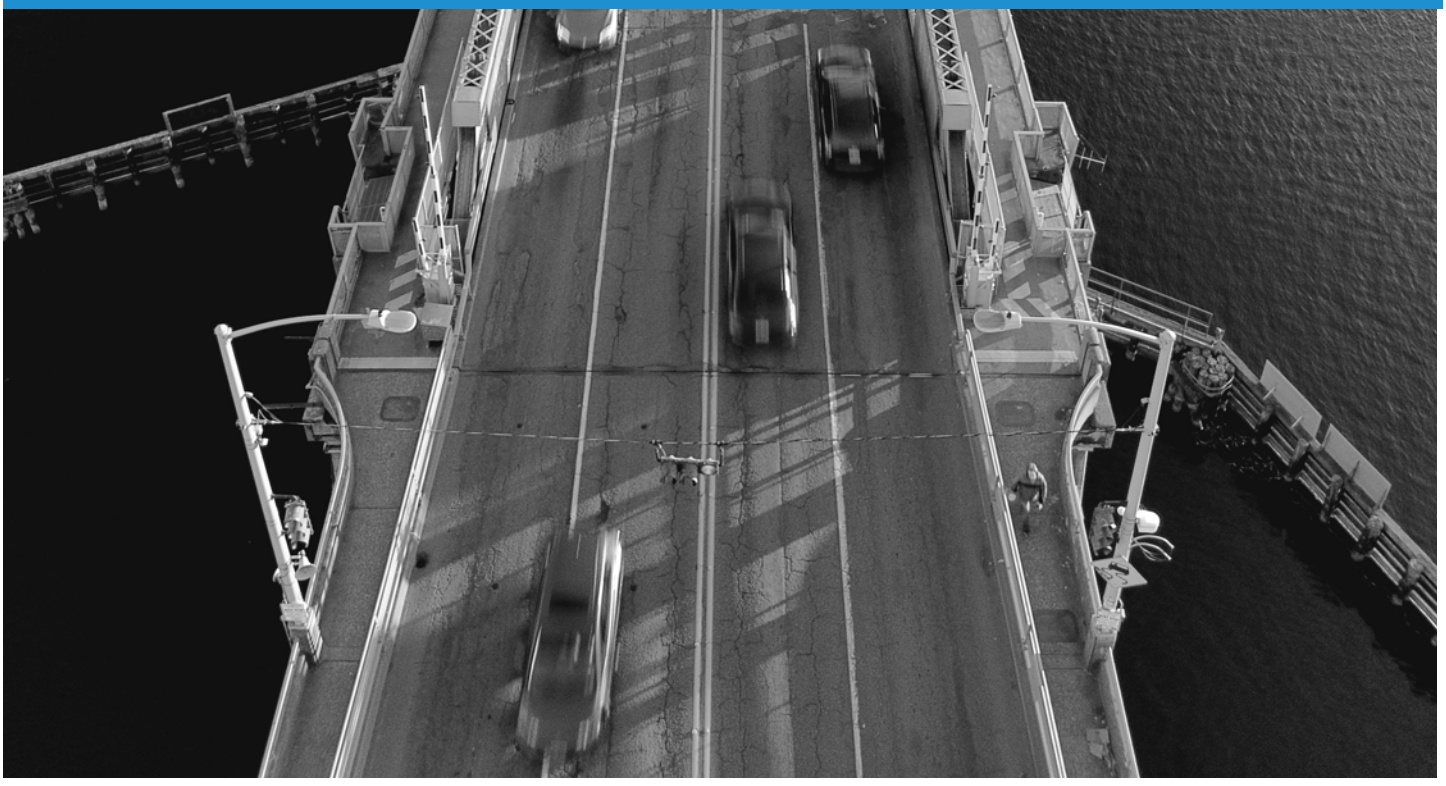
APPENDIX A

STP Large Capital Project Summary Sheets



[This page intentionally left blank]

STP LARGE CAPITAL PROJECT LIST

The STP project list is expansive and aspirational. It identifies a variety of transformational projects—each estimated to cost more than $10 million—that could be pursued to implement the STP. Due to funding constraints, the list of projects implemented over the 20-year STP planning horizon will be narrowed down using a prioritization framework. Funding availability will help determine how many projects can be implemented over the life of the STP.

Many of the projects are multimodal and would create "Complete Street" corridors, which aim to meet the needs of all travelers across several streets within a corridor, rather than on a single street. Several projects would require extensive coordination with our City and regional partners, such as Seattle Public Utilities, Seattle City Light, WSDOT, Sound Transit, and King County Metro.

STP projects were identified through an evaluation of data inputs, existing project lists, community input heard during STP engagement activities, interviews with a wide variety of SDOT subject matter experts, road and paving conditions, leveraging other transportation investments (e.g., light rail expansion and future bus investments), and the updated modal networks presented in the element chapters in Part II of the STP.

The list includes five types of large capital projects:

- **Comfortable Connections:** These projects involve improving connections to make walking, rolling, and biking more comfortable. They may include widening trails or sidewalks and adding or improving infrastructure like lighting or curb ramps. Many of these projects would include an investment in stormwater infrastructure.
- **Multimodal Improvements:** These corridor improvements would rebuild the entire right-of-way to better serve the planned modal networks. This may involve upgrading streets to better withstand the weight of trucks and buses, adding bike and e-mobility lanes, and/or constructing sidewalks.
- **New Connections:** These projects include studies and potential connections that currently do not exist and would be a new connector in the network.
- **Transit+:** These projects support upcoming transit improvements. They may include bus lanes or other strategies to improve transit reliability. The projects may include transit stop amenities and pedestrian upgrades.
- **Other:** These are projects that either need to be further defined or are identified for specific upgrades that do not fit neatly into the other categories.

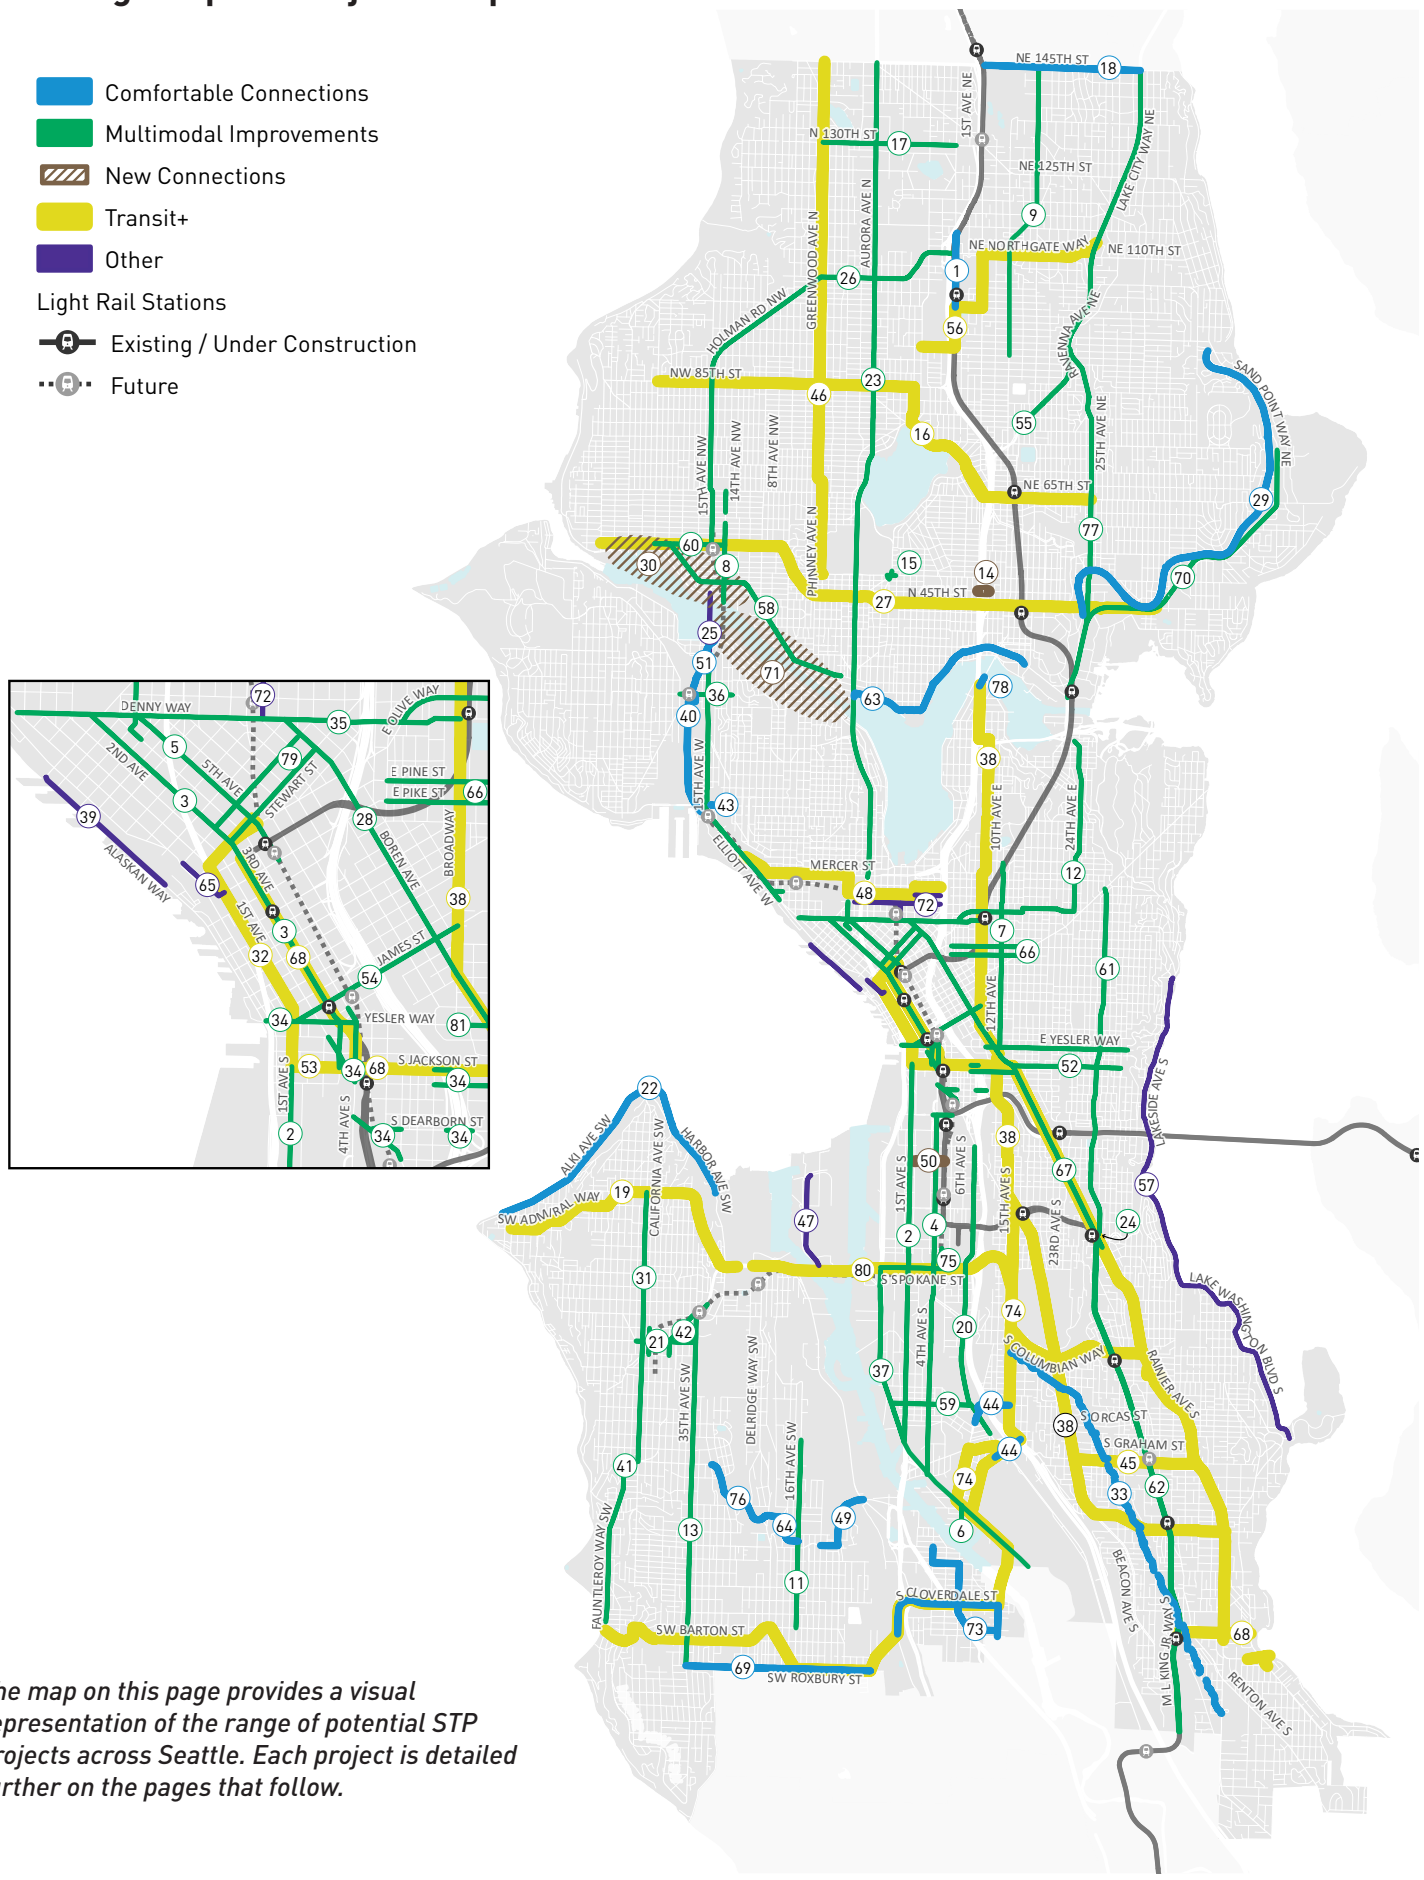
STP Large Capital Projects Map



The map on this page provides a visual representation of the range of potential STP projects across Seattle. Each project is detailed further on the pages that follow.

[This page intentionally left blank]

1 1ST AVE N | Comfortable Connections

Modes Served

Project Description

This project will connect people biking to the Northgate Link light rail station, complementing the improvements made in 2021 to this area when the station opened. This could include:

- Repaving some portions of the road
- Adding bicycle routes for people of all ages and abilities on 1st Ave NE to connect to NE 117th St

Click HERE to see the project location in Google Street View

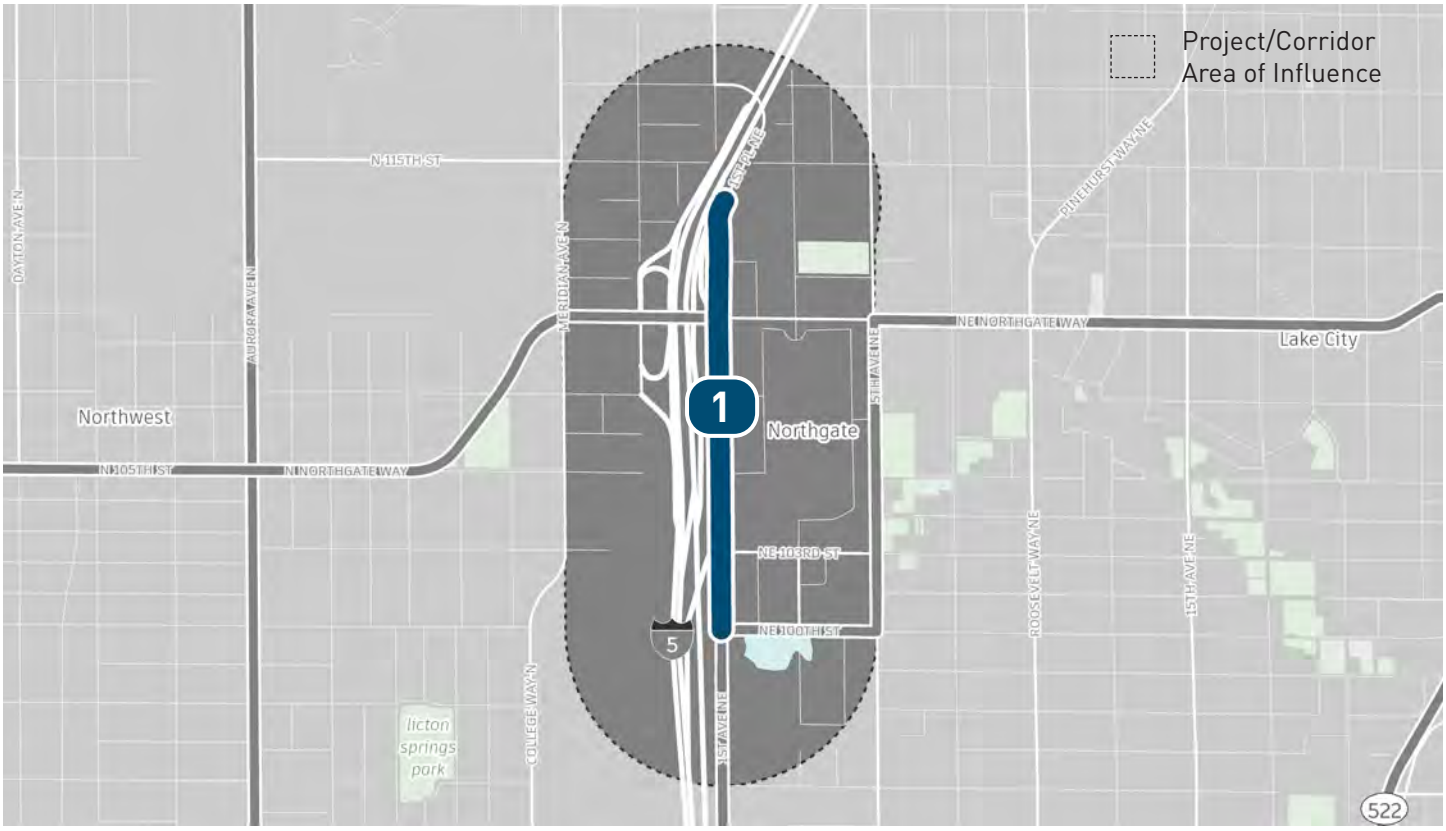
PLACEHOLDER: QR code will be inserted to information hosted online, following STP publication

Goal Evaluation

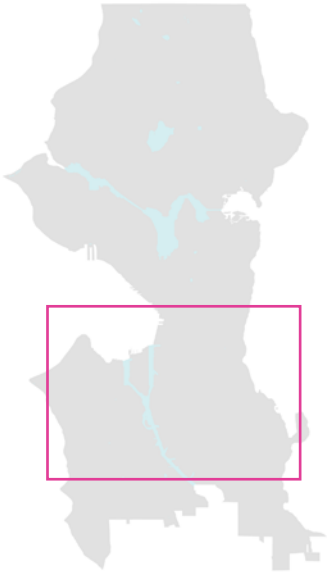
Each project was evaluated with a combination of quantitative and qualitative data to assess how well it advances the STP goals. You can view the evaluations for each goal below.

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



2 1ST AVE S | Multimodal Improvements



Modes Served

Project Description

This project will improve a major freight and transit route, which also serves as an important connection for other modes. This could include:

- Redesigning the street to better support transit and freight vehicles, including potential bus- and freight-only lanes
- Building new sidewalks and improved crossings
- Implementing Intelligent Transportation System improvements to make traveling along this busy street more efficient, safe, and predictable
- Making Occidental Ave S more enjoyable for people walking and rolling with better lighting, landscaping, and public art

Click HERE to see the project location in Google Street View

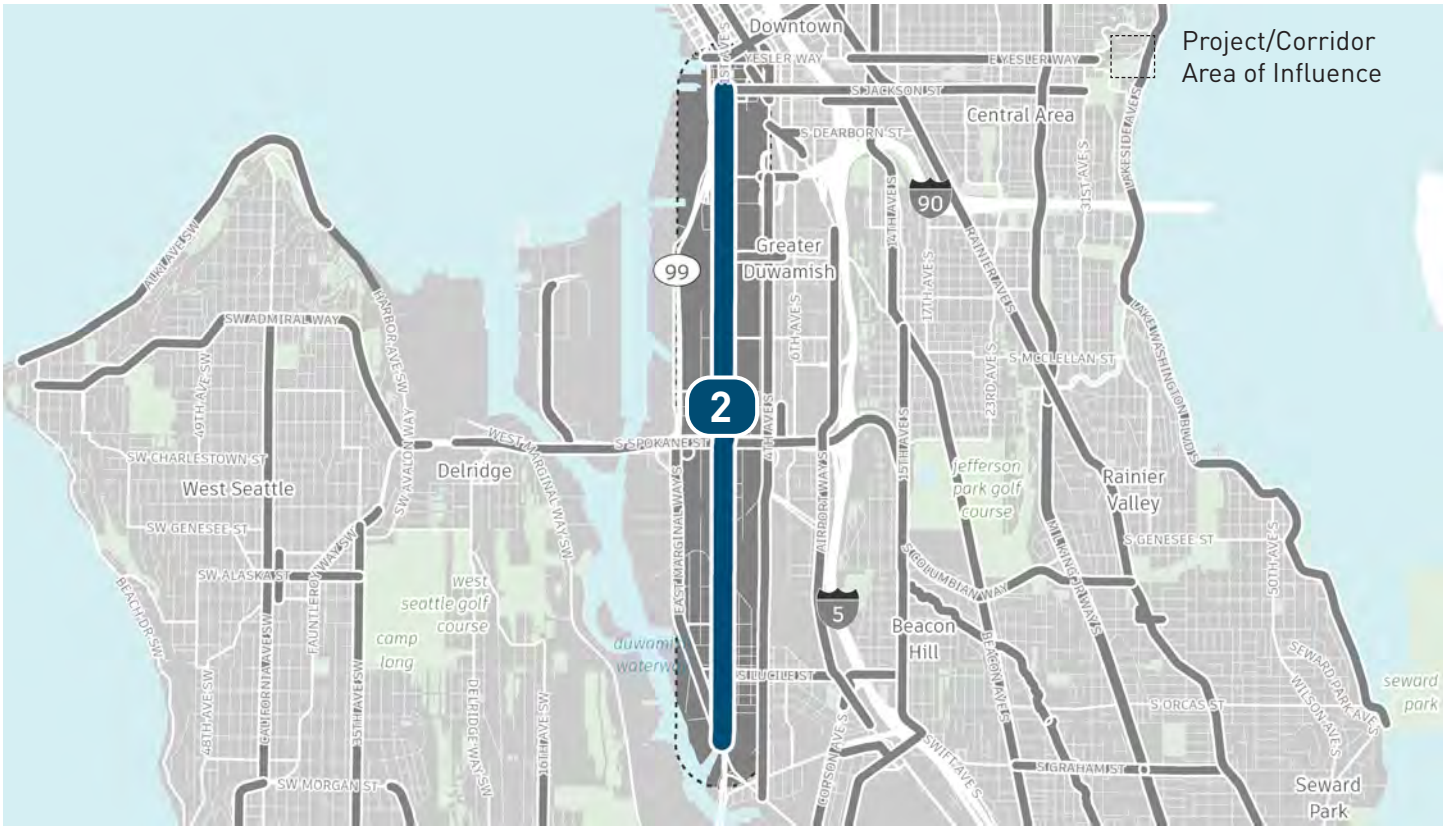
PLACEHOLDER: QR code will be inserted to information hosted online, following STP publication

Goal Evaluation

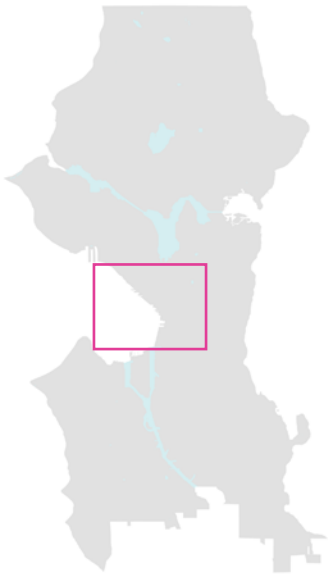
Each project was evaluated with a combination of quantitative and qualitative data to assess how well it advances the STP goals. You can view the evaluations for each goal below.

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



3 3RD AVE | Multimodal Improvements



Modes Served

Project Description

This project will improve a critical link in Seattle's transit network. This could include:

- Improving transit reliability
- Adding sidewalk space to allow more people to wait comfortably for transit, walk, roll, dine, and visit local businesses.

Click HERE to see the project location in Google Street View

PLACEHOLDER: QR code will be inserted to information hosted online, following STP publication

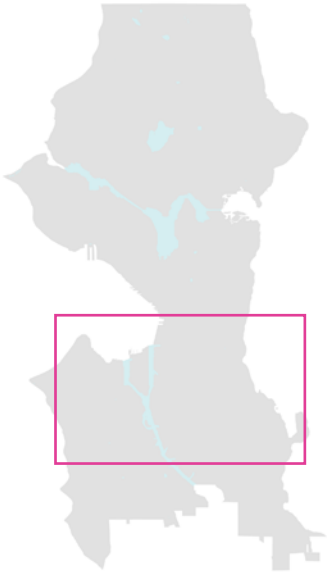
Goal Evaluation

Each project was evaluated with a combination of quantitative and qualitative data to assess how well it advances the STP goals. You can view the evaluations for each goal below.

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost

4 4TH AVE S | Multimodal Improvements



Modes Served

Project Description

This project will improve safety for people walking and rolling, support reliable transit service, and improve freight mobility. This could include:

- Repairing sidewalks and building new sidewalks
- Making it safer to cross the street with elements like median islands, extensions of curbs, and better crossings
- Redesigning the street to better support transit and freight vehicles
- Implementing Intelligent Transportation System improvements to make traveling more efficient, safe, and predictable

Click HERE to see the project location in Google Street View

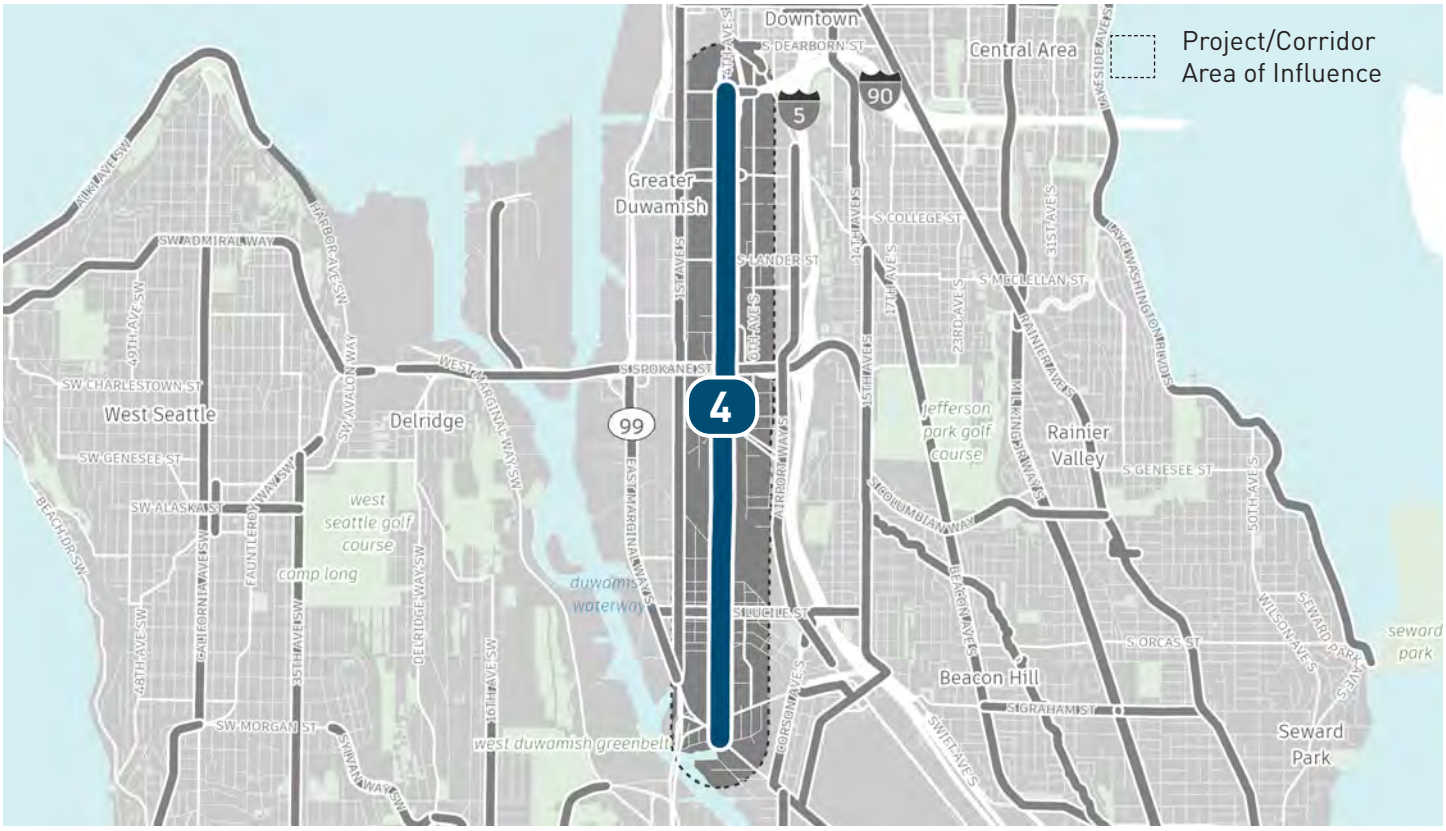
PLACEHOLDER: QR code will be inserted to information hosted online, following STP publication

Goal Evaluation

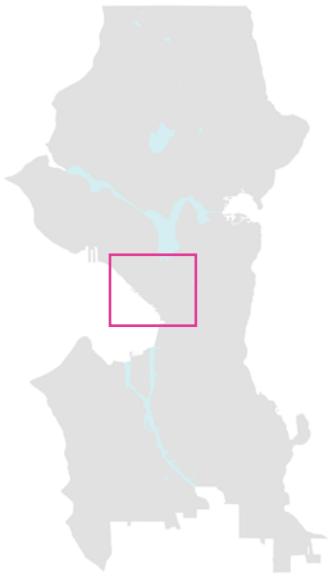
Each project was evaluated with a combination of quantitative and qualitative data to assess how well it advances the STP goals. You can view the evaluations for each goal below.

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



5 5TH AVE | Multimodal Improvements



Modes Served

Project Description

This project will improve public spaces and make it easier and safer to walk, roll, and bike along parts of 5th Ave. This could include:

- Creating welcoming public space with wider sidewalks, street trees, and opportunities for patio dining
- Adding a bicycle route for people of all ages and abilities
- Adjusting where parking and other curbside activities occur to best accommodate all needs

Click HERE to see the project location in Google Street View

PLACEHOLDER: QR code will be inserted to information hosted online, following STP publication

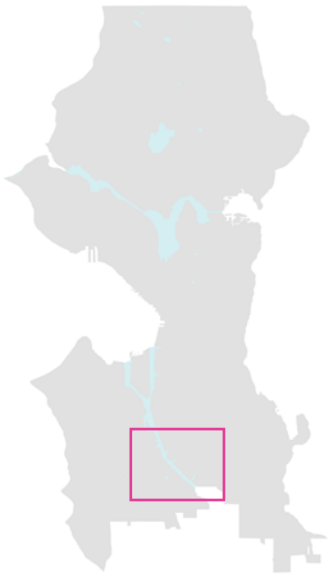
Goal Evaluation

Each project was evaluated with a combination of quantitative and qualitative data to assess how well it advances the STP goals. You can view the evaluations for each goal below.

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost

6 8TH AVE S | Multimodal Improvements



Modes Served

Project Description

This project will make walking and rolling, as well as freight movement, safer and more reliable. This could include:

- Adding curbs and sidewalks
- Improving stormwater drainage, including installing new landscaping
- Rebuilding S Garden St
- Improving rail crossings and the intersection of
- East Marginal Way S, 8th Ave S, and S Myrtle St
- Implementing Intelligent Transportation System improvements to make traveling along this busy street more efficient, safe, and predictable

Click HERE to see the project location in Google Street View

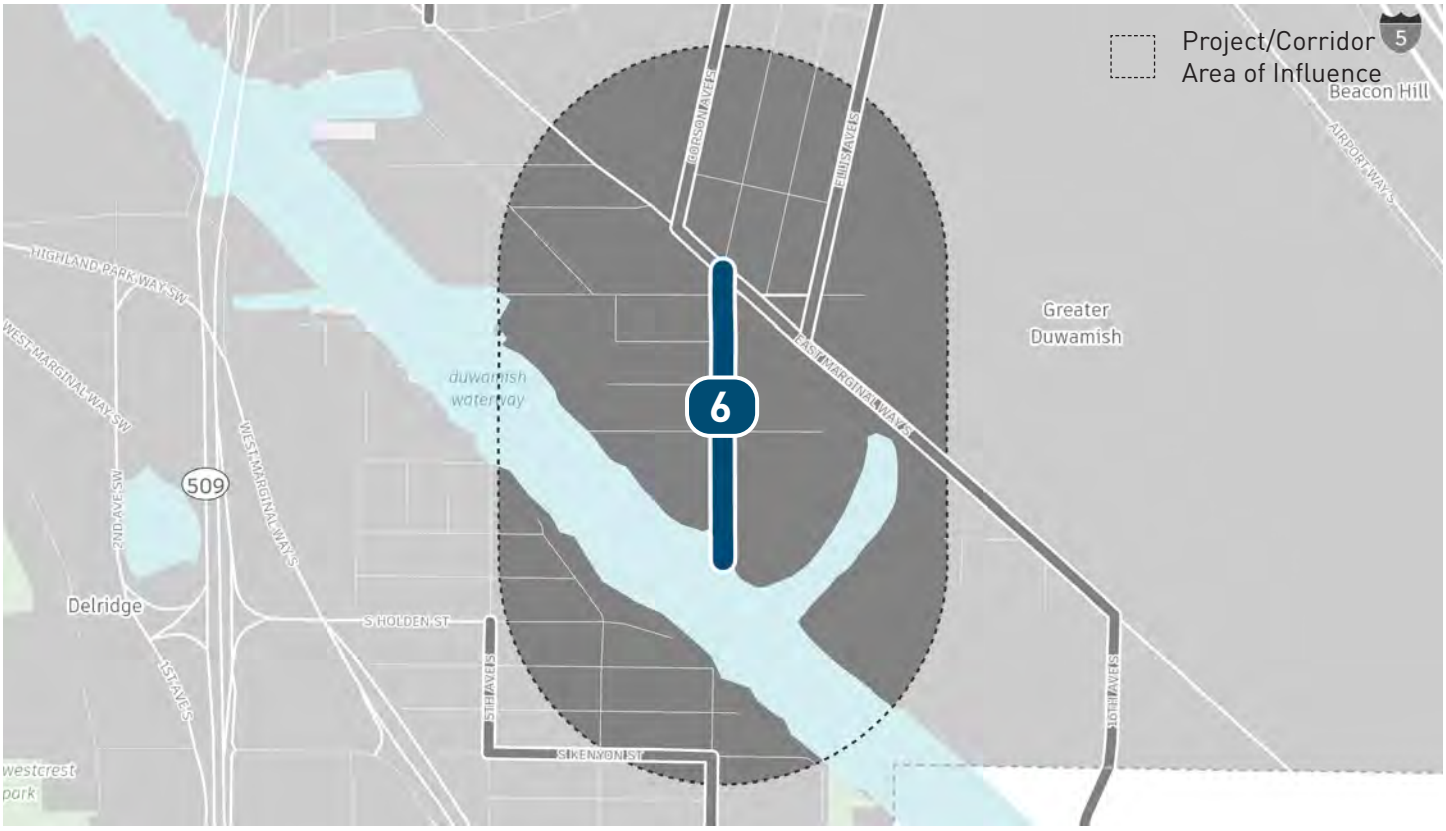
PLACEHOLDER: QR code will be inserted to information hosted online, following STP publication

Goal Evaluation

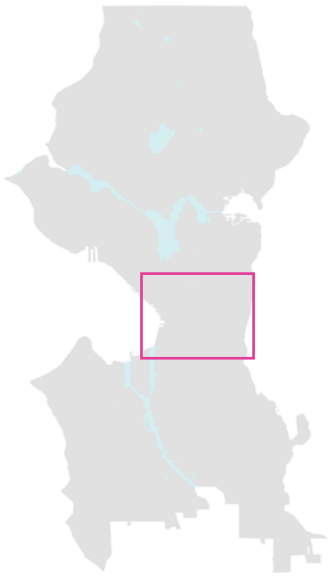
Each project was evaluated with a combination of quantitative and qualitative data to assess how well it advances the STP goals. You can view the evaluations for each goal below.

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



7 12TH AVE | Multimodal Improvements



Modes Served

Project Description

This project will improve the connection between Little Saigon, First Hill and Capitol Hill for people walking, rolling, biking, taking transit and for freight vehicles. This could include:

- Repaving portions of the street
- Improving access to local businesses for people walking, rolling, and biking, as well as vehicles making deliveries
- Planting street trees
- Repairing sidewalks and adding bicycle routes for people of all ages and abilities

Click HERE to see the project location in Google Street View

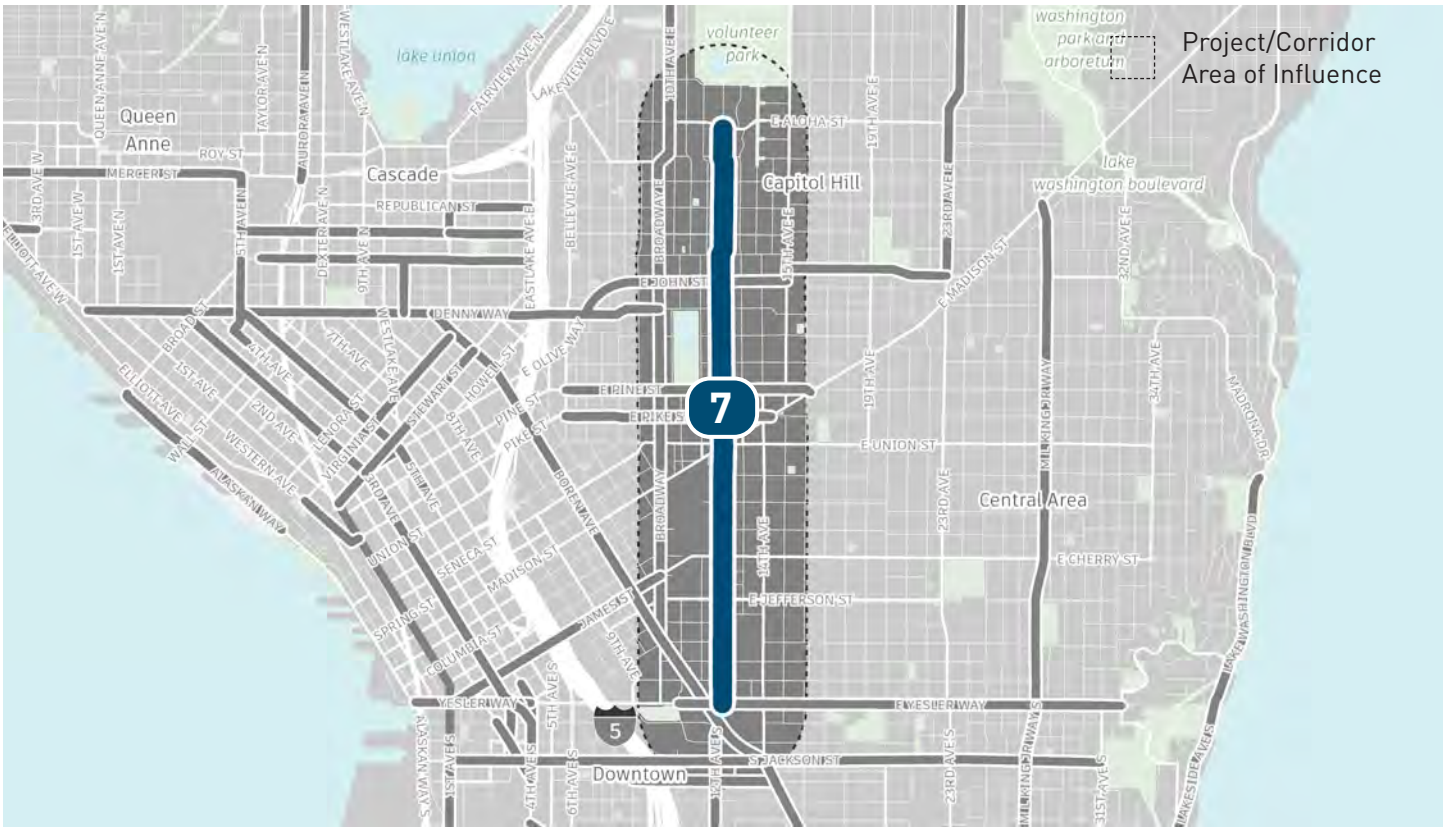
PLACEHOLDER: QR code will be inserted to information hosted online, following STP publication

Goal Evaluation

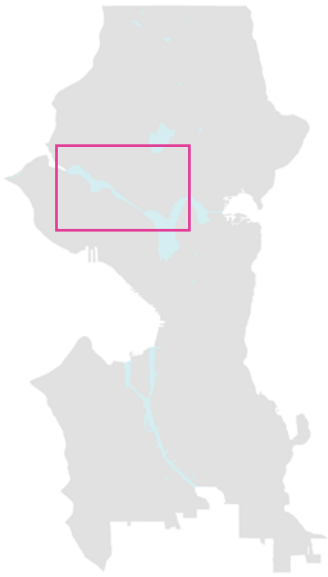
Each project was evaluated with a combination of quantitative and qualitative data to assess how well it advances the STP goals. You can view the evaluations for each goal below.

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



8 14TH AVE NW | Multimodal Improvements



Modes Served

Project Description

This project will connect people using the Ballard Link light rail station to the Burke Gilman Trail, nearby neighborhood greenways and protected bike lanes, and schools. The project will make streets and public spaces around NW Market St safer and more enjoyable for people walking, rolling, biking, and visiting local businesses.

Click HERE to see the project location in Google Street View

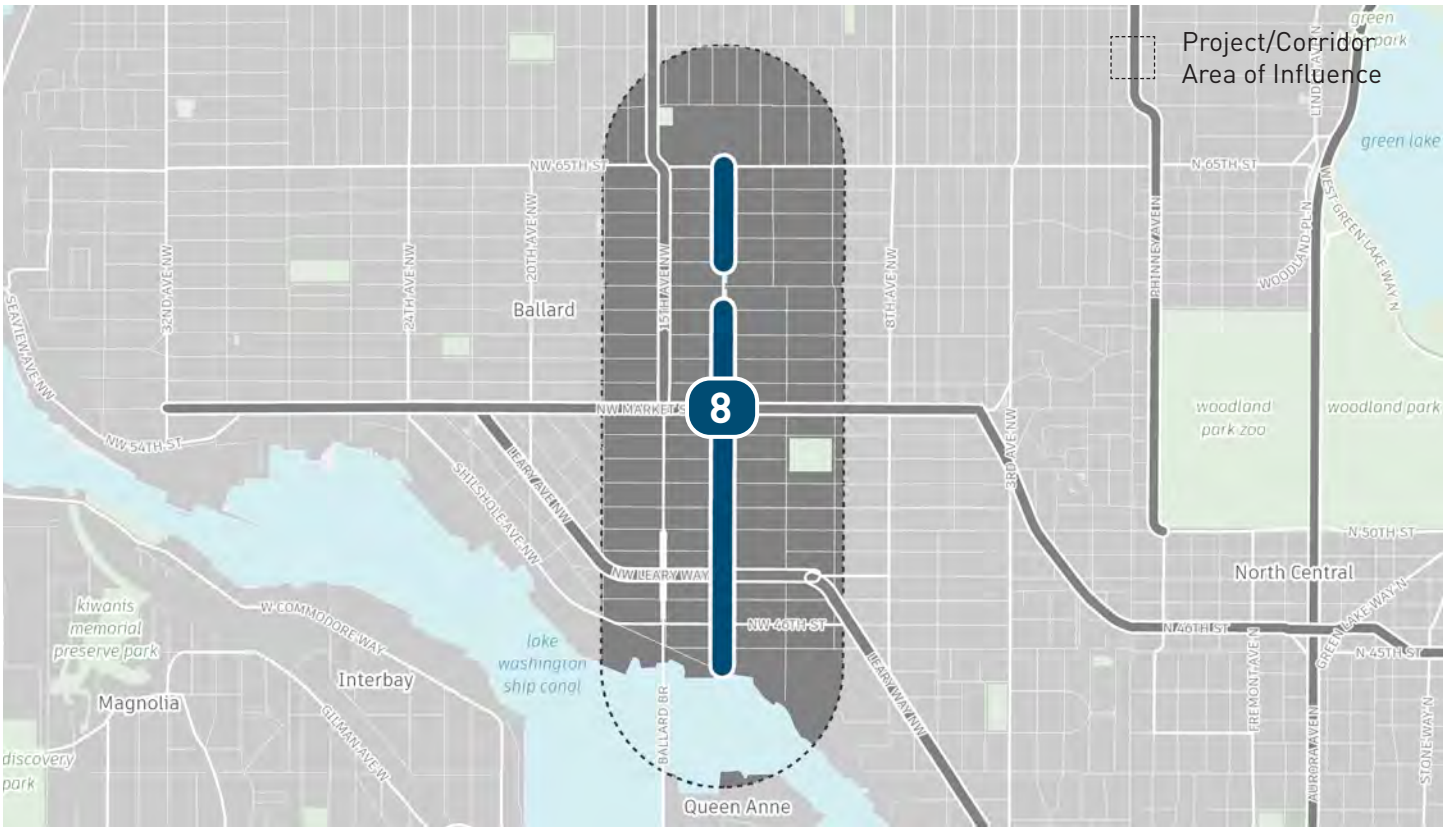
PLACEHOLDER: QR code will be inserted to information hosted online, following STP publication

Goal Evaluation

Each project was evaluated with a combination of quantitative and qualitative data to assess how well it advances the STP goals. You can view the evaluations for each goal below.

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



9 15TH AVE NE | Multimodal Improvements

Modes Served

Project Description

This project will connect people walking, rolling, biking between Shoreline and NE 125th St and improve access to the new Link light rail stations on NE 130th St and NE 148th St. This could include:

- Repaving the street
- Repairing sidewalks and adding bicycle facilities for people of all ages and abilities
- Redesigning the street to better support transit and freight vehicles, including potential bus- and freight-only lanes Improving access to local businesses

Click HERE to see the project location in Google Street View

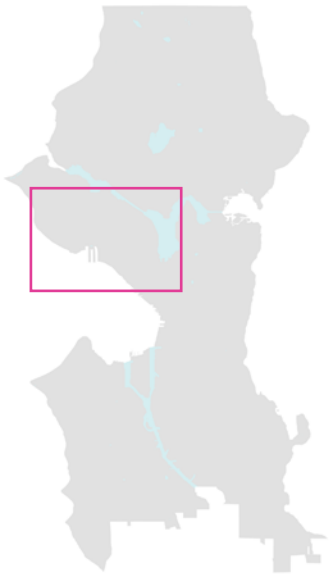
Goal Evaluation

Each project was evaluated with a combination of quantitative and qualitative data to assess how well it advances the STP goals. You can view the evaluations for each goal below.

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost

10 15TH AVE W & ELLIOTT AVE W | Multimodal Improvements



Modes Served

Project Description

This project will work hand in hand with the opening of the Ballard Link light rail station to improve connections to local businesses and neighborhoods for people walking, rolling, biking, and taking transit. This will also improve reliability for freight vehicles. This project could include:

- Repaving portions of the street
- Redesigning the street to better support transit and freight vehicles, including potential bus- and freight-only lanes
- Repairing sidewalks and enhancing opportunities to cross 15th and Elliott
- Improving access to local businesses for people walking, rolling, and biking, as well as vehicles making deliveries

Click HERE to see the project location in Google Street View

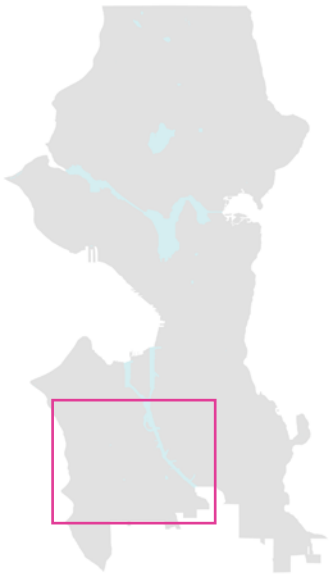
Goal Evaluation

Each project was evaluated with a combination of quantitative and qualitative data to assess how well it advances the STP goals. You can view the evaluations for each goal below.

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost

11 16TH AVE SW | Multimodal Improvements



Modes Served

Project Description

This project will improve safety for people walking, rolling, biking, and taking transit to and from South Seattle College. This project could include:

- Repairing sidewalks and adding bicycle routes for people of all ages and abilities
- Improving transit reliability and transit stops
- Making it safer to cross the street with elements like median islands, extensions of curbs, and better crossings

Click HERE to see the project location in Google Street View

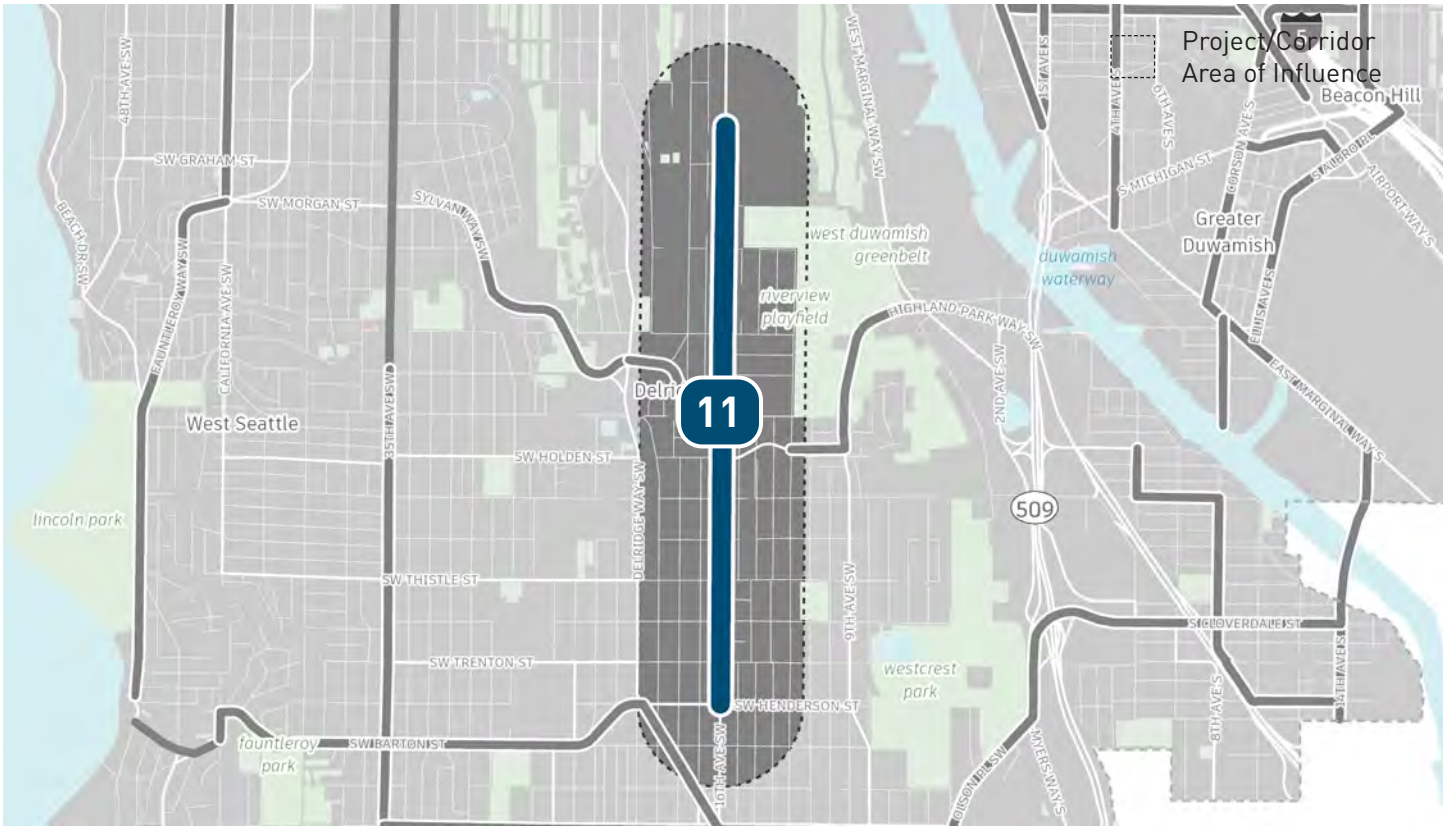
PLACEHOLDER: QR code will be inserted to information hosted online, following STP publication

Goal Evaluation

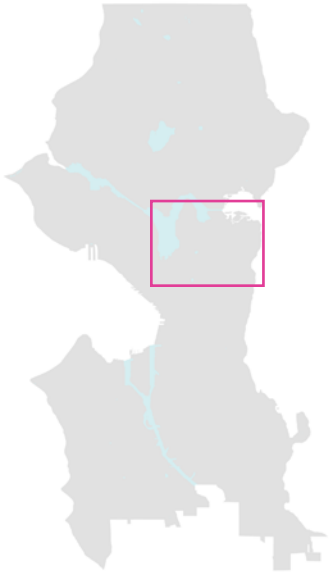
Each project was evaluated with a combination of quantitative and qualitative data to assess how well it advances the STP goals. You can view the evaluations for each goal below.

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



12 23RD AVE | Multimodal Improvements



Modes Served

Project Description

This project will build on work funded by the Levy to Move Seattle on 23rd Ave to improve safety and predictability for people traveling along this busy street. This could include:

- Repaving portions of the street
- Redesigning intersections to improve safety for people walking and rolling
- Redesigning the street to better support transit and freight vehicles, including ITS improvements, and potential transit-only lanes, freight and bus-lanes, and transit queue jumps.

Click HERE to see the project location in Google Street View

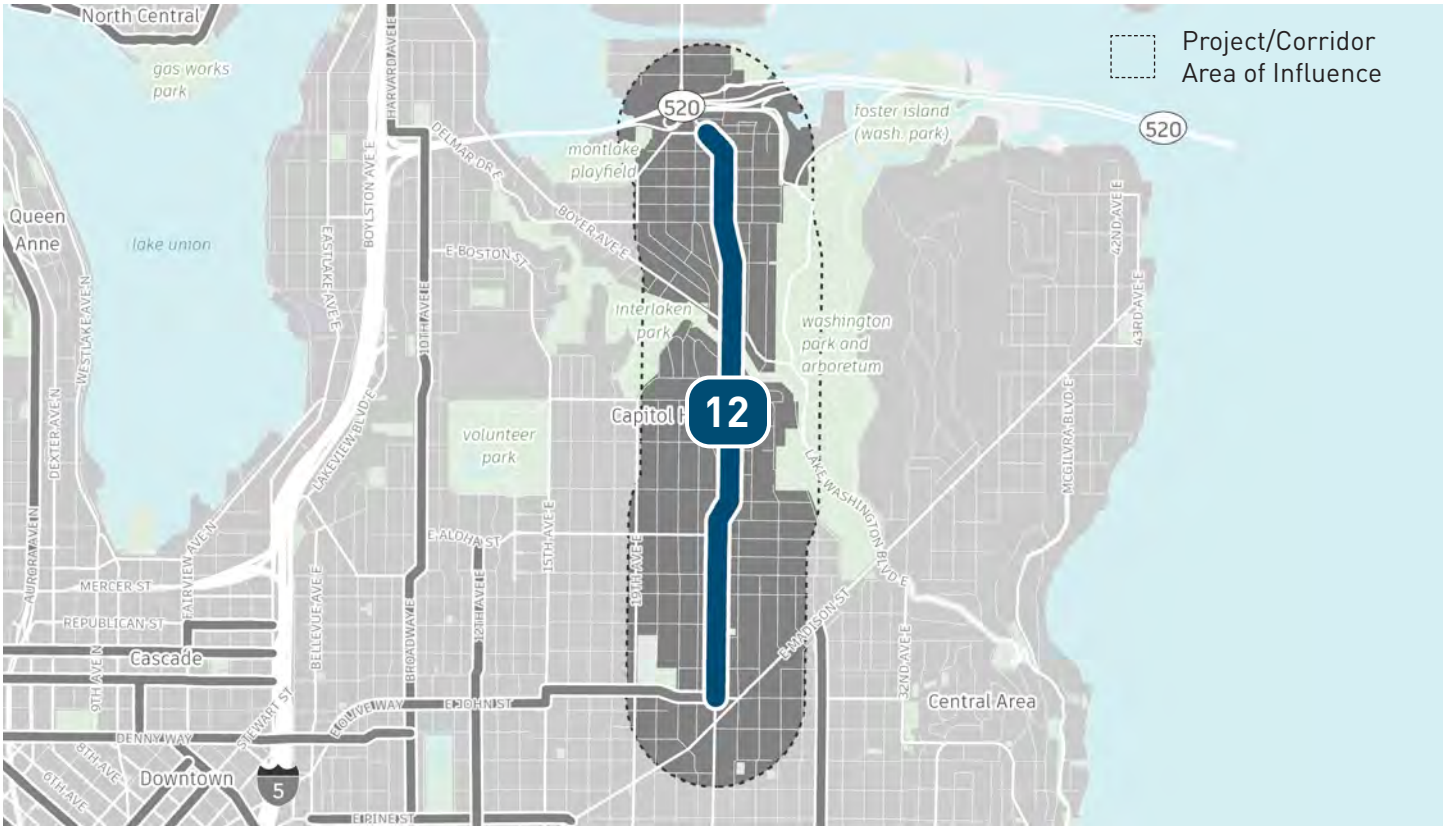
Goal Evaluation

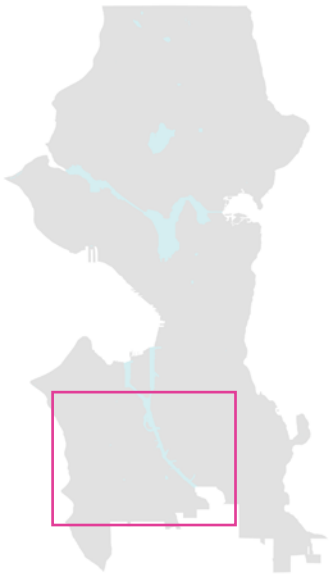
Each project was evaluated with a combination of quantitative and qualitative data to assess how well it advances the STP goals. You can view the evaluations for each goal below.

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



13 35TH AVE SW | Multimodal Improvements



Modes Served

Project Description

This project will improve a major street that connects many West Seattle neighborhoods. This could include:

- Repaving portions of the road
- Redesigning the street to better support transit
- Repairing sidewalks and making it safer to cross the street with elements like extensions of curbs and better crossings
- Adding bicycle routes for people of all ages and abilities
- Enhancing access to destinations like shops, businesses, restaurants, and cultural centers in the area

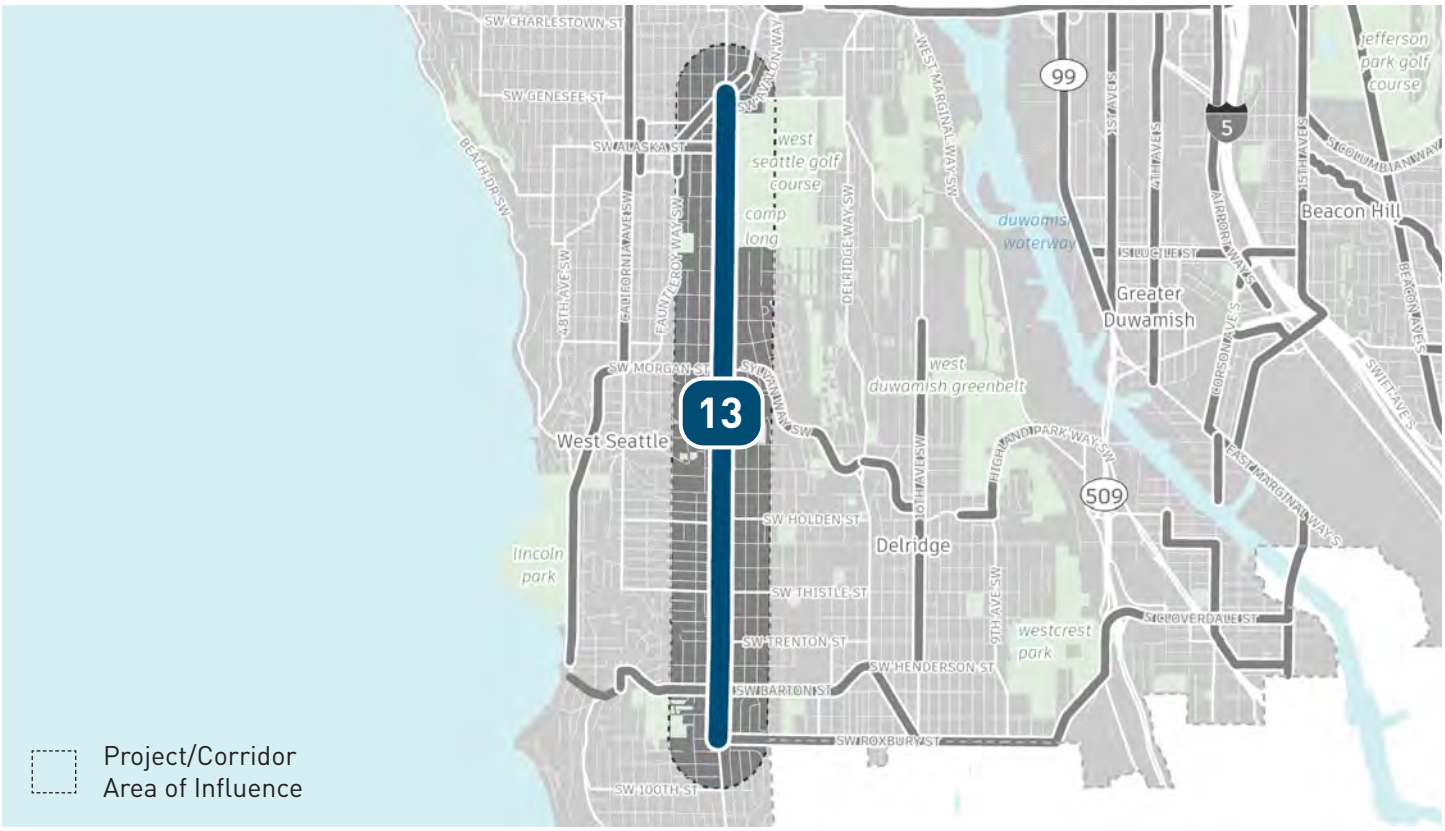
Goal Evaluation

Each project was evaluated with a combination of quantitative and qualitative data to assess how well it advances the STP goals. You can view the evaluations for each goal below.

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



14 NE 47TH ST | Pedestrian and Bicycle Bridge

Modes Served

Project Description

This new bridge will connect people walking, rolling, and biking between the University District and Wallingford. It will link people to nearby neighborhood greenways and provide a safe alternative to traveling across I-5 that avoids vehicle traffic.

Click HERE to see the project location in Google Street View

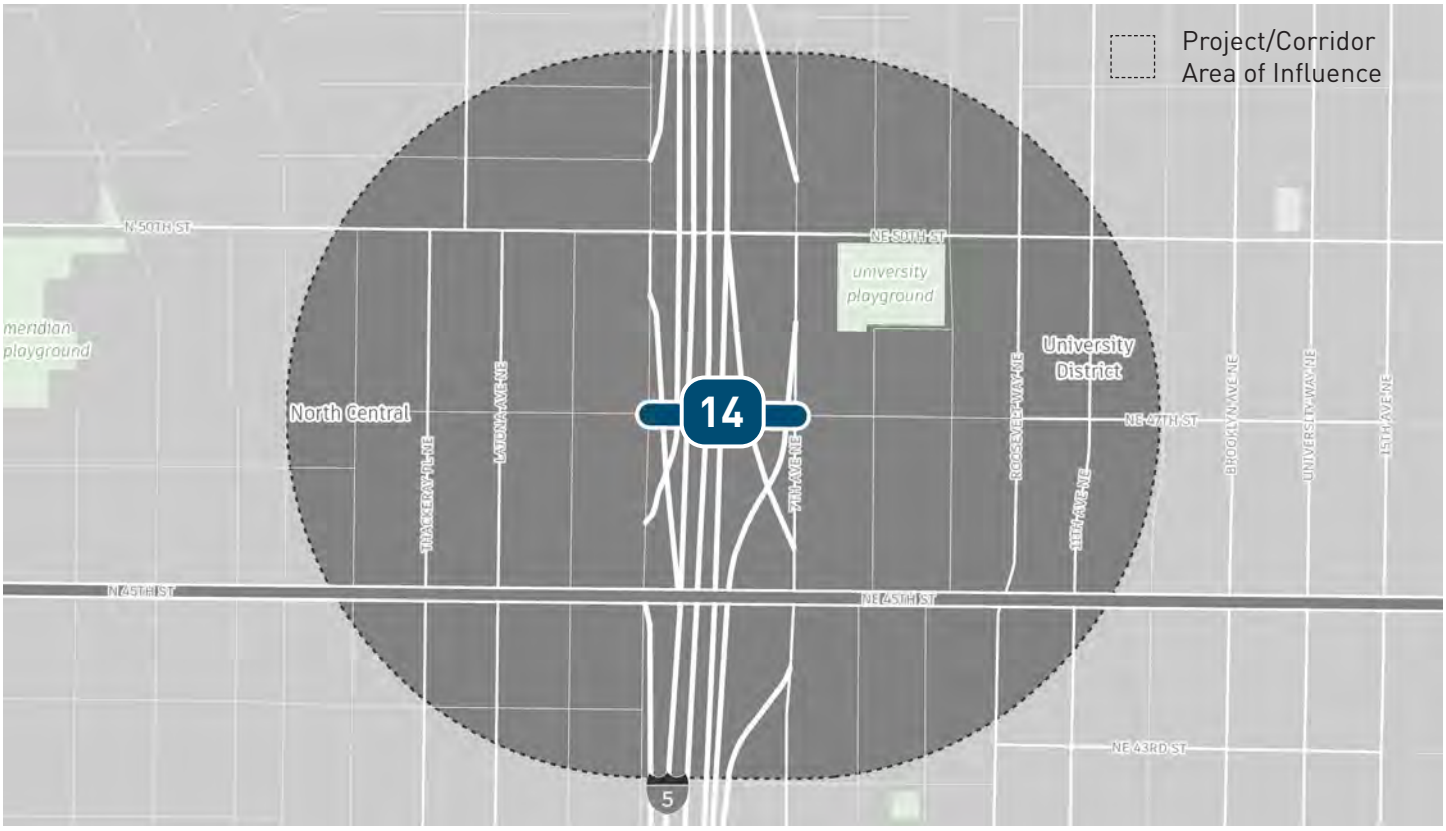
PLACEHOLDER: QR code will be inserted to information hosted online, following STP publication

Goal Evaluation

Each project was evaluated with a combination of quantitative and qualitative data to assess how well it advances the STP goals. You can view the evaluations for each goal below.

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



15 N 50TH ST/GREEN LAKE WAY N/STONE WAY | Intersection Redesign

Modes Served

Project Description

This project will improve this five-way busy intersection in North Seattle with more protection for people walking, biking, and rolling; a roundabout or turn restrictions for smoother movement through the intersection; and supports to streamline freight travel.

Click HERE to see the project location in Google Street View

PLACEHOLDER: QR code will be inserted to information hosted online, following STP publication

Goal Evaluation

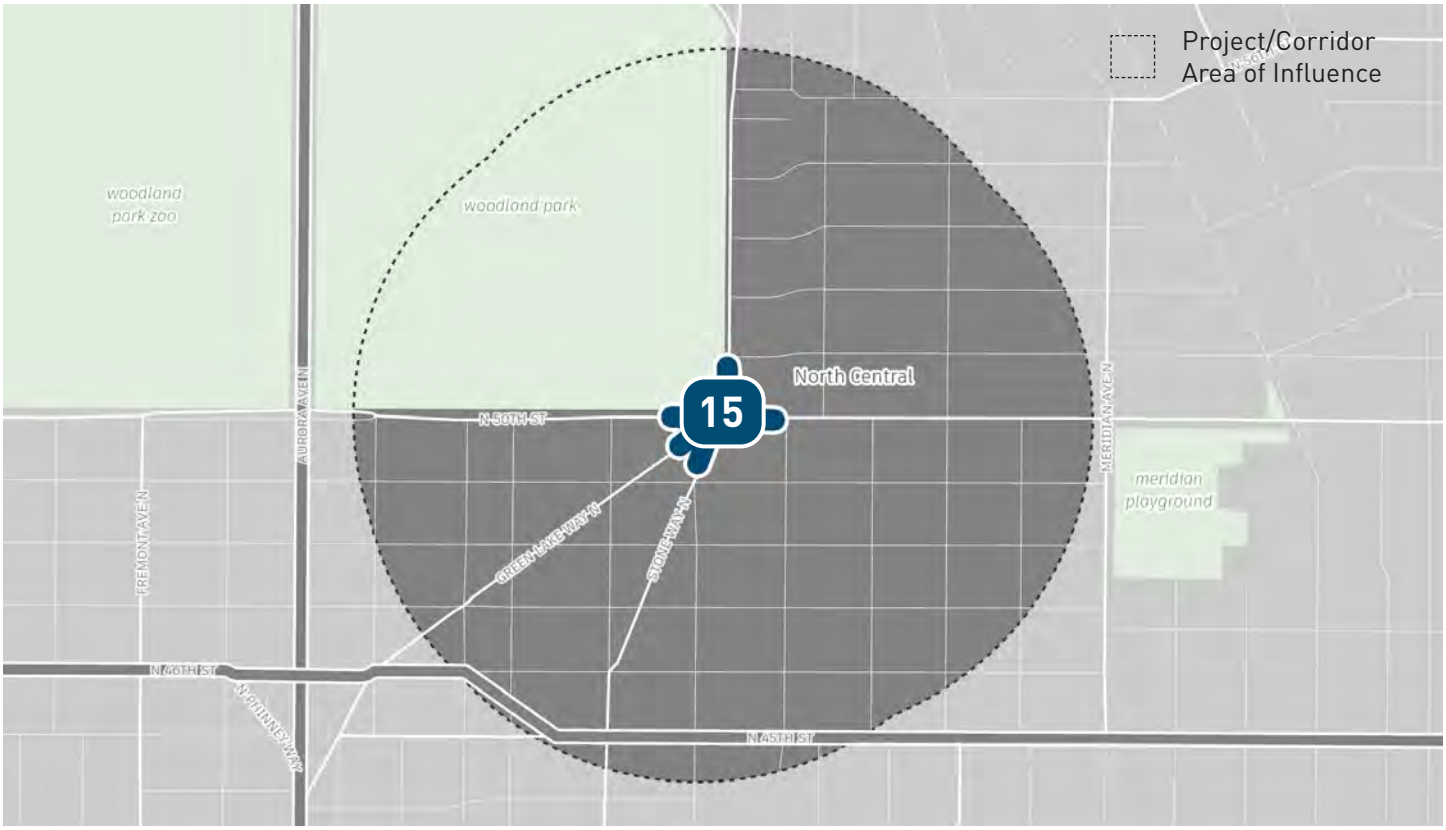
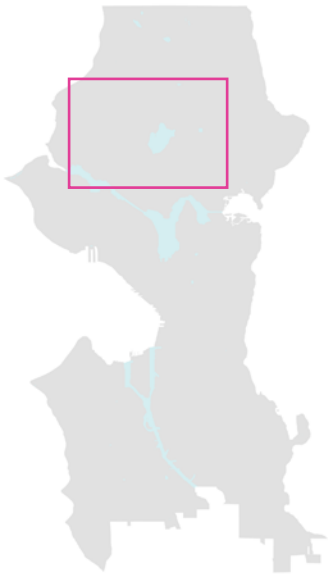
Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



16 N 85TH ST AND NE 65TH ST | Transit and Multimodal Improvements



Modes Served

Project Description

Along a future RapidRide corridor, this project will make improvements to street design and pedestrian infrastructure to better serve people walking, rolling, and taking transit. This could include:

- Redesigning the street to better support transit, including potential bus-only lanes
- Improving bus stops, street crossings, and sidewalks
- Supporting the business access needs of destinations like shops, restaurants, and cultural centers in the area
- Creating a more welcoming space for people to walk or roll along NE Ravenna Blvd
- Implementing Intelligent Transportation System improvements to make traveling more efficient, safe, and predictable

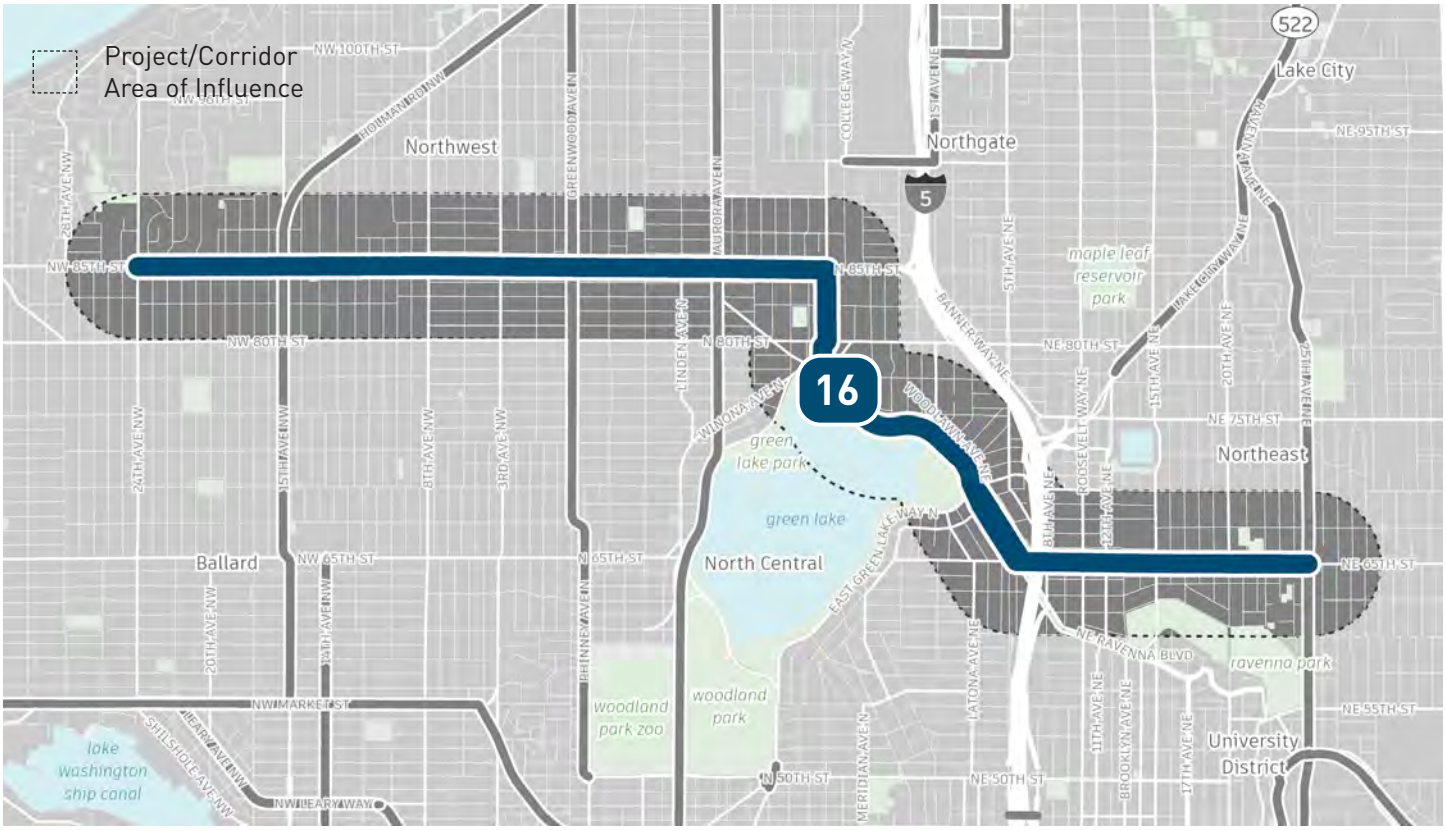
Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



17 N 130TH ST | Multimodal Improvements

Modes Served

Project Description

This project will improve connections for people walking, rolling, biking, and taking transit on N 130th St and in surrounding neighborhoods. This could include:

- Adding a multiuse trail to connect the Interurban Trail to the Link light rail station or nearby protected bike lane
- Upgrading sidewalks and adding curb ramps
- Improving street crossings and signals at busy intersections
- Redesigning the street to better support transit and freight vehicles
- Improving transit stops and signals so transit can move more reliably

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost

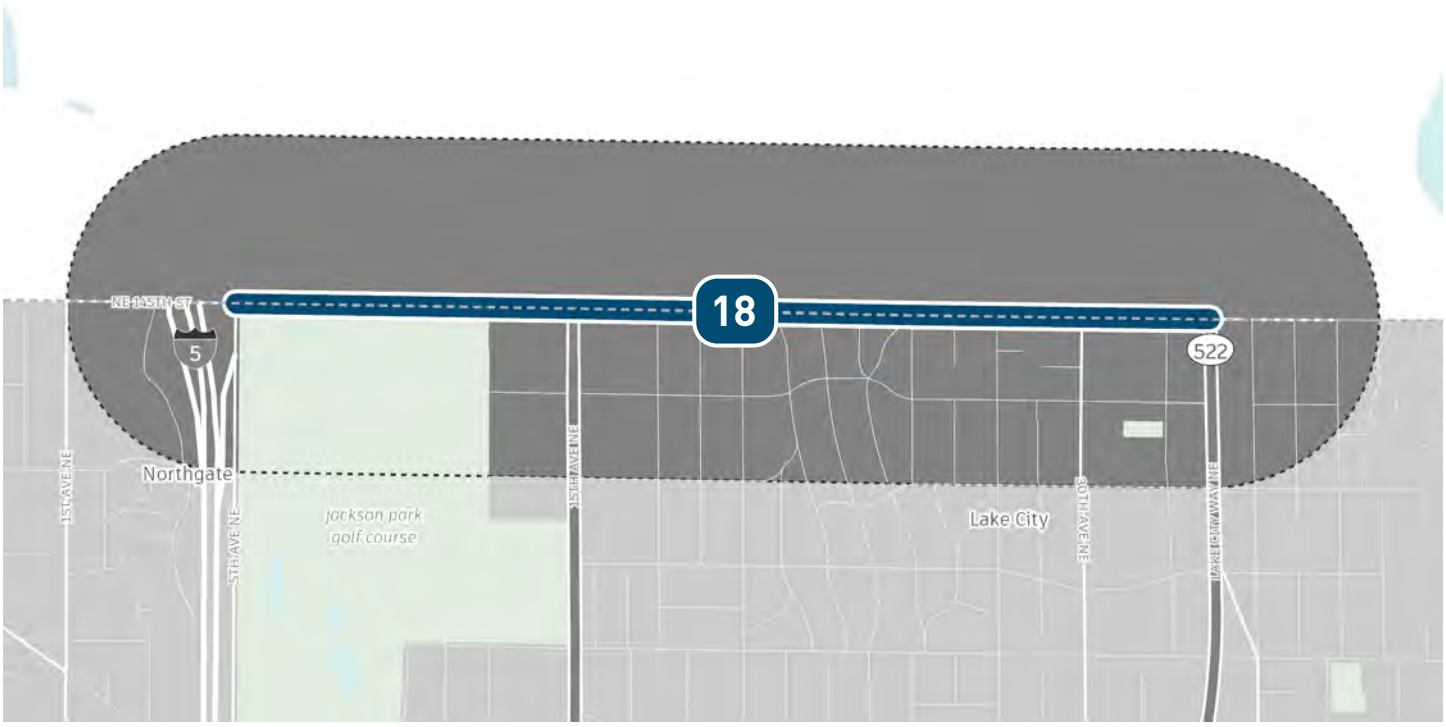
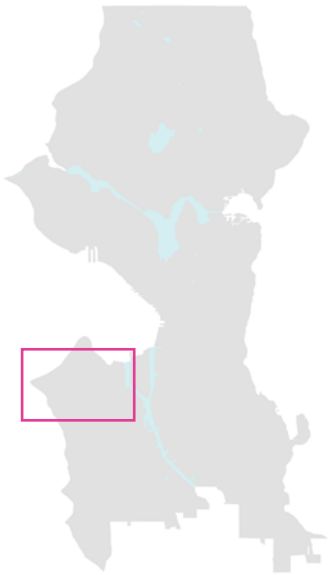
Project/Corridor Area of Influence



19 SW ADMIRAL WAY | Transit and Multimodal Improvements



Modes Served

Project Description

This project will capitalize on the opening of the West Seattle - Ballard Link Extension project, which will result in redirecting the RapidRide H Line to Admiral and Alki neighborhoods and provide more reliable transit access to these areas. This could include:

- Redesigning the street to better support transit and freight travel, including potential bus- and freight-only lanes
- Improving street crossings and repairing sidewalks
- Adding a bike route for people of all ages and abilities
- Enhancing access to destinations like shops, restaurants, and cultural centers in the area

Click HERE to see the project location in Google Street View

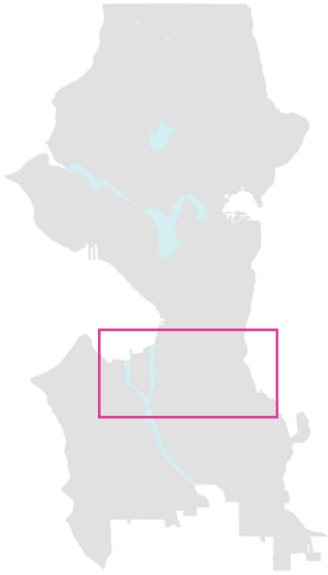
Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost

20 AIRPORT WAY S | Multimodal Improvements



Modes Served

Project Description

This project will improve the experience of people walking and rolling along Airport Way S and better support transit and freight travel. This could include:

- Building new sidewalks, extending curbs and adding median islands, and improving street crossings
- Implementing Intelligent Transportation System improvements to make traveling along this busy street more efficient, safe, and predictable
- Redesigning the street to streamline transit and freight movement, including potential bus- and freight-only lanes

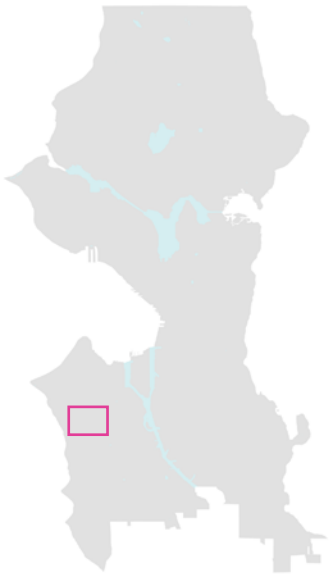
Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost

21 SW ALASKA ST LINK LIGHT RAIL STATION | Multimodal Improvements



Modes Served

Project Description

This project will improve access to the future Link light rail station in West Seattle's Alaska Junction. This could include:

- Redesigning the street to better support transit movement and making some areas more pedestrian-friendly
- Improving street crossings
- Creating welcoming public space with wider sidewalks, street trees, and opportunities for patio dining
- Enhancing access to destinations like shops, restaurants, and cultural centers in the area

Click HERE to see the project location in Google Street View

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost

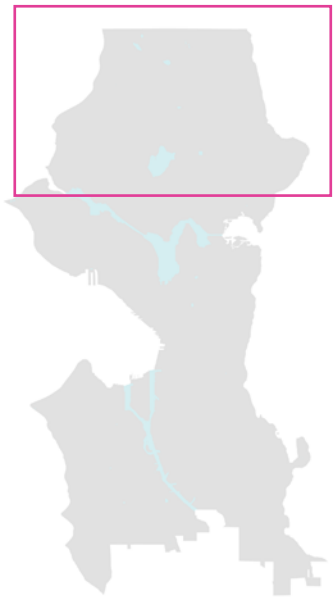
23 AURORA AVE N | Multimodal Improvements



Modes Served

Project Description

In collaboration with WSDOT and King County Metro, this project will improve safety and transit access on Aurora Ave N from the SR 99 Tunnel to NE 145th St. This could include:

- Making it safer to walk and roll, and cross the street
- Implementing changes to support transit and freight vehicles
- Improving drainage systems to better manage stormwater and reduce flooding

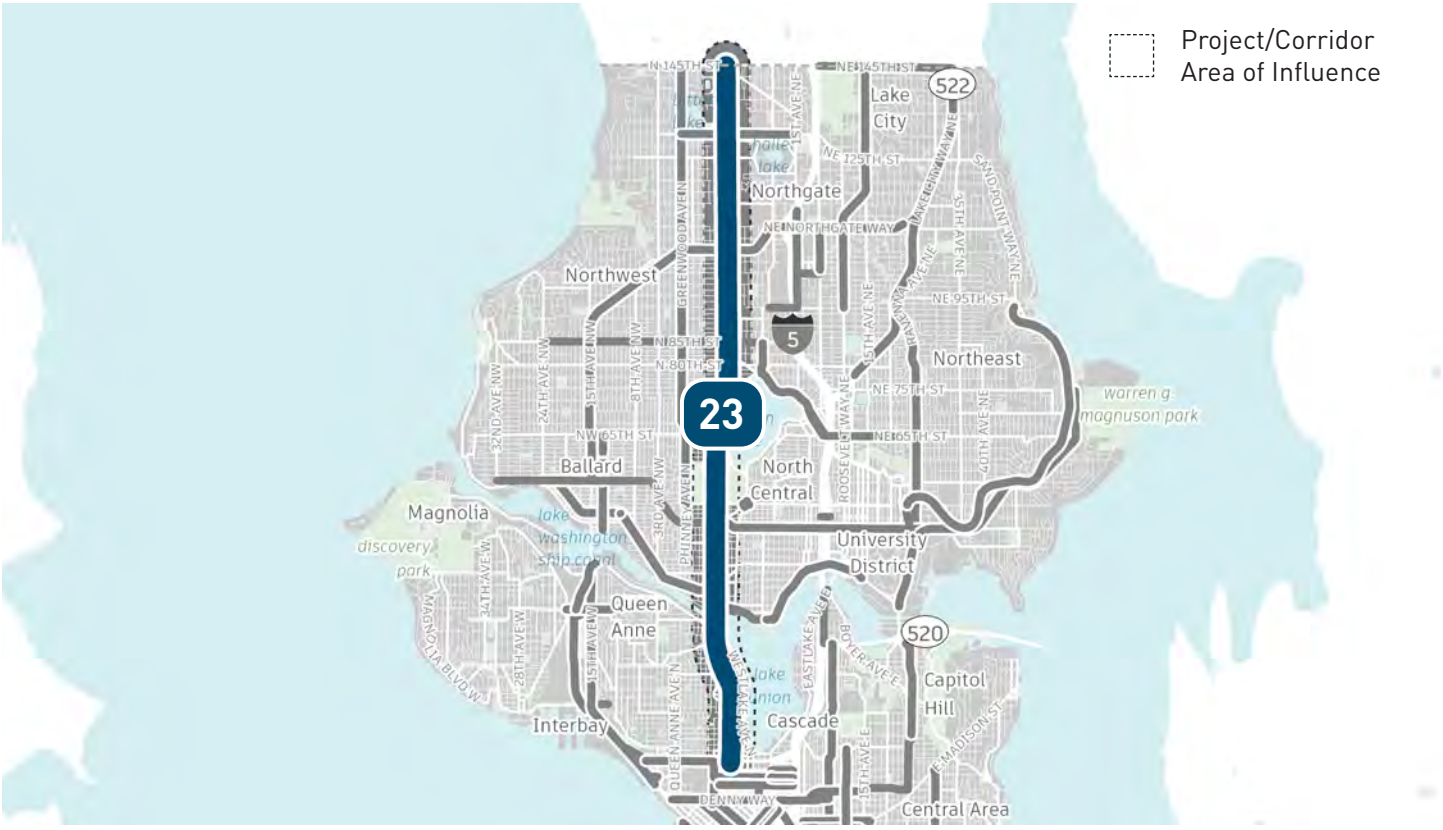
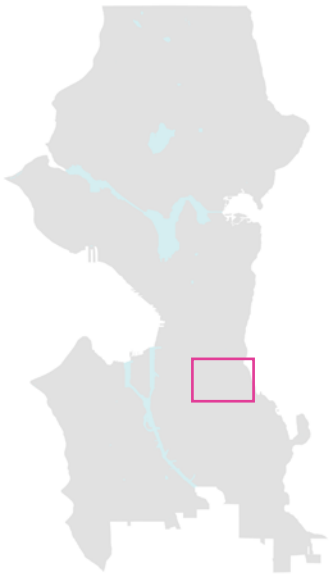
Each project was evaluated with a combination of quantitative and qualitative data to assess how well it advances the STP goals. You can view the evaluations for each goal below.

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



24 MT. BAKER STATION | Multimodal Improvements



Modes Served

Project Description

This project will better support people walking, rolling, and taking transit in and around the Mt. Baker neighborhood, improving access to the Link light rail station, bus transfer center, Franklin High School, and more. This could include:

- Redesigning the busy intersection of Rainier Ave S and Martin Luther King Jr Way S.
- Enhancing access to destinations like shops, restaurants, and cultural centers in the area
- Improving transit reliability and access
- Repairing sidewalks and adding bicycle facilities for people of all ages and abilities

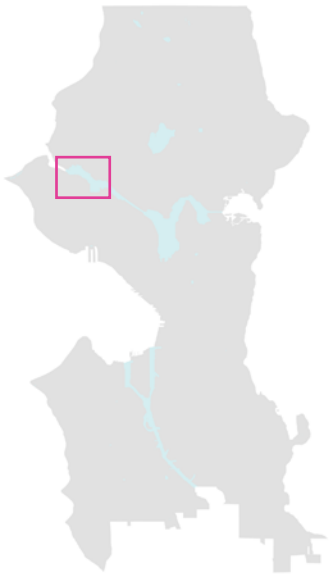
Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost

25 BALLARD BRIDGE



Modes Served

Project Description

This project will make major repairs on the Ballard Bridge so that it remains a reliable route for people traveling across the Ship Canal. The project will also improve safety for people walking, rolling, and biking at the south end of the bridge by adding widened sidewalks and intersection improvements.

Click HERE to see the project location in Google Street View

PLACEHOLDER: QR code will be inserted to information hosted online, following STP publication

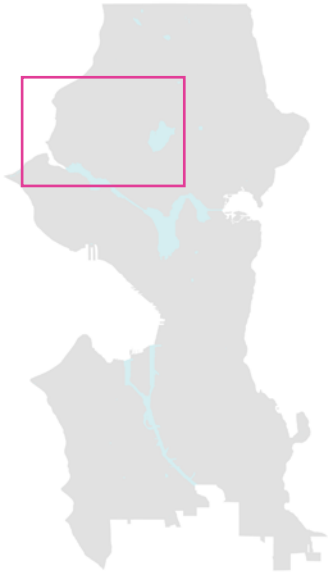
Goal Evaluation

Each project was evaluated with a combination of quantitative and qualitative data to assess how well it advances the STP goals. You can view the evaluations for each goal below.

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost

26 BALLARD TO NORTHGATE | Multimodal Improvements



Modes Served

Project Description

This project will reimagine the route for people walking, rolling, biking, and taking transit from Ballard to Northgate and improve access to the new Ballard Link light rail station. This could include:

- Repairing sidewalks and adding bicycle facilities for people of all ages and abilities
- Redesigning the street to better support transit and freight vehicles
- Improving bus stops and crossings and making the Link light rail station more welcoming for transit riders
- Enhancing access to destinations like shops, restaurants, and cultural centers in the area

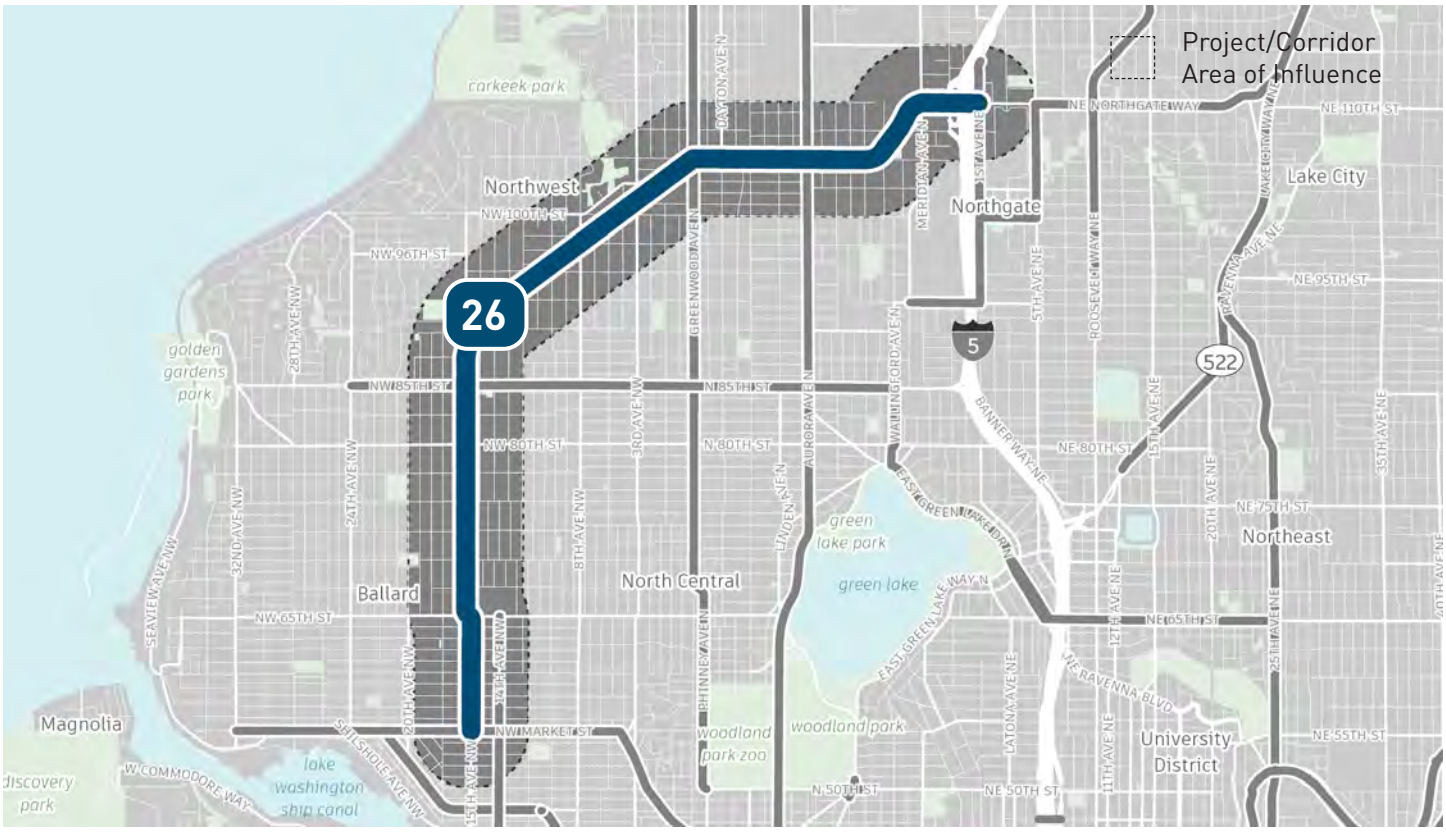
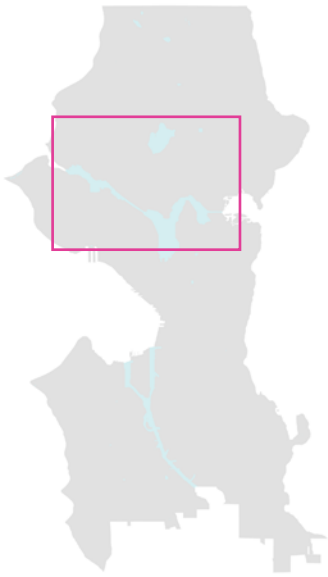
Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



27 BALLARD TO U DISTRICT | RapidRide Coordination



Modes Served

Project Description

This project will support King County Metro's upgrade of Route 44 to RapidRide. The route will connect Ballard, Wallingford, and the U District. This project could include:

- Enhancing access to destinations like shops, restaurants, and cultural centers in the area
- Implementing Intelligent Transportation System improvements to make traveling more efficient, safe, and predictable

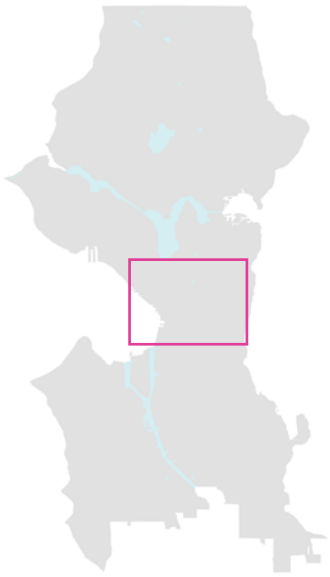
Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost

28 BOREN AVE | Multimodal Improvements



Modes Served

Project Description

This project reimagines Boren Ave as a safer, more reliable, and more pleasant connection through First Hill and the Denny Triangle. This could include:

- Adding lush median landscaping and street trees to encourage slower vehicle speeds and make walking and rolling safer
- Repairing sidewalks and making it safer to cross the street
- Improving access to local businesses for vehicles making deliveries

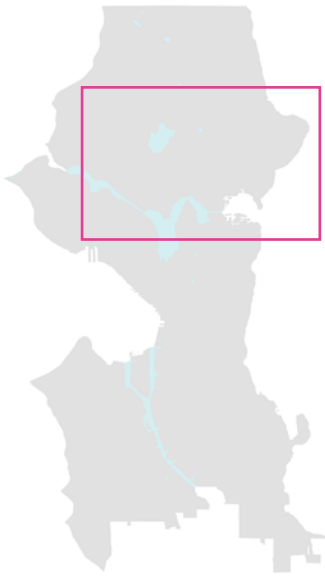
Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost

29 BURKE GILMAN TRAIL | Comfortable Connections



Modes Served

Project Description

This project will upgrade the Burke Gilman Trail to more comfortably and safely connect people walking, rolling, and biking on one of the region's most popular trails with destinations along their route. This could include:

- Redesigning, widening, and repaving sections of the trail
- Improving crossings where people using the trail intersect with people using other modes of transportation
- Connect the trail to other bicycle routes and nearby destinations like parks

Click HERE to see the project location in Google Street View

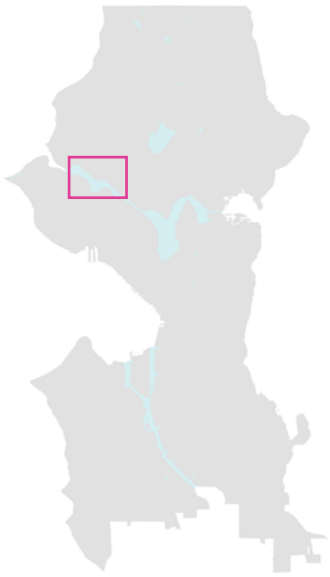
Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost

30 BURKE GILMAN TRAIL MISSING LINK



Modes Served

Project Description

Multi-use trail connecting the two existing sections of the Burke-Gilman Trail in Ballard

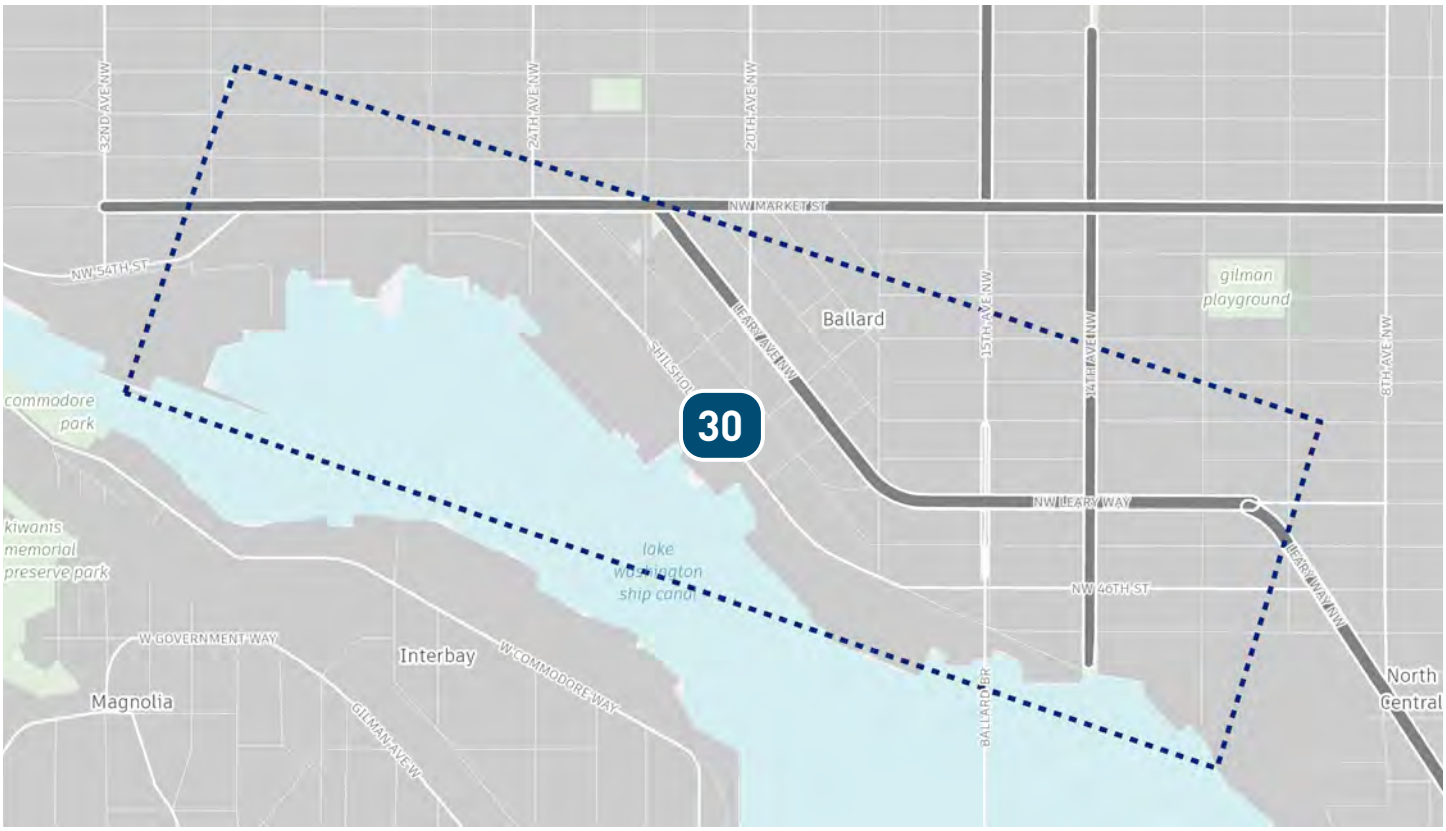
PLACEHOLDER: QR code will be inserted to information hosted online, following STP publication

Goal Evaluation

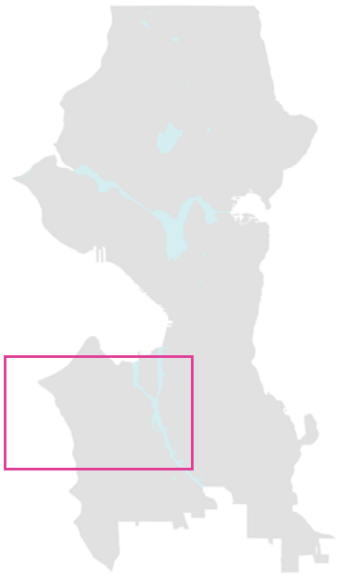
Each project was evaluated with a combination of quantitative and qualitative data to assess how well it advances the STP goals. You can view the evaluations for each goal below.

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



31 CALIFORNIA AVE SW | Multimodal Improvements



Modes Served

Project Description

This project will improve mobility and safety on California Ave SW, connecting West Seattle neighborhoods from north to south. This could include:

- Repairing sidewalks and adding bicycle facilities for people of all ages and abilities
- Making it safer to cross the street with elements like median islands, extensions of curbs, and better crossings
- Redesigning the street to better support transit access and reliability
- Implementing Intelligent Transportation System improvements to make traveling along this busy street more efficient, safe, and predictable
- Planting street trees
- Enhancing access to destinations like shops, restaurants, and cultural centers in the area

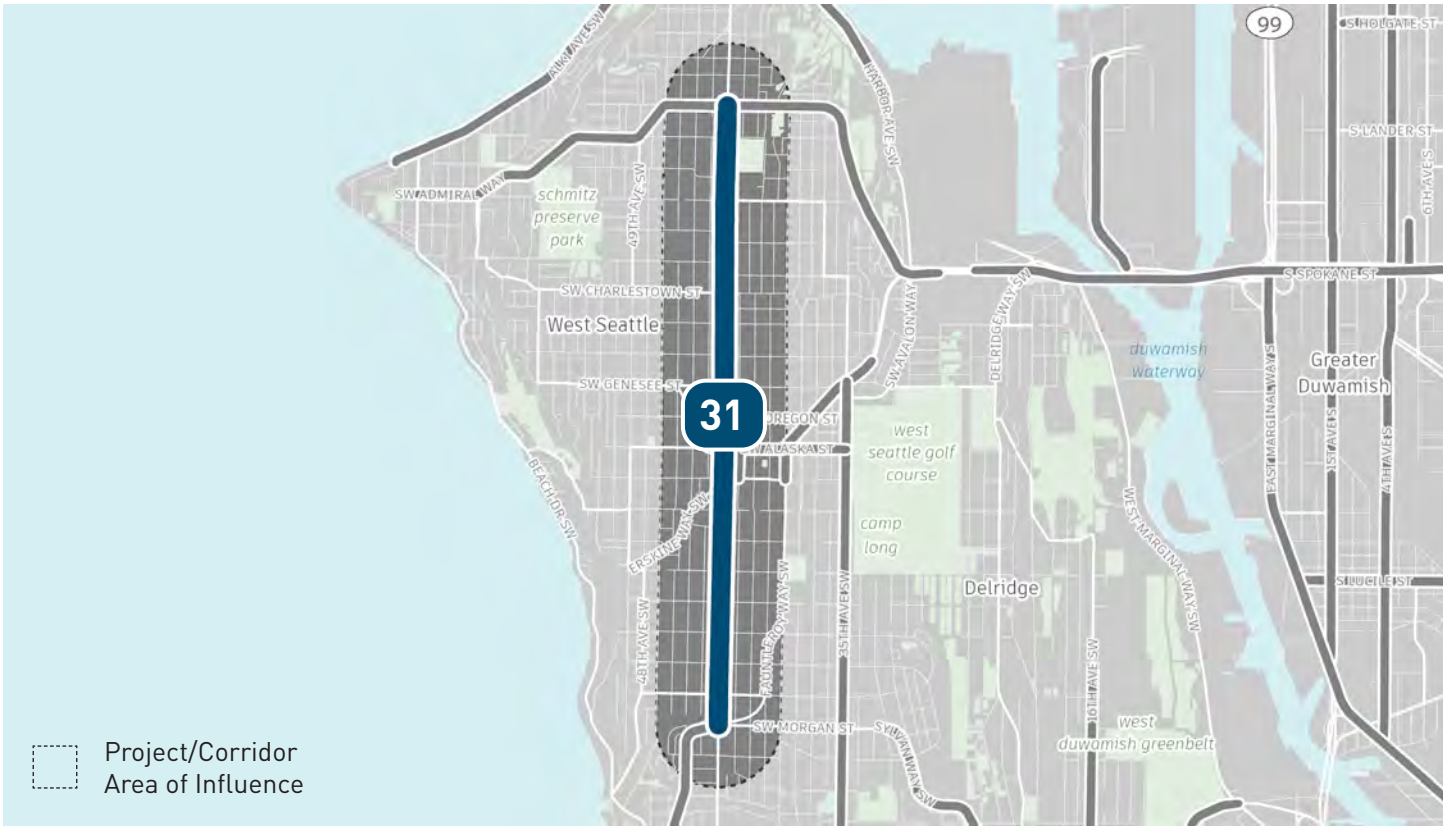
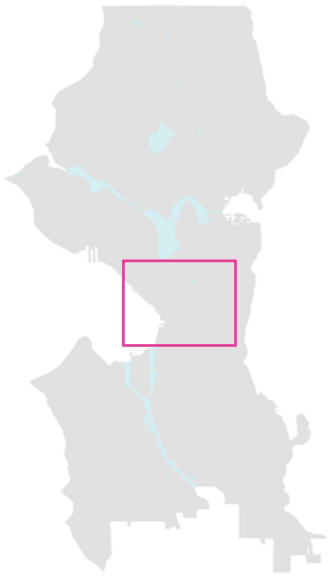
Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



32 CENTER CITY CONNECTOR



Modes Served

Project Description

This project will join the South Lake Union and First Hill Streetcar lines to create a seamless connection through these vibrant neighborhoods all the way to Pioneer Square. When complete, 5 miles and 23 stations of streetcar service will be available to access hundreds of destinations, including Pike Place Market, Colman Dock, and First Hill, along with four direct connections to Link light rail.

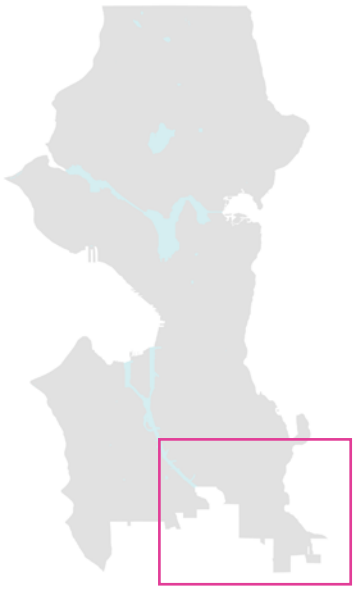
Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost

33 CHIEF SEALTH TRAIL | Comfortable Connections



Modes Served

Project Description

This project will improve sections of the Chief Sealth Trail to more comfortably and safely connect people walking, rolling, and biking in South Seattle. This could include:

- Completing small gaps in the trail
- Creating areas for shade and rest, especially at popular viewpoints
- Improving areas where the trail intersects with vehicle traffic
- Connecting people to key destinations and other bicycle routes along the trail

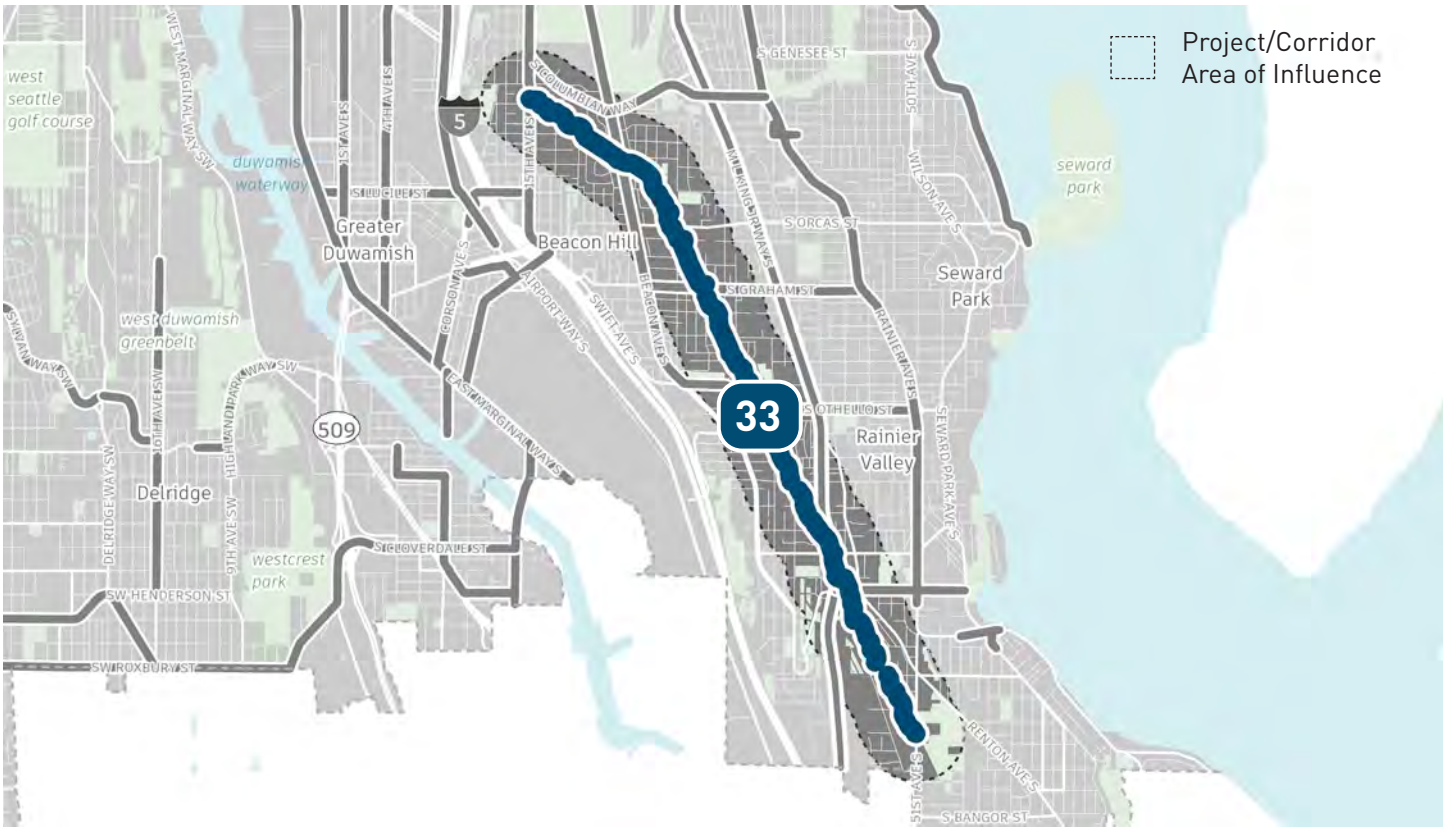
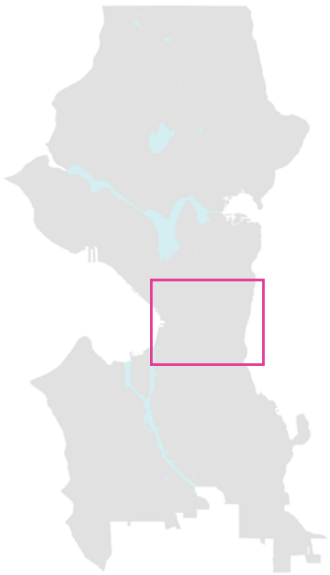
Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



34 CHINATOWN-INTERNATIONAL DISTRICT STATION | Multimodal Improvements



Modes Served

Project Description

This project will streamline connections and make walking, rolling, and biking near the Chinatown-International District Link light rail station safer and more accessible. This could include:

- Making S Jackson, S King, and S Dearborn streets more enjoyable for people walking and rolling with better lighting, landscaping, public art, and more
- Adding bicycle facilities for people of all ages and abilities and improving connections for pedestrians to nearby trails
- Redesigning the street to better support freight vehicles
- Creating welcoming public space for people walking and rolling on S Jackson St
- Improving connections for people to and from Colman Dock, including repaving some areas of the street

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost

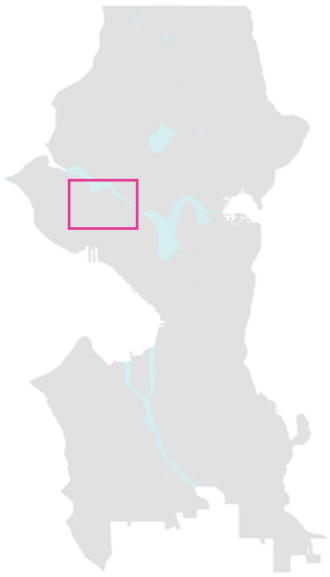
36 DRAVUS ST | Multimodal Improvements



Modes Served

Project Description

This project will improve W Dravus St, connecting people walking, rolling, biking, taking transit, and making deliveries along a major east-west street. This could include:

- Adding bicycle facilities for people of all ages and abilities
- Redesigning the street to better support transit and freight vehicles
- Supporting the business access needs of destinations like shops, restaurants, and cultural centers in the area

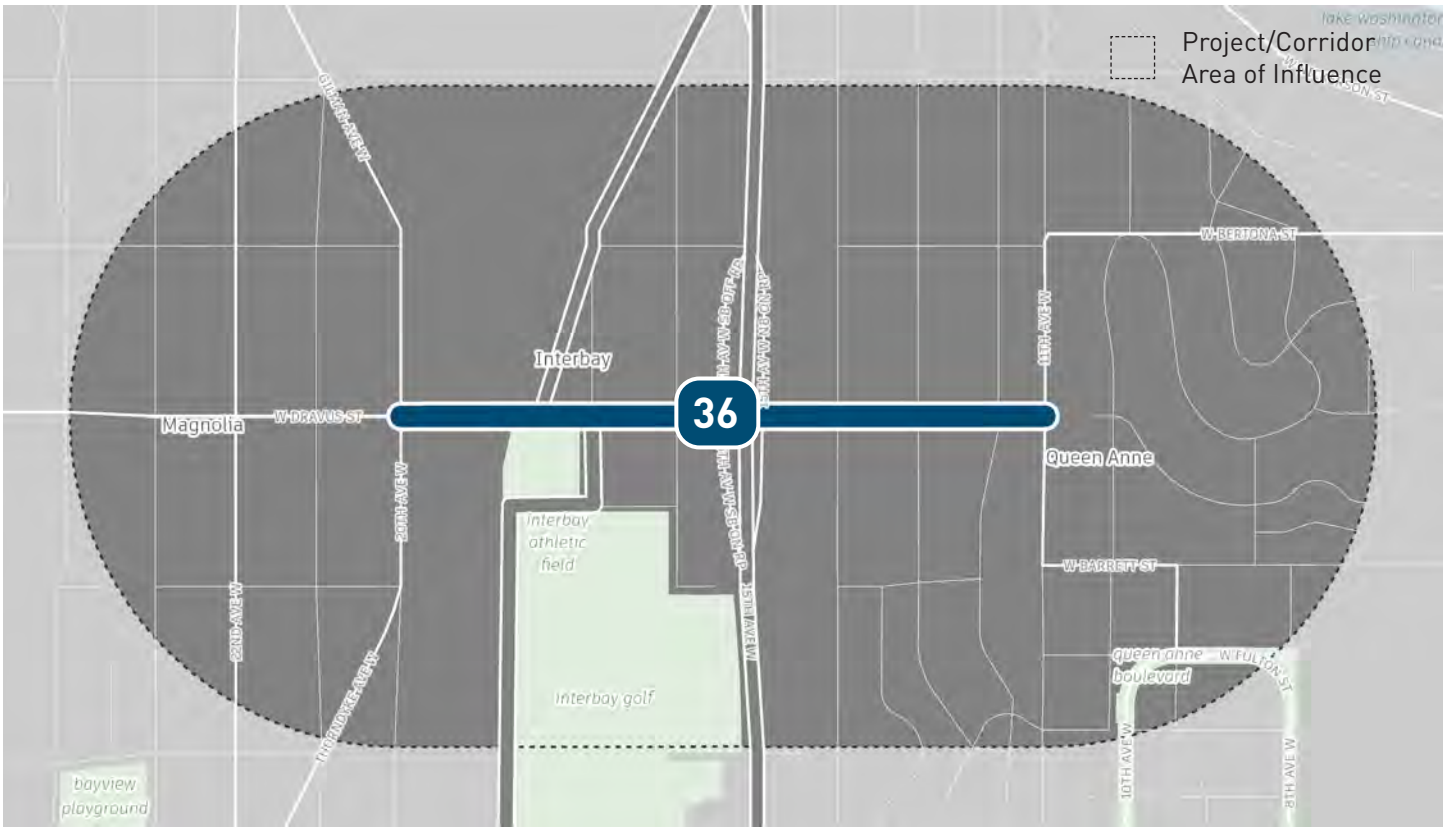
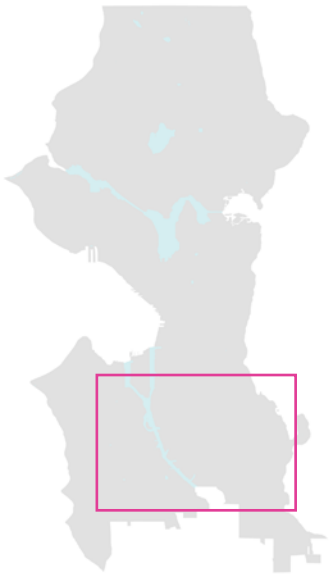
Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



37 E MARGINAL WAY | Multimodal Improvements



Modes Served

Project Description

In collaboration with WSDOT, this project will improve East Marginal Way, which serves as a major freight corridor and connection for people between the West Seattle Bridge Trail, downtown, and the SODO neighborhood. This could include:

- Redesigning the street to better support freight vehicles, including potential freight-only lanes
- Repairing and widening sidewalks and improving bus stops and crossings
- Implementing Intelligent Transportation System improvements to make traveling along this busy street more efficient, safe, and predictable

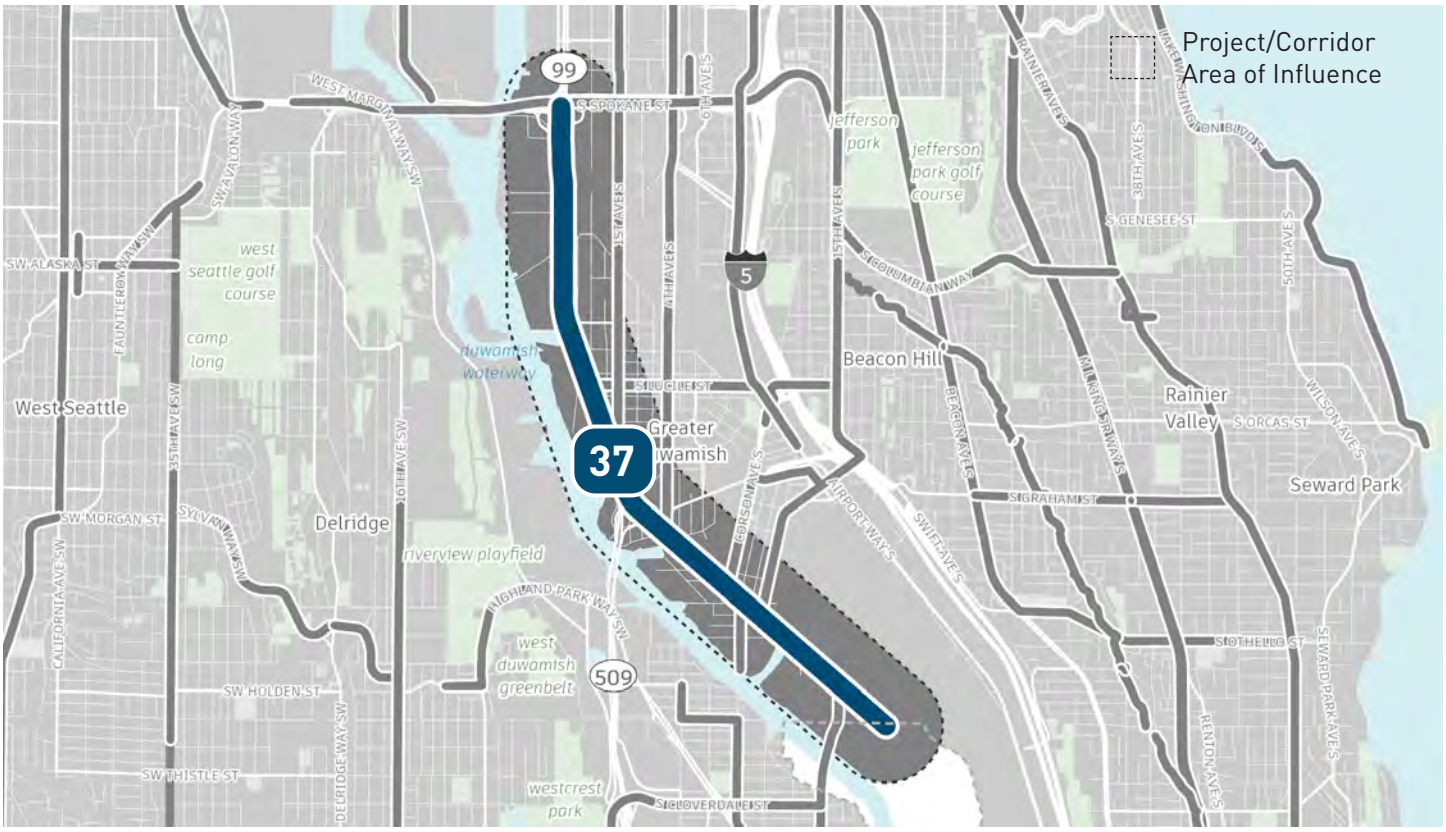
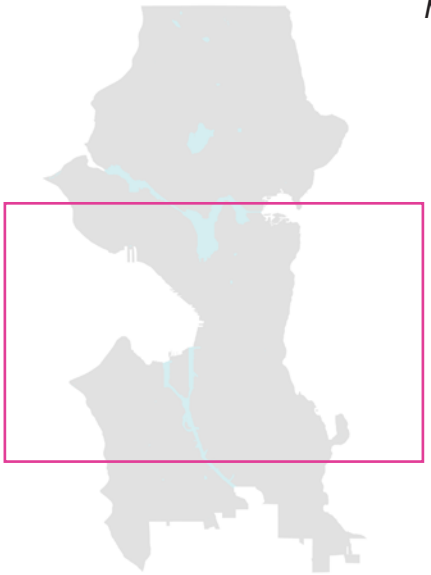
Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



38 EASTLAKE TO RAINIER BEACH | Transit and Multimodal Improvements



Modes Served

Project Description

In partnership with King County Metro, support the new RapidRide connection from Eastlake to Rainier Beach with improvements on Beacon Ave S, Broadway, and 10th Ave E. This could include:

- Repaving some portions of the road
- Redesigning the street to better support RapidRide service
- Repairing sidewalks and adding bicycle facilities for people of all ages and abilities
- Making it safer to cross the street
- Enhancing access to destinations like shops, restaurants, and cultural centers in the area "Improving connections for people to and from Colman Dock, including repaving some areas of the street

Each project was evaluated with a combination of quantitative and qualitative data to assess how well it advances the STP goals. You can view the evaluations for each goal below.

Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost

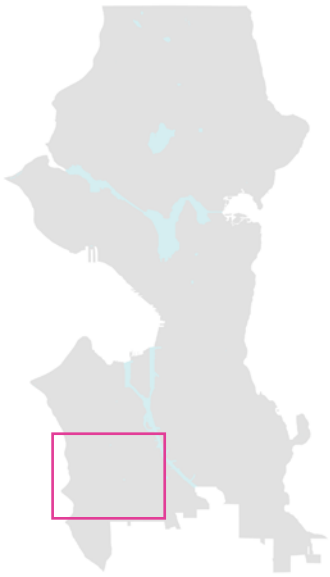
41 FAUNTLEROY WAY SW | Multimodal Improvements



Modes Served

Project Description

This project will complement new connections in West Seattle, specifically improving the route for people walking, rolling, biking, and taking transit between Morgan Junction, Lincoln Park, and the Fauntleroy Ferry Terminal in West Seattle. This could include:

- Making improvements to better support transit and freight vehicles
- Repairing sidewalks and adding bicycle facilities for people of all ages and abilities
- Implementing Intelligent Transportation System improvements to make traveling along this busy street more efficient, safe, and predictable
- Planting new trees
- Making it safer to cross the street

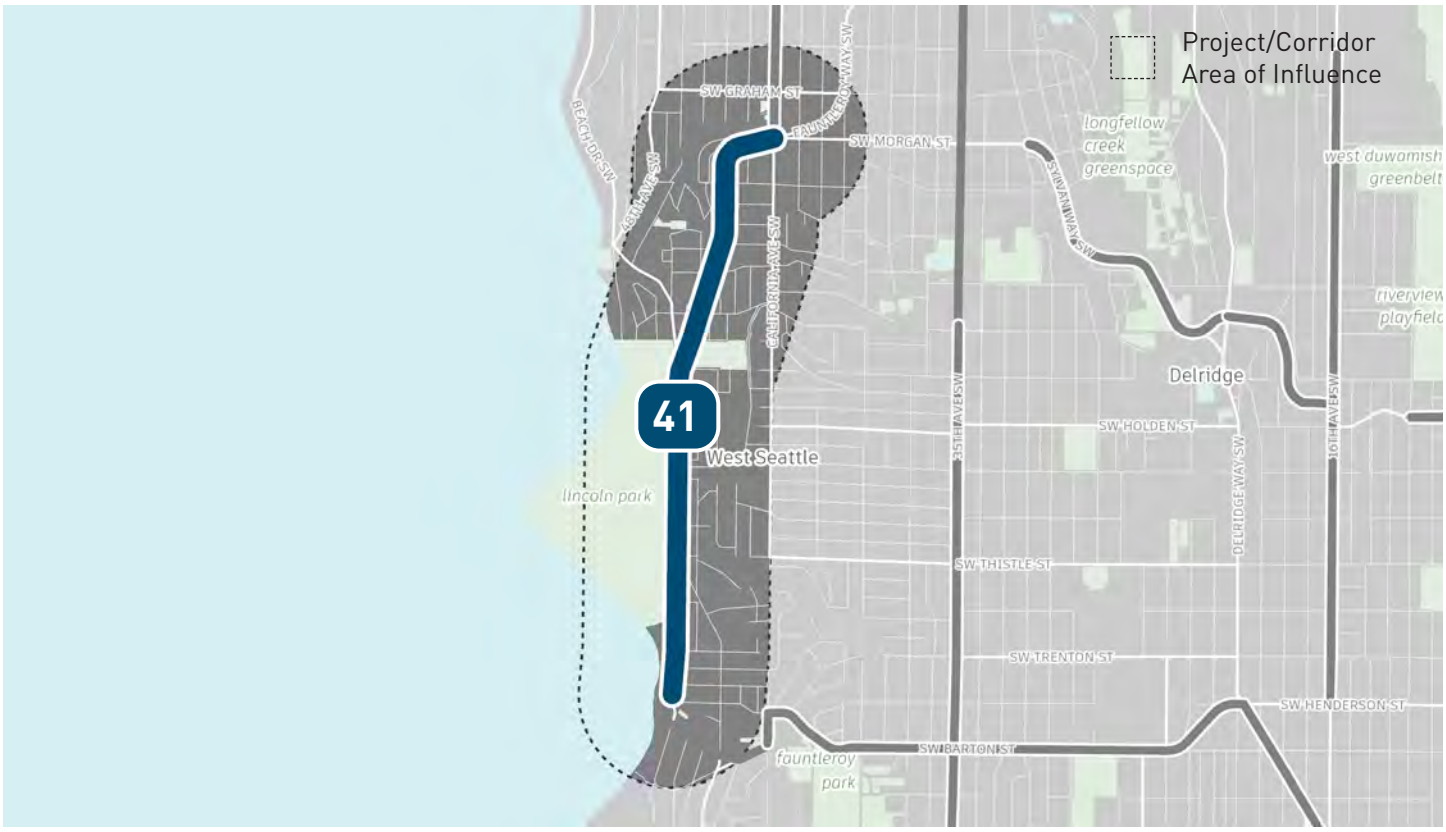
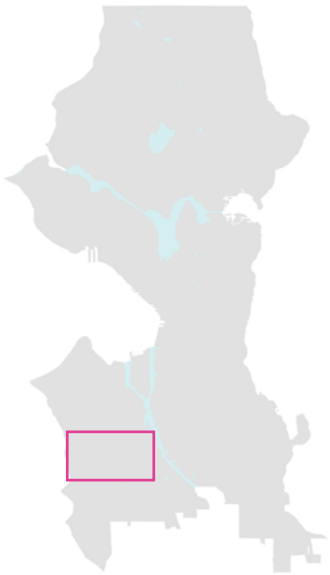
Safety | Equity | Sustainability | Mobility & Economic Vitality | Livability | Maintenance & Modernization

Cost



42 FAUNTLEROY WAY SW BLVD | Multimodal Improvements



Modes Served

Project Description

This project improves a busy street that welcomes people into West Seattle from the West Seattle Bridge and will connect people to the new Link light rail station on SW Avalon Way. This will fulfill a commitment made as part of the Levy to Move Seattle. This could include:

- Repaving some areas of the street
- Redesigning some areas, including adding a landscaped median, new sidewalks, improving crossings, and planting street trees along with improved signage for better navigation through the area
- Implementing Intelligent Transportation System improvements to make traveling along this busy street more efficient, safe, and predictable
- Adding bicycle facilities for people of all ages and abilities

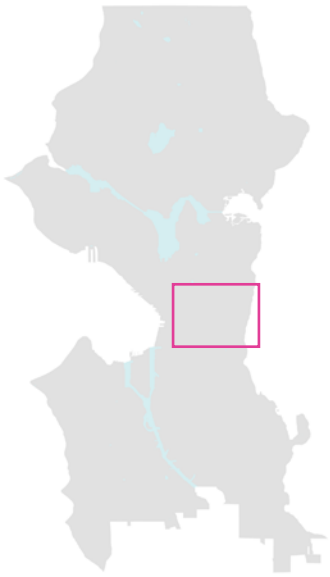
81 E YESLER WAY | Multimodal Improvements



Modes Served

Project Description

This project will improve connections on E Yesler Way for people traveling across modes. This could include:

- Repaving some areas of the street
- Adding bicycle facilities for people of all ages and abilities
- Improving bus stops
- Supporting the business access needs of destinations like shops, restaurants, and cultural centers in the area
- Making it more enjoyable for people to walk and roll
