The Role of Hospital Harborview Hospital-Linked Violence Intervention Program and Community Partnership

Deepika Nehra, MD FACS Assistant Professor of Surgery Trauma/General Surgery, Surgical Critical Care Harborview Medical Center University of Washington

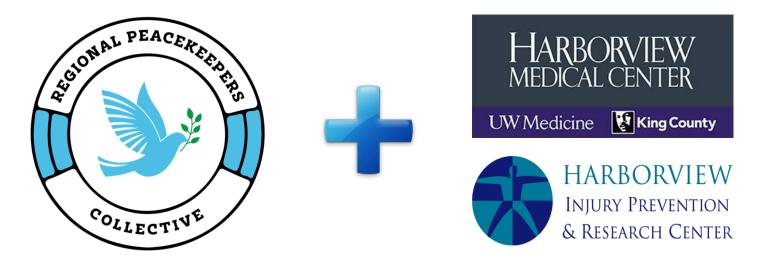

Harborview has felt the increase in gun violence we are seeing, especially over the last couple of years.

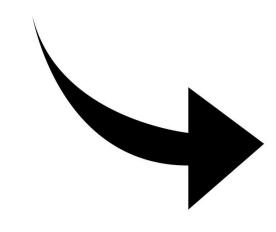

We need to **do better than just "treating and releasing**" survivors of gun violence . . .

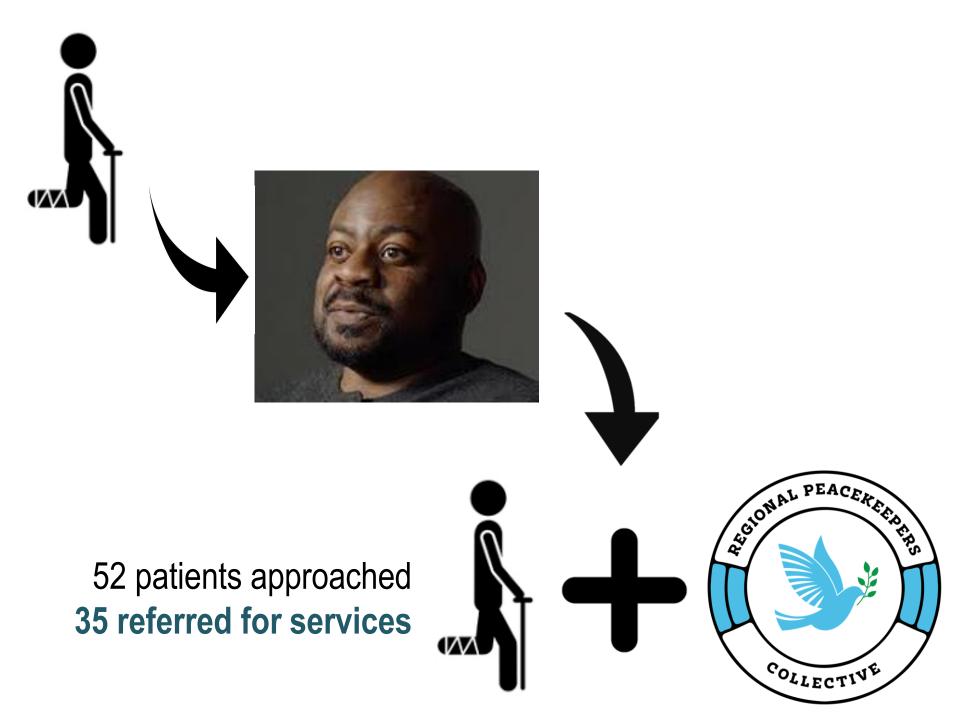

there is an opportunity to break the cycle of violence and to change entire life trajectories which can impact entire families and communities.

Pilot Harborview Hospital-Linked Violence Intervention Program and Community Partnership

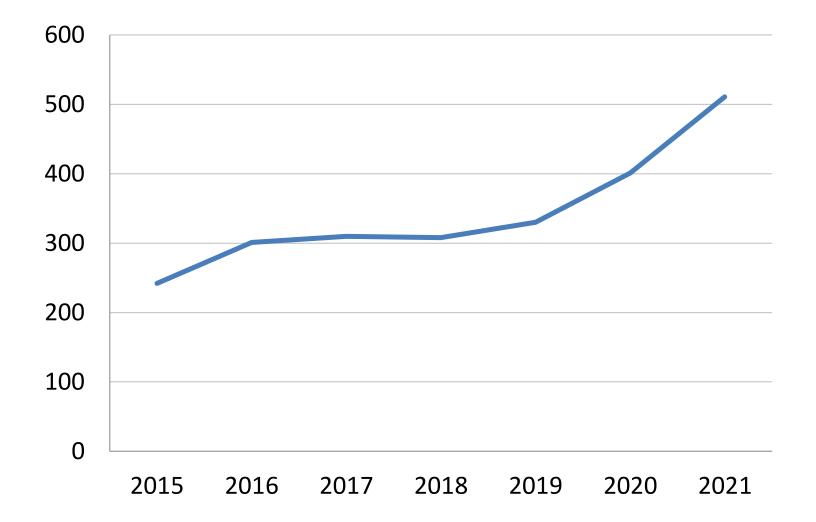

12-24 year oldsKing County residentsGun violence cared for at HMC+Younger siblings

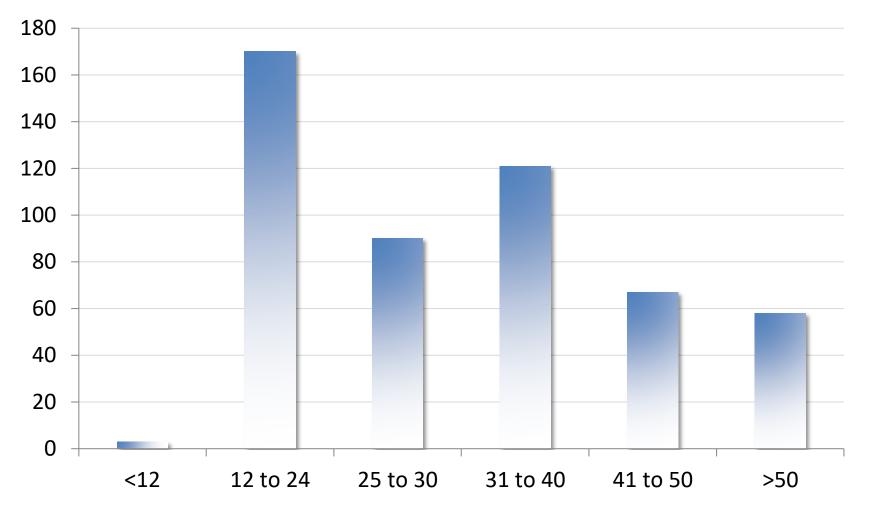

This program is a really **great collaborative start** but,

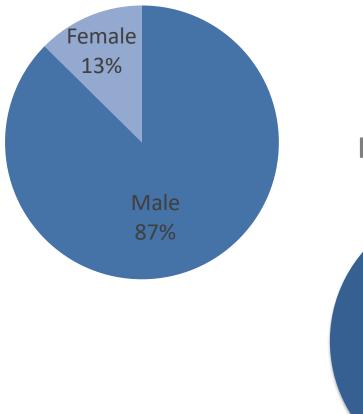

there are a lot of ways in which we need to expand and enhance. So let's take a deeper look at these individuals cared for at Harborview for injuries due to gun violence

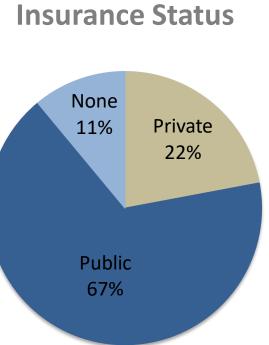

AGE

Individuals of **color** disproportionately impacted

Expand the program . . .

Expand to older age groups (25-40 yo) High-risk individuals from other counties Mental health/substance abuse support Multidisciplinary trauma clinic **Program evaluation**

But what about the bigger picture . . .

+ Community partnerships in other high-risk counties (Yakima, Pierce, Spokane, etc)
