23.23 m²) or less serving a private office space.
11. Doors from elevator lobbies providing access to exits are permitted to be locked during or after business hours where items 12.1 through 12.5 are satisfied.
 - 11.1. The lobby doors shall unlock automatically upon fire alarm.
 - 11.2. The lobby doors shall unlock automatically upon power loss.
 - 11.3. The alarm system shall include smoke detection in the elevator lobby and at least two detectors on the tenant side within 15 feet of the door;
 - 11.4. Access through the tenant portion of the building to both exits shall be unobstructed; and
 - 11.5. The building shall have an automatic sprinkler system throughout in accordance with Section 903.3.1.1 or 903.3.1.2.

[S] 1010.2.5 Bolt locks. Manually operated flush bolts or surface bolts are not permitted.

Exceptions:

1. On doors not required for egress in individual *dwelling units* or *sleeping units*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

2. Where a pair of doors serves a storage or equipment room, manually operated edge- or surface-mounted bolts or self-latching flush bolts are permitted on the inactive leaf.
3. Where a pair of doors serves an *occupant load* of less than 50 persons in a Group B, F or S occupancy, manually operated edge- or surface-mounted bolts are permitted on the inactive leaf. The inactive leaf shall not contain doorknobs, *panic* bars or similar operating hardware.
4. Where a pair of doors serves a Group B, F or S occupancy, manually operated edge- or surface-mounted bolts are permitted on the inactive leaf provided that such inactive leaf is not needed to meet egress capacity requirements and the building is equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1. The inactive leaf shall not contain doorknobs, *panic* bars or similar operating hardware.
5. Where a pair of doors serves patient care rooms in Group I-2 occupancies, self-latching edge- or surface-mounted bolts are permitted on the inactive leaf provided that the inactive leaf is not needed to meet egress capacity requirements and the inactive leaf shall not contain doorknobs, *panic* bars or similar operating hardware.

1010.2.6 Closet doors. Closet doors that latch in the closed position shall be openable from inside the closet.

[S] 1010.2.7 Stairway doors. Interior *stairway* means of egress doors shall be openable from both sides without the use of a key or special knowledge or effort.

Exceptions:

1. *Stairway* discharge doors shall be openable from the egress side and shall only be locked from the opposite side.
2. This section shall not apply to doors arranged in accordance with Section 403.5.3.
3. *Stairway* exit doors are permitted to be locked from the side opposite the egress side, provided that they are openable from the egress side and capable of being unlocked simultaneously without unlatching upon a signal from the *fire command center*, if present, or a signal by emergency personnel from a single location inside the main entrance to the building.
4. *Stairway exit* doors shall be openable from the egress side and shall only be locked from the opposite side in Group B, F, M and S occupancies where the only interior access to the tenant space is from a single *exit stairway* where permitted in Section 1006.3.4.
5. *Stairway* exit doors shall be openable from the egress side and shall only be locked from the opposite side in Group R-2 occupancies where the only interior access to the *dwelling unit* is from a single exit *stairway* where permitted in Section 1006.3.4.
6. In stairways serving more than four stories in non-high-rise buildings, doors are permitted to be locked from the side opposite the egress side, provided they are openable from the egress side and capable of being unlocked simultaneously without unlatching upon a signal from the fire command center, if present, or a signal by emergency personnel from a single location inside the main entrance to the building. A communication system that complies with Section 403.5.3.1 shall be provided.

1010.2.8 Locking arrangements in educational occupancies. In Group E occupancies, Group B educational occupancies and Group I-4 occupancies, egress doors from classrooms, offices and other occupied rooms with locking arrangements designed to keep intruders from entering the room shall comply with all of the following conditions:

1. The door shall be capable of being unlocked from outside the room with a key or other *approved* means.
2. The door shall be openable from within the room in accordance with Section 1010.2.
3. Modifications shall not be made to listed *panic hardware*, *fire door* hardware or door closers.
4. Modifications to *fire door assemblies* shall be in accordance with NFPA 80.

Remote locking or unlocking of doors from an approved location shall be permitted in addition to the unlocking operation in Item 1.

1010.2.9 Panic and fire exit hardware. Swinging doors serving a Group H occupancy and swinging doors serving rooms or spaces with an *occupant load* of 50 or more in a Group A or E occupancy shall not be provided with a latch or lock other than *panic hardware* or *fire exit hardware*.

Exceptions:

1. A main exit of a Group A occupancy shall be permitted to have locking devices in accordance with Section 1010.2.4, Item 3.
2. Doors provided with *panic hardware* or *fire exit hardware* and serving a Group A or E occupancy shall be permitted to be electrically locked in accordance with Section 1010.2.11 or 1010.2.12.
3. Exit access doors serving occupied exterior areas shall be permitted to be locked in accordance with Section 1010.2.4, Item 8.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

4. Courtrooms shall be permitted to be locked in accordance with Section 1010.2.13, Item 3.

1010.2.9.1 Refrigeration machinery room. Refrigeration machinery rooms larger than 1,000 square feet (93 m²) shall have not less than two exit or exit access doorways that swing in the direction of egress travel and shall be equipped with *panic hardware* or *fire exit hardware*.

1010.2.9.2 Rooms with electrical equipment. Exit or exit access doors serving transformer vaults, rooms designated for batteries or energy storage systems, or modular data centers shall be equipped with panic hardware or fire exit hardware. Rooms containing electrical equipment rated 800 amperes or more that contain overcurrent devices, switching devices or control devices and where the exit or exit access door is less than 25 feet (7620 mm) from the equipment working space as required by NFPA 70, such doors shall not be provided with a latch or lock other than *panic hardware* or *fire exit hardware*. The doors shall swing in the direction of egress travel.

1010.2.9.3 Installation. Where panic or *fire exit hardware* is installed, it shall comply with the following:

1. *Panic hardware* shall be *listed* in accordance with UL 305.
2. *Fire exit hardware* shall be *listed* in accordance with UL 10C and UL 305.
3. The actuating portion of the releasing device shall extend not less than one-half of the door leaf width.
4. The maximum unlatching force shall not exceed 15 pounds (67 N).

1010.2.9.4 Balanced doors. If *balanced doors* are used and *panic hardware* is required, the *panic hardware* shall be the push-pad type and the pad shall not extend more than one-half the width of the door measured from the latch side.

1010.2.10 Monitored or recorded egress. Where electrical systems that monitor or record egress activity are incorporated, the locking system shall comply with Section 1010.2.11, 1010.2.12, 1010.2.13, 1010.2.14 or 1010.2.15 or shall be readily openable from the egress side without the use of a key or special knowledge or effort.

[S] 1010.2.11 Door hardware release of electrically locked egress doors. Door hardware release of electric locking systems shall be permitted on doors in the *means of egress* in any occupancy except Group H where installed and operated in accordance with all of the following:

1. The door hardware (~~that~~) is affixed to the door leaf and has an obvious method of operation that is readily operated under all lighting conditions.
2. The door hardware is capable of being operated with one hand without special knowledge, keys or tools, and shall comply with Section 1010.2.1.
3. Operation of the door hardware directly interrupts the power to the electric lock and unlocks the door immediately.
4. Loss of power to the electric locking system automatically unlocks the door.
5. Where *panic* or *fire exit hardware* is required by Section 1010.2.9, operation of the *panic* or *fire exit hardware* also releases the electric lock.
6. The locking system units shall be *listed* in accordance with UL 294.

1010.2.12 Sensor release of electrically locked egress doors. Sensor release of electric locking systems shall be permitted on doors located in the *means of egress* in any occupancy except Group H where installed and operated in accordance with all of the following criteria:

1. The sensor shall be installed on the egress side, arranged to detect an occupant approaching the doors, and shall cause the electric locking system to unlock.
2. The electric locks shall be arranged to unlock by a signal from or loss of power to the sensor.
3. Loss of power to the lock or locking system shall automatically unlock the electric locks.
4. The doors shall be arranged to unlock from a manual unlocking device located 40 inches to 48 inches (1016 mm to 1219 mm) vertically above the floor and within 5 feet (1524 mm) of the secured doors. Ready access shall be provided to the manual unlocking device and the device shall be clearly identified by a sign that reads "PUSH TO EXIT." When operated, the manual unlocking device shall result in direct interruption of power to the electric lock—independent of other electronics—and the electric lock shall remain unlocked for not less than 30 seconds.
5. Activation of the building *fire alarm system*, where provided, shall automatically unlock the electric lock, and the electric lock shall remain unlocked until the *fire alarm system* has been reset.
6. Activation of the building *automatic sprinkler system* or fire detection system, where provided, shall automatically unlock the electric lock. The electric lock shall remain unlocked until the *fire alarm system* has been reset.
7. Emergency lighting shall be provided on the egress side of the door.
8. The door locking system units shall be *listed* in accordance with UL 294.

[S] 1010.2.13 Delayed egress. Delayed egress locking systems shall be permitted to be installed on doors serving the following occupancies in buildings that are equipped throughout with an *automatic sprinkler system* in accordance with

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Section 903.3.1.1 or an *approved automatic smoke or heat detection system* installed in accordance with Section 907. Delayed egress locks are permitted in libraries in both Group A and E occupancies in locations other than at main exit doors, and in Group E day care occupancies.

1. Group B, F, I, M, R, S and U occupancies.
2. Group E classrooms with an *occupant load* of less than 50.
3. In courtrooms in Group A-3 and B occupancies, delayed egress locking systems shall be permitted to be installed on exit or *exit access* doors, other than the main exit or *exit access* door, in buildings that are equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1.

1010.2.13.1 Delayed egress locking system. The delayed egress locking system shall be installed and operated in accordance with all of the following:

1. The delay electronics of the delayed egress locking system shall deactivate upon actuation of the *automatic sprinkler system* or *automatic fire detection system*, allowing immediate free egress.
2. The delay electronics of the delayed egress locking system shall deactivate upon loss of power controlling the lock or lock mechanism, allowing immediate free egress.
3. The delayed egress locking system shall have the capability of being deactivated at the *fire command center* and other *approved* locations.
4. An attempt to egress shall initiate an irreversible process that shall allow such egress in not more than 15 seconds when a physical effort to exit is applied to the egress side door hardware for not more than 3 seconds. Initiation of the irreversible process shall activate an audible signal in the vicinity of the door. Once the delay electronics have been deactivated, rearming the delay electronics shall be by manual means only.

Exception: Where *approved*, a delay of not more than 30 seconds is permitted on a delayed egress door.

5. The egress path from any point shall not pass through more than one delayed egress locking system.

Exceptions:

1. In Group I-1, Condition 2, Group I-2 or I-3 occupancies, the egress path from any point in the building shall pass through not more than two delayed egress locking systems provided that the combined delay does not exceed 30 seconds.
 2. In Group I-1, Condition 1 or Group I-4 occupancies, the egress path from any point in the building shall pass through not more than two delayed egress locking systems provided the combined delay does not exceed 30 seconds and the building is equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1.
6. A sign shall be provided on the door and shall be located above and within 12 inches (305 mm) of the door exit hardware:

Exception: Where *approved*, in Group I occupancies, the installation of a sign is not required where care recipients who because of clinical needs require restraint or containment as part of the function of the treatment area.

- 6.1. For doors that swing in the direction of egress, the sign shall read, "PUSH UNTIL ALARM SOUNDS. DOOR CAN BE OPENED IN 15 [30] SECONDS."
 - 6.2. For doors that swing in the opposite direction of egress, the sign shall read, "PULL UNTIL ALARM SOUNDS. DOOR CAN BE OPENED IN 15 [30] SECONDS."
 - 6.3. The sign shall comply with the visual character requirements in ICC A117.1.
7. Emergency lighting shall be provided on the egress side of the door.
 8. The delayed egress locking system units shall be *listed* in accordance with UL 294.

[W][S] 1010.2.14 Controlled egress doors in Groups I-1 and I-2. Electric locking systems, including electro-mechanical locking systems and electromagnetic locking systems, shall be permitted to be locked in the *means of egress* in Group I-1 or I-2 occupancies where the clinical needs of persons receiving care require their containment. Controlled egress doors shall be permitted in such occupancies where the building is equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1 or an *approved automatic smoke detection system* installed in accordance with Section 907, provided that the doors are installed and operate in accordance with all of the following:

1. The door locks shall unlock on actuation of the *automatic sprinkler system* or *automatic smoke detection system*.
2. The door locks shall unlock on loss of power controlling the lock or lock mechanism.
3. The door locking system shall be installed to have the capability of being unlocked by a switch located at the *fire command center*, a nursing station or other *approved* location. The switch shall directly break power to the lock.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

4. A building occupant shall not be required to pass through more than one door equipped with a ~~((controlled))~~ special egress locking system before entering an *exit*.
5. The procedures for unlocking the doors shall be described and *approved* as part of the emergency planning and preparedness required by Chapter 4 of the *International Fire Code*.
- ~~((6. All clinical staff shall have the keys, codes or other means necessary to operate the locking systems.))~~
6. There is a system, such as a keypad and code, in place that allows visitors, staff persons and appropriate residents to exit. Instructions for exiting shall be posted within six feet of the door.
7. Emergency lighting shall be provided at the door.
8. The door locking system units shall be *listed* in accordance with UL 294.

Exceptions:

1. Items 1 through 4, and 6, shall not apply to doors to areas ~~((occupied by))~~ where persons ~~((who))~~ which, because of clinical needs, require restraint or containment as part of the function of a psychiatric or cognitive treatment area provided that all clinical staff shall have the keys, codes or other means necessary to operate the locking devices.
2. Items 1 through 4, and 6, shall not apply to doors to areas where a *listed* egress control system is utilized to reduce the risk of child abduction from nursery and obstetric areas of a Group I-2 *hospital*.

1010.2.15 Locking arrangements in buildings within correctional facilities. In *buildings* within correctional and detention facilities, doors in *means of egress* serving rooms or spaces occupied by persons whose movements are controlled for security reasons shall be permitted to be locked where equipped with egress control devices that shall unlock manually and by not less than one of the following means:

1. Activation of an *automatic sprinkler system* installed in accordance with Section 903.3.1.1.
2. Activation of an *approved manual fire alarm box*.
3. A signal from a *constantly attended location*.

1010.3 Special doors. Special doors and security grilles shall comply with the requirements of Sections 1010.3.1 through 1010.3.4.

1010.3.1 Revolving doors. Revolving doors shall comply with the following:

1. Revolving doors shall comply with BHMA A156.27 and shall be installed in accordance with the manufacturer’s instructions.
2. Each revolving door shall be capable of *breakout* in accordance with BHMA A156.27 and shall provide an aggregate width of not less than 36 inches (914 mm).
3. A revolving door shall not be located within 10 feet (3048 mm) of the foot or top of *stairways* or escalators. A dispersal area shall be provided between the *stairways* or escalators and the revolving doors.
4. The revolutions per minute (rpm) for a revolving door shall not exceed the maximum rpm as specified in BHMA A156.27. Manual revolving doors shall comply with Table 1010.3.1(1). Automatic or *power-operated* revolving doors shall comply with Table 1010.3.1(2).
5. An emergency stop switch shall be provided near each entry point of power or automatic operated revolving doors within 48 inches (1219 mm) of the door and between 34 inches (864 mm) and 48 inches (1219 mm) above the floor. The activation area of the emergency stop switch button shall be not less than 1 inch (25 mm) in diameter and shall be red.
6. Each revolving door shall have a side-hinged swinging door that complies with Section 1010.1 in the same wall and within 10 feet (3048 mm) of the revolving door.
7. Revolving doors shall not be part of an *accessible route* required by Section 1009 and Chapter 11.

**TABLE 1010.3.1(1)
MAXIMUM DOOR SPEED MANUAL REVOLVING DOORS**

REVOLVING DOOR MAXIMUM NOMINAL DIAMETER (FT-IN)	MAXIMUM ALLOWABLE REVOLVING DOOR SPEED (RPM)
6-0	12
7-0	11
8-0	10
9-0	9
10-0	8

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

1. The doors shall be power operated and shall be capable of being operated manually in the event of power failure.
2. The doors shall be openable by a simple method without special knowledge or effort from the egress side or sides.
3. The force required to operate the door shall not exceed 30 pounds (133 N) to set the door in motion and 15 pounds (67 N) to close the door or open it to the minimum required width.
4. The door shall be openable with a force not to exceed 15 pounds (67 N) when a force of 250 pounds (1100 N) is applied perpendicular to the door adjacent to the operating device.
5. The door assembly shall comply with the applicable *fire protection rating* and, where rated, shall be *self-closing* or automatic closing by smoke detection in accordance with Section 716.2.6.6, shall be installed in accordance with NFPA 80 and shall comply with Section 716.
6. The door assembly shall have an integrated standby power supply.
7. The door assembly power supply shall be electrically supervised.
8. The door shall open to the minimum required width within 10 seconds after activation of the operating device.

1010.3.4 Security grilles. In Groups B, F, M and S, horizontal sliding or vertical security grilles are permitted at the main *exit* and shall be openable from the inside without the use of a key or special knowledge or effort during periods that the space is occupied. The grilles shall remain secured in the full-open position during the period of occupancy by the general public. Where two or more exits or access to exits are required, not more than one-half of the *exits* or *exit access doorways* shall be equipped with horizontal sliding or vertical security grilles.

[W] 1010.3.4.1 Fixed transit and passenger rail systems. In fixed transit and passenger rail system stations, horizontal and vertical security grilles are permitted at station entrances as a component in the means of egress when the station is under constant supervision by on-site security personnel and an exit door with panic hardware that swings in the direction of egress, with a minimum clear width of 32 inches, provided within 10 feet of the gate. The security grilles shall remain secured in the full-open position during the period of occupancy by the general public.

1010.4 Gates. Gates serving the *means of egress* system shall comply with the requirements of this section. Gates used as a component in a *means of egress* shall conform to the applicable requirements for doors.

Exception: Horizontal sliding or swinging gates exceeding the 4-foot (1219 mm) maximum leaf width limitation are permitted in fences and walls surrounding a stadium.

1010.4.1 Stadiums. *Panic hardware* is not required on gates surrounding stadiums where such gates are under constant immediate supervision while the public is present, and where safe dispersal areas based on 3 square feet (0.28 m²) per occupant are located between the fence and enclosed space. Such required safe dispersal areas shall not be located less than 50 feet (15 240 mm) from the enclosed space. See Section 1028.5 for *means of egress* from safe dispersal areas.

1010.5 Turnstiles and similar devices. Turnstiles or similar devices that restrict travel to one direction shall not be placed so as to obstruct any required *means of egress*, except where permitted in accordance with Sections 1010.5.1, 1010.5.2 and 1010.5.3.

1010.5.1 Capacity. Each turnstile or similar device shall be credited with a capacity based on not more than a 50-person *occupant load* where all of the following provisions are met:

1. Each device shall turn free in the direction of egress travel when primary power is lost and on the manual release by an employee in the area.
2. Such devices are not given credit for more than 50 percent of the required egress capacity or width.
3. Each device is not more than 39 inches (991 mm) high.
4. Each device has not less than 16-1/2 inches (419 mm) clear width at and below a height of 39 inches (991 mm) and not less than 22 inches (559 mm) clear width at heights above 39 inches (991 mm).

1010.5.1.1 Clear width. Where located as part of an *accessible* route, turnstiles shall have not less than 36 inches (914 mm) clear width at and below a height of 34 inches (864 mm), not less than 32 inches (813 mm) clear width between 34 inches (864 mm) and 80 inches (2032 mm) and shall consist of a mechanism other than a revolving device.

1010.5.2 Security access turnstiles. Security access turnstiles that inhibit travel in the direction of egress utilizing a physical barrier shall be permitted to be considered as a component of the *means of egress*, provided that all of the following criteria are met:

1. The building is protected throughout by an approved, supervised *automatic sprinkler system* in accordance with Section 903.3.1.1.
2. Each security access turnstile lane configuration has a minimum clear passage width of 22 inches (559 mm).
3. Any security access turnstile lane configuration providing a clear passage width of less than 32 inches (810 mm) shall be credited with a maximum egress capacity of 50 persons.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

4. Any security access turnstile lane configuration providing a clear passage width of 32 inches (810 mm) or more shall be credited with a maximum egress capacity as calculated in accordance with Section 1005.
5. Each secured physical barrier shall automatically retract or swing to an unobstructed open position in the direction of egress, under each of the following conditions:
 - 5.1. Upon loss of power to the turnstile or any part of the access control system that secures the physical barrier.
 - 5.2. Upon actuation of a clearly identified manual release device with ready access that results in direct interruption of power to each secured physical barrier, after which such barriers remain in the open position for not less than 30 seconds. The manual release device shall be positioned at one of the following locations:
 - 5.2.1. On the egress side of each security access turnstile lane.
 - 5.2.2. At an *approved* location where it can be actuated by an employee assigned to the area at all times that the building is occupied.
 - 5.3. Upon actuation of the building *fire alarm system*, if provided, after which the physical barrier remains in the open position until the *fire alarm system* is manually reset.

Exception: Actuation of a manual fire alarm box.
 - 5.4. Upon actuation of the building automatic sprinkler system or fire detection system, after which the physical barrier remains in the open position until the *fire alarm system* is manually reset.

1010.5.3 High turnstile. Turnstiles more than 39 inches (991 mm) high shall meet the requirements for revolving doors or the requirements of Section 1010.5.2 for security access turnstiles.

1010.5.4 Additional door. Where serving an *occupant load* greater than 300, each turnstile that is not portable shall have a side-hinged swinging door that conforms to Section 1010.1 within 50 feet (15 240 mm).

Exception: A side-hinged swinging door is not required at security access turnstiles that comply with Section 1010.5.2.

SECTION 1011 STAIRWAYS

[W] **1011.1 General.** *Stairways* serving occupied portions of a building shall comply with the requirements of Sections 1011.2 through 1011.13. *Alternating tread devices* shall comply with Section 1011.14. Ship's ladders shall comply with Section 1011.15. Ladders shall comply with Section 1011.16.

Exceptions:

1. Within rooms or spaces used for assembly purposes, stepped *aisles* shall comply with Section 1030.
2. Stairways, alternating tread devices, ship's ladders, or ladders within an individual dwelling unit or sleeping unit used for egress from areas of 200 square feet (18.6 m²) or less, and not containing the primary bathroom or kitchen, are exempt from the requirements of Section 1011. Such areas shall not be located more than 10 feet (3048 mm) above the finished floor of the space below.

[S] **1011.2 Width and capacity.** The required capacity of *stairways* shall be determined as specified in Section 1005.1, but the minimum width shall be not less than 44 inches (1118 mm). See Section 1009.3 for *accessible means of egress stairways*.

Exceptions:

1. *Stairways* serving an *occupant load* of less than 50 shall have a width of not less than 36 inches (914 mm).
2. *Spiral stairways* as provided for in Section 1011.10.
3. Where an incline platform lift or *stairway* chairlift is installed on *stairways* serving occupancies in Group R-3, or within *dwelling units* in occupancies in Group R-2, a clear passage width not less than 20 inches (508 mm) shall be provided. Where the seat and platform can be folded when not in use, the distance shall be measured from the folded position.
4. Stairways that are designed exclusively for circulation.

1011.3 Headroom. *Stairways* shall have a headroom clearance of not less than 80 inches (2032 mm) measured vertically from a line connecting the edge of the *nosings*. Such headroom shall be continuous above the *stairway* to the point where the line intersects the landing below, one tread depth beyond the bottom riser. The minimum clearance shall be maintained the full width of the *stairway* and landing.

Exceptions:

1. *Spiral stairways* complying with Section 1011.10 are permitted a 78-inch (1981 mm) headroom clearance.
2. In Group R-3 occupancies; within *dwelling units* in Group R-2 occupancies; and in Group U occupancies that are accessory to a Group R-3 occupancy or accessory to individual *dwelling units* in Group R-2 occupancies; where the

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

nosings of treads at the side of a *flight* extend under the edge of a floor opening through which the *stair* passes, the floor opening shall be allowed to project horizontally into the required headroom not more than 4-3/4 inches (121 mm).

1011.4 Walkline. The walkline across *winder* treads shall be concentric to the direction of travel through the turn and located 12 inches (305 mm) from the side where the *winders* are narrower. The 12-inch (305 mm) dimension shall be measured from the widest point of the clear *stair* width at the walking surface of the *winder*. Where *winders* are adjacent within the *flight*, the point of the widest clear *stair* width of the adjacent *winders* shall be used.

1011.5 Stair treads and risers. *Stair* treads and risers shall comply with Sections 1011.5.1 through 1011.5.5.3.

1011.5.1 Dimension reference surfaces. For the purpose of this section, all dimensions are exclusive of carpets, rugs or runners.

1011.5.2 Riser height and tread depth. *Stair* riser heights shall be 7 inches (178 mm) maximum and 4 inches (102 mm) minimum. The riser height shall be measured vertically between the *nosings* of adjacent treads or between the *stairway* landing and the adjacent tread. Rectangular tread depths shall be 11 inches (279 mm) minimum measured horizontally between the vertical planes of the foremost projection of adjacent treads and at a right angle to the tread's *nosing*. *Winder* treads shall have a minimum tread depth of 11 inches (279 mm) between the vertical planes of the foremost projection of adjacent treads at the intersections with the walkline and a minimum tread depth of 10 inches (254 mm) within the clear width of the stair.

Exceptions:

1. *Spiral stairways* in accordance with Section 1011.10.
2. *Stairways* connecting stepped *aisles* to cross *aisles* or concourses shall be permitted to use the riser/tread dimension in Section 1030.14.2.
3. In Group R-3 occupancies; within *dwelling units* in Group R-2 occupancies; and in Group U occupancies that are accessory to a Group R-3 occupancy or accessory to individual *dwelling units* in Group R-2 occupancies; the maximum riser height shall be 7-3/4 inches (197 mm); the minimum tread depth shall be 10 inches (254 mm); the minimum *winder* tread depth at the walkline shall be 10 inches (254 mm); and the minimum *winder* tread depth shall be 6 inches (152 mm). A *nosing* projection not less than 3/4 inch (19.1 mm) but not more than 1-1/4 inches (32 mm) shall be provided on *stairways* with solid risers where the tread depth is less than 11 inches (279 mm).
4. See ((Section 503.1 of)) the *International Existing Building Code* for the replacement of existing *stairways*.
5. In Group I-3 facilities, *stairways* providing access to guard towers, observation stations and control rooms, not more than 250 square feet (23 m²) in area, shall be permitted to have a maximum riser height of 8 inches (203 mm) and a minimum tread depth of 9 inches (229 mm).

1011.5.3 Winder treads. *Winder* treads are not permitted in *means of egress stairways* except within a *dwelling unit*.

Exceptions:

1. Curved *stairways* in accordance with Section 1011.9.
2. *Spiral stairways* in accordance with Section 1011.10.

1011.5.4 Dimensional uniformity. *Stair* treads and risers shall be of uniform size and shape. The tolerance between the largest and smallest riser height or between the largest and smallest tread depth shall not exceed 3/8 inch (9.5 mm) in any *flight of stairs*. The greatest *winder* tread depth at the walkline within any *flight of stairs* shall not exceed the smallest by more than 3/8 inch (9.5 mm).

Exceptions:

1. *Stairways* connecting stepped *aisles* to cross *aisles* or concourses shall be permitted to comply with the dimensional nonuniformity in Section 1030.14.2.
2. Consistently shaped *winders*, complying with Section 1011.5, differing from rectangular treads in the same *flight of stairs*.
3. Nonuniform riser dimension complying with Section 1011.5.4.1.

[S] **1011.5.4.1 Nonuniform height risers.** Where the bottom or top riser adjoins a sloping *public way*, walkway or driveway having an established grade and serving as a landing, the bottom or top riser is permitted to be reduced along the slope. ((to less than 4 inches (102 mm) in height, with the variation in height of the bottom or top riser not to exceed one unit vertical in 12 units horizontal (8 percent slope) of *stair* width. The *nosings* or leading edges of treads at such nonuniform height risers shall have a distinctive marking stripe, different from any other *nosing* marking provided on the *stair flight*. The distinctive marking stripe shall be visible in descent of the *stair* and shall have a slip-resistant surface. Marking stripes shall have a width of not less than 1 inch (25 mm) but not more than 2 inches (51 mm).))

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Exception: Spaces under *stairways* serving and contained within a single residential *dwelling unit* in Group R-2 or R-3 shall be permitted to be protected on the enclosed side with 1/2-inch (12.7 mm) *gypsum board*.

1011.7.4 Enclosures under exterior stairways. There shall not be enclosed usable space under exterior exit *stairways* unless the space is completely enclosed in 1-hour fire-resistance-rated construction. The open space under exterior *stairways* shall not be used for any purpose.

[S] 1011.8 Vertical rise. A *flight of stairs* shall not have a vertical rise greater than 12 feet (3658 mm) between floor levels or landings.

Exceptions:

1. Spiral stairways used as a means of egress from technical production areas.
2. Stairways that are designed exclusively for circulation.

1011.9 Curved stairways. Curved *stairways* with *winder* treads shall have treads and risers in accordance with Section 1011.5 and the smallest radius shall be not less than twice the minimum width or required capacity of the stairway.

Exception: The radius restriction shall not apply to curved *stairways* in Group R-3 and within individual dwelling units in Group R-2.

[S] 1011.10 Spiral stairways. *Spiral stairways* are permitted to be used as a component in the *means of egress* only within *dwelling units* or from a space not more than 250 square feet (23 m²) in area and serving not more than five occupants, ((~~or~~)) from *technical production areas* in accordance with Section 410.5 or as approved by the building official.

1. A *spiral stairway* shall have a 6-3/4-inch (171 mm) minimum clear tread depth at a point 12 inches (305 mm) from the narrow edge. The risers shall be sufficient to provide a headroom of 78 inches (1981 mm) minimum, but riser height shall not be more than 9-1/2 inches (241 mm). The minimum *stairway* clear width at and below the *handrail* shall be 26 inches (660 mm).
2. Spiral stairways are permitted to be used exclusively for circulation, provided:
 - 2.1. The spiral stairway connects any combination of the following: Group B occupancy, Group R occupancy, or Group A occupancies that are accessory to a Group R occupancy;
 - 2.2. It can be demonstrated that the occupants are unlikely to access the spiral stairway in an emergency;
 - 2.3. The required means of egress is clear and readily visible to occupants; and
 - 2.4. A placard is installed at the spiral stairway warning occupants that the spiral stairway is “NOT AN EXIT” in accordance with Section 1013.7.

1011.11 Handrails. *Flights of stairways* shall have *handrails* on each side and shall comply with Section 1014. Where glass is used to provide the *handrail*, the *handrail* shall comply with Section 2407.

Exceptions:

1. *Flights of stairways* within *dwelling units* and *flights of spiral stairways* are permitted to have a *handrail* on one side only.
2. Decks, patios and walkways that have a single change in elevation where the landing depth on each side of the change of elevation is greater than what is required for a landing do not require *handrails*.
3. In Group R-3 occupancies, a change in elevation consisting of a single riser at an entrance or egress door does not require *handrails*.
4. Changes in room elevations of three or fewer risers within *dwelling units* and *sleeping units* in Groups R-2 and R-3 do not require *handrails*.
5. Where a platform lift is in a stationary position and the floor of the platform lift serves as the upper landing of a *stairway*, *handrails* shall not be required on the *stairway*, provided that all of the following criteria are met:
 - 5.1. The *stairway* contains not more than two risers.
 - 5.2. A handhold, positioned horizontally or vertically, is located on one side of the *stairway* adjacent to the top landing.
 - 5.3. The handhold is located not less than 34 inches (864 mm) and not more than 42 inches (1067 mm) above the bottom landing of the *stairway*.
 - 5.4. The handhold gripping surface complies with Section 1014.3, and is not less than 4.5 inches (114 mm) in length.

[S] 1011.12 Stairway to roof. In buildings four or more stories above grade plane, one *stairway* shall extend to the roof surface unless the roof has a slope steeper than four units vertical in 12 units horizontal (33-percent slope).

Exceptions:

1. Other than where required by Section 1011.12.1, in buildings without an occupied roof, access to the roof from the top story shall be permitted to be by an *alternating tread device* ((;)) or a ships ladder, ~~((or a permanent ladder.))~~
2. Access to the roof is not required in Group R-3 occupancies.

1011.12.1 Stairway to elevator equipment. Roofs and *penthouses* containing elevator equipment that must be accessed for maintenance are required to be accessed by a *stairway*.

1011.12.2 Roof access. Where a *stairway* is provided to a roof, access to the roof shall be provided through a *penthouse* complying with Section 1511.2.

Exception: In buildings without an occupied roof, access to the roof shall be permitted to be a roof hatch or trap door not less than 16 square feet (1.5 m²) in area and having a minimum dimension of 2 feet 6 inches (((6+0)) 762 mm).

1011.13 Guards. *Guards* shall be provided along *stairways* and landings where required by Section 1015 and shall be constructed in accordance with Section 1015. Where the roof hatch opening providing the required access is located within 10 feet (3049 mm) of the roof edge, such roof access or roof edge shall be protected by *guards* installed in accordance with Section 1015.

1011.14 Alternating tread devices. *Alternating tread devices* are limited to an element of a *means of egress* in buildings of Groups F, H and S from a *mezzanine* not more than 250 square feet (23 m²) in area and that serves not more than five occupants; in buildings of Group I-3 from a guard tower, observation station or control room not more than 250 square feet (23 m²) in area and for access to unoccupied roofs. *Alternating tread devices* used as a *means of egress* shall not have a rise greater than 20 feet (6096 mm) between floor levels or landings.

1011.14.1 Handrails of alternating tread devices. *Handrails* shall be provided on both sides of *alternating tread devices* and shall comply with Section 1014.

1011.14.2 Treads of alternating tread devices. *Alternating tread devices* shall have a minimum tread depth of 5 inches (127 mm), a minimum projected tread depth of 8-1/2 inches (216 mm), a minimum tread width of 7 inches (178 mm) and a maximum riser height of 9-1/2 inches (241 mm). The tread depth shall be measured horizontally between the vertical planes of the foremost projections of adjacent treads. The riser height shall be measured vertically between the leading edges of adjacent treads. The riser height and tread depth provided shall result in an angle of ascent from the horizontal of between 50 and 70 degrees (0.87 and 1.22 rad). The initial tread of the device shall begin at the same elevation as the platform, landing or floor surface.

Exception: *Alternating tread devices* used as an element of a *means of egress* in buildings from a *mezzanine* area not more than 250 square feet (23 m²) in area that serves not more than five occupants shall have a minimum tread depth of 3 inches (76 mm) with a minimum projected tread depth of 10-1/2 inches (267 mm). The rise to the next alternating tread surface shall not exceed 8 inches (203 mm).

1011.15 Ship's ladders. Ship's ladders are permitted to be used in Group I-3 as a component of a *means of egress* to and from control rooms or elevated facility observation stations not more than 250 square feet (23 m²) with not more than three occupants and for access to unoccupied roofs. The minimum clear width at and below the *handrails* shall be 20 inches (508 mm). Ship's ladders shall be designed for the live loads indicated in Section 1607.17.

1011.15.1 Handrails of ship's ladders. *Handrails* shall be provided on both sides of ship's ladders.

1011.15.2 Treads of ship's ladders. Ship's ladders shall have a minimum tread depth of 5 inches (127 mm). The tread shall be projected such that the total of the tread depth plus the *nosing* projection is not less than 8-1/2 inches (216 mm). The maximum riser height shall be 9-1/2 inches (241 mm).

1011.16 Ladders. Permanent ladders shall not serve as a part of the *means of egress* from occupied spaces within a building. Permanent ladders shall be constructed in accordance with Section 306.5 of the *International Mechanical Code* and designed for the live loads indicated in Section 1607.17. Permanent ladders shall be permitted to provide access to the following areas:

1. Spaces frequented only by personnel for maintenance, repair or monitoring of equipment.
2. Nonoccupiable spaces accessed only by catwalks, crawl spaces, freight elevators or very narrow passageways.
3. Raised areas used primarily for purposes of security, life safety or fire safety including, but not limited to, observation galleries, prison guard towers, fire towers or lifeguard stands.
4. Elevated levels in Group U not open to the general public.
5. Nonoccupied roofs that are not required to have *stairway* access in accordance with Section 1011.12.1.
6. Where permitted to access equipment and appliances in accordance with Section 306.5 of the *International Mechanical Code*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

**SECTION 1012
RAMPS**

[W] 1012.1 Scope. The provisions of this section shall apply to *ramps* used as a component of a *means of egress*.

Exceptions:

1. Ramped *aisles* within assembly rooms or spaces shall comply with the provisions in Section 1030.13.
2. Curb ramps shall comply with ICC A117.1.
3. Vehicle ramps in parking garages for pedestrian *exit access* shall not be required to comply with Sections 1012.3 through 1012.10 where they are not an *accessible* route serving accessible parking spaces, other required accessible elements or part of an *accessible means of egress*.
4. In a parking garage where one accessible *means of egress* serving accessible parking spaces or other accessible elements is provided, a second accessible *means of egress* serving that area shall be permitted to include a vehicle ramp that does not comply with Sections 1012.4, 1012.5 and 1012.8. A landing complying with Sections 1012.6.1 and 1012.6.4 shall be provided at any change of direction in the accessible *means of egress*.

1012.2 Slope. *Ramps* used as part of a *means of egress* shall have a running slope not steeper than 1 unit vertical in 12 units horizontal (8.3-percent slope). The slope of other pedestrian *ramps* shall not be steeper than 1 unit vertical in 8 units horizontal (12.5-percent slope).

1012.3 Cross slope. The slope measured perpendicular to the direction of travel of a *ramp* shall not be steeper than one unit vertical in 48 units horizontal (2-percent slope).

1012.4 Vertical rise. The rise for any *ramp* run shall be 30 inches (762 mm) maximum.

1012.5 Minimum dimensions. The minimum dimensions of *means of egress ramps* shall comply with Sections 1012.5.1 through 1012.5.3.

1012.5.1 Width and capacity. The minimum width and required capacity of a *means of egress ramp* shall be not less than that required for *corridors* by Section 1020.3. The clear width of a *ramp* between *handrails*, if provided, or other permissible projections shall be 36 inches (914 mm) minimum.

1012.5.2 Headroom. The minimum headroom in all parts of the *means of egress ramp* shall be not less than 80 inches (2032 mm) above the finished floor of the *ramp* run and any intermediate landings. The minimum clearance shall be maintained for the full width of the *ramp* and landing.

1012.5.3 Restrictions. *Means of egress ramps* shall not reduce in width in the direction of egress travel. Projections into the required *ramp* and landing width are prohibited. Doors opening onto a landing shall not reduce the clear width to less than 42 inches (1067 mm).

1012.6 Landings. *Ramps* shall have landings at the bottom and top of each *ramp*, points of turning, entrance, *exits* and at doors. Landings shall comply with Sections 1012.6.1 through 1012.6.5.

1012.6.1 Slope. Landings shall have a slope not steeper than one unit vertical in 48 units horizontal (2-percent slope) in any direction. Changes in level are not permitted.

1012.6.2 Width. The landing width shall be not less than the width of the widest *ramp* run adjoining the landing.

1012.6.3 Length. The landing length shall be 60 inches (1525 mm) minimum.

Exceptions:

1. In Group R-2 and R-3 individual dwelling and *sleeping units* that are not required to be *Accessible units, Type A units* or *Type B units* in accordance with Section 1108, landings are permitted to be 36 inches (914 mm) minimum.
2. Where the *ramp* is not a part of an *accessible* route, the length of the landing shall not be required to be more than 48 inches (1219 mm) in the direction of travel.

1012.6.4 Change in direction. Where changes in direction of travel occur at landings provided between *ramp* runs, the landing shall be 60 inches by 60 inches (1524 mm by 1524 mm) minimum.

Exception: In Group R-2 and R-3 individual *dwelling* or *sleeping units* that are not required to be *Accessible units, Type A units* or *Type B units* in accordance with Section 1108, landings are permitted to be 36 inches by 36 inches (914 mm by 914 mm) minimum.

1012.6.5 Doorways. Where doorways are located adjacent to a *ramp* landing, maneuvering clearances required by *ICC A117.1* are permitted to overlap the required landing area.

1012.7 Ramp construction. *Ramps* shall be built of materials consistent with the types permitted for the type of construction of the building, except that wood *handrails* shall be permitted for all types of construction.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

1012.7.1 Ramp surface. The surface of *ramps* shall be of slip-resistant materials that are securely attached.

1012.7.2 Outdoor conditions. Outdoor *ramps* and outdoor approaches to *ramps* shall be designed so that water will not accumulate on walking surfaces.

1012.8 Handrails. *Ramps* with a rise greater than 6 inches (152 mm) shall have *handrails* on both sides. *Handrails* shall comply with Section 1014.

1012.9 Guards. *Guards* shall be provided where required by Section 1015 and shall be constructed in accordance with Section 1015.

1012.10 Edge protection. Edge protection complying with Section 1012.10.1 or 1012.10.2 shall be provided on each side of *ramp* runs and at each side of *ramp* landings.

Exceptions:

1. Edge protection is not required on *ramps* that are not required to have *handrails*, provided they have flared sides that comply with the *ICC A117.1* curb *ramp* provisions.
2. Edge protection is not required on the sides of *ramp* landings serving an adjoining *ramp* run or *stairway*.
3. Edge protection is not required on the sides of *ramp* landings having a vertical dropoff of not more than 1/2 inch (12.7 mm) within 10 inches (254 mm) horizontally of the required landing area.

1012.10.1 Curb, rail, wall or barrier. A curb, rail, wall or barrier shall be provided to serve as edge protection. A curb shall be not less than 4 inches (102 mm) in height. Barriers shall be constructed so that the barrier prevents the passage of a 4-inch-diameter (102 mm) sphere, where any portion of the sphere is within 4 inches (102 mm) of the floor or ground surface.

1012.10.2 Extended floor or ground surface. The floor or ground surface of the *ramp* run or landing shall extend 12 inches (305 mm) minimum beyond the inside face of a *handrail* complying with Section 1014.

SECTION 1013 EXIT SIGNS

[S] **1013.1 Where required.** Exits and *exit access* doors shall be marked by an *approved* exit sign readily visible from any direction of egress travel. The path of egress travel to *exits* and within *exits* shall be marked by readily visible exit signs to clearly indicate the direction of egress travel in cases where the exit or the path of egress travel is not immediately visible to the occupants. Intervening means of egress doors within *exits* shall be marked by exit signs. Exit sign placement shall be such that any point in an *exit access corridor* or *exit passageway* is within 100 feet (30 480 mm) or the *listed* viewing distance of the sign, whichever is less, from the nearest visible *exit* sign. Exit signs shall be located at any other location determined by the building official to be necessary to clearly indicate the direction of egress.

Exceptions:

1. Exit signs are not required in rooms or areas that require only one exit or *exit access* other than in buildings designed with a single exit stairway according to Section 1006.3.3 item 7.
2. Main exterior exit doors or gates that are obviously and clearly identifiable as *exits* need not have exit signs where *approved* by the building official.
3. Exit signs are not required in occupancies in Group U and individual *sleeping units* or *dwelling units* in Group R-1, R-2 or R-3.
4. Exit signs are not required in dayrooms, sleeping rooms or *dormitories* in occupancies in Group I-3.
5. In occupancies in Groups A-4 and A-5, exit signs are not required on the seating side of vomitories or openings into seating areas where exit signs are provided in the concourse that are readily apparent from the vomitories. Egress lighting is provided to identify each vomitory or opening within the seating area in an emergency.
6. Exit signs are not required on exterior stairways serving exterior exit balconies.

1013.2 Low-level exit signs in Group R-1. Where exit signs are required in Group R-1 occupancies by Section 1013.1, additional low-level exit signs shall be provided in all areas serving guest rooms in Group R-1 occupancies and shall comply with Section 1013.5.

The bottom of the sign shall be not less than 10 inches (254 mm) nor more than 18 inches (455 mm) above the floor level. The sign shall be flush mounted to the door or wall. Where mounted on the wall, the edge of the sign shall be within 4 inches (102 mm) of the door frame on the latch side.

1013.3 Illumination. Exit signs shall be internally or externally illuminated.

Exception: Tactile signs required by Section 1013.4 need not be provided with illumination.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

1013.4 Raised character and braille exit signs. Where exit signs are provided at an *area of refuge* with *direct access* to a *stairway*, an exterior area for assisted rescue, an *exit stairway* or *ramp*, an *exit passageway*, a *horizontal exit* and the *exit discharge*, a sign stating accessways in visual characters, raised characters and braille and complying with ICC A117.1 shall be provided.

1013.5 Internally illuminated exit signs. Electrically powered, *self-luminous* and *photoluminescent* exit signs shall be *listed* and labeled in accordance with UL 924 and shall be installed in accordance with the manufacturer’s instructions and Chapter 27. Exit signs shall be illuminated at all times.

[S] 1013.6 Externally illuminated exit signs. Externally illuminated exit signs shall comply with Sections 1013.6.1 through 1013.6.3.

1013.6.1 Graphics. Every exit sign and directional exit sign shall have plainly legible letters not less than 6 inches (152 mm) high with the principal strokes of the letters not less than 3/4 inch (19.1 mm) wide. The word “EXIT” shall have letters having a width not less than 2 inches (51 mm) wide, except the letter “I,” and the minimum spacing between letters shall be not less than 3/8 inch (9.5 mm). Signs larger than the minimum established in this section shall have letter widths, strokes and spacing in proportion to their height.

The word “EXIT” shall be in high contrast with the background and shall be clearly discernible when the means of exit sign illumination is or is not energized. If a chevron directional indicator is provided as part of the exit sign, the construction shall be such that the direction of the chevron directional indicator cannot be readily changed.

Exception: Existing exit signs with letters at least 5 inches (127 mm) in height are permitted to be reused.

1013.6.2 Exit sign illumination. The face of an exit sign illuminated from an external source shall have an intensity of not less than 5 footcandles (54 lux).

1013.6.3 Power source. Exit signs shall be illuminated at all times. To ensure continued illumination for a duration of not less than 90 minutes in case of primary power loss, the sign illumination means shall be connected to an emergency power system provided from storage batteries, unit equipment or an on-site generator. The installation of the emergency power system shall be in accordance with Chapter 27. Group I-2, Condition 2 exit sign illumination shall not be provided by unit equipment batteries only.

Exception: *Approved* exit sign illumination types that provide continuous illumination independent of external power sources for a duration of not less than 90 minutes, in case of primary power loss, are not required to be connected to an emergency electrical system.

[S] 1013.7 Not-an-exit warnings. Placards reading “NOT AN EXIT” shall be installed at all doorways, passageways or stairways that are not exits, exit accesses or exit discharges, and that may be mistaken for an exit. A sign indicating the use of the doorway, passageway or stairway, such as “TO BASEMENT,” “STORE ROOM,” “LINEN CLOSET,” is permitted in lieu of the “NOT AN EXIT” sign.

SECTION 1014 HANDRAILS

1014.1 Where required. *Handrails* serving *flights of stairways*, *ramps*, stepped *aisles* and ramped *aisles* shall be adequate in strength and attachment in accordance with Section 1607.9. *Handrails* required for flights of *stairways* by Section 1011.11 shall comply with Sections 1014.2 through 1014.9. *Handrails* required for *ramps* by Section 1012.8 shall comply with Sections 1014.2 through 1014.8. *Handrails* for stepped *aisles* and ramped *aisles* required by Section 1030.16 shall comply with Sections 1014.2 through 1014.8.

[W] 1014.2 Height and location. *Handrails* serving *flights of stairways*, *ramps*, stepped *aisles*, and ramped *aisles* shall comply with the provisions of Sections 1014.2.1 and 1014.2.2.

1014.2.1 Height. *Handrail* height, measured above *stair* tread *nosings*, or finish surface of *ramp* slope, shall be uniform, not less than 34 inches (864 mm) and not more than 38 inches (965 mm). *Handrail* height of *alternating tread devices* and ships ladders, measured above tread *nosings*, shall be uniform, not less than 30 inches (762 mm) and not more than 34 inches (864 mm).

Exceptions:

1. Where *handrail* fittings or bendings are used to provide continuous transition between flights, the fittings or bendings shall be permitted to exceed the maximum height.
2. In Group R-3 occupancies; within *dwelling units* in Group R-2 occupancies; and in Group U occupancies that are associated with a Group R-3 occupancy or associated with individual *dwelling units* in Group R-2 occupancies; where *handrail* fittings or bendings are used to provide continuous transition between flights, transition at *winder* treads, transition from *handrail* to guard, or where used at the start of a *flight*, the *handrail* height at the fittings or bendings shall be permitted to exceed the maximum height.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

3. *Handrails* on top of a *guard* where permitted along stepped *aisles* and ramped *aisles* in accordance with Section 1030.16.

1014.2.2 Lateral location. *Handrails* located outward from the edge of the walking surface of flights of stairways, ramps, stepped *aisles*, and ramped *aisles* shall be located within 6 inches (152.4 mm) measured horizontally from the edge of the walking surface. *Handrails* projecting into the width of the walking surface shall comply with Section 1014.8.

1014.3 Handrail graspability. Required *handrails* shall comply with Section 1014.3.1 or shall provide equivalent graspability.

Exception: In Group R-3 occupancies; within *dwelling units* in Group R-2 occupancies; and in Group U occupancies that are accessory to a Group R-3 occupancy or accessory to individual *dwelling units* in Group R-2 occupancies; *handrails* shall be Type I in accordance with Section 1014.3.1, Type II in accordance with Section 1014.3.2 or shall provide equivalent graspability.

1014.3.1 Type I. *Handrails* with a circular cross section shall have an outside diameter of not less than 1-1/4 inches (32 mm) and not greater than 2 inches (51 mm). Where the *handrail* is not circular, it shall have a perimeter dimension of not less than 4 inches (102 mm) and not greater than 6-1/4 inches (160 mm) with a maximum cross-sectional dimension of 2-1/4 inches (57 mm) and minimum cross-sectional dimension of 1 inch (25 mm). Edges shall have a minimum radius of 0.01 inch (0.25 mm).

1014.3.2 Type II. *Handrails* with a perimeter greater than 6-1/4 inches (160 mm) shall provide a graspable finger recess area on both sides of the profile. The finger recess shall begin within a distance of 3/4 inch (19 mm) measured vertically from the tallest portion of the profile and achieve a depth of not less than 5/16 inch (8 mm) within 7/8 inch (22 mm) below the widest portion of the profile. This required depth shall continue for not less than 3/8 inch (10 mm) to a level that is not less than 1-3/4 inches (45 mm) below the tallest portion of the profile. The width of the *handrail* above the recess shall be not less than 1-1/4 inches (32 mm) to not greater than 2-3/4 inches (70 mm). Edges shall have a minimum radius of 0.01 inch (0.25 mm).

1014.4 Continuity. *Handrail* gripping surfaces shall be continuous, without interruption by newel posts or other obstructions.

Exceptions:

1. *Handrails* within *dwelling units* are permitted to be interrupted by a newel post at a turn or landing.
2. Within a *dwelling unit*, the use of a volute, turnout, starting easing or starting newel is allowed over the lowest tread.
3. Handrail brackets or balusters attached to the bottom surface of the *handrail* that do not project horizontally beyond the sides of the *handrail* within 1-1/2 inches (38 mm) of the bottom of the *handrail* shall not be considered obstructions. For each 1/2 inch (12.7 mm) of additional *handrail* perimeter dimension above 4 inches (102 mm), the vertical clearance dimension of 1-1/2 inches (38 mm) shall be permitted to be reduced by 1/8 inch (3.2 mm).
4. Where *handrails* are provided along walking surfaces with slopes not steeper than 1:20, the bottoms of the *handrail* gripping surfaces shall be permitted to be obstructed along their entire length where they are integral to crash rails or bumper *guards*.
5. *Handrails* serving stepped *aisles* or ramped *aisles* are permitted to be discontinuous in accordance with Section 1030.16.1.

1014.5 Fittings. *Handrails* shall not rotate within their fittings.

1014.6 Handrail extensions. *Handrails* shall return to a wall, *guard* or the walking surface or shall be continuous to the *handrail* of an adjacent *flight of stairs* or *ramp* run. Where *handrails* are not continuous between flights, the *handrails* shall extend horizontally not less than 12 inches (305 mm) beyond the top riser and continue to slope for the depth of one tread beyond the bottom riser. At *ramps* where *handrails* are not continuous between runs, the *handrails* shall extend horizontally above the landing 12 inches (305 mm) minimum beyond the top and bottom of *ramp* runs. The extensions of *handrails* shall be in the same direction of the flights of *stairs* at *stairways* and the *ramp* runs at *ramps*.

Exceptions:

1. *Handrails* within a *dwelling unit* that is not required to be *accessible* need extend only from the top riser to the bottom riser.
2. *Handrails* serving *aisles* in rooms or spaces used for assembly purposes are permitted to comply with the *handrail* extensions in accordance with Section 1030.16.
3. *Handrails* for *alternating tread devices* and ships ladders are permitted to terminate at a location vertically above the top and bottom risers. *Handrails* for *alternating tread devices* are not required to be continuous between flights or to extend beyond the top or bottom risers.

1014.7 Clearance. Clear space between a *handrail* and a wall or other surface shall be not less than 1-1/2 inches (38 mm). A *handrail* and a wall or other surface adjacent to the *handrail* shall be free of any sharp or abrasive elements.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

[W] 1014.8 Projections. On *ramps* and on ramped *aisles* that are part of an *accessible* route, the clear width between *handrails* shall be 36 inches (914 mm) minimum. Projections into the required width of stepped and ramped aisles, flights of stairways and *ramps* at each side shall not exceed 4-1/2 inches (114 mm) at or below the *handrail* height. Projections into the required width shall not be limited above the minimum headroom height required in Section 1011.3. Projections due to intermediate *handrails* shall not constitute a reduction in the egress width. Where a pair of intermediate *handrails* are provided within the *stairway* without a walking surface between the pair of intermediate *handrails* and the distance between the pair of intermediate *handrails* is greater than 6 inches (152 mm), the available egress width shall be reduced by the distance between the closest edges of each such intermediate pair of *handrails* that is greater than 6 inches (152 mm).

1014.9 Intermediate handrails. *Stairways* shall have intermediate *handrails* located in such a manner that all portions of the *stairway* minimum width or required capacity are within 30 inches (762 mm) of a *handrail*. On monumental *stairs*, *handrails* shall be located along the most direct path of egress travel.

SECTION 1015 GUARDS

1015.1 General. *Guards* shall comply with the provisions of Sections 1015.2 through 1015.7. Operable windows with sills located more than 72 inches (1829 mm) above finished grade or other surface below shall comply with Section 1015.8.

[W] 1015.2 Where required. *Guards* shall be located along open-sided walking surfaces, including *mezzanines*, equipment platforms, lofts in accordance with Section 420.14, *aisles*, *stairs*, *ramps* and landings that are located more than 30 inches (762 mm) measured vertically to the floor or grade below at any point within 36 inches (914 mm) horizontally to the edge of the open side. Guards shall be provided at the perimeter of the occupied portions of an occupied roof. *Guards* shall be adequate in strength and attachment in accordance with Section 1607.9.

Exceptions: *Guards* are not required for the following locations:

1. On the loading side of loading docks or piers.
2. On the audience side of *stages* and raised *platforms*, including *stairs* leading up to the *stage* and raised *platforms*.
3. On raised *stage* and *platform* floor areas, such as runways, *ramps* and side *stages* used for entertainment or presentations.
4. At vertical openings in the performance area of *stages* and *platforms*.
5. At elevated walking surfaces appurtenant to *stages* and *platforms* for access to and utilization of special lighting or equipment.
6. Along vehicle service pits not accessible to the public.
7. In assembly seating areas at cross *aisles* in accordance with Section 1030.17.2.
8. On the loading side of station platforms on fixed guideway transit or passenger rail systems.
9. Portions of an occupied roof located less than 30 inches measured vertically to adjacent unoccupied roof areas when approved guards are present at the perimeter of the roof.
10. At an occupied portion of an occupied roof where a barrier approved by the building official is provided.

1015.2.1 Glazing. Where glass is used to provide a *guard* or as a portion of the *guard* system, the *guard* shall comply with Section 2407. Where the glazing provided does not meet the strength and attachment requirements of Section 1607.9, complying *guards* shall be located along glazed sides of open-sided walking surfaces.

[W] 1015.3 Height. Required *guards* shall be not less than 42 inches (1067 mm) high, measured vertically as follows:

1. From the adjacent walking surfaces.
2. On *stairways* and stepped *aisles*, from the line connecting the leading edges of the tread *nosings*.
3. On *ramps* and ramped *aisles*, from the *ramp* surface at the guard.

Exceptions:

1. For occupancies in Group R-3 not more than three stories above grade in height and within individual *dwelling units* in occupancies in Group R-2 not more than three stories above grade in height with separate *means of egress*, required *guards* shall be not less than 36 inches (914 mm) in height measured vertically above the adjacent walking surfaces.
2. For occupancies in Group R-3, and within individual *dwelling units* in occupancies in Group R-2, *guards* on the open sides of *stairs* shall have a height not less than 34 inches (864 mm) measured vertically from a line connecting the leading edges of the treads.
3. For occupancies in Group R-3, and within individual *dwelling units* in occupancies in Group R-2, where the top of the *guard* serves as a *handrail* on the open sides of *stairs*, the top of the *guard* shall be not less than 34 inches (864

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

mm) and not more than 38 inches (965 mm) measured vertically from a line connecting the leading edges of the treads.

4. In areas with ceiling heights of 7 feet (2134 mm) or less in lofts constructed in accordance with Section 420.14, guards shall not be less than 36 inches (914 mm) in height or one-half of the clear height from the loft floor to the loft ceiling, whichever is less.

((4)) 5. The guard height in assembly seating areas shall comply with Section 1030.17 as applicable.

((5)) 6. Along alternating tread devices and ships ladders, guards where the top rail serves as a handrail shall have height not less than 30 inches (762 mm) and not more than 34 inches (864 mm), measured vertically from the leading edge of the device tread nosing.

((6)) 7. In Group F occupancies where exit access stairways serve fewer than three stories and such stairways are not open to the public, and where the top of the guard also serves as a handrail, the top of the guard shall be not less than 34 inches (864 mm) and not more than 38 inches (965 mm) measured vertically from a line connecting the leading edges of the treads.

1015.4 Opening limitations. Required guards shall not have openings that allow passage of a sphere 4 inches (102 mm) in diameter from the walking surface to the required guard height.

Exceptions:

1. From a height of 36 inches (914 mm) to 42 inches (1067 mm), guards shall not have openings that allow passage of a sphere 4-3/8 inches (111 mm) in diameter.
2. The triangular openings at the open sides of a stair, formed by the riser, tread and bottom rail shall not allow passage of a sphere 6 inches (152 mm) in diameter.
3. At elevated walking surfaces for access to and use of electrical, mechanical or plumbing systems or equipment, guards shall not have openings that allow passage of a sphere 21 inches (533 mm) in diameter.
4. In areas that are not open to the public within occupancies in Group I-3, F, H or S, and for alternating tread devices and ships ladders, guards shall not have openings that allow passage of a sphere 21 inches (533 mm) in diameter.
5. In assembly seating areas, guards required at the end of aisles in accordance with Section 1030.17.4 shall not have openings that allow passage of a sphere 4 inches (102 mm) in diameter up to a height of 26 inches (660 mm). From a height of 26 inches (660 mm) to 42 inches (1067 mm) above the adjacent walking surfaces, guards shall not have openings that allow passage of a sphere 8 inches (203 mm) in diameter.
6. Within individual dwelling units and sleeping units in Group R-2 and R-3 occupancies, guards on the open sides of stairs shall not have openings that allow passage of a sphere 4-3/8 (111 mm) inches in diameter.

1015.5 Screen porches. Porches and decks that are enclosed with insect screening shall be provided with guards where the walking surface is located more than 30 inches (762 mm) above the floor or grade below.

[S] 1015.6 (~~Mechanical equipment~~) Equipment, systems and devices. Guards shall be provided where various components that require service are located within 10 feet (3048 mm) of a roof edge or open side of a walking surface and such edge or open side is located more than 30 inches (762 mm) above the floor, roof or grade below. The guard shall extend not less than 30 inches (762 mm) beyond each end of such components. The guard shall be constructed so as to prevent the passage of a sphere 21 inches (533 mm) in diameter.

Exception: Guards are not required where personal fall arrest anchorage connector devices that comply with ANSI/ASSE Z 359.1 are installed.

[S] 1015.7 Roof access. Guards shall be provided where the roof hatch opening is located within 10 feet (3048 mm) of a roof edge or open side of a walking surface and such edge or open side is located more than 30 inches (762 mm) above the floor, roof or grade below. The guard shall extend not less than 30 inches (762 mm) beyond each end of the hatch parallel to the roof edge. The guard shall be constructed so as to prevent the passage of a sphere 21 inches (533 mm) in diameter.

~~((Exception: Guards are not required where personal fall arrest anchorage connector devices that comply with ANSI/ASSE Z 359.1 are installed.))~~

1015.8 Window openings. Windows in Group R-2 and R-3 buildings including dwelling units, where the bottom of the clear opening of an operable window is located less than 36 inches (914 mm) above the finished floor and more than 72 inches (1829 mm) above the finished grade or other surface below on the exterior of the building, shall comply with one of the following:

1. Operable windows where the top of the sill of the opening is located more than 75 feet (22 860 mm) above the finished grade or other surface below and that are provided with window fall prevention devices that comply with ASTM F2006.
2. Operable windows where the openings will not allow a 4-inch-diameter (102 mm) sphere to pass through the opening when the window is in its largest opened position.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

3. Operable windows where the openings are provided with window fall prevention devices that comply with ASTM F2090.
4. Operable windows that are provided with window opening control devices that comply with Section 1015.8.1.

1015.8.1 Window opening control devices. Window opening control devices shall comply with ASTM F2090. The window opening control device, after operation to release the control device allowing the window to fully open, shall not reduce the minimum net clear opening area of the window unit to less than the area required by Section 1031.3.1.

SECTION 1016 EXIT ACCESS

1016.1 General. The *exit access* shall comply with the applicable provisions of Sections 1003 through 1015. *Exit access* arrangement shall comply with Sections 1016 through 1021.

[S] 1016.2 Egress through intervening spaces. Egress through intervening spaces shall comply with this section.

1. *Exit access* through an enclosed elevator lobby is permitted. Where access to two or more exits or exit access doorways is required in Section 1006.2.1, access to not less than one of the required *exits* shall be provided without travel through the enclosed elevator lobbies required by Section ((3006)) 713.14. Where the path of *exit access* travel passes through an enclosed elevator lobby, the level of protection required for the enclosed elevator lobby is not required to be extended to the *exit* unless direct access to an *exit* is required by other sections of this code.
2. Egress from a room or space shall not pass through adjoining or intervening rooms or areas, except where such adjoining rooms or areas and the area served are accessory to one or the other, are not a Group H occupancy and provide a discernible path of egress travel to an exit.

Exception: *Means of egress* are not prohibited through adjoining or intervening rooms or spaces in a Group H, S or F occupancy where the adjoining or intervening rooms or spaces are the same or a lesser hazard occupancy group.

3. An *exit access* shall not pass through a room that can be locked to prevent egress.
4. *Means of egress* from *dwelling units* or sleeping areas shall not lead through other sleeping areas, toilet rooms or bathrooms.
5. Egress shall not pass through kitchens, storage rooms, closets or spaces used for similar purposes.

Exceptions:

1. *Means of egress* are not prohibited through a kitchen area serving adjoining rooms constituting part of the same *dwelling unit* or *sleeping unit*.
2. *Means of egress* are not prohibited through stockrooms in Group M occupancies where all of the following are met:
 - 2.1. The stock is of the same hazard classification as that found in the main retail area.
 - 2.2. Not more than 50 percent of the *exit access* is through the stockroom.
 - 2.3. The stockroom is not subject to locking from the egress side.
 - 2.4. There is a demarcated, minimum 44-inch-wide (1118 mm) *aisle* defined by full- or partial-height fixed walls or similar construction that will maintain the required width and lead directly from the retail area to the exit without obstructions.
6. Unless approved by the building official, where two or more exits are required, exit travel shall not pass through an interior exit stairway as the only way to reach another exit.

Note: See Section 1010.2.4 for conditions in which exit access doors from elevator lobbies are permitted to be locked.

1016.2.1 Multiple tenants. Where more than one tenant occupies any one floor of a building or structure, each tenant space, *dwelling unit* and *sleeping unit* shall be provided with access to the required *exits* without passing through adjacent tenant spaces, *dwelling units* and *sleeping units*.

Exception: The *means of egress* from a smaller tenant space shall not be prohibited from passing through a larger adjoining tenant space where such rooms or spaces of the smaller tenant occupy less than 10 percent of the area of the larger tenant space through which they pass; are the same or similar occupancy group; a discernible path of egress travel to an *exit* is provided; and the *means of egress* into the adjoining space is not subject to locking from the egress side. A required *means of egress* serving the larger tenant space shall not pass through the smaller tenant space or spaces.

**SECTION 1017
EXIT ACCESS TRAVEL DISTANCE**

1017.1 General. Travel distance within the *exit access* portion of the *means of egress* system shall be in accordance with this section.

Note: Additional interior exit stairways or corridors constructed as smoke barriers may be required for standpipe hose connections. See Section 905.4.

1017.2 Limitations. *Exit access* travel distance shall not exceed the values given in Table 1017.2.

**[W][S] TABLE 1017.2
EXIT ACCESS TRAVEL DISTANCE^a**

OCCUPANCY	WITHOUT SPRINKLER SYSTEM (feet)	WITH SPRINKLER SYSTEM (feet)
A, E, F-1, M, R, S-1	200 ^c	250 ^b
I-1	Not Permitted	250 ^b
B	200	300 ^c
F-2, S-2, U	300	400 ^c
H-1	Not Permitted	75 ^d
H-2	Not Permitted	100 ^d
H-3	Not Permitted	150 ^d
H-4	Not Permitted	175 ^d
H-5	Not Permitted	200 ^c
I-2, I-3	Not Permitted	200 ^c
I-4	150	200 ^c

For SI: 1 foot = 304.8 mm.

a. See the following sections for modifications to *exit access* travel distance requirements:

- Section 402.8: For the distance limitation in malls.
- Section 407.4: For the distance limitation in Group I-2.
- Sections 408.6.1 and 408.8.1: For the distance limitations in Group I-3.
- Section 411.2: For the distance limitation in special amusement areas.
- Section 412.6: For the distance limitations in aircraft manufacturing facilities.
- Section 1006.2.2.2: For the distance limitation in refrigeration machinery rooms.
- Section 1006.2.2.3: For the distance limitation in refrigerated rooms and spaces.
- Section 1006.3.4: For buildings with one exit.
- Section 1017.2.2: For increased distance limitation in Groups F-1 and S-1.
- Section 1030.7: For increased limitation in assembly seating.
- ((Section 3103.4: For temporary structures.))
- Section 3104.9: For pedestrian walkways.
- Section 3116: For fixed guideway and passenger rail stations.

b. Buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 or 903.3.1.2. See Section 903 for occupancies where automatic sprinkler systems are permitted in accordance with Section 903.3.1.2.

c. Buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.

d. Group H occupancies equipped throughout with an automatic sprinkler system in accordance with Section 903.2.5.1.

e. Group R-3 and R-4 buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.3. See Section 903.2.8 for occupancies where automatic sprinkler systems are permitted in accordance with Section 903.3.1.3.

1017.2.1 Exterior egress balcony increase. *Exit access* travel distances specified in Table 1017.2 shall be increased up to an additional 100 feet (30 480 mm) provided that the last portion of the *exit access* leading to the exit occurs on an exterior egress balcony constructed in accordance with Section 1021. The length of such balcony shall be not less than the amount of the increase taken.

1017.2.2 Groups F-1 and S-1 increase. The maximum *exit access* travel distance shall be 400 feet (122 m) in Group F-1 or S-1 occupancies where all of the following conditions are met:

1. The portion of the building classified as Group F-1 or S-1 is limited to one *story* in height.
2. The minimum height from the finished floor to the bottom of the ceiling or roof slab or deck is 24 feet (7315 mm).
3. The building is equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

**SECTION 1019
EXIT ACCESS STAIRWAYS AND RAMPS**

1019.1 General. *Exit access stairways* and *ramps* serving as an *exit access* component in a *means of egress* system shall comply with the requirements of this section. The number of stories connected by *exit access stairways* and *ramps* shall include *basements*, but not *mezzanines*.

1019.2 All occupancies. *Exit access stairways* and *ramps* that serve floor levels within a single *story* are not required to be enclosed.

[W][S] 1019.3 Occupancies other than Groups I-2 and I-3. In other than Group I-2 and I-3 occupancies, floor openings containing *exit access stairways* or *ramps* shall be enclosed with a shaft enclosure constructed in accordance with Section 713.

Exceptions:

1. *Exit access stairways* and *ramps* that serve or atmospherically communicate between only two adjacent stories. Such interconnected stories shall not be open to other stories.
2. In Group R-1, R-2 or R-3 occupancies, *exit access stairways* and *ramps* connecting four stories or less serving and contained within an individual dwelling unit or sleeping unit or live/work unit.
3. *Exit access stairways* serving and contained within a Group R-3 congregate residence or a Group R-4 facility are not required to be enclosed.
4. *Exit access stairways* and *ramps* that are designed exclusively for circulation in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1, where the area of the vertical opening between stories does not exceed twice the horizontal projected area of the stairway or *ramp* and the opening is protected by a draft curtain and closely spaced sprinklers in accordance with NFPA 13. In other than Group B and M occupancies, this provision is limited to openings that do not connect more than four stories.
5. *Exit access stairways* and *ramps* within an *atrium* complying with the provisions of Section 404.
6. *Exit access stairways* and *ramps* in *open parking garages* that serve only the parking garage.
7. *Exit access stairways* and *ramps* serving smoke-protected or *open-air assembly seating* complying with the exit access travel distance requirements of Section 1030.7.
8. *Exit access stairways* and *ramps* between the balcony, gallery or press box and the main assembly floor in occupancies such as theaters, *places of religious worship*, auditoriums and sports facilities.
9. Exterior *exit access stairways* or *ramps* between occupied roofs.

1019.4 Group I-2 and I-3 occupancies. In Group I-2 and I-3 occupancies, floor openings between stories containing *exit access stairways* or *ramps* are required to be enclosed with a shaft enclosure constructed in accordance with Section 713.

Exception: In Group I-3 occupancies, *exit access stairways* or *ramps* constructed in accordance with Section 408 are not required to be enclosed.

**SECTION 1020
CORRIDORS**

1020.1 General. Corridors serving as an exit access component in a *means of egress* system shall comply with the requirements of Sections 1020.2 through 1020.7.

[S] 1020.2 Construction. Corridors shall be fire-resistance rated in accordance with Table 1020.2. The *corridor* walls required to be fire-resistance rated shall comply with Section 708 for *fire partitions*.

Exceptions:

1. A *fire-resistance rating* is not required for *corridors* in an occupancy in Group E where each room that is used for instruction has not less than one door opening directly to the exterior and rooms for assembly purposes have not less than one-half of the required means of egress doors opening directly to the exterior. Exterior doors specified in this exception are required to be at ground level.
2. A *fire-resistance rating* is not required for *corridors* contained within a *dwelling unit* or *sleeping unit* in an occupancy in Groups I-1 and R.
3. A *fire-resistance rating* is not required for *corridors* in *open parking garages*.
4. A *fire-resistance rating* is not required for *corridors* in an occupancy in Group B that is a space requiring only a single *means of egress* complying with Section 1006.2.
5. *Corridors* adjacent to the *exterior walls* of buildings shall be permitted to have unprotected openings on unrated *exterior walls* where unrated walls are permitted by Table 705.5 and unprotected openings are permitted by Table 705.8.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

6. In office areas located in buildings of Types IA or IB construction, corridor walls need not be of fire-resistance-rated construction where the corridor side of the corridor walls is finished with materials having a maximum Class B rating as defined in Chapter 8. This exception does not apply to outpatient clinics and medical offices.
7. The occupant load of Group B conference rooms, lunch rooms without grease-producing cooking and other assembly rooms with an occupant load of less than 50 in each room need not be considered when determining whether corridor construction is required, provided such rooms are accessory to an office tenant located in a building of Type IA or IB construction. This provision is permitted to be used in other construction types when the floor on which the assembly room is located is equipped with an automatic sprinkler system.

[S] 1020.2.1 Hoistway opening protection. Elevator hoistway openings shall be protected in accordance with Section ~~(3006.2.1)~~ 713.14.2.1.

**[S] TABLE 1020.2
CORRIDOR FIRE-RESISTANCE RATING**

OCCUPANCY	OCCUPANT LOAD SERVED BY CORRIDOR	REQUIRED FIRE-RESISTANCE RATING (hours)	
		Without sprinkler system	With sprinkler system
H-1, H-2, H-3	All	Not Permitted	1 ^c
H-4, H-5	Greater than 30	Not Permitted	1 ^c
A, B, E, F, M, S, U	Greater than 30	1	0
R	((Greater than 10)) All	Not Permitted	((0.5^{e,f})) 1 ^d
I-2 ^a	All	Not Permitted	0
I-1, I-3	All	Not Permitted	1 ^{b, c}
I-4	All	1	0

- a. For requirements for occupancies in Group I-2, see Sections 407.2 and 407.3.
- b. For a reduction in the fire-resistance rating for occupancies in Group I-3, see Section 408.8.
- c. Buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 or 903.3.1.2 where allowed.
- d. Group R-3 and R-4 buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.3. See Section 903.2.8 for occupancies where automatic sprinkler systems are permitted in accordance with Section 903.3.1.3.

1020.3 Width and capacity. The required capacity of *corridors* shall be determined as specified in Section 1005.1, but the minimum width shall be not less than that specified in Table 1020.3.

Exception: In Group I-2 occupancies, *corridors* are not required to have a clear width of 96 inches (2438 mm) in areas where there will not be stretcher or bed movement for access to care or as part of the *defend-in-place* strategy.

**TABLE 1020.3
MINIMUM CORRIDOR WIDTH**

OCCUPANCY	MINIMUM WIDTH (inches)
Any facility not listed in this table	44
Access to and utilization of mechanical, plumbing or electrical systems or equipment	24
With an occupant load of less than 50	36
Within a dwelling unit	36
In Group E with a corridor having an occupant load of 100 or more	72
In corridors and areas serving stretcher traffic in ambulatory care facilities	72
Group I-2 in areas where required for bed movement	96

For SI: 1 inch = 25.4 mm.

1020.4 Obstruction. The minimum width or required capacity of *corridors* shall be unobstructed.

Exception: Encroachments complying with Section 1005.7.

[S] 1020.5 Dead ends. Where more than one *exit* or *exit access doorway* is required, the *exit access* shall be arranged such that dead-end *corridors* do not exceed ~~((20 feet (6096 mm)))~~ 25 feet (7620 mm) in length.

Exceptions:

1. In Group I-3, Condition 2, 3 or 4, occupancies, the dead end in a *corridor* shall not exceed 50 feet (15 240 mm).
2. In occupancies in Groups B, E, F, I-1, M, R-1, R-2, S and U, where the building is equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1, the length of the dead-end *corridors* shall not exceed 50 feet (15 240 mm).

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

3. A dead-end *corridor* shall not be limited in length where the length of the dead-end *corridor* is less than 2.5 times the least width of the dead-end *corridor*.
4. In Group I-2, Condition 2 occupancies, the length of dead-end *corridors* that do not serve patient rooms or patient treatment spaces shall not exceed 30 feet (9144 mm).
5. Dead ends are permitted to be 75 feet (22 860 mm) in length in areas containing Group B offices in buildings of Types IA and IB construction, where the cumulative occupant load does not exceed 50 for all areas for which the dead end serves as the only means of egress.

[S] **1020.6 Air movement in corridors.** *Corridors* shall not serve as supply, return, exhaust, relief or ventilation air ducts or plenums except as allowed by Mechanical Code Section 601.2.

~~(Exceptions:~~

1. ~~Use of a *corridor* as a source of makeup air for exhaust systems in rooms that open directly onto such corridors, including toilet rooms, bathrooms, dressing rooms, smoking lounges and janitor closets, shall be permitted, provided that each such *corridor* is directly supplied with outdoor air at a rate greater than the rate of makeup air taken from the corridor.~~
2. ~~Where located within a *dwelling unit*, the use of *corridors* for conveying return air shall not be prohibited.~~
3. ~~Where located within tenant spaces of 1,000 square feet (93 m²) or less in area, utilization of *corridors* for conveying return air is permitted.~~
4. ~~Transfer air movement required to maintain the pressurization difference within health care facilities in accordance with ASHRAE 170.)~~

1020.6.1 Corridor ceiling. Use of the space between the corridor ceiling and the floor or roof structure above as a return air plenum is permitted for one or more of the following conditions:

1. The *corridor* is not required to be of *fire-resistance-rated* construction.
2. The *corridor* is separated from the plenum by *fire-resistance-rated* construction.
3. The air-handling system serving the *corridor* is shut down upon activation of the air-handling unit smoke detectors required by the *International Mechanical Code*.
4. The air-handling system serving the *corridor* is shut down upon detection of sprinkler water flow where the building is equipped throughout with an automatic sprinkler system.
5. The space between the corridor ceiling and the floor or roof structure above the *corridor* is used as a component of an *approved* engineered smoke control system.

1020.7 Corridor continuity. *Fire-resistance-rated corridors* shall be continuous from the point of entry to an *exit*, and shall not be interrupted by intervening rooms. Where the path of egress travel within a *fire-resistance-rated corridor* to the *exit* includes travel along unenclosed *exit access stairways* or *ramps*, the *fire-resistance rating* shall be continuous for the length of the *stairway* or *ramp* and for the length of the connecting *corridor* on the adjacent floor leading to the exit.

Exceptions:

1. Foyers, lobbies or reception rooms constructed as required for *corridors* shall not be construed as intervening rooms.
2. Enclosed elevator lobbies as permitted by Item 1 of Section 1016.2 shall not be construed as intervening rooms.

SECTION 1021 EGRESS BALCONIES

1021.1 General. Balconies used for egress purposes shall conform to the same requirements as *corridors* for minimum width, required capacity, headroom, dead ends and projections.

[S] **1021.2 Wall separation.** Exterior egress balconies shall be separated from the interior of the building by walls and opening protectives as required for *corridors*.

Exceptions:

1. Separation is not required where the exterior egress balcony is served by not less than two *stairways* and a dead-end travel condition does not require travel past an unprotected opening to reach a *stairway*.
2. Separation is not required in buildings equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1 or 903.3.1.2.

1021.3 Openness. The long side of an egress balcony shall be not less than 50 percent open, and the open area above the *guards* shall be so distributed as to minimize the accumulation of smoke or toxic gases.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

1021.4 Location. Exterior egress balconies shall have a minimum *fire separation distance* of 10 feet (3048 mm) measured at right angles from the exterior edge of the egress balcony to the following:

1. Adjacent *lot lines*.
2. Other portions of the building.
3. Other buildings on the same lot unless the adjacent building *exterior walls* and openings are protected in accordance with Section 705 based on *fire separation distance*.

For the purposes of this section, other portions of the building shall be treated as separate buildings.

SECTION 1022 EXITS

1022.1 General. *Exits* shall comply with Sections 1022 through 1027 and the applicable requirements of Sections 1003 through 1015. An *exit* shall not be used for any purpose that interferes with its function as a *means of egress*. Once a given level of *exit* protection is achieved, such level of protection shall not be reduced until arrival at the *exit discharge*. Exits shall be continuous from the point of entry into the *exit* to the *exit discharge*.

1022.2 Exterior exit doors. Buildings or structures used for human occupancy shall have not less than one exterior door that meets the requirements of Section 1010.1.1.

1022.2.1 Detailed requirements. Exterior *exit* doors shall comply with the applicable requirements of Section 1010.1.

1022.2.2 Arrangement. Exterior *exit* doors shall lead directly to the *exit discharge* or the *public way*.

SECTION 1023 INTERIOR EXIT STAIRWAYS AND RAMPS

1023.1 General. *Interior exit stairways* and *ramps* serving as an exit component in a *means of egress* system shall comply with the requirements of this section. *Interior exit stairways* and *ramps* shall be enclosed and lead directly to the exterior of the building or shall be extended to the exterior of the building with an *exit passageway* conforming to the requirements of Section 1024, except as permitted in Section 1028.2. An *interior exit stairway* or *ramp* shall not be used for any purpose other than as a *means of egress* and a *circulation path*.

[S] 1023.2 Construction. Enclosures for interior *exit stairways* and *ramps* shall be constructed as *fire barriers* in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both. *Interior exit stairway* and *ramp* enclosures shall have a *fire-resistance rating* of not less than 2 hours where connecting more than four stories (~~or more~~) and not less than 1 hour where connecting (~~less than~~) four stories or less. The number of stories connected by the interior *exit stairways* or *ramps* shall include any *basements*, but not any *mezzanines*. Enclosures for interior *exit stairways* and *ramps* shall have a *fire-resistance rating* not less than the floor assembly penetrated, but need not exceed 2 hours.

Exceptions:

1. *Interior exit stairways* and *ramps* in Group I-3 occupancies in accordance with the provisions of Section 408.3.8.
2. *Interior exit stairways* within an *atrium* enclosed in accordance with Section 404.6.
3. *Interior exit stairways* in accordance with Section 510.2.

1023.3 Termination. *Interior exit stairways* and *ramps* shall terminate at an *exit discharge* or a *public way*.

Exception: A combination of *interior exit stairways*, *interior exit ramps* and *exit passageways*, constructed in accordance with Sections 1023.2, 1023.3.1 and 1024, respectively, and forming a continuous protected enclosure, shall be permitted to extend an *interior exit stairway* or *ramp* to the *exit discharge* or a *public way*.

[S] 1023.3.1 Extension. Where *interior exit stairways* and *ramps* are extended to an *exit discharge* or a *public way* by an *exit passageway*, the *interior exit stairway* and *ramp* shall be separated from the *exit passageway* by a *fire barrier* constructed in accordance with Section 707 or a *horizontal assembly* constructed in accordance with Section 711, or both. The *fire-resistance rating* shall be not less than that required for the *interior exit stairway* and *ramp*. A *fire door assembly* complying with Section 716 shall be installed in the *fire barrier* to provide a *means of egress* from the *interior exit stairway* and *ramp* to the *exit passageway*. Openings in the *fire barrier* other than the *fire door assembly* are prohibited. Penetrations of the *fire barrier* are prohibited.

Exceptions:

1. Penetrations of the *fire barrier* in accordance with Section 1023.5 shall be permitted.
2. Separation between an *interior exit stairway* or *ramp* and the *exit passageway* extension shall not be required where there are no openings into the *exit passageway* extension.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

3. Separation between an *interior exit stairway* or *ramp* and the *exit passageway* extension shall not be required where the *interior exit stairway* and the *exit passageway* extension are pressurized in accordance with Section 909.20.5.

1023.4 Openings. *Interior exit stairway* and *ramp* opening protectives shall be in accordance with the requirements of Section 716.

Openings in *interior exit stairways* and *ramps* other than unprotected exterior openings shall be limited to those required for *exit access* to the enclosure from normally occupied spaces and for egress from the enclosure.

Elevators shall not open into *interior exit stairways* and *ramps*.

Interpretation I1023.4: Accessory rooms such as restrooms, storage closets, laundry rooms, electrical, communication closets, mechanical rooms and similar spaces shall not open directly into an interior exit stairway. Rooms and spaces that are separated from the stairway by a corridor or a vestibule are not considered to open directly into the interior exit stairway. The corridor or vestibule shall be constructed as a minimum 1-hour fire-resistance rated fire partition complying with Section 708. Openings shall comply with Sections 716.2.2.1 and 716.3.2.1.

[S] **1023.5 Penetrations.** Penetrations into or through *interior exit stairways* and *ramps* are prohibited except for the following:

1. Equipment and ductwork necessary for independent ventilation or pressurization.
2. *Fire protection systems.*
3. Security systems.
4. Two-way communication systems.
5. Electrical raceway for fire department communication systems and sprinkler monitoring terminating at a steel box not exceeding 16 square inches (0.010 m²).
6. Electrical raceway serving the *interior exit stairway* and *ramp* and terminating at a steel box not exceeding 16 square inches (0.010 m²).
7. Structural elements supporting the *interior exit stairway* or *ramp* or enclosure, such as beams or joists.
8. Piping used exclusively for the drainage of rainfall runoff from roof areas, provided the roof is not used for a helistop or heliport.
9. Unfired unit heaters required for freeze protection of fire protection equipment are permitted to penetrate one membrane; the conduit serving the heater is permitted to penetrate both membranes.
10. Equipment necessary for electrically controlled stairway door locks and security cameras are permitted to penetrate one membrane; the conduit serving the equipment is permitted to penetrate both membranes.

Such penetrations shall be protected in accordance with Section 714. There shall not be penetrations or communication openings, whether protected or not, between adjacent *interior exit stairways* and *ramps*.

Interpretation I1023.5: Ducts passing through interior exit stairways shall be separated from the stairway by construction having a fire-resistance rating at least equal to the stairway walls. At least one side of the duct enclosure shall abut the interior exit stairway enclosure.

Exception: *Membrane penetrations* shall be permitted on the outside of the *interior exit stairway* and *ramp*. Such penetrations shall be protected in accordance with Section 714.4.2.

1023.6 Ventilation. Equipment and ductwork for *interior exit stairway* and *ramp* ventilation as permitted by Section 1023.5 shall comply with one of the following items:

1. Such equipment and ductwork shall be located exterior to the building and shall be directly connected to the *interior exit stairway* and *ramp* by ductwork enclosed in construction as required for *shafts*.
2. Where such equipment and ductwork is located within the *interior exit stairway* and *ramp*, the intake air shall be taken directly from the outdoors and the exhaust air shall be discharged directly to the outdoors, or such air shall be conveyed through ducts enclosed in construction as required for *shafts*.
3. Where located within the building, such equipment and ductwork shall be separated from the remainder of the building, including other mechanical equipment, with construction as required for *shafts*.

In each case, openings into the fire-resistance-rated construction shall be limited to those needed for maintenance and operation and shall be protected by opening protectives in accordance with Section 716 for shaft enclosures.

The *interior exit stairway* and *ramp* ventilation systems shall be independent of other building ventilation systems.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

1023.7 Interior exit stairway and ramp exterior walls. *Exterior walls* of the *interior exit stairway* or *ramp* shall comply with the requirements of Section 705 for *exterior walls*. Where nonrated walls or unprotected openings enclose the exterior of the *stairway* or *ramps* and the walls or openings are exposed by other parts of the building at an angle of less than 180 degrees (3.14 rad), the building *exterior walls* within 10 feet (3048 mm) horizontally of a nonrated wall or unprotected opening shall have a *fire-resistance rating* of not less than 1 hour. Openings within such *exterior walls* shall be protected by opening protectives having a *fire protection rating* of not less than 3/4 hour. This construction shall extend vertically from the ground to a point 10 feet (3048 mm) above the topmost landing of the *stairway* or *ramp*, or to the roof line, whichever is lower.

1023.8 Barrier at level of exit discharge. An *interior exit stairway* and *ramp* shall not continue below its *level of exit discharge* unless an *approved barrier* is provided at the *level of exit discharge* to prevent persons from unintentionally continuing into levels below. Directional exit signs shall be provided as specified in Section 1013.

[S] 1023.9 Stairway identification signs. A sign shall be provided at each floor landing in an *interior exit stairway* and *ramp* connecting more than three stories designating the floor level, the terminus of the top and bottom of the *interior exit stairway* and *ramp* and the identification of the *stairway* or *ramp*. The signage shall state the story of and direction to the *exit discharge*, and ~~((the availability of))~~ whether there is roof access from the *interior exit stairway* and *ramp* for the fire department, and whether the roof access is accessed by roof hatch. The bottom of the sign shall be located not less than 5 feet (1524 mm) above the floor landing in a position that is readily visible when the doors are in the open and closed positions.

1023.9.1 Signage requirements. *Stairway* identification signs shall comply with all of the following requirements:

1. The signs shall be a minimum size of 18 inches (457 mm) by 12 inches (305 mm).
2. The letters designating the identification of the *interior exit stairway* and *ramp* shall be not less than 1-1/2 inches (38 mm) in height.
3. The number designating the floor level shall be not less than 5 inches (127 mm) in height and located in the center of the sign.
4. Other lettering and numbers shall be not less than 1 inch (25 mm) in height.
5. Characters and their background shall have a nonglare finish. Characters shall contrast with their background, with either light characters on a dark background or dark characters on a light background.
6. Where signs required by Section 1023.9 are installed in the *interior exit stairways* and *ramps* of buildings subject to Section 1025, the signs shall be made of the same materials as required by Section 1025.4.

1023.10 Elevator lobby identification signs. At landings in *interior exit stairways* where two or more doors lead to the floor level, any door with direct access to an enclosed elevator lobby shall be identified by signage located on the door or directly adjacent to the door stating "Elevator Lobby." Signage shall be in accordance with Section 1023.9.1, Items 4, 5 and 6.

1023.11 Tactile floor-level signs. Where floor level signs are provided in *interior exit stairways* and *ramps*, a floor-level sign identifying the floor level in visual characters, raised characters and braille complying with ICC A117.1 shall be located at each floor-level landing adjacent to the door leading from the *interior exit stairway* and *ramp* into the corridor.

[S] 1023.12 ((Smokeproof enclosures)) Pressurized stairways. Where required by Section 403.5.4, 405.7.2, ~~((or))~~ 412.2.2.1 or 510.2, *interior exit stairways* and *ramps* shall be ~~((smokeproof enclosures))~~ pressurized in accordance with Section 909.20.5 or 909.20.6.

1023.12.1 Termination and extension. A ~~((smokeproof enclosure))~~ pressurized stairway shall terminate at an *exit discharge* or a *public way*. The ~~((smokeproof enclosure))~~ pressurized stairway shall be permitted to be extended by an *exit passageway* in accordance with Section 1023.3. ~~((The exit passageway shall be without openings other than the fire door assembly required by Section 1023.3.1 and those necessary for egress from the exit passageway.))~~ The *exit passageway* shall be separated from the remainder of the building by 2-hour *fire barriers* constructed in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both. The *exit passageway* shall be protected and pressurized in the same manner as the pressurized stairway.

~~((Exceptions:~~

1. ~~Openings in the *exit passageway* serving a *smokeproof enclosure* are permitted where the *exit passageway* is protected and pressurized in the same manner as the *smokeproof enclosure*, and openings are protected as required for access from other floors.~~
2. ~~The *fire barrier* separating the *smokeproof enclosure* from the *exit passageway* is not required, provided that the *exit passageway* is protected and pressurized in the same manner as the *smokeproof enclosure*.~~
- 3-)) **Exception:** A ~~((smokeproof enclosure))~~ pressurized stairway shall be permitted to egress through areas on the *level of exit discharge* or vestibules as permitted by Section 1028.

~~((1023.12.2 Enclosure access. Access to the *stairway* or *ramp* within a *smokeproof enclosure* shall be by way of a vestibule or an open exterior balcony.~~

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Exception: Access is not required by way of a vestibule or exterior balcony for *stairways* and *ramps* using the pressurization alternative complying with Section 909.20.5.))

1023.13 Standpipes. Standpipes and standpipe hose connections shall be provided where required by Sections 905.3 and 905.4.

[S] 1023.14 Equipment in interior exit stairways. Equipment is prohibited in interior exit stairways except for equipment necessary for independent pressurization, lighting of the interior exit stairway, sprinkler piping, standpipes, electrical equipment for fire department communication and sprinkler monitoring, and unit heaters required to protect fire protection equipment from freezing.

SECTION 1024 EXIT PASSAGEWAYS

1024.1 General. Exit passageways serving as an exit component in a *means of egress* system shall comply with the requirements of this section. An *exit passageway* shall not be used for any purpose other than as a *means of egress* and a *circulation path*.

1024.2 Width and capacity. The required capacity of exit passageways shall be determined as specified in Section 1005.1 but the minimum width shall be not less than 44 inches (1118 mm), except that exit passageways serving an *occupant load* of less than 50 shall be not less than 36 inches (914 mm) in width. The minimum width or required capacity of exit passageways shall be unobstructed.

Exception: Encroachments complying with Section 1005.7.

1024.3 Construction. *Exit passageway* enclosures shall have walls, floors and ceilings of not less than a 1-hour *fire-resistance rating*, and not less than that required for any connecting *interior exit stairway* or *ramp*. Exit passageways shall be constructed as *fire barriers* in accordance with Section 707 or *horizontal assemblies* constructed in accordance with Section 711, or both.

1024.4 Termination. Exit passageways on the *level of exit discharge* shall terminate at an *exit discharge*. Exit passageways on other levels shall terminate at an exit.

[S] 1024.5 Openings. *Exit passageway* opening protectives shall be in accordance with the requirements of Section 716.

((Except as permitted in Section 402.8.7, openings in exit passageways other than unprotected exterior openings shall be limited to those necessary for *exit access* to the *exit passageway* from normally occupied spaces and for egress from the *exit passageway*.)

The following openings are permitted in *exit passageways*:

1. Doors from rooms and spaces in accordance with Section 402.8.7;
2. Unprotected exterior openings;
3. Doors necessary for exit access from normally occupied spaces;
4. Doors necessary for egress from the *exit passageway*;
5. Doors from interior exit stairways.

Where an *interior exit stairway* or *ramp* is extended to an *exit discharge* or a *public way* by an *exit passageway*, the *exit passageway* shall comply with Section 1023.3.1.

Elevators shall not open into an *exit passageway*.

Interpretation I1024.5: Accessory rooms such as restrooms, storage closets, laundry rooms, electrical, communication closets, mechanical rooms and similar spaces shall not open directly into an *exit passageway*. Rooms and spaces that are separated from the *exit passageway* by a *corridor* or a vestibule are not considered to open directly into the *exit passageway*. The *corridor* or vestibule shall be constructed as a minimum 1-hour fire-resistance rated fire partition complying with Section 708. Openings shall comply with Sections 716.2.2.1 and 716.3.2.1.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Code Alternate CA1024.5: An elevator is permitted to open into an *exit passageway* when the following conditions are met:

1. A lobby shall separate the elevator from the *exit passageway*. This is allowed at only one location in the building. The lobby is required whether the elevator hoistway is pressurized or not.
2. The separation shall be constructed as a fire barrier having a fire-resistive rating and opening protectives as for the *exit passageway*. The door between the lobby and the *exit passageway* shall also comply with Section 716.2.2.1. The door shall have listed gaskets installed at head, jambs and meeting edges. This only applies to the walls common with the *exit passageway*.
3. The lobby shall have a minimum depth of 36 inches. (Note that areas of refuge may require a larger dimension).
4. An elevator lobby constructed as a smoke partition shall be provided at every floor below the level of the *exit passageway* served by the elevator. Hoistway pressurization is permitted to be used in lieu of the lobbies on floors below the level of the *exit passageway*.
5. A door as required by Section 1023.3.1 between an interior exit stairway and the *exit passageway* shall be provided.
6. An *automatic sprinkler system* in accordance with Section 903.3.1.1 shall be provided throughout the floor on which the *exit passageway* is located.

This alternate does not apply to interior exit stairways.

[S] **1024.6 Penetrations.** Penetrations into or through an *exit passageway* are prohibited except for the following:

1. Equipment and ductwork necessary for independent ventilation or pressurization.
2. Fire protection systems.
3. Security systems.
4. Two-way communication systems.
5. Electrical raceway for fire department communication.
6. Electrical raceway serving the *exit passageway* and terminating at a steel box not exceeding 16 square inches (0.010 m²).

Such penetrations shall be protected in accordance with Section 714. There shall not be penetrations or communicating openings, whether protected or not, between adjacent *exit passageways*.

Exceptions:

1. Membrane penetrations shall be permitted on the outside of the *exit passageway*. Such penetrations shall be protected in accordance with Section 714.4.2.
2. Unfired unit heaters allowed by Section 1023.14 to be installed in interior exit stairways are permitted to penetrate one membrane. The conduit serving the heater is permitted to penetrate both membranes.

1024.7 Ventilation. Equipment and ductwork for *exit passageway* ventilation as permitted by Section 1024.6 shall comply with one of the following:

1. The equipment and ductwork shall be located exterior to the building and shall be directly connected to the *exit passageway* by ductwork enclosed in construction as required for *shafts*.
2. Where the equipment and ductwork is located within the *exit passageway*, the intake air shall be taken directly from the outdoors and the exhaust air shall be discharged directly to the outdoors, or the air shall be conveyed through ducts enclosed in construction as required for *shafts*.
3. Where located within the building, the equipment and ductwork shall be separated from the remainder of the building, including other mechanical equipment, with construction as required for *shafts*.

In each case, openings into the fire-resistance-rated construction shall be limited to those needed for maintenance and operation and shall be protected by opening protectives in accordance with Section 716 for shaft enclosures.

Exit passageway ventilation systems shall be independent of other building ventilation systems.

1024.8 Exit passageway exterior walls. *Exterior walls* of the *exit passageway* shall comply with Section 705. Where nonrated walls or unprotected openings enclose the exterior of the *exit passageway* and the walls or openings are exposed by other parts of the building at an angle of less than 180 degrees (3.14 rad), the building *exterior walls* within 10 feet (3048 mm) horizontally of a nonrated wall or unprotected opening shall have a *fire-resistance rating* of not less than 1 hour. Openings within such *exterior walls* shall be protected by opening protectives having a *fire protection rating* of not less than 3/4 hour.

and restricted height areas. However, such markings shall not conceal any required information or indicators including but not limited to instructions to occupants for the use of standpipes.

Exception: The minimum width of 1 inch (25 mm) shall not apply to markings *listed* in accordance with UL 1994.

[S] **1025.2.6 Doors within the exit path.** Doors through which occupants must pass in order to complete the exit path shall be provided with markings complying with Sections 1025.2.6.1 through 1025.2.6.3.

Exception: Main exterior exit doors or gates that are obviously and clearly identifiable as exits need not be provided with markings where approved by the building official.

1025.2.6.1 Emergency exit symbol. The doors shall be identified by a low-location luminous emergency exit symbol complying with NFPA 170. The exit symbol shall be not less than 4 inches (102 mm) in height and shall be mounted on the door, centered horizontally, with the top of the symbol not higher than 18 inches (457 mm) above the finished floor.

1025.2.6.2 Door hardware markings. Door hardware shall be marked with not less than 16 square inches (10323 mm²) of luminous material. This marking shall be located behind, immediately adjacent to, or on the door handle or escutcheon. Where a *panic* bar is installed, such material shall be not less than 1 inch (25 mm) wide for the entire length of the actuating bar or touchpad.

1025.2.6.3 Door frame markings. The top and sides of the door frame shall be marked with a solid and continuous 1-inch- to 2-inch-wide (25 mm to 51 mm) stripe. Where the door molding does not provide sufficient flat surface on which to locate the stripe, the stripe shall be permitted to be located on the wall surrounding the frame.

1025.3 Uniformity. Placement and dimensions of markings shall be consistent and uniform throughout the same enclosure.

1025.4 Self-luminous and photoluminescent. Luminous egress path markings shall be permitted to be made of any material, including paint, provided that an electrical charge is not required to maintain the required luminance. Such materials shall include, but not be limited to, *self-luminous* materials and *photoluminescent* materials. Materials shall comply with either of the following standards:

1. UL 1994.
2. ASTM E2072, except that the charging source shall be 1 footcandle (11 lux) of fluorescent illumination for 60 minutes, and the minimum luminance shall be 30 milicandelas per square meter at 10 minutes and 5 milicandelas per square meter after 90 minutes.

1025.5 Illumination. Where *photoluminescent* exit path markings are installed, they shall be provided with not less than 1 footcandle (11 lux) of illumination for not less than 60 minutes prior to periods when the building is occupied and continuously during occupancy.

SECTION 1026 HORIZONTAL EXITS

1026.1 General. Horizontal *exits* serving as an *exit* in a *means of egress* system shall comply with the requirements of this section. A *horizontal exit* shall not serve as the only exit from a portion of a building, and where two or more *exits* are required, not more than one-half of the total number of *exits* or total exit minimum width or required capacity shall be horizontal *exits*.

Exceptions:

1. Horizontal *exits* are permitted to comprise two-thirds of the required *exits* from any building or floor area for occupancies in Group I-2.
2. Horizontal *exits* are permitted to comprise 100 percent of the *exits* required for occupancies in Group I-3. Not less than 6 square feet (0.6 m²) of accessible space per occupant shall be provided on each side of the *horizontal exit* for the total number of people in adjoining compartments.

1026.2 Separation. The separation between buildings or refuge areas connected by a *horizontal exit* shall be provided by a *fire wall* complying with Section 706; or by a *fire barrier* complying with Section 707 or a *horizontal assembly* complying with Section 711, or both. The minimum *fire-resistance rating* of the separation shall be 2 hours. Opening protectives in horizontal *exits* shall also comply with Section 716. Duct and air transfer openings in a *fire wall* or *fire barrier* that serves as a *horizontal exit* shall also comply with Section 717. The *horizontal exit* separation shall extend vertically through all levels of the building unless floor assemblies have a *fire-resistance rating* of not less than 2 hours and do not have unprotected openings.

Exception: A *fire-resistance rating* is not required at horizontal *exits* between a building area and an above-grade *pedestrian walkway* constructed in accordance with Section 3104, provided that the distance between connected buildings is more than 20 feet (6096 mm).

Horizontal exits constructed as *fire barriers* shall be continuous from *exterior wall* to *exterior wall* so as to divide completely the floor served by the *horizontal exit*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

1026.3 Opening protectives. *Fire doors* in horizontal exits shall be *self-closing* or automatic-closing when activated by a smoke detector in accordance with Section 716.2.6.6. Doors, where located in a cross-corridor condition, shall be automatic-closing by activation of a smoke detector installed in accordance with Section 716.2.6.6.

1026.4 Refuge area. The refuge area of a *horizontal exit* shall be a space occupied by the same tenant or a public area and each such refuge area shall be adequate to accommodate the original *occupant load* of the refuge area plus the *occupant load* anticipated from the adjoining compartment. The anticipated *occupant load* from the adjoining compartment shall be based on the capacity of the *horizontal exit doors* entering the refuge area or the total *occupant load* of the adjoining compartment, whichever is less.

1026.4.1 Capacity. The capacity of the refuge area shall be computed based on a *net floor area* allowance of 3 square feet (0.2787 m²) for each occupant to be accommodated therein. Where the *horizontal exit* also forms a *smoke compartment*, the capacity of the refuge area for Group I-1, I-2 and I-3 occupancies and Group B ambulatory care facilities shall comply with Sections 407.5.3, 408.6.2, 420.6.1 and 422.3.2 as applicable.

1026.4.2 Number of exits. The refuge area into which a *horizontal exit* leads shall be provided with *exits* adequate to meet the occupant requirements of this chapter, but not including the added *occupant load* imposed by persons entering the refuge area through horizontal exits from other areas. Not less than one refuge area exit shall lead directly to the exterior or to an *interior exit stairway* or ramp.

Exception: The adjoining compartment shall not be required to have a *stairway* or door leading directly outside, provided that the refuge area into which a *horizontal exit* leads has *stairways* or doors leading directly outside and are so arranged that egress shall not require the occupants to return through the compartment from which egress originates.

1026.5 Standpipes. Standpipes and standpipe hose connections shall be provided where required by Sections 905.3 and 905.4.

SECTION 1027 EXTERIOR EXIT STAIRWAYS AND RAMPS

1027.1 General. Exterior exit stairways and ramps serving as an exit component in a *means of egress* system shall comply with the requirements of this section.

1027.2 Use in a means of egress. *Exterior exit stairways* shall not be used as an element of a required *means of egress* for Group I-2 occupancies. For occupancies in other than Group I-2, *exterior exit stairways* and *ramps* shall be permitted as an element of a required *means of egress* for buildings not exceeding six stories above grade plane or that are not *high-rise buildings*.

[S] **1027.3 Open side.** *Exterior exit stairways* and *ramps* serving as an element of a required *means of egress* shall be at least 50 percent open on not less than one side, (except for required structural columns, beams, handrails and guards.) An open side shall have not less than ~~((35 square feet (3.3 m²)))~~ 28 square feet (2.6 m²) of aggregate open area adjacent to each floor level, ~~((and the level of each intermediate landing. The required open area shall be located not less than 42 inches (1067 mm) above the adjacent floor or landing level.))~~ The open area shall be distributed to prevent accumulation of smoke or toxic gases.

1027.4 Side yards. The open areas adjoining *exterior exit stairways* or *ramps* shall be either *yards, courts* or *public ways*; the remaining sides are permitted to be enclosed by the *exterior walls* of the building.

1027.5 Location. *Exterior exit stairways* and *ramps* shall have a minimum *fire separation distance* of 10 feet (3048 mm) measured at right angles from the exterior edge of the *stairway* or *ramps*, including landings, to:

1. Adjacent *lot lines*.
2. Other portions of the building.
3. Other buildings on the same lot unless the adjacent building *exterior walls* and openings are protected in accordance with Section 705 based on *fire separation distance*.

For the purposes of this section, other portions of the building shall be treated as separate buildings.

Exception: *Exterior exit stairways* and *ramps* serving individual *dwelling units* of Group R-3 shall have a minimum *fire separation distance* of 5 feet (1525 mm).

[S] **1027.6 Exterior exit stairway and ramp protection.** *Exterior exit stairways* and *ramps* shall be separated from the interior of the building as required in Section 1023.2. Openings shall be limited to those necessary for egress from normally occupied spaces. Where a vertical plane projecting from the edge of an *exterior exit stairway* or *ramp* and landings is exposed by other parts of the building at an angle of less than 180 degrees (3.14 rad), the *exterior wall* shall be rated in accordance with Section 1023.7.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

Exceptions:

1. Separation from the interior of the building is not required for occupancies, other than those in Group R-1 or R-2, in buildings that are not more than two stories above grade plane where a *level of exit discharge* serving such occupancies is the *first story above grade plane*.
2. Separation from the interior of the building is not required where the *exterior exit stairway* or *ramp* is served by an *exterior exit ramp* or balcony that connects two remote exterior exit *stairways* or other *approved exits* with a perimeter that is not less than 50 percent open. To be considered open, the opening shall be not less than 50 percent of the height of the enclosing wall, with the top of the openings not less than 7 feet (2134 mm) above the top of the balcony.
3. Separation from the open-ended *corridor* of the building is not required for *exterior exit stairways* or *ramps*, provided that Items 3.1 through 3.5 are met:
 - 3.1. The building, including open-ended *corridors*, and *stairways* and *ramps*, shall be equipped throughout with an *automatic sprinkler system* in accordance with Section 903.3.1.1 or 903.3.1.2.
 - 3.2. The open-ended *corridors* comply with Section 1020.
 - 3.3. The open-ended *corridors* are connected on each end to an *exterior exit stairway* or *ramp* complying with Section 1027.
 - 3.4. The *exterior walls* and openings adjacent to the *exterior exit stairway* or *ramp* comply with Section 1023.7 and 1027.7.
 - 3.5. At any location in an open-ended *corridor* where a change of direction exceeding 45 degrees (0.79 rad) occurs, a clear opening of not less than 35 square feet (3.3 m²) or an *exterior stairway* or *ramp* shall be provided. Where clear openings are provided, they shall be located so as to minimize the accumulation of smoke or toxic gases.
4. In Group R-3 occupancies not more than four stories in height, *exterior exit stairways* and *ramps* serving individual *dwelling units* are not required to be separated from the interior of the building where the *exterior exit stairway* or *ramp* discharges directly to grade.

[S] 1027.7 Exterior exit stairway and ramp exterior walls. Where nonrated walls or unprotected openings enclose the exterior of the stairway and the walls or openings are exposed by other parts of the building at an angle of less than 180 degrees (3.14 rad), the building exterior walls within 10 feet (3048 mm) horizontally of a nonrated wall or unprotected opening shall have a fire-resistance rating of not less than 1 hour. Openings within such exterior walls shall be protected by opening protectives having a fire protection rating of not less than 3/4 hour. This construction shall extend vertically from the ground to a point 10 feet (3048 mm) above the topmost landing of the stairway or to the roof line, whichever is lower.

SECTION 1028 EXIT DISCHARGE

1028.1 General. The exit discharge shall comply with Sections 1028 and 1029 and the applicable requirements of Sections 1003 through 1015.

[S] 1028.2 Exit discharge. *Exits* shall discharge directly to the exterior of the building. The *exit discharge* shall be at grade or shall provide a direct path of egress travel to grade. The *exit discharge* shall not reenter a building except into an exit or as otherwise approved by the building official. The combined use of Exceptions 1 and 2 shall not exceed 50 percent of the number and minimum width or required capacity of the required *exits*.

Exceptions:

1. Not more than 50 percent of the number and minimum width or required capacity of *interior exit stairways* and *ramps* is permitted to egress through areas, including *atriums*, on the level of discharge provided that all of the following conditions are met:
 - 1.1. Discharge of *interior exit stairways* and *ramps* shall be provided with a free and unobstructed path of travel to an exterior *exit* door and such *exit* is readily visible and identifiable from the point of termination of the enclosure.
 - 1.2. The entire area of the *level of exit discharge* is separated from areas below by construction conforming to the *fire-resistance rating* for the enclosure.
 - 1.3. The egress path from the *interior exit stairway* and *ramp* on the *level of exit discharge* is protected throughout by an *approved automatic sprinkler system*. Portions of the *level of exit discharge* with access to the egress path shall be either equipped throughout with an *automatic sprinkler system* installed in accordance with Section 903.3.1.1 or 903.3.1.2, or separated from the egress path in accordance with the requirements for the enclosure of *interior exit stairways* or *ramps*.

SPECIAL DETAILED REQUIREMENTS BASED ON OCCUPANCY AND USE

- 1.4. Where a required *interior exit stairway* or *ramp* and an *exit access stairway* or *ramp* serve the same floor level and terminate at the same *level of exit discharge*, the termination of the *exit access stairway* or *ramp* and the *exit discharge* door of the *interior exit stairway* or *ramp* shall be separated by a distance of not less than 30 feet (9144 mm) or not less than one-fourth the length of the maximum overall diagonal dimension of the building, whichever is less. The distance shall be measured in a straight line between the *exit discharge* door from the *interior exit stairway* or *ramp* and the last tread of the *exit access stairway* or termination of slope of the *exit access ramp*.
2. Not more than 50 percent of the number and minimum width or required capacity of the *interior exit stairways* and *ramps* is permitted to egress through a vestibule provided that all of the following conditions are met:
 - 2.1. The entire area of the vestibule is separated from areas below by construction conforming to the *fire-resistance rating* of the *interior exit stairway* or *ramp enclosure*.
 - 2.2. The depth from the exterior of the building is not greater than 10 feet (3048 mm) and the ~~(length)~~ width is not greater than 30 feet (9144 mm).
 - 2.3. The area is separated from the remainder of the *level of exit discharge* by a *fire partition* constructed in accordance with Section 708.

Exception: The maximum transmitted temperature rise is not required.
 - 2.4. The area is used only for *means of egress* and *exits* directly to the outside.

Interpretation I1028.1: Exception 2 applies only to vestibules with *direct access* from the *interior exit stairway* or *ramp*.

3. *Horizontal exits* complying with Section 1026 shall not be required to discharge directly to the exterior of the building.

[S] 1028.2.1 Remoteness of egress paths at building exterior. The paths of egress travel from separate exits shall be separated by at least 10 feet at the exterior of the building. The separation shall be maintained for at least 10 feet, as measured from the face of the exterior wall containing the exits, before the paths of egress travel are permitted to converge. The paths of egress travel, before and after convergence, shall provide unobstructed access to a *public way*. Where 3 or more exits are required, at least 2 paths shall be arranged in accordance with this provision.

1028.3 Exit discharge width or capacity. The minimum width or required capacity of the *exit discharge* shall be not less than the minimum width or required capacity of the *exits* being served.

1028.4 Exit discharge components. *Exit discharge* components shall be sufficiently open to the exterior so as to minimize the accumulation of smoke and toxic gases. *

[S] 1028.5 Access to a public way. The *exit discharge* shall provide a direct and unobstructed access to a *public way*. Converging paths of egress travel located in the *exit discharge* are permitted under the conditions of 1028.2.1.

Exception: Where access to a *public way* cannot be provided, a safe dispersal area shall be provided where all of the following are met:

1. The area shall be of a size to accommodate not less than 5 square feet (0.46 m²) for each person.
2. The area shall be located on the same lot not less than 50 feet (15 240 mm) away from the building requiring egress.
3. The area shall be permanently maintained and identified as a safe dispersal area.
4. The area shall be provided with a safe and unobstructed path of travel from the building.

**SECTION 1029
EGRESS COURTS** **

1029.1 General. *Egress courts* serving as an *exit discharge* component in the *means of egress* system shall comply with the requirements in this section.

1029.2 Width or capacity. The required capacity of egress courts shall be determined as specified in Section 1005.1, but the minimum width shall be not less than 44 inches (1118 mm), except as specified herein. Egress courts serving Group R-3 and U occupancies shall be not less than 36 inches (914 mm) in width. The required capacity and width of egress courts shall be unobstructed to a height of 7 feet (2134 mm). The width of the egress court shall be not less than the required capacity.

Exception: Encroachments complying with Section 1005.7.
