I purposely bought a home in a neighborhood that offered front and backyards and single family homes. I chose Northgate because it was one of the few that had not been destroyed by rezoning. The rezone you are considering will take away yards and privacy and build 80ft complexes right up against property lines. It's atrocious and unwelcoming to the property owners who already live here.

What you may consider progress and growth, I and many others consider problematic, disruptive and destructive to our livelihoods. I do not want my neighborhood rezoned in any form that would potentially allow a massive apt complex or otherwise to be built towering above my house and yard. Simple as that

Thank you.

Very concerned homeowner,

Erica Carre

CAUTION: External Email

To whom it may concern,

Please note my comment on the DEIS:

1: Section P 3-3 states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild." What is the impact of the plan specifically on Seattle's plants and animals?

2: Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." What analysis shows that tree planting programs, coupled with increased hardscape, will compensate for lost urban forest?

3: The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development?

Sincerely,

Mal Carter, community member

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

Comments Planning and Community Development EIS,

[Resubmitting because first version sent prematurely]

The Draft EIS must be amended to protect and enhance Seattle's tree canopy. This is important to all Seattle residents because trees are one of the most cost-effective (not to mention beautiful) ways to reduce heat, flooding, and air pollution that is getting worse every year. Trees improve health, especially in low income communities, and make the city someplace people actually want to live. Other Northwest cities like Portland recognize this and have enacted measures to protect urban trees, but in Seattle, I watch one tree after another get cut down and replaced by concrete or by spindly street trees destined to die in the first year. We need to take a systems approach and understand that trees are one significant puzzle piece that defines our future. Continuing to take a siloed approach to trees and many other topics will likely cost Seattle billions of dollars over the coming years and result in an unlivable city. It does not need to be this way!!

CAUTION: External Email

Good morning,

I live in Columbia City with my wife and two kids.

I have read both the state bill HB 1110 and Seattle comprehensive plan. I have to say the state bill is fairly straightforward and easy to comprehend. I was left knowing exactly what the changes would be.

Seattle plan is extremely wordy, full of vague details and extremely hard to digest. The maps are not detailed enough and add to the confusion. I was left wondering actually what were the proposed zoning changes and what type of housing will be allowed on what types of lots.

My recommendation is to follow the state bill and abandoned the comprehensive plan. Our state already spent time and money on this. Let's use the money we would save by adopting the state bill and put it towards affordable housing.

Wishing for more practical thinking!

Kind regards,

Marc Charbonneau

Comment:

I am a renter in Wallingford, and I believe that the City of Seattle did not listen to the overwhelming majority's call for an Alternative 6 vision, which would lower the cost of housing across the city. Instead the current draft plan will increase already unaffordable housing costs. To create a more equitable, sustainable, affordable city, the plan should allow much more housing to be built away from noisy, polluted arterials.

If the City of Seattle adopted my above proposed changes, then we would be able to create a more affordable city for everyone.

Subject: Comp Plan Comments
Date: Thursday, May 16, 2024 9:04:48 PM

CAUTION: External Email

Hello, my name is Robert Clabough.

I wanted to leave a comment on the Seattle plan, in favor specifically of more transit and further upzoning.

Seattle has had a housing crisis for a very long time, longer than I've lived here. In the short 10 years I've lived in the area housing has only become more expensive and less available. While I myself am fortunate enough to have purchased, there are many many more who are finding it near impossible to purchase, or even rent around Seattle.

The solution is obvious - more housing. To accomplish this we need to rethink the outdated zoning laws of the 1950s and 60s and start thinking about density across the city. More apartment buildings sure, but specifically middle housing. We are missing the middle zoning in this city, the places in between single family homes and large apartment buildings. Allowing smaller row-style housing and townhouses in what were previously less dense areas would lessen the crisis, allowing people to both purchase property and more easily rent.

Mixed use housing is also a benefit, I would encourage more looking into mixed commercial and residential. Allowing buildings with commercial on the ground floor with residential above is great for communities. Look at Woodinville and their new Schoolhouse district, it's the busiest area of town. People can now live and shop in the same place, even work there, all within walking distance.

These ideas would make Seattle more accessible and more available to people. Staying with single family housing is expensive and wasteful during this crisis. We should be celebrating that so many people want to live in our great city, not trying to "gatekeep" our city and push others out.

One final note, this is all accomplishable with transit. I'm glad to see the plan allows for extra dense zoning around transit. While we also have a housing crisis we also have a car crisis, and the only way to fix that is to reduce how many cars are on the road. I envision a future where Seattle would allow you to live without requiring a car. We aren't there yet, but I do hope that with proper planning we can become a city where you could walk outside and grab a bus or train to anywhere else in the city.

Thank you for taking the time to read this, and am happy to offer any clarification if needed.

Robert Clabough

Subject: Tree protection with density
Date: Saturday, May 4, 2024 7:10:49 AM

CAUTION: External Email

I would like to address the comprehensive plan so we can build 100,000 new homes while preserving our trees. Two beautiful, healthy cedar trees we removed across from my house, and these should have been protected though the current tree protection plans. It just seems that little is being done for protection of our city's treasures.

157-1

In Section P 3-3, it states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." Where is the study that was done to prove that that tree planting programs and increased hardscape will be able to compensate for all of the trees that will be lost

From what I understand from the plan, it states that Seattle will make progress toward its 30% canopy goal. However, new tree ordinance substantially reduces private land available for trees. How much public land, and where is this land, that will be needed to reach this goal? How many trees, and what kind of trees need to be planted on public land to compensate for all the trees that are going to be removed through development?

Thank for your attention to this matter,

Lisa Clark

Subject: Comments on Seattle Comp Plan EIS

Seattle Government:

I am providing comments on the draft EIS for the Seattle Comp Plan.

My primary concern is the lack of detailed mathematical and technical analysis concerning the impacts of adding 100,000 new housing units to the City on our precious and limited natural landscape. In particular, what will be the true and expected impact of building these many new homes on the landscape and natural environment that currently exists in the City? This is a basic concern and question that the draft EIS fails to address in any detailed manner. Blanket statements in the draft EIS suggesting that significant adverse impacts on tree cover and other natural landscape elements are not expected is not backed up with any analysis to support those statements.

Professionally authored studies are currently available to the City concerning the need for changes to the City's tree protection regulations which currently do almost nothing to protect significant trees and the acreage of tree coverage in the City. Adding 100,000 new homes to the City that currently doesn't sufficiently regulate tree coverage and protections will do nothing more than exacerbate the loss of canopy cover and effectively increase the effects of solar warming in large parts of the City. Absent any detailed or rigorous technical analysis on these impacts, the draft EIS is postulating an impact analysis that is seriously flawed in stating "significant adverse impacts on trees and canopy cover" is not expected.

Global warming is a phenomenon that is scientifically supported by essentially all corners of professional and scientific studies and literature. The draft EIS makes unsupported conclusions and statements of negligible or no adverse impact from any of the Plan alternatives on existing landscapes, vegetation, trees and tree cover/canopy that fly in the face of scientific studies to the contrary in considering the effects of same on global warming. The

City has a regulatory and legal responsibility to do a much better analysis of these Plans impacts on landscape elements and should, at the minimum, produce that analysis as an amendment to the draft EIS that is circulated for public review and comment.

Comments Planning and Community Development EIS,

We certainly need more affordable housing as our city grows, but our plans must create healthy and livable communities across our city.

That means more trees and tree preservation as we build the homes and businesses that will nestle among them. Preserving as many large trees as possible is better for our own well-being and for the planet.

The following are comments with which i wholeheartedly agree on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Date: 4/8/2024

Comment:

1. The City should study the impact of higher floor area ratios for middle housing in all residential zones, such as those corresponding to the state model code for middle housing (allowing FAR of 1.6 for sixplex).
2. Study how and where to place social housing projects that are feasible to build (50+ units) in every neighborhood; and how this can impact the production of affordable units.
3. Please study eliminating parking minimums citywide.
4. Please study the impacts of allowing for greater height and density bonuses within a quarter mile of transit stops.
5. Study how allowing increased height of residential buildings, in exchange for reduced lot coverage (including for parking), can preserve tree canopy.
6. Please study the impacts of granting tax breaks & fee deferrals to housing projects that include affordable units.

161-1

DEIS StoryMap Comment

Name: Travis Close

Email: travis.close@gmail.com

Date: 5/6/2024

Comment:

I recently learned that there is a density bonus applied to certain projects that provide a certain amount of public space in their yard. It would be beneficial to study the impacts of a density and/or height bonus for middle housing projects with 2-6 units in residential areas that preserve additional green space in their yards beyond the minimums required. This type of incentive could have important, beneficial effects with respect to pervious surfaces, prevention of stormwater runoff, tree preservation, and preventing heat islands. Thank you for your consideration.

To: OneSeattleCompPlan@seattle.gov

To: PCD_CompPlan_EIS@seattle.gov

cc: Bruce.Harrell@seattle.gov , maritza.rivera@seattle.gov

I have lived in the Ravenna neighborhood for 39 years. During that time, much has changed throughout the City of Seattle and it is clear we need to plan for continued growth. **The draft Comp Plan and DEIS provide ideas for the future but more work must be done to acknowledge our historic and natural resources as we plan for growth.** Of most concern, is that the plans will bring greater density to our City but will not actually provide affordable housing. New, affordable housing must be planned for along with amenities such as parks, open space, preservation of tree canopy, schools, transportation and other infrastructure. I believe the draft documents can be strengthened with the following in mind.

164-1

Protect Historical Resources

In 2018, the Ravenna-Cowen North Historic District (RCN NHD) was listed in the National Historic Register of Historic Places, as well as the Washington State Register of Historic Places, where it joins other districts which contribute to the rich cultural heritage of Washington State. The proposed One Seattle Plan Land Use Goal LU G16 (page 59) identifies three important reasons to preserve, maintain, and celebrate historical and cultural resources. The RCN NHD fulfills all of these. However, the plans fall short of adequate mitigation to protect these resources.

- Policy LU 16.1 talks about maintaining a comprehensive survey and inventory of Seattle's historic and cultural resources, but this inventory is very incomplete and still needs significant development. This inadequacy must be addressed or resources will be lost due to lack of knowledge/recognition. This is where "advance planning" can actually work (see DEIS page 3.9-121, last paragraph) because it would help *avoid* adverse impacts on historic/cultural resources.
- Policy LU 16.3 talks about supporting designation of areas as historic, cultural, and special review districts, but NHDs are not recognized as special review districts or exemptions. Recognition of NHDs must be added here. Recognition and protection for NHDs must be part of mitigation or these will be lost due to redevelopment related to upzoning and the One Seattle Plan.
- Policy LU 16.4 talks about tailoring development standards for a special review district, but this policy needs to include NHDs or they will be degraded and lose their historical/cultural integrity and ability to interpret Seattle's history

- Policy LU 16.5 talks about encouraging adaptive reuse of designated landmark structures by allowing uses in these structures that might not otherwise be allowed under the applicable zoning. This policy should also be applied for structures in historic districts and NHDs in cases where this approach could help the district retain its architectural integrity.
- Policy LU 16.6 talks about incentives to restore or reuse designated landmark structures and specified structures within designated districts. While this policy is fairly narrow, it should be *broadened to include additional incentives for restoration and reuse of historic structures* and *should also apply to NHDs* but fails to include them. These incentives should also apply to NHDs and/or contributing structures within NHDs to avoid or mitigate adverse impacts and to prevent loss of the NHD's integrity.
- Policy LU 16.7 talks about protecting the scale and character of the established development pattern in historic districts, while encouraging compatible and context-sensitive infill development. This is a very important policy, however, it fails to include NHDs. These incentives should also apply to NHDs to avoid or mitigate adverse impacts.

The DEIS provides a list of "Potential Mitigation Measures (see pages 3.9-119 and 3.9-120). While many of these can be helpful and/or are already required under other regulations, mitigation for historic/cultural resources and NHDs needs to incorporate these measures more substantially.

Also, please consider that mature trees and landscape are elements of RCN NHD, as well as many other historic/cultural districts. Protection of these not only provides part of the context for NHD, but recognition of the NHD reciprocally can help protect these elements of the environment.

Improve Land Use and Housing Policies

It is interesting that for Regional Centers, GS 3.2, p. 22 has the language "Recognize and plan for the unique role and character of different neighborhoods within large regional centers." ***The same language be added for Urban Centers (GS 4, p. 24 and 25) and Neighborhood Centers.*** The Roosevelt Urban Center (p. 25) is a mix of commercial, high rise and "craftsman."

LU 2.9 (p.38) states: *Encourage the preservation of characteristics and features that contribute to communities' multiple identities, including in areas of historic,*

architectural, cultural, or social significant.” This is a very important policy and it needs to be taken seriously.

To help facilitate this, LU Policies should be added to recognize and plan for the unique role and character of different neighborhoods:

- Note that the definition of middle housing in E2SHB 1110, p. 5, para (21) (lines 32-35), "means buildings that are compatible in scale, form, and character with single-family houses ... ["single family" is defined at p.7, para.32, lines 32-34.]

Add a new LU that states the same language as above – *Middle housing means buildings that are compatible in scale, form, and character with single-family houses.*

- Add the italicized language to LU 4.1 (p.40). Allow for flexibility in development standards so existing structures, *trees and green space* can be maintained and improved and new development can respond to site-specific conditions.
- LU 4.18 (p.48), second bullet, add italicized language – responds to the surrounding neighborhood, *character*, and context, including historic resources. Thus, for the RCN NHD and any other NHD, the type of housing built should preserve the character of the NHD.

With regard to housing/displacement:

The proposed upzoning will increase the tax base for properties in the RCN NHD that will continue to displace owners from our neighborhood (this has been happening since the last rezone) as property taxes have become unaffordable for homeowners. This trend shifts ownership of these historic homes and many historic properties to developers and lessors, thus consolidating the trend of land ownership. This applies to any other NHD or historic district, and LU policies to prevent this are inadequate.

Another type of housing that exists in our neighborhood and the RCN NHD, which is located close to the University of Washington, is the group home, usually a historic home that has been rented to a group of unrelated people who often are college students and/or people with jobs in Seattle. This type of housing offers an often more affordable alternative for housing groups of people, as well as for people who prefer older buildings and garden areas. This type of housing will be displaced by redevelopment. Many existing Seattle homes can be subdivided or use a “community” model with four bedrooms with the other spaces for the shared use within the structure. Adding policies to further protect this type of use increases housing flexibility and can help protect historic housing.

164-2
cont

164-3

Still of concern is that while the One Seattle Plan would create additional housing units per the directive of E2SHB 1110, increasing the number of units will not bring affordability. Thus, the proposed impacts on displacement and historic preservation caused by the proposed upzoning would occur without bringing enough benefit to justify the losses. This was largely the basis behind the recent Los Angeles County Superior Court ruling that overturned CA Senate Bill 9, which had overturned single-family housing in five California cities. See: <https://www.latimes.com/homeless-housing/story/2024-04-29/law-that-ended-single-family-zoning-is-struck-down-for-five-southern-california-cities> .

164-3
cont

Protect Plants, Animals and the Natural Environment

A stated goal of the Comprehensive Plan is to “protect and enhance” the natural environment (p.36). This document includes some positive goals and policies but falls short in several areas.

Furthermore, the DEIS falls short:

The DEIS, 3.1.3, states that *“Projects that entail vegetation clearing would likely reduce the diversity and/or abundance of plants and animals on and near the affected parcels. These impacts would be expected to diminish over time as vegetation regrows in temporarily disturbed areas.”* Most projects that are moving forward are maximizing lot coverage, with little setbacks or vegetative areas around them. This general statement is misleading and implies a no problem exists when developments occur. Mitigation must address this issue.

164-4

The DEIS, p. 3.3-7, states, *“In 2023,... the city’s tree ordinance was updated. It is anticipated that these updates will decrease the rate of canopy loss associated with residential and commercial development.”* **Many urban forest practitioners, including Seattle’s Urban Forestry Commission, do not share the expectation that the new tree protection ordinance will decrease the rate of canopy loss associated with residential and commercial development, especially on Multifamily, Commercial, and Seattle Mixed Zones.** The combination of high hardscape allowances, rigid delineation method for tree protection areas, and reduced authority by departments to request alternate designs to accommodate tree preservation make it likely that any sizeable, regulated tree on these lots would be permitted for removal.

The DEIS conclusions are hypothetical, not fact-based:

The DEIS concludes, “Action alternatives would tend to increase regional tree canopy by focusing growth in urban areas and preventing sprawl.” “[D]evelopment within the urban environment of Seattle could indirectly benefit the tree canopy pressure in less-developed areas outside the city.” (Emphasis added.) The DEIS does not identify any data supporting an indirect benefit that regional tree canopy would increase, not even

the acreage currently remaining that is less developed. Sprawl continues, with suburban areas with lawns that do not provide needed habitat for birds and other wildlife. Nor does the DEIS identify the reasons people seek housing outside Seattle. And, apparently, no one at OPCD has bothered to traverse the “region.” King County is rapidly becoming one big sprawl as people search for more affordable housing options outside of Seattle. Moreover, state law (E2SHB 1110) now requires most municipalities to increase density, which could mean more tree cutting region-wide. The DEIS conclusions are fictitious, unsupported hypotheses and pure fantasy.

The reality is that if real mitigation to preserve Seattle’s tree canopy is not implemented immediately, Seattle will be a polluted, heated environment impacting its residents, other animals and native flora. One only has to look at the Roosevelt Urban Village, parts of which transformed within four years to a heat island.

With regard to the tree canopy:

On p. 150, Goal CE G12 refers to the tree canopy goals and lists several related policies. The following goals/policies should be added:

- Strengthen and enforce tree protections throughout the City to ensure Seattle's current canopy tree policies and goals continue. The Seattle One Plan would inexplicably reduce that policy’s goals.

The 2035 Seattle Comprehensive Plan includes Policy EN 1.2 (p. 133) which states, “Seek to achieve citywide tree canopy coverage to **30 percent by 2037, and 40 percent eventually**, which maximizes the environmental, economic, social, and climate-related benefits of trees.” This is **current Seattle policy**. Current Seattle Policy also includes Policy EN 1.7 which states, “Promote the care and retention of trees and groups of trees that enhance Seattle’s historical, cultural, recreational, environmental, and aesthetic character.” ***Both policies should be retained.***

However, for unexplained reasons, without discussing the adverse implications of this major reduction in tree canopy, the Seattle One Plan changes **current policy to a goal of 30 percent with no increase over time**. Moreover, the goal, CE G12 (p.151) *makes a false statement of fact*. The actual current tree canopy is 28 percent due to a loss of 235 acres, the size of Green Lake. CE 12 maintains “Seattle has a healthy urban forest with a tree canopy that covers at least 30% of the land [this is not true....

It is critical that the Seattle One Plan maintain the 2035 Comp Plan Policies EN 1.2 and EN 1.7, for multiple reasons:

- The more trees, the better for all of us. Trees absorb and mitigate water run-off. Trees absorb pollution. Trees reduce carbon. Trees reduce heat, which is why Seattle is trying desperately to plant more trees in underserved communities to

164-4
cont

prevent residents from dying. Currently, due to recent development in Neighborhood Residential areas, 19%, or more, tree canopy was lost. Seattle One Plan, Ex. 3.3-7. Neighborhood Residential has the highest percentage of trees in the city. The Ravenna-Cowen NHD is a green oasis with plentiful trees and green cover where Roosevelt residents now come to escape from their heat island high-rise homes. The NHD represents a historic era and embodies the reasons current Policy EN 1.7 should remain in effect.

- Trees also contribute to a personal sense of well-being and reduce crime. <https://www.motherjones.com/environment/2019/04/trees-crime-cincinnati-philadelphia-ida-b-wells-chicago/>.
- Adequate tree canopy is essential for birds and other wildlife. Among the 120+ birds tabulated city-wide by the annual Seattle Audubon Christmas Bird Count, tree-dependent species include: Pileated, Hairy, Downy, Northern Flicker and Red-breasted Sapsucker Woodpeckers; Barred, Western Screech, Great Horned and Saw-whet Owls; Cooper's, Sharp-shinned, and Red-tailed Hawks; Black-throated Gray and Townsend's Warblers, Pacific Wren, Brown Creeper, Red-breasted Nuthatch, and Varied and Swainson's Thrush. These birds require a dense forest canopy in which to hunt, feed, nest and take cover. These birds become scarce when tree canopy cover falls below 20%. There is a direct relationship between bird abundance and tree canopy. Some might say, just develop everything except the designated parks and green spaces. ***As all major wildlife and bird organizations and conservation scientists will tell you, however, these "postage stamp" preserves are not viable unless green corridors connect them. The tree canopy in Seattle is critical to ensure these green corridors.***

The Ravenna-Cowen/Roosevelt community is keenly aware of the impact from tree reduction. Our naturalist conducted a bird count. From Ravenna Park north, the bird species decreased dramatically as the trees diminished. Due to development in Roosevelt, where high-rise apartment buildings developers bulldozed all the trees, within a few years that area became a heat island with few birds and few species.

- Need for Additional Policies and Goals Due to Climate Change Impact on Tree Canopy. The Seattle One Plan contains two policies that address tree canopy and climate change, CE 12.2 and CE 12.3 (p. 150). Additional policies are needed to address this existential issue. Tree death from heat is acknowledged in the discussion, but the policies are vague. Communities around the world are emphasizing the use of native flora in landscapes and researching the use of species that would adapt readily to warmer climate. See: <https://www.discovermagazine.com/environment/cities-are-rethinking-what-kinds-of-trees-theyre-planting> If Seattle is to retain a healthy tree canopy, the Seattle One Plan must address this issue with more specificity, with specific goals, policies and

164-4
cont

time-tables. This issue requires research, knowledgeable staff, and funding.

With regard to the natural environment and urban wildlife:

- The Climate and Environment Section beginning on p. 137, should include **more specific goals and policies regarding the significance of biodiversity and urban wildlife.**

This idea is reinforced by Professor John Marzluff, University of Washington Ornithology, who points out in his book Welcome to Subirdia, “When natural land cover measured across areas the size of neighborhoods, metropolitan areas or counties drops to less than one-third of its historical extent, its ability to sustain native biodiversity crumbles.” Marzluff warned that “...not considering the amount and arrangement of green spaces that connect urban people with nature is inefficient and dangerous.” He added, ***“To remember what biodiversity is, and why it is important, we must conserve nature close to where we live and work.”***

Neither the Seattle One Plan nor the Seattle Plan DEIS provide any base-line data as to the current bird count (by number and species) for indigenous and migratory birds and the impact of the Plan.

Specific policies regarding natural environment and urban wildlife should include the following:

- First, determine status and trends of biodiversity within Seattle;
- Recognize and support Indigenous-led conservation and environmental stewardship;
- Seek new financing mechanisms and incentives for conservation, natural space management, urban forestry, etc.;
- Protect and enhance habitat quality within natural areas, parks, and open spaces
- Reduce urban hazards to biodiversity, including pesticides; reflective glass; plastic and other pollution; and negative impacts from certain human-associated and introduced species, such as outdoor cats and unleashed dogs.
- Encourage residents and visitors to learn about, celebrate, study, and conserve urban biodiversity.
- Maintain current trees and green cover on Neighborhood Residential and Multifamily lots.

164-4
cont

With regard to Mitigation:

The DEIS mitigation options are incomplete and fail to consider substantive steps and regulations that would reduce loss of trees/wildlife habitat. The mitigation measures below will help preserve trees and green cover on Neighborhood Residential lots

- *Amend and strengthen the Seattle Tree Ordinance as recommended by the Urban Forestry Commission.*
- *Retain current Neighborhood Residential setback requirements.* This will reduce the likelihood that tree canopy and green cover will be reduced.
- *Require developers to design projects that preserve trees, with oversight by professionals who know how to accomplish this.* While the DEIS sets out "green" alternatives, such as permeable driveways, solar panels, wood construction, limiting fossil fuels, it inadequately addresses the most valuable of our green resources, trees. There is technical knowledge on how to build and protect trees. Groups of architects now design buildings focusing on tree preservation. See, for example, Matthews Beach Cottage – NW Green Home Tour. To accomplish retention of as many trees and green space on Neighborhood Residential lots, the DEIS is deficient because it did not address solutions, such as requiring developers to identify the location of trees and species at the onset of the permitting process; requiring the developer to design the project to retain the maximum number of trees, with oversight by arborists and other professionals who understand how to accomplish tree retention.

With regard to Access to Public Open Space, p. 157:

This section speaks to “Public Space” and uses this term to imply parks and natural areas. Public Space can be unfortunately be interpreted by some as a concrete plaza. This term should either be deleted or defined as a space that include a majority of natural landscaping similar to the definition of the “Open Space” (which is defined as containing elements of the natural environment). Courtyards and the like should be incentivized by the City for new developments, but again these must include natural landscaping.

Thank you for your consideration of my comments.

Subject: Comments on Draft EIS
Date: Monday, May 6, 2024 8:42:59 AM

CAUTION: External Email

Comments Planning and Community Development EIS,

I am writing to let you know about the need for trees in an era of climate change. The reason I moved to Seattle was because of the stunning tree canopy which made the city so beautiful and livable. Of course, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

I know today that you are making important decisions about the next few years for Seattle. The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.

The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"

No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

There are lots of ways that canopy mitigation can occur.

We can reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.

We can require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.

We can consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.

I urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration,
Alex Colledge

CAUTION: External Email

Hello Office of the Mayor and City Officials,

I am writing you to express my support for higher density in my neighborhood and specifically to include a portion of the Roosevelt Neighborhood in the upzoning plan in work under the Mayor's current draft of the comprehensive One Seattle plan. The specified area, my neighborhood, is a perfect transition zone candidate for MR (6 story apartment building) zoning as it is close to existing tall infrastructure, a freeway, and is very close to the U-District Light Rail station among other transit lines. Please read, consider in relation to the OneSeattle plan draft, and record the attached letter petitioning for higher density in my neighborhood.

I hope our aspirations for higher density are aligned and I look forward to explicit MR upzoning in the specified region.

Thank you for your time and consideration.

Warmly,

Matt Cramer

Re: *Comments to One Seattle Plan and its EIS: 9th Avenue Northeast and Area
Midrise (MR) Opportunity*

Dear Office of Planning & Community Development:

I appreciate the opportunity to comment on the Draft One Seattle Plan ("Draft Plan") and the related Draft Environmental Impacts Statement ("DEIS"). This letter requests an upzone to Midrise (MR) zoning (and a complimentary redesignation on the future land use map) for my home and neighborhood, so that we can do our part to support the Mayor's One Seattle Plan by contributing new housing to our community.

I request that this Midrise (MR) upzone and redesignation be included in the scope of the FEIS study and executed by the Mayor's Final Recommended Plan and its proposed implementing ordinances.

**A. Background: Unintended
Consequences under Current
Code.**

I live at 4709 9th Avenue NE, APN 0889000030, which is depicted and marked with a small grey spot at right.

Figure 1. Current zoning surrounding my property. Light brown is low-rise, mustard yellow is neighborhood commercial, orange is Seattle Mixed, and darker brown is mid-rise.

166-1
cont

My home is zoned LR1, but is located just outside of the current University District Urban Center (which the Draft Plan proposes transitioning into a “Regional Center”), and just one block north of SM-U 95-320 (M1) zoning (and a tower of more than 200 feet, with further 60-foot buildings immediately west of that. As you can see, the area that includes my home also is very well served by frequent transit and other vibrant urban services on Roosevelt and at 45th. The University Playground is another immediately adjacent gem that should be accessible to more housing units.

Unfortunately, as of now the Mayor’s Draft Plan proposes to leave my home, block and neighborhood relegated to “Urban Neighborhood” future land use designation, where dense housing more appropriate to this location is effectively prohibited. The currently proposed future land use redesignation could conceivably drive density downward as compared to the Multi-Family Residential Area future land use designation that is effective today.¹ That result flies in the face of the Mayor’s goals.

Under the vision set forth by the Mayor and the policies set forth in the One Seattle Plan, my home and neighborhood would be a fantastic place to create badly needed Midrise (MR) housing density at market rents, affordable rents, or a mix. It is no longer a fit for Lowrise zoning, and certainly not a fit for an Urban Neighborhood future land use designation.

I have watched with pride as the neighborhood has grown up into a bustling area of midrise apartments around me. It is also notable that an upzone to MR for my home and neighborhood would help provide great housing capacity *in a location where displacement will be minimal*, due to a high population of undergraduate and graduate students who generally are rotating in and out of the neighborhood on a yearly (if not quarterly) basis. In light of comprehensive transit and parks investments, together with the general urban maturation of the University District, my home and neighborhood’s current Lowrise zoning status is outdated, artificially constraining the transit-oriented density and affordability that properties like mine could provide. I request the following:

- **The Mayor’s zoning implementation map (which I understand is to be introduced in draft later this summer) should propose rezoning this area to Midrise (MR).**
- **The Mayor’s Final Recommended Plan should include this area within the adjacent Regional Center future land use designation, or at a minimum, the Corridor future land use designation studied in the DEIS and initially proposed in the OPCD staff draft.**
- **The Final EIS should study inclusion of this area within the adjacent Urban Center (soon to be renamed “Regional Center”), and should study an upzone of this area to, at a minimum, Midrise (MR) zoning.**

I am concerned about the success of the 30% tree canopy goal. How have you been able to calculate the recovery of lost tree canopy when so many city trees have disappeared and are continuing to disappear, while expecting that they will be adequately replaced by planting young fragile saplings in their place? How much public land space do you have for increasing the tree canopy and who will take care of all the new trees for the next several years to ensure their survival and growth?

Thank you,
Beverly Crocker

Office of Planning and Community Development

Re: One Seattle Comprehensive Plan and draft Environmental Impact Statement

169-1

My name is Carolyn Crockett. Thank you for giving me the opportunity to comment on the Draft Plan and EIS. We bought our home in the Haller Lake neighborhood in 1976. My community interests have focused on the Haller Lake P-Patch which I helped found in 1998, the Haller Lake Community Club where I serve as Parks Chair, and Northacres Park.

Whereas growth is inevitable and there is a need for more housing, Seattle should not promote growth in a manner that creates problems in the future. One looming issue facing the world is increasing global temperatures. Tree canopy has been shown to mitigate neighborhood temperature. Of the 5 Alternatives in the Comprehensive Plan draft, I favor Alternative 2, Focused. Given that Alternative 1, no change, is unrealistic, Alternative 2 is the best option in that it allows for population and job growth with the least negative impact on tree canopy and biodiversity. The City of Seattle Assessment of Tree Canopy 2021 report (p. 21) found that, in 2021, neighborhood residential comprises 47% of city's tree canopy. By focusing development, per Alternative 2, more tree canopy will be preserved. The most significant canopy in Seattle is comprised of tall native species, such as Douglas firs, which, outside of parks (such as Northacres), are found on residential lots. Such trees are many decades old and would not be replaced in significant numbers by mitigation efforts such as street trees. These tall trees are also habitat for many urban wildlife species. For example, in Seattle it is not uncommon to see Bald Eagles perched, and sometimes nesting, in them. Street trees are not a replacement for these tall native evergreens.

In addition to examining the draft One Seattle Comprehensive Plan and draft EIS, I have reviewed suggestions provided by Birds Connect Seattle (formerly Seattle Audubon) and Friends of Seattle's Urban Forest.

I wholehearted agree with Birds Connect Seattle (BCS) that the Plan should reference Biodiversity as well as Climate and Sustainability. I agree with BCS's suggested changes to the Comp Plan shown in red on their web page: <https://birdsconnectsea.org/wp-content/uploads/2024/04/A-bird-and-nature-advocates-guide-to-commenting-on-Seattles-draft-2024-Comprehensive-Plan-update-v2.pdf>

I especially wonder why the goal of "30% tree canopy by 2037" was changed to exclude a date goal? Is this because the EIS suggests that indeed a substantial decrease in canopy will result

from all Alternatives except Alternative 1?

The remainder of my comments are copied from an email from Friends of Seattle's Urban Forest. These comments and questions are very well thought out and presented, so I do not feel the need to reword them. I have pasted them verbatim below.

Thank you for considering my comments,

Carolyn Crockett
13034 1st Ave NE
Seattle, WA 98125-3005
(206) 363-9527
ccrockett@mac.com

From Friends of Seattle's Urban Forest email dated 5/3/24:

P 3-3-29-30 Please analyze the potential impact of the 5 options on Seattle plants and animals. This is a Seattle EIS, not a regional or state EIS. Saying "unlikely to result in appreciable impacts on regional populations of plants or animals" and "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild" is avoiding commenting on the specific impacts on Seattle plants and animals.

p 3-3-30 Saying that "none of the action alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." is not backed up by facts but speculative at best. The new tree protection ordinance actually increases the potential for tree removal in several ways. One is that all the developmental areas covered by the ordinance state that the newly defined "basic tree protection area cannot be modified" despite Portland, Oregon and the Northwest Society of Arboriculture saying it can be modified to save trees. This and current lot coverage of 85 - 100% for multifamily lots and above and rezoning to occur means more trees, especially large ones, will be removed. What is your estimation of potential canopy acreage loss (over 5 year periods consistent with the city's canopy studies) with increased development density in each alternative?

What is your estimation of planting needs and time frame to replace the lost canopy (over 5 year periods tracked by the city's canopy study)?

Is canopy replacement equivalence even possible with replanting since removed trees, if not removed, would have increased growing according to scientific articles?

What is the acreage available and suitable for planting trees in each of the following public areas- the city's right of ways, Natural Areas and Developed Parks?

How many trees and what size will need to be planted in these areas every year to make up for trees and canopy removed during development on lots?

What is the available acreage available to plant trees on private property?

When will it be possible to reach the 30% citywide goal?

What potential is there for more than 30% tree canopy in Seattle over time?

Is up to 40% canopy coverage, over time, as proposed in the previous Comprehensive Plan possible?

Canopy volume, especially of coniferous trees during our rainy season, are critical factors in reducing stormwater runoff. What is the projected loss in canopy volume over the next 20 years as big trees, including conifer trees are removed?

What is the projected increase in stormwater runoff and what costs are associated with on site and alternative city water management policies of stormwater and pollutant runoff as a result?

As to commenting on other tree potential mitigation measures, add:

Amend the Tree Protection Ordinance to require developers to maximize the retention of existing trees 6" DSH and larger.

Give SCCI Director the ability to ask for alternative site designs to save trees.

Support building higher and building attached units to allow for tree retention and planting areas like Portland, Oregon has with 20% areas for multifamily and 40% for its 1-4 unit family zone.

Amend Tree Protection Ordinance to require ordinance to apply to all city land use zones.

Remove the "basic tree protection area" loophole in the Tree Protection Ordinance that allows developers to unnecessarily remove almost all large trees on lots.

Comment:

- The City should study the impact of higher floor area ratios for middle housing, such as those corresponding to the state model code for middle housing (e.g. allowing FAR of 1.6 for sixplex).
- Study how and where to place social housing projects that are feasible to build in every neighborhood
- Study eliminating parking minimums citywide
- Study the impact of allowing for bolder height and density bonuses within a quarter mile of transit stops

My urban-policy lingo humor is a real hit, you'll have to believe me.

In all seriousness, though, I'm deeply disappointed with the proposal for the comprehensive plan. You asked the people of Seattle what we wanted a year ago, and we went out of our way to tell you: over 60% of respondents wanted Alternative 5 or more. What was it all for? Is there some silent majority that's strongly in favor of restrictive floor-area ratios, parking requirements, and regressive zoning just steps away from light-rail stations? No. There's no silent majority, just a wealthy minority. And it's a terrible shame that you're listening to them instead of the experts, the public, and your own common sense.

Hi –

I have some questions and concerns about the environmental impact of the draft Seattle Comprehensive Plan:

1. How will the plan impact the existing plants and animals that call Seattle home?
2. With increased hardscape and loss of urban forest, where is the analysis that shows tree planting programs will be enough to avoid adverse impacts on tree canopy cover?
3. To reach the 30% canopy goal, how much public land will be made available? To compensate for trees lost due to development, how many trees will need to be planted every year?

Mr. Holmes,

I'm writing with feedback on the draft comprehensive plan and specifically on the EIS that is available at the website <https://storymaps.arcgis.com/collections/bc280a13a8ee4db28cd4d602ffe69336?item=1>.

I live in the Ballard area and have for 40 years. I grew up across the street from Haller Lake United Methodist Church about 3 blocks from the projected light rail station at 130th. I have been a friend of the church for about 20 years. We have become aware of the need for more housing in the area especially affordable housing. Churches are rising to the occasion but need help meeting this need. The Zoning changes happening with the Comprehensive plan is one way to provide help.

I am working with the congregation in a discernment process that is leading toward building housing on the property at 133rd and 1st Ave. NE. We have talked with neighbors and community leaders in our area. We have met with city representatives and government officials. We have partnered with community organizations and grass roots organizers. What we are hearing is that there is widespread support for more dense housing in the area, especially on this property. We see the possibility for that kind of development in Alternative 5 of the EIS and support moving in the direction of more dense housing throughout the city.

However, we also know from experience, and hear repeatedly from our neighbors, that the neighborhood around our proposed project is sorely lacking in small businesses and options for gathering, shopping, and creating community. Therefore, we would like to be able to consider creating such a space in the development on our property when we are ready to partner with a developer. None of the alternatives in the DEIS currently allow for commercial or mixed commercial and residential development on our corner. **We would like to request that the DEIS be revised to include NC2-55 zoning for the church property, Lots 3, 4 and 5, of block 65, in the H.E. Orr Park Division No. 6** so that a development might be considered that includes both commercial and residential components.

We are still in the beginning phases of planning. We don't have a developer yet but we have talked with several possible developers and have heard that the zoning, current and projected by the DEIS, limits their ability to dream with us about how we might become community with neighbors who aren't here yet.

Please consider this request and be part of the dream to build a community with space for all.

Thank you,

[Jon Daniel](#)

Subject: We need more housing
Date: Saturday, May 4, 2024 12:30:14 PM

CAUTION: External Email

The city's released growth plan is wildly insufficient for Seattle's needs. Looking through it makes me wonder if city leadership even realizes that we're in the midst of a housing crisis. Just to be safe, hey, city leaders, we're in a housing crisis. Rents are out of control. Homelessness is out of control because people can't afford the rent. People are spending less at local businesses because more and more of their money is going towards rent. There are just plain more people who want to live in Seattle than there are places for them to live.

175-1

But how to fix this problem? Well, I've heard of this radical new idea of responding to increased demand and rising prices by increasing supply. OPCD's earlier housing abundance map, for example, provides something much closer to what the city actually needs. Now, I know building more housing in response to demand is a controversial idea in some circles, so I'll attempt to address some of the common criticisms.

Displacement. Some people claim that building more housing will displace those already living in the area. There's one problem with that argument. People are already being displaced. Turns out that rising prices can displace people just as easily as tearing a building down. At least building more housing means that the displaces people can remain within their existing neighborhoods rather than having to move to Tacoma because it's the only place they can afford.

Character of the neighborhood. This is a classic argument for NIMBY types. The idea that building denser housing like triplexes, row houses, and low rise apartments ruins the "character of the neighborhood." This is an argument that is dripping with classism and occasionally racism. "Ruining the character of the neighborhood" in this case seems to mean "letting the poor in." Sometimes it even means "letting the Blacks in." I don't want to live in the kind of city where these kinds of arguments are entertained. The other problem with this argument is that high homeless rates aren't exactly good for the character of the neighborhood either. For that matter, loss of the residents who provide that character through rising rents isn't great either. Finally, I doubt anyone would call the neighborhoods of Paris "lacking in character" despite much higher levels of density than what we have in Seattle.

Traffic. More people means more traffic, right? Well, not exactly. It turns out that people who live in denser, mixed use, neighborhoods drive a lot less. After all, if most everything you want is within walking distance, why drive? In addition, people who live on transit corridors are more likely to take transit rather than drive. Finally, shorter commutes contribute less to traffic than longer ones. If people can't live in the city, they'll live in the suburbs, and drive into the city for work. They'd clog up our city streets with their longer commutes, and the city wouldn't even get their tax revenue because they'd be living elsewhere.

That's actually a springboard to one last point. It's a well-established fact that denser neighborhoods bring in more tax revenue to the city. This is a strong enough effect to even outweigh the effects of wealth. On a dollar per land area basis, a low-income apartment building brings in more tax money to the city than the swankiest mansion. For a city that's struggling with a budget deficit to the point of cutting funding to popular social programs, taking advantage of this effect is an absolute necessity. A housing plan as lacking as the current one will instead serve to drain the city's coffers as it drives people to the suburbs, where they'll still use city resources by driving on city roads to jobs in the city, but will pay property taxes outside of it. In short, a denser housing plan will make balancing the budget much easier, while the current plan will make it substantially harder.

I could try to tie all this together with one last grand statement, but if you've read this far, you probably get the point by now. If you actually want what's best for the city of Seattle, you'll give us a better housing plan. It's really as simple as that.

Sincerely,

Casey Daniels

Comment:

Much research has been done by UW Traffic Lab's ("Final 50 Feet," "Alley Inventory") and SDCI ("Residential Loading Berth and Delivery Activity and Standards Research") documenting Seattle's need to adopt land use changes to meet the growing need to adopt and implement a formal "Urban Freight Plan," to better manage direct delivery of goods and services to dense neighborhoods. Left unmanaged, increased deliveries to increasingly dense neighborhoods results in increased traffic congestion and avoidable carbon emissions. Adoption of an effective Urban Freight Management Plan should be called out as mitigation for transportation impacts which the EIS predicts will be significant under all five alternatives.

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

Subject: Three Critical Questions for the City's Comprehensive Plan
Date: Monday, May 6, 2024 4:59:27 PM

CAUTION: External Email

Hello!
I have three questions to consider, please, in relation to the city's comprehensive plan and Section P 3-3...

1. Can you please let me know, what is this impact precisely on Seattle’s plants and animals?
2. Also, what research proves that tree-planting programs, along with increased tree removal, will make up for lost urban forest?
3. I'm also wondering, how much public land is available to succeed the city's canopy goal of 30%, as stated in the plan? Is there a record available stating how many trees will need to be planted in these areas every year to make up for trees that would be removed with development?

179-1

Thank you in advance for diligently looking into these questions. This is critical to our environment. Every tree lost is critical right now to our environment and the climate. And, in Seattle, we love our urban nature!

Sincerely,
-Kirtana Devi

Yes, we need more affordable housing, but we also need to have healthy and livable communities that are climate resilient.

The following are comments on the One Seattle Comprehensive Plan's Draft Environmental Impact Statement (DEIS).

- Stormwater will be an issue with the planned extensive increase in impervious surfaces will increase runoff. What measures will be taken to prevent flooding streets and buildings and the scouring of receiving creek beds?
- The DEIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity, or sustainable urban forestry.
- The DEIS does not analyze the probable scale of impact of tree loss or give numbers and does provide analysis of cumulative impacts. Yet the DEIS speculates, without evidence or analysis, that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover."
- No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

182-1

Mitigation recommendations:

- Protect mature tree canopy as mitigation for stormwater management.
- Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration. Please make me a party of record for future communications on the EIS and the One Seattle Comprehensive Plan in general

CAUTION: External Email

I am disappointed in the vague statements in this plan related to the protection of trees and wildlife in this city. Where are the data points and what is the plan for centering environmental protection and environmental justice into the future of our community? We know we're in a climate crisis. Protecting and increasing tree canopies is vital to combat this. We know we're in a mental health crisis. Being exposed to nature/trees regularly is vital to combat this. We know as a city we have prioritized easy/cheap builds over protecting the greenery that makes Seattle so unique compared to other cities.

I see first hand in my neighborhood mature trees that should be considered safe under current protections consistently removed to build new mega-sized homes. It is not enough to just replant trees and hope they make it.

I've seen countless 'infrastructure improvement projects' that also kill mature trees instead of coming up with creative solutions to keep them.

The city needs a comprehensive plan that truly includes and centers saving mature trees. Growth and tree protection can go hand in hand. We are smart enough to figure this out.

Thank you for the work you all do for our city. I hope we can figure out how to keep our tree canopy not only intact, but growing.

Please note the following as comments on the DEIS:

- 1: Section P 3-3 states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild." What is the impact of the plan specifically on Seattle's plants and animals?
- 2: Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." What analysis shows that tree planting programs, coupled with increased hardscape, will compensate for lost urban forest?
- 3: The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development?

Sincerely,
Jill Doran

Comment:

As a life long Seattle resident, long term Seattle Parks volunteer (retired), and home owner in the Magnolia neighborhood, I am pleased to make comment on the draft Comprehensive Plan. I retired from my nursing career early so I could devote more time to environmental restoration in Seattle Parks and the Western Washington region. That time was wonderful, and gave me an appreciation of our City and region that informs the comments to follow. Thanks for this opportunity.

1. Revise the climate and sustainability element to to become the climate biodiversity and sustainability element, acknowledging biodiversity as a goal of the comprehensive plan. While a park steward with the Green Seattle partnership at Lawton Park a few blocks from my home, I was privileged to witness the life cycle of Coopers hawks for years at the park. The hawks at Lawton fledged chicks every year from 2012 to 2023 and were studied and documented by the Urban Raptor Conservancy (URC) group who published their findings. It's hard to describe the thrill of encountering these birds at close range as I was privileged to do many times at Lawton Park- a 10 acre space adjacent to Lawton Elementary School where I often walked with my wheel barrel to work. URC has documented that urban hawks can thrive but face challenges that we here in Seattle can mitigate by acknowledging the value of wildlife and biodiversity. I urge you to protect and enhance the habitat quality of City owned property like parks, streets and undeveloped street right of ways that are often adjacent to parks.

2. Tree canopy (pp149-150) will be critical to Seattle's quality of life for people and wildlife. Reintroduce the timeline and stretch goal CE G12 to a tree canopy that covers at least 30% of the land by 2037 and 40% eventually. Page 3.3-5 states "Notably, most canopy loss was not associated with development activities; only 15 % of the canopy loss occurred on parcels that underwent development during that period" but a canopy change analysis from the Washington Department of Fish and Wildlife "determined that at a minimum, development or redevelopment of parcels in Seattle was the agent of change for approximately half of all tree loss that occurred between 2009-2017." The City's updated tree ordinance mentioned page 3.3-7 still needs revision to protect biodiversity in the City that is liable to decline.

3. Add a policy under LU G17 : "seek to increase both number and area of fish and wildlife conservation areas".

Re: *Comments to One Seattle Plan and EIS: 16th Avenue East and Other Infill Opportunities*

Dear OPCD:

Thank you for the opportunity to comment on the Draft One Seattle Plan (“Draft Plan”) and the related Draft Environmental Impacts Statement (“DEIS”). This letter addresses a specific fact pattern on our block, which is no doubt relevant in many additional instances throughout the City. After providing initial background about the issues our block is facing, this letter provides recommendations to address these problems both for our block and for similarly situated blocks in many parts of the City.

Specifically, we request an upzone to better match adjoining blocks, as well as additional EIS analysis and text revisions to the Code and the Plan that would provide continued flexibility into the future.

The City’s action on these recommendations would allow policymakers, staff, and the public to effectively respond to changing neighborhoods and needs in support of the Administration’s and the City’s policy goals.

A. Background: Unintended Consequences under Current Code.

We own (and in three of four cases, reside at) 415, 421, 425 and 431 16th Avenue E, APNs 4232400690, 4232400695, 4232400700 and 4232400706. These properties are mapped on the following page. As shown, they are zoned NR3, but immediately abut property zoned NC2P-55(M).

As you can see, our location on the easterly side of 14th Ave. E between E Republican Street and E Harrison Street benefits from excellent urban services, transit, and walkability. By all applicable metrics and under this Administration’s policies and the One Seattle Plan, this location is an excellent place to provide additional housing density at market rents, affordable rents, or a mix.

This neighborhood is already dramatically changing around us. Immediately abutting our properties to the west, the City is evaluating a vested application for a six-story, 172-unit apartment building with retail and 102 parking stalls. We cautiously welcome the density, walkability and services

185-1

this development will provide, but it will create a jarring transition next to our homes. To allow adjustment to this transition and new transit-oriented density to be developed on this block, we request an upzone to LR3(M), to match properties to the north and south. Simply put, the Block's current Neighborhood Residential ("NR") zoning is outdated and is unnecessarily precluding the City and the block from valuable and badly needed additional housing capacity.

As shown in the attachments, one of us have previously conveyed such concerns to City decision-makers, with a request for action. However, the existing code retains outdated planning strategies that have prevented this block from providing the additional density it otherwise could, by prohibiting owner-driven upzones except in overly prescriptive and inflexible circumstances. *See* SMC 23.34.010.A¹ and 23.34.013.² While these policies may have been well-intentioned, in the context of a burgeoning housing crisis and pro-density residents, today they are clearly outdated.

B. Requested Map Change in Zoning Map and Future Land Use Map for Final One Seattle Plan ("Final Plan").

For the reasons briefly covered in the previous section, the block's zoning is outdated, which artificially and unnecessarily suppresses the housing supply it could provide at its location in close proximity to excellent transit, urban services, and walkable commercial density. It also results in an uncomfortable and unnatural built environment where single-family houses stand in the shadow of a dramatic six-story building project that will likely result in a jarring transition as opposed to the wedding-cake model that is now known to be a best practice. We do not wish to oppose the neighboring project, but rather request an upzone so that our properties will be permitted to complement it with compatible degrees of infill residential density.

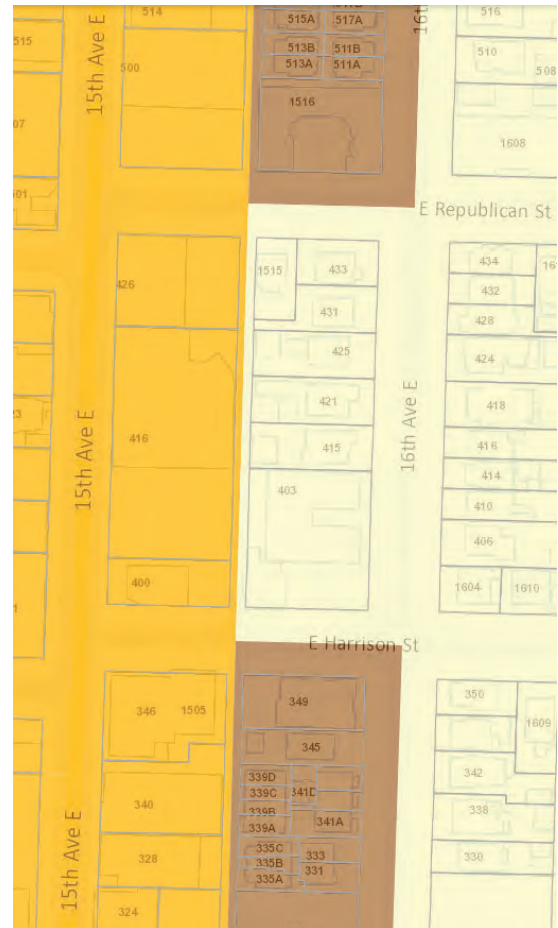

Figure 1. Current zoning of vicinity surrounding our homes. Light yellow properties are zoned NR3 and light brown properties are zoned LR3(M). Mustard yellow properties are zoned NC2-55(M), with a pedestrian designation in most circumstances.

¹ "Except as provided . . . single-family zoned areas may be rezoned to zones more intense . . . only if the City Council determines that the area does not meet the criteria for single-family designation."

² "An area zoned single-family that meets the criteria . . . may not be rezoned to multifamily except as otherwise provided in Section 23.34.010.B."

We understand that the proposed zoning map for the One Seattle Plan will be released in approximately July or August of this year. We request that the map and the Mayor's Recommended Plan provide LR3(M) zoning to the westerly side of 16th Avenue E between E Harrison and E Republican, and correspondingly append this same area to the "Regional Center" designation that already adjoins us to the north and south.

This change would allow our block's zoning to match what is already located to the north and south, and to provide a less jarring transition between NR zoning (across the street from this location to the east) and NC zoning (across the alley to the west). The change would be consistent with multiple policies set forth by the Mayor, as contemplated in the Draft Plan, including most notably draft GS 6.2 ("Allow moderate-scale housing of 4 to 6 stories in areas . . . along arterials where zoned densities may be increased to provide more housing options near frequent transit").

C. Requested Policy Change in Final Plan, and Related Implementing Regulations.

In addition to applying NR3 zoning and Regional Center designation to the subject area, the Mayor's Final Plan should be updated to acknowledge existence of areas like ours, in order to allow such areas to not remain unnecessarily stuck for another planning cycle. At a minimum, these changes should be as bulleted below. These revisions would recognize that some Urban Neighborhoods are already very well served by urban services and appropriate for multifamily densities, and therefore may be suitable for low rise multifamily and other upzones in the future.

- At Page 27, "While some Urban Neighborhoods are not within walking distance of ~~lacking~~ the larger business districts located in centers . . ." and "By providing new options to add density, like middle housing . . ."
- At GS 6-2, "Allow moderate-scale housing of 4 to 6 stories in areas currently zoned for such housing and ~~along in the near vicinity of~~ arterials where zoned densities may be increased to provide more housing options near frequent transit."
- At Page 66, "It includes more low-scale housing options in Urban Neighborhoods across the city, and mid-scale options in parts of Urban Neighborhoods that are appropriate for greater densities."

Development regulations to implement the Final Plan should repeal SMC 23.34.010.A³ and 23.34.013.⁴ This is a needlessly inflexible rule that has kept areas like ours from appropriately responding to changing circumstances around them. This lack of flexibility is not consistent with the Mayor's vision for One Seattle.

Similarly, to implement the Final Plan, SMC 23.34.010.B.2.d should be revised to allow upzones if the proposed upzone is "[w]ithin or adjacent to a neighborhood center, regional center or urban center

³ "Except as provided . . . single-family zoned areas may be rezoned to zones more intense . . . only if the City Council determines that the area does not meet the criteria for single-family resignation."

⁴ "An area zoned single-family that meets the criteria of Section 23.34.011 for single-family designation may not be rezoned to multifamily except as otherwise provided in Section 23.34.010.B."

~~an urban village and the Comprehensive Plan Future Land Use Map designation is a designation other than Single Family.~~” This code change would allow the Council, staff, owners and residents the flexibility needed to respond to changing circumstances as the City evolves.

185-2
cont

D. Requested Change in Final Environmental Impact Statement.

To enable maximum nimbleness in finalization and implementation of the Mayor’s Recommended Plan both at the Council level and in future years, the Final Environmental Impact Statement should, in at least one of the Action Alternatives, please study the addition of the easterly block of 16th Avenue E, between E Republican Street and E Harrison Street, to the adjoining Urban Center (titled a “Regional Center” under the Draft Plan).

185-3

Additional textual changes could help maintain flexibility for future policymakers, from the Council down to planning staff. Accordingly, we recommend additional textual changes in **Exhibit A** to this letter.

Sincerely,

Doug Du Mas and Cherry Haisten

APPENDIX A:

SUGGESTED EIS TEXT CLARIFICATIONS TO MORE CLEARLY ACKNOWLEDGE RESIDENTIAL NEIGHBORHOODS DIRECTLY ADJACENT TO CENTERS

I respectfully suggest these text changes to the EIS, in order to allow the Council, staff, and property users greater flexibility to creatively respond to circumstances on the ground in future development and planning efforts.

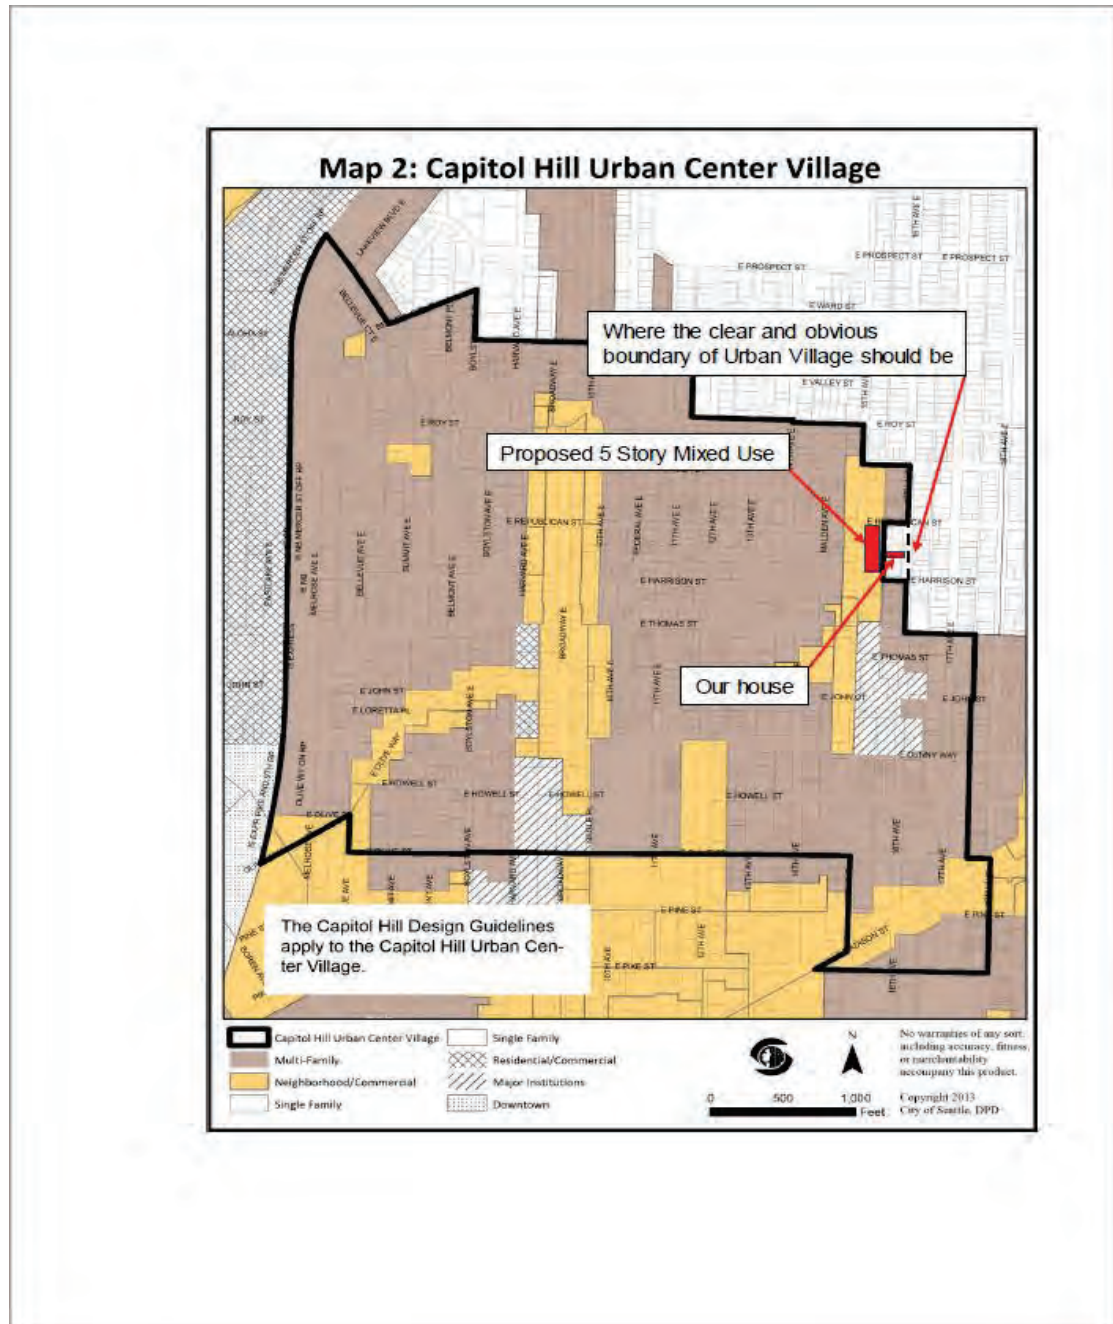

- At 1-3, 1-11, and 2-34, “Housing in the urban neighborhood place type could include . . . stacked flats and sixplexes on larger lots and lots that are adjacent to more densely zoned areas.”
- At 1-8, “Urban Neighborhoods represent primarily low-scale, ~~primarily~~ residential areas.”
- At 1-65, “Non-stacked housing ~~refers primarily to~~ unit types are primarily expected to be built in Urban Neighborhood Residential zones.”
- At 1-100 and 3.12-18, “For example, a greater degree of utility improvements may be required in many (but not all) urban neighborhood areas for multifamily development than in urban centers.”
- At 2-3, “This place type would allow flexibility for new forms of housing in areas currently zoned primarily for detached homes, including stacked flats and sixplexes on larger lots and lots that are adjacent to more densely zoned areas.”
- At 2.4-2, add a footnote to the “Urban Neighborhood” category indicating that “This EIS accounted for the possibility of additional height in Urban Neighborhoods on larger lots and lots that are adjacent to more densely zoned areas.”
- At 2.4-34, “Market-rate development in most of these areas would continue to have a three-story height limit, consistent with current rules in Neighborhood Residential zones.”
- At 2-54, in Ex. 2.4-33’s third row, “Neighborhood residential: 30 ft in most cases”
- At 3.2-36 and 3.4-17, “Under Alternative 3, a wider range of low- and mid-scale housing options in urban neighborhood areas would be allowed, expanding housing choices and allowing additional housing options near existing parks and other amenities.”
- At 3.6-14, in the lefthand column, under *Neighborhood Residential Areas*, “Neighborhood residential areas provide opportunities for detached single-family and other compatible

housing options that have low height, bulk, and scale in order to serve a broad array of households and incomes, and to maintain an intensity of development that is ~~appropriate for~~ responsive to areas with limited access to services, infrastructure constraints, fragile environmental conditions, or that are otherwise not conducive to more intensive development.

- At 3.6-14, in the righthand column, opposite *Neighborhood Residential Areas*, “• Neighborhood Residential (NR1, NR2, and NR3) and potentially Lowrise Multifamily (LR1, LR2, and LR3) to serve a broad array of households and incomes in appropriate areas that are conducive to such development.”
- Footnote 1, “See Appendix G.1 for more detailed summaries of general zoning categories and overlay districts, respectively. Additional zones, beyond those listed here as “typical,” may be appropriate in certain circumstances.”
- At 3.6-145, “Alternative 3 would allow a wider range of low-scale housing options—like triplexes and fourplexes—in all urban neighborhood areas (see Exhibit 2.4-16) and could include stacked flats and sixplexes on larger lots and lots that are adjacent to more densely zoned areas.”
- At 3.6-147, “Alternative 3 would allow missing middle housing types . . . in urban neighborhood areas, and potentially greater densities on larger lots and lots that are adjacent to more densely zoned areas.”
- At 3.6-162, “Similar to Alternative 2, urban neighborhood areas that are currently primarily 1- and 2-story buildings would be allowed to develop up to 4- to 5-story buildings, especially on larger lots and lots that are adjacent to more densely zoned areas.”
- At 3.6-183, “Where middle housing is allowed in urban neighborhood areas, more properties may develop with 3-story (or 4-story if affordable) buildings adjacent to 1- and 2-story buildings, or to greater heights on larger lots and lots that are adjacent to more densely zoned areas.”
- At 3.12-23, “The addition of multifamily homes of various sizes—~~duplexes up to sixplexes~~—would likely require construction of new water and electrical service connections and potential upgrades to wastewater and drainage facilities to accommodate greater population and development density in many (but not all) cases, particularly in areas characterized by large-lot single-family zones.

APPENDIX B:

Illustrations previously transmitted to City officials with previous comments on this matter in April 2018 (in public comment and by written correspondence to CMs Sawant and Johnson) and February 2024 (by email to Michael Hubner, Nick Welch, Brennan Staley, Jim Holmes and Nathan Torgelson as well as Councilmembers Tammy Morales, Joy Hollingsworth and Dan Strauss).

CAUTION: External Email

I like the combined plan but I still don't think it goes far enough. We still need more homes than that if we're to bring down the housing costs and putting them closer to light rail and transit makes sense. I'd also like to see more smaller-scale commercial accessible from neighborhoods and near transit centers. It would be nice to do shopping and daycare drop-off on the way to/from the train.

We specifically need more child care and locations for child care in the neighborhood though. The lot for Northgate Whizz Kids Academy (in Pinehurst) is currently for sale and they have had trouble finding other suitable locations nearby.

Thanks,
Phillip

Re: Support for Alternative 5 and additional height and density studied in small parcels zoned NC-55 to encourage development and create a workable Mandatory Housing Affordability program.

Dear Mr. Holmes,

Thank you for the opportunity to provide feedback on the One Seattle Comprehensive Plan Draft Environmental Impact Statement (“DEIS”).

I am an owner/partner of four sites currently zoned NC-55, at 2514, 2518 and 2616 East Cherry Street and 533 26th Avenue in the Central District neighborhood (District 3). 2514 and 2518 East Cherry Street are each 40 feet wide and 100 feet deep. 2616 East Cherry is 45 feet wide and 60 feet deep. 533 26th Avenue is 100 feet wide and 100 feet deep. These properties are typical of many small/shallow NC-55 sites around the city. Many of these parcels belong to longtime property owners, often families or owner-users, who do not have development or land use expertise. My own awareness comes from having started the redevelopment process on two of these parcels before the MHA legislation went through, and then having to rush to get that process vested to NC-40 in 2019 when I realized the devastating negative impact that the MHA formula would have for these sites.

While I was a proponent of MHA generally, the warnings that we gave to Councilmembers and Staff about the MHA changes to what were NC40 sites, prior to the adoption of the Citywide MHA program, have come true. The MHA payments have terribly diminished the existing value of this category of sites and made any new units that could be developed under MHA much more expensive than they previously were. In short, MHA has been a success in some zones, but in NC-55 zones (formerly NC-40), the program has been a disincentive to housing development. As such, I urge OPCD to study several policy suggestions outlined later in this letter.

First though, a reminder of why formerly NC-40 sites were always challenging, and therefore why the MHA changes tipped them from being challenging to infeasible, depressing housing creation and MHA fees in the NC-55 zones:

1. These sites are often on smaller commercial streets and tend to be relatively small and shallow, because they were historically zoned to reflect and/or encourage a shallow row of retail “liner” buildings in otherwise residential neighborhoods.

187-1

2. As such, they typically back up to immediately adjacent LR and NR zones, with no separating alley, and are therefore subject to a 15-foot setback at all the residential floors (i.e. above 13 feet). This condition can be found not just along East Cherry but, as just a few further examples, along the north side of Yesler in the CD, the west side of 15th Avenue on Capitol Hill, and the east side of 34th Avenue in Madrona.
3. The setback is very impactful on these shallow sites. At 2616 East Cherry, for example, the 15-foot setback removes 25% of the residential floor area. This means that the proscribed 3.25 FAR barely fits (and only if the ground floor is built to the back lot line with a blank wall). It also means that the stairs/elevators/hallways of a new building take up an inordinate amount of the floor plate relative to actual living space.
4. As NC-40 sites had started to be redeveloped around the city prior to 2019, a saving grace was that their four-story height didn't necessarily demand an elevator; and some innovative developers were choosing to do these as walkups (e.g. Pax Futura in Columbia City). This saved valuable FAR from being consumed by the elevator shaft and circulation space around it, and also saved \$150k or more in purchase price for an elevator, and thousands more per year in annual operating expenses, improving both the feasibility of these sites and the affordability of the units. Unfortunately the fee payments that came with the MHA upzone subtracted mightily from the economic viability of this solution.

MHA gave these sites an additional 0.5 FAR and an extra floor of height (from NC-40 to NC-55) but as illustrated by the points above, there is no practical way to use it. The 15-foot setback means that the four stories are already completely filled out. Going to five stories in order to capture 0.5 FAR on a small site is ENORMOUSLY expensive and inefficient. Market wisdom dictates that five floors necessitates an elevator, which along with the two stairs, circulation space, trash room/shaft easily consumes 600-800 SF per floor. On a site like 2514-2518 East Cherry, of the 4,000 SF in additional FAR, up to 25% of the additional floor would be consumed by common area. On an even smaller site like 2616 East Cherry (even with one stair serving less than four units per floor), a third to a half of the additional 1,350 SF in FAR would be consumed by the common area. In both cases, the enormous costs of adding an elevator and the building skin for an additional floor would far outweigh the finished value of the meagre additional living space created, and this is even BEFORE the costs of paying the MHA fees.

I am suggesting a multi-part solution for NC-55 sites that could be selectively applied to sites that directly abut residential zones and are less than 120 feet deep or 10,000 SF total:

1. Increase the FAR so that a full fifth story is possible on these sites, meaning a full 5.0 FAR. While this is likely not always useable due to need for windows, light and air, it would make these small sites useable to the five stories that the zoning intended.
2. Reduce the frequency of NC-zoned sites abutting neighborhood residential zones, and rezone the “back half” of these NC blocks from NR to NC. The City should work to eliminate these impactful transitions where NC zones abut NR directly or across an alley. Please study in the DEIS options that eliminate these transitions. The DEIS discloses that transitions in scale may be an issue in all alternatives, but the best way the City can mitigate this is to eliminate these awkward transitions altogether.
3. Study in the DEIS the elimination of upper-level setbacks when these transitions do occur in order to prioritize housing development. Eliminating upper-level setbacks will allow the full FAR to be utilized in these zones. The OneSeattle Plan's main goals revolve around increasing housing choices and expanding housing opportunities across the City. Whole swaths of the NC-55 zones

have been underdeveloped because of the combination of too-low FAR and these setbacks that are “protective” of neighborhood residential zones. As you are aware and the DEIS discloses, neighborhood residential zones have been “protected” for years “from” development in a manner that has been highly inequitable and exclusionary. Please consider whether protective setbacks of neighborhood zones is indeed an equitable solution.

Subject: DEIS Comments and Questions re One Seattle Draft Plan
Date: Monday, May 6, 2024 10:10:11 AM

CAUTION: External Email

City of Seattle Staff:

I have the following questions regarding the DEIS for the Draft One Seattle Plan.

1. Current and proposed alternative setback requirements for multi-family dwellings of all types on arterials do not allow adequate space for both pedestrian access and adequate and substantial tree canopy. Residents of units facing those arterials therefore have no or inadequate buffers from noise pollution, air and particulate pollution, and heat island effects along these corridors due to lack of shade and inadequate carbon absorption. So-called affordable housing is almost universally proposed to be along these arterials, and lower income households will suffer the greatest effects. The DEIS states "major policy updates" can mitigate some effects of increased density and population. **Please provide your analysis of increasing the threshold building setback requirements on arterials for each of the alternatives, with supporting data and research. How much of Seattle's tree canopy deficiency can be met with street trees? With policy updates regarding setback requirements, how much could be met, and what would those policy requirements need to be, given the Plan's apparent reliance on street trees to provide mitigation?**
2. **What is the supporting data and research behind the DEIS assertion that "No significant unavoidable adverse impacts to air quality and greenhouse gas emissions are anticipated."**
5. Multiple neighborhoods in Seattle that are within both urban cores and urban neighborhoods, along with substantial buffer zones alongside those cores, and that are expected to absorb a substantial amount of increased units, do not have sidewalks. Greenwood north of N 85th St is one such area. The plan is designed to increase walkability, however safe walkability is not possible without sidewalks. **How much of Seattle's development under each of the alternatives is in areas currently without sidewalk? What data and research do you have regarding the walkability for areas currently without sidewalks, and the number of miles of sidewalk needed in order to meet a minimum standard of walkability?**
6. **What plans does the City have to add parks in areas with heavy concentration of**

188-1

188-2

188-3

188-4

apartment buildings? What land does the City intend to buy for this purpose? How many acres would this need to encompass? How many trees would need to be planted in these parks to mitigate tree loss on other parcels?

188-4
cont

7. When no parking is provided for private automobiles in order to encourage use of public transportation, grocery stores must be within walkable distance from population centers. Approximately one supermarket is required for every 10,000 residents. As has been well-publicized, numerous supermarkets have closed around the city due to consolidation in the grocery industry. Current apartment development along the Aurora corridor and in the Duwamish Valley, for example is occurring outside the range of walkability to a supermarket, and will increase city-wide under any of the alternatives. **What is the number of supermarkets that will be required to support increased density in each zone? What location, within a range, will these supermarkets need to be in, and what is the availability of land or structures for them? What incentives will the city need to provide in order to lure supermarkets back into the city in an amount sufficient to meet the development need, and for developers to put aside ground-level units for supermarkets?**

188-5

8. **What is the anticipated family size of Seattle's population in the next 20 years? To what extent will family size differ by income, ethnicity, race, or other family background? To what extent will the standard of two bedrooms as the criterion for a family-sized unit meet the need of Seattle's families? To what extent will two bedrooms as family size provide equity? Please provide supporting documentation.**

188-6

9. **Working parents with children need daycare even for school-aged children. How will Seattle's anticipated transportation pattern, using the bus and rail system that is available only in major corridors, enable parents to get children to and from daycare and still get to their employment on time, considering that multiple parents will not work on direct buslines? How will this transportation and overall land use allow daycares to afford rent in sufficient areas of the city to meet the need? Please provide supporting documentation.**

188-7

10. **To what extent will Seattle's future housing be stair-free and suitable for seniors? Please provide supporting documentation.**

188-8

11. The DEIS states, "Given that habitats in the city limits represent a very small proportion of the total amount of habitat available to any species, differences in the availability or distribution of habitats in the city would be unlikely to result in any appreciable impacts on regional populations of plants or animals." *Yet development and population growth is expected to be statewide*, in fact has been encouraged by HB 1110, and is certainly occurring with accelerating speed in King, Snohomish, and Pierce Counties. The DEIS

188-9

has simply skirted this issue, which is unacceptable. This is a DEIS about a plan for Seattle, and ***Seattle has a responsible and key position within the region that cannot and should not be abdicated.*** What is the supporting documentation, including data and research, showing the impact on plants and animals of development in Seattle proper?

188-9
cont

12. The DEIS states, "none of the action alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." Supporting data and research is not provided. **What would be the potential loss of tree canopy, in acreage, with increased development and density in each alternative, over each of the successive five year periods?**
13. **What impact on tree canopy loss would modification of the basic tree protection area have, for each of the alternatives, over successive five year measurement periods?**
14. **How many trees would need to be planted, and over what period of time, to replace trees and tree canopy (number of trees, size and volume of canopy) lost to development in each of the five alternatives? How many acres and how many privately owned parcels would this require?**
15. **What heat island effects would occur in the interim between planting and sufficient maturity to replace existing canopy and canopy lost over the past 20 years?**
16. **What kinds---species and varieties--- of trees would need to be planted to provide suitable nesting and food for urban birds to compensate for trees lost to development? How many such trees would be needed to maintain the current urban bird population? How long would it take for those trees to reach a size capable of providing habitat?**
17. **What is the available acreage available to plant trees on private property?**
18. **As noted above, what building setback requirements would be needed to enable street tree planting to occur sufficiently, with sufficiently large trees with sufficient volume and canopy, to compensate for tree loss due to development?**
19. **When will it be possible to reach the 30% tree canopy citywide goal? What would the 20 year climate change and heat island impact be of Seattle abdicating its role in maintaining a minimum tree canopy of 30%?**
20. **What potential is there for more than 30% tree canopy in Seattle over time? To what**

extent is 40% canopy coverage possible over time as proposed in the previous Comprehensive Plan possible, under each of the alternatives?

21. **Canopy volume, especially of coniferous trees during our rainy season, are critical factors in reducing stormwater runoff. What is the projected loss in canopy volume over the next 20 years as big conifer trees are removed?**
22. **What is the projected increase in stormwater runoff and what costs are associated with on-site and alternative city water management policies of stormwater and pollutant runoff as a result?**

188-9

Subject: Comments on One Seattle Comp Plan Draft
Date: Monday, May 6, 2024 1:05:17 PM

CAUTION: External Email

I write in agreement with comments posted by Friends of Seattle's Urban Forest, to wit: "The following comment is in regards to legislation passed last year on Comprehensive Plan requirements

- 1. In the Climate and Environment Section, p 149, of the draft One Seattle Comprehensive Plan, the heading **Tree Canopy**, should be changed to **Urban Forest and Tree Canopy**.
- 2. Discussion - Seattle's urban forest and tree canopy is fundamental...

Rationale for adding urban forest is legislative amendments noted in text below.
Highlighting is from Friends of Seattle's Urban Forest, for pointing out specific sections.
Underlined areas are new to the 2023 legislation.

The Washington State Legislature in 2023 passed [E2SHB 1181](#) - AN ACT Relating to improving the state's climate response through updates to the state's planning framework.

189-1

Section 1.(14) Climate change and resiliency. Ensure that comprehensive plans, development regulations, and regional policies, plans, and strategies under RCW 36.70A.210 and chapter 47.80 RCW adapt to and mitigate the effects of a changing climate; support reductions in greenhouse gas emissions and per capita vehicle miles traveled; **prepare for climate impact scenarios; foster resiliency to climate impacts and natural hazards; protect and enhance environmental, economic, and human health and safety; and advance environmental justice. ...**

Section 3.(3) The comprehensive plan of a county or city that is required or chooses to plan under RCW 36.70A.040 shall consist of a map or maps, and descriptive text covering objectives, principles, and standards used to develop the comprehensive plan. The plan shall be an internally consistent document and all elements shall be consistent with the future land use map. A comprehensive plan shall be adopted and amended with public participation as provided in RCW 36.70A.140. Each comprehensive plan shall include a plan, scheme, or design for each of the following: (1) **A land use element designating the proposed general distribution and general location and extent of the uses of land, where appropriate,** for agriculture, timber production, housing, commerce, industry, recreation, open spaces and

green spaces, urban and community forests within the urban growth area, general aviation airports, public utilities, public facilities, and other land uses. The land use element shall include population densities, building intensities, and estimates of future population growth. The land use element shall provide for protection of the quality and quantity of groundwater used for public water supplies. **The land use element must give special consideration to achieving environmental justice in its goals and policies, including efforts to avoid creating or worsening environmental health disparities.** Wherever possible, the land use element should consider utilizing urban planning approaches that promote physical activity and reduce per capita vehicle miles traveled within the jurisdiction, but without increasing greenhouse gas emissions elsewhere in the state. **Where applicable, the land use element shall review drainage, flooding, and stormwater runoff in the area and nearby jurisdictions and provide guidance for corrective actions to mitigate or cleanse those discharges that pollute waters of the state, including Puget Sound or waters entering Puget Sound.** The land use element must reduce and mitigate the risk to lives and property posed by wildfires by using land use planning tools, which may include, but are not limited to, adoption of portions or all of the wildland urban interface code developed by the international code council or developing building and maintenance standards consistent with the firewise USA program or similar program designed to reduce wildfire risk, reducing wildfire risks to residential development in high risk areas and the wildland urban interface area, separating human development from wildfire prone landscapes, and protecting existing residential development and infrastructure through community wildfire preparedness and fire adaptation measures.

189-1
cont

2nd change - In the Land Use Element General Development Standards:
Policies L.U.4.8 add underlined words.

Urban forest and tree requirements to preserve and enhance the City's physical, aesthetic and cultural character and to enhance the value of the trees and urban forest in addressing stormwater management, pollution reduction, climate resiliency and heat island mitigation."

Subject: Seattle's Comprehensive plan and tree canopy: choose alt 2 or 4
Date: Saturday, May 4, 2024 12:49:09 PM

CAUTION: External Email

I am a resident of Seattle, District 6, and I am concerned with our diminishing tree canopy and the proposed comprehensive plan's impact on tree canopy.

Tree canopy isn't just nice, making Seattle "pretty" and "The Emerald City" in name only. Tree canopy provides essential cooling in our warming climate and increasingly paved city. Trees provide vital habitat for urban wildlife which, for me, is a major reason to live here.

Specifics of the plan I'd like to address are:

The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development?, and how much of that land can even support additional trees to replace being lost on private land?

Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." Can you point to specific analysis which shows that tree planting programs, coupled with increased hardscape, will compensate for lost urban forest? If this analysis has not yet been done, why not?

Section P 3-3 also states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild." This is very vague and, frankly, sounds quite improbable. What, exactly, is the impact of the plan on Seattle's plants and animals?

I feel that there is an implication here that we do not need urban nature. I strongly disagree. We absolutely do need urban nature and urban forests. Not everyone who lives in Seattle has the ability to get outside the city for "more wild" nature. Urban nature is essential to our quality of life for innumerable reasons including, but certainly not limited to:

1. Human mental and physical health. (Countless studies show a positive correlation between even short walks in areas with sufficient tree canopy to positive physical and mental health benefits such as lower blood pressure and lower levels of anxiety.
2. Mediating effects of climate change by providing shade, clean air, and retaining moisture.
3. Urban nature simply deserves to exist for its own intrinsic value.

I ask you to choose either alternatives 2 or 4 in the comprehensive plan so we can build 100,000 new homes while preserving our trees. The state of our tree canopy may seem like a small thing but I believe it is very important

Thank you for considering,
 Eli Edlund

Subject: 3 Critical Questions, for our environmental impact statement, please?
Date: Thursday, May 16, 2024 12:52:08 PM

CAUTION: External Email

First

Regarding Section P3-3: We need more scientific research that clearly lays out what impacts of the Plan would be SPECIFICALLY for Seattle's animals and plants. We have to have these factual projections clearly stated for citizens to understand consequences. We must know as clearly as possible, BEFORE we take irreparable actions, making expensive choices that may not be able to be corrected.

Second

For Section P3-3: Do we have a concrete, factual analysis that demonstrates that tree planting programs, to include additional hardscapes, will scientifically serve us as sufficiently as the urban forests that are proposed for destruction?

Third

With private land available for trees measurably reduced by this new tree ordinance, which public lands will be used to get Seattle to the stated 30% canopy goal?

What are the specific plans for how much public land and the number of trees to be planted EACH Year in compensation for the destruction of tree canopy by development, please?

Thank You All for taking these issues under your consideration and into the public debate.

Thank You for your work to make our world livable into the future,
 Sara Eldridge

CAUTION: External Email

In reviewing the comprehensive plan update, I have noted there are 4 overarching oversights that must be addressed if we are to be a city that actually prioritizes public health, affordability, reversing gentrification, meeting our climate goals, and ensuring a high quality of life for all residents. These oversights are:

- 193-1
- 1. the plan does not do enough to redress the harm and poor outcomes stemming from Seattle’s racist and classist land use regulations.**
 - 2. the plan does not do enough to address broad housing affordability crises in the city.**
 - 3. the plan does not center climate adaptation in the middle of a worsening climate crisis.**
 - 4. the plan is not coordinated with the Seattle transportation plan and levy, nor commits to a transformative turnaround in any timeline that matters**

Redressing Seattle’s racist land use policies

Seattle’s land use ordinance was written by Harland Bartholomew, an urban planner hired by the city in 1921, whose views on cities, renters, and people of color was decidedly negative. In Color of Law, Richard Rothstein notes that Bartholomew was a zoning expert in St. Louis, whose ordinance for that city was intended, 'to “preserv[e] the more desirable residential neighborhoods,” and to prevent movement into “finer residential districts ... by colored people.” Concurrent with writing Seattle’s zoning ordinance, Bartholomew was working one for Memphis. According to Roger Biles in 'Memphis: in the Great Depression,'

'While it sought to demarcate areas of industry, commerce, and residence, the ordinance additionally reflected the desire of the elite to maintain existing patterns of racial segregation... Recognizing that these informal boundaries might shift or that a growing black population might spill over into heretofore white neighborhoods, the strict application of zoning laws, particularly having to do with dwelling standards, went a long way toward preserving the exclusivity of white enclaves.'

The outcomes in Memphis were the same in Seattle. The zoning map was effectively a snapshot of existing land uses. Poor areas and neighborhoods primarily with people of color were zoned for multifamily housing, with single family zoning around them to restrict movement. Our zoning map today ensures that Bartholomew’s racist views still affect how the city grows and changes. The Urban Village strategy merely doubled down on Bartholomew’s map and ordinance, effectively keeping the original 1923 zoning ordinance intact – and focusing more development in areas where multifamily zoning and density were *already* legal – increasing displacement and gentrification. The policies of the Urban Village strategy were both racist and incredibly classist – loaded with pernicious anti-tenant policies, and eliminating

affordable housing. Various neighborhood planning documents, that were largely dominated by homeowners in areas that are primarily renter, include numerous classist policies. ^[1]

These include statements and goals about preserving single family zoning over all other forms of housing in Urban Villages and areas slated for density, and limiting zoning expansion or increases.

Goal 5 - housing which conforms to the existing single-family character of the neighborhood for a range of incomes. Strive to protect the integrity of the single-family housing stock. Green Lake's plan includes this classist gem: 'the Green Lake community believes that the neighborhood already contains much of the low-income housing that exists in Seattle.

Green Lake's plan also explicitly called out limiting low-income housing, and channeling growth along arterials. Greenwood's plan eliminated 32 blocks of multifamily housing, limiting all new density to a half block depth off the freight routes of 85th and Phinney/Greenwood. As a result of these Urban Village planning documents = plans, the goals and objectives have been refined to encourage moderate income housing. Ravenna, Bryant, Wedgewood and Maple Leaf—which also had small neighborhood centers, great parks, good schools, and access to incoming high capacity transit – all avoided Urban Village designation... One wonders why that could have been...

This is why it was important that former Council Member Mosqueda pushed for the Urban Village strategy to undergo a racial equity analysis ^[2] - a report OPCD and the mayor's office delayed and have ignored. There was never an analysis for the 1994 comprehensive plan.

Throughout the One Seattle engagement – Seattle residents have overwhelmingly asked the city to step up and study a plan that not only redresses the harms of Bartholomew's racist zoning ordinance – but to go further. The overwhelming number of comments were to adopt Alternative 5, or to go even further with an Alternative 6 – pivoting towards a more equitable, social, and sustainable city with a focus on inducing significantly more affordability and social housing. ^[3]

For some reason, all of that engagement was ignored or tossed out – as the mayor's comprehensive plan update is little more than Alternative 2 and continues to double down on the racist and classist roots of Seattle's zoning history. For all the mayor's talk about affordable housing and equity – opting to preserve an inequitable and unsustainable status quo instead of an alternative that would increase most affordable homes is incredibly disappointing.

Prioritizing urbanism and affordable housing.

Per OPCD's own EIS, ***only Alternative 5 maximizes the number of affordable homes.***

While it was not good policy from an urbanism, housing affordability, or public health standpoint – the plan's complete elimination of **Alternative 4 – Corridors** is

193-1
cont

193-2

confounding. What makes walkable cities... walkable – is that density and midrise buildings are allowed for several blocks off of arterials. This plan would have allowed for multifamily and affordable housing off of dangerous, toxic and loud arterials.

The district maps show that the new neighborhood centers are largely centered on arterials and freight routes.

This plan flies in the face of HB1110 – and the authors have rightfully called out the inadequacy of it. The entire Neighborhood Residential section needs to be re-formulated so that the FAR and setbacks are functional for the development of 4-6 unit family sized homes. The proposed FAR of 0,9 is laughably inadequate – much like this plan.

The EIS also states that Alternative 5 is the greatest opportunity for more affordable housing: ***‘Alternative 5 provides the greatest capacity for housing to meet affordability... Alternative 5 would result in the largest increase in housing supply and therefore have the greatest impact on reducing overall market housing cost pressures for both new and older units.’***

With the EIS showing that project new affordable units through MHA would occur in Alternative 5 (Exhibit 1.6-15) – and by nearly 25% increase. With housing production tanking, it is more imperative than ever to prioritize and facilitate more affordable housing.

EIS also states, ***‘Alternative 5 would provide the greatest benefit for low-income renter households among all alternatives due to its impact on increasing rental housing supply and new affordable housing through MHA and MFTE.’***

In the EIS Exhibit 1.6-21 Population, Housing & Employment Summary of threshold significance – only Alternative 5 shows positive impacts for nearly across the board – increases the supply of market rate housing, affordable housing, diversity of market rate housing, the supply of income-restricted housing, and reducing economic displacement.

Alternative 5 is also the only alternative studied that would reduce growth pressure on Southeast and Central Seattle: ***‘Most housing growth would be in Northwest & Northeast Seattle (Areas 1 and 2) followed by Downtown/South Lake Union (Area 4)’***

In looking at regional effects of the comprehensive plan update – which has the greatest potential for reducing WA’s carbon emissions and meeting climate goals, the EIS states ***‘Among all of the alternatives, however, Alternative 5 offers the highest amount of new housing in the city, which would deter housing growth in the region beyond the city. Based on this, Alternative 5 could indirectly avoid adverse impacts to some of the most pristine water resources throughout the region, as described under Impacts Common to All Alternatives.’***

Prioritize and study the effects of enacting a more visionary, climate forward, and social housing-laden comp plan.

Centering Climate Adaptation:

Under the Equity & Climate Vulnerability Considerations – the most important consideration missing: the majority of new apartments in Seattle CANNOT utilize passive cooling or night purging because they are single aspect units in double loaded corridors. The city also don't have incentives for active solar protection (operable shading), making climate adaptation near impossible.

193-3

A climate-forward plan would prioritize thinner buildings with single loaded corridors and point access blocks (single stair buildings) to allow more units that can cross ventilate. [4] The preponderance of double loaded corridors in buildings is a massive policy and public health failure – especially in the face of future heat domes (units stayed well above 90F in new construction during the previous heat dome).

Thinner buildings would also allow for more land on lots to prioritize broadening the tree canopy in urban areas where it is needed most. Vienna's Sonnwendviertel shows how this is achieved.

Multifamily housing must also be positioned off toxic and dangerous arterials for this same reason – opening up opportunities for more affordable housing near parks which tend to be much cooler due to urban heat island mitigation.

Public Health

Study effects of allowing more affordable housing off of arterials. Noise pollution causes way more issues than just annoyance and hearing loss – it is linked to cardiovascular issues, and more recently dementia [5]

Study effects of lush, family-friendly, car-light and car-free districts around light rail, such as Freiburg's Vauban, or Vienna's Sonnwendviertel.

Alternative 5 is the only plan that has better social impacts – stating, '**Alternative 5 would likely have overall positive impacts on social wellbeing and social interactions.**'

Transportation

Under the visionary leadership of an actual climate leader, Paris under Mayor Anne Hidalgo has seen a 45% drop in car ownership since 1990. [6] This plan needs to be better coordinated with the Seattle Transportation Plan, which itself is completely inadequate to facilitate the mobility transition, or adapt to a changing climate.

193-4

The DEIS states that the action alternatives are expected to result in higher vehicle miles traveled (VMT) than the No Action Alternative due to increased growth levels. The impact analysis also states that all the action alternatives are expected to have significant impacts to transit passenger load, corridor travel time, intersection level of service in the NE 130th/NE 145th Street Subarea, and state facilities. The proposed mitigation measures include targeted transportation capacity improvements; bicycle, pedestrian, and freight connections; and demand management using policies,

programs, and investments aimed at shifting travel to modes other than single occupant vehicles. While we are supportive of these mitigation measures, we would like more information on whether these mitigation measures are consistent with those proposed in the STP.

193-4
cont

“We must shift our thinking away from short-term gain toward long-term investment and sustainability, and always have the next generations in mind with every decision we make.”

I wanted to end with this perfect quote from US Department of Interior Secretary Deb Haaland, because it absolutely summarizes the thinking that should be inherent in the comprehensive plan. We should have a mayor that prioritizes future generations. We should have a comprehensive plan that prioritizes the fact that the majority of residents both now, and in the future – are not homeowners, but renters. And ensures everyone – not just the wealthy and those who were able to buy ‘affordable’ detached homes decades ago – the opportunity for high quality of life, climate adaptive homes, and affordable housing. Unfortunately, this mayor and OPCD have opted not to do this. They have opted to prioritize climate arson over climate action. To prioritize homeownership over social and affordable housing. We must shift our thinking away from short term gains, to ensure the sustainable, livable, and affordable city with future generations in mind. There is a lot of work that needs to be done to ensure the comp plan is not a complete failure – and I really hope, both for our sake – as well as my own kids, and future generations – you all take that responsibility seriously.

Thank you,

Michael Eliason

Comments Planning and Community Development EIS,

TO: The Seattle City Council
RE: Seattle Comprehensive Plan DEIS
DATE: May 6, 2024

COMPREHENSIVE PLAN HISTORY

One of the four core values of the Seattle Comprehensive Plan is Environmental Stewardship. This has been a core value for decades of Seattle Comp Plans.

Previous Comp Plans said:

“The Seattle Comprehensive Plan calls for Seattle to continue to be a national leader in environmental stewardship. Even as the city becomes increasingly urban, Seattle is dedicated to protecting and restoring the green spaces and water that make our city special.”

- “To Design, build, and manage the City’s built environment in ways that protect, and strive to restore, ...natural resources and natural systems;
- Act as a role model ... in environmentally sustainable practices;
- Improve the overall quality of life in Seattle.”

“The overarching goal of this Comprehensive Plan is to promote sustainable development – through a smart and well-integrated approach to where and how we grow.”

NEW TREE ORDINANCE IMPACTS

In MF zones with 100% lot coverage allowed, it may be impossible to save any existing large or medium sized tree on a lot, and also many adjacent street trees.

For the EIS for Accessory Dwelling Units, the City compared canopy cover on lots that had undergone development. The found representative sample lots and compared canopy coverage before and after using LIDAR. The current DEIS for the comprehensive plan does not calculate canopy cover changes on potential lots in zones for the 5 Alternatives. Instead it wrongly assumes the new tree ordinance will protect trees similarly or better than the previous ordinance did. This wrong assumption will have potential long and short term significant impacts because mitigation opportunities will be lost as no proper evaluations of impacts has occurred to push for greater mitigations.

Exhibit 3.3-3. Total Area and Proportion of Tree Canopy Loss on Parcels That Underwent Development, by Management Unit, suggests that under the new tree ordinance, on NR lots, at the desire of the developer they are allowed to remove all trees on an approved development lot. Thus this will mimic current MF lots in regards to measured canopy’s lost. Neighborhood Residential = 19% of the parcels canopy cover lost

194-1

Multifamily = 75% of the parcels canopy cover lost

Table 3.3-3 shows that a shift from “NR” toward “MF” will result in a much higher rate of canopy loss due to development. IMO, this shift (not quantified by the EIS in acreage of land or canopy cover) could well be a “significant unavoidable adverse impact,” contrary to the conclusion on p. 3.3-30 based in good part on “the City’s current tree protection regulations minimize the potential for development-related loss of tree canopy cover and require mitigation for such tree loss.”

The new tree ordinance does not protect trees under development. It only protects trees on NR parcels NOT undergoing development. Parcels undergoing development can have even Exceptional trees be removed if they will reduce the development potential of a lot. The decision is according to the developer; it’s not the City’s decision. The City only issues the permit which then allows the tree removal.

The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.

The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover."

No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

OPEN SPACE AND WILDLIFE

While we have a terrible need for affordable housing, everyone needs a livable community, including trees in open spaces for families and native wildlife. Without big trees, without real open space, where are the kids going to play and dream and get off their cell phones? Housing justice and environmental justice go hand in hand.

PROPOSED MITIGATION IS INCOMPLETE

Tree Canopy and Climate; Tree Preservation and other Environmental Elements are Not Adequately Addressed in the EIS. Required Mitigation Measures to Achieve Policies are Not Addressed or Proposed in the Comprehensive Plan or SEPA Review / EIS.

The results from this failure to properly address the required climate change and tree canopy policies and lack of inclusion in the Plan and lack of analysis in the EIS are likely to be:

1 a tremendous loss of mature tree canopy as the City falls further and further behind from its adopted policy goal for 30% tree canopy coverage by 2037;

2 adverse health impacts from loss of tree and green space (particularly for overburdened or highly impacted communities); health impacts will almost certainly include increasing mortality and hospitalizations of vulnerable populations due to projected increasing days of severe high temperature with the highest temperatures in residential areas that lack tree canopy and

whose residents have the most adverse social determinants of health (e.g., overburdened and highly impacted communities and populations under the State HEAL Act).

3 adverse impacts due to increased storm water runoff, including stream erosion, contamination entering surface waters, harm to salmon or fish habitat and recovery and biological diversity in surface waters and shoreline habitat, impacts on meeting legal requirements to reduce combined sewage overflows and lack of mitigation for increased runoff from increasing impervious surfaces from other plan policies.

4 The current proposal will help connect clearcut lots with other cleared lots and spread tree deserts and build urban heat islands. With just a 5-ft setback, you are building a natural environment dead zone.

5 Extreme weather events, like summer droughts with record heat, require an infrastructure that includes shade trees. As we build more multiplexes that have few to no windows that open, and fewer with balconies, what happens if the power goes out and its 100+ degrees outside?

The solution?

Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.

Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.

Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.

Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Build taller, not lot line to lot line, but regardless of which housing zone, saving the best healthy trees and building around them. Give extra height bonuses to save trees with affordable housing. Is Seattle clever enough to build affordable housing with open space for families and trees and habitat for all? Is Seattle going to be a leader in Environmental Stewardship, or just clearcut our way to environmental justice?

Subject: Comments on Seattle's Comprehensive Plan
Date: Friday, May 3, 2024 4:09:17 PM

CAUTION: External Email

I've received emails from organizations that are reading the plan and suggesting comments, but I could not find on all the websites I looked at from the Mayor's office whether there were local meetings or zoom calls to go through the plan - even a course in navigating all the documents and how they connect with others would be helpful.

195-1

I have read National Forest Plans and the Hanford output weekly - but that takes lots of time. The plan lists many entities and agencies and they pay someone to read and make judgement on the plan's value, but the average citizen is not getting paid to go over all this materia. Part of the plan must include a way to present the many documents and how they relate. I sure hope I've missed something,

My concerns over the years are the retention of trees. The new tree policy has eliminated heritage trees and I hear about very valuable trees being cut down. Further - how does this plan affect the School District when they are making changes on school property.

195-2

There are ways to evaluate the value of a tree that is planned for removal. It's value in connection with the other trees on the lot, How much carbon is stored from those trees - etc. I looked this all up when the School District was going to remove a group of Black Locust. Now I know they are not native to Seattle - but that group provided excellent shade along its fence and housed many birds and critters. Where do they go when it is all removed. Like Gaza? Just kill them all? It will take years to equal the work that those trees did in providing oxygen and their storage of carbon,

Ever Onward!

Subject: Important Comment on DEIS
Date: Monday, May 6, 2024 12:28:02 PM

CAUTION: External Email

Please note my comment on the DEIS:

- 1: Section P 3-3 states that “none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild.” What is the impact of the plan specifically on Seattle’s plants and animals?
- 2: Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." What analysis shows that tree planting programs, coupled with increased hardscape, will compensate for lost urban forest?
- 3: The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development?

Sincerely,
Stephanie

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

* Please listen to and follow the advice of the Seattle Urban Forestry Commission. Despite their hard work and expertise, they have consistently been sidelined by development interests. We can both protect our mature tree canopy on private lots and build needed density. Yes, it will be more expensive if only the building costs are factored into the economic analysis without considering the economic benefits provided by our existing mature trees and the climate and natural environment costs of losing them.

* The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.

* The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"

* No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

* Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.

* Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.

* Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.

Subject: Questions on the environmental impact statement
Date: Wednesday, May 8, 2024 8:59:54 AM

CAUTION: External Email

Hi,

I'm reaching out with questions about the environmental impact statement

Section P 3-3 states that “none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild.”

200-1

Will you please elaborate on the details? How will this plan affect Seattle's plants and animals?

Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover."

How does the conclusion show that planting + hardscape will replace the environmental contribution of the mature urban forest in the near and far future?

The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees.

How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development?

200-1

Thank you

Subject: DEIS Comments
Date: Monday, May 6, 2024 5:00:10 PM

CAUTION: External Email

Good afternoon,

The DEIS needs to study an alternative which the citizens demanded in the 2022 scoping: Alternative 6. We need to study the impact of 150,000 units of capacity so that we can meet the moment of current undersupply and readily plan for the arrival of 250,000 new residents by 2044. We cannot continue with the status quo of low housing stock, decreasing housing affordability, and minimal varieties of housing.

Please also provide us the criteria for selection of neighborhood centers. How was the list narrowed down between scoping and drafting and why? We need all the original neighborhood centers returned to the FLUM so that we can provide new units all across the city and open up otherwise exclusive neighborhoods to new, lower-income residents.

The DEIS should also ensure that bulking regulations such as FAR and lot coverage, as well as parking minimums, can be lifted on every residential lot in the city. HB 1110 requires the allowance of a sixplex on every residential lot in the city if it has an affordability component. This will only be achieved if the Plan incentivizes development through tiered restrictions like Commerce's recommendation or a removal altogether like Spokane's new zoning ordinance.

Best,
Nico Faz

CAUTION: External Email

Hello,

The DEIS No Action alternative assumes that new zoning requirements consistent with HB 1110 (2023) are in place. I believe this is incorrect. HB 1110 directs the City to change its zoning, but does not put the new zoning in place; that is done through Seattle's change to its comprehensive plan and zoning map. This comprehensive plan update implements HB 1110 through the proposed action; therefore the impacts of implementing HB 1110 should be documented as an action rather than included in the No Action alternative.

Subject: Seattle's Comprehensive Plan Concerns
Date: Friday, May 3, 2024 9:17:41 AM

CAUTION: External Email

Here are my concerns and questions.

Can you explain what impact each of these plans has on Seattle's trees, plants and non domesticated animals.

Section P 3-3 reads none of the alternatives "would be expected to have significant, unavoidable adverse impacts on tree canopy cover". This phrase raises red flags when it combines the word "significant" with "unavoidable". It leaves an awful lot of wiggle room for mass destruction of tree cover, particularly if that phrase becomes the legal standard by which any of these plans is judged. It seems designed to offer to developers who wish to take the easiest path to development in the city.

One goal of the Plan is to increase tree canopy in Seattle by 30% primarily by using city owned property rather than public land, but where are the specifics? For each plan, How many trees must be planted in those areas to replace those that are lost in the private sector, how much of that tree canopy will be added to the parts of Seattle — particularly on the South End —where there are fewer trees at present.

Thank you for considering this email.

Subject: Comments on Seattle Comprehensive Plan DEIS
Date: Sunday, May 5, 2024 9:51:02 PM

CAUTION: External Email

Thank you for this opportunity to provide comment on the Draft Environmental Impact Statement for the Periodic Update to the Comprehensive Plan.

The proposed alternative for the Seattle Comprehensive Plan does not address Seattle's future housing needs. It only adds capacity for 120,000 new homes over the next 20 years, which is far less annually than Seattle has produced under the previous comprehensive plan. Bellevue, a city that is one-sixth the size of Seattle, is planning on adding 40,000 new housing units over the next 20 years. Seattle must step up and do its part and produce a comprehensive plan which results in 200,000 new homes. This would match the current rate of housing production.

Moreover the current alternative falls well short of the need for affordable housing. Seattle's own Housing Needs Assessment requires that Seattle build over 70,000 new homes that are affordable to families making 80% or less of AMI. The current alternative would build only 18,000 such homes - meaning that over 50,000 families will either become overburdened with housing costs, or be displaced out of Seattle.

The definition of a "neighborhood center" to within 800 feet of a frequent transit stop is hardly believable. That is barely half a block. How can you provide the basic necessities for a family, including groceries, a drugstore, child care, and other services all within half a block? Let alone opportunities for dining, entertainment or the arts? The neighborhood center designation must include enough room to allow essential services for families to become available near transit stops.

Finally the changes to residential zoning will cause single family homes to be predominantly replaced by townhomes. Townhomes are fine, but we need a variety of housing types in single-family neighborhoods to start to undo decades of racial and class segregation in Seattle through exclusionary zoning.

I request the following in the final EIS:

- Analysis of an alternative that provides 200,000 new homes over the next 20 years in Seattle.
- Analysis of an alternative that provides 70,000 new homes affordable to 80% AMI.
- Analysis of an alternative that expands the neighborhood center designation to within at least 0.25 miles of a frequent transit stop.
- Analysis of an alternative that permits small apartments and quadplexes in all formerly single family only neighborhoods.

Thank you for considering my comments.

Please make me a party of record for the Seattle Comprehensive Plan DEIS and FEIS.

Mark Foltz

Comment:

The city should study the impacts of additional Neighborhood Centers in Urban Neighborhoods, as well as greater height and density bonuses within a half mile of transit stops. Of the available alternatives, I strongly prefer Alternative 5 with higher growth targets.

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

CAUTION: External Email

Comments Planning and Community Development EIS,

The science is clear. Creating policies that are based on short-term outcomes is counter-productive and destructive. We cannot plan for an equitable, live-able city that has fewer trees. Tree canopy is our best tool for keeping our city cooler. Every tree that is lost creates another heat island in its place.

The numbers are also clear when it comes to equity. Historically Black and brown neighborhoods in Seattle have more real estate development and less tree canopy. Let me put that another way. The distribution of tree canopy in this city is blatantly racist, and the city is complicit because 1) it looks the other way as real estate developers repeatedly cut down legacy trees and then just pay the fine and 2) city planning repeatedly places the burden of growth on neighborhoods south of the ship canal, leaving neighborhoods like Ravenna, Magnolia, and Laurelhurst with their single family homes tucked beneath well-established tree canopy, while neighborhoods like Rainier Beach and Beacon Hill bake under the sun in expanding concrete canyons of ever higher apartment buildings. If the city can't find a way to plan for the future in a way that repairs the economically, environmentally, and culturally inequitable systems of the past (and present), then there will never be "one Seattle."

* The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.

* The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"

* No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

* Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.

* Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.

* Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.

* Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

210-1

* Create and enforce legislation and policies that actually deter the illegal removal of trees by real estate developers. Current and proposed policy will do nothing to deter these practices.

Thank you for your consideration.

Subject: Public comment on DEIS and Draft Comp Plan
Date: Monday, May 6, 2024 4:23:07 PM

CAUTION: External Email

Dear DPCD team,

Thank you for your many hours of work on the One Seattle planning process and related environmental documents. I am a very proud Seattlite - this is the city where my grandparents finally found freedom, acceptance and happiness after arriving as refugees from genocide overseas. Today I feel very lucky to own a home off the intersection of 57th Avenue S and S Orcas Street.

I hope to live in my home for many years to come, to raise a family there, to age in place, and if I can afford it, to provide an ADU or DADU as a rental option to someone seeking an affordable home. I ask that the Mayor's Final Proposed Plan (and the accompanying FEIS) do the following to make my neighborhood more sustainable, walkable, vibrant and affordable:

- In the final Plan, please include the Seward Park Neighborhood Center as studied DEIS Alternative 5. If you can, please include all studied Neighborhood Centers in the Final Plan. In the FEIS, please ensure to study the likely adverse environmental consequences of failing to do so.
- Please implement the Corridor designation studied in DEIS Alternative 4 in the streets surrounding the gateway to Seward Park. If you can, please reinstate the Corridor designation City-wide. In the FEIS, please ensure to study the likely adverse environmental consequences of failing to do so.
- Please raise FAR and eliminate minimum-parking mandates in the Seward Park neighborhood and City-wide, for the benefit of our air, our health, and our housing affordability. In the FEIS, please ensure to study the likely adverse environmental consequences of failing to do so.
- If the Corridor model is not reinstated in the Final Plan, please clarify that Urban Neighborhoods may accommodate zoning designations other than NR. It concerns me that many current Multifamily-designated areas on today's Future Land Use Map are currently proposed to be replaced by Urban Neighborhood, which appears intended to be predominantly a single-family and middle-housing designation. If the Urban Neighborhood designation is intended to possibly include LR and MR zones (the way the Multifamily designation does today) please clarify that to ease future rezoning efforts, whether proposed by Council or by private parties. Please ensure that similar clarifications are made throughout the FEIS.
- Please ensure that in the FEIS, environmental impacts (especially in the realm of housing supply and affordability) are studied with reference to *likely* job and population growth in the City, not merely *targeted* growth. Planning only for a targeted outcome is very risky, so I hope we instead will use the best available information to plan for a range of *most likely* outcomes. We should be preparing our City to be welcoming to both its current residents and many more people who will arrive whether they are part of the County's targeted population growth or not.

211-1

- I also endorse and support the requests stated in the Complete Communities Coalition letter.

These comments are respectfully submitted in my personal capacity as a Seattle resident and voter; they are not submitted on behalf of any organization or any client.

Thanks for your time and all of your hard work. Onward!

CAUTION: External Email

The draft plan does not make enough measurable change. The city should enact Alternative 6 and or improve the plan follows:

1. Allow bigger buildings in more places - to break out of the “Urban Village” strategy and scarcity mindset. Expanding existing "Urban Centers" as well as add more and up zone them higher. Residential Small Lot (RSL) zones to Lowrise 1 (LR1) is not enough.
2. Add more “Neighborhood Centers” to anchor small neighborhood business districts with housing.
3. Zone for fourplexes and sixplexes that will actually get built and support families with three- and four-bedroom homes. The proposed restrictive size limits — particularly the floor area ratio (FAR) set at a measly 0.9 — are effectively erasing the value of the fourplex and sixplex zoning. Follow state model code and allow 1.6 FAR in sixplex areas instead.
4. Embrace transit-oriented development and allow larger apartment and condo buildings near all frequent transit corridors. The mayor’s proposal appears to have jettisoned the transit corridor alternative from scoping.
5. Remove parking requirements. Parking requirements are a secret tax on housing that render many projects infeasible. We cannot afford this amidst a housing crisis.
6. Corner stores should not only be on corners. Allow more flexibility to ensure more neighborhoods can actually get bodegas or cafes.

Further explanation of each point can be found at <https://www.theurbanist.org/2024/03/29/op-ed-six-ways-to-improve-seattles-comprehensive-plan/>

Subject: Comments on Draft EIS
Date: Monday, May 6, 2024 12:08:45 PM

CAUTION: External Email

May 6, 2024

Good Morning,

I support Alternative 2 to concentrate growth as it results in less canopy loss for Seattle. Under Alternative 2, about 3,000 acres of currently lower-density parcels may be converted to higher-density uses (neighborhood centers), the smallest area of conversion among the action alternatives (Exhibit 3.3-4). Growth would be focused in neighborhood centers. Among the action alternatives, Alternative 2 would thus have the lowest potential for development-related impacts to vegetation (including loss of tree canopy cover) citywide.

214-1

In addition, I have these questions:

- P 3-3-29-30 Please analyze the potential impact of the 5 options on Seattle plants and animals. This is a Seattle EIS, not a regional or state EIS. Saying "unlikely to result in appreciable impacts on regional populations of plants or animals" and "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild" is avoiding commenting on the specific impacts on Seattle plants and animals.
- p 3-3-30 Saying that "none of the action alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." is not backed up by facts but speculative at best. The new tree protection ordinance actually increases the potential for tree removal in several ways. One is that all the developmental areas covered by the ordinance state that the newly defined "basic tree protection area cannot be modified" despite Portland, Oregon and the Northwest Society of Arboriculture saying it can be modified to save trees. This and current lot coverage of 85 - 100% for multifamily lots and above and rezoning to occur means more trees, especially large ones, will be removed. What is your estimation of potential canopy acreage loss (over 5 year periods consistent with the city's canopy studies) with increased development density in each alternative?
- What is your estimation of planting needs and time frame to replace the lost canopy (over 5 year periods tracked by the city's canopy study)?
- Is canopy replacement equivalence even possible with replanting since removed trees, if not removed, would have increased growing according to scientific articles?

What is the acreage available and suitable for planting trees in each of the following public areas- the city's right of ways, Natural Areas and Developed Parks?

- How many trees and what size will need to be planted in these areas every year to make up for trees and canopy removed during development on lots?
- What is the available acreage available to plant trees on private property?
When will it be possible to reach the 30% citywide goal?

- What potential is there for more than 30% tree canopy in Seattle over time?
- Is up to 40% canopy coverage, over time, as proposed in the previous Comprehensive Plan possible?
- Canopy volume, especially of coniferous trees during our rainy season, are critical factors in reducing stormwater runoff. What is the projected loss in canopy volume over the next 20 years as big trees, including conifer trees are removed?
- What is the projected increase in stormwater runoff and what costs are associated with on site and alternative city water management policies of stormwater and pollutant runoff as a result?

Finally, please consider the following:

- Amend the Tree Protection Ordinance to require developers to maximize the retention of existing trees 6" DSH and larger.
- Give SCCI Director the ability to ask for alternative site designs to save trees.
- Support building higher and building attached units to allow for tree retention and planting areas like Portland, Oregon has with 20% areas for multifamily and 40% for its 1-4 unit family zone.
- Amend Tree Protection Ordinance to require ordinance to apply to all city land use zones.
- Remove the "basic tree protection area" loophole in the Tree Protection Ordinance that allows developers to unnecessarily remove almost all large trees on lots.

Regards,
Chris Gaul
District 5

Subject: Questions reenvironmental impact statement
Date: Monday, May 6, 2024 4:56:43 PM

CAUTION: External Email

I have three questions to ask regarding the environmental impact statement that I do not see addressed in the document:

It is not clear what specific impact the plan will have on Seattle's plants and animals. Will migration zones be affected? Will bird habitats be destroyed? What is the documentation to substantiate the claim of limited impact.

How will the existing tree canopy cover be adversely affected or fully compensated by the proposed tree planting programs, coupled with increased hardscape? What are we giving up in the fight to mitigate climate change in this context?

The new tree ordinance substantially reduces private land available for trees. How much public land is available to reach the 30% goal of increasing our tree canopy? How many trees will need to be planted in these areas every year to make up for trees removed by development?

I believe that these issues must be addressed in the revision of this EIS.

Sincerely,

Mark Ghiorso

Date: 4/6/2024

Comment:

I am a homeowner in North Beach, and I believe that the City of Seattle did not listen to the overwhelming majority's call for an Alternative 6 vision, which would lower the cost of housing across the city. Instead the current draft plan will increase already unaffordable housing costs. To create a more affordable city, the plan should allow much more housing to be built away from noisy, polluted arterials.

In Ballard in particular, I think that the plan should expand the upzone walk shed around high frequency transit to at least 1/2 mile.

If the City of Seattle adopted my above proposed changes, then we would be able to create a more affordable city for everyone.

216-1

Comment:

I am a climate scientist living in Ballard, and I believe that the City of Seattle did not listen to the overwhelming majority's call for an Alternative 6 vision, which would allow for more sustainable, car-free or car-light living. Instead the current draft plan will worsen congestion and pollution by forcing more people into long commutes. To create a more sustainable, vibrant city, the plan should eliminate parking minimums.

In North Seattle in particular, I think that the plan should apply Vision Zero best practices on dangerous roadways like Aurora Ave.

If the City of Seattle adopted my above proposed changes, then we would be able to reduce greenhouse gas emissions.

217-1

Comment:

I am a homeowner in North Beach, and I believe that the City of Seattle did not listen to the overwhelming majority's call for an Alternative 6 vision, which would enable the creation of more walkable neighborhoods. Instead the current draft plan will lock us into dangerous, polluting car dependency. To create a more equitable, sustainable city, the plan should allow for corner stores in many more places.

In Ballard in particular, I think that the plan should look at zoning and other changes to the Shilshole marina area to allow a more vibrant and walkable mixed use area given its access to the gem of the Seattle park system, Golden Gardens.

If the City of Seattle adopted my above proposed changes, then we would be able to reduce greenhouse gas emissions.

218-1

DEIS StoryMap Comment

Name: Michael Gillenwater

Organization: Greenhouse Gas Management Institute

Email: mwgillenwater@gmail.com

Date: 4/6/2024

Comment:

I have been a IPCC lead author for the last 20 years, a former lead author of the U.S. national greenhouse gas inventory submitted to the UNFCCC by the U.S. EPA, an academic scholar focusing on GHG accounting and mitigation analysis, and co-Editor for the journal Carbon Management.

Regarding the summarized impact of the five alternatives with respect to greenhouse gas emissions that is presented in Exhibit 1.6-3. GHG Emissions (MTCO₂e) by Alternative and Per Capita Rate. Although I applaud the presentation of per capita emissions, I challenge the analysis as presented. First, the use of an emission inventory methodology to compare alternative scenarios is flawed, especially when inappropriate boundary conditions are used. Focusing on city boundaries when the impacts of shifting from a baseline scenario to an alternative scenario have impacts regionally will lead to erroneous policy decisions. Obviously, exclusionary zoning that drives a lack of affordable housing will simply shift populations and increase transport (e.g., commuting) outside of the analysis boundary (i.e., Seattle to surrounding areas). A consequential (intervention) analysis approach is the appropriate methodology for informing policy choices, versus an inventory (allocational or called attributional in LCA) method that compares only city-wide inventory estimates. For a deeper technical discussion of why this approach is flawed, see here:

<https://ghginstitute.org/2023/12/19/what-is-greenhouse-gas-accounting-turning-away-from-lca/>

Therefore, the comparative analysis of GHG emissions between each scenario in the EIS is fundamentally flawed. For example, assuming that all electricity in Seattle is carbon neutral, and therefore any changes in electricity consumption has no effect, problematically ignores the fact that wholesale power markets are connected and that less consumption in Seattle (due to less housing being built) will not impact how much electricity is consumed in the surrounding area (due to shifting population). Similarly, focusing on construction related emissions within Seattle only, while ignoring changes in construction outside of Seattle resulting from the implementation of an alternative scenario is also misleading. Simply put, from a consequential impact analysis standpoint, in what world are the comparative system wide (i.e., regional in this context) impacts greater in a scenario with a more dense walkable urban environment than a scenario that drives populations into less dense walkable and car-dependent areas.

I recognize that redoing the EIS on this matter at this stage is likely impractical, and I am not demanding that be done. Although, ideally, a proper scenario analysis that compared system wide (regional and global) GHG impacts of each alternative relative to the base case would be done. However, the summary discussion on GHG emission impacts, by focusing not just narrowly but misleadingly only on citywide emissions, provides policy makers and the public with incorrect information upon which to judge the tradeoffs between alternatives for a global environmental challenge such as the mitigation of GHG emissions. Therefore, the EIS should, at a minimum, qualitatively acknowledge the flaws in this presentation applying a proper impact analysis methodology that Alternative 5 would be highly likely to

219-1

result in greater overall avoided GHG emissions relative to the the base case and the other policy alternatives. I would be happy to follow up with the EIS team on how to address this apparent methodological error. I would also be happy to comment the draft Appendix D on GHG emissions if it is provided for review (it is empty when viewed online).

Sincerely,
Michael Gillenwater, PhD

Subject: Comments on our One Seattle Comprehensive Plan and EIS
Date: Sunday, May 5, 2024 9:30:13 PM

CAUTION: External Email

Please accept my comments on the One Seattle Comprehensive Plan and the associated EIS.

I would like to see **Alternative 2** further examined and modified.

Please maintain the existing tree canopy goals of 30% by 2035 and 40% over time and specify with data how this will be achieved.

Also, please analyze the potential impact of the final selected option on **Seattle's plants and animals**.

And I have a few questions for you:

- What is your estimation of tree planting needs and a time frame to replace the equivalent lost canopy area and volume (over 5-year periods as tracked by the city's canopy studies)?
- Is canopy area and volume replacement equivalence even possible with replanting since removed trees, if not removed, would have increased growing according to scientific articles?

What is the acreage available and suitable for planting trees in each of the following public areas: the city's right of ways, natural areas, and developed parks?

- How many trees and what size will need to be planted in these areas every year to make up for trees and canopy removed during development on lots? How many trees and what size for all canopy loss?
- What is the available acreage available to plant trees on private property?
- When will it be possible to reach the 30% citywide goal?
- What potential is there for more than 30% tree canopy in Seattle over time?
- Is up to 40% canopy coverage, over time, as proposed in the previous Comprehensive Plan even possible?

221-1

- Canopy volume, especially of coniferous trees during our rainy season, are critical factors in reducing stormwater runoff. What is the projected loss in canopy volume over the next 20 years as big conifer trees are removed?
- What is the projected increase in stormwater runoff and what costs are associated with on site and alternative city water management policies of stormwater and pollutant runoff as a result?

I am seriously concerned about the significant loss of trees in Seattle as more and more residential lots undergo development. It seems that no mature trees are safe any longer in Seattle. I would like to see the following changes made to mitigate any further increase in the loss of our life-sustaining urban forest:

- Amend the Tree Protection Ordinance to require developers to maximize the retention of existing trees 6" DSH and larger.
- Give SCCI Director the ability to ask for alternative site designs to save trees.
- Support building higher and building attached units to allow for tree retention and planting areas like Portland, Oregon has with 20% areas for multifamily and 40% for its 1-4 unit family zone.
- Amend Tree Protection Ordinance to require ordinance to apply to all city land use zones.
- Remove the "basic tree protection area" loophole in the Tree Protection Ordinance that allows developers to unnecessarily remove almost all large trees on lots.
- Require developers to submit a tree inventory on lots they intend to develop.

Thank you for your work, and I hope that you will take great measures to ensure that, as we grow our city, we take into consideration all that makes life here so beautiful, sustaining and life-giving: our trees and plants, birds and animals, our creeks and hillsides. The city is not adequately protecting what makes Seattle most livable and beautiful, and we must do better!

David Gloger
Seattle, WA

Subject: D6 comments
Date: Sunday, May 5, 2024 10:59:21 AM

CAUTION: External Email

Hi all,

Thank you for your work. In one of the DEIS meetings, I asked what impacts had been studied on the starving and polluted Southern Resident Killer Whales. The answer from Brennan was that the impact on the SRKWs from additional stormwater produced by a reduction in mature trees while adding humans creating more sewage had not been studied. P 3-3 says no impact but more study seems to be needed if our most vulnerable endangered wildlife was excluded. I also asked if the impact of removing shade providing mature trees had been studied given it will increase the need and reliance on a/c with predictions of higher temps. Growing numbers of people with and without health challenges will succumb to adverse health outcomes without cooler air in the hotter temps. The energy industry has predicted shortages in electricity with rising temperatures.

I'd assume any true EIS would include actual environmental impacts to our most vulnerable/endangered fauna and life/shade giving flora. I'm confident we can do this safely and equitably with climate justice for all residents of the "Emerald City." Where has the 2035 canopy goal gone? How will we reach 30% and on what land? Those who want to alter our city externally from other cities should not outweigh those who reside in Seattle. Especially when the majority of these vote for stronger tree ordinances in their homes in alternate cities. That would be very inequitable, wouldn't it?

Thank you so much for your work,
Jennifer Godfrey

CAUTION: External Email

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

Subject: Comp Plan draft
Date: Monday, May 20, 2024 7:00:02 PM

CAUTION: External Email

Hi,

While the draft comp plan had some good elements, it needs to go much further in allowing more housing options in more of the city. The plan is a generational opportunity and the city faces numerous crises related to lack of housing options that will stagnate or get worse with the modest current draft. We need Seattle's comp plan to align with state law and allow 6-plexes throughout the city and missing middle housing in many more areas, not just on congested, polluted, and dangerous thoroughfares.

224-1

As a homeowner in Magnolia, I'm relatively lucky to live on a quiet street near good schools and many amenities. But my neighborhood has effectively locked out working class and poor people through restrictive zoning. This has also limited options for retirees looking to downsize or young adults getting a start in life as there are scarcely any affordable options like 4 or 6 plexus, apartments, or condos. The lack of density in Magnolia and many other similar exclusive neighborhoods across the city also restricts transit options and frequency making it harder for the city to meet its climate goals.

Let's go big and make Seattle a great and thriving city for all!

Thanks,

-Demian

ATTN:
Office of Planning and Community Development
c/o Jim Holmes
City of Seattle

Hello,

As both a citizen and business owner in the City of Seattle I am providing my comments on the City's Draft Environmental Impact Statement (DEIS, 2024) as part of the public comment period. I have both numbered them and also provided pages references as necessary. These comments represent my personal opinions and do not reflect those of any organizations or entities I may be affiliated with.

225-1

My comments are as follows:

General Comments

1. Please study the elimination of all parking requirements in the Final EIS, as a recognition that parking will still be allowed and that the market will decide how much parking should be constructed
2. Please Provide an Alternative in the Final EIS that can address 50% the current need for income-restricted housing (housing available to those at 80% AMI or below) in a pattern consistent with Alternative 5. Based on the recent MHA/IZ program, the City's current programs result in 7% of all produced housing being in this category of income-restricted housing and the total number of units needed according to the 2020 Community I
3. For all Alternatives, please study providing high-rise zoning immediately adjacent to all light-rail stations (within 1000 feet or 1/8th mile) similar to what is done at SkyTrain stations in Vancouver.
4. In the Final EIS, please study condensing the Seattle Mixed, Commercial, and Multifamily Zones into one Category
5. For all Alternatives, please revise the Capitol Hill Regional Center to include all land as designated "Broadway" under the City Clerk's Geographic Indexing Atlas
6. For All Alternatives, please revise the Madison-Miller Urban Center to include all land designated as "Stevens" under the City Clerk's Geographic Indexing Atlas
7. For All Alternatives, please extend the SLU Regional Center to include all land designated as "Westlake" under the City Clerk's Geographic Indexing Atlas
8. For all Alternatives, please study the impact of exempting all deep green building projects from the Design Review process.

225-2

225-3

9. For All Alternatives, please extend the adjacent Urban and Regional Centers to include all land designated as “Minor” into an adjacent Urban Center OR provide justification for not including these areas given their location between Urban Centers and Regional Centers.
10. For all Alternatives, please revise the Montlake Neighborhood Center to include all land between the proposed area and the light rail station located to the north.
11. For all Alternatives, please revise the 145th station area to include the same distance from the station in the station area as is include in the 130th station, particularly as this road is slated to receive a bus-rapid transit line.
12. For all Alternatives, expand ‘corridor’ areas to include all parcels located within a 10-minute walkshed of transit stops used
13. For all Alternatives, please expand the adjacent Urban Centers to cover all areas of North Beacon Hill up to Dearborn Street (fill the gap.)
14. For all Alternatives, please provide an Urban Center adjacent to Discovery Park
15. For All Alternatives, please fill the gap between the Fremont and Wallingford Urban Centers
16. For all Alternatives, please expand the Wallingford Urban Center to include no less than ½ mile walkshed on both sides of 45th Street
17. For all Alternatives, please provide an Urban Center adjacent to Magnuson Park
18. For all Alternatives, please expand and connect the areas between the West Seattle Junction and Morgan Junction Urban Centers.
19. For all Alternatives, either establish a new Urban Center between the University Community and Roosevelt or extend the University Regional Center to include all parcels to the north of it up to the Southern Edges of the Roosevelt Urban Center and Cowen / Ravenna Parks
20. For all alternatives, please study providing a new Urban Center in NE Seattle along 35th Ave either at NE 65th or NE 75th Ave.
21. For all Alternatives, revise the center at the West Magnolia Playfield to be an Urban Center with an Area that covers a mile in diameter (no less than ½ mile in each direction around the West Magnolia Playfield)
22. For all Alternatives, revise the Green Lake Urban Center to include all lots adjacent to Green Lake Park and along all Green Lake Drives.

225-3
cont

23. For all Alternatives, please connect the areas between the North Beacon Hill and North Rainier Urban Centers. Please also fill in the hole in the Columbia City Urban Center
24. For all Alternatives, please study providing Urban Center level zoning around Jefferson Park
25. For all Alternatives, please study an Urban Center adjacent to Seward Park
26. For all Alternatives, please study an Urban Center centered around the Burke-Gilman Playground Park / Seattle Children's Hospital
27. For all Alternatives, please study changing Othello into a Regional Center and expanding its reach to include parcels to the north up to the Columbia City Urban Center
28. Please Provide an Alternative that provides a Neighborhood Center (or more dense zoning designation) within a 10-minute walkshed of every parcel zoned for residential uses, thereby achieving the City's own stated goals of providing 15-Minute neighborhoods.
29. Please expand neighborhood centers to include an area no smaller than ¼-mile
30. Please study the following areas for inclusion as neighborhood centers
 - a. At least one neighborhood Center in the Portage Bay neighborhood, either at Eastlake Ave E / Fuhrman Ave E or Fuhrman Ave E / E Shelby St.
 - b. Greenwood Ave N / N 145th St
 - c. Greenwood Ave N / N 125th St
 - d. 15th Ave NW / NW 100th St
 - e. 32nd Ave NW / NW 85th St
 - f. 3rd Ave NW / N 80th St
 - g. 8th Ave NW / NW 70th St
 - h. Phinney Ave N / N 60th St
 - i. Fremont Ave N / N 43rd St
 - j. NW Market St between 8th Ave NW and 3rd Ave NW
 - k. 24th Ave NW / NW 80th
 - l. 32nd Ave NW / NW 65th
 - m. Phinney Ave N / N 46th St
 - n. 32nd Ave W / W Government Way
 - o. 6th Ave W / W McGraw St
 - p. 10th Ave W / W Howe St
 - q. Queen Anne Ave N / Nickerson St
 - r. Wallingford Ave N / N 37th St
 - s. Wallingford Ave N / N 40th St
 - t. Wallingford Ave N / N 34th St
 - u. 1st Ave NE / NE 50th St
 - v. Lakeside Ave / Lake Washington Blvd
 - w. MLK Jr Way / E Union St

225-3
cont

- x. 34th Ave W / W Emerson St
- y. 35th Ave NE at all intersections not included in an Urban Center (55th, 65th, 75th, 85th, and 95th)
- z. Sand Point Way between NE 95th St and NE 97th
- aa. 5th Ave NE / NE 83rd St
- bb. West Seattle Water Taxi Station
- cc. Alki Ave SW between 63rd Ave SW and 61st Ave SW
- dd. California Ave SW / SW Charlestown St

225-3
cont

Introduction / Chapter 1

- 31. III: how do Neighborhood Centers differ from the Neighborhood Anchors introduced as part of the Urban Village strategy in 1994?
- 32. IV: why is Alternative 5 only 40,000 units more than Alternative 1, given that it's a combination of Alternatives 2, 3, and 4?
- 33. 1-3: Please provide information justifying a continuation of the current jobs and housing imbalance based on the projected number of all Alternatives, which seems to be counter to the City's stated goals of revitalizing downtown.

34. 1-11: How does Alternative 3 achieve the goal of more housing options near large parks without designating higher density place types around Discovery Park, Seward Park, Woodland Park, Green Lake, the Arboretum, and Magnuson Park?
35. 1-7: Given current downtown vacancy rates, why is the general accepted number of new jobs being located outside of downtown 15% and not higher?
36. 1-10: it is unclear if the intent is to provide a range of zones that reflect the different housing types allowed or one zone type that allows a spectrum of housing options
37. 1-10: *“neighborhood centers could have a range of housing from townhouses to 7 story stacked housing”* – where does seven story stacked housing come from and why will these be allowed in neighborhood centers but not in neighborhood residential?
38. 1-15: re Exhibit 1.4-7 – please study an Alternative that results in a higher percentage change in Area 3 as compared to Area 5 and Area 8.
39. 1-15: re Exhibit 1.4-8 – in line with community requests for a Regional Center in the South End, please study an alternative that reduces job growth in Area 4 below 50% and increases Area 8 above 10%
40. 1-17: bottom list, bullet point 3 – please revise to study single flats up to six stories, in line with Seattle’s current building code
41. 1-17: bottom list, bullet point 5 – why are bicycle requirements being studied for modification and not car parking requirements? This does not make sense given the City’s goals for mode shift as well as goals for reducing VMT.
42. 1-18: bullet point 2 – the impact of MHA must be studied in the Final EIS to both comply with the GMA as well as accurately calculate the number of projected units for each alternative studied.
43. 1-18: bullet point 4 – please revise studies to emphasize reduction in VMT as required in the Climate Change and Resiliency Element given its adoption by the City of Seattle for this Comprehensive Plan cycle
44. 1-24: please study and provide suggestions for increasing housing density while reducing pollution and runoff increases, such as allowing for higher height limits and requiring a reduction in lot coverage for multifamily-zoned land
45. 1-24: please provide evidence of compliance with HB... and lost capacity given the current contaminated sites in Seattle

225-3
cont

46. 1-27: please acknowledged the impact of increased density in the South Park neighborhood given recent examples of flooding in the area
47. 1-29: please provide an alternative or revise alternatives so that all options reduce per capita GHG emissions so that all plans can achieve AT MINIMUM the 58% reduction from 2008 levels by outlined in the City's Climate Action Plan no later than the completion of this comprehensive plan cycle (2045).
48. 1-35: please add language that acknowledges the percentage of land owned by the City that is Right-of-Way / impervious surface and the associated amount of runoff with this area
49. 1-38: please add a bullet that acknowledges the City will take additional steps to add and replace removed trees on City-owned land and Parks
50. 1-42: please provide an alternative studied that reduces VMT to below 13.0, as recorded and studied for Exhibit 1.6-6
51. 1-51: why are transitions considered an environmental impact?
52. 1-54: provide information as to how Exhibit 1.6-11 ratings for tree canopy are assessed given that per the City's own recent study, almost all tree canopy loss was not due to development and nearly half was on City-owned land.
53. 1-59: third line - was there an Alternative 6 studied?
54. 1-61: it is clear Alternative 1 does not comply with HB 1220, which is related to the siting of affordable and permanent supportive housing. In the final EIS, please identify which alternatives comply with HB 1220 as the final adopted plan MUST comply with the state requirements.
55. 1-62: last paragraph, please study compliance to state and regional plans for ALL Alternatives included in the Final EIS so that the version of the plan Council votes on is clearly in compliance.
56. 1-66: please provide the impact on housing production for each Alternative studied should MHA be expanded to include all Neighborhood Residential zones.
57. 1-67: please provide information related to 'naturally occurring affordable housing' and how supply provided in each Alternative will balance those losses.
58. 1-68: what is the net increase in units affordable to those making below 100% AMI?
59. 1-70: Please note how all alternatives either meet demand or fall short as noted in Alternative 1
60. 1-89: For all alternatives, adjust zoning capacity to take into account the potential for the city to acquire land that achieves the LOS of Parks as outlined in Exhibit 1.6-27

225-3
cont

Chapter 2

61. 2, generally: please revise numbering to follow nomenclature used in other sections (3,4, etc.)
62. 2-4: please correct Exhibit to provide the place type 'Neighborhood Residential' under Alternative 1 place types. The change in name already existed before the beginning of the Comprehensive Plan process.
63. 2-42-11: please provide the required information in the EIS to show compliance with the Environment and Climate Element of the GMA, which the City voluntarily agreed to follow
64. 2-19: please study the impact of removing FAR for all Neighborhood Residential Zones
65. 2-20: revise bullet point two to allow for up to six-story single flat configurations
66. 2-30: revise Alternative to provide a consistent minimum area for each urban center designated.
67. 2-30: in addition, please revise map to designate urban centers $\frac{3}{4}$ mile around each studied ST3 station location.
68. 2-33: please study impact of condensing all Lowrise zoning to highest possible use (LR3)
69. 2-33: please study the impact of condensing all Neighborhood Residential into one zone with a minimum lot size of 2500sf.
70. 2-34: Please study an alternative for Neighborhood Residential with a capacity limit that is in line with up to six stories on all lots and a lot coverage of 50%, in compliance with current building codes that allow wood-frame construction and single stair building up to six stories and would allow for six-unit flats on a lot.
71. 2-40: Please revise Alt 5 to truly represent a combination of alternatives 2, 3, and 4. The resulting alternative 5 should be no less than 140,000 units, or, in alignment with following comments, no less than 314,000 units (158,000 units planned for each alternative)
72. 2-48: the PSRC already acknowledges that Seattle has a housing and jobs imbalance. Please correct all Alternatives studies so that the minimum number of housing units projected is no less than the number of jobs projected
73. 2-48: the PSRC identifies a jobs / housing balance of 1.3 to be ideal for all jurisdictions within King County. That would mean planning for an increase of at least 209,670 housing units as compared to 158,000 jobs. Please study at least one alternative with a **projected** number of units that exceeds 210,000 housing units.

225-4

74. 2-51: please revise the numbers in the comparison tables, Exhibits 2.4-31 and -32. There is no reason the numbers should be the exact same in all the alternatives studied.

225-4
cont

75. 2-56: please correct this section to acknowledge that delaying action would also put the City in non-compliance with state requirements.

Chapter 3 Environment

3.1 Earth & Water Quality

76. 3.1-15: Provide information as to mitigation strategies for areas that will see a significant sea level rise by 2100.

225-5

77. 3.1-16: revise Alternatives to increase density in areas ranked either 4, 3, 2, or 1 in terms of Burden Levels

3.2 Air Quality & GHG Emissions

78. 3.2-17: how is the location of Sensitive Populations factored into the placement of new housing in all studied alternatives?

79. 3.2-21: how do the City's 2030 targets factor into estimates of housing production?

80. 3.2-24: please include GHG per capita numbers below each alternative

225-6

81. 3.2-25: please study alternatives that provide additional height and density away from the 200 meter buffer outlined in paragraph 2

82. 3.2-29: for Exhibit 3.2-7, please provide per capita numbers for all alternatives studied

3.3 Plants & Animals

83. 3.3-5: why are tree management units by zone type and not by Subarea?

84. 3.3-8: please provide additional information that makes it clear that 6PPD-quinone originates from tires

225-7

3.4 Energy & Natural Resources

85. 3.4-7: Please provide a comparative Building EUI for single-family homes based on existing energy data

86. 3.4-10: How does the Transportation Plan factor into these #s?

87. 3.4-21: there seems to be an error in the naming of Exhibit 3.4-9

225-8

3.5 Noise

88. 3.5-28: Please provide information that acknowledges the impact that a lack of air conditioning and need for passive cooling strategies (i.e. open windows) has on noise pollution in neighborhoods along arterials

225-9

3.6 Land Use Patterns & Urban Form

89. 3.6-12: please provide clear language that acknowledges the continued racism and exclusionary practices continued by the Urban Village Strategy and provide clear differences between this plan and the previous one to address this history.
90. 3.5-19: please study capacity increases equivalent to eliminating all setbacks in multifamily such that buildings are regulated solely by fire separation requirements per the Seattle Building Code.
91. 3.5-19: please study capacity increases equivalent to reducing all upper setbacks to no more than 10 feet; removal of corner setback requirements; and reducing front setbacks on neighborhood residential 0 feet.
92. 3.6-21: please study capacity increases equivalent to 50% coverage of lot area for all Neighborhood Residential zones
93. 3.6-107: how are the overcast nature of most times of year in Seattle along with the increasingly hot summers factored into concerns around shadows?
94. 3.6-117: please revise all Exhibits so that place types align with new proposed place types (Regional Center, Urban Center, Neighborhood Center)
95. 3.6: for all alternatives, raise urban village zoning to a minimum of orange (85ft) and all and all urban centers to red (120ft)
96. 3.6-138: per Exhibit 3.6-93, why is the future AU/acre much lower at NE 130th as compared to 15th & 145th even though they are the same Place Type?
97. 3.6-139: please condense all zoning at 15th & 145th to study the highest potential capacity
98. 3.6-146: per Exhibit 3.6-98, the numbers in Alt 4 are the exact same as Alt 2
99. 3.6-161: per Exhibit 3.6-108, the numbers in Alt 4 are the exact same as Alt 2
100. 3.6-170: To provide increased equity, please study and revise capacity so that all Residential Urban Centers have an AU/acre of at least 50, all Hub Urban Centers have an AU/acre of at least 80, and all Regional Centers have an AU/acre of at least 150 for Alternative 5.
101. 3.6-175: Per Exhibit 3.6-115, please provide revised zoning and study additional capacity here that increases the Future Activity Units per Acre to above 70 or as much as 15th & 145th.

225-10

102. 3.6-182 Land Use Patterns & Urban Form: Please explain the justification for requiring transitions and the deference to single-family homes given the current housing emergency

103. 3.6-186 Housing: Please provide additional justification for continuing the “Urban Village” strategy under a new name given the research and confirmation by the RET Racial Analysis that the strategy has continued the racist redlining of Seattle’s past in a new form and has been insufficient to solve the City’s housing affordability emergency, which was declared in 2015.
(*“All alternatives would focus most future growth into existing urban centers and villages.”*)

225-10
cont

3.7 Relationship to Plans, Policies, & Regulations

104. 3.7-20 Housing: Per the “Housing” section of Exhibit 3.7-9, please confirm and provide one alternative that achieves the County’s goals for housing targets by affordability for all affordability bands at and below 80% AMI.

105. 3.7-26 Housing: Please provide and study a Regional Center located in the South End, as requested by a number of members of the South End Community.

225-11

3.8 Housing

106. 3.8-4 Housing: Given the correlation between denser housing and more racial diversity, please provide a map with zoning changes intended to allow for more dense housing in subareas that have a significantly higher percentage (above 5%) of ‘White, Non-Hispanic’ than the Seattle average, namely Areas 1, 3, and 6.

107. 3.8-31 Housing: Please provide a map for each alternative that clearly identifies new zoning types and related increases in density in areas with a low risk of displacement as compared to those with a high risk of displacement.

108. 3.8-45 Housing: For Exhibit 3.8-41, how does the total projected new income-restricted units for each alternative compare to the current deficiencies identified in the EDI Community Indicators Report (September 2020)?

109. 3.8-47 Housing: For Exhibit 3.8-44, please provide strategies or increase the number of allowed housing units in Alternative 5 in order to reduce the ‘ratio of net new units to units demolished’ to a number than is lower than Alternative 3.

225-12

3.10 Transportation

110. Please clearly outline in the Final EIS how the Comprehensive Plan achieves Policy T4.2, a 20% reduction in VMT by 2030

111. Please revise LOS standards to move to VMT and revise Comprehensive Plan Policies T9.7 and T 9.8 accordingly.

225-13

112. 3.10-5 Transportation: For Exhibit 3.10-2, please provide justification for maintaining an SOV mode share of '38%' for Subarea 4 as compared to other Subareas, given its proximity to two major Regional Centers. Can this number be reduced to 30%?
113. 3.10-41 Transportation: For Exhibit 3.10-22, please provide separated LOS for Freight vs. HOV vs. SOV.
114. 3.10-101 PM Peak Hour Mode Share-Alternative 5: Please provide information as to what steps or adjustments need to be made in order to achieve SOV Targets in all Subareas studied. Currently it appears that Subarea 7 does not comply regardless of Alternative.
115. 3.10-114: If you're going to provide a Sensitivity Test, please do so for all alternatives studied.
116. 3.10-129 Transportation: Please provide a matrix that shows LOS and VMT (both total and per capita) of all studies alternatives crossed with the studied transportation plan alternatives

225-13
cont

3.11 Public Services

117. Please provide additional information in the Final EIS that addresses the City's capacity to deal with extreme weather events, including but not limited to a major earthquake event.
118. 3.11-3 Public Services: for Exhibit 3.11-1, please either revise to only show the number of sworn officers from 2017 to 2022 or revise later exhibits to provide data all the way back to 2012. The information as shown currently is misleading.
119. 3.11-61 Schools: please provide revised estimates that consider the projected number of students adjusted based on the expected number of family size units to be created through all studied alternatives.

225-14

Chapter 4 – Acronyms & References

120. 4.2 References: Please add references and include the following items in your research as part of the Final EIS:

121. 4-43: Please fix the broken link to the Market Rate Housing Needs and Supply Analysis. I am assuming this is the 2021 BERK Report, however this cannot be confirmed. If it is not, please include that report in your research for this final EIS.

225-15
cont

Chapter 5 – Appendices

122. B – Detailed Estimated Growth by Alternative: can you please provide the missing information?
123. C – Infill Exemption Summary of Law & List of Codes as Mitigation: can you please provide the missing appendix?
124. D – Air Quality & GHG Appendix: can you please provide the missing appendix?
125. E – Energy Appendix: can you please provide the missing appendix?
126. F – Noise Appendix: can you please provide the missing appendix?
127. G – Land Use Appendices: can you please provide the missing tables?
128. G – Land Use Appendices: can you please provide a draft future zoning land use table? These zones should be in line with the proposed city types: Regional Centers, Urban Centers, Neighborhood Centers, Neighborhood Residential, Industrial, et. Al
129. H – Transportation Appendices: can you please provide the missing information for both the Pedestrian Master Plan as well as the Bicycle Master Plan?

225-16

Feel free to email me back for questions. In line with the requirements of the EIS as part of the Comprehensive Plan Process and per the Growth Management Act, I look forward to responses to all of my comments as listed above.

Thank you,

Andrew Grant Houston, AIA NCARB CPHD
District 3 Resident – City of Seattle

Subject: One Seattle Plan comments
Date: Monday, May 6, 2024 2:10:26 PM

CAUTION: External Email

ONE SEATTLE PLAN

I would like to submit the following comments regarding the One Seattle Plan.

I support Alternative 2 as The Plan.

Alternative 2 would have the lowest potential for development-related impacts to vegetation (including loss of tree canopy cover) citywide.

Based on the anticipated amount of area likely to be redeveloped, Alternative 2 would have a lower potential of leading to increased delivery of stormwater contaminants to streams.

However, on p.3-3-30, saying that "none of the action alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover" is not backed up by facts but speculative at best. The Plan states: "development projects on parcels in the Neighborhood Residential or Multifamily management units are likely to result in more loss of tree canopy, compared to development on parcels in other management units. This is particularly true of parcels with lower-density residential designations, where existing canopy cover is higher than elsewhere. As such, strategies that convert parcels with lower-density residential designations to higher-density designations could reduce the total amount of tree canopy cover in the city."

Some questions that need answering are:

1. Considering the fact that the trees being removed are larger than the ones being planted and it will take many years to replace the current trees, what is your estimation of tree planting needs and a time frame to replace the equivalent lost canopy area and volume?
2. What is the acreage available and suitable for planting trees in the City's public areas?
3. What is the available acreage available to plant trees on private property?
 - Canopy volume, especially of coniferous trees during our rainy season, are critical factors in reducing stormwater runoff. What is the projected loss in canopy volume over the next 20 years as big conifer trees are removed?
5. What is the projected increase in stormwater runoff and what costs are associated with on site and alternative city water management policies of stormwater and pollutant runoff as a result?

Although the provision for 30% tree canopy is retained in the draft Plan, reaching the target date by 2037 needs to be put back into the draft, as well as attaining a tree canopy goal of 40% over time, which has also been removed from the draft Plan. On p.3-3-12, the Plan states: "Based on the potential for reductions in canopy cover, projects that entail tree clearing could slow progress toward achieving the City's canopy cover goal."

There seems to be an opinion amongst some that we cannot have both trees and houses, but we CAN. Although the Plan states that "the City's current tree protection regulations minimize the potential for development-related loss of tree canopy cover and require mitigation for such tree loss," there are serious omissions in the Tree Ordinance. The Plan needs to correct these omissions by specifying dedicated tree retention and planting areas that will require saving more existing trees, especially mature trees, on building lots. To stop lot sprawl, the Plan needs to give SDCI Director the ability to ask for alternative site design. The Plan needs to have a provision to review and amend the Tree Ordinance to (1) require developers to submit a tree inventory before taking any action on the lot, (2) remove

226-1

the “basic tree protection area” that allows developers to unnecessarily remove almost all large trees on lots, and (3) the Tree Ordinance needs to apply to all City land use zones.

The Plan needs to require all housing built, including building additions of any size and ADU's, to plant street trees with trees of larger sizes than currently allowed on sidewalk strips being allowed if there are no wires overhead.

Increasing access to trees and clean natural spaces for people everywhere is something we all agree on. Biden’s Inflation Reduction Act includes an investment in urban tree planting of \$1.5 billion. Part of his Justice 40 Initiative ensures that 40 percent of the benefits reach communities that are disadvantaged or nature deprived. The Plan needs to specify that affordable housing and multifamily housing have trees and parks nearby.

The Plan needs to authorize the use of Parks Impact fees to create more parks, especially pocket parks, in neighborhoods across the city. The Plan needs to authorize the use of Transportation Impact fees to create more tree-lined streets.

Urban trees are valuable for so many reasons. They reduce surface temperatures and storm runoff (helping to protect our salmon). They cleanse the air and improve residents’ mental and physical health. There’s even a correlation with public safety, an issue which is SO important to Seattleites: Neighborhoods with more street trees have lower crime rates. Expanding urban tree cover is truly an issue of environmental justice and equity.

Thank you.

Comment:

Comments on Seattle Comp Plan Draft EIS

The Draft EIS lists likely 'local' adverse impacts in the categories Earth and Water Quality, Air Quality and GHG Emissions, and Plants and Animals:

Increased hard surfaces

Decreased vegetation

Increased total emissions at a local scale

'Temporary' (increased) emissions from construction (please define temporary)

Exposure of population living in new buildings near high volume roads to air pollution

'Moderate' loss of tree canopy

227-1

However, it states there is "No significant adverse impact" in these categories. The reason given is that the entire region (by the way, what region is being referred to?) will benefit or at least is not worse off. Why is a theoretical regional benefit assumed to be desirable at the cost of worsening conditions in Seattle? Shouldn't there be more discussion of this? It is important to maintain a healthy environment in Seattle for people, plants and animals and this does not have to be at the expense of a healthy regional environment.

The Draft EIS finds "Moderate adverse impacts" from Noise:

Increased construction noise

Increased transportation noise

More people living near/exposed to noise of transportation corridors

However, it states that the impact "can be adequately mitigated". This is misleading and likely false, based on my experience with construction noise in my neighborhood for the past decade.

The Draft EIS finds "Potential for significant adverse impacts" on Cultural Resources and Transportation. I agree with these findings.

Under Public Services it mentions that "Additional park space would be needed to maintain existing park level service ..." The important question would be: will the increased development be allowed to go forward without improving/increasing park space and services.

In addition, I don't think the Draft EIS addresses the issue of higher summer temperatures in the city due to more buildings, paved surfaces, and fewer trees and gardens. The environmental (e.g. more need for air conditioning) and health impacts of this deserve consideration.

Thank you for considering my comments.

CAUTION: External Email

Hello,

I am writing to express my disappointment with the Seattle one plan. The plan put forward by the mayor's office lacks any kind of vision of the future or awareness of the current state and future realities of housing in Seattle.

I was born in Seattle and am a life-long pacific northwester. I am in my 30's, single, and work as a prenatal healthcare provider at the UW medical center. I am immensely fortunate to be able to take public transportation to work, however that decision has also constrained where in the city I can live. I value so much about Seattle - the neighborhoods, the walkability of so many areas, the natural beauty. However, as I look at the current and future housing situation, I strongly doubt my ability to remain in this city long term. The mayor's proposal maintains the current status quo and demonstrates that this government does not value me or my contemporaries as residents of this city. It does not seek to make this city more affordable or attractive to myself, my other early-career co-workers, or my similarly situated friends.

I was fortunate to live for many years in Europe, in cities where the majority of residents are long-term renters in apartments. These cities are walkable, with easy access to local events and venues. Each neighborhood has a community center and pool, which are actively used by all generations. Fewer cars on the roads means more room for trees and plants. While homelessness exists, it is nowhere near the proportions in Seattle. When friends from Europe visit I warn them ahead of time of the situation here and they are still shocked. Affordability does not mean that only "undesirables" can live in a city, it means that nurses, teachers, cashiers at stores, the people who clean the mayoral offices and clean the streets can live in the city, instead of spending hours of their life in traffic, hours which could be spent with their families or communities. Why is Seattle not striving for a vision of the future which values these people? Renting is not a bad word in the rest of the world, but Seattle seems to think that renters are nothing more than transitory nuisances, not deserving of a stable-living situation and certainly not of buying an apartment or home in this city. With obesity and poor health on the rise, why not make it easier for people to walk to buy groceries, bike to their gym, or use any other means of transportation than a car to get around? And given all of the predictions about increased migration to Washington and the Seattle area, migrations which are likely to be made even worse by climate change, why does this administration continue to attempt to put up gates and walls around those few lucky and wealthy enough to have bought a home? Shame on the mayor and his team for having so little vision of the future, but thank you for making your contempt of me and my generation so clear.

Emily Green

Comment:

I'd like to see the city study some different options for industrial areas like SoDo and Interbay. These areas take up a huge area of our city and include a lot of vacant land. It seems foolish not to study the possibility of transforming these areas into mixed-use walkable neighborhoods, allowing conversion of warehouses into cheap housing, more areas for low-cost art and music venues etc. Leaving them out of all five alternatives is a mistake.

Comment:

I'd like to see the city get more creative with ways to increase density and greenery simultaneously. We can have both! Removing parking mandates citywide would allow a lot more greenspace, as would adding more meridians in the middle of busy streets, and removing onstreet parking to expand planting strips in sidewalks. I'd also like the city to study developer incentives for green roofs and walls, and incentives for keeping on-site trees. What would be the effect of unlimited building height and FAR in exchange for keeping onsite trees? I'd like to see these options studied in the EIS

Comment:

I'd like Seattle to be much more walkable, meaning building many more homes near businesses and businesses near homes. I'd like the EIS to study much taller buildings in neighborhood centers, urban centers and regional centers, including an option of unlimited building height in these areas. I'd also like to study significantly expanding neighborhood centers to 1/4 mile radius instead of 800 feet and study many more than the 42 neighborhood centers in alternative 5. Research shows more than 80 of these business clusters in Seattle already. I'd also like to study zoning for small retail and cafes citywide.

Comment:

I grew up in this city and I really would like the opportunity to settle down and raise a family here. I want my kids to be able to grow up around their grandparents. I'd like to be able to help my parents out as they get older. This comp plan is trying to force me out of my city and break up my family. I need you to study much bolder options if we are going to build enough housing for me to be able to afford to stay here. What about zoning for 5-storey apartment buildings city-wide? What about planning for 200,000 new homes? What about 6-storey apartments within a 15 minute walk from transit? What about unlimited building height in regional centers, or even city-wide? What about 80 neighborhood centers instead of 24? Why not study an option that sees growth as an opportunity for Seattle to take its place on the world stage, rather than cower in fear and blindness?

I'd like to you to study the boldest possible approach to the Duwamish River- what wouldit take to make it the crown jewel of our city instead of one of the most polluted places in the country? What would it take to restore native wetland along the entire course of the river, with walking trails for the public an vibrant walkable neighborhoods along both banks? What would be the benefits of doing so (I am guessing they would be tremendous)

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

Subject: questions about comprehensive plan
Date: Monday, May 6, 2024 11:21:23 AM

CAUTION: External Email

The EIS for this plan seems seriously deficient. How is this even an EIS when it doesn't address key questions of the plan's likely impact?

Here are some questions/requests for more information. Please go back to the drawing board. thanks, Mary Gwinn/West Seattle resident.

238-1

1. Section P 3-3 states that “none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild.” This is a preposterous statement, given the amount of construction and disruption that will come with building new housing plants. What are the impacts on plants and animals of the alternatives.
2. Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." Is there any information to support the notion that tree planting programs replace lost urban tree cover? For starters, trees take many years to replace, and many animals depends on older growth trees. Please revisit this assumption.
3. The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. Please provide specific information on how much public land is available for tree planting and how many trees will need to be planted to replace those lost for development.

Comment:

I am a Seattle renter. The city should study the impacts and opportunities of the following:

239-1

Citywide elimination of parking minimums
 Additional Neighborhood Centers in Urban Neighborhoods
 Additional Neighborhood Centers off of arterials
 Higher floor area ratios for Urban Neighborhood zoning
 Higher growth targets for Alternative 5
 Expanded highrise zoning in Regional and Urban Centers
 Expanded highrise zoning in Urban Neighborhoods within 1 mile of parks >1 acre
 Expanded highrise zoning in Urban Neighborhoods
 Expanded highrise zoning at Neighborhood Centers
 Expanded highrise zoning within a half mile of all light rail stations
 Expanded highrise zoning around existing grocery stores
 "Corner stores" allowed mid-block as well as on corners
 Reforesting golf courses on tree canopy
 Higher floor area ratios for middle housing in all residential zones, such as those corresponding to the state model code for middle housing
 Social housing in every neighborhood on affordability
 Greater height and density bonuses within a quarter mile of transit stops
 Greater height and density bonuses within a half mile of transit stops
 Increased building height allowances, in exchange for reduced lot coverage, on tree canopy
 Granting tax breaks & fee deferrals to housing projects that include affordable units
 Expanded highrise zoning in Regional Centers
 Development incentives like additional floor area ratio for 2- and 3-bedroom units
 Floor area ratio bonuses that incentivize stacked flat development rather than attached or detached townhomes
 An Urban Center around the 145th light rail station

Of the available alternatives, I strongly prefer Alternative 5 with higher growth targets.

Comment:

Thank you for the presentation of the EIS on April 11, 2024. I am writing to offer a suggestion pertaining to the "Adverse Impact" associated with Alternative Five, described in the EIS as "low level sidewalk connectivity." The City owns 40 feet of right-of-way on Roosevelt Way from 3rd NE to Aurora Ave. Sidewalk connectivity could be increased by adding bike lanes and pedestrian lanes on the shoulders of this roadway, with ditches replaced by covered culverts.

This section of Roosevelt Way was severed in 1962 from the busy portion of Roosevelt Way when I-5 was built. Often described as the "Ghost Portion of Roosevelt Way," this diagonal roadway has been submitted by SDOT to be considered for delisting as an arterial; delisting would allow for calming measures including speed bumps. (One speed bump is already in place on this "Ghost Portion" of Roosevelt Way, located southeast of 1st NE.)

Thank you for considering my suggestion.

Subject: an idea for consideration for the One Seattle Plan
Date: Monday, April 15, 2024 7:59:14 PM

CAUTION: External Email

Dear One Seattle Planners,

I live in north Seattle near the two light rail stations under construction at 130th and 148th streets. I support Option Five for density, for two basic reasons: 1) To support the development of additional low-income housing in Seattle, and 2) to lower the carbon footprint of residents in the Puget Sound area. By tolerating greater density, perhaps our society can salvage the ecology of Puget Sound and the Cascades while providing greater social economic and racial equity with respect to housing. It is time for north Seattle to play its part in providing more housing particularly around light rail stations.

I have a recommendation:

I have learned that the Haller Lake United Methodist Church at 133rd and 1st Ave. NE also supports Alternative 5 of the EIS. Their church has property that they would like to subdivide. However, they need a revision of DEIS to include NC-55 zoning for the church property, in order to accomplish their goals. Their intention to subdivide pertains to Lots 3, 4, and 5 of block 65, in the H.E. Orr Park Division No. 6.

242-1

This zoning revision would mean that the housing units could have small businesses on the ground floor. The One Seattle Plan calls for just this sort of development for land parcels located within 2 or 3 minutes of walking distance from light rail stations. The One Seattle Plan calls for new "Neighborhood Centers" exactly in line with the vision offered by the Haller Lake United Methodist Church.

Please consider making this zoning change.

Thank you,

Mark Hammarlund

CAUTION: External Email

I am devastated by this dangerous plan.
Trees are vital to protect our city and our homes.
Allowing trees to be cut down for building is totally wrong!

I have a big lot and have planted many trees and shrubs over the years.
They help to keep my home cooler in the summer without having air conditioning, which would use more power! I open up my house at night for the cooler air, and close it first thing in the morning.

I have been appalled at the many houses being built in Seattle without leaving any room for trees.
Our tree canopy is shrinking, when the opposite should be happening.
New sidewalks, good in many ways, but they add more hard surface to absorb and radiate heat.

Who came up with terrible ideas that will make residents more vulnerable to the increasing heat and drought over the years.
What about the children who have years and years ahead of them?

I have a large lot, and plan to stay in my home until I die. I don't want to know about the destruction of my plants and the increased risk to the birds and animals in my area.

I'm glad I won't be here to get my heart broken and see what happens after following such a plan.

Good Grief!!!! How can you be so ignorant about how to live into the future?

Judith Hance,
Seattle since 1991

My comments are attached and copied into the body of this email. I am not sure which works best for you.

ONE SEATTLE PLAN

I support Alternative 2 as The Plan.

Alternative 2 would have the lowest potential for development-related impacts to vegetation (including loss of tree canopy cover) citywide. Based on the anticipated amount of area likely to be redeveloped, Alternative 2 would have a lower potential of leading to increased delivery of stormwater contaminants to streams. More trees need to be planted in the areas with a lack of tree canopy instead of the absurdity of removing trees from areas that have a higher amount of canopy that is currently helping to mitigate the effects of climate change.

However, on p.3-3-30, saying that "none of the action alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover" is not backed up by facts but speculative at best. The Plan states: "development projects on parcels in the Neighborhood Residential or Multifamily management units are likely to result in more loss of tree canopy, compared to development on parcels in other management units. This is particularly true of parcels with lower-density residential designations, where existing canopy cover is higher than elsewhere. As such, strategies that convert parcels with lower-density residential designations to higher-density designations could reduce the total amount of tree canopy cover in the city."

Some questions that need answering are:

1. Considering the fact that the trees being removed are larger than the ones being planted and it will take many years to replace the current trees, what is your estimation of tree planting needs and a time frame to replace the equivalent lost canopy area and volume?
2. What is the acreage available and suitable for planting trees in the City's public areas?
3. What is the available acreage available to plant trees on private property?
4. Canopy volume, especially of coniferous trees during our rainy season, are critical factors in reducing stormwater runoff. What is the projected loss in canopy volume over the next 20 years as big conifer trees are removed?

245-1

5. What is the projected increase in stormwater runoff and what costs are associated with on site and alternative city water management policies of stormwater and pollutant runoff as a result?

Although the provision for 30% tree canopy is retained in the draft Plan, reaching the target date by 2037 needs to be put back into the draft, as well as attaining a tree canopy goal of 40% over time, which has also been removed from the draft Plan. On p.3-3-12, the Plan states: "Based on the potential for reductions in canopy cover, projects that entail tree clearing could slow progress toward achieving the City's canopy cover goal."

There seems to be an opinion amongst some that we cannot have both trees and houses, but we CAN. Although the Plan states that "the City's current tree protection regulations minimize the potential for development-related loss of tree canopy cover and require mitigation for such tree loss," there are serious omissions in the Tree Ordinance. The Plan needs to correct these omissions by specifying dedicated tree retention and planting areas that will require saving more existing trees, especially mature trees, on building lots. To stop lot sprawl, the Plan needs to give SDCI Director the ability to ask for alternative site design. The Plan needs to have a provision to review and amend the Tree Ordinance to (1) require developers to submit a tree inventory before taking any action on the lot, (2) remove the "basic tree protection area" that allows developers to unnecessarily remove almost all large trees on lots, and (3) the Tree Ordinance needs to apply to all City land use zones.

The Plan needs to require all housing built, including building additions of any size and ADU's, to plant street trees with trees of larger sizes than currently allowed on sidewalk strips being allowed if there are no wires overhead.

Increasing access to trees and clean natural spaces for people everywhere is something we all agree on. Biden's Inflation Reduction Act includes an investment in urban tree planting of \$1.5 billion. Part of his Justice 40 Initiative ensures that 40 percent of the benefits reach communities that are disadvantaged or nature deprived. The Plan needs to specify that affordable housing and multifamily housing have trees and parks nearby.

The Plan needs to authorize the use of Parks Impact fees to create more parks, especially pocket parks, in neighborhoods across the city. The Plan needs to authorize the use of Transportation Impact fees to create more tree-lined streets.

Urban trees are valuable for so many reasons. They reduce surface temperatures and storm runoff (helping to protect our salmon). They cleanse the air and improve residents' mental and physical health. There's even a correlation with public safety, an issue which is SO important to

Seattleites: Neighborhoods with more street trees have lower crime rates. Expanding urban tree cover is truly an issue of environmental justice and equity.

Thank you.

My concerns and questions -

Has The Thornton Creek Watershed been considered in these growth plans. It is very close to the 130 th and 145 th street area. Protection of that watershed from increased population is essential

If the city can't address the lack of adequate police officers now how will it handle the increase in population in the future ?

Are there adequate safeguards in place for bike storage for commuters at the urban centers and Light Rail stations? Theft is rampant.

How will the trails around the outside of Jackson Park be protected? How will these trails be maintained?

How will these trails be kept safe from homeless encampments?

How will parks along Lake City Way be kept free of drugs and which are current issues.

How will there be adequate funds for maintenance of parks lands .

Current landscapes near local elementary schools are growing " wild". After being rebuilt the Olympic Hills elementary school does not seem to have any funding for the maintenance of its landscapes. Will this occur with other new schools built

I am a renter in U-District, and I believe that the City of Seattle did not listen to the overwhelming majority's call for an Alternative 6 vision, which would enable the creation of more walkable neighborhoods. Instead the current draft plan will worsen the many crises (housing, climate, unaffordability) our city faces. To create a more vibrant city, the plan should add many more 'Neighborhood Centers', especially in Urban Neighborhoods.

If the City of Seattle adopted my above proposed changes, then we would be able to reduce rates of homelessness.

- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

Comment:

The Comprehensive Plan sets a goal of ensuring equitable internet access for all residents of Seattle. Is there broadband capacity to accommodate this growth, but also ensure 150/150 broadband speeds for all, per the RCW 43.330.536 state-level goal definitions?

CAUTION: External Email

Please rework the comp plan to expand housing capacity across the city and not just in isolated pockets and along car-choked arterials. I am embarrassed for Seattle to hear Rep. Jessica Bateman call our plan "underwhelming" and Rep. Julia Reed call it "the minimum." The majority of Seattleites would love for rent prices to stabilize or come down. Everyone would benefit from the inherent eco-friendliness of denser housing with nearby amenities. We welcome more housing stock!

Comments Planning and Community Development EIS,

Dear Council Members and Mayor Harrell,

I have been a Seattle resident since 1981, and have watched the tree canopy slowly (and more recently - quickly) disappear during this time. What this amounts to is a loss of the character and livability in Seattle, nothing less. I've also been an active citizen of Seattle, and am thinking back to when there was a big clash between developers of the Northgate area that is now Thornton place and the people like me who wanted to see the headwaters of Thornton Creek daylighted. What I learned from that experience is that developers can do the right thing if they have to, and it doesn't cause them much pain either. The Creek is daylighted and it is an amenity that makes the real estate more desirable.

We are asking again that the City Council do the right thing and require developers to retain big trees as much as possible. You have the specifics in other letters from people like me, but I want to emphasize one mitigation action in particular:

"Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees."

Please require designs to incorporate existing trees on lots as much as possible. Both sides can win this way, and that makes the decision-makers look good. This is not as onerous as developers would have us believe. In the end, the trees make the property more valuable, not less. Often, the alternative doesn't even affect the total square footage of building on the lot.

Thank you for considering these comments.

Sincerely,
Deborah Horn

CAUTION: External Email

To whom it may concern,

Please consider alternatives 2 and 4.

According to Section P 3-3, the plan is not anticipated to cause any adverse effects that would diminish the chances of survival or recovery for plant or animal species in the wild. **How does this plan specifically influence the flora and fauna of Seattle?**

253-1

Section P 3-3 asserts that none of the alternatives are projected to yield substantial, unavoidable negative effects on tree canopy cover. **What research demonstrates that initiatives like tree planting programs, combined with expanded hardscape, will counterbalance the reduction in urban forest?**

The plan indicates Seattle's advancement towards its 30% canopy target. However, the new tree ordinance significantly diminishes the space on private land suitable for trees. **What is the extent of available public land to achieve the 30% goal? Additionally, how many trees must be planted annually in these areas to offset those removed due to development?**

Sincerely,
Jared Howe
Seattle, WA

Subject: About the DEIS and the Comprehensive Plan
Date: Sunday, May 5, 2024 11:31:35 AM

CAUTION: External Email

I have serious concerns regarding the continued destruction of Seattle's canopy and building plans based on what I'm seeing in current city council actions.

Regarding the Draft Environmental Impact Statement :

1: Section P 3-3 states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild." What is the impact of the plan specifically on Seattle's plants and animals?

2: Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." What analysis shows that tree planting programs, coupled with increased hardscape, will compensate for lost urban forest? This assumption looks like a fantasy.

3: The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development?

And about the Comprehensive Plan specifically as it impacts District 5:

The massive "neighborhood center" project planned for Roosevelt Ave NE and NE 90th in Maple Leaf is laughably named. It will destroy a large section of an established neighborhood, including existing homes and change the character of an established community.

I live next to a plot that had a small affordable home torn down to make room for 3 massive, ugly, high-priced housing units. (Despite being 3 units on a small lot, they will sell for well beyond a barista's salary. There is no way this is low cost housing.) This will not only disrupt the quality of the block in the future, but has proven to be a violation of our privacy and property rights all during the construction. 827 NE 98th St is a construction project where the workers have repeatedly walked over our property and tossed their food litter all over our yard from the beginning. Workers have also most often not worn safety equipment and broken other rules that appear to have no consequences when reported. They also ripped down an exceptional tree on the north side of the lot. The spot where the tree was still has nothing built on it, so I don't know why they had to do this. We managed to stop them from taking down two more exceptional trees on the east and west sides of the property, but they have repeatedly removed the "permanent" fencing that is supposed to protect those trees during construction. Currently, they have a table saw and a huge pile of lumber within the "protected area" of one tree. Again, the city does nothing about any of this. I have no doubt that any Comprehensive Plan/neighborhood center construction will be carried out with the same disregard for rules and promises as what I am seeing going on right next to me today.

Beyond all that, why destroy a lovely bit of neighborhood when there are under-utilized stretches of parking lot and office buildings much closer to the Northgate Transit Center? I

254-1

walk past the area of NE 100th and 1st Ave NE and see very few cars ever parked there. That area could contain one of these neighborhood centers without destroying a single home. It would be closer to transportation, and still very close to schools and shopping. The plan as it is is ridiculous.

Sincerely,
Sam Hranac
Maple Leaf

CAUTION: External Email

In short, the benefits of building a denser city far outweigh the temporary impacts during development. Increasing bulk isn't an impact, it is a feature of a lower carbon, more efficient city. We should lean into smarter, greener growth with:

255-1

- Taller buildings in growth areas.** Around our light rail investments, tall buildings should be the norm. As job centers, they should be paired with enough zoned capacity to make thousands of homes there. For example, the new 130th Street Regional Center is stated to add only 1644 homes (*DEIS, page 1–77*), but could be home to thousands more. And as Councilmember Morales has pointed out [“...excluding the South End from intentionally planning for economic development opportunities...\(will create\)...deeper economic inequality.”](#) It is the natural progression for Seattle moving from a single downtown destination to a polycentric network where you can walk to your job or take transit to another neighborhood without ever going downtown.
- Additional stories elsewhere.** Adding a story or two elsewhere has a marginal impact on the street, but these are the cheapest floors in any development already being built. In the rebranded Centers, 30' tall Residential Small Lot zoning should jump to 40' and 55' heights. This 4–5 story scale is the baseline for non-profit developers to build subsidized affordable housing, and also the scale at which we start to see for-profit developers provide affordable units under Mandatory Housing Affordability (MHA). There may not be the political will for the 5–8 story

urban streetscape of a Paris or Copenhagen, but more new development should hit that sweet spot.

- **Zoning for Mass Timber.** Buildings made from [mass timber](#), a low-carbon alternative to steel or concrete, can go up to 18 stories. We should optimize the zoning to match the building code and let the market produce green towers.
- **Zoning for more than Townhouses.** Granted, smaller homes are generally less expensive, but shorting middle housing will drive more projects into the typology we already have: 3 or 4 units on a parcel (like today's NR and RSL zoning). There is a strong market preference for townhouses and the city's approach will make it easier to build and sell those, but it leaves the extra capacity granted by HB1110 on the shelf unbuilt. To get the other types of middle housing, such as sixplexes, the update should factor in some bonuses for height, setbacks or floor area.
- **Reward extra units** The update should either allow for more bulk as you add units as an incentive like the State model code, or use a more basic unlimited density within the buildable area like Spokane's successful [Building Opportunity for Housing](#) program.
- **Don't count ADUs when counting density.** Over the last several years, ADUs have become popular because they have low barriers to permit and flexibility that fit many residential sites. The Update counts them against the 4/6 unit maximum per parcel, closing the code exceptions, like exemption from MHA, that makes them so popular (2500 ADUs in just the last three years). They are low-impact infill development and there is no reason to kneecap this housing type.

- **Solve for affordable housing.** First, the kinds of buildings funded and built for income-restricted housing are not low-rise middle housing in residential neighborhoods — they are largely 4–8 story mid-rises in growth areas. More urban centers need to be zoned for this scale of building. If we want affordable housing distributed throughout the city, we must repeat similar zoning in the new ‘Neighborhood Center’ place type.
- **Resist the urge to expand Mandatory Housing Affordability (MHA)** into zones we hope to build middle housing. [ADUs \(not subject to MHA\) have exploded, up 217% over four years, versus townhouses \(subject to MHA\), which are off 77%.](#) Builders will go where the barriers are lowest. A [recent study by Shane Phillips about inclusionary zoning in Los Angeles](#) illustrates that for every affordable unit inclusionary zoning creates, it costs 4–5 market rate ones. In the plan, OPCD studied expanding MHA into Urban Neighborhoods but only netted 3 more income-restricted units built on-site there (DEIS, pg 3.8.46).
- **Align the Affordable Housing Bonus building type with Habitat for Humanity and Seattle’s Social Housing Developer.** The affordable housing bonus type (1 unit per 400 sq ft of lot and a FAR of 1.8) in the [Updating Seattle Neighborhood Residential Zones](#) documents might be more workable for those specialized builders if the affordability requirements mirrored their optimal pro formas. This is a natural alignment with the nascent social housing developer’s publicly supported mission and the principles of the comprehensive plan.
- **Center new housing on parks and shorelines, less on arterials.** The health impacts of placing multifamily housing on arterials are well

documented and disproportionately affect BIPOC and low-income residents. As a means to equitably increase access to nature, light, air, and recreation, the plan should prioritize housing around parks and shores.

- **Support Neighborhood Centers.** Just because the idea has been around, doesn't mean that it will be accepted easily. Actually, the fact that zoning hasn't changed at all around them for decades is proof of just how difficult it will be politically. Already between the scoping report and the draft plan, the number and area of the Neighborhood Centers have been clipped, from 42 to 24, and from roughly 3000 acres to somewhere around 1000 acres. Yet these zones supply some of the biggest growth, nearly 20,000 units under Alternative 5.
- **Embrace Neighborhood Centers as '15 Minute' neighborhoods.** They support local jobs and services, mixed-use buildings, increases in the tax base and commerce, in walkable proximity both to new housing and existing neighborhoods. It is home to your favorite coffee shop or bakery, professional services like daycare, dentists, plus a library and grocery store. Every home we put into Neighborhood Centers fuels local business and keeps people out of cars.
- **Build out 'Low-Emission Neighborhoods'** that were promised in the Seattle Transportation Plan and under Executive Order 2022–07 and these Neighborhood Centers would be perfectly suited to lowering our per capita carbon footprint.
- **Lean into infill development to reduce carbon per capita over**

255-1
cont

time. [Doubling density reduces CO2 emissions from residential energy use by 35% and household travel by 48%](#). Beyond the Low Emission Neighborhoods mentioned above, we should align urban design and the housing market with climate change adaption.

- **Remove parking mandates** (it doesn't mean parking won't be built). Parking requirements drive up the cost of housing, lock in carbon emissions, and require either expensive garages or extensive surface parking, taking space that could otherwise be used for vital tree canopy. In today's Neighborhood Residential zoning, we require one parking space per principal unit. If we allow more principal units, the number of parking spaces should be based on the discretion of the developer. In 2024, there is no reason to require parking in new urban development when cities like Olympia, Austin, and Raleigh have already done away with this antiquated requirement.
- **Go bigger to leverage lower carbon benefits of smart zoning.** It is not surprising that the most ambitious Alternative 5 is also the greenest: 20% less electricity demand per capita, 28% reduction in natural gas demand, and a 22% reduction in vehicle miles traveled (VMT) per capita.

As for commenting on the plan, annotating a PDF is labor intensive and not intuitive. I've opted for email.

Hello,

I choose alternative 2 for the alternative development scenarios proposed. I believe this is the best choice for giving growth while keeping climate impact considerations a high priority. I don't think it would be wise for us to compromise those impacts with any of the other alternatives. If we destroy our environment, what will be the point of our development?

Thank you for your consideration,

Kippy Irwin

From: [GAYLE JANZEN](#)
To: [PCD_CompPlan_EIS](#)
Subject: My Seattle One Comprehensive Plan Draft EIS concerns
Date: Monday, May 6, 2024 4:24:47 AM

CAUTION: External Email

To Whom It May Concern:

I have some questions and concerns regarding the EIS statement:

Section 3.3-30 states that "none of the action alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." I think all the Alternatives except 1 will definitely have a negative impact on our tree canopy. The new tree protection ordinance INCREASES the potential for tree removal and loss. The current guaranteed lot coverage of 85 - 100% for multifamily lots and above and rezoning to occur in the Neighborhood Residential zone means more trees, especially large ones, will be removed.

The EIS states: "Canopy cover decreased by 255 acres between 2016 and 2021—an area roughly the size of Green Lake. As canopy cover decreases, mature tree benefits like helping to keep our neighborhoods cool, helping to clean our air and providing homes to wildlife are diminished. The city is BELOW its goal for canopy cover. Total cover in 2021 was 28%, compared to a goal of 30%." And this was **BEFORE** all the current building going on.

* So what exactly is your estimation of potential canopy acreage loss (over 5 year periods consistent with the city's canopy studies) with increased development and density in each alternative?

* Will it ever be possible to reach the 30% citywide goal and is there even a potential for more than 30% tree canopy in Seattle over time?

* Is up to 40% canopy coverage, over time, as proposed in the previous Comprehensive Plan even possible?

* Canopy volume, especially of coniferous trees during our rainy season, are critical factors in reducing stormwater runoff so what is the projected loss in canopy volume over the next 20 years as big conifer trees are removed? And what is the projected increase in stormwater runoff and what costs are associated with on site and alternative city water management policies of stormwater and pollutant runoff as a result?

If you really want to save our established trees, I urge you to consider implementing the following suggestions:

* Amend the Tree Protection Ordinance to require developers to maximize the retention of existing trees 6" DSH and larger.

* Allow and encourage the SCCI Director to ask for alternative site designs to save trees.

* Support building higher and building attached units to allow for tree retention and planting areas like Portland, OR has done, with 20% areas for multifamily and 40% for its 1-4 unit family zone.

* Amend Tree Protection Ordinance to require the Tree Protection Ordinance to apply to **ALL** city land use zones.

*** I think one of the most problematic issues affecting mature tree loss is the "basic tree protection area" loophole in the Tree Protection Ordinance that allows developers to unnecessarily remove almost all large trees on lots. This**

258-1

loophole needs to be removed as it makes all the talk about saving trees just words on paper!

* Developers need to be required to submit a Tree Inventory and how they will save as many trees as possible on any given lot. Currently they are given free reign to cut down trees with impunity.

I think the EIS is just more pie in the sky words that the policymakers think will appease the public when it comes to saving/increasing our tree canopy. It will take decades for any small, deciduous replacement trees to provide all the benefits of the mature trees that are currently being cut down. We shouldn't have to fight so hard to try to save the huge trees that currently offer so many benefits for free.

Sincerely,

Gayle Janzen

CAUTION: External Email

Dear People,

Again , I read your criteria for the plan and again it fails to meet the lofty goals. Let’s get right to equity. I live in Haller Lake, close to the 130th new station and and about an 11-12 minute walk to the 145th one. The algorithm used by the planners to give a 10-minute walk window was either was an average. As a senior citizen I could be expected to make tha average lower but the 130th Street Stations about 9 minutes and -as I said, the 145th Street one is a bit further. One would think that ALL this area—like Shoreline—from Meridian to the freeway would be up zoned.

However, again, equity, the idea that ALL citizens are equal lost to the statement by Lakeside School, that they were not interposed in having the area around them up zoned. Of course, we all know in the neighborhood that Lakeside has been buying up houses, in the beginning to house their teachers but also, like EVeryGreen School to the north, to plan for future expansion. And also of course, they do not want to pay their share of taxes on their acquisitions.

I live between the High School & the Middle School. I have an 860 sq. ft. little post-war box on a nearly 9000 sq.ft. lot. A prime example of poor zoning, I am not able to subdivide—no, I don’t want to build an ADU. I want the property liquid for my children and myself. It could easily house six families in townhouses, all within reasonable walking distance to th light rail and even preserve some private yard area—or cottages—or a condo building at 3 stories. But my neighborhood is a hole into plan due to Lakeside and their wishes.

Again, Shoreline has done a great job providing housing, providing jobs, providing wealth. Seattle’s plan, particularly in my neighborhood bows to the willow the wealthy -again-just like there is no social housing in Laurelhurst or Madison Park.
I want all of Haller Lake from the line of Meridian to I-5 to be upzoned like Shoreline endnote have the wealthy covertly run the city plan.

I was around her win the Charlie Chong days and remember th eNIMBY-ism and th preciousness of Seattle voters, who cried about their ‘neighborhoods’ but let thousands of acres of east and south King County go to development with no infrastructure. Thousands of forest and farms were turned into he area’s needed housing to protect the ‘feel’ of the neighborhoods and resist change in Seattle—providing the same sort of short-sightedness still seen in this plan-

As a then-resident in the wilderness around dNorth Bend, on the family farm, I witnessed this ignorance up close —and here —in light of a similar ‘balanced ‘ to the wealthy and the NIMBY is a similar one——time to grown up Seattle and become a real city —

The truth is. ———It is either density or sprawl

Choose density for the health of the planet---

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

Comment:

I strongly support Alternative 5. I live in the station area and am in my 30s. We need more housing for Seattle's future, so people don't have to leave the area and can have families here. There will be impacts, but the impacts of insufficient housing are worse. It feels like what is proposed might not even go far enough. Right now there is not enough housing; if the proposal only meets today's needs then we will still have a problem in the future.

Section P3-3 claims NO IMPACT on "plant or animal species in the wild", BUT, what is the impact on plant or animal species IN SEATTLE'S URBAN FOREST?

Section P3-3 claims these plans will not have significant adverse impacts on the tree canopy cover. ****WHO MAKES THIS CLAIM?**** When you remove a tree, it is removed FROM the tree canopy cover; it is subtracted. Removing multiple trees TAKES AWAY from tree canopy cover! How can subtracting not be adverse to the GOAL of attaining 30% cover? Planting saplings does NOT EQUAL mature trees which today make up SEATTLE'S urban forest and tree canopy cover.

How does planning to attain 30% urban tree canopy cover (by planting new trees/saplings) work without space for them to mature? If mature trees are not left on developed land, where will they be? Remember, saplings do not equal mature trees.

7. The EIS has stated that there are no environmental concerns worth assessing with the added density of the One Seattle Plan. What infrastructure capacity studies has the EIS looked at to assess the city's sewer capacity to handle storm overflow in the new climate of extreme rainfall with added density and hardscaping? Has it looked, for reference, at the proven historical damages and enormous expense incurred to repair inadequate drainage in Broadview, and the Central District's Madison Valley, where storm overflow has led to death? (Source <https://www.seattletimes.com/seattle-news/anatomy-of-madison-valleys-fatal-december-flood/>) Has it considered the flash flooding in Ballard in November 2023 that overwhelmed water systems and flooded the Salty Dog Studios, causing tens of thousands of dollars? Has the EIS taken into account that we now have "100-year floods" annually and that most of our drainage systems were built 50+ years ago, and built for 25-year floods? Has it looked at the science of how large trees hold water in the ground and prevent flooding?

11. One of the chief rationales for adding exponential housing density throughout the formerly single family zones has been “equity.” It is a fundamental value proposition of the One Seattle Plan that low income people should have equal access to the desirable neighborhoods with trees, gardens and historical character, and particularly that people formerly excluded from these neighborhoods under redlining should benefit from added density. Since the added density will remove historical homes, trees and gardens, leading to hard-scaped heat islands and making formerly desirable neighborhoods less environmentally healthy and appealing, in what way will this benefit formerly excluded and low income people?

12. It has been shown after 20 years of explosive growth of housing in Seattle, with 30% of all new housing provided in the last two decades, that new housing is far more expensive than old housing: Housing costs have doubled and tripled. Has the DEIS verified the assumptions that 100,000 new units of housing will trickle down to create greater affordability? If so, how much more affordability will occur? The past 20 years have shown that for-profit developers build luxury housing and expensive apartments, not affordable rentals. What protection is there in the One Seattle Plan to prevent the housing inflation that comes with gentrification?

CAUTION: External Email

Please note my comment on the DEIS:

1: Section P 3-3 states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild." What is the impact of the plan specifically on Seattle's plants and animals?

2: Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." What analysis shows that tree planting programs, coupled with increased hardscape, will compensate for lost urban forest?

3: The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development?

Sincerely,

Luci Johnston

Comments Planning and Community Development EIS,

For Seattle to remain a desirable city we need to maintain our livability which means open space and trees!

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

Subject: Trees Save Lives
Date: Thursday, May 2, 2024 9:41:58 PM

CAUTION: External Email

To the comprehensive planners and my District 5 Representatives:

I have serious questions about Seattle's Comprehensive Plan for growth. Trees have to come first and trees do not appear to have much importance in this plan.

Section P 3-3 states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild." What should we expect if this is not true? What are the specific details? **This statement is too vague.**

Section P 3-3 also states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." Again, what are the details of these "adverse impacts"? How do you **guarantee survival of the tree canopy**?

The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. How much land do we need for this 30% goal? How much will be slated for "development" (i.e., pricey apartments and condos with nothing reserved for low income people) and how much for trees? Where in the city will these trees be planted? And how many trees exactly do we need to reach the 30% goal?

Jimi Hendrix Park has pitifully few trees, and was passed by the last time the city planted trees in public places. It covers a large area, 2.3 acres, and **trees could be planted in abundance there**, trees that have a proven value in raising the quality of life with healthier air, and the proven psychological lift that green spaces provide, ergo less crime. We could certainly use that in Seattle. The park is in a low income, mostly minority neighborhood. **Just why is it that Jimi Hendrix Park, named in honor of one of Seattle's greatest musicians and hands down the greatest rock guitarist of all time, gets treated so shamefully? Don't Black Lives Matter there?**

SAVE THE PLANET.
PLANT A TREE.
SAVE THE PLANET FASTER.
PLANT MORE TREES.

CAUTION: External Email

Seattle Comprehensive Plan (/ Environmental Impact Statement).

Some input... thank you for the consideration.

-- -- -- --

>> The DEIS Executive Summary states an intent to "Increase the supply of housing to ease increasing housing prices caused by limited supply."

Provide evidence for and against the claim that this supply-side trickle-down theory has worked for housing... and state whether the evidence is scarce or abundant.

Provide evidence for and against the claim that this supply-side trickle-down theory has worked to reduce housing costs for low-income households during the recent 10 years of extreme increase in rental housing in Seattle... and state whether the evidence is scarce or abundant.

What specific change has been drafted to address this input?

>> Include definitions of "affordability" that are good (proven to be clear by public survey), and make them easily found.

What specific change has been drafted to address this input?

>> Require that all development be required to build sidewalks, or pay into a sidewalk fund if a sidewalk is already present.

(NOTE: The city has demonstrated over the years that sidewalks will not be built in significant numbers by city dollars if significant changes in policy are not enacted).

What specific change has been drafted to address this input?

>> Prioritize that development (with sidewalks) occur where sidewalks are lacking... and DE-prioritize development where sidewalks already exist... to...

1) Get sidewalks.

2) Get enough sidewalks to make a difference (hence the "DE-prioritize elsewhere").

3) Reduce the damage to older existing sidewalks which has been occurring near development.

(NOTE: The city has sufficiently demonstrated over the years that sidewalks will not be built in significant numbers by city dollars if significant changes in policy are not enacted).

What specific change has been drafted to address this input?

>> Provide no giveaways to developers that are not combined with impact fees or other commensurate public benefit compensation.

(NOTE: Once developers are given something, it can't be taken away or balanced (they will sue, successfully), therefore, the give and take need to be connected... not giveaways first).

What specific change has been drafted to address this input?

>> According to current code, when the zoning of a parcel changes, it can also impact the rules for neighboring parcels.

For example: changing a parcel from single family zoning to "Low Rise" may loosen the (for example) setback requirements on a neighboring parcel zoned Commercial.

Do not give away such benefits to the investors in those NC Commercial zone properties without simultaneously implementing impact fees or other commensurate public benefit compensation.

REF: Commercial Setback Requirements (23.47A.014): (https://library.municode.com/wa/seattle/codes/municipal_code?nodeId=TIT23LAUSCO_SUBTITLE_IILAUSRE_CH23.47ACO_23.47A.014SERE).

What specific change has been drafted to address this input?

271-1

>> Up-zones without commensurate public benefit compensation are immoral.

Such up-zoning now cheats current and future generations of the asset of being able to apply those up-zones under better circumstances... when fairness can be applied (up-zones which create private benefit in exchange for public benefit)... or when there is greater need to stimulate the economy and create employment in construction and government (during periods of high unemployment).

Such up-zoning now is short-sighted and a short term money grab... when long term needs are not predictable except that it is nearly certain that things will not stay on a steady course, but rather that there will be cycles (periods of rising and falling employment).

What specific change has been drafted to address this input?

>> Blanket up-zones without commensurate public benefit compensation are particularly immoral as they cheat current and future generations of being able to target up-zones for maximum result (highest public benefit and lowest public harm).

What specific change has been drafted to address this input?

>> **Do not up-zone the residential blocks between 85th and 80th near Greenwood Ave.**

...

"Updating Seattle's Neighborhood Residential Zones" page 4 says:

"In these new and expanded centers (see map), areas currently zoned Neighborhood Residential would be changed to other zones (like Lowrise Multifamily) where development of larger buildings could occur."

This may mean a change to: Lowrise Multifamily (LR1, LR2, LR3):

(<https://www.seattle.gov/Documents/Departments/SDCI/Codes/MultifamilyZoningSummary.pdf>).

...

Just as "one-size-fits-all" is false, it is also false that "one-shape-fits-all". Looking at the actual situation in Greenwood rather than plopping standard shapes on a map leads to a better conclusion... that the Greenwood Urban Village should not be changed to up-zone residential blocks between 85th and 80th.

...

This location is not near "major transit" (which WA state has defined as a stop which serves light rail, express buses and HOV lanes), and lacks even minor direct transit to the largest centers north of the canal.

...

The up-zoning may or may not change the value of the property, but would change who it is of value to... from those seeking a place to live... to those seeking a place to hold as an investment until multiple contiguous properties are available for teardown and redevelopment.

...

The effect will be that the properties will experience a future of decay as the incentive to maintain the structures is lost because of the expectation of future tear-down.

...

In effect this rezoning is a rezoning to "AREA OF FUTURE DECAY" (a dedicated decay zone).

...

In areas that have already experienced significant decay, the housing may have reached a natural affordability. In such cases this rezoning can hasten the tearing down affordable housing and the replacing of it with housing which is not affordable, on a false theory that it will increase affordability.

...

This plan is using quality decay, and quality of life decay, to achieve greater profitability for investors, and to increase employment during a time of already low unemployment.

...

Do not up-zone the residential blocks between 85th and 80th near Greenwood Ave.

What specific change has been drafted to address this input?

Comment:

I am a renter in U District, and I believe that the City of Seattle did not listen to the overwhelming majority's call for an Alternative 6 vision, which would encourage social housing in all neighborhoods. Instead the current draft plan will increase inequality and homelessness. To create a more equitable, affordable city, the plan should add many more 'Neighborhood Centers', especially in Urban Neighborhoods.

If the City of Seattle adopted my above proposed changes, then we would be able to enhance housing security for renters and low-income folks.

Date: Sunday, May 5, 2024 10:16:15 PM

CAUTION: External Email

1. The Comp Plan poorly documents that plants and animals will not be affected by planned building scenarios.
2. Preservation and enhancement our urban forest lands and parks must be a high priority. Many people cannot get out of town into the national forests because there is no transportation.
3. It's absurd to state that new tree plantings will compensate for those removed for development. It takes years for new trees to equal the sequestering ability of mature trees.

Respectfully submitted,
Dan Keefe

CAUTION: External Email

Hi:

I've been following the process for some time (and involved historically in a number of these efforts). I think that once we got HB1110, along with the Seattle and WA ADU bills, Seattle could potentially get some level of growth everywhere. So, Earth and Climate, displacement pressures, and city infrastructure impacts become really important to mitigate or avoid, given Seattle's development way ahead of where most of the rest of the state is at. We do not exist in a vacuum. Nor does any one get to say, or should get to say 'I will live out in the country' and have nothing to do with the local economy of that place by virtue of job in framing or open space management. So, I do not believe Seattle takes on ALL growth issues for the state.

I don't see any place based discussion other than for the new light rail station area in the EIS, so I expect area based planning, out of which any rezones (and changes to the code itself) should come. We should actually have the whole city planned like Portland has, maintained plans. So they can be adjusted over time. It isn't about the 'type' of zoning, it is about the place and the whole mix of history, people, and many types of zoning. Why should the city care if it isn't facilitated by good transportation, diverse uses and architecture and diversity of residents? The people who get pushed out cared but they are gone now. Their children now care about harms done in the name of planning, though. We all care when the land slides, too. Or we get flooded. I realize no one can fix anything, but let's stop lose lose propositions.

We require transparency about exactly what the impacts are, no mitigation possible is NOT an answer. No mitigation needed — we need the evidence, the money is on the table. You will need to fight for mitigation is not the answer, either. The means, programs and laws that ensure we are safe and secure in our homes, and communities are resilient, needs to be materially assured before government allows more construction in an area. Focus on what to develop and who to develop for is also critical when publicly subsidies are needed for pretty much everyone's home if they are under AMI. Access to services and transportation infrastructure is more important, as well as, and all that makes a complete neighborhood. People living in a place need to shape that, because de facto eminent domain is more what has happened. Anti-displacement measures need to be in place before up zone actions. And legacy and outcomes of prior action needs to be assessed.

I argue that we consider a much better process for the implementation land use actions for the comprehensive plan that can take into account the recently passed Transportation Plan, more aggressive anti-displacement measures, hashing out preservation of some more land for trees, our sidewalks, etc. Including hyper local assessment in EIS's.

With Neighborhood Residential work, I also think certain facts of history and how they played out need to be readdressed. Because the city is doing generic zone-based zoning, all incredibly 'flexible' (NEVER any form based), which carries a ton of false assumptions. Presumption has been the name of the game. Never actually talk to homeowners who have the land under them changed by the government.

Much of low rise in the Central Area was a recognition of an area that was not mostly developed with nice platted subdivisions. And, I am sure there are other areas that are not nice neat suburban style platted. But, the city went on a mission to conform all to some suburban style scheme and make it grow more, and in my area 'accommodated' some flexibility. This needs a serious unwiring of history. From the last 60 years or so.

Accommodating low rise when it was actually just a few units on a lot, meant that those families did triplex their properties, and a few properties were redeveloped, which did have some anti-displacement effect prior to 2000. The sell off by SHA had an impact. There are cottage condo communities nearly 50 years old, too. Dirty little secret, once multiple owners on a lot it's pretty much done for redevelopment potential unless, someone buys up to the point or owners flip to investment property to the point, when it is no longer 50% owner occupied residential under terms where feds will lend for home purchase. This is a vulnerability that all the rewrite of state 'HOA' laws which still apply to all the townhomes zero-lot whether they require an HOA or not, is missed. And, there are two story apartment buildings. But, the 'highest and best use' did not reach a threshold making it impossible for someone to develop their own property for housing family or renting out units until after 2000. At least in my area of outside the Urban Village but still low rise.

Even with the Urban Village scheme, there were low rise outside the Urban Village and Single Family inside the Urban Village because the city wanted to draw lines on the map to scope the planning work, again ignoring that planning is not about bigger buildings, but community development, and this in a community struggling to prevent displacement. Where one presumes the community there, the PEOPLE THERE, should benefit from what building happens. Others just see empty land to exploit.

In the 21st Century, the city classified all zones not Single Family/single owner/single house as Multi-family (which everyone thinks apartment buildings), with development regulations to promote redevelopment and displacement. The zoning toolbox is weak, too weak, when it comes to options for form and fit with the real economy and economic conditions of the people. The multi-family track became an exercise on paper to add units and square footage, then apply everywhere without regards to real differences in different places. Ignoring the fact that government has accountabilities rezoning the land under peoples' homes. It is as if someone changed the covenants without having you sign anything to agree the way the city will not communicate real consequences by USPS. On land you own?

I think the biggest new reality is that we really have multiple housing units on a lot anywhere in the urbanized areas of the state. The intent of low rise, at least what was LDT and L-1, and smaller apartment buildings L-2, seems to be really the same as higher densities of what is allowed under HB1110, and projected for our new Neighborhood Residential, so I'd hope we can align this better. In hindsight, MHA seems unfair to those pulled into that regime by virtue of having been low rise, or single family inside Urban Village, just before the city allows three units for sale everywhere, and the state unwind 'pure' single family development. At least in some areas, there is no potential for redevelopment really. It's already new townhouses or old families who survived. Redevelopment will happen, but it will be more rare than tearing down whole blocks.

We will need to look carefully at the steep slope and liquefaction areas before encouraging more building. Or, how would development improve or stabilize the earth? The hillsides over that Madison Valley neighborhood on the map are still being studied with water issues continuing. Believe me, people living on that land are concerned, and every development seemed to include some mudslide activity.

We do not know if the Transportation levy will pass, and even if it does, we need to know the budget is there to support whatever level of development is proposed for each area to be re zoned.

For all those reasons, I think there is a lot more reality check that everyone needs to understand, more deep look at place based interconnections of all concurrency factors and equitable income distribution. Not from 'above' on a map with spreadsheets. On the ground with the people who are residents and plot owner residents in the places.

As far as this Draft EIS, and the realities of generic/theoretical/ideological planning:

DEIS 3.1 Earth and Water This section needs to have more information about the specific land slide prone areas and water and flood threats with the building we have already in those places.

DEIS 3.6 Land Use This section should reflect better dependency on anti-displacement measures which may need to be beyond that which housing subsidies try to deliver for. It does not belong only in the housing section, because all homeowners and residents (home owners who have long tenure living on their land are residents) are impacted positively or negatively, by up zoning. Some see the disinvestment in their commercial areas when no one wants to build what is planned for. Local businesses being pushed out is also a huge problem. The poor and middle class are pushed out which subsidies try (without enough) to mitigate. The wealthy don't want poor people in their neighborhoods? Too bad. That ship has sailed, but we need to ensure sidewalks and transit assets to those areas when there is growth planned for. We might need to take place based planning more iteratively, in conjunction with when we actually are doing infrastructure improvements in an area or plan large public investment because we are talking about adding onto what already is. Infill is not empty land, but in some ways, we need to handle the processes by which land becomes 'empty'. A little bit of forensics about property transfers would uncovered a lot of dirty dealing by land flippers, supported by a system that views land as empty if under built to zoning they did not agree to when they bought, and which is now lived on and well loved.

Backyard cottages under MFTE would help us. As would a lot more Habitat type housing. Privilege those, and long time homeowners rehabbing for additional units, in the permitting process. I think enabling more people to house more people where they live is slower, and not as visible, but more resilient and community stability focused.

Finally: Saving trees elsewhere or any other grand scheme is not a reason for Seattle to take action that contradicts the basic concurrency factors we have decided matter for a healthy life. GMA envisions a system of complete towns and cities. It is framed with growth boundaries, ending suburban subdivisions and strip malls, and highway capacity replaced with rail that will stop creeping urbanization. The economic growth in the city of Seattle is connected by people who move around the region. Yet, within and outside of the city there are urban areas that are underdeveloped, and have mass transit options. This requires investment in community and housing for all incomes in all 'places' which is different from 'everywhere' or covering the earth with building and human enterprise. We have well formed and defined places that operate as a system. Not just Seattle.

Thank you,
 Kathryn Keller

I offer a perspective, expressed in the Snohomish County plan, in their Transportation section. It makes transparent the very real choices we have, might have, and might not have.

CAUTION: External Email

Comments Planning and Community Development EIS,

Trees and housing are not incompatible. We need to preserve our existing mature trees and support the planting and growth of more trees. That will make our neighborhoods more healthy and livable.

I have comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS):

- * It does nothing to address keeping safe the existing larger trees when properties are developed.
- * It provides no research or analysis of the impact of the tree loss that we are currently experiencing and will continue to experience without better protections. It dismisses new solutions without proof.
- *There is no time frame for any restoration or replacement for lost trees.

Mitigation recommendations:

- * Allow the city to require alternative site designs and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before any tree removal and any building permits are issued.
- * Provide dedicated tree planting and retention areas like Portland does and Tacoma has proposed.
- * Amend the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.
- *Make stiffer penalties for any tree removal done in violation of the Tree Protection Ordinance. Trees are often removed despite plans approved that show the trees retained.

Thank you for your consideration.

Subject: Environmental impact on our urban canopy
Date: Monday, May 6, 2024 12:35:39 AM

CAUTION: External Email

Out of the five alternatives in the plan, alternatives 2 and 4 would save the most trees and still allow for 100,000 new homes.

In Section P 3-3 states, "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recover of plant or animal species in the wild."

277-1

What are the expected impacts of the One Seattle Plan on Seattle's plants and animals?

Section P 3-3 states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild."

What is the impact of the plan specifically on Seattle's plants and animals? We have already experienced significant bird, insect, and plant decreases over the past few years. I don't see how removing more trees and allowing unsustainable increases in density, pavement, and shorelines won't impact the flora and fauna.

Will there be long term monitoring of impacts?

Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover."

I would like to know what analysis or data shows that tree planting programs, coupled with increased hardscape, will compensate for lost urban forest?

The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees and the current system of fining developers is not effective.

What is the environmental impact of continuing to lose 1.7 of our tree canopy every five years, when 70% of our tree canopy and most of the loss is in formerly single-family neighborhoods?

Where does the city acknowledge that planting new trees takes 20-30 years to provide a tree canopy, to shade houses, or combat heat islands?

Doesn't it seem more practical to offer incentives to build around established trees?

How much public land is available to reach the 30% goal?

How many trees will need to be planted in these areas every year to make up for trees removed by development AND what responsibility will the city take for ensuring the life and

growth of newly planted trees, when new owners are unable/unwilling?

Thank you for your support of Seattle's irreplaceable urban forest.

Subject: One Seattle Comprehensive Draft Plan
Date: Monday, May 6, 2024 4:56:05 PM

CAUTION: External Email

Dear Staff members and Coun members

I am writing to state my preference for Urban Planning Alternative 2 and 4 as they would protect the most trees. Some of the draft's sections such as the one on Climate and the Environment talk about and recognize the benefits of green spaces and trees. However, preserving and expanding our tree canopy and green spaces will not happen without concrete efforts. With that in mind, I have concerns and questions about statements in the Environmental Impact Statement.

1. Section P 3-3 states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild." **What is the impact of the plan specifically on Seattle's plants and animals? This statement implies that nature is "out there" and separate from people living in the city. Connection to nature is vital to our physical and psychological health and to imply that the only thing that matters as far as environmental impact is whether the plant or animal goes extinct gives lie to the goals and statements in the Comprehensive Plan.**
2. Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." **What analysis shows that tree planting programs, coupled with increased hardscape, will compensate for lost urban forest? Keep in mind that when we cut down old large trees which keep growing and putting on more canopy each year, we are destroying valuable green infrastructure. Any tree that is planted will take many years to take return us to what we had. Do we have that time given the accelerating effects of climate change? Are we leaving enough space for trees to be able to survive?**
3. The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. **How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development? What budget has been established to reach our 30% goal?**

Sincerely,
 Kathleen Kerkof

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

Alternatives 2 and 4 are less harmful than 3 and 5.

What an appalling set of alternatives for those of us who worry about the impact on Seattle's short- term and long-range liveability as climate change continues to impact our city, state and region.

Existing big trees can help mitigate the changes coming. Cutting these big trees down -- not to mention not requiring that many more be planted in the very areas that will be developed -- to be able to stuff ever more housing into already developed areas with no shade is short-sighted and will just make life miserable for the new inhabitants.

Letting developers cut down big trees only to plant small trees elsewhere will not improve the liveabiity of the new housing.

Subject: Public Comment on the One Seattle Draft EIS
Date: Monday, May 6, 2024 6:30:59 AM

CAUTION: External Email

This is public comment on the Draft One Seattle Environmental Impact Statement (DEIS).

1: The City has documented that people of color (POC) in Seattle are more likely to live within 200 meters of major freight routes, adjacent to busy arterials, and near sources of industrial pollution as a result of land use planning decisions regarding the location of multifamily housing. The Final EIS will limit the scope of change possible in the One Seattle Comprehensive Plan (Comp Plan) update. The Final EIS should therefore include a plan encompassing the number, kind, and location of homes sufficient to remedy this racial inequity based on where people live during the effective period of the One Seattle Comprehensive Plan Update. This would be consistent with the City's Federal obligation to Affirmatively Further Fair Housing and Council Resolution 31164 which states "The Race and Social Justice Initiative envisions a city where racial and social disparities have been eliminated and equity and inclusiveness achieved...City departments should use available tools to work to eliminate racial and social disparities across key indicators of success, including health..."

284-1

1a: Did the City consider an analysis of a plan encompassing the number, kind, and location of homes sufficient to remedy racial inequity based on where people live based on its obligation to Affirmatively Further Fair Housing? If so, why was such an analysis rejected? If such an analysis was conducted, why was it not included in the DEIS?

1b: Did the City consider an analysis of a plan encompassing the number, kind, and location of homes sufficient to remedy racial inequity based on where people live based on Council Resolution 31164? If so, why was such an analysis rejected? If such an analysis was conducted, why was it not included in the DEIS?

1c: Did the City consider an EIS analysis of a plan encompassing the number, kind, and location of homes sufficient to remedy racial inequity based on the Comp Plan update objectives of "Equity"--"Equity: Provide equitable access to housing, jobs and economic opportunities, services, recreation, transportation, and other investments. Center the work with an intersectional, race-conscious lens, informed by a history of racial discrimination and disinvestment"--and "Inclusivity"--"Increase diversity of housing options in neighborhoods throughout Seattle to address exclusivity and so more people can live and stay in a variety of neighborhoods." If so, why was such an analysis rejected? If such an analysis was conducted, why was it not included in the DEIS?

2: The City has documented that POC in Seattle are more likely to live within 200 meters of major freight routes, adjacent to busy arterials, and near sources of industrial pollution as a result of land use planning decisions regarding the location of multifamily housing. The DEIS states that "Equity" and "Inclusivity" are objectives of the Comp Plan update. What are the detailed forecasts for the number and percentage of POC living in and not in those areas over the effective period of the Comp Plan update for each alternative presented?

3: The City has documented that POC in Seattle are more likely to live within 200 meters of major freight routes, adjacent to busy arterials, and near sources of industrial pollution as a result of land use planning decisions regarding the location of multifamily housing. The majority of residential land in the city that is not within 200 meters of major freight routes, adjacent to busy arterials, and near sources of industrial pollution is zoned “Neighborhood Residential.” The DEIS includes the possibility of “Implementing MHA requirements in Neighborhood Residential zones” as a mitigation measure related to “Population, Housing, & Employment.” MHA entails charging a fee for the construction of multifamily housing that is not applied to the construction of single family housing. This should be stricken from the EIS because it runs counter to the Comp Plan update’s objectives of Equity and Inclusivity, the City’s obligation to Affirmatively Further Fair Housing, and Council Resolution 31164 because it would reduce the economic competitiveness and viability of constructing multifamily housing more affordable to POC in those areas relative to single family housing.

4: The DEIS states “The gradual conversion from low-intensity to higher-intensity development patterns is an expected characteristic of urban areas.” The DEIS also states as a potential impact on “Land Use and Urban Form” “Increased frequency of areas with mixing of uses and heights. Awkward transitions may temporarily result in older, less intense development next to newer, more-intense ones during Redevelopment. Additional height and bulk changing views, casting longer shadows, and displacing trees.” The DEIS presents as a potential mitigation measure “Implementing gradual transitions in zoning.” Frankly these statements constitute something of an inscrutable mess and should be clarified and disambiguated in the EIS. To the extent any such considerations have played or will play a role in EIS analysis and proposals, they must be quantified, made clear to the public, and empirically based on pre-existing conditions as follows:

4a: First, since urban areas such as “Paris” and “Barcelona” exist and are popular, what “the expected nature” of a “gradual conversion from low-intensity to higher-intensity development patterns” in urban areas relative to looking backwards at Seattle of the past versus a Seattle of the future is ambiguous. If this assertion is retained, what constitutes “gradual,” “low intensity,” and “high intensity” should be explicitly defined, along with options for the nature of “transitions.” Any impacts from choosing “gradual transitions” for the sake of “expectations” should be declared and quantified relative to the Comp Plan update’s goals of “Equity” and “Inclusivity,” including residential patterns in which POC disproportionately live within 200 meters of major freight routes, adjacent to busy arterials, and near sources of industrial pollution as a result of land use planning decisions regarding the location of multifamily housing.

4b: “Intensity” should be broken down into constituent elements that are clearly defined. Massing and height, for example, are distinct from “type of use” (such as commercial). The need for “transitions” should be reduced or eliminated based on real-world conditions rather than general expectations. For example: Seattle’s “First Residential” districts allowed churches. Thus in Northwest Wallingford, for example, St. Ben’s church, a big structure with a multistory bell tower is next door to single family houses. There was no need for a “gradual” transition and larger structures than single family houses have (empirically) happily coexisted for a long time. Likewise, the Walling-Five apartments are the same height as a single family house next door to them, and the Mari-Don apartments are shorter than a three-story single family house. Planning should take into consideration what has empirically actually worked in practice rather than some conceptual and set

of expectations.

4c: Residential density—units per lot—should be stricken from consideration in terms of “transition” outside of health and safety requirements in building code because it would have segregative effects by race and class. There is a large single family house on our block, for example, that could be four two bedroom stacked flats or six to eight one bedroom apartments within the same massing, for example—the latter being more affordable options) Likewise, within the massing of typical four-three-story townhome developments the homes could be one studio per floor. A corner commercial building on Meridian Avenue in Tangletown is shorter than the single family house next door. An older relative who grew up in Ballard described corner stores as “everywhere” in his youth. Slightly more intensive—e.g., corner commercial—within the same massing also does not require “transitions.”

4d: The statement “Additional height and bulk changing views, casting longer shadows, and displacing trees” is internally contradictory. Trees cast shadows and block views, and the trees that benefit the city most are as tall or taller than allowable heights on most of the city’s residential land. This statement implies removing big trees could be a good thing relative to shadows and views. The EIS and the Comp Plan should clearly state that the highest priorities are more and more affordable homes and trees, not changes in views or patterns of shadow. Consider awarding height bonuses for preserving or planting larger rather than smaller trees.

5: The 2017 City of Seattle and Seattle Housing Authority Joint Assessment of Fair Housing states “Within a 200-meter radius of T-1 and T-2 roadways... the noise and air pollution impacts are most acute...” Recent research has indicated that “Residential proximity to busy roads, defined as >10 000 vehicles per day, was selected as a marker of long-term exposure to near-road traffic-related pollution” and “Air pollution is hyperlocal ...research shows it can vary up to 800% from one end of a block to the other” (See: 2017 City of Seattle and Seattle Housing Authority Joint Assessment of Fair Housing, Chronic burden of near-roadway traffic pollution in 10 European cities (APHEKOM network), Air disparities in the Bay Area: Hyperlocal data insights to support climate action). The EIS should evaluate Equity and disproportionate exposure of POC to pollution by analyzing each alternative in view of the number, kind, and affordability of homes that are neither within 200 meters of a T-1 or T-2 roadway, nor on a street carrying 10,000 or more vehicles per day, nor on the block face of a busy street. The EIS should include an option for the number, kind, and affordability of homes that would equalize living in or not in those locations by race. Bryan Kirschner Seattle

Subject: Support Original Abundance Map, Seattle Comprehensive Plan
Date: Monday, May 20, 2024 4:20:37 PM

CAUTION: External Email

Hi Seattle Comprehensive Plan planning,

I support the original abundance map being advocated by Complete Communities Coalition. I support an alternative 6 that provides ability to build 10,000+ units a year, has the original 44+ Neighborhood Centers included in OPCD's 2023 Fall draft, allows more businesses beyond corner stores, etc.

I've been renting for 10 years, and I know that less supply of housing will mean increased cost, potentially pricing me out of my home and making the possibility of actually buying a home much less likely.

I've was born in Western Washington and have lived and rented in Seattle for 15 years, attending UW Seattle for 5 years, volunteering at Roots Youth Homeless shelter, organizing in person meetups for 7 years as organizer of Seattle Hacker News Meetup, serving as board member on my Fremont Neighborhood Council, playing several seasons on pinball teams in Seattle. I am an engaged and contributing member of our Seattle community.

I live and I work in Seattle. I buy and sell products for a living and use public transit to purchase from thrift stores in Seattle. Less density and housing in Seattle will put more cars and traffic on the road, making my job take longer, as thrift stores exist throughout seattle.

My sister and her husband were priced out of Seattle, as they both lived and worked here. For housing cost reasons when they got married they moved north to Edmonds, and again for housing cost reasons when they had kids they moved further north to Everett. They both still work in Seattle, with my sister works as a nurse and nurse manager that delivers babies at a Seattle hospital. But now they have to commute an hour plus everyday to get to work. This costs them time and money, and keeps them away from their family longer every work day.

Having to drive an hour extra each workday is also dramatically more dangerous, than well, not having to do that.

We do not consider enough in our housing policy the consequence of forcing people to have to live far from the job hub of Seattle. The more people have to drive, the higher the chances of literally dying in a car accident. Do we not have a Vision Zero traffic death goal? And how is that fair? Do the people that work here not deserve to live here, and the added transit safety of living here?

Does my sister who literally helps deliver new life into this world as a Seattle nurse, does shere and her family deserve to live here?

Best,
 Timothy Kitchen :)

CAUTION: External Email

Please consider all the critters you displace and make homeless by cutting down trees, green belt areas. My yard is now full of animals due to loss of habitat along i5 and now look for cover as well as any food that might be available. I've more squirrels, raccoons, birds of all types and 5 homeless cats in the last few years all living rough under buildings since no green belt for them. The plantings will take years to grow to shelter them. How about larger taller etc plantings to help where we can have critters move back to our urban green belts.

Subject: About The DEIS and the Comprehensive Plan
Date: Sunday, May 5, 2024 11:42:55 AM

CAUTION: External Email

I have serious concerns regarding the continued destruction of Seattle's canopy and building plans based on what I'm seeing in current city council actions.

Regarding the Draft Environmental Impact Statement :

1: Section P 3-3 states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild." What is the impact of the plan specifically on Seattle's plants and animals?

2: Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." What analysis shows that tree planting programs, coupled with increased hardscape, will compensate for lost urban forest? This assumption looks like a fantasy.

3: The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development?

And about the Comprehensive Plan specifically as it impacts District 5:

The massive "neighborhood center" project planned for Roosevelt Ave NE and NE 90th in Maple Leaf is laughably named. It will destroy a large section of an established neighborhood, including existing homes and change the character of an established community.

I live next to a plot that had a small affordable home torn down to make room for 3 massive, ugly, high-priced housing units. (Despite being 3 units on a small lot, they will sell for well beyond a barista's salary. There is no way this is low cost housing.) This will not only disrupt the quality of the block in the future, but has proven to be a violation of our privacy and property rights all during the construction. 827 NE 98th St is a construction project where the workers have repeatedly walked over our property and tossed their food litter all over our yard from the beginning. Workers have also most often not worn safety equipment and broken other rules that appear to have no consequences when reported. They also ripped down an exceptional tree on the north side of the lot. The spot where the tree was still has nothing built on it, so I don't know why they had to do this. We managed to stop them from taking down two more exceptional trees on the east and west sides of the property, but they have repeatedly removed the "permanent" fencing that is supposed to protect those trees during construction. Currently, they have a table saw and a huge pile of lumber within the "protected area" of one tree. Again, the city does nothing about any of this. I have no doubt that any Comprehensive Plan/neighborhood center construction will be carried out with the same disregard for rules and promises as what I am seeing going on right next to me today.

288-1

288-2

Beyond all that, why destroy a lovely bit of neighborhood when there are under-utilized stretches of parking lot and office buildings much closer to the Northgate Transit Center? I walk past the area of NE 100th and 1st Ave NE and see very few cars ever parked there. That area could contain one of these neighborhood centers without destroying a single home. It would be closer to transportation, and still very close to schools and shopping. The plan as it is is ridiculous.

Subject: Environmental Impact Statement comments
Date: Thursday, May 2, 2024 7:30:37 PM

CAUTION: External Email

I am writing as a resident of Greenwood neighborhood in Seattle for 24 years. I am writing with comments and questions on the Environmental impact statement relative to Seattle's Comprehensive Plan.

Section P 3-3 states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild." What will be the direct impact of the Comprehensive plan on Seattle's flora and fauna? How can this much development not be expected to impact the urban wildlife and plants?

Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." What specific data and analysis predicts that tree planting programs, coupled with increased non-living landscaping, will compensate for lost urban forest? How can established trees be replaced by smaller sapling tree plantings? This will take a very long time.

The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. How much public land is then going to be available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development? This is utter ridiculous to cut down established large trees that already provide canopy and think they will be able to be replaced in our lifetimes!

Thank you,
 Carrie

CAUTION: External Email

Please note my comment on the DEIS:

1: Section P 3-3 states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild." What is the impact of the plan specifically on Seattle's plants and animals?

2: Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." What analysis shows that tree planting programs, coupled with increased hardscape, will compensate for lost urban forest?

3: The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development?

Comment:

Please respond to the following questions in response to the City's DEIS:

I. The plan's details provide many sketches of multi-unit complexes in family neighborhoods, but they only include city blocks that are completely flat. Our neighborhood is filled with steep hills. If we try to build a DADU in our backyard, most of it would be underground. How would these designs be adaptable to various geographical limitations?

293-1

II. Our neighborhood lots are far less than the 5000 square feet assumed in the various sketches provided in the Plan's details. Those variations in styles already appear to result in the loss of valuable open space; but they would not be practical on our lots, where the current homes already supersaturate the use of the available square footage. So, how can these designs be adapted to our narrow lots, purposefully designed that way in the early 1900s to maximize coverage and profits?

III. What happens to our lower 1 to 1 ½ story houses with solar panels if they become surrounded by 4-5 story box structures which will block access to the sun?

IV. Is anyone addressing the issue of light pollution?

V. Why doesn't the City consider and factor in these losses, when acclaiming their success stories:

i. The loss of existing affordable housing in apartment complexes razed in the process, including the energy it took to construct and demolish those buildings? ...

ii. The loss of green spaces as density and mass are rapidly increased? ...

iii. The loss of low-rent apartments/homes which house larger families, only to be replaced by efficiency apartments? Instead of justifying the gains by simply counting the numbers of new units, regulations should require an accurate count of the number of residents and family sizes both gained and lost, but not replaced.

293-2

VI. Corner stores may be a wonderful addition to a neighborhood, but the City cannot predetermine whom they will serve. Furthermore, solid corner stores without any meaningful setbacks can create a blind spot for pedestrians and cyclists. Is anyone addressing this safety issue?

293-3

VII. Has the City reviewed its fence regulations? Tall hedges, walls, and solid fencing may lead to a sense of privacy for the residents, but they act as shields which can create a sense of insecurity for the passersby. Instead, if Seattle still wants to retain and expand its title as a "pedestrian-friendly town", these features should be encouraged throughout the neighborhoods:

i. Inviting entrances to the streetscape, including colorful gardens and yards for gathering spaces.

ii. Fences, etc. that are not overwhelming.

iii. Large lobbies for larger complexes

iv. Corner stores, etc. without blind spots

293-4

v. Special emphasis on safety and a sense of community

VIII. How will the City provide larger families, especially multi-generational families of color, with affordable, larger, 3–4-bedroom homes, as they seek a sense of permanency, so that they can raise their children and care for their elderly in one place, without feeling nomadic? Remember there are other concerns for families besides price, such as amenities (schools, libraries, places of worship, convenient and affordable shopping, and gathering places like the YMCA and community centers), safety, and a true sense of community.

293-4
cont

IX. Trees are definitely important, but how will the City encourage gardens and yards, filled with aromas, color, and textures, for our residents to enjoy and for our non-human neighbors to explore and add joy to our lives?

X. Why doesn't the City wait until the results of the Pilot Program first and its 35 projects, which upon analysis and data collection, may positively or negatively influence the structure and promises of the OneSeattlePlan?

293-5

Comment:

Please respond to these additional questions in response to the City's DEIS:

294-1

I. How is the entire plan going to achieve any meaningful results in 20 years? Will homeowners be forced to sell, forced to tear down their homes in order to increase housing units? Will speculators and developers be encouraged to let their properties deteriorate, purchase adjacent properties by force, and then make larger multi-plex complexes? How much pressure will be placed by the City on homeowners?

II. Where is the definition of affordability that's used in the DEIS? It's often said that you can't manage what you can't measure. Without a clear definition, the City has nothing to measure against.

III. Will the City's new zone maps be revised independently of any outside influence by developers who may lobby to have carve outs or extensions to the upzoned areas for their personal projects and profits – to the detriment of the entire district/neighborhood and to the upheaval of the long-term aspirations of the City's Comprehensive Plan?

IV. How will the City encourage a variety of home configurations, such as clusters of houses with a central garden/yard? Don't you think that developers will try to maximize profits while minimizing costs?

294-2

V. Why is the City considering the removal of Design Standards and Reviews because of the cost in time in money instead of streamlining the process and including the surrounding communities from the start of the process?

294-3

VI. Why does the City fail to discuss and formalize the transition zones as permanent, impenetrable boundaries that surround the higher density zoning of the Urban Center, etc.? They were designed to protect the bordering family neighborhoods from aggressive infiltration by large-scale development, which could potentially lead to the accumulation of our smaller lots in order to create major complexes.

294-4

VII. Why doesn't the City create general overlay zones to protect family neighborhoods, especially those that are established, already saturated with homes, and have their own distinct character and history? This should be achieved by requiring that all developers of new homes or of major additions follow these steps: notification of the surrounding neighborhood, through mail and signage, of their projects; and engagement with those most affected by the development before the plans are finalized. Furthermore, neighborhoods, all unique and with their own pressures and limitations, should be able to create a simplified set of design standards which can be used at the start of the permitting process. This would lead to a greater sense of cooperation and lessen the need for long, tedious, and formal Design Standard processes by City Boards, which may lead to a compromise no one wants, while creating a feeling of tension and mistrust.

294-5

VIII. How can the City justify its assumption that a rapid increase in the number of units built is more important than meeting the demands for multi-bedroom homes by larger families? Instead, the City made all sorts of promises that affordable housing for displaced and marginalized families would be its focus in the upzoned areas created around the Light Rail Stations. In spite of multiple warnings, the City is now expanding its efforts outward into family neighborhoods in search of such housing, without admitting that their original proposals were mere illusions, as they allowed the rapid growth of tall multi-plex apartments, only to create units for single adults – apodments, group housing apartments, and efficiency units.

IX. How is the City going to achieve the grandness of this new “OneSeattlePlan”? What is the strategy to create more housing units per lot?

- i. Will residents of single-family homes be forced to move out (and if so, where ... to the suburbs)?
- ii. Will speculators be encouraged to buy adjacent properties on our narrow lots? Will they be monitored, so that they don't allow these properties to deteriorate, in order to expand their purchases, so that larger complexes can become a reality?
- iii. In our neighborhood of University Park, the absentee landlords make so much money renting out to large groups of students. What will be their incentive to provide multi-plex home arrangements for families of all sizes – a process that would involve demolishing existing buildings, applying for permits, hiring architects and engineers – all while losing years of income from rent?

We appreciate your sincere and open-minded approach to resolving these issues, in order to correct such errors before the ink dries on the “OneSeattlePlan”.

Sincerely,

Aileen M. Langhans

Of the available alternatives, I strongly prefer Alternative 5 with higher growth targets.

The city should study the impacts of: higher growth targets for Alternative 5; additional Neighborhood Centers in Urban Neighborhoods, including off of arterials; social housing in every neighborhood; expanded highrise zoning within a half mile of all light rail stations; greater height and density bonuses within a half mile of transit stops; corner stores allowed mid-block as well as on corners; floor area ratio bonuses that incentivize stacked flat development rather than attached or detached townhomes; an Urban Center around the 145th light rail station; and citywide elimination of parking minimums.

Subject: Environmental impact of comprehensive plan for Seattle housing
Date: Thursday, May 2, 2024 8:01:33 PM

CAUTION: External Email

Dear PCD,

I have three different questions for you concerning the comprehensive plan specifically the environmental impact statement.

First, Section P 3–3 states that “none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild.” This seems rather vague because building always disrupts, ecosystems and habitat, cutting down trees, impacts birds nesting, removing lawns, hedges, and plants removes cover and food for animals. Is there any sort of plan to mitigate these disruptions?

Secondly, section P 3–3 states that “none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover.” Again, this sounds vague and disingenuous, most of the builders want to tear down all the trees all the bushes all the hedges when they build these housing units because it makes their construction easier. How can you say it won’t have an impact on the tree canopy? Removing mature trees impacts our tree canopy and planting trees will take years to replace what have been destroyed.

Thirdly, the plan states that Seattle will make progress toward its 30% canopy goal. Again the wording is pretty vague. It will make progress. What does that mean? It seems to me that removing mature trees for construction is counterintuitive to making progress towards 30% canopy goal. If the developers are allowed to remove mature trees, will there be any room left to plant trees and are the designs of the buildings such that trees reaching maturity would have room to grow?

Climate change is going to make tree canopy vital for many of our communities. There’s an article in the paper today about how energy use is increasing it an alarming rate, and our renewable sources are not keeping up.

It just seems shortsighted to me to allow developers and builders to remove mature trees and then plant new ones when with a little thoughtfulness, ingenuity and planning they could design buildings around the trees, which would make a more pleasing environment for everyone.

Subject: Seattle Comp Plan – "personal" Comments
Date: Saturday, May 4, 2024 4:21:36 PM

CAUTION: External Email

Seattle Comp Plan – personal comments from the Chair of the Roosevelt Neighborhood Association:

Seattle is projected to grow and grow, as much or more proportionately as any major city, so setting the growth plan targets appropriately, is the key to making the plan workable. Zoned capacity is not plentiful enough in Seattle. If it were, then housing prices wouldn't be going through the roof. **Increase the housing capacity projections to match future demand; aim for 120,000 new units over the next 20 years.**

To increase walkability throughout the city there should be more Neighborhood Centers. **Increase the number of new Neighborhood Centers to 50** (as OPCD initially proposed) **and allow buildings six stories and up, near job centers, transit hubs, mixed-used nodes, schools, and parks, to provide the level of density that both reduces overall unit cost and adds homes at the scale needed to address Seattle's shortage.**

It will be in the Urban Centers and Neighborhood Centers where most of the new housing will be developed. Buildings made from mass timber can go up to 18 stories. **Allow for taller midrise housing in these growth areas, as these will all be served by frequent transit. These should allow for a minimum height of 65' and 85', with central areas of Urban Centers where the zoning allows for 12-18 stories.**

WA State HB 1110 will soon allow 4 units per lot in most places in Seattle, and 6 units per lot near major transit stops or anywhere in the city if at least two are affordable. **Increasing the development gross buildable area of Middle-housing is critical to make this a realistic feature of the plan. Raising the FAR from 0.9 to 1.2 (and up to 1.5 for properties within a 800' of major transit and Neighborhood Centers) will be more effective in producing family-sized units in these walkable communities; possibly requiring some affordable and family-sized homes for this trade-off.**

Affordability is a major concern to all of us, and State HB1220 requires that all state comprehensive plans "accommodate housing affordable to all economic segments of the population of this state, promote a variety of residential densities and housing types, and encourage preservation of existing housing stock". **Create significant floor area, height, and density bonuses for affordable and social housing development. Include tax-rebate programs for developers to "include" affordability restricted units as an alternative to the MHA program.** <https://www.sightline.org/2024/02/23/now-fully-funded-portlands-affordability-mandate-should-be-a-model/>

Displacement is an important consideration as properties are redeveloped. **Include the OPCD proposed anti-displacement strategies in the Comp plan.**

Off-street parking increases the cost of housing and takes up space that could be reserved for tree canopy. **Remove parking requirements for housing on Neighborhood-Residential lots.**

298-1

Thank you

Jay Lazerwitz

Displacement is an important consideration as properties are redeveloped. * Include the OPCD proposed anti-displacement strategies in the Comp plan.

Off-street parking increases the cost of housing and takes up space that could be reserved for tree canopy. * Remove parking requirements for housing on Neighborhood-Residential lots.

299-1

I strongly prefer Alternative 5 with higher growth targets.
The city should also study the impacts of these alternatives:

Citywide elimination of parking minimums
Additional Neighborhood Centers in Urban Neighborhoods
Higher floor area ratios for Urban Neighborhood zoning
Higher growth targets for Alternative 5
Expanded highrise zoning in Regional and Urban Centers
Expanded highrise zoning in Urban Neighborhoods
Expanded highrise zoning at Neighborhood Centers
Expanded highrise zoning around existing grocery stores
Higher floor area ratios for middle housing in all residential zones, such as those corresponding to the state model code for middle housing
Social housing in every neighborhood on affordability
Greater height and density bonuses within a quarter mile of transit stops
Increased building height allowances, in exchange for reduced lot coverage, for increased tree canopy
Granting tax breaks & fee deferrals to housing projects that include affordable units
Development incentives like additional floor area ratio for 2- and 3-bedroom units
Floor area ratio bonuses that incentivize stacked flat development rather than attached or detached townhomes
An Urban Center around the 145th light rail station

Comment:

I am a homeowner in Roosevelt, and I believe that the City of Seattle did not listen to the overwhelming majority's call for an Alternative 6 vision, which would enable the creation of more walkable neighborhoods. Instead the current draft plan will worsen the many crises (housing, climate, unaffordability) our city faces. To create a more diverse city, the plan should allow taller and bigger buildings in many more places.

I strongly prefer Alternative 5 with higher growth targets. The city should also study the impacts of these alternatives:

In Roosevelt in particular, I think that the plan should include ideas that support HB1220 for affordable housing throughout the city.

Zoned capacity is not plentiful enough in Seattle. If it were, then housing prices wouldn't be going through the roof. *Increase the housing capacity projections to match future demand; aim for 120,000 new units over the next 20 years.

To increase walkability throughout the city there should be more Neighborhood Centers. *Increase the number of new Neighborhood Centers to 50, and allow buildings five stories and up, near job centers, transit hubs, mixed-used nodes, schools, and parks, to provide the level of density that both reduces overall unit cost and adds homes at the scale needed to address Seattle's shortage.

It will be in the Urban Centers and Neighborhood Centers where most of the new housing will be developed. Buildings made from mass timber can go up to 18 stories. *Allow for taller midrise housing in these growth areas. These should allow for a minimum height of 65' and 85', with areas of Urban Centers that allow for 12-18 stories, as these will all be served by frequent transit.

WA State HB 1110 will soon allow 4 units per lot in most places in Seattle, and 6 units per lot near major transit stops or anywhere in the city if at least two are affordable. *Increasing the development gross buildable area of Middle-housing is critical to make this a realistic feature of the plan. Raising the FAR from 0.9 to 1.2 (and up to 1.5 for properties within a 800' of major transit and Neighborhood Centers) will be more effective in producing family-sized units in these walkable communities; possibly requiring some affordable and family-sized homes for this trade-off.

Affordability is a major concern to all of us, and State HB1220 requires that all state comprehensive plans "accommodate housing affordable to all economic segments of the population of this state, promote a variety of residential densities and housing types, and encourage preservation of existing housing stock". *Create significant floor area, height, and density bonuses for affordable and social housing development.

Include tax-rebate programs for developers to "include" affordability restricted units as an alternative to

300-1

the MHA program.

<https://www.sightline.org/2024/02/23/now-fully-funded-portlands-affordability-mandate-should-be-a-model/>

Displacement is an important consideration as properties are redeveloped. *Include the OPCD proposed anti-displacement strategies in the Comp plan.

Off-street parking increases the cost of housing and takes up space that could be reserved for tree canopy. *Remove parking requirements for housing on Neighborhood-Residential lots.

If the City of Seattle adopted my above proposed changes, then we would be able to create a more affordable city for everyone.

I strongly prefer Alternative 5 with higher growth targets. The city should also study the impacts of these alternatives:

- Citywide elimination of parking minimums
- Additional Neighborhood Centers in Urban Neighborhoods
- Higher floor area ratios for Urban Neighborhood zoning
- Higher growth targets for Alternative 5
- Expanded highrise zoning in Regional and Urban Centers
- Expanded highrise zoning in Urban Neighborhoods
- Expanded highrise zoning at Neighborhood Centers
- Expanded highrise zoning around existing grocery stores
- Higher floor area ratios for middle housing in all residential zones, such as those corresponding to the state model code for middle housing
- Social housing in every neighborhood on affordability
- Greater height and density bonuses within a quarter mile of transit stops
- Increased building height allowances, in exchange for reduced lot coverage, for increased tree canopy
- Granting tax breaks & fee deferrals to housing projects that include affordable units
- Development incentives like additional floor area ratio for 2- and 3-bedroom units
- Floor area ratio bonuses that incentivize stacked flat development rather than attached or detached townhomes
- An Urban Center around the 145th light rail station

CAUTION: External Email

Good evening and thank you for the opportunity to comment on the PCD Comp Plan. One Plan states this key value:

"Climate and Sustainability: Meet the challenges of climate change for a resilient future. Seattle residents are feeling the impact of the climate crisis with more extreme weather events every year, disproportionately impacting lower income and communities of color. This Plan introduces a Climate and Environment element that redoubles our effort to reduce our carbon footprint and build resiliency in frontline communities most vulnerable to climate impacts. The new element includes strategies to reduce carbon pollution from key sectors: transportation, development pattern, buildings, energy, and solid waste. It also promotes a wide range of measures to enhance the resilience of our communities and natural environment that are threatened by current and potential climate impacts."

301-1

As a retired USAF Flight Surgeon I loved the roar of aerial demonstration teams like the USAF Thunderbirds and Navy Blue Angels. That was then, decades ago. Climate science irrefutably demonstrates the environmental harm and human disease caused by fossil fuels--we know better now, so it's time to change our ways. A coalition of thoughtful health, climate and environmental groups respectfully ask that Seattle and WA state close the chapter on Blue Angels at Seafair. PM 2.5 particles, green-house gases, and jet noise are not good for us. Let's find some electric aerial demonstration teams--piloted or drones--to wow the crowds. We look forward to engaging with you on this issue in the near future. To your health!

CAUTION: External Email

Comments Planning and Community Development EIS,

Please attend to these issues. I have been to several sites where tree removal has been expedient for the developer but bad for the climate and surrounding neighborhood.

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

Comments for the One Seattle Plan.

Here are my thoughts about Seattle and its future.

The One Seattle Plan is covering too long of time. In today's climate change, an EIS could only be reliable for information for 5 years. Yes, I am saying every 5 years Seattle needs to access its growth and needs. The SEPA's don't work. They do not improve an EIS, they just refer back to it as if the EIS is a document to be followed, not updated. Every 5 years a full EIS with a Housing, Tree Count and Park evaluations. If 11 houses go up in a 5-year period in a small radius of a mile, with more planned, is it a good idea to ignore the overall environmental impact for another 5, 10 or 20 years? In the last 5 years, in my small 1 mile square, I have seen 20 large evergreens removed, 20 mature deciduous and no replacements

Apartment buildings cost less to live in than a house. They have less upkeep. Making more houses, will not satisfy housing needs for all income levels. Forcing developers, apartment complex owners to have a percentage of apartments for low income will. 20% for low income (under 45K) with more weight given to those with the least amount of income.

Affordability is not driven by the number of homes built, or even what type home is built. Affordability can only be attained when restraints are placed upon those doing the building and selling. If one is building a home in Seattle, then the type home, the number of inhabitants and the general location needs to be considered. A two bedroom home is not going to house a family, if a family is made up of more than 2 adults. No parking with any home is a disaster. All housing must have parking. An area with no parks, no playgrounds and no parking will not be inviting to a family. How close do those things need to be to housing? I would suggest there be NO crossing of 4 lane roads to get to a park. No further than a mile from a home...is ideal. That is walking distance for younger children.

The thoroughness of what can be done to meet housing and environmental needs, leaves me with many questions the foremost of which is: Why are trees and wildlife habitat required to suffer the most to meet housing needs? What are big businesses, builder's associations, developers, private corporations that buy up the land doing to facilitate new affordable housing? What will be done to guarantee that anything that is "new" will be affordable? For example, the single family homes, are bought by developers, who in turn build 3 or more homes on that lot. That is what the City wants. But that does not increase the affordability of housing. In fact, what it has done is increase the amount of money that a developer, or builder and the like place in their pocket. What has happened is that my property tax has increased, due to the number of homes that are new, in my neighborhood, that have sold for \$600K or above. My home is three bedrooms, 900 sq. ft. built in the 1950's. It is being compared to and taxed at the level of the brand new "affordable" houses.

Instead of sending out information and requests for people to grow evergreen trees if they have room, why don't you keep the ones we have??? Not every inch of a lot must be covered with lumber and gravel. Architects could do a better job of keeping trees, as could the developer, they won't keep the trees if they can remove them so they can build faster. The City needs to ask for more alternative development plans on all properties. Tree retention is an architects problem, design the plan to keep the trees, with no waivers necessary.

I also suggest that one look closely at a plan that opens the entire city, or at least the "poorer" areas of the city to two, three or more houses on one lot. Those homes are apartments with thicker walls,

304-1

and larger halls between them. That is not healthy. That is a disaster waiting to happen. Of course, if one is looking to have cigarette box style of architecture for the future of Seattle, then I guess that open, build whatever you want in the outlying areas and “poorer” areas will fill that bill.

The type homes being built waste space. High ceilings, and lots of windows is not going to make better housing, or affordable housing. But that is the style builders have chosen for Seattle. The cost to maintain such a home will increase rapidly. The cost for electricity in this city climbs, reminiscent of a hiker on Mt. Rainier...ever higher, except with the mountain there is a peak, with City Light there is no such thing.

There are 11 homes that have been built in my 1 mile walk around the edges of the neighborhood. That does not count anything inside that path, just the outer edges. Of the 11 homes, I have seen trees removed, with no replacements (we don't have sidewalks, so trees have no where to be replaced too). We don't have walking paths, and if such things were made, there would be no parking...everyone around here has cars, and if there are two adults, there usually are two cars. If there are teenagers and young adults in that mix, there are even more cars per house. No replacement trees. Can you imagine what that does for the environment? What that does to people? I live between I-5 and 99. I live on 135th not far from the new car garage, the 100's of apartments going up on the Shoreline side of 145th, and not far from the Kraken stadium. Guess what, there is already a lot of pollution and high density housing in this area. We don't need more tree removal, oversized houses and no parking. We already have increased traffic, speeders, and crumpled traffic islands.

People can live in apartment buildings. There are a lot less costs for upkeep, taxes, and insurance plus other home owner costs. There is no need to have a house for every person in Seattle. Some people would like to live in an apartment complex, as long as it has play areas, and parking. Families like the security offered in an apartment complex (if it is designed to protect the children). Apartment buildings can easily be accessible to the disable and elderly. The 2 and 3 story houses I am seeing are not accessible, due to the steps.

Do trees and wildlife habitat have a monetary value? Do trees and wildlife habitat have any health benefits that are very important to the citizens of Seattle? Should those health benefits, which would be available to all income levels, be considered? Are they? What about the infrastructure value for older, mature trees? Is that being considered in this rush to make Seattle a high density population? Are new sapling street trees really going to cover the infrastructure needs of this City?

Do they need to be kept, even if it means less housing on that lot? My answer is yes, those trees help with air quality, low upkeep for leaves, and highly useful when it comes to rain, because they retain water. Can a 7 ft sapling deciduous do that? Think about it. How many years would it take for a sapling to do the work of a 100 ft Fir tree? Instead of sending out information and requests for people to grow evergreen trees if they have room, why don't you keep the ones we have??? Not every inch of a lot must be covered with lumber and gravel. Architects could do a better job of keeping trees, as could the developer. Unless forced they won't keep the trees if they can remove them so they can build faster.

City parks can only do good, where the city park is, and if they are properly maintained. Most of Seattle parks are not maintained to the degree necessary. Garbage, and non-native plants take over quickly, unless it is used for league play, which increases traffic in an area. A City park 2 miles from my home is not going to do any good for my houses cooling and heating. But the Urban Forest that the School District is going to want to remove does. The Fir trees in my yard do.

Do trees have value? Yes, all trees have value. A tree is worth its age in gold. A tree is worth its age to keep a city and its inhabitants healthy. The taller, stronger, older trees are better than any forest of saplings. One tall, strong, older tree can supply better oxygen, infrastructure, cooling, and heating needs of a home owner than 20, 7-10 ft trees. An Evergreen tree supplies help year-round a deciduous helps mostly in the summer to keep away heat islands. Both types of trees are needed. When a builder comes along, the first thing to go are the oldest trees. . .at a tremendous cost to the

environment.

I see that my options are minimal in the One Seattle Plan, sad as that may be. I have been advised that the best options will be 2. I am not sure about that, since it still leaves a lot of questions about how Seattle is going to obtain "affordable" housing and keep trees so it can be called an Evergreen City with trees.

Having a chance to talk with others, I see that there are issues that must be addressed in a more direct manner. More analysis, and less speculative guessing is required. At no time should tree removal be considered a first option for development. As I stated earlier, an EIS is simply not a good idea as a map for a future with drastic climate change. The EIS must be easily amended to meet the new challenges a City will have. Tree retention must be a priority, if climate change is to be met head on. Heat Islands must be mitigated with more trees, not less. Building lots must have better space usage, that retains trees. No more stunts of saying "we will keep the tree if we can" and then have that tree the first thing to be removed by a bulldozer...with the yellow tape surrounding it.

Note the following:

P 3-3-29-30 Please analyze the potential impact of the 5 options on Seattle plants and animals. **This is a Seattle EIS, not a regional or state EIS.** Saying "unlikely to result in appreciable impacts on regional populations of plants or animals" and "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild" is avoiding commenting on the specific impacts on Seattle plants and animals. **Logically any tree removal will have an adverse impact on plants and animals. The more trees removed in a smaller area will have a larger impact on those animals in that area. Remove large older trees, and you won't see the Ravens and Eagles that I have seen this Spring.**

- p 3-3-30 Saying that "none of the action alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." is not backed up by facts but speculative at best. The new tree protection ordinance actually increases the potential for tree removal in several ways. One is that all the developmental areas covered by the ordinance state that the newly defined "basic tree protection area cannot be modified" despite Portland, Oregon and the Northwest Society of Arboriculture saying it can be modified to save trees. This and current lot coverage of 85 - 100% for multifamily lots and above and rezoning to occur means more trees, especially large ones, will be removed. What is your estimation of potential canopy acreage loss (over 5 year periods consistent with the city's canopy studies) with increased development density in each alternative? **Again, if you remove trees, that changes the environment. That is not a statement of genius quality, it is a statement of fact that any person who wants to evaluate truth will see. If you take away a tree it changes the tree canopy. PERIOD. It is easier to modify where a house will be placed on a property, and how to build that house for maximum residency, than it is to replace a 100 year old tree... or even 20 year old tree.**
- What is your estimation of planting needs and time frame to replace the lost canopy (over 5 year periods tracked by the city's canopy study)? **Simply put, and much easier to understand, if you cut down a 100 year old tree...it will take 100 years to replace**

it. And even if you “replace” it with small caliber trees, it will take 100 of those small 7-10 ft trees to make up 50% of the loss from that old tree... and that doesn’t include the pollution released into the atmosphere the minute the old tree is cut down. One never recovers that pollution that immediately goes into the air. Be wise, keep the tree.

- Is canopy replacement equivalence even possible with replanting since removed trees, if not removed, would have increased growing according to scientific articles? **Like I said, you never replace what you take away when you remove an old tree. You will NEVER replace it.**
- What is the acreage available and suitable for planting trees in each of the following public areas- the city's right of ways, Natural Areas and Developed Parks? **What good will it do the heat island in my area if you plant trees away from my home?**
- How many trees and what size will need to be planted in these areas every year to make up for trees and canopy removed during development on lots? **Basically, how much more will it cost the city to plant trees, keep trees alive, and hope for a quick canopy recovery compared to the rampant developer, chain saw, money in the pocket scheme of the developer?**
- What is the available acreage available to plant trees on private property? **Land is at a premium, it would be wiser to keep trees, than to find private property to plant trees on. Maybe even pay people to keep their trees?**
- When will it be possible to reach the 30% citywide goal? **That is rhetorical, there is no way on God’s green earth to get 30% canopy with 85% hardscape...**
- What potential is there for more than 30% tree canopy in Seattle over time? **Read previous point, Seattle is doomed to less than 30% canopy.**
- Is up to 40% canopy coverage, over time, as proposed in the previous Comprehensive Plan possible? **Again read the above bullet point.**
- Canopy volume, especially of coniferous trees during our rainy season, are critical factors in reducing stormwater runoff. What is the projected loss in canopy volume over the next 20 years as big trees, including conifer trees are removed? **What is it going to cost in man hours, equipment and infrastructure damage??**
- What is the projected increase in stormwater runoff and what costs are associated with on site and alternative city water management policies of stormwater and pollutant runoff as a result? **You won’t cover the ditch surrounding my house, because it would create a problem for the City management of storm water damage, and I have 5, 100 year old trees in my back yard, what are your plans for the rest of the**

City when you remove all the trees? Are you going to put ditches in???

More comments about other tree problems this City has:

- Amend the Tree Protection Ordinance to require developers to maximize the retention of existing trees 6" DSH and larger. **Keep trees, especially trees with a decent start to their growth.**
- Give SCCI Director the ability to ask for alternative site designs to save trees. **Architects are supposed to be smart, that is why they went to school for so many years, they should be able to give more than one design that keeps trees, and the SCCI Director should make them do so. Time to let the SCCI Director get real answers and choices...isn't that why they were hired?**
- Support building higher and building attached units to allow for tree retention and planting areas like Portland, Oregon has with 20% areas for multifamily and 40% for its 1-4 unit family zone. **Not thrilled with idea, UNLESS the areas with new apartments, multifamily units are built in areas where transportation is, along 4 lane (or more) streets.**
- Amend Tree Protection Ordinance to require ordinance to apply to all city land use zones. **Another no brainer, if you want to protect trees, protect them. Don't play dartboard legislation...throw a dart keep those trees throw another dart cut those down...**
- Remove the "basic tree protection area" loophole in the Tree Protection Ordinance that allows developers to unnecessarily remove almost all large trees on lots. **Since the only thing that makes developers even consider a tree is money, offer them some type bonus, like a reduction in some permitting costs, to keep trees? The bigger the tree, the more the bonus.**
- And finally, please, please, please make sure all the people checking a development, look at where the fencing is to be around a tree, and if it has been removed, bent up, leaning against the tree, or moved in any direction other than where it should be **FINE THE CONTRACTOR.** You can't keep a selected save tree, if the tree is damaged during construction...

Subject: Questions related to Trees
Date: Sunday, May 5, 2024 12:22:13 PM

CAUTION: External Email

Good Day:

Regarding this draft plan, please consider these questions.

Section P 3-3 — Reducing tree canopy will surely impact wildlife and plants in our urban forests. Has even the obvious impact on bird populations been studied?

305-1

Section P 3-3 — How can the loss of tree canopy not result in “. . . significant, unavoidable adverse impacts on tree canopy cover.” We’re trying to save many trees, an **urban forest**, not just a single tree here and there.

The newly adopted Seattle Tree Ordinance actually provides less protections for our City’s trees. How does the City plan to achieve the long-time goal of 30% tree canopy?

Thank you for your consideration.

Sincerely,
Judith Leshner

Subject: Comp Plan Draft EIS
Date: Thursday, May 16, 2024 11:51:38 PM

CAUTION: External Email

Although our family supports the Alternative 1 (no action baseline), Alternative 2 will be the least destructive to Seattle's exceptional tree canopy, our vegetation and the urban wildlife that enhance our environment !

Further study the environmental impacts of Alternative 2 for the EIS.

Implement the following mitigation measures to help compensate for the loss of many exceptional, significant and mature trees.

- Amend the Tree Protection Ordinance to require developers to maximize the retention of existing trees 6" DSH and larger.
- Give SCCI Director the ability to ask for alternative site designs to save trees.
- Support building higher and building attached units to allow for tree retention and planting areas like Portland, Oregon has with 20% areas for multifamily and 40% for its 1-4 unit family zone.
- Amend Tree Protection Ordinance to require ordinance to apply to all city land use zones.
- Remove the "basic tree protection area" loophole in the Tree Protection Ordinance that allows developers to unnecessarily remove almost all large trees on lots.

Subject: Comment on DEIS
Date: Monday, May 6, 2024 5:17:19 PM

CAUTION: External Email

Please note my comment on the DEIS:

1: Section P 3-3 states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild." What is the impact of the plan specifically on Seattle's plants and animals?

2: Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." What analysis shows that tree planting programs, coupled with increased hardscape, will compensate for lost urban forest?

3: The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development?

Sincerely,

S. Lewis

CAUTION: External Email

Please keep Green Lake perimeter as it is. I do not live on W Green Lake Drive N but the lake is a gem and should not be ruined by developers who care only about making money.

Development of the neighborhood village should occur along the arterials not neighborhood streets. Changing zoning in those areas will only benefit developers and not help with affordable housing.

CAUTION: External Email

While the proposed comp plan is a good step in increasing housing for our communities. I'm disappointed that consideration is not currently being given to increase the FAR/coverage for smaller middle housing projects. We are behind and below the state other municipalities adopted standards. Without and increase in FAR the units build will be smaller and it will also disincentivize them from being built at all as less livable units are less desirable and therefore make less financial sense for a developer. In short, Seattleites want more housing options, a sixplex boom can bring down housing costs, underbuilding with the current townhome model can be a forever mistake, the state and other cities are setting a higher standard on lot coverage and there is need for more divers housing options that can accommodate families and multigenerational groups.

Lastly, I disagree on the reduced zoning for South Seattle neighborhoods. This is in fact redlining, artificially devaluing these properties preventing those individuals from realizing the full value of their properties as well as develop for their own community needs.

Thank you for you consideration and I hope that you make the right choice.

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

Comment:

I generally advocate for denser housing throughout the city in new development projects. I support Alternative 5. My church, Haller Lake United Methodist, is considering development of low income housing on our property and we would like to be able to include retail space. This would make our neighborhood more accessible and appealing.

312-1

DEIS StoryMap Comment

Name: Christine Loder

Email: cma319@gmail.com

Date: 3/8/2024

Comment:

1. I'm dubious that there will be no overall effect on our area waterways given that we regularly have sewage overflows into the Sound and Lake WA. Can our system really handle 200K more users?
2. Moderate tree canopy loss is not acceptable. The idea that tree loss will be offset as new trees grow is not a given. We know that small trees are not cared for and often die or are stunted. There should be no loss of large mature trees.
3. The idea that overall, it's okay if we see tree loss in the city because "Action alternatives would tend to increase regional tree canopy by focusing growth in urban areas and preventing sprawl" is not valid. "Regional tree canopy" will not keep Seattle cool. We don't want to be a heat island. And, there are growth boundaries that prevent sprawl. All development is infill now. Ask any developer.
4. I'm glad to see renter displacement acknowledged.
5. Public services: The plan mentions we will need 300-700 new acres of parkland. Is there that much empty/available land open that could be added to the park system?
6. Public services: I'm a longtime animal shelter volunteer. We have been overwhelmed as the population has grown. There has been no new funding, no plans for a larger building. As we grow, if there continues to be no plan, animals will continue to suffer and be euthanized.
- 7: Nowhere do I see mitigation for the impacts (air pollution, pedestrian safety, noise) of more cars on our streets. Even if people less frequently own cars, they still employ Doordash, Uber, Amazon, etc etc. How are we going to keep cars off the road? How about requiring EV only for deliveries? How are we going to ensure pedestrian safety? What about more traffic/speed cams and more traffic calming measures?

CAUTION: External Email

Greetings,

Upon reviewing the EIS I have a few questions.

Section P 3–3 states that “none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild.” How was this determined and who made this determination? Does this mean that all the plants currently growing within the Maple Leaf Neighborhood Center would survive a 50% build out?

Section P 3-3 also states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." Please provide me with the data that supports this conclusion. This seems impossible to me. Please define significant and adverse.

The EIS indicates that tree planting will mitigate the loss of mature trees. How was this determined?

How did you determine that it will be possible for the city to meet the 30% canopy goal with the estimated increase in housing densities. As a professional forester I do not understand how this will be possible.

I look forward to your response.

Subject: One Seattle Comprehensive Plan Feedback

Hello CMs Moore, Woo, and Nelson, Mayor Harrell, and the Office of Planning and Community Development,

My name is Ryan Lorey, and I am a Seattle resident of District 5 in the 98125 zip code.

As I am unable to attend any of the in-person events around the Comprehensive Plan update, I am contacting you today to provide my feedback on the draft.

The proposal in its current state is insufficient to meet our housing needs and does not properly incorporate the previous community feedback OPCD received during the initial scoping for the plan. When presented with Alternatives 1 - 5, the community *overwhelmingly* preferred Alternative 5 and a community-led Alternative 6 that would go even further than what OPCD presented. We are in a housing crisis and have been for years. This plan guides our city's growth pattern over the next 20 years. We do not have the luxury to go small, and we have a responsibility as the largest city in Washington - and in the US for hundreds of miles - to build significantly more housing than we have in the past.

Additionally, in the most recent election for city council, not only did every candidate that won explicitly say they supported Alternative 5 when asked, nearly all *candidates* in the general election also supported Alternative 5 or 6. In my view, Seattle's city leaders have a mandate

315-1

from voters to lead on housing growth and go big.

My specific feedback is as follows:

1. The plan needs to address HB 1110 provisions that require 6-unit zoning within walking distance of high capacity transit, including trolleybus lines.
2. The plan needs to use the state Department of Commerce's model middle housing zoning ordinance developed as part of HB 1110 implementation as a minimum standard. Ideally, we would allow a set FAR ratio per unit (e.g. 0.4 for 1 unit, 0.8 for 2, 1.2 for 3, 1.6 for 4, etc.). The state's model code tapers off FAR for higher unit counts, meaning larger buildings have a lower per-unit size. In either case, the current proposal from OPCD is too limiting and will not result in many, if any, 6-unit developments.
3. Add back the removed neighborhood centers. No neighborhood should be exempt from density, and the number of neighborhood centers in the draft plan is greatly reduced from the original proposals presented for the lower growth alternatives.
4. Discontinue the practice of focusing all growth along high traffic corridors. This feedback is the most important. Our past and current development patterns focus nearly all housing growth along high traffic roads, which we know from evidence and data are the most dangerous to human health. They result in higher numbers of traffic violence, have higher levels of air and noise pollution, and make for less cohesive communities but cutting them in half. Instead, we should be moving our growth to be within the grids created by these higher traffic corridors rather than running these corridors down the middle of our highest population zones.
5. The plan should *eliminate* parking minimums city-wide.

Thank you for your hard work on this proposal, and I hope that the community's feedback will be heard.

Thank you,
Ryan Lorey

CAUTION: External Email

Hello OPCD and Mayor Harrell,

My name is Ryan, and I am a Seattle resident of District 5 in the 98125 zip code.

I have previously sent an email regarding my feedback on the comprehensive plan update, and want to provide a final bit of feedback.

316-1

I strongly support bringing the comprehensive plan back in line with the original map OPCD drafted before it was pared down to the current map in the draft EIS. This proposal matches up with Alternative 5, which received massive community support. This proposal would also ensure that we can meet our expected housing demand, as well as prepare for unexpected future increases in housing demand (keep in mind our demand has surpassed previous estimates for several planning cycles - we are not doing well at predicting future growth!). Our comprehensive plan should go above our projections and bare minimum requirements to ensure Seattle can become and *stay* a livable and affordable city for all who want to be here regardless of whether predictions hold.

Please bring back this land use map!

Thank you,
Ryan Lorey

CAUTION: External Email

I am writing to support the adoption of **Alternative 2** as the development alternative in the update One Seattle Comprehensive Plan.

Most importantly:

- **Amend the Tree Protection Ordinance to require developers to maximize the retention of existing trees 6" DSH and larger.**
- **Give SCCI Director the ability to ask for alternative site designs to save trees.**
- **Support building higher and building attached units to allow for tree retention and planting areas like Portland, Oregon has with 20% areas for multifamily and 40% for its 1-4 unit family zone.**
- **Amend Tree Protection Ordinance to require ordinance to apply to all city land use zones.**
- **Remove the "basic tree protection area" loophole in the Tree Protection Ordinance that allows developers to unnecessarily remove almost all large trees on lots.**
- **Require developers to submit a Tree Inventory**

319-1

Thank you for considering the **essential quality of life** which has made Seattle the special place it is.

CAUTION: External Email

Please note my comment on the DEIS:

1: Section P 3-3 states that “none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild.” What is the impact of the plan specifically on Seattle’s plants and animals?

2: Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." What analysis shows that tree planting programs, coupled with increased hardscape, will compensate for lost urban forest?

3: The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development?

Sincerely,

Finu Lukose

CAUTION: External Email

Hello,

I have concerns about the environmental impact statement for the Comprehensive Plan:

I have watched trees disappear on my block as older houses and yards are replaced by much larger houses and almost no trees and shrubs, and with much more concrete hardscape. So I disagree with the statement in Section P 3-3 that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover". I have seen the tree canopy decline on my street already. How will this plan mitigate lost, established trees as new housing is built that covers more of the lots?

I would like to know how the city will reach the 30% tree canopy goal. Since the new tree ordinance allows development that will reduce private land available for trees, how will the city provide more public land to make up the difference in order to reach the 30% goal? What is the plan for planting trees to replace trees lost to development?

Are there specific studies/data that support statements in Section P 3-3 that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild"? How will the plan impact plants and animals in Seattle?

I support building more housing in Seattle, especially more affordable housing. But we also need to protect and expand the tree canopy in our city.

Sincerely,

Martha Taylor, Seattle 98115

CAUTION: External Email

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

Comments Planning and Community Development EIS,

I agree that we need more affordable housing. We need livable and vibrant communities, too.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

323-1

- * The draft EIS lacks the means to protect current 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity, and sustainable urban forestry. This is unacceptable.
- * The draft EIS does not analyze the impact of tree loss but speculates WITHOUT PROOF that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover". Really? Without quantification this is meaningless.
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services. This is unacceptable.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to REQUIRE alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be COMPLETED before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Trees are not just pretty, folks. Our canopy is critical to the city's ability to maintain wildlife, pollinators, cope with hot summers and cold winters, mitigate water runoff, and contributes meaningfully to community health.

Don't take our trees away.

Thank you for your consideration.

Subject: Inquiry Regarding Environmental Impact Statement for Comprehensive Plan
Date: Thursday, May 2, 2024 8:10:08 PM

CAUTION: External Email

Dear Seattle Planning Commission,

I hope this message finds you well. I am reaching out with several questions regarding the environmental impact statement (EIS) for the comprehensive plan, aiming to gain a deeper understanding of how the plan will affect our urban environment.

325-1

1. In Section P 3-3 of the environmental impact statement, it is mentioned that none of the proposed alternatives would be expected to negatively impact the survival or recovery of plant or animal species in the wild. Could you provide more detailed insights into how the plan specifically impacts Seattle's plants and animals, considering aspects like habitat preservation and ecosystem health?
2. The EIS also states that none of the alternatives would have significant, unavoidable adverse impacts on tree canopy cover. Can you share the analysis or studies conducted to support this claim? I am particularly interested in understanding how tree planting initiatives and the increase in hardscape will compensate for any potential loss of urban forest cover.
3. With the city's goal of achieving a 30% canopy cover, the new tree ordinance has reduced private land available for trees. Could you clarify how much public land remains available to reach this goal? Additionally, what are the projected annual planting requirements for trees in these public areas to offset the trees removed due to development activities and maintain or enhance our overall canopy coverage?

Thank you for taking the time to address these questions. Your insights will greatly contribute to a more informed decision-making process regarding the comprehensive plan's environmental implications.

Best regards,

CAUTION: External Email

Comments Planning and Community Development EIS,

Hello,

I'm a Seattle resident since 1972. Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities. Trees make it far more pleasant and healthy.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

* The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry. Planting baby trees isn't the same thing.

* The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover" This is not true!

* No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services. This must be in a timely manner. Trees take years to grow.

Mitigation recommendations:

* Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees. Please! This is serious.

* Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued. Also crucial!

* Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.

* Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees. Let us not remove large trees when it can be avoided.

Thank you for your consideration.

Comments: City of Seattle Comprehensive Plan Draft EIS

I prefer Alternative Plan #2. I recognize the need for more affordable housing in Seattle. I would like to see this accomplished via a comprehensive plan that retains as much of our current urban forest as possible, with an emphasis on retaining mature trees and addressing storm water runoff into our streams and wetlands. I am especially concerned about the potential loss of tree canopy in the areas adjacent to the 130th Street and 145th Street Light Rail Stations. For these reasons, I support Alternative #2, which focuses growth and limits the destruction of tree canopy.

Please review and revise the Plants and Animals Section.

- P 3-3-29-30 Please analyze the potential impact of the 5 options on Seattle plants and animals. This is a Seattle EIS, not a regional or state EIS. Saying "unlikely to result in appreciable impacts on regional populations of plants or animals" and "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild" is avoiding commenting on the specific impacts on Seattle plants and animals.

Specifically, this section ignores bird species that are currently (or were formerly) a [Species of Concern in Washington](#). Seattle is home to several species that are being monitored, including the native Band-tailed Pigeon, Great Blue Heron, and raptors, such as Bald Eagle, [Cooper's Hawks](#), and [Merlin](#). These species require mature trees for nesting and other behaviors. In particular, Merlins were once listed as a Species as Concern in Washington, but they were removed from the list when their numbers rebounded, due to their ability to adapt to nesting in urban areas, such as Seattle, where they nest exclusively in conifers over 100 ft tall.

Please amend this section to address the retention of large, mature, trees in our urban forest, including residential lots that are slated for development, and acknowledge the importance of maintaining and increasing diversity in urban plant and animal species.

- p 3-3-30 Saying that "none of the action alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." is not backed up by facts but speculative at best. The new tree protection ordinance actually increases the potential for tree removal in several ways. One is that all the developmental areas covered by the ordinance state that the newly defined "basic tree protection area cannot be modified" despite Portland, Oregon and the Northwest Society of

329-1

Arboriculture saying it can be modified to save trees. This and current lot coverage of 85 - 100% for multifamily lots and above and rezoning to occur means more trees, especially large ones, will be removed. What is your estimation of potential canopy acreage loss (over 5 year periods consistent with the city's canopy studies) with increased development density in each alternative?

- What is your estimation of planting needs and time frame to replace the lost canopy (over 5 year periods tracked by the city's canopy study)?
- Is canopy replacement equivalence even possible with replanting since removed trees, if not removed, would have increased growing according to scientific articles?

329-1
cont

What is the acreage available and suitable for planting trees in each of the following public areas- the city's right of ways, Natural Areas and Developed Parks?

- How many trees and what size will need to be planted in these areas every year to make up for trees and canopy removed during development on lots?
- What is the available acreage available to plant trees on private property?
- When will it be possible to reach the 30% citywide goal?
- What potential is there for more than 30% tree canopy in Seattle over time?
- Is up to 40% canopy coverage, over time, as proposed in the previous Comprehensive Plan possible?
- What is the projected loss in canopy volume over the next 20 years as big conifer trees are removed?
- Canopy volume, especially of coniferous trees during our rainy season, are critical factors in reducing stormwater runoff.
- What is the projected increase in stormwater runoff and what costs are associated with on site and alternative city water management policies of stormwater and pollutant runoff as a result?

I also support the following mitigation measures:

- Amend the Tree Protection Ordinance to require developers to maximize the retention of existing trees 6" DSH and larger.
- Give SCCI Director the ability to ask for alternative site designs to save trees.
- Support building higher and building attached units to allow for tree retention and planting areas like Portland, Oregon has with 20% areas for multifamily and 40% for its

329-2

1-4 unit family zone.

- Amend Tree Protection Ordinance to require ordinance to apply to all city land use zones.
- Remove the "basic tree protection area" loophole in the Tree Protection Ordinance that allows developers to unnecessarily remove almost all large trees on lots.

Comment:

The impact of higher growth targets should be studied, an 'alternative 6'. Alternative 5 is the most preferable of current proposals, but more growth appears necessary to comply with state law requiring more density around transit, address historic inequities with SFH zoning being used as a tool of segregation, and to meet our climate goals.

330-1

CAUTION: External Email

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

What is the actual impact to Seattle's plants, trees and animals?

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees. It's honestly egregious.
- * Create a Department of Urban Forestry to oversee this plan given the obvious conflict of interest with SDCI

At this point, please choose alternatives 2 or 4 in the comprehensive plan so we can build 100,000 new homes while preserving our trees.

Many other large cities went down the pathway of overdevelopment without consideration of the environmental benefits of keeping our mature trees. They are now regretful and working to reverse their costly mistakes. Write the plan keeping these lessons in mind and show forward

331-1

thinking planning that's not simply for developer profit.

Thank you for your consideration.

CAUTION: External Email

To Whom It May Concern:

Comments on the Draft Comprehensive Plan are below and attached via pdf.

Thank you for the opportunity to comment on the draft One Seattle Comprehensive Plan and Draft Environmental Impact Statement. We are writing to express broad support for the comment letter submitted from the Seattle Chapter of NAIOP. We believe that Alternative 5 would be the most successful option for addressing the city's severe housing shortage, though we believe much more can be done to encourage housing production in order to ease the housing crisis and associated issues.

We support strategies that maximize development capacity and remove or reduce zoning barriers in target growth areas. In addition to the Plan's proposal for a new Regional Center in Ballard, we strongly support a future Regional Center in southeast Seattle. Southeast Seattle is already served by several light rail connections and would benefit from additional investment to support the current residents and increase housing supply. The designation and expansion of Regional Centers should be completed as soon as possible.

We also support residential uses in Manufacturing Industrial Centers, but more generally support true mixed-use development around all transit corridors, including those located in a MIC.

In addition to an increase in the capacity for housing development, the current process for land use entitlements adds significant uncertainty and delay. We support the design review program changes included in HB 1293, but also encourage the City to go further in reducing regulatory barriers. The City should continue to exempt housing projects from design review and SEPA, and should develop a program for more clearly integrating utility approvals (Seattle Public Utilities and Seattle City Light) with the current land use and building permit approval processes.

We do not support additional impact fees or an increase in MHA fees and strongly encourage the City to evaluate the possibility of payment for MHA fees at Certificate of Occupancy, rather than building permit issuance.

Thank you for your consideration of these items and we look forward to continued engagement around the Comprehensive Plan update.

Subject: Comments on our One Seattle Comprehensive Plan and EIS
Date: Monday, May 6, 2024 11:13:18 AM

CAUTION: External Email

Please accept my comments on the One Seattle Comprehensive Plan and the associated EIS.

I would like to see **Alternative 2** further examined and modified.

Please maintain the existing tree canopy goals of 30% by 2035 and 40% over time and specify how you will meet these goals with data.

333-1

Also, please analyze the potential impact of the final selected option on **Seattle's plants and animals**.

And I have a few questions for you:

- What is your estimation of tree planting needs and a time frame to replace the equivalent lost canopy area and volume (over 5-year periods as tracked by the city's canopy studies)?
- Is canopy area and volume replacement equivalence even possible with replanting since removed trees, if not removed, would have increased growing according to scientific articles?

What is the acreage available and suitable for planting trees in each of the following public areas: the city's right of ways, natural areas, and developed parks?

- How many trees and what size will need to be planted in these areas every year to make up for trees and canopy removed during development on lots? How many trees and what size for all canopy loss?
- What is the available acreage available to plant trees on private property?
- When will it be possible to reach the 30% citywide goal?
- What potential is there for more than 30% tree canopy in Seattle over time?
- Is up to 40% canopy coverage, over time, as proposed in the previous Comprehensive Plan even possible?

- Canopy volume, especially of coniferous trees during our rainy season, are critical factors in reducing stormwater runoff. What is the projected loss in canopy volume over the next 20 years as big conifer trees are removed?
- What is the projected increase in stormwater runoff and what costs are associated with on site and alternative city water management policies of stormwater and pollutant runoff as a result?

333-1
cont

I am seriously concerned about the significant loss of trees in Seattle as more and more residential lots undergo development. It seems that no mature trees are safe any longer in Seattle. I would like to see the following changes made to mitigate any further increase in the loss of our life-sustaining urban forest:

333-2

- Amend the Tree Protection Ordinance to require developers to maximize the retention of existing trees 6" DSH and larger.
- Give SCCI Director the ability to ask for alternative site designs to save trees.
- Support building higher and building attached units to allow for tree retention and planting areas like Portland, Oregon has with 20% areas for multifamily and 40% for its 1-4 unit family zone.
- Amend Tree Protection Ordinance to require ordinance to apply to all city land use zones.
- Remove the "basic tree protection area" loophole in the Tree Protection Ordinance that allows developers to unnecessarily remove almost all large trees on lots.
- Require developers to submit a tree inventory on lots they intend to develop.

Thank you for your work, and I hope that you will take great measures to ensure that, as we grow our city, we take into consideration all that makes life here so beautiful, sustaining and life-giving: our trees and plants, birds and animals, our creeks and hillsides. The city is not adequately protecting what makes Seattle most livable and beautiful, and we must do better!

CAUTION: External Email

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

Subject: Comments re. the Draft EIS - please support development alternative 2
Date: Monday, May 6, 2024 11:58:04 AM

CAUTION: External Email

To whom it may concern,

In regards to the Draft EIS and alternatives for development, please support alternative 2. Clearly Seattle needs new houses but the health of the people living in those houses and in our city depends on preserving our trees and natural resources. Under Alternative 2, about 3,000 acres of currently lower-density parcels may be converted to higher-density uses (neighborhood centers), the smallest area of conversion among the action alternatives (Exhibit 3.3-4). Growth would be focused in neighborhood centers. Among the action alternatives, Alternative 2 would thus have the lowest potential for development-related impacts to vegetation (including loss of tree canopy cover) citywide.

In addition, Please prioritize the following: Amend the Tree Protection Ordinance to require developers to maximize the retention of existing trees 6" DSH and larger.
Give SCCI Director the ability to ask for alternative site designs to save trees.
Support building higher and building attached units to allow for tree retention and planting areas. Amend Tree Protection Ordinance to require ordinance to apply to all city land use zones. Remove the "basic tree protection area" loophole in the Tree Protection Ordinance that allows developers to unnecessarily remove almost all large trees on lots.

Thanks,
Anne Miller

Subject: Questions on the Environmental Impact Statement:
Date: Friday, May 3, 2024 9:11:31 AM

CAUTION: External Email

To Whom It May Concern and my elected city council members,

I moved from a neighborhood in northeast Seattle to my current home in downtown Seattle. I miss the bird songs from the large trees in my old neighborhood. I miss walking down the block on the sidewalk and being in the shade of living breathing trees. How does your plan provide those human comforts while setting aside concerns for the existing trees and plants? What are your plans for future human comforts afforded by our natural urban environment?

336-1

Did you do your research to show that future plans will make up for the concrete structures and asphalt parking lots taking over our existing urban forest?

I make trips to my old neighborhood and am astonished by the loss of large old street trees and big trees on private lands that have been removed to build bigger and cover more of the dirt. I do believe that if we are to be a green city, we need to reach for more canopy cover and stop the destruction of the valuable older trees in our private and public lands. I learn that trees removed to build these bigger buildings are replaced but where?! Parks is constantly cutting and removing trees, as is the Transportation department. Who is watching the store? How many trees and where are they to be planted if you intend to reach a goal of thousands of new residences which will remove, not include, trees in the development?

Please consider my comments.

Comment:

I am a Ballard renter and city worker. The City of Seattle did not listen to the overwhelming majority's call for an Alternative 6 vision, which would encourage social housing in all neighborhoods. Instead the current draft plan will worsen the many crises (housing, climate, unaffordability) our city faces. To create a more vibrant city, the plan should enable permanently affordable social, cross-class housing to be developed in all neighborhoods.

It is shocking to me that most, if not all of our major parks and coastlines remain surrounded by single family zoning, promising that the greenest neighborhoods will remain out of reach to all but the wealthiest. In Ballard, for example - a major neighborhood center - our main parks, Carkeek and Golden Gardens, remain untouched. Zoning and FAR regulations should be changed to not just allow but encourage stacked-flat, 6-plexes across the board, at minimum. 8-12 plexes in most places. Our greenest areas should be up-zoned even higher, instead of just our loudest, deadliest arterials. Serving these areas with more transit would both help these new residents, and residents of other neighborhoods access green space.

If the City of Seattle adopted my above proposed changes, then we would be able to provide much needed housing while still preserving and even increasing greenery and access to it, for all.

Thousands of people have already been forced to leave this city, and thousands are already on the streets because of our current inaction. We cannot do less than the minimum, which is the current path our Comprehensive Plan is on. It's time to move forward.

CAUTION: External Email

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

338-1

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

CAUTION: External Email

“Seattle One” planners,

With the forthcoming light rail stops along Interbay between Smith Cove and Dravus/Nickerson , the Interbay Neighborhood Center designation is regrettably undersized and undervalued to its potential mixed use commercial and mid-rise to high-rise residential given the 2040 transit capacity, proximity to City Center, and immediate proximity to jobs with business office and light manufacturing industries.

Upgrade the recommendations of 2013 Envision Interbay considering appropriate eco-district and transit oriented models built in other smaller cities (such as Burnaby and New Westminster, British Columbia) that have transformed single-story commercial and parking lots into thriving urban centers.

City planners and partners and agencies can make this happen in current wasted prime real estate within the context of the City and tourism.

blank

blank

**Seattle does not support a
'single-minded' comprehensive
plan that simply backs the
financial interests of a few in
the property investment
industry, and disregards
everything else we have
collectively worked to achieve.**

**Plan vertically upward ...
rather than planning to
evaporate urban open spaces.**

**Support Urban Planning
Alternatives 2 and 4!**

341-1
cont

Out of the five alternatives in the plan, alternatives 2 and 4 would retain open moire open space and the greatest amount of tree canopy. According to recent data from Seattle Office of Planning and Community Development, without changing the current 2035 comprehensive plan and current Seattle zoning, Seattle has the capacity to add another 165,000 +/- dwellings.

Therefore, Seattle Legislators have a good reason to choose Seattle One alternatives 2 or 4 so we can add capacity for another 100,000 new homes while preserving our trees, and planting another 100,000 trees to achieve Seattle's tree canopy goals established in 2007.

'Seattle One (idea only)' DEIS questions as to environmental impact:

In what way, if any, does the environmental impact statement sustain urban nature?

1. Section P 3-3 states that “none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species *in the wild*.”
 - **Do People Belong in Cities, and Plants and Animals belong elsewhere? What is the impact of the plan specifically on Seattle’s plants and animals?**
1. Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover."
 - **What analysis shows that tree planting**

341-1
cont

programs, coupled with increased hardscape, will compensate for lost urban forest?

1. The plan states that Seattle will make progress toward its 30% canopy goal. Seattle's developed properties lost an average of 39% of tree canopy between 2016 and 2021. The new tree ordinance substantially reduces private land available for trees.
 - **How will areas of Seattle, such as within the Duwamish Valley, be planned to double their existing trees canopy in order to be equitable with the rest of the city?**
 - **How many acres of public land is available to reach our 30% tree canopy goal within the next 13 years?**
 - **How many trees will need to be planted in these areas every year to make up for trees removed by development?**
 - **What budget has been established for Seattle to expand it's canopy by over 1,000 acres plus an average annual net canopy loss of 50 acres per year?**

Consider what makes Seattle a rose among the USA Cities, and amplify those feature! Plan upward! Retain treasured open space!

Mr. Holmes.

The following are my comments on the DEIS on the Draft 2024 One Seattle Plan Comprehensive Plan Update.

Robert (Bob) Morgan
559 N 74th Street
Seattle
bmorgan5@comcast.net

Comments:

3.1 Earth

1. “Alternative 5: Combined” Page 3.1-27 states that the alternative “would deter housing growth in the region beyond the city,” and thereby indirectly avoid adverse impacts regionally. The same argument is made at 3.1.4 (p. 3.1-32) “Significant Unavoidable Adverse Impacts,” (Page 3.1-32), and is a principle of the EIS in general. This “toothpaste” theory is erroneous. The simplistic assumption that allowing greater density in urban areas reduces sprawl in outlying areas has proven to be false. We don’t get density instead or sprawl. Experience proves that the result is density and sprawl. All of the alternatives have a high probability of driving those desiring a less dense lifestyle to further and further reaches of the region’s rural areas.

342-1

Question: What measures does this plan anticipate to actually deter development in outlying areas of the region other than allowing it in the city?

3.3 Plants and Animals

2. 3.3.2 Impacts. Page 3.3.-13. Here the draft states “the potential for adverse effects on plants and animals would be avoided, minimized, documented, and mitigated to the greatest extent possible through regulatory reviews and permitting processes that apply to individual projects.” This is blatantly false or misleading depending upon which of the plausible meanings given to the ambiguous statement. Also, 3.3.3 Mitigation Measures, “Regulations & Commitments” states that statutes and regulations “ensure” that impacts are “avoided, minimized, documented, and mitigated to the greatest extent possible.”

342-2

These statements are blatantly false if they mean to say the regulations are so good that they avoid the impacts to the greatest extent possible, which is laughable. For example, Seattle’s tree regulations are almost completely ineffective at saving mature trees when private land is developed. Does planting moribund tiny saplings and total lack of enforcement of the viability of those saplings preserve tree canopy to the greatest extent possible? Also, much of the middle housing development as proposed in the draft Comprehensive Plan that has actually

occurred to date, is almost completely devoid of plants and true open space other than parking areas and walkways.

If the statements mean, alternatively, that the impacts would be mitigated to the extent that is provided by regulations that apply, then it is misleading because it seems to imply the regulations are effective.

342-2
cont

Question: Do these statements intend to say that the currently applicable regulations mitigate impacts to the greatest extent possible?

3. Mitigating measures cited under 3.3.3 Mitigation Measures “Incorporated Plan Features” (pp 3.3-24 and 25) include a lot of “encouraging” and monitoring only, except on City property. Programs for tree replacement and preservation of rare heritage trees are great, but significant development of 4-6 units in each Neighborhood Residential area and allowing 7-story development in Neighborhood Centers and other recommendations will result in loss of tree canopy throughout the city. Also, the draft is proposing to increase lot coverage in Neighborhood Residential zones to allow spread-out 2-story, rather than 3 story development. This will result increased loss of tree canopy.

The conclusion on page 3.3-30 that “none of the action alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover” is clearly false.

3.6 land Use patterns & Urban Form,

4. 3.6.3 “Mitigation Measures:”

Regarding the proposed 4-story, six-unit development in Neighborhood Residential Zones when “affordable” housing is included and 6-story or 7-story development in Neighborhood Centers:

342-3

The proposed plan introduces significant inconsistencies in development scale and density by permitting 4-story development and near full-lot development in Neighborhood Residential zones and would have significant adverse impacts as a result. Page 3-6-186 states: “These impacts, if they occur, are likely temporary and will be resolved over time or reduced by the application of existing or new development regulations and design standards.” This is false, because not all properties within the Neighborhood Residential zones will be permitted 4-story or 6-unit development – only those that include “affordable” units, and these developments will be incompatible with the predominant form.

Also, there is no buffer proposed between Neighborhood Residential zones in Neighborhood Centers where zoning allowing seven-story developments is planned. *

*Although the land use changes summary seems to suggest 6 story development, the Executive Summary states on Page two that the regulations would “Allow a range of housing (from

duplexes to 7 story stacked housing) and commercial uses in neighborhood center areas...”)
Also see the Growth Strategy Element, page 26, Policy GS 5.3: “Zoning in Neighborhood Centers should generally allow buildings of 3 to 6 stories, especially 5- and 6-story residential buildings to encourage the development of apartments and condominiums.”

Perhaps most egregious is the lack buffers proposed where large-scale development along frequent transit arterials is to be extended one-block into adjacent Neighborhood Residential Zones. This is hard to find in the plan documents, but this was conveyed by City staff at a Green Lake/Phinney Ridge Zoom meeting on this subject. This change will introduce extreme transitions in intensity and development scale. An example is along Greenwood Avenue North, where the topography falls off steeply on either side of the ridge. The large-scale zone along Greenwood currently extends only one lot on either side of the arterial for this reason.

Therefore, the conclusion that there is no significant environmental impact related to land use patterns and urban form is incorrect.

3.10 Transportation

5. The decision to establish Neighborhood Centers prior to localized analysis of pedestrian and transportation conditions will lead to unanticipated significant adverse transportation impacts. Here are two examples:

- The neighborhood center at 65th and Phinney Ave N. is at a location where an undersized street (N 65th Street) is currently overburdened and cannot safely accommodate the kind of increased automobile travel likely with 6 units allowed on all lots, much less with 6, or 7 story development proposed for Neighborhood Centers. Bike lanes and promises of increased transit will not be sufficient to address this impact. These areas need careful local scrutiny before general policies locking in such development is approved. At this location the proposal should prove to be unacceptable.
- The neighborhood center at Linden and 73rd street does not have adequate transit service. There is not a full regional transit stop in this location, but a North-bound stop only. This area should not be included in the proposed blob describing the Neighborhood Center.

342-3

Comment #2

3.6 land Use patterns & Urban Form,

4. 3.6.3 "Mitigation Measures:"

Regarding the proposed 4-story, six-unit development in Neighborhood Residential Zones when "affordable" housing is included and 6-story or 7-story development in Neighborhood Centers:

The proposed plan introduces significant inconsistencies in development scale and density by permitting 4-story development and near full-lot development in Neighborhood Residential zones and would have significant adverse impacts as a result. Page 3-6-186 states: "These impacts, if they occur, are likely temporary and will be resolved over time or reduced by the application of existing or new development regulations and design standards." This is false, because not all properties within the Neighborhood Residential zones will be permitted 4-story or 6-unit development – only those that include "affordable" units, and these developments will be incompatible with the predominant form.

Also, there is no buffer proposed between Neighborhood Residential zones in Neighborhood Centers where zoning allowing seven-story developments is planned. *

*Although the land use changes summary seems to suggest 6 story development, the Executive Summary states on Page two that the regulations would "Allow a range of housing (from duplexes to 7 story stacked housing) and commercial uses in neighborhood center areas..." Also see the Growth Strategy Element, page 26, Policy GS 5.3: "Zoning in Neighborhood Centers should generally allow buildings of 3 to 6 stories, especially 5- and 6-story residential buildings to encourage the development of apartments and condominiums."

Perhaps most egregious is the lack buffers proposed where large-scale development along frequent transit arterials is to be extended one-block into adjacent Neighborhood Residential Zones. This is hard to find in the plan documents, but this was conveyed by City staff at a Green Lake/Phinney Ridge Zoom meeting on this subject. This change will introduce extreme transitions in intensity and development scale. An example is along Greenwood Avenue North, where the topography falls off steeply on either side of the ridge. The large-scale zone along Greenwood currently extends only one lot on either side of the arterial for this reason.

Therefore, the conclusion that there is no significant environmental impact related to land use patterns and urban form is incorrect.

344-1

3.10 Transportation

5. The decision to establish Neighborhood Centers prior to localized analysis of pedestrian and transportation conditions will lead to unanticipated significant adverse transportation impacts. Here are two examples:

- The neighborhood center at 65th and Phinney Ave N. is at a location where an undersized street (N 65th Street) is currently overburdened and cannot safely accommodate the kind of increased automobile travel likely with 6 units allowed on all lots, much less with 6, or 7 story development proposed for Neighborhood Centers. Bike lanes and promises of increased transit will not be sufficient to address this impact. These areas need careful local scrutiny before general policies locking in such development is approved. At this location the proposal should prove to be unacceptable.
- The neighborhood center at Linden and 73rd street does not have adequate transit service. There is not a full regional transit stop in this location, but a North-bound stop only. This area should not be included in the proposed blob describing the Neighborhood Center.

Subject: Inaccurate statement re: tree loss (section 3.3.7)
Date: Sunday, May 5, 2024 10:27:19 AM

CAUTION: External Email

The statement that "most canopy loss was not associated with development activities" is inaccurate. Only projects that started and finished in the 5 year period were examined for tree loss. No study counts tree loss in houses started in 2015 but not finished until 2016 or 2017

Tree canopy loss on lots undergoing development should look at loss on **all projects finished in 2016 to 2020.**

346-1

From: [Guila Muir](#)
To: [PCD CompPlan EIS](#)
Subject: Comment on the EIS re: TREE CANOPY
Date: Sunday, May 5, 2024 10:10:29 AM

CAUTION: External Email

Here is my comment. Please take it into consideration.

As tree canopy is currently measured, the area does not include analysis of tree canopy **volume**. Without taking both measurements of **area** and **volume** into consideration, we cannot calculate ecological loss when mature trees are removed. Mature trees reduce storm water runoff, combat CO2, etc.

Small, new trees could *could* eventually gain the same canopy size when mature. But how can we possibly expect new, weak, immature trees to even make it to “adulthood”? I walk in my gteen area nearly daily and see how small young saplings struggle to survive.

It makes sense to keep and nurture the tall, old trees that we have. Why tear down and then attempt to “re-create” something that is already working for us?

Thank you.

Date: Monday, May 6, 2024 10:38:03 AM

CAUTION: External Email

Comments Planning and Community Development EIS,

Seattle desperately NEEDS more affordable housing. And we also need healthy air as the climate heats up.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities. Large mature trees offer important green infrastructure services, reduce crime, and increase the health of people living in urban neighborhoods.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

CAUTION: External Email

David,

As always your wisdom and attention to detail abound.

Unfortunately, the corruption that has permeated City Hall knows no limits and the likes of Mayor Lowe, puppet Strauss and other key MBACKS plants within the likes of SDCI and OSE have had too much time to set the environmental destruction ball rolling, to ensure their blatant pay offs by the shadowy and very visible real estate investment entities, keep rolling in my lying to the people of Seattle to push in regressive laws and code changes to allow full profit building, regardless of the negative impact to Seattle's neighbourhoods and its diverse residents.

I will expand on my comments soon, so new councilmembers know what their colleagues and predecessors have been up to with their meddling in dirty politics with their grubby, greedy little fingers.

**Seattle does not support a
'single-minded' comprehensive
plan that simply backs the
financial interests of a few in
the property investment
industry, and disregards
everything else we have
collectively worked to achieve.**

**Plan vertically upward ...
rather than planning to
evaporate urban open spaces.**

Support Urban Planning Alternatives 2 and 4!

Out of the five alternatives in the plan, alternatives 2 and 4 would retain open more open space and the greatest amount of tree canopy. According to recent data from Seattle Office of Planning and Community Development, without changing the current 2035 comprehensive plan and current Seattle zoning, Seattle has the capacity to add another 165,000 +/- dwellings.

Therefore, Seattle Legislators have a good reason to choose Seattle One alternatives 2 or 4 so we can add capacity for another 100,000 new homes while preserving our trees, and planting another 100,000 trees to achieve Seattle's tree canopy goals established in 2007.

'Seattle One (idea only)' DEIS questions as to environmental impact:

In what way, if any, does the environmental impact statement sustain urban nature?

1. Section P 3-3 states that “none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species *in the wild*.”
- **Do People Belong in Cities, and Plants and Animals belong elsewhere? What is the impact of the plan specifically on Seattle’s plants and animals?**

blank

blank

352-1
cont

1. Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover."

- **What analysis shows that tree planting programs, coupled with increased hardscape, will compensate for lost urban forest?**

1. The plan states that Seattle will make progress toward its 30% canopy goal. Seattle's developed properties lost an average of 39% of tree canopy between 2016 and 2021. The new tree ordinance substantially reduces private land available for trees.

- **How will areas of Seattle, such as within the Duwamish Valley, be planned to double their existing trees canopy in order to be equitable with the rest of the city?**
- **How many acres of public land is available to reach our 30% tree canopy goal within the next 13 years?**
- **How many trees will need to be planted in these areas every year to make up for trees removed by development?**
- **What budget has been established for Seattle to expand it's canopy by over 1,000 acres plus an average annual net canopy loss of 50 acres per year?**

Consider what makes Seattle a rose among the USA Cities, and amplify those feature! Plan upward! Retain treasured open space!

CAUTION: External Email

Hello,

I am writing to express my strong concerns about the loss of trees and wildlife habitat which will happen during the proposed development citywide, and especially near the 130th Street Station. Having commercial development so close to the parkland and Flicker Haven is not conducive to protecting the creatures that live there, and the loss of trees throughout the city is a tragedy.

I strongly advocate for Option 1 which will result in less destruction of neighborhoods and greenspace, while still resulting in more housing units. And if there was better planning, instead of just leaving it up to developers to decide what they wanted to do, I'm sure even more trees could be saved and more housing could be created without loss of greenspace. For instance, if you built apartments with underground parking, over a store, in places where currently there are stores with large parking lots. I know it isn't as cheap as clearcutting lots, but there could be more units; it would save open space, and they would be walkable neighborhoods.

The current plan that just suggests mitigation, but doesn't require it, is extremely unrealistic. When my neighbor cut down a bunch of trees, the temperature in my house rose 10 degrees in the summer. We don't want the entire city to suffer the same way.

Please consider the following questions before making such momentous quality of life decisions for the city. Remember we are known as the Evergreen City.

- How many trees and what size will need to be planted in these areas every year to make up for trees and canopy removed during development on lots?
- What is the available acreage available to plant trees on private property?
- When will it be possible to reach the 30% citywide goal?
- What potential is there for more than 30% tree canopy in Seattle over time?
- Is up to 40% canopy coverage, over time, as proposed in the previous Comprehensive Plan possible?

Please also amend the Tree Protection Ordinance in the following ways:

- Amend the Tree Protection Ordinance to require developers to maximize the retention of existing trees 6" DSH and larger.
- Give SCCI Director the ability to ask for alternative site designs to save trees.
- Support building higher and building attached units to allow for tree retention and planting areas like Portland, Oregon has with 20% areas for multifamily and 40% for its 1-4 unit family zone.
- Amend Tree Protection Ordinance to require ordinance to apply to all city land use zones.
- Remove the "basic tree protection area" loophole in the Tree Protection Ordinance that allows developers to unnecessarily remove almost all large trees on lots.

Thank you so much.
 Kris Niznik

Comment:

Broadly speaking, I hope that the plan will be updated to be bolder around housing capacity and growth. As I understand it, this plan assumes that Seattle will grow more slowly than it has over the last 10-15 years. We need more housing capacity than what is being proposed.

I hope that our City leaders will consider expanding urban centers boldly near transit and adding additional neighborhood centers. There are several small hubs in my neighborhood (Beacon Hill) apart from the Urban Village center (near clock out lounge for example) that add vibrancy and convenience to my life. I hope the City will add more or even allow midrise housing (4-8 stories) wherever housing is allowed that is also near frequent transit. We shouldn't be artificially holding back our City's growth; we want abundant housing.

Allow corner stores in more places-- not just in centers. I have a corner store near my house that is otherwise a 12 minute walk from the grocery store. The Three Little Pigs is a great example of a neighborhood asset that should be enabled in more places. I know the workers and see my neighbors there.

Allow more types of middle housing everywhere in neighborhood residential zones. I currently live in a stacked triplex as a renter. I would love to own a humble stacked flat condo if more housing types like this were allowed. The FAR being proposed in the draft plan would NOT sufficiently allow for stacked flats and would favor taller, skinnier townhomes. I don't have anything against town homes being created and know people that live in them, however, Townhomes are not going to work for a major proportion of people looking to buy (ex: aging adults or people with mobility issues).

I also hope that this City will find ways to include affordability in growth by giving substantial bonuses in FAR, height, etc. for affordable housing provision.

I was born in Seattle and still can't afford a house here. I'd like to start a family here because my job and social network are in the City. Please enable more housing in the City, including homeownership options and rentals. Cities MUST change and evolve and I hope that you will create a bold growth strategy that allows organic growth where it's needed: near transit and jobs and community amenities. The current plan is not bold enough and will likely make our affordability challenges worse and will lock out more people who are already contributing and living in the City.

Date: Tuesday, May 7, 2024 1:33:39 PM

CAUTION: External Email

P 3-3-29-30 Please analyze the potential impact of the 5 options on Seattle plants and animals. This is a Seattle EIS, not a regional or state EIS. Saying "unlikely to result in appreciable impacts on regional populations of plants or animals" and "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild" is avoiding commenting on the specific impacts on Seattle plants and animals.

- p 3-3-30 Saying that "none of the action alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." is not backed up by facts but speculative at best. The new tree protection ordinance increases the potential for tree removal and loss in several ways. One is that all the zones that can undergo development under the ordinance state that the newly defined "basic tree protection area cannot be modified" despite Portland, Oregon and the Northwest Society of Arboriculture saying it can be modified to save trees. This and current guaranteed lot coverage of 85 - 100% for multifamily lots and above and rezoning to occur in the Neighborhood Residential zone means more trees, especially large ones, will be removed. What is your estimation of potential canopy acreage loss (over 5 year periods consistent with the city's canopy studies) with increased development and density in each alternative?
- What is your estimation of tree planting needs and a time frame to replace the equivalent lost canopy area and volume (over 5 year periods as tracked by the city's canopy studies)?

CAUTION: External Email

What follows are my comments with regard to the Draft EIS:

After reviewing the five alternatives and their impacts, I would prefer to see Alternative 2 selected for a detailed final EIS.

The City established a goal in 2007 of having a 30% tree canopy cover by 2037. A study undertaken in 2022 by the Seattle Office of Sustainability and Environment determined that in the five-year period of 2016-2021, Seattle lost 255 acres of tree canopy.

Along with population growth and the attendant increase in housing must come protections for Seattle's existing trees and commensurate growth in a diverse tree canopy; one that provides protection for animals and other vegetation. I believe whatever the City chooses to do must sustain a healthy ecosystem that promotes well-being, resilience, clean air, and sustainability equitably across all neighborhoods.

CAUTION: External Email

Dear Project Staff and Council Member,

While I applaud the city's efforts to increase housing while preserving and expanding tree canopy, particularly in disadvantaged areas, I take issue with two areas of the One Seattle Plan (Plan) and Draft EIS (DEIS):

- The Plan clearly states the benefits of proper stewardship of our tree canopy (Land Use policy 4.8 aims to “use tree requirements to preserve and enhance the City’s physical, aesthetic, and cultural character and to enhance the value of trees in addressing stormwater management, pollution reduction, and heat island mitigation.”). In opposition to this goal, the DEIS states that “development projects on parcels in the Neighborhood Residential or Multifamily management units are likely to result in more loss of tree canopy” and that “alternatives with a higher likelihood of contributing to canopy cover loss in areas with low canopy cover would have an elevated risk of exacerbating local heat island impacts (Section 3.3.2).” To mitigate this, the DEIS states “enhanced restrictions on tree removal will reduce related canopy loss on private parcels, and tree replacement requirements will ensure that a substantial portion of such losses are reversed over time (Section 3.3.3).” While this sounds effective in theory, in practice the current tree protection ordinance, and thus the mitigation plan, is insufficient and my concern is this may result in new heat islands in neighborhoods slated for development. Specifically, the current tree protection ordinance gives developers excessive latitude to remove Tier 2 trees which encroach on their guaranteed 85% developable space in Low Rise zones. To presumably offset this removal they may either replant a comparable tree onsite or pay into a fund which replaces the tree on public land or private land with low tree canopy. While this policy aims to maintain 30% tree canopy across the city over time and benefits disadvantaged areas (both admirable goals), it effectively redistributes trees away from where we need them most, on private land in our neighborhoods. Further, Tier 2 trees take decades to mature and provide protection *now*, not decades from now. To properly mitigate tree loss we need a Tree Protection Ordinance that imposes uniform restrictions on Tier 2 tree removal for all parties, individual homeowners and developers. We need a Plan that reduces heat islands in all areas of the city, not creates new heat islands in some areas. **I support alternative plans 1 and 2 since the DEIS acknowledges they involve the lowest reduction in tree canopy while still creating 80K-100K homes.**
- Some Alternative Plans include a Neighborhood Center at 35th Ave NE and NE 85th St and the DEIS indicates there will be increased traffic and travel time. It is worth noting this intersection has arterials going North, East, and South, but heading West is a non-arterial neighborhood street. The mitigation plans do not address how having a Neighborhood Center connected to a non-arterial street will negatively impact the residential streets in the adjacent neighborhood. Given the current high traffic volume in that area and multiple nearby schools with restricted speed limits during rush hour, it is likely the residential streets will be used as cross streets for overflow traffic. **Can the DEIS comment on impact to neighborhood traffic, noise, and safety in special cases such as NE 85th St.? Does the Plan include alternative Neighborhood Center options in this area which have arterials in all 4 directions (e.g. NE 95th St or NE 75th St)?**

Best regards,

David J. Ortiz, PhD

CAUTION: External Email

Hello, I have some questions about the EIS for the Comp plan.

Section P 3-3 states that no impact is expected on survival to plants and animals. What exactly is the impact of the plan on Seattle's plants and animals, if any?

Section P 3-3 states that "none of the alternatives would be expected to have significant, adverse impacts on tree canopy cover." What evidence do you have to demonstrate this? What analysis, if any, indicates that tree planting programs along with increased hardscape will compensate for lost urban forest?

The plan states that Seattle will make progress toward its 30% canopy goal. This sounds ridiculous. The new tree ordinance substantially reduces private land available for trees. How much public land is actually available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development? Also, mature trees absorb much more CO2 than tiny immature trees. Are you taking into account this difference?

Sincerely,
Allison Ostrer

From: [Dan Overgaard](#)
To: [PCD CompPlan EIS](#)
Cc: [Kettle, Robert](#)
Subject: Comments on One Seattle Plan
Date: Monday, May 6, 2024 11:20:17 AM

CAUTION: External Email

Dear Comp Plan team and Councilmember Kettle,

We have reviewed the draft Comprehensive Plan, and would like to offer some comments.

1. We urge you to select alternative 2 or 4, as they would save more of the City's tree canopy. We are very concerned about the potential loss of tree canopy, as many single family homes will be replaced by multiple units. In our Queen Anne neighborhood we have already seen the removal of many mature trees as replacement structures have eliminated yards and other spaces for trees.

2. Section P 3-3 states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild." What is the basis for this claim, and what is the impact of the plan specifically on Seattle's plants and animals?

3. Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." What analysis shows that tree planting programs, coupled with increased hardscape, will compensate for lost urban forest? What incentives will there be for developers to retain or replace affected trees? Please include this analysis in the updated plan.

4. The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development? Please provide supporting analysis in the updated plan.

5. Upper Queen Anne is identified as an Expanded Regional or Urban Center, with expanded development allowed from approximately Galer to Smith, and 6th West to 5th North. We agree with the need for additional housing, but recommend that you reduce the proposed expansion area by at least 50%. Most of the streets and avenues in this expansion area, especially to the east and west of Queen Anne Ave, are effectively one lane streets since there is neighborhood parking on both sides. We do not think this street network will be able to support the added traffic and parking requirements that will be generated by the level of proposed development.

Thank you for your consideration.

Comment:

The city should study the impacts of Floor area ratio bonuses that incentivize stacked flat development rather than attached or detached townhomes, Higher floor area ratios for middle housing in all residential zones, such as those corresponding to the state model code for middle housing, Social housing in every neighborhood on affordability, and Greater height and density bonuses within a quarter mile of transit stops.

Of the available alternatives, I strongly prefer Alternative 5 with higher growth targets. Ideally I'd prefer that the city look at higher growth targets for Alternative 5

CAUTION: External Email

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

CAUTION: External Email

Hello!

I volunteer with the Urban Carnivore Project and am concerned about the vagueness of the Draft EIS when it comes to our urban vegetation and wildlife. Please provide more information on the impact specifically on Seattle's plants and animals. I find it hard to believe that the loss of green space and urban canopy will have no impact at all. Development is removing habitat. The removal of habitat harms a species. Any other implication doesn't make any sense to me.

369-1

I also have a hard time believing the Draft EIS actually stated that this would probably minimize development in rural areas. This throwaway line is not backed by facts even though it is tossed around all the time. Please back up your assertions.

369-2

Many years ago, I worked for a land use consulting firm and I know that EIS's are often written to accommodate the client's needs. I am concerned that is the case here.

Please fix this.

Sincerely,

Anna Pedroso

Subject: Comment on Draft One Seattle Plan
Date: Monday, May 6, 2024 3:14:09 PM

CAUTION: External Email

Dear OPCD Staff and Seattle City Council:

I am a longtime Seattle resident writing to express my serious concern with the draft One Seattle Plan, and to urge modifications that will increase smart growth and help make the city accessible to a wider range of people.

In the past 20 years, I have seen firsthand the rapidly accelerating crisis of affordability in our city, as friends, many of whom are artists, teachers, or other non-tech workers, have been forced to downsize, or relocate out of the city entirely. As a non-tech knowledge sector worker, I have watched my own ability to stay in the city become increasingly tenuous amid constant rent hikes, and the prospect of ownership of any housing vanish entirely. It is widely documented that these issues, of which my experience is far from isolated, are rooted foremost in an undersupply of housing. The continued upward trajectory of housing costs in Seattle seriously threatens the city's long-term prospects as a multifaceted, culturally vital, inhomogeneous place that offers prospects to more than a select few.

In light of this, I find the proposed plan wholly inadequate for meeting the current moment. Specifically, here are some minimum recommendations to improve Seattle's comprehensive plan:

1. Actually support missing middle housing. Increase the floor-area-ratio above the proposed value, to make development of fourplex and sixplex-zoned areas actually viable. Or, go further to tailor zoning that would support sixplexes configured as in [Spokane](#).
2. Include provisions for transit-oriented development that anticipate elements similar to [House Bill 2160](#) -- larger buildings around all transit corridors would be a major step forward for the city. Rather than waiting to be told what to do at the state level by passage of a similar bill, Seattle should be a leader in this conversation.
3. [Eliminate parking requirements](#) -- like other forward-thinking American cities. These requirements discourage and stunt development away from what is most critically needed.

In a larger sense, I recommend city leaders reconsider what kind of city they want Seattle to be: a jeweled but cloistered artifice, that is nice to visit, but only accessible to everyday people through commuting? Or, a modern, hybrid metropolis that understands, accepts, and seizes the opportunities presented by growth? Having a comprehensive plan that anticipates less growth than what would be allowed at maximum by Bellevue is embarrassing. Please keep in mind the widespread support for Alternative 5 during the scoping period and by many city council candidates -- that is the mandate that is present among Seattle's electorate.

Thank you for your time and consideration.

With regards,

Noel Pelland

Subject: Comp Plan EIS questions
Date: Tuesday, May 7, 2024 7:54:27 PM

CAUTION: External Email

Hello,

I have a few questions/concerns about the comprehensive plan EIS that I would love for you to consider as the public comment period is coming to a close:

1. Regarding Section P 3-3 which states that “none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild.” Can you say directly what the plans impact on plants and animals will be?
2. And RE Section P 3-3 which states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." Do you have any data or studies showing that tree planting program along with with more hardscape will actually compensate for lost urban forests?
3. And finally, the plan states that Seattle will make progress toward its 30% canopy goal. But there will be significantly less private land available for trees with the new tree ordinance so can you say how much public land will be usable for reaching the 30% goal? And about how many trees per year will need to be planted there to compensate for the trees that are removed by development?

Thanks so much for your time and feedback.

Best wishes,

Sarah Pellkofer

Subject: EIS Plan around N 145th and N 130th St stations
Date: Sunday, May 5, 2024 11:42:00 AM

CAUTION: External Email

Mr. Holmes,

I'm writing with comments on the EIS for the North Seattle light rail station areas.

I live just west of I-5 near both of these stations, and appreciated the online EIS presentation by Jim Holmes and others focusing on this area.

N 148th St Station

I believe the assessment that the areas in Seattle on or near N 145th St west of I-5 were "too far" from the coming Shoreline South station for increased development was made in error. It is a short walk in this neighborhood, especially east of Meridian Ave N. Look at what Shoreline has done just north of N 145th. Surely Seattle citizens can walk or ride a bike as well as Shoreline citizens. The future Shoreline non-motorized pedestrian bridge over I-5 at N 148th St will make the distance and ease to the station even easier from neighborhoods just west of I-5. Please re-evaluate.

N 130th St Urban Center (old "Urban Village")

I fully support an Urban Center near the N 130th St Station. However, the area west of I-5 should do more. Please allow higher apartment buildings (multistory, stacked flats, etc) in the neighborhood between N 130th and N 135th. Allow more zoning for apartments with ground floor commercial / community spaces, especially along 1st Ave NE and all of Roosevelt Ave N. Expand this area west to at least Meridian Ave N. I'm especially concerned that Haller Lake United Methodist Church (at 1st Ave NE and N 133rd St) be able to build such an apartment. Not allowing commercial use there seems really strange, as there is already a daycare center across the street from the church.

Impacts and Mitigation Options for this area:

Sturdy, safe, predictable, planned pedestrian, wheelchair, and bike lanes and sidewalks must be developed for the neighborhoods near the light rail stations.

In this Urban Center West of I-5, planned improvements of 1st Ave NE (added shareway from N 117th to 130th NE) and N. 130th will help. The area needs OFF-CORRIDOR bike routes also. Continue improvements on 1st Ave NE from N 130th to N 145th st. (or at the minimum, from N 130th to Roosevelt Way N.) SDOT planned Neighborhood Greenways in the area (Corliss Ave N, Ashworth Ave N., N 137th, etc.) must be implemented .

Roosevelt Way N (west of I-5) will become a very important 'Boulevard' for this new Urban Center. The city owns 40ft of right-of-way on this street. Plan protected bike lanes AND sidewalks AND trees on Roosevelt between 3rd Ave NE and at least Stone Ave N / N 143rd St. IT WILL BE IMPORTANT TO NOT ALLOW STREET PARKING for new housing on this street. Note the newer housing development on Roosevelt Way N & Meridian Ave N - with a great sidewalk, trees, and space on Roosevelt Way for a protected bike lane. DO THIS. Further north on Roosevelt Way N there are newer apartments / townhomes between Stone Ave N and Lenora Pl N that does not allow for a protected bike lane. PLEASE DO NOT

373-1

ALLOW THIS PARKING WITH FUTURE DEVELOPMENT ALONG ROOSEVELT WAY N.

Tree Canopy loss

The Mitigation Options for tree canopy loss include "additional incentives to encourage retaining / expanding tree canopy." I support this and would like to know how this will be done? There are a number of established trees (possibly 'heritage' trees) in this area. Codes that encourage higher structures that preserve more open ground - including established trees - need to be developed. Developers should work with arborists and submit plan options that include saving established trees whenever possible.

373-1
cont

Green Space: Use city property to develop pocket parks where possible. Consider this for the triangle section on the north side of N 133rd St. at Roosevelt Way N.

Of course, listing the many mitigations in the EIS is helpful, but unless the city takes on the responsibility of ACTING on these mitigations, the Seattle One Comp Plan will result in thoughtless worsening of the quality of life that Seattle residents deserve.

Thank you,

Jan Peterson

Subject: Comment on DEIS
Date: Monday, May 6, 2024 8:01:17 AM

CAUTION: External Email

Hello,

Urban natural spaces are important to me and what set Seattle apart from other major cities. Urban forestry reduces the overall surface temperature for pedestrians and what make a city not just liveable but enjoyable to live in. Staring at telephone poles through a window instead of trees is also unsightly.

Please note my comment on the DEIS:

1: Section P 3-3 states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild." What is the impact of the plan specifically on Seattle's plants and animals?

2: Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." What analysis shows that tree planting programs, coupled with increased hardscape, will compensate for lost urban forest?

3: The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development?

Sincerely,

Ellen Pifer

Comment:

I am a renter in Ballard, and I believe that the City of Seattle did not listen to the overwhelming majority's call for an Alternative 6 vision, which would allow for more sustainable, car-free or car-light living. Instead the current draft plan will worsen congestion and pollution by forcing more people into long commutes. To create a more sustainable and equitable city, the plan should eliminate parking minimums, convert underutilized golf courses into free public parks and affordable housing, and allow taller and bigger buildings in more neighborhoods.

If the City of Seattle adopted my above proposed changes, then we would be able to reduce vehicle miles traveled, reduce greenhouse gas emissions, and create a more affordable city for everyone. Land use has a huge impact on the environment. We should seek to increase density wherever possible in order to lower per capita greenhouse gas emissions.

Comment:

The city has an obligation to pursue the comprehensive plan as proposed by OPCD last fall--a plan that is much more ambitious in upzoning to increase density and build an equitable and sustainable city for all. The plan should be revised to do the following: allow bigger buildings in more places; restore all 42 originally proposed neighborhood centers to create more walkable environments so people can access the things they need in their immediate area; match or exceed the state floor area minimums and allow more housing, taller housing, and greater lot coverage to increase housing diversity; increase density around transit corridors so that people can rely on more sustainable modes of transportation rather than remaining dependent on personal vehicles; remove parking requirements citywide to further divest from personal-vehicle infrastructure; and allow small scale businesses in all zones including small cafes, stores, services, and even small scale production.

Comment:

It is extremely disappointing that the Mayor's office has disregarded the overwhelming call for a much bolder growth strategy than this plan proposes. During the scoping phase, over 60% of commenters voiced desire for alternative 5 or an even more progressive alternative six, and it's hard to understand why those suggestions have been so watered down in this draft. Seattle residents want to see bold change--more dense housing everywhere, more housing around transit corridors, more corner stores in their neighborhoods to create vibrancy and meet needs locally. We need more fourplexes and sixplexes, not more townhomes. This plan simply does not meet the moment. It will not create enough housing to accommodate the number of new residents projected to arrive over the next 20 years, and low-income residents like myself will inevitably be priced out of their communities.

Subject: Feedback- Comprehensive Plan
Date: Sunday, May 5, 2024 8:09:37 AM

CAUTION: External Email

As our population increases, the best possible living environment for Seattle will be to increase greening our communities NOT depleting these resources.

In your Comprehensive Plan I'm concerned that in your haste to develop you are ignoring studies from some of the largest urban centers in the world that prioritize increasing green spaces as a way to enhance environmental and ecological benefits, such as mitigation of the urban heat island effect and air and noise pollution. Such benefits are irrefutable.

To succeed, we will need a whole-of-government collaboration among multiple agencies, including tree preservation organizations and including studies that examine human wellbeing. This balance of power will help us protect the canopy of green where we live, not only in public parks.

The words in your plan skip the details of who makes these choices. Is it the Land Developers or the hollow if the city continues its same approach to cutting down our trees. I'd appreciate some clarity on the following:

- In your Comprehensive Plan *what specific studies shows planting programs can compensate for the loss of already established larger trees and the increase of hardscape?*
- In section LZU 2.7 it says "Encourage the *preservation* and expansion of the tree canopy throughout the city for the benefit they provide". *What tree advocacy committees and arbor scientists have been involved in the Comprehensive Plan, and what **oversight** will be in place to ensure scientists will lead the SDCI decisions in the approach to tree preservation?*

Thank you,

Helen Pope
 Hpope@live.com

379-1

From: [Helen Pope](#)
To: [PCD CompPlan EIS](#)
Subject: Feedback Comprehensive Plan
Date: Sunday, May 5, 2024 5:20:10 PM

CAUTION: External Email

Thank you for the chance to voice my perspective of Seattle future growth.

In your Comprehensive Plan you are not specifically addressing what committee or department will make the day-to-day decisions regarding preserving existing green spaces in city lots (all zones).

This concerns me especially after recent public efforts to save large trees (some of 150 years old) from being cut. My conclusion is there isn't any official tree advocacy group in the city government that has the power to evaluate and preserve trees. Unfortunately this important fact will leave our trees in the hands of Developers and city's short term financial goals.

380-1

I eagerly await your response which clarifies this point, as I hope I'm wrong because it would show us you are ignoring studies from some of the largest urban centers in the world that prioritize increasing green spaces as a way to enhance environmental and ecological benefits, such as mitigation of the urban heat island effect and air and noise pollution. Such benefits are irrefutable.

To help succeed and take the long view to the emerald city, we will need a whole-of-government collaboration among multiple agencies, including tree preservation organizations and including studies that examine human wellbeing.

It is imperative that The Department of Construction and Inspection's authority is balanced by other separate agencies which are educated in understanding the science of urban nature, wildlife and the importance of existing trees, especially larger trees whose contribution is far greater than any monetary compensation.

"Encourage the *preservation* and expansion of the tree canopy throughout the city for the benefit they provide" (written in your plan under section LZU 2.7.) Please share specifics including:

- What specific studies shows planting programs can compensate for the loss of already established larger trees and the increase of hardscape?
- *Name the specific tree advocacy groups and science based studies have been used concerning this subject*
- *What **oversight** will be in place going forward to ensure scientists will lead the SDCI decisions in the approach to tree preservation?*

Thanks!

Comments Planning and Community Development EIS,

Dear city decision-makers,

I am deeply concerned about the lack of attention to QUALITY of life being paid in development plans. Yes, we need more affordable housing, but we also need to have healthy and livable communities.

These are weaknesses of the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * It does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * It does not ANALYZE the probable scale of impact of tree loss or give numbers but instead SPECULATES that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Please consider the following recommendations to mitigate damage to our natural environment:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

 EIS Lead
 jim.holmes@seattle.gov

Dear Office of Planning and Community Development:

I represent Elizabeth and Jonathan Roberts, who own a home located next to the E. Harrison Street End on Lake Washington in Seattle. We are writing to provide comment on the draft One Seattle Comprehensive Plan Update policies that relate to Shoreline Street Ends in Seattle, and the Draft Environmental Impact Statement for the One Seattle Comprehensive Plan Update as it relates to those policies.¹

In summary, we propose edits (1) to the language of draft P 1.14 to expressly include the need to “restore ecological conditions” that already is included in the current 2035 Comprehensive Plan, and (2) to the glossary definition of Shoreline Street Ends to be inclusive of neighbors to Shoreline Street Ends in the collaboration that occurs around these unique and important spaces. Please see the specific suggestions at pages 3-4 of this letter.

By way of background, the Roberts have lived in a community with multiple Shoreline Street Ends for decades, and in the last 3 years have owned a home next to a Shoreline Street End. Unfortunately, during this time the Roberts have observed deterioration of ecological conditions

¹ See, e.g., Draft EIS at 3.11-28 (Shoreline Master Program Public Access).

of Shoreline Street Ends. For example, a mapped Environmentally Critical Area wetland in the shoreline at the E. Harrison Street End has been trampled and degraded over time, and vegetation is frequently cut back and removed without a plan or consideration for the ecological benefit the vegetation may provide.

There is a strong emphasis in state and federal law on protecting critical areas, including wetlands. The Growth Management Act (Chapter 36.70A RCW), Shoreline Management Act (Chapter 90.58 RCW), and numerous regulations in the Washington Administrative Code require Cities and Counties to protect critical areas. *See, e.g.*, WAC 365-190-080 (“Counties and Cities must protect critical areas.”). Additional state and federal laws also regulate wetlands, such as the Water Pollution Control Act (Chapter 90.48 RCW), the State Environmental Policy Act (Chapter 43.21C RCW), and Section 401 of the federal Clean Water Act.

The overall goal for statewide wetland resource management in Washington State, quoted from Executive Order 89-10 is:

“...to achieve no overall net loss in acreage and function of Washington's remaining wetlands base. It is further the long-term goal to increase the quantity and quality of Washington's wetlands resource base.”²

The Washington State Department of Ecology also recognizes the importance of wetlands in mitigating climate change: “Wetlands are a key player in global greenhouse gas budgets . . . they are also an important sink for greenhouse gases, where carbon is stored and prevented from entering the atmosphere.”³

For Seattle to continue to have healthy shorelines with vegetation and natural features that provide a beautiful environment for the public to enjoy while also supporting wildlife and battling climate change, ecological restoration needs to remain a clear policy for Shoreline Street Ends in the comprehensive plan.

The current Comprehensive Plan (2022 Update) includes two policies specifically addressing Shoreline Street Ends:

- P 1.6: “Provide public access to shorelines by using street ends, regulations, or acquisition.”
- SA P10: “Shoreline street ends are a valuable resource for public use, access, and shoreline restoration. Design public or private use or development of street ends to enhance, rather than reduce, public access and to restore the ecological conditions of the shoreline.”

² See <https://ecology.wa.gov/water-shorelines/wetlands/tools-resources/wetland-program-plan>.

³ See <https://ecology.wa.gov/water-shorelines/wetlands/tools-resources/wetlands-climate-change>.

The draft One Seattle Comprehensive Plan Update includes the following policy that directly addresses Shoreline Street Ends:

- P 1.14: “Provide sustainable public access to shorelines by improving shoreline street ends, applying shoreline regulations, and acquiring waterfront land.”

382-2

In addition to this policy, there are other policies in the draft One Seattle Comprehensive Plan Update that are protective of the shoreline and public safety that would apply to Shoreline Street Ends as public spaces. We generally support the new policies and provide a few suggestions that address protection of the ecological environment against environmental impacts at Shoreline Street Ends:

1. Include Ecological Restoration in P 1.14.

Elements of the last sentence of current SA P10, quoted above, should be added to draft P 1.14 so it reads (additions in bold and underline):

P 1.14 Provide sustainable public access to shorelines by improving shoreline street ends **to enhance public access while also restoring ecological conditions of the shoreline**, applying shoreline regulations, and acquiring waterfront land.

This proposed edit carries forward the current policy and makes P 1.14 more consistent with other policies in the Comprehensive Plan requiring ecological protection and restoration, for example:

382-1
cont

- SA G10 which “[r]equire[s] that no net loss of ecological functions occurs as a result of uses, development, shoreline modifications, maintenance activities, or expansion of existing uses.”
- P G5 which requires that “[p]ublic spaces support a healthy environment and resilient shorelines and mitigate the impacts of climate change.”
- LU 17.12 which aims to “[s]eek a net gain in wetland function by enhancing and restoring wetland functions across the city in City projects.”

The proposed change is also consistent with the code, Resolution 29370 and Directors Rule 12-2015 that govern Shoreline Street Ends in Seattle, along with Seattle’s Shoreline Master Program. It also reflects one of the goals of the most current Shoreline Street Ends Work Plan Update (Oct. 2017), which is to “[e]nhance shoreline habitat by including, where possible, ecological benefits such as native plantings and green stormwater treatment.”

2. Be inclusive of neighbors as part of “community partners” who collaborate on Shoreline Street Ends.

The Glossary at page 189 of the draft One Seattle Comprehensive Plan Update defines Shoreline Street Ends as:

“Shoreline street ends are City Council designated areas for public access and occur where streets meet a shore. Our program collaborates with community partners on maintaining and improving shoreline street ends for public use.”

This should be revised as follows to be more inclusive of neighbors of Shoreline Street Ends, who sometimes are not heard in the processes around maintaining and improving Shoreline Street Ends (additions in bold and underline):

“Shoreline street ends are City Council designated areas for public access and occur where streets meet a shore. Our program collaborates with community partners **including neighbors of shoreline street ends** on maintaining and improving shoreline street ends for public use.”

382-2
cont

For some Shoreline Street Ends, community members volunteer as “stewards” and serve as a sort of liaison from community partners such as Friends of Street Ends to the Seattle Department of Transportation. There currently is no manual or formal certification process that governs stewards. In this de facto system of Shoreline Street End stewards, the voices of neighbors of Shoreline Street Ends are often unheard. Accordingly, it is important that when the One Seattle Comprehensive Plan Update mentions collaborating with “community partners”, it is clear that community partners include neighbors of Shoreline Street Ends so that all voices are heard in the future maintenance and improvement of Shoreline Street Ends.

Shoreline Street Ends provide incredible opportunities in Seattle for public access alongside ecological restoration and conservation that can make Seattle and its shorelines healthier and more environmentally sustainable for decades to come. The policies related to Shoreline Street Ends in the One Seattle Comprehensive Plan Update should acknowledge the importance of ecological restoration to public access and enjoyment of these spaces. Focusing on improving the ecology of Shoreline Street Ends may help to mitigate many of the environmental impacts that will be felt from increased growth and urbanization of Seattle in the coming decades.

We appreciate your consideration of these changes and look forward to continuing to be involved as the update process moves forward.

Sincerely,

Jacqueline C. Quarre

Subject: Concerns around proposed changes to zoning West Green Lake
Date: Monday, May 20, 2024 11:18:06 AM

CAUTION: External Email

I'm deeply concerned by the proposal to rezone our neighborhood to allow up 3-6 story buildings along the Green Lake.

Please use C1-55 (M) zoned area along Aurora in West Green Lake for building affordable housing instead of rezoning NR3 neighborhood residential community between Winona and the lake that would devastate our community and displacing neighbors that have lived here for decades.

Thank you,
Aleksandra Radmanovic

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

Subject: Comment on the Seattle Comprehensive Plan/130th Station Rezone Draft EIS
Date: Monday, May 6, 2024 4:59:51 PM

CAUTION: External Email

Thank you for this opportunity to provide comments. I have lived on Corliss Ave North just south of 128th in the triangle area of land of our Haller Lake neighborhood that was rather newly included in what is now designated as an "Urban Center" as this parcel of land is in the walking zone that surrounds the upcoming 130th light rail station. I have lived in this location since 1989 and anticipate staying in this neighborhood for the next 20-30 plus years.

Our city is experiencing growth and I support managed growth to add housing in our area recognizing that we are in walking distance from the upcoming 130th light rail. We have been seeking attention from the City of Seattle for decades to place sidewalks in our neighborhoods as promised when our area was first annexed by the city. I support a focus of growth between Interstate 5 and Aurora along 130th that will enhance safe walking to grocery stores and amenities. Since Washington State law is impacting re-zoning for all single family neighborhoods I favor a city wide plan that focuses on transportation corridors as noted in Alternative 4. Adding high-rise apartment buildings around neighborhood amenities that could provide single story living for families and for elderly.

385-1

Our neighborhood is surrounded by a wonderful tree canopy that provide energy efficient shade and many already have the designation of being a Tier 1 or heritage tree. Under Alternative 5 the charts shown our neighborhood as being zoned as LR1. I support that level of growth if developers are required to maintain a maximum percentage of healthy, long-living trees.

I understand that specific zoning street by street is still in the planning stages and that the public will have a chance to comment later this Fall about specific zoning recommendations.

385-2

Thank you,

Linda

CAUTION: External Email

Hi there-

I am concerned that the EIS on the comprehensive plan fails to adequately address key issues related to urban forestry and the city's canopy.

Specifically, in section P3-3 the EIS does not state directly what the impact of the plan will be on Seattle's plants and animals, only that the impacts wouldn't reduce their survival rates in the wild. This is super vague language and should be clarified.

Also in that section, saying that the plan alternatives would not have 'significant unavoidable adverse impacts' on tree cover seems to gloss over real potential problems. What are the adverse impacts it will have? How is significant defined? And what makes this 'unavoidable'? I mean couldn't adverse impacts on the tree canopy absolutely be mitigated by requiring more greenscape vs. hardscape on new developments??

Finally - the EIS seems to say that the city can still meet it's 30% canopy goal largely through public lands. That is ridiculous - we will have whole swaths of the city with little to no canopy, increasing exposure to climate change impacts, etc. There is surely not enough public land nor would it make sense to foist all of the onus on public lands to count toward the 30% canopy goal. There needs to be provisions to have private lands explicitly have a % contribution goal in this 30%.

Thank you for your consideration.

Subject: Public Comment on One Seattle Draft Comprehensive Plan Update
Date: Monday, May 20, 2024 2:01:04 PM

CAUTION: External Email

Hello,

My name is Sarah and I live, work, and study in Seattle. I am emailing as I have many concerns with the Draft One Seattle Plan and call upon you to embrace a plan that allows for greater abundance and diversity of housing.

The Draft Plan does not plan for enough housing, keeping housing production below expected growth. The Draft Plan also does not allow for family-sized homes in middle housing. Restrictive size limits will limit the growth of family-sized homes in middle housing, which will continue to push families out of Seattle.

Instead of the Draft Plan that preserves the status quo and makes Seattle even more expensive, embrace housing abundance that will better meet Seattle's needs as a growing world-class city. This includes, but is not limited to:

- Allow bigger buildings in more places.
- Follow the spirit of HB 1110 to allow more middle housing to actually get built. Match or exceed state floor area minimums, setting FAR at at least 1.2 for fourplexes and 1.6 for sixplexes instead of a measly 0.9 across the board.
- Embrace transit-oriented development.
- Make Seattle a truly accessible and climate-conscious city by improving access to transit, identifying gaps in transit and work towards filling those gaps, and building infrastructure for safe active transportation like walking and biking.
- Allow more growth in low-displacement areas.
- Embrace mixed-use zoning so we can actually become a 15-minute city. Add more "neighborhood centers" and allow for corner stores on more than just corners.

I love Seattle, but without significant change, I may not be able to afford living here in the future. As a renter, I've experienced firsthand how expensive Seattle's housing market is, and without a financial windfall or zoning and market reform, I doubt I will ever be able to own a home in Seattle. More generally, as a Seattle resident, I see homelessness every day. Knowing that the 2024 point-in-time count shows a 24% increase in homelessness from 2022, and knowing that homelessness is tied to housing affordability, Seattle must embrace affordability through abundance if we wish to keep more of our unhoused neighbors off the streets and prevent displacement of underprivileged communities.

The Draft Plan maintains the status quo and will make Seattle more expensive -- increasing rent burdens, making homeownership less accessible, and driving displacement. We cannot afford a Plan that does not adequately address our housing crisis. Please change the Comprehensive Plan to reflect the needs of Seattle and make it a better, more affordable, more accessible, and more climate-conscious city.

Sincerely,
 Sarah Reuben

CAUTION: External Email

Dear Seattle City Council and Comprehensive Plan Drafters,

As you are most likely aware, daily access to urban green spaces (UGS) increases physical and mental well-being. Lack of access has the greatest impact on underserved populations, who are already impacted by the effects of economic, minority, and environmental stressors.

Additionally, urban green spaces will be increasingly important for us all as climate change worsens.

Seattle should be making a concerted effort to increase UGS and ensure that historically disenfranchised populations are experiencing an equal percentage of UGS and aren't being asked to travel to benefit from them.

With these issues in mind, I have comments about the proposed comprehensive plan.

Please note my comment on the DEIS:

1: Section P 3-3 states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild." What is the impact of the plan specifically on Seattle's plants and animals?

2: Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." What analysis shows that tree planting programs, coupled with increased hardscape, will compensate for lost urban forest?

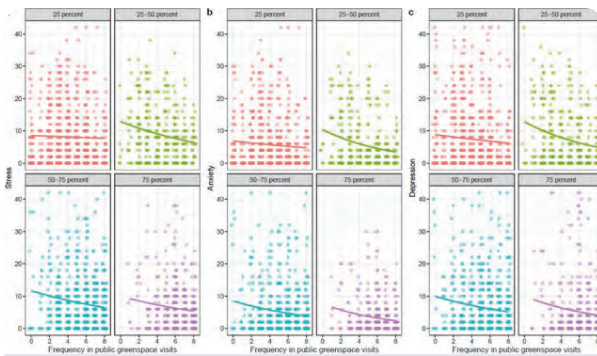

3: The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development?

Sincerely,
 Susan Robb

 EIS Lead
 jim.holmes@seattle.gov

Dear Office of Planning and Community Development:

I represent Elizabeth and Jonathan Roberts, who own a home located next to the E. Harrison Street End on Lake Washington in Seattle. We are writing to provide comment on the draft One Seattle Comprehensive Plan Update policies that relate to Shoreline Street Ends in Seattle, and the Draft Environmental Impact Statement for the One Seattle Comprehensive Plan Update as it relates to those policies.¹

In summary, we propose edits (1) to the language of draft P 1.14 to expressly include the need to “restore ecological conditions” that already is included in the current 2035 Comprehensive Plan, and (2) to the glossary definition of Shoreline Street Ends to be inclusive of neighbors to Shoreline Street Ends in the collaboration that occurs around these unique and important spaces. Please see the specific suggestions at pages 3-4 of this letter.

By way of background, the Roberts have lived in a community with multiple Shoreline Street Ends for decades, and in the last 3 years have owned a home next to a Shoreline Street End. Unfortunately, during this time the Roberts have observed deterioration of ecological conditions

¹ See, e.g., Draft EIS at 3.11-28 (Shoreline Master Program Public Access).

of Shoreline Street Ends. For example, a mapped Environmentally Critical Area wetland in the shoreline at the E. Harrison Street End has been trampled and degraded over time, and vegetation is frequently cut back and removed without a plan or consideration for the ecological benefit the vegetation may provide.

There is a strong emphasis in state and federal law on protecting critical areas, including wetlands. The Growth Management Act (Chapter 36.70A RCW), Shoreline Management Act (Chapter 90.58 RCW), and numerous regulations in the Washington Administrative Code require Cities and Counties to protect critical areas. *See, e.g.*, WAC 365-190-080 (“Counties and Cities must protect critical areas.”). Additional state and federal laws also regulate wetlands, such as the Water Pollution Control Act (Chapter 90.48 RCW), the State Environmental Policy Act (Chapter 43.21C RCW), and Section 401 of the federal Clean Water Act.

The overall goal for statewide wetland resource management in Washington State, quoted from Executive Order 89-10 is:

“...to achieve no overall net loss in acreage and function of Washington's remaining wetlands base. It is further the long-term goal to increase the quantity and quality of Washington's wetlands resource base.”²

The Washington State Department of Ecology also recognizes the importance of wetlands in mitigating climate change: “Wetlands are a key player in global greenhouse gas budgets . . . they are also an important sink for greenhouse gases, where carbon is stored and prevented from entering the atmosphere.”³

For Seattle to continue to have healthy shorelines with vegetation and natural features that provide a beautiful environment for the public to enjoy while also supporting wildlife and battling climate change, ecological restoration needs to remain a clear policy for Shoreline Street Ends in the comprehensive plan.

The current Comprehensive Plan (2022 Update) includes two policies specifically addressing Shoreline Street Ends:

- P 1.6: “Provide public access to shorelines by using street ends, regulations, or acquisition.”
- SA P10: “Shoreline street ends are a valuable resource for public use, access, and shoreline restoration. Design public or private use or development of street ends to enhance, rather than reduce, public access and to restore the ecological conditions of the shoreline.”

² See <https://ecology.wa.gov/water-shorelines/wetlands/tools-resources/wetland-program-plan>.

³ See <https://ecology.wa.gov/water-shorelines/wetlands/tools-resources/wetlands-climate-change>.

The draft One Seattle Comprehensive Plan Update includes the following policy that directly addresses Shoreline Street Ends:

- P 1.14: “Provide sustainable public access to shorelines by improving shoreline street ends, applying shoreline regulations, and acquiring waterfront land.”

In addition to this policy, there are other policies in the draft One Seattle Comprehensive Plan Update that are protective of the shoreline and public safety that would apply to Shoreline Street Ends as public spaces. We generally support the new policies and provide a few suggestions that address protection of the ecological environment against environmental impacts at Shoreline Street Ends:

392-1
cont

1. Include Ecological Restoration in P 1.14.

Elements of the last sentence of current SA P10, quoted above, should be added to draft P 1.14 so it reads (additions in bold and underline):

P 1.14 Provide sustainable public access to shorelines by improving shoreline street ends **to enhance public access while also restoring ecological conditions of the shoreline**, applying shoreline regulations, and acquiring waterfront land.

This proposed edit carries forward the current policy and makes P 1.14 more consistent with other policies in the Comprehensive Plan requiring ecological protection and restoration, for example:

- SA G10 which “[r]equire[s] that no net loss of ecological functions occurs as a result of uses, development, shoreline modifications, maintenance activities, or expansion of existing uses.”
- P G5 which requires that “[p]ublic spaces support a healthy environment and resilient shorelines and mitigate the impacts of climate change.”
- LU 17.12 which aims to “[s]eek a net gain in wetland function by enhancing and restoring wetland functions across the city in City projects.”

The proposed change is also consistent with the code, Resolution 29370 and Directors Rule 12-2015 that govern Shoreline Street Ends in Seattle, along with Seattle’s Shoreline Master Program. It also reflects one of the goals of the most current Shoreline Street Ends Work Plan Update (Oct. 2017), which is to “[e]nhance shoreline habitat by including, where possible, ecological benefits such as native plantings and green stormwater treatment.”

2. Be inclusive of neighbors as part of “community partners” who collaborate on Shoreline Street Ends.

The Glossary at page 189 of the draft One Seattle Comprehensive Plan Update defines Shoreline Street Ends as:

“Shoreline street ends are City Council designated areas for public access and occur where streets meet a shore. Our program collaborates with community partners on maintaining and improving shoreline street ends for public use.”

This should be revised as follows to be more inclusive of neighbors of Shoreline Street Ends, who sometimes are not heard in the processes around maintaining and improving Shoreline Street Ends (additions in bold and underline):

“Shoreline street ends are City Council designated areas for public access and occur where streets meet a shore. Our program collaborates with community partners **including neighbors of shoreline street ends** on maintaining and improving shoreline street ends for public use.”

392-1
cont

For some Shoreline Street Ends, community members volunteer as “stewards” and serve as a sort of liaison from community partners such as Friends of Street Ends to the Seattle Department of Transportation. There currently is no manual or formal certification process that governs stewards. In this de facto system of Shoreline Street End stewards, the voices of neighbors of Shoreline Street Ends are often unheard. Accordingly, it is important that when the One Seattle Comprehensive Plan Update mentions collaborating with “community partners”, it is clear that community partners include neighbors of Shoreline Street Ends so that all voices are heard in the future maintenance and improvement of Shoreline Street Ends.

Shoreline Street Ends provide incredible opportunities in Seattle for public access alongside ecological restoration and conservation that can make Seattle and its shorelines healthier and more environmentally sustainable for decades to come. The policies related to Shoreline Street Ends in the One Seattle Comprehensive Plan Update should acknowledge the importance of ecological restoration to public access and enjoyment of these spaces. Focusing on improving the ecology of Shoreline Street Ends may help to mitigate many of the environmental impacts that will be felt from increased growth and urbanization of Seattle in the coming decades.

We appreciate your consideration of these changes and look forward to continuing to be involved as the update process moves forward.

Sincerely,

Jacqueline C. Quarre

Comment:

I am a property and business owner at 12303 15th Ave NE. I am very excited about the prospect of changing the zoning in the 130th & 145th Street Station Area. Especially Alternatives 2 and 5. I think that allowing for higher elevations of townhomes, apartment buildings, and mixed use buildings with fewer requirements for parking will make for more vibrant and walkable streets. We need more density in this part of Seattle. We need more living units as well as room for small businesses. The light rail station will allow for easy commuting into downtown Seattle and so more working families will want to live close to the station. And the more services that are provided within walking distance, the more appealing this neighborhood will be. Fewer parking lots will make the area appeal to more people.

CAUTION: External Email

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

395-1

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

Subject: Questions regarding the Comprehensive Plan's environmental statement
Date: Monday, May 6, 2024 3:25:22 PM

CAUTION: External Email

There are some parts of the Comprehensive Plan's environmental statement that I believe need to be clarified:

- Seattle has a goal of 30% tree canopy. I trust that there has been analyses of how much public land is available to be used to replace trees removed by development on private land. Is there a concrete plan to ensure that these trees will be planted in a timely fashion?
- In the same vein, I would like to see documentation that the alternatives put forth in the Comprehensive plans will not have "significant, unavoidable adverse impacts on tree canopy cover", nor will they "reduce the likelihood of survival or recovery of a plant or animal species in the wild". Those are pleasant sentiments, but we need to have supported analysis of what the impacts on trees and wildlife are expected to be, and that the proposed tree planting programs will compensate for the lost urban forest and associated increased hardscape.

Date: Monday, May 6, 2024 12:18:07 AM

CAUTION: External Email

I am in favor of alternative 2 or 4 for future housing plans for Seattle as there is more possibility in these alternatives for the city to try to maintain a tree canopy in order to help our environment Seattle while providing additional housing.

I also believe that the TREE PROTECTION ORDINANCE SHOULD BE AMENDED TO MAXIMIZE RETENTION OF EXISTING TREES 6" DSH AND LARGER, AND THAT THE SCCI DIRECTOR SHOULD BE GIVEN the ability to ask for alternative site designs to maximize the retention of trees.

I am wondering what impact there will be on the plants and animals in each of the alternatives.

Sincerely yours,

Cynthia Rose, 11557 23rd Ave Ne, Seattle , Wa. 98125

Subject: Bring back the OPCD Abundance Plan
Date: Saturday, May 18, 2024 9:16:42 AM

CAUTION: External Email

Hello,

I am in favor of the OPCD Abundance plan and reject Mayor Harrell's current plan that has significantly reduced the amount of planned housing in Seattle's comprehensive plan.

The OPCD Abundance Plan showcases a future with transit-oriented development that helps create desperately needed housing along natural corridors that will help make our city more accessible, walkable, and enjoyable. This is the future Seattle needs to be working toward. Mayor Harrell's proposal falls short and removes critical opportunities for development of neighborhood centers.

Please bring back the OPCD Abundance Map!!!

Thank you for your time,
Hannah

Subject: Comment on DEIS - comprehensive plan
Date: Monday, May 6, 2024 10:34:44 AM

CAUTION: External Email

Please note my comment on the DEIS:

1: Section P 3-3 states that “none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild.” What is the impact of the plan specifically on Seattle’s plants and animals?

2: Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." What analysis shows that tree planting programs, coupled with increased hardscape, will compensate for urban forest loss?

3: The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development? Why are we even considering removing mature trees already doing fine work of ecosystem services? Services that any young replacement tree cannot possibly replicate any time soon, if at all, given how climate change is making it harder to establish new plantings.

Mature trees and pocket forests are doing so much for us- millions of dollars in ecosystem services like cleaning and storing water, reducing erosion, cooling and shading, providing habitat, and more. We should be prioritizing saving and honoring these trees already doing the work. They cannot be replaced.

Sincerely,

Carolyn Rubenkönig

Subject: One Seattle Comments
Date: Saturday, May 4, 2024 11:19:21 AM

CAUTION: External Email

Dear City of Seattle,
 Concerning the One Seattle Plan:

As I look over my notes from waking at 2:00 am and from the virtual meeting I attended on May 2, 2024 this is what comes up:

Climate Change Resilience and Displacement concerns and cutting costs on the lower class and poor:

- Energy efficient construction is needed for all these new homes in whatever form they will take. Social Housing is focused on this. I support Social Housing for its commitment to energy efficiency and to paying no more than 30% of your income.
- Walkable neighborhoods to healthy food and pharmaceuticals. I think more City encouragement/rezoning to putting close access to necessities is important.
- Not so excited by large apartment buildings along neighborhood streets – smaller multi-family units feel more neighborly and also more able to keep access to nature – trees and places for gardens.

What makes walking pleasurable and desirable? Find places to change focus on car culture to focus on walking/biking/human culture:

- Decrease hardscape and increase trees and other vegetation. More trees and rain gardens along easements.
- Encourage homeowners to plant drought tolerant, native and near native trees and other plants as well as creating rain gardens. (via water utility bills and City could lead by example)
- More crosswalks with islands and walk lights. Again, refocus on walking/biking/human oriented culture and away from car culture.

New housing and sense of community - built to encourage interaction – community garden space incorporated into?

Also:

- P 3-3-29-30 Please analyze the potential impact of the 5 options on Seattle plants and animals. This is a Seattle EIS, not a regional or state EIS. Saying "unlikely to result in appreciable impacts on regional populations of plants or animals" and

401-1

"none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild" is avoiding commenting on the specific impacts on Seattle plants and animals.

- p 3-3-30 Saying that "none of the action alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." is not backed up by facts but speculative at best. The new tree protection ordinance actually increases the potential for tree removal in several ways. One is that all the developmental areas covered by the ordinance state that the newly defined "basic tree protection area cannot be modified" despite Portland, Oregon and the Northwest Society of Arboriculture saying it can be modified to save trees. This and current lot coverage of 85 - 100% for multifamily lots and above and rezoning to occur means more trees, especially large ones, will be removed. What is your estimation of potential canopy acreage loss (over 5 year periods consistent with the city's canopy studies) with increased development density in each alternative?
- What is your estimation of planting needs and time frame to replace the lost canopy (over 5 year periods tracked by the city's canopy study)?
- Is canopy replacement equivalence even possible with replanting since removed trees, if not removed, would have increased growing according to scientific articles?

Thank you! Much has gone into this. Please continue to be thoughtful and respectful to communities on this and to what remains of the natural world in Seattle. Seattle used to be the Emerald City, let's not lose this and make sure the beautiful green plants are expanded into poorer areas. And, more small parks – for Forest Bathing ☺

CAUTION: External Email

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

RE: DEIS Comment Letter (RSL-Zoned Property between Union and E Pine St.)

404-1

Dear Mr. Holmes:

Background: A common critique is that the draft Comprehensive Plan and its associated draft environmental impact statement (DEIS) does not go far enough to generate housing to adequately address Seattle's housing crisis while appropriately balancing displacement concerns that the City acknowledges is difficult to quantify and measure.

Requests: As a City resident and property owner, I strongly encourage the City to be more bold to address the housing crisis and enact the following:

- Create a preferred alternative that increases housing potential for RSL-zoned land **between Union and E Pine St.**
- Enact a specific land use policy that encourages rezoning this property from RSL to LR1, LR2, or LR3:

Proposed LU 1.7.1: Rezone areas currently zoned RSL to an appropriate LR zone for land between Union and E. Pine St. located in the 23rd and Union-Jackson Residential Urban Center.

This approach advances the City's housing goals and continues to address the City's displacement concerns.

I also request that the City's FEIS include an analysis of the trade-offs between the draft anti-displacement strategies and the quantifiable need to generate more housing. Specifically, I request that the City analyze the amount of additional housing that could be generated under the following scenarios:

404-2

1. if all RSL-zoned land in Centers was rezoned to LR regardless of displacement risk;
2. if all RSL-zoned land in Centers that is not a high-displacement risk was rezoned to LR;
3. if all RSL-zoned land in Centers that is only low-displacement risk was rezoned to LR; and
4. if none of the RSL-zoned land in Center was rezoned to LR (no action). For the no action alternative, identify the number of homes that would likely be demolished or renovated to create luxury homes and still result in displacement.

This data would help the City weigh the pros and cons of its draft plan to limit RSL to LR rezones in Centers only with low-displacement risk.¹

404-2
cont

Background Information:

- RSL-zoned land between Union and E. Pine St. is located in the 23rd and Union-Jackson Residential Urban Center. This area is attractive: walking distance to Capitol Hill, Central District, and Madrona/Leschi.
- As we've repeatedly seen, high-income individuals purchase existing homes in this area, demolish or substantially renovate the homes, and build new luxury single family homes in the exact area where the City desires to encourage new housing and discourage displacement. The displacement risk is already here and real.

City Displacement Analysis:

- Comp Plan materials state that "market pressures ... drive displacement."² The DEIS shares a similar sentiment with supplemental information.³
- The City is attempting to balance encouraging housing production and discouraging displacement. To this end, the City's broad approach currently contemplates rezones from RSL to LR only for areas within existing centers that are zoned Residential Small Lot and are in areas of low-displacement risk. The RSL-zoned land between Union and Pine St. is not low-displacement risk. Thus, the City is poised to miss an opportunity to provide additional housing here.
- The City's draft documents understandably use a broad brush, and one purpose of public comment is to inform City Staff of the realities on the ground.
- ***For this unique area***, the City's draft approach will, ironically, exacerbate displacement and restrict new housing. Again, the practice of creating luxury homes in under-zoned property is commonplace between Union and Pine St in this Urban Center.
- The DEIS and associated draft Comp Plan presume that "market pressures" and associated displacement will be lower if the area is not rezoned to LR. This presumption is not accurate in this particular neighborhood.⁴

¹ Updating Seattle's Neighborhood Residential Zones (March 2024) ("We propose to remove RSL as a zoning category. Areas currently zoned RSL with low risk of displacement or within a half mile of a light rail station would be rezoned to Lowrise 1 (LR1), a multifamily zone that allows a similar number of units but more floor area. Areas zoned RSL located elsewhere would be rezoned to one of the updated Neighborhood Residential zones.") (emphasis added).

² One Seattle Plan Anti-Displacement Framework, p. 4.

³ DEIS, Ch 3.8-22-30.

⁴ The DEIS does not quantify the displacement impact of single-family home development / substantial alterations on under-zoned property. The cited TRAO data does not provide relevant information on this point.

- Rezoning this area from RSL to LR would create more housing and generate more funding for affordable housing through MHA. The DEIS notes that MHA is an identified mitigation measure for displacement. Rezoning would also discourage displacement from converting existing housing stock to luxury homes.

404-2
cont

Comprehensive Policy: The requested policy is consistent with draft Policy LU 1.7, although we would encourage the City to refine its analysis to understand the trade-offs of the need for housing while enacting sensible anti-displacement strategies. We also encourage the City to enact a specific Comprehensive Plan policy for this unique area:

Proposed LU 1.7.1: Rezone property currently zoned RSL to an appropriate LR zone for land between Union and E. Pine St. located in the 23rd and Union-Jackson Residential Urban Center.

Thank you for your consideration.

Sincerely,

Kevin Saliba

DEIS StoryMap Comment

Name: Saunatina Sanchez

Email: saunatina@proton.me

Date: 4/26/2024

Comment:

Corner stores throughout Neighborhood Residential areas is one of the best changes we can make to the city. Having small stores throughout neighborhoods will help bring neighbors together and help with safety by adding eyes on the street.

The Draft One Seattle Plan contemplates an average annual housing production rate of 5,000 homes over the next 20 years. This is significantly lower than the 6,800 to 12,500 homes that Seattle has actually built per year since 2015—which itself has been insufficient to keep up with job growth and demand.

Simply put, the current Draft Plan is a plan to make Seattle more expensive. This will most impact renters, low-income people, and people of color, as we face rising rents and displacement pressures. This is a step back in our efforts to meet the growing demand for housing.

Allow midrise housing (4-8 stories) and mixed uses in all residential areas within walking distance of frequent transit. Allow middle housing like triplexes, fourplexes, sixplexes, townhouses, and stacked flats throughout all residential areas. Enlarge the proposed Neighborhood Centers, from 800-ft to ¼ mile. Reintroduce Neighborhood Centers that were studied but not included in the Draft Plan. Allow the development of cross-laminated timber highrise buildings in Regional and Urban Centers.

I support the following features of the Draft Plan: Expanding Urban Center boundaries and creating a new Urban Center at 130th Street, Designating Ballard as a new Regional Center, Removing parking minimum requirements near transit and considering a citywide removal, Policy to support community-based developers working to help BIPOC homeowners avoid displacement, Allowing corner stores throughout Neighborhood Residential areas.

Subject: Comp Plan Update
Date: Thursday, March 7, 2024 4:08:25 PM

CAUTION: External Email

Dear Seattle Officials,

Please consider the following to beef-up this weak Comp Plan

- Apartments allowed on ALL arterials with 10 minute or better bus service. The higher allowed the better. Perhaps the maximum height (7 floors) directly on them and 3/4 story not on the arterial but within the 800 feet distance.

-Apartments on all corner lots that are 50% larger than the underlying zoning. So 7500sqft minimum to qualify in typical 5000 sqft lot zoning.

-Look into those 6 & 8 pack flats for some areas. Just building townhomes will not get us to where we need to be. However if you plan to rely on townhomes so much you must increase apartments. See first point regarding that.

-The FAR has to be improved. Anything under 1 is pointless. Mid to high 1s at a minimum please in some areas.

Thank you,

Laura Sanders

CAUTION: External Email

Comments Planning and Community Development EIS,

These are my comments regarding the One Seattle Plan draft Environmental Impact Statement: Most importantly, the draft EIS does not address saving the 6 inch and larger diameter trees we have. We need large trees for shade during our new, hot summers, and for the CO2 capture they provide for us all. A sapling planted to replace an old growth tree does not provide these for many years, and may not survive. A sapling has to be watered deeply at least once a week during our new summers for at least 5 years.

The EIS draft is mighty vague about the actual projected tree loss, gives no numbers, and simply guesses, conveniently, that there won't be adverse impact on Seattle's tree canopy. Their guess is disingenuous- the tree canopy loss under this plan will be extreme. Seattle will no longer be the Emerald City.

Under the current Tree "protection" ordinance, SDCI approves the removal of every single tree a developer wants to remove for any reason, regardless of size. If this is not changed, the impact on Seattle's tree canopy under the One Seattle Plan will be disastrous. Expect heat islands, worsening air quality and hotter summers. Developers will continue to rake in \$\$\$\$\$ and Seattle residents will suffer.

Thank you for considering my input, Hope Sanford

CAUTION: External Email

Hello!

I'm not sure if this is the best place to send comments? I tried to join tonight but couldn't get into the meeting and the link in the calendar invite as broken as well :(

My husband and I live along 145th. We've been going to the meetings for several years now and we were disappointed to see the plan released with the potential rezone around the 145th street station removed. 145th is a busy connector, and Shoreline has really stepped up with some great taller projects (6-7 stories) already underway. We would love to see the same happening on our side of the street. Seattle desperately needs more housing, especially close to light rail and upzoning along these busier arterials and close to transportation makes great sense. Our neighborhood would love to see first story retail- 3rd spaces, coffee shops, a local market, day care and small businesses walkable to our neighborhood.

Please let me know if there is somewhere else I should go to submit comments. I would love to be involved if you have meetings coming up in the future.

Thank you,

Lindsey Sargent

Comment:

The city should study the impacts of citywide elimination of parking minimums, expanded highrise zoning within a half mile of all light rail stations, parks, and grocery stores, and floor area ratio bonuses that incentivize stacked flat development rather than attached or detached townhomes. Of the available alternatives, I strongly prefer Alternative 5 with higher growth targets.

Resolution #31870 was signed along with the last upzones, (MHA). This was the resolution to study whether or not South Park for the designation criteria as an Urban Village. This study was never done, and now South Park will be upzoned again. Why was the promised study not done ? A large portion of South Park is in ECAs, and the area is remotely located, geographically isolated, and surrounded by industrial zoning, not residential as other urban centers are. Why are we still designated as something South Park has never been? When will South Park be planned using the most recent studies and best info?, (not assumptions or "visioning")

Subject: Comment on draft EIS for One Seattle Comprehensive Plan
Date: Monday, May 6, 2024 10:46:17 AM

CAUTION: External Email

Thank you for the opportunity to comment on the Plan and the draft EIS statement.

The EIS seems to say at several points that urban nature will likely need to be sacrificed to our housing needs. The housing vs trees (and other urban nature) type of thinking is absolutely a false dichotomy. The immediate thought when this language appears is that the document is in service to real estate or other vested interests that would find it simpler to go for the wholesale removal of many aspects of our urban nature and a pretense of replacing it later.

For example, Section P3-3 talks about how the alternatives under review will not impact plant or animal species in the wild. One question arising here is how will the plan impact our own urban plants and animals—with specific data? The omission is concerning. Please talk directly about how urban nature will be protected. It is essential for climate change protection and equitable treatment of our citizens.

The same section (P3-3) has a general statement that the alternatives would not be expected to have adverse impacts on tree canopy cover. A second question is how will this come about? If this is to be through tree planting after the removal of larger trees that are part of the current canopy, this is not in any way equivalent or acceptable. Given the current tree ordinance, which will diminish the private land available for trees and increase hardscape throughout the city, there need to be more specifics on how the tree current canopy will be preserved—and expanded. (We are currently losing canopy and are not progressing toward the 30% goal. Where I live, on Beacon Hill, we are not close to the 30% goal.)

I understand that all of the 5 alternatives will achieve approximately the same amount of housing.

Are any of the 5 alternatives more oriented toward preserving urban nature? If so, this should be noted as an asset of that alternative.

Thank you for your work and for your consideration of citizen comments,

Delia Scholes
Beacon Hill 98108

Subject: Greenlake rezoning community input
Date: Monday, May 20, 2024 2:41:07 PM

CAUTION: External Email

I live at 7426 Keen Way North. I purchased my home as a fixer-upper in 2020. I have worked very hard to improve it over the years. I have raised my son here and hope to spend the rest of my life here. My home is my primary investment.

This plan to re-zone my neighborhood for 6-story apartment buildings and condos would change it beyond recognition.

There is no infrastructure here to support such a drastic increase in density. Parking is already very tight, access is difficult, and congestion is a constant and growing problem.

Worse, high-rises filled with large numbers of short-term residents would transform a cozy urban neighborhood of old family homes and modest yards to a place much less safe and much more crowded. These looming commercial structures will block light and air and commandeer the open space.

A sprawling corridor of multistory buildings will ruin the neighborhood. Indeed, it will no longer even be a neighborhood.

Already, our neighborhood has been zoned for increased density and we see multiple dwellings being built on what used to be single-home lots. That's enough.

Thank you,
Jennifer Schubert

Subject: Resident feedback: District 4 neighborhood center proposal (NE 55th St. and 40th Ave NE)
Date: Monday, May 6, 2024 3:52:58 PM

CAUTION: External Email

To whom it may concern (cc Mayor Harrell and Councilmember Rivera),

I'm writing to provide feedback on the recent city proposal to develop **District 4** as a high density neighborhood center; and specifically about the 800 ft radius around **the intersection of NE 55th St. and 40th Ave NE**. My husband and I live at 5614 40th Ave NE and this development will directly impact our home and neighborhood.

First, I would like to acknowledge the need for increased density and affordable housing in our city, which we are in support of when done in a thoughtful and sensible manner. However, the specific neighborhood that we live in does not have sufficient business opportunities for job placement, nor the public transit options to support adding high density living.

In the last 5 years hundreds of high density housing units have been developed in the area directly surrounding University Village, which is far more sensible as it is near to the light rail, UW campus, and retail spaces for business and job growth. This is where it makes sense!

In addition to added housing surrounding U Village, in the near vicinity to 55th and 40th, we have recently added 2 senior living facilities adding 150+ units and another large mixed use development will be installed at the intersection of 35th and 85th (old QFC building). Our neighborhood is simply not set up with the infrastructure to sustain the large influx of people. This will add hundreds more people on our already jam packed roads entering and leaving this area. We fought hard for bike lanes along 35th Ave NE a few years ago and it was struck down. Adding high density living without also having high density job opportunities to an already non-bike friendly neighborhood, without sufficient public transit will make this area impossible to traverse.

We are in support of positive infrastructure and sensible housing development (close to light rail, shopping center, etc.), but trying to turn the smaller pocket neighborhoods into those city centers without the transit, jobs, etc - is not the right way to fix the housing problem.

Please reconsider this site for increased density, we are not set up for it.

Hannah Scott & Cornelius Bradford Jr
 5614 40th Ave NE

CAUTION: External Email

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

CAUTION: External Email

Please clarify how you will stop the continued loss of tree canopy in Seattle due to in-fill developement in residential neighborhoods that allow developers to clear mature trees from single family lots in order to maximize their profit from redevelopment? The current tree ordinance has resulted in further loss of tree canopy when you state the goal is to achieve 30%. What studies have you made showing that planting young trees will compensate for removal of established mature trees during development?

Hi there,

Does the 30% tree canopy goal newly listed as a "goal" also retain its status as a policy? In other words, is the City required to be make progress on toward 30% tree canopy, or is it simply aspirational?

Thank you,

Sandy Shettler

Please see my comments below:

1.
Section P 3-3 states that “none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild.” **How does this plan impact Seattle’s urban nature and wildlife?**

2.
Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." **How does the increased hardscape, as set forth in this plan, and tree replanting programs make up for Seattle’s existing urban forest?**

3.
The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. **How many acres of public use land will be available to meet our tree canopy goals? How many trees will need to be replanted annually to meet our tree canopy goals?**

CAUTION: External Email

Dear Comprehensive Plan DEIS comment coordinators:

Here is my comment on the Draft EIS for the Comprehensive Plan:

426-1

Neither the Plan nor the Draft EIS adequately consider how the loss of tree canopy, which has already been documented by the City, and which will accelerate under the proposed Plan. This will result in increased “heat islands” and adverse health effects on vulnerable populations and overburdened communities from reduced tree canopy. Indeed, the Plan and EIS are required to have strategies to reverse the documented loss of tree canopy reflected in Seattle now being further from its goal than when the goal was adopted.

1. Section P 3-3 states that “none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild.” **What is the impact of the plan specifically on Seattle’s plants and animals? What data supports the conclusion that removing most of Seattle’s existing trees (47% on private residential property, 23% adjacent street trees often removed during construction) and replanting elsewhere will not have an impact on Seattle’s plants and wildlife?**
2. Section P 3-3 states that “none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover.” **What analysis shows that tree planting programs, coupled with increased hardscape, will compensate for the loss of existing mature trees. What is the time frame of this analysis? Does the analysis evaluate the impact of the anticipated loss of approximately 4000 mature trees per year in the ten-year timeframe of this Plan?**
3. The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. **How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development?**

The Comprehensive Plan should include revisions to the tree ordinance, as well as policy changes to ensure enforcement by moving tree protection out of an agency which has a structural bias against tree retention.

426-1
cont

Thank you,

Sandy Shettler

"There is a magic machine that sucks carbon out of the air, costs very little, and builds itself. It's called a tree." - George Monbiot

Dear Public Policy Officials:

I support Alternative 2.

Below are comments on the DRAFT EIS, focused specifically on the plants and animals section.

P 3-3-29-30 Please analyze the potential impact of the 5 options on Seattle plants and animals. This is a Seattle EIS, not a regional or state EIS. Saying "unlikely to result in appreciable impacts on regional populations of plants or animals" and "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild" is avoiding commenting on the specific impacts on Seattle plants and animals.

p 3-3-30 Saying that "none of the action alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover" is not supported by trends, practice and what the impacts will be from the most recent tree removal ordinance passed in 2023. The new tree protection ordinance actually increases the potential for tree removal in several ways. One is that all the developmental areas covered by the ordinance state that the newly defined "basic tree protection area cannot be modified" despite Portland, Oregon and the Northwest Society of Arboriculture saying it can be modified to save trees. This and current lot coverage of 85 - 100% for multifamily lots and above and rezoning to occur means more trees, especially large ones, will be removed. What is your estimation of potential canopy acreage loss (over 5 year periods consistent with the city's canopy studies) with increased development density in each alternative?

- What is your estimation of planting needs and time frame to replace the lost canopy (over 5 year periods tracked by the city's canopy study)?
- How can this occur given current staffing within SDCI and the several arborists who work for SDCI?
- How could canopy replacement occur within the given time frame?

- What is the plantable acreage available for planting trees in each of the following public areas: the city's right of ways, Natural Areas and Developed Parks?
- How many trees and what size will need to be planted in these areas every year to make up for trees removed during development on lots?
- How will replacing evergreen conifers with deciduous trees lead to equivalent replacement?
- How long will it take for a 50, 60, or 80 year old conifer to regrow?
- How long would a deciduous replacement tree take to become a conifer's functional and biological equivalent from an ecosystem services standpoint?
- What is the available acreage available to plant trees on private property?
- When will it be *possible* to reach the 30% citywide goal?
- What potential is there for more than 30% tree canopy in Seattle over time?

427-1

- Is up to 40% canopy coverage, over time, as proposed in the previous Comprehensive Plan possible?
- What is the projected loss in canopy volume over the next 20 years as big conifer trees are removed?
- Canopy volume, especially of coniferous trees during our rainy season, are critical factors in reducing stormwater runoff. What is the projected increase in stormwater runoff and what costs are associated with on site and alternative city water management policies of stormwater and pollutant runoff as a result?
- As to other tree potential mitigation measures, add:
- **Amend the Tree Protection Ordinance** to require developers to maximize the retention of existing trees 6" DSH and larger.
- Give SDCI Director ability to ask for alternative site designs to save trees.
- Support building higher and building attached units to allow for tree retention and planting areas like Portland, Oregon has with 20% areas for multifamily and 40% for its 1-4 unit family zone.
- Amend Tree Protection Ordinance to require ordinance to apply to all city land use zones.
- Remove the "basic tree protection area" loophole in the Tree Protection Ordinance that allows developers to unnecessarily remove almost all large trees on lots.

427-1
cont

Additional questions that connect the draft EIS to the Comprehensive Plan:

1. The city has a goal of reaching 30% canopy cover by 2037. Please articulate what policies in the One Seattle Plan will help reach this goal.
2. An estimated 67% of urban trees are in residential areas. How will the One Seattle Plan protect these trees when the 2023 tree code allows developers to cover 85% of a lot and the only protected trees are heritage trees?
3. The state's 2023 missing middle housing law legalized two to six-unit homes in all single family neighborhoods, including neighborhood residential which has most of the city's canopy. How will this level of density impact the city's 30% canopy goal?
4. Will the One Seattle Plan consider implementing construction site designs that protect existing trees?
5. Prioritizing tree canopy expansion in areas with the least tree canopy is listed as a specific goal of one the plans three key moves. "Community & Neighborhoods". How will the OneSeattlePlan achieve this goal under new state laws and Seattle's 2023 tree code?
6. Will the One Seattle Plan's DEIS consider removing any of the 2035 Comprehensive Plan urban forest / tree canopy policies, strategies, or other written objectives / goals? If so, which prior policies, strategies, and goals will be removed, and why?
7. Has the DEIS considered the difference in the average 2021 tree canopy cover between Neighborhood Residential zones compared to Multifamily zones? • NR zones had 33.6% coverage (7.0k acres of tree

canopy within 20.8k acres of land); • whereas Multifamily zones had 22% coverage (0.9 acres of tree canopy within 4.1k acres of land). If not, why? If so, in what way will each of the alternatives impact the long-term acreage of canopy cover within NR-zones?

8. Will the DEIS consider how much of Seattle's 1,600+ acres of Developed Park Land without tree canopy has the physical and logistical potential to plant medium to large trees?

9. Will the DEIS consider how much of Seattle's 8.0k acres of Neighborhood Residential and Multifamily Residential which has roughly 500,000 medium to large trees will be lost with the addition of 150,000 new dwellings within the next 20 years for each of the proposed alternatives?

10. Will the DEIS consider a significant shift in Seattle's tree canopy from private land to public land? If so, (as was done by Cambridge and Los Angeles) will the DEIS consider how much of Seattle's 11k acres of Right-of-Way (R.O.W.) without canopy has the physical and logistical potential to plant medium to large trees (when mature) and what land volume is needed to plant that quantity?

11. How many years will it take for a sapling planted today to replace an 80 year old tree and for it to perform all the ecosystem services of that tree – from carbon sequestration and stormwater runoff, to climate and heat island mitigation?

References

Your plant and animal section does not have any references that apply to the urban forest, urban forestry, tree growth, tree measurement and the long term effects of removing thousands of mature conifers and replacing them with dwarf seedlings that are not sufficiently maintained. The City's urban forest management plan lacks specificity.

Sincerely,
Heidi Siegelbaum
Seattle, WA.

Comment:

428-1

- 1) Where is the definition of affordability that's used in the DEIS? It's often said that you can't manage what you can't measure. Without a clear definition, the City has nothing to measure against.
- 2) If the Plan says it implements HB 1011, and the definition of affordability in HB 1011 is clearly stated at less than 60% of AMI for renters and less than 80% of AMI for owner-occupied, why isn't this statewide definition in the Plan?
- 3) In the DEIS Executive Summary, the objective for affordability is: "Increase the supply of housing to ease increasing housing prices caused by limited supply and create more opportunities for income-restricted housing." Where is the evidence that this dependence on supply-side, trickle-down housing works, or that it has worked to reduce housing costs to a level affordable to low-income people, during the past 5 to 10 years of the most extreme increases in supply of rental housing ever experienced in Seattle?
- 4) If you exclude fanciful supply-side housing promises, what is the likelihood that this plan will result in affordable low-income housing provided by the market?
- 5) Do you agree that given the state definition of affordability in HB 1110, that no new for-profit housing will be affordable without subsidies? Where does the DEIS acknowledge this?
- 6) Do you agree that given the state definition of affordability in HB 1110, no new market-rate townhouses are affordable to households with incomes less than 80% of AMI, without subsidies and income restrictions? Do you agree that townhouses are the predominant form of new housing being permitted in formerly single-family zones?
- 7) Although HB 1110 allows duplexes, triplexes, fourplexes, sixplexes, stacked flats and courtyard apartments, what is the likelihood that any of these Middle Housing forms will be built by current for-profit infill developers, when these builders refuse to build rentals of any sort? If these forms are meant to produce rental apartments in formerly single-family neighborhoods, and non-profits have told the city that they can't build there either, because they need economies of scale for construction and staffing, where are the programs or zoning incentives Urban Residential neighborhoods?
- 8) What is the environmental impact of continuing to lose 1.7% of our tree canopy every five years, when 70% of our tree canopy and most of the loss is in formerly single-family neighborhoods?
- 9) Where does the plan acknowledge that planting new trees takes 20-30 years to provide tree canopy, to shade houses, or to combat heat islands?
- 10) Where does the plan acknowledge that supply-side trickle-down housing takes 30-40 years to age into natural affordability, when a Stanford researcher who studies this determined that Seattle hadn't built enough housing 40 years ago for this to be a significant factor, when instead, Seattle tends to recycle older affordable rentals by rehabbing them into new, market-rate housing?
- 11) Specifically, how many low-income affordable rentals will be built under Alternative 5? Will this be half of all new housing units, as called for by the Governor and the Department of Commerce? If not, what zoning and policies could mitigate the extreme lack of affordable rentals in Seattle?
- 12) Several years ago, the City redefined "family-sized housing" as 2 bedrooms, rather than 3 bedrooms. How has that change contributed to the lack of family-sized rental housing being built, and what would

be the effect of restoring the definition of family size to the common understanding of 3 bedrooms?

13) What zoning tools are available, including MHA, to require more family-sized 3-bedroom rental housing at all income levels?

14) Where does the housing plan acknowledge the needs of seniors and people with disabilities for accessible housing without stairs? How can the plan incentivize stacked flats and courtyard apartments? Wouldn't such forms mean one-third to half the apartments would be ground-floor accessible apartments? Could these apartments be built by non-profits with the benefit of land trusts funded by the City?

15) Shouldn't courtyard apartments be an option, especially where "protected" trees occupy the center of a parcel? How can they be incentivized?

16) Instead of insensitively promoting residential units with the first floor raised up, shouldn't the City be promoting Universal Design in all new construction, so that seniors and people with disabilities can find suitable homes in our future city?

17) Since we no longer have single-family neighborhoods, should every developer be required to build sidewalks on their property, not just in multi-family or Urban Villages, as now?

18) What is the effect of lacking 11,000 blocks of sidewalks on our vision of a 15-minute city? On accessibility for seniors, people with mobility aids, baby strollers and ADA requirements? How can we include and fund a plan for a complete sidewalk grid within 20 years?

Comment:

Displacement:

- 1) How can the plan recommend paying someone to move under the Tenant Relocation Assistance program as a mitigation, when it actually facilitates displacing someone? Someone who will certainly find no comparable rental housing within their community of support?
- 2) The plan says: "Overall the action alternative would tend to reduce displacement as the benefit in terms of reduced economic displacement pressure increases production of affordable units offered by the action alternatives outweigh any increased risk of physical displacement." Where is the evidence of this??? Rather, it depends on the tired and disproven theory of trickle-down housing. This, despite the chart that shows 1324 to 1416 units at 50% to 80% of AMI were lost to demolition.
- 3) New MHA units under Alternative 5 are 17,293, and 2788 renter households were physically displaced. How does this compare with the statement in number 2)? When the city reports on displacement, are they counting buildings demolished, or units demolished? How many of these are low-income? How can we know with an inventory?
- 4) This plan is suffused with the supply-side myth, such as in Land Use "All alternatives increase the overall number of units and improve housing affordability." Since no evidence is offered, and no evidence exists, are you willing to remove this false supply-side statement? Are you willing to scrub the DEIS and the Plan itself of this delusion that simply building more housing creates affordability defined in HB 1110 as less than 60% of AMI for renter households and less than 80% of AMI for owner-occupied units.? Otherwise, won't that prevent us from ever achieving housing equity? (Note: affordable doesn't mean less expensive!)
- 5) Isn't it true that the last CompPlan resulted in a loss of workforce or middle-income housing, since almost all market-rate rental apartments were built for high-income workers and older housing lost to demolition?
- 6) Isn't it true that continuing on the present course, as this plan does, will exacerbate the hollowing out of our middle class because of the loss of low-income housing and family-size housing affordable to them?
- 7) Isn't it true that since infill builders will never build rentals (not their business model) and no nonprofits can build at the scale of six units or less, that no affordable rental units are likely to be built in Urban Neighborhoods?
- 7b) And that seniors who live there now, being priced out by rising property taxes, will have no place in their own neighborhoods to downsize, unless stacked flats and courtyard buildings are incentivized or zoned for? What are the recommendations to allow seniors (of all races) to remain in their communities of support?
- 8) The Housing element clearly displaces trees from all new development. Where is the mitigation to prevent loss of tree canopy, by stronger enforcement of permitting, by requiring developers to replace full-size trees with full-size trees, by determining some lots to be unbuildable? Where are your mitigations for the trees that will increase the tree canopy to 30%, rather than continuing on the present course and displacing our tree canopy?

429-1

429-2

429-3

429-4

9) In the Housing Appendix, shouldn't trees be shown in the idealized drawings of housing?

429-5

10) If buildings (condos) are allowed to be four-story blocks in Urban Residential zones, doesn't that block the sun from 2-story craftsman homes that are or are likely to have solar panels? Is this economic loss being evaluated? Shouldn't four-story buildings be grouped with taller, not shorter buildings?

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

Subject: Regarding the Environmental Impact Statement
Date: Sunday, May 5, 2024 2:52:21 PM

CAUTION: External Email

Greetings Councilmember Morales and others involved in the drafting of this statement.

I am deeply troubled by this plan and have questions.

Section P 3-3 states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild." This is murky at best. What study is ongoing or will be (we need this cited), and what clear provisions will be implemented to ensure protections for Seattle's plants and animals? What is the actual impact we can expect? This is our home.

Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." As you know we are losing tree canopy at an alarming rate due to poor legislation like the current tree protection ordinance. What studies can you cite that shows any tree planting or landscape programs could possibly compensate for lost urban forest?

The plan states that Seattle will make progress toward its 30% canopy goal. The abovementioned tree ordinance removes a large portion of private land available for trees. Is remaining public land truly sufficient to reach the 30% stated goal? Is there a plan for the many trees that must be planted in these areas every year to compensate for trees destroyed by development? May I remind you that saplings are not and will not be in our lifetime any kind of substitute for the magnificent old growth trees of Seattle being butchered?

I am deeply concerned at the lack of consideration shown to the magnificent trees and by extension, wildlife and natural beauty that we are so gifted with in being residents of Seattle. I am horrified at the trend in recent years that is turning the Emerald City into a concrete city for the interest of developers. This is not necessary in order to furnish more housing. It is simply short-sighted and a terrible choice not only for the quality of our lives but for those to come.

I am a constituent and I vote.

Sincerely,
Vanessa Maria Skantze

Subject: Modify the Comprehensive Plan toward the recommendations of The Urbanist
Date: Monday, April 29, 2024 8:50:52 PM

CAUTION: External Email

Dear Comprehensive Plan Coordinators,

Hello, I am a Mount Baker resident and I want to provide a comment on the Comprehensive Plan. Specifically, I want the city to adjust the plan to be more like the recommendations of The Urbanist in this editorial: <https://www.theurbanist.org/2024/04/29/op-ed-building-the-seattle-we-want-with-the-growth-we-have/> . Please read it and incorporate its ideas.

Allow for taller buildings, especially around transit. Support and truly incentive middle housing and affordable housing as they describe. Remove barriers for increased density. Invest in desirable, dense housing as well as business development opportunities for current residents of the South End. Add some Neighborhood Centers in South Seattle: Mt. Baker, Rainier Valley, Columbia City, Leschi, the Central District, Othello, Hillman City, Seward Park, Beacon Hill - where are the Neighborhoods Centers there that are so present in other areas of the map?

Thank you for your time in reading this email,

Zoe Stephenson
206-913-8510

CAUTION: External Email

1. Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." It is obvious that any alternative will result in large trees getting removed and the replacement trees will not replace the tree canopy lost for decades. The weak tree protection ordinance that was recently passed will not be sufficient to protect the canopy. What data supports the conclusion that tree planting programs will compensate for lost urban forest, given the increased hardscape in all alternatives?
2. The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance dramatically reduces private land available for trees. Is there actually enough public land without trees that new planting of trees can eventually reach the 30% goal?

Ann Stevens

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

Subject: Not Enough - Seattle's Comprehensive Plan
Date: Saturday, May 4, 2024 10:29:51 AM

CAUTION: External Email

Hello,

I am writing to encourage the city to plan for more types of housing throughout the city.

438-1

I am currently a resident in the Ballard area. And like many of my peers (young professionals in their 20-30s) I was hoping Seattle would take the opportunity to start building out our housing supply in order to blunt the ridiculous rise of housing prices, so that people like me could have a chance to settle here long-term.

I am requesting that the comprehensive plan be revised with the following modifications.

Encourage transit-oriented development. Why has the plan not included more zoning changes near frequent transit corridors? Transit enables greater density, and Seattle should be tapping into that. Additionally, zoning changes should be applied to a larger area surrounding the transit stops - and not just along the arterial.

Increase the FAR. State model code allows for 1.6 FAR in sixplex areas. 0.9 is overly restrictive and won't allow for the development of multi-family flats. Why would we want to restrict this? Many people find flats far more desirable to multi-story townhomes, and many people would have a great deal of difficulty living in a townhome, where everything is on a different floor! Whether they are elderly, disabled, etc. Give our neighborhoods the means to build housing for everyone. This *needs* to be changed.

Add back the original Neighborhood Centers that were removed and allow neighborhood businesses! - Living near a coffee shop or taproom is enormously popular, and adds a communal spot for neighbors to gather, and for small businesses to thrive. And it lessens peoples' dependence on cars to shop for basic goods ... because they can walk to them.

Remove Parking Requirements - This strikes me as overly restrictive zoning. Let the consumer decide if they want to live somewhere with a parking spot or not. If I choose to live without a car, why would you force me into renting/purchasing a unit that will have an unused parking spot?

Please don't let this opportunity pass us by. Seattle is a city full of beauty and opportunity. It will continue to be one of the most desirable places in the country, and we should embrace that. We can make a Seattle that works for everyone. But it starts with updating this plan to something far more visionary.

Thank you,
Sean Stockwell

Comment:

I support Alternative 5 as stated in the draft EIS, including the development of a new Urban Center on 130th Street. However, I do feel that the plan is not ambitious enough. I encourage more housing options in the neighborhood, including addressing the hidden obstacles to building denser housing. To that end, I ask that you consider:

440-1

1. Minimize or remove parking requirements -- make this a pedestrian-oriented neighborhood not beholden to car traffic and with precious space devoted to housing for people, not storage for cars.

2. Increase floor-area ratios -- The draft plan caps floor-area ratio at too low a number: 0.9 for all middle housing. This will reduce the amount of housing actually built. Other jurisdictions, including Spokane, have aimed much higher in this area. And the WA Dept of Commerce middle housing model code recommends higher floor area ratio as well. Don't make Seattle the outlier -- we should be leading in this area, not following.

3. Consider a broader rezone in the 130th Street area -- In my feedback on the 1 Seattle Comp Plan, I suggested extending upzones to more areas of the city rather than limiting to certain areas of the city. I still encourage a more ambitious approach to allowing different housing options, including apartments, across the city, but I especially encourage the development of taller and denser residential and commercial uses near the new 130th Street light rail station.

440-2

To the last point, I encourage the City to consider Pastor Laura Baumgartner of the Haller Lake Methodist Church's request to allow their lot to accommodate both residential and commercial development. We feel this would add new opportunity for both housing and small business in the new urban center:

440-3

"We would like to request that the DEIS be revised to include NC2-55 zoning for the church property, Lots 3, 4 and 5, of block 65, in the H.E. Orr Park Division No. 6 so that a development might be considered that includes both commercial and residential components." (feedback submitted 4/13/24)

Thank you for the opportunity to provide feedback.

T.J.

Subject: One Seattle Comments- Magnolia/Interbay Land Use Committee
Date: Monday, May 6, 2024 1:36:23 PM

CAUTION: External Email

Good afternoon,

Thank you for the opportunity to submit comments. Below are summarized comments from Magnolia/Interbay Land Use Committee's last meeting, which included a presentation and overview of the One Seattle Plan.

Please feel to contact me if you have any questions.

Thank you,

Scott Surdyke

Chair, Magnolia/Interbay Land Use Committee

Trustee, Magnolia Community Council

Urban Residential Zone: RE: Loss of Tree Canopy

- We support the increased zoning, and inclusion of +2 units (if affordable)
- Our group is very concerned that the new zoning will substantially diminish Seattle's (and our neighborhood's) tree canopy, which will counter the city's tree canopy goals and increase potential for urban heat islands
- Please consider more substantial setbacks in the front yards (10'+) that allow for larger trees, more landscaping and personalized stoops
- Consider height or density bonuses (or reductions in setback requirements) for builders who strive to preserve existing trees (esp. substantial trees)
- Consider eliminating or reducing the side setbacks (offsetting the increase in front or back yards). This will allow for wider (more livable) dwellings, rather and super-skinny and inefficient 10' wide rowhouses.
- Consider encouraging more diverse housing types. Many design and real estate professionals (and tenants) decry the proliferation of 10' wide rowhouses. NOTE: Baltimore and Baltimore County, home to tens of thousands of rowhouses, does NOT allow rowhouses narrower than 16' because anything less is deemed undesirable and/or not livable.
- Remember, Seattle is NOT San Francisco (or San Francisco's Daly City). What makes our city and neighborhoods unique and livable is the substantial green canopy and connected greenscape. We do not support zoning that promotes the reduction of the treen canopy and substantially reduces opportunities for landscaping (which also is necessary for wildlife)

Neighborhood Centers:

442-1

There is almost unanimous consensus in our neighborhood that Magnolia Village is seriously underdeveloped and needs a major overhaul. We applaud the opportunity to have more robust zoning (65') and look forward to the discussion.

- We were surprised and disappointed that the proposed **North Magnolia Neighborhood Center** was dropped from the NC designation. This part of Magnolia (along 34th Ave and at the intersection of Government Way) is near the entrance to Discovery Park and has seen mid-rise, multifamily development for more than 50 years, including several low-income senior housing projects. This part of the neighborhood is ripe for additional development due to a number of factors:
 - Mid-rise development has occurred here for more than 50 years
 - Area is served by 2 bus lines (24 and 33)
 - Right next to the entrance to the City's largest park
 - Major grocery store located here (Met Market)
 - Shops and services already exist, primarily in several mid-rise multifamily buildings.
 - Close to planned affordable housing village at nearby Ft. Lawton

Station-area Planning

- There is general consensus that LINK station-area zoning may be too conservative. TOD neighborhoods like Capitol Hill, Northgate, and even Ballard could likely support much taller, denser buildings. The approach that Vancouver and Burnaby, BC take is much more urban and promotes much more housing at rail stations

CAUTION: External Email

Alternative 2 preferred

- Amend the Tree Protection Ordinance to require developers to maximize the retention of existing trees 6" DSH and larger.
- Give SCCI Director the ability to ask for alternative site designs to save trees.
- Support building higher and building attached units to allow for tree retention and planting areas like Portland, Oregon has with 20% areas for multifamily and 40% for its 1-4 unit family zone.
- Amend Tree Protection Ordinance to require ordinance to apply to all city land use zones.
- Remove the "basic tree protection area" loophole in the Tree Protection Ordinance that allows developers to unnecessarily remove almost all large trees on lots.

443-1

Thank you
,Rick

Comment:

I am writing to you because adding more housing in all neighborhoods, planning for much more growth, and developing the city in a more sustainable and equitable way via this Seattle Comprehensive Plan Update is a major political priority for me. I am looking to you and the Council for leadership on this and will certainly be considering your decisions and work on the Comp Plan in the next election.

I am a renter in Capitol Hill , and I believe that the City of Seattle did not listen to the overwhelming majority's call for an Alternative 6 vision, which would welcome more neighbors in areas with low displacement risk and high opportunity. Instead the current draft plan will perpetuate a racist history of exclusionary land use. To create a more sustainable, affordable, vibrant city, the plan should allow highrises and skyscrapers outside of just Regional Centers.

In Capitol Hill in particular, I think that the plan should Allow high-rise apartments.

If the City of Seattle adopted my above proposed changes, then we would be able to create a more affordable city for everyone.

Sincerely,
Ryan Talen

Comment:

The city should study the impacts of expanded highrise zoning in Urban Neighborhoods within 1 mile of parks >1 acre. Of the available alternatives, I strongly prefer Alternative 5 with higher growth targets.

445-1

May 6, 2024

City of Seattle Mayor, Council, and Office of Planning and Community Development

Subject: One Seattle Comprehensive Plan Update Draft EIS Comments and One Seattle Comprehensive Plan: Draft for Public Review Comments

Dear Mayor Harrell, City Council Members, Director Quirindongo, and OPCD staff,

Thank you for the opportunity to comment on the “One Seattle Comprehensive Plan Update Draft EIS” (DEIS) and the “One Seattle Comprehensive Plan: Draft for Public Review” (“Draft Plan”). Please find my comments below. They are based on the letter provided by the Complete Communities Coalition, as it incorporates the best thinking of a broad collection of progressive land use organizations within our city.

446-1

I appreciate OPCD’s work that produced the Draft Plan. I strongly share the values expressed in the Draft Plan and concur with much of the Department’s analysis of the challenges facing the city and their root causes. However, the plan does not go far enough and seems intent on continuing the status quo of underproduction of housing, escalating costs, and continued displacement. To truly make housing more affordable, advance racial equity, mitigate displacement, and meet our climate goals, the Mayor’s Recommended Plan and the Final Environmental Impact Statement (“FEIS”) should incorporate the following revisions:

EIS Preferred Alternative

I recommend that the FEIS designate a Preferred Alternative. While FEIS documents prepared pursuant to SEPA are not required to designate a “preferred alternative,” there is a sound reason why doing so has become common practice among lead agencies over the years. As the Department of Ecology has explained, designation of a preferred alternative gives public reviewers more awareness of which alternative the professional staff members within the lead agency feel is best, or which appears most likely to be approved. In the high-profile, contentious and complex instance of the One Seattle Plan, identification of a preferred alternative in the FEIS would be an especially useful step. Not only has the DEIS discussed and analyzed five different alternatives, but two different complex alternative proposals have also entered public discussion in the form of the Mayor’s Draft Plan and the August 2023 OPCD staff recommended plan (“OPCD Draft Plan”). Given the sprawling and complex interrelated impacts that the One Seattle Plan will have on the future of our City, the FEIS will be best positioned to inform productive discussion and understanding if it clearly designates a preferred alternative.

- The growth strategy described by OPCD staff in their August 2023 proposal should be the basis for the preferred alternative. The OPCD Draft Plan is the boldest growth strategy presented to date. It responds to the overwhelming community feedback provided during scoping, and we believe it will best meet the city’s needs over the next decades.
- If the FEIS does not designate the growth strategy from the OPCD Draft Plan (or an updated version) as its preferred alternative, it should adopt a modified version of the DEIS’s Alternative 5. Preferably, modifications to the DEIS Alternative 5 would incorporate as many

attributes of the OPCD Draft Plan as possible, and as many of the policy positions requested in this letter as possible.

- If the FEIS adopts the Draft Mayor's Recommended Plan growth strategy as a preferred alternative, it should adopt many of the features of the OPCD Draft Plan or DEIS's Alternative 5, together with the additions requested by this letter.
- The FEIS should include a table that summarizes zoned land development capacity analysis and projected housing needs for the Preferred Alternative. The table should disaggregate housing unit development by AMI band, following the guidance provided by the Department of Commerce, in order to ensure we are providing sufficient capacity for housing affordable to low-income people and demonstrate that the plan will comply with the Growth Management Act's Housing Element requirements provided in RCW 36.70a.070(2)(c)-(d). Table 34 in the [Draft Housing Appendix](#) provides an excellent template for this information.

446-1
cont

Urban and Regional Centers

Regional and Urban Centers have and will continue to be the areas where the most new housing is built in the city. Currently, the City is proposing very little change within existing centers, minor expansion of the smallest centers, and only one new center at NE 130th St. The City should expand the potential for growth in Urban and Regional Centers by both increasing the area they cover and the intensity of development allowed. The City should also seek to undo the past harms of the Urban Village strategy, which is the basis of our centers-based growth framework, by allowing more intense development near public facilities such as parks, water ways, and high performance schools. The City should also take this opportunity to address the inequitable distribution of Regional Centers, none of which are currently located in South Seattle.

To Facilitate Immediate Progress, the Mayor's Recommended Plan Should:

- Continue to include the addition of Ballard as a Regional Growth Center and 130th Street Station as an Urban Center.
- Continue to include the expansions of existing Urban Centers such as the Greenwood-Phinney Ridge, Queen Anne, and West Seattle Junction Urban Centers.
- Expand the University District Regional Center to include University Village and lands adjacent to Seattle Children's Hospital, or create a new Urban Center to incorporate it.
- Create additional Urban Centers at all future Link stations, excepting areas within Manufacturing and Industrial Centers.
- Allow high rise zoning in all Regional Centers and within all Urban Centers adjacent to Link Stations.

- Allow eight-story residential construction on the majority of the land within all Urban Centers. Explore allowing greater height with the use of mass timber, to incentivize low carbon construction.
- Designate Mt. Baker and West Seattle Junction Urban Centers as future Regional Centers, include them in the list of Centers to receive updated subarea plans, and plan for combined jobs and housing unit density that exceed King County's Urban Growth Center threshold for both centers.

To facilitate continued innovation and flexibility in the months and years to come, the FEIS should:

- Study the maximum possible expansion of all existing Urban and Regional Centers.
- Study additional Urban Centers near all proposed Link Stations and adjacent to our greatest parks, including Discovery and Magnuson.
- Study increasing the zoning capacity of all Regional and Urban Center to maximize the productions of housing.
- Study the impacts of designating Mt. Baker and West Seattle Junction Urban Centers as Urban Growth Centers, using the definition provided in the 2021 King County Countywide Planning Policies.

Neighborhood Centers

The One Seattle Plan's proposed "Neighborhood Center" model presents dramatic opportunities for our City. If fully realized, this could lead to increased housing supply and affordability, enhanced economic opportunities, improved walkability, and better environmental outcomes for more of Seattle's neighborhoods and a broader segment of the city's population. We request the following actions to bring the Council's request for a "fifteen minute city" and the Mayor's vision of "One Seattle" closer to reality.

To facilitate immediate progress, the Mayor's Recommended Plan and any Preferred Alternative should:

- Allow for the development of all Neighborhood Centers studied under EIS Alternative 5 and proposed under the OPCD Draft Plan. The total number of Neighborhood Centers should not be less than 50. Additional Neighborhood Centers should include (but not be limited to): Alki, High Point, Seward Park, South Beacon Hill, Gas Works, North Magnolia, Roanoke Park (North Broadway), Nickerson (North Queen Anne), and Upper Fremont.
- Expand the radii of Neighborhood Centers to ¼ mile to create enough land to support a small cluster of mixed-use development.

- Increase permitted Floor Area Ratio (FAR) to no less than 2.0 for multifamily housing in all Neighborhood Centers.
- Increase height limits to 85 feet throughout all Neighborhood Centers.

To facilitate continued innovation and flexibility in the months and years to come, the FEIS should:

- Study expanding all Neighborhood Centers up to a ten-minute walkshed and 2.5 maximum FAR, for all multifamily housing across those areas.
- Be sure to thoroughly study any potential adverse environmental impacts of these actions, as well as the probable significant adverse environmental impacts of failing to take such measures.

Corridors

The DEIS studies a “Corridor” growth strategy (Alternative 4) that would focus new housing in areas near transit and amenities. Increasing access to frequent transit and parks is one of our coalition’s goals, and it will help the City reduce cost of living while improving quality of life. While the DEIS includes this strategy, the Draft Plan significantly reduces the amount of area where such flexibility and walkable density would be possible. This is inconsistent with the Mayor’s One Seattle goals for housing, transportation, environmental, and climate. By restoring multifamily housing to the parcels off of arterials, the Mayor’s Recommended Plan can avoid disproportionately exposing renter households to environmental harms caused by high-traffic roadways. This would be more consistent with the City’s One Seattle values of racial and environmental justice.

To facilitate immediate progress, the Mayor’s Recommended Plan and any Preferred Alternative should:

- Add a Corridor place type that allows mid rise housing up to 85 feet in height. This place type should include all parcels currently zoned Neighborhood Residential that are:
 - a. within 0.5 miles (roughly a 10-minute walk) of light rail or bus rapid transit; or
 - b. within 0.25 miles (roughly a 5-minute walk) of frequent bus stops.
- Where appropriate, add the Corridor place type to policies that reference the three centers (Regional, Urban, and Neighborhood).
- Impose a maximum FAR no lower than 2.0 for multifamily development in Corridor areas.
- Allow mixed-use residential development in Corridor areas.

To facilitate continued innovation and flexibility in the months and years to come, the FEIS should:

- Study all Corridor areas contemplated by EIS Alternative 5 or the OPCD Draft Plan up to a ten-minute walkshed, and no less than 2.5 maximum FAR, for all multifamily housing across those areas.
- Be sure to thoroughly study the probable significant adverse environmental impacts of failing to take such measures.

Urban Neighborhoods & Middle Housing

This section focuses on the One Seattle plan's implementation of HB 1110 (2023) in Neighborhood Residential Areas and throughout the city. Full implementation of the state law needs to be planned to ensure we encourage a diversity of housing types, including backyard cottages, boarding houses, townhouses, and stacked flats. Urban Residential zones need to be planned to help us meet our equity, environmental, and affordability goals.

To facilitate immediate progress, the Mayor's Recommended Plan and any Preferred Alternative should:

- Increase the allowed FAR for middle housing to feasibly allow for family-sized two, three, and four bedroom homes to be built throughout the city. At a minimum, the city should align standards with the Department of Commerce's model ordinance. We recommend no less than 1.4 FAR for fourplexes and no less than 1.6 FAR for six-plexes.
- Create a 0.2 FAR bonus for stacked flats in middle housing, to incentivize the creation of physically accessible housing.
- Create a 0.1 FAR bonus for each Multifamily Tax Exemption (MFTE) unit, along with increasing height to 40 feet if two or more MFTE units are included.
- Encourage the development of housing for large households, including families with children and elders, by providing a development incentive of 0.05 additional FAR for 2 bedroom homes and 0.1 additional FAR for 3 or 4 bedroom homes.
- Create a 0.2 FAR bonus for housing that satisfies defined passive house, living building, or LEED specifications.
- Allow for a full range of middle housing types in Neighborhood Residential areas throughout the city, including allowing for six-plexes by right in all areas with low-displacement risk.
- Align the Draft Plan with HB 1110, by ensuring any alternative density requirements in high-displacement risk areas are temporary. Create a plan for implementing appropriate anti-displacement policies by the next implementation progress report. Partner with BIPOC-led community organizations to engage neighborhood and community residents,

both present and former, to better understand how to accommodate their housing needs and improve community resilience.

- Eliminate requirements for side and front setbacks, to allow for more of the lot to be usable open space and accommodate trees.
- When calculating minimum density, do not include ADU and DADU's in the unit density metric.
- Allow subdivision of lots into lots less than 1,000 square feet.
- Ensure that middle housing is not subject to more restrictive land use or other code requirements than single family housing, as required under HB 1101.
- Expand the "corner store" concept to allow greater flexibility for commercial uses to be introduced to neighborhoods that are currently primarily residential. Examples of greater flexibility include: non-residential uses that meet the daily needs of residents (e.g., health care, small grocers, "third place" leisure activities, etc.), ability to locate on off-corner lots, and increased height and FAR limits to facilitate the development of ground floor commercial units.

To facilitate continued innovation and flexibility in the months and years to come, the FEIS should:

- Study the impacts of removing side setback requirements in all areas, to allow for more of the lot to be usable open space and accommodate trees.

Affordable Housing and Social Housing

The City of Seattle is facing a housing crisis in terms of scarcity and affordability. One of the goals of the One Seattle Plan, which we strongly support, is to achieve housing abundance:

"When housing is safe, affordable, and abundant, we can fulfill many of our goals for the future....Achieving housing abundance is fundamental to addressing our homelessness crisis, redressing historical patterns of segregation and exclusion, and creating opportunities for displaced residents to return to their communities."

I appreciate the inclusion of the affordable housing bonus to address this pressing need, by allowing for additional development capacity for income-restricted affordable housing in neighborhood residential areas that are within ¼ mile of frequent transit. Though I have not seen a detailed proposal for the income restrictions and set aside requirements, it is our understanding that this bonus is intended for use by non-profits and others building wholly affordable housing projects. This will blunt the impact of the proposed density bonus, as any developments benefiting from the bonus will need to compete for limited public funds available for affordable housing.

To facilitate immediate progress, the Mayor's Recommended Plan and any Preferred Alternative should:

- Revise the proposed affordable housing bonus to ensure it is usable by a broad range of developers—including private, nonprofit, and social housing developers—without needing scarce public funding. This could look like a requirement for no less than 20% of the homes to be affordable at 60% AMI for rental or 80% AMI for ownership.
- Increase the proposed FAR limit from 1.8 to no less than 2.2.
- Increase the proposed lot coverage from 60% to 70%.
- Allow the proposed affordable housing bonus to be used outside of frequent transit areas.

To facilitate continued innovation and flexibility in the months and years to come, the FEIS should:

- Study the impacts of allowing up to 80% lot coverage for developments using the affordable housing bonus.

Equitable Development and Anti-Displacement Strategies

The City currently provides support to communities disproportionately impacted by displacement pressure, economic exclusion, and disinvestment through a variety of different equitable development programs and anti-displacement policies. I support the continuation of all existing equitable development and anti-displacement tools, notably the Equitable Development Initiative. However, it is not enough for the City to simply continue its current programs; the tools and policies need to be expanded based on feedback from communities disproportionately impacted by discrimination and displacement pressure.

To facilitate immediate progress, the Mayor's Recommended Plan and any Preferred Alternative should:

- Expand the City's land banking strategy to support affordable rental, affordable ownership, and social housing projects.
- Create incentives and provide technical assistance for small community-based organizations to partner with larger developers in Equitable Development Initiative projects.
- Facilitate generational wealth building, by providing a way for low-income and fixed-income families to sell their home and gain a new high-quality home on the site of the new development.
- Collaborate with the Seattle school district to plan for affordable, family-sized housing near schools, pursuant to City Ordinance 124919.

- Provide information to support the development of Community Opportunity to Purchase Act (COPA) legislation, which would allow qualified non-profit organizations the first opportunity to make an offer on real estate sales involving multifamily buildings with low-income residents.
- Incentivize the use of affirmative marketing and community preference policies for private developments not receiving public subsidy. Continue to incentivize such policies for publicly-funded projects.
- Continue to explore and support the expansion of short-term rental assistance programs.

To facilitate continued innovation and flexibility in the months and years to come, the FEIS should:

- Study the impact of displacement and lack of affordable housing on school enrollment and ensuing school budget constraints and create incentives for family-sized units near schools.

Multifamily Housing Mapping Error

The Draft Plan appears to include an unintentional mapping oversight which, if not corrected, would likely result in a loss of *existing* zoned housing capacity and a reduction in the fifteen-minute walkable neighborhoods envisioned by the Mayor's One Seattle policies and championed by the City Council. This loss would be found in neighborhoods that are today designated for "Multifamily Housing" future land uses *under the currently effective Comprehensive Plan*, but erroneously have been proposed to transition into Urban Neighborhood status under the Draft Plan. This change would replace a designation in the current Comprehensive Plan where "you might find duplexes or townhouses, walk-up apartments or highrise towers," with a new place type that "would primarily allow housing types within a three-story scale, such as detached homes, duplexes, triplexes, fourplexes and stacked flats." A ceiling of stacked flats in the proposed designation is much reduced from a ceiling of highrise towers in the existing designation. In particular, this issue would impact the proposed redevelopment of Fort Lawton with affordable housing, which is a major priority of the City of Seattle and Mayor's Office.

To preserve affordability, walkability and environmental progress made over the last ten years, the Mayor's Recommended Plan should:

- Ensure that all areas that are currently designated as Multifamily Residential on today's future land use map be redesignated as a Corridor, Neighborhood Center, Urban Center or Regional Center, rather than Urban Neighborhood.

Transportation

Safe, accessible, and frequent transportation is a key element to the success of any city. I strongly support Goal TG 1 in the Draft Plan, which states, “Transportation decisions, strategies, and investments support the growth strategy for the City and the region and are coordinated with this Plan’s land use goals.” In order to achieve this, Seattle should prioritize *proximity*-based strategies over mobility-based ones. One example of this approach would be to plan for far more Neighborhood Centers than are included in the Draft Plan—especially in low-density, car-dependent neighborhoods (see the Neighborhood Centers section of this letter). In its mobility strategy, Seattle should prioritize carbon-neutral transportation modes such as walking, rolling, and cycling, and carbon-light modes such as mass transit and carpooling. Transportation infrastructure that primarily serves personal automobiles, including parking, should be deprioritized in relation to these other modes.

446-1
cont

To Facilitate Immediate Progress, the Mayor’s Recommended Plan Should:

- Plan to accommodate housing and job growth in a manner that will enable the City to achieve the following transportation and environmental goals: net-zero citywide emissions by 2050 (see T 4.1), 20% reduction in VMT by 2044 (see T 4.2), and a 37% reduction in VMT by 2044.
- Eliminate parking minimum requirements for all land uses types citywide.
- Plan to serve all Neighborhood Centers with frequent bus service.
- Add the Corridor place type to the lists of places described in T 1.2, T 3.1, and T.2.12; for example, “all centers (Regional, Urban, and Neighborhood) and corridors”.
- Clarify that T 4.4, which describes neighborhood-scale strategies to reduce carbon emissions and pollution, applies to all types of neighborhoods—including neighborhoods with high-traffic arterial streets with frequent transit service.
- Use a racial equity lens when prioritizing sidewalk and pedestrian infrastructure construction in areas that currently lack it (see T 3.20).
- Plan to prioritize street right of way differently in different contexts: within centers and neighborhoods, streets should prioritize active transportation that is safe and sustainable; between centers and neighborhoods, streets should prioritize public transit; and within and between Manufacturing and Industrial Centers, streets should safely accommodate the reliable movement of goods.

To facilitate continued innovation and flexibility in the months and years to come, the FEIS should:

- Study the environmental impacts of maximum parking requirements for residential and commercial uses in frequent transit service areas.

Climate & Environment

The City is preparing to comply with new climate requirements that will be required by state law in 2029. I support the City's decision to get ahead of these upcoming requirements, and I applaud the goal of 58% reduction in greenhouse gas emissions from 2008 levels. I also support the City's study of the environmental impacts of planning for additional density within Seattle, which found that DEIS Alternative 5 would produce the lowest GHG emissions per capita. I particularly support the following statement in the DEIS:

While each [EIS] alternative would generate GHG emissions from growth and development within the city, the benefit of channeling development to targeted areas that might otherwise occur in peripheral areas of the city or region could serve to offset these impacts. (DEIS, p.3.2-51)

I encourage the City to set additional specific climate goals that will allow for progress to be accurately assessed throughout the next twenty years.

To Facilitate Immediate Progress, the Mayor's Recommended Plan Should:

- Prioritize supporting transportation mode shift toward active mobility options over automobile electrification.
- Define specific anti-displacement strategies that meet the needs of communities most likely to be impacted by climate change.
- Set goals for building de-carbonization that can inform future revisions to the energy code.

To facilitate continued innovation and flexibility in the months and years to come, the FEIS should:

- Provide additional explanation for the conclusion that Alternative 1: No Action would have no significant adverse impacts on greenhouse gas emissions or air quality. Given the anticipated impacts that this strategy would have on greenfield development and increased vehicle-miles traveled, particularly by commuters, explain why these impacts would not be significant.

Thank you for considering my comments. I urge you all to think beyond the next election and to the future of our city. Do we want to shut the door behind us or do we want to continue to welcome people from all walks of life to our wonderful city? If the latter then we need to plan for it and allow for the highest number of new homes.

Sincerely,

Patrick Taylor

Comments Planning and Community Development EIS,

We need more tree canopy!!!!

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

Comment:

There does not seem enough protections for the trees. It takes years to grow trees, how are you planning on mitigating the loss of trees? What is consider affordable housing for the middle clas with families? How does this plan provide for seniors and there issues? There seems a lack of incentives for building for families, families need more space.

Subject: Comment on DEIS
Date: Sunday, May 5, 2024 8:51:43 AM

CAUTION: External Email

Please note my comment on the DEIS:

1: Section P 3-3 states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild." What is the impact of the plan specifically on Seattle's plants and animals? Where is the study?

2: Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." What analysis shows that tree planting programs, coupled with increased hardscape, will compensate for lost urban forest? Often trees planted as part of developers work die within three years. Even if those trees survive it will be many decades before they provide the same amount of shade and habitat as an adult tree, precisely at the time when climate change is rapidly affecting us. We need our mature trees right now more than ever.

3: The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development?

Sincerely,
Toby Thomas

Subject: Community feedback - One Seattle draft Comprehensive Plan - be more aggressive, ignore all Mayor Harrell edits
Date: Wednesday, April 17, 2024 7:55:41 AM

CAUTION: External Email

Hi One Seattle Comprehensive Plan draft update team -

First, thank you for the work you do for the City. This is complex stuff!

455-1

My community feedback is the following:

Reverse any and all requests, edits or edicts from the Mayor's Office - Mayor Harrell has been an utter failure when it comes to ensuring the needs of our community are met both in the near-term and long-term as it comes to 'Space Needle thinking' around housing. A homelessness emergency is a 'build more housing everywhere all the time' emergency. We need more housing in every neighborhood now, tomorrow, *and* 20 years in the future.

My personal Community Feedback to the One Seattle draft plan includes the following:

- a) the removal of any and all parking minimums from every residential zone in the city (a single parking spot can cost a residential developer up to \$100,000 - drastically increasing the cost of homes, condos, and apartment rents)
- b) 4-6 story condo/apartment buildings by right in all neighborhoods; 20 stories (or higher) tall residential buildings by right within 0.25 miles of all light rail station (please see the entire province of British Columbia's recent legislation allowing height by right within distances to public transit: "For all SkyTrain stations in Metro Vancouver, municipal governments will be required to allow minimum residential building heights of up to 20 storeys for sites within 200 metres of a station, up to 12 storeys for sites between 201 and 400 metres from a station, and up to eight storeys for sites 401 metres to 800 metres from a station.")
- c) groundfloor multi-use storefronts (office, shops, restaurants) by right in all neighborhoods with zero minimum parking required (this drastically reduces the amount of people who need to get into a car to go to work, eat a meal out or buy daily essentials for use at home)
- d) the inclusion of multi-modal transportation options included in all plans and requirements for minimum bike parking and public transit-supportive amenities in all residential buildings (e.g., public transit passes that come with each lease (King County Metro has already launched a program for this), real-time arrival screens, information displays, etc.)

I'm incredibly disappointed to learn - through The Urbanist - of how this plan has been watered down. Please see The Urbanist "Planners Proposed Bigger Upzones Before Harrell's Team Intervened, Records Show" (April 16, 2024) for the story I reference.

I fully endorse and agree with plans put forward by **Complete Communities Coalition** (<https://www.completecommunitiescoalition.org/policy-priorities>), The Urbanist, and other members of our community who are advocating for anything that was previously cut from the Comp Plan, including an aggressive Option 6 as advocated by Councilmembers Mosqueda and Morales prior to the recent elections.

Housing is the #1 reason I would leave Seattle and Puget Sound in the near future (3-5 years) - the Mayor's current Comprehensive Plan draft guarantees Seattle will continue to fail upward as a city.

Discard all edits by the Mayor's Office. Be aggressive and follow the plan you had prior to the Mayor's edits.

Thank you,
Matthew Trecha

Subject: Comments: Draft DEIS One Seattle Plan Comprehensive Plan Update
Date: Friday, May 3, 2024 3:40:13 PM

CAUTION: External Email

Thank you for the opportunity to comment on the One Seattle draft comprehensive plan, draft environmental impact statement and neighborhood rezoning proposals.

We are Caroline and Mike Ullmann; we've lived in Maple Leaf since 1998. Our residential lot has several mature evergreen trees, we garden without pesticides to support wildlife and the city recently designated our street (12th Ave NE) as a "Neighborhood Greenway." We have a deep respect for nature conservation, the positive effects of living beneath trees and the preservation of habitat.

We acknowledge and support the need to provide safe, affordable, comfortable housing for a diversity of income levels, family sizes, culture and ages. Mike helped found a membership-based nonprofit called NEST (North East Seattle Together) designed to allow seniors to safely age in place in their own homes, with support from volunteers and trusted vendors.

We respectfully submit the following comments.

Seattle is made up of a number of distinct neighborhoods, each with its own unique identity and characteristics. Maple Leaf is an established neighborhood known for its quiet, leafy residential streets. It is bordered by Interstate 5 and includes several arterials (5th Ave NE, Roosevelt Way NE, 15th Ave NE, Lake City Way NE, NE Northgate Way). It is family-friendly and not too far from the urban center, though transit cuts have made it harder to commute by bus to downtown Seattle in a timely fashion.

Maple Leaf Neighborhood Center

We support adding corner stores, small businesses and small apartment buildings in neighborhoods, and we appreciate that per the Growth Strategy Summary, Neighborhood Center boundaries would be determined by further analysis and community feedback.

You used Maple Leaf in your plan as an example of a Neighborhood Center, but siting it at NE 90th St and Roosevelt Way doesn't meet the criteria per the One Seattle Plan FAQ. It doesn't have frequent transit. It isn't near everyday essentials such as grocery stores, pharmacies, libraries, banks, post offices, or most professional services – the four corners of its "commercial core" consists of a hardware store, a specialty toy store, a restaurant and a private school. The area already has multiple multifamily/apartment units. In fact, the recently completed, 5-story Maple Leaf Apartments is now leasing its 69 units, though regrettably they

457-1

are market-rate+.

The proposed circle for higher density of up to 5-6-story development interrupts the 12th Ave NE Greenway, defined as a “safer, calmer neighborhood street where people walking and biking are the priority.” This is especially concerning given the circle includes the stretch north of Maple Leaf Reservoir Park, which is a veritable promenade route for pedestrians, kids on bikes, dog walkers, etc.

Non-arterial streets in the proposed circle are narrow and density of the scale proposed would block the sun, reduce the tree canopy and associated animal life, block air flow and create concrete canyons that would destroy the character of the neighborhood and the very reason people want to move to Maple Leaf.

A better site for a Neighborhood Center would be at either Maple Leaf’s south end (near Lake City Way and NE 80th St) or closer to Northgate at the north end of the neighborhood. Either location has better access to transit and services, and the ability to scale up new residential buildings without adversely affecting the smaller, quieter streets.

In addition, the proposed 20+block circle is overly broad for the 5-6 story buildings the plan recommends as appropriate for the area. You can see on the aerial photo of Maple Leaf that you used in your presentation that the blocks around NE 90th St and Roosevelt Way NE are thick with mature trees. We will talk further about trees below, but for a city whose goal is to increase its shrinking tree canopy, it makes no sense to cut down mature trees that are making a significant contribution. The Neighborhood Center development zone should be modified to be a quarter-block from the main arterial along Roosevelt.

If the final version of the plan does not modify the size of the circle, then development beyond a quarter-block from the main arterial should be limited to buildings of 2-3 stories to better fit the character of the neighborhood.

RECOMMENDATIONS: Re-site Maple Leaf’s Neighborhood Center. Modify the circumference to a quarter-block on non-arterials. Limit density beyond a quarter-block on non-arterials.

Affordable housing

We support the need for ample, diverse housing, particularly the need to expand affordable housing, citywide. But we don’t see any data re: how many affordable units will be produced under this plan, aside from noting the affordable housing bonus to allow 6 units if 2 are affordable to low-income households.

The plan doesn’t require developers to take part in the city’s Mandatory Housing Affordability program, and we understand planners are concerned that including that requirement won’t

457-1
cont

457-2

pencil out for builders. Please take a closer look at that. And please don't exempt developers from design review in exchange for promises of affordable housing – then we'll just get ugly, shoddy affordable housing – hardly equitable for a population that most needs equity.

The DEIS executive summary's section on Population, Housing & Employment states that all alternatives will increase income-restricted and affordable market-rate housing by increasing housing supply. Where does this assumption come from? Please amend the DEIS to cite sources for that conclusion, and provide an estimate of how long it takes for increased housing supply to filter downward to become affordable at less than 60% area median income for renters and 80% AMI owner-occupied.

We are not seeing lower prices in our neighborhood. Maple Leaf single-family homes are each being replaced with 3 large townhouse/ADU/DADU units, each of which sells for \$800,000-\$1.3 million. Hardly affordable. The plan considers apartments to be affordable alternatives but our neighborhood's newest apartment building calls itself luxury housing and is renting units for \$1,800 for a 400-SF studio to \$3,100 for 2 bedrooms. Only 2 of the 69 units in the 5-story building are 2 bedrooms, which doesn't encourage families. On the other end of the spectrum, at least one Lake City Way building designed to rent for 60% AMI is having trouble finding tenants because even that is too expensive for many families.

Also, please amend the plan to encourage social housing, land trusts and local decision-making authority to invest in affordable housing that meets the needs of the neighborhood. Give neighbors and local community organizations first dibs to bid on property for sale, ahead of regional or national developers.

RECOMMENDATIONS: Analyze and source supply/demand/affordability over time. Examine MHA. Encourage social housing.

Transit and parking

We love the concept of a 15-minute city where everything you need in daily life is but a short walk, bike trip or bus ride away. In retirement, we enjoy being able to walk to buy coffee, a light bulb or a math game for kids in our own neighborhood.

But bus service in Maple Leaf has been decimated in recent years. Caroline rode her bike to work downtown year-round for 15+ years, and took the (now defunct #77) bus when she couldn't cycle. Busing downtown in a timely fashion is no longer possible, given the region's decision to prioritize light rail over buses. Were Caroline still working, she'd either have to spend more of her day commuting (walk 20 minutes or take a local bus to Northgate, take light rail through the University District and Capitol Hill and eventually downtown) or choose to drive.

457-2
cont

457-3

We also question the urbanist belief that most people don't need cars or off-street parking. Maple Leaf is the third highest hill in Seattle, and 13% of Seattle's population is 65 or older, forecast to grow by 75% by 2045, per the plan Housing Appendix. Citywide rezoning plans that depend on prospective improvements to a transit system not under the city's control must address the concerns of older people.

Being able to walk/bike/take Maple Leaf's very limited public transit is an aspirational goal for a limited, able-bodied portion of the population. It's unrealistic, discriminatory, humiliating, and isolating for older people, or people with disabilities or limited strength. Three people on our street alone use canes or walkers. In addition, the east side of Maple Leaf is very steep, which provides extra challenges for people with mobility issues.

Maple Leaf now has only 2 local bus routes, neither of which goes downtown. The #67 runs along Roosevelt every 15 minutes (between Northgate and the U-District). The #73, which used to go downtown, was rerouted and now runs every 30-60 minutes along 15th Ave NE to the U-District. Bus service was removed entirely from the 5th Ave NE arterial several years ago, and the well-loved, peak-only #77 commuter bus downtown also was cut.

Given the city doesn't control Metro, it is disingenuous to add high density developments along assumed frequent transit routes, expecting that bus service will follow, when in fact we have been losing access to transit for years. We need better bus service before we redesign the city.

Parking also is an issue, and we are troubled by the lack of required off-street parking in the plan. On-street parking already is a premium in Maple Leaf, particularly around the Maple Leaf Reservoir Park and local restaurants and coffee shops. Modern cars don't fit in garages of older homes and not all homes have usable driveways. The new 69-unit apartment building on Roosevelt has underground parking but is charging \$175 extra a month for a stall. Given that the monthly rents are so high, we predict that some people won't want to pay extra to park, and will opt to jostle for space on the street.

RECOMMENDATIONS: Site Neighborhood Centers near transit hubs. Address needs of older people. Mandate parking in residential redevelopment.

Tree preservation

We support the city's aspiration to achieve a 30% tree canopy, and note that coverage has shrunk in recent years, per the 2022 citywide review of tree canopy cover.

We believe more analysis of the effect of development on the tree canopy is needed for each proposed Neighborhood Center, and that the DEIS includes statements that either are irrelevant or not supported by facts.

457-3
cont

457-4

The physical, mental and environmental benefits of preserving a healthy tree canopy are well-established, as are the adverse effects of losing trees.

Neighborhood Residential areas provided 47% of the tree canopy area in 2021, per the citywide review, and the Maple Leaf area has a moderate tree canopy cover of 25-40% (DEIS Exhibit 3.3-2 Plants and Animals). Proposed zoning changes in Neighborhood Residential areas increase lot coverage from the existing 35% to 50% and reduce front and rear setbacks, which would have a significant effect on plants and animals.

Per the DEIS Plants and Animals Impacts section: “Projects that increase the area of individual parcels occupied by buildings and impervious surfaces would be expected to result in long-term (but localized) reductions in the diversity and/or abundance of plant and animal communities in the affected areas.”

Furthermore, the DEIS examination of the Impacts of Alternative 2, which creates Neighborhood Centers, specifically warns of the effect of development in the proposed Maple Leaf Neighborhood Center at NE 90th and Roosevelt. It notes that due to the relatively high proportion of existing tree canopy in the area, development there could cause so much loss that it could prevent the city from achieving its tree canopy goal.

The DEIS concludes that none of the alternatives studied would be expected to have significant, unavoidable adverse impacts on tree canopy cover, in part due to new tree regulations and in part because a lot of development-related loss of canopy cover would be reversed “over time” as replacement trees grow.

That statement needs rigorous analysis given the lack of information on the effect of development and on the quantity of trees lost in each Neighborhood Center, the absence of acknowledging the decreased benefits of newly planted trees, and the use of the vague term “over time.” There is a great risk of underestimating development-related canopy loss and overestimating canopy preservation due to regulations.

The DEIS further states that city development could help preserve trees regionally, which certainly cannot be proven given that other cities make their own density decisions. Likewise, stating that any decreases to plants and animals in the city of Seattle wouldn’t affect numbers in the wild is irrelevant since the DEIS is not analyzing effects of development in the wild. Those statements are unsupportable and irrelevant and should be deleted.

In addition, the DEIS includes urban tree equity as a mitigation measure – namely, planting more trees in areas with disadvantaged populations. We support adding trees in those areas; it makes sense and it’s the right thing to do from an equity standpoint. But cutting down

mature trees in other areas does not make sense, and does not balance the scale.

In short, the mitigation measures proposed are based on faulty assumptions and are not appropriate to the scale of the loss.

RECOMMENDATIONS: Guarantee protection for large trees. Evaluate projected canopy loss for each Neighborhood Center. Define time needed for newly planted trees to achieve benefits of mature trees. Remove irrelevant and unsupported assumptions.

Thanks again for the opportunity to share our views. Please let us know if you have any questions about our comments. We look forward to further engagement.

Subject: Comment Re: Comp Plan - More Housing Needed
Date: Monday, May 20, 2024 11:51:28 AM

CAUTION: External Email

Hello -

I write to submit a comment on the proposed Seattle Comprehensive Plan. I would like the city to pursue the Housing Abundance Map, i.e., the earlier Comp. Plan draft that was rejected by Mayor Harrell's policy team.

Since the 2021, my rent has increased year after year, and I expect it to increase again when I renew my lease. We need an ambitious plan to handle the housing crisis and cost of living crisis that go with a lack of housing. Only the abundant housing plan can turn us in the right direction, not the current comp. plan.

Thank you,

Skyler Urban.

Subject: Comment on Seattle's One Comprehensive Plan EIS
Date: Friday, May 3, 2024 9:50:24 AM

CAUTION: External Email

This email is to serve as public comment on Seattle's Comprehensive Plan Environmental Impact Statement.

1. Section P 3-3 states that "none of the alternatives would be expected to result in impacts reducing the likelihood of survival or recovery of a plant or animal in the wild." **How would Seattle's comprehensive plan affect available standing habitat for Seattle's urban ecosystem and what impacts are created from the plan regarding landscape fragmentation and wildlife corridors?**
2. Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." **What is the effectiveness of tree planting programs designed for tree replacement in preserving habitat and ecosystem functions? How does this impact Seattle's likelihood of achieving its canopy and climate goals set forth?**
3. The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. **How does the emphasis on public land achieving canopy goals account for the fact that current assessments show that canopy in parks is declining? How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development?**

The city's comprehensive plan is meant to serve the people of Seattle, and not sit in the pocket of the developers and its industry.

Best,
John Valett

Comments Planning and Community Development EIS,

460-1

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

CAUTION: External Email

Hello,

I am concerned with the current proposal to increase housing in Seattle with regards to the urban forest and animals living within.

Specifically, in Section P 3-3, it states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild." However it does not spell out clearly how the plan will impact our city's plants and animals. I think this must be addressed.

This same section also claims that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." However it seems to me that there is an in depth analysis lacking that will show that all the plants removed and corresponding fauna affected by such removal will be adequately "substituted" with the tree planting programs. Can you "show your work" like they use to tell my kids in grade school? It's hard to imagine the increased hardscape will not have unavoidable adverse impacts on tree canopy cover.

Finally, how is it possible that Seattle will reach its 30% canopy goal when the new tree ordinance translates in a net reduction of private land available for trees? Is there really enough public land that grants the assumption that the 30% goal will be reached? Over the years we have seen how private developers (whether for buildings, townhomes or private residences) remove trees over and over again. How many trees have to die, how many old, established trees will be cut? Has this plan made an accurate prediction of how many trees will need to be planted in these areas every day/month/year to make up for the trees killed by the proposed development?

Let us not forget that green spaces in cities mitigate the effects of pollution and can reduce a phenomenon known as the urban heat island effect.

Please, save our urban forest!

Sincerely,

Luz Villasana

CAUTION: External Email

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

CAUTION: External Email

Greetings--

My partner Robyn Ramsey and I attended the Seattle Rezoning District 1 Info Session on April 29th in West Seattle. After reflecting on the information presented at that community meeting and reviewing the online information about the plan we have the following comments.

463-1

We are long-time Seattle residents and have been home owners for a good portion of our adult life. Seattle is at a major turning point in its existence and West Seattle residents recently also had a first-hand, front row seat at what happens when a major citywide medical emergency and a major West Seattle infrastructure crisis occurs simultaneously. And that also prompted us to imagine what might happen if there is a major earthquake in our area in the near future.

As we drove home from the presentation a week ago and as we have traveled around the city in the past week we have tried to imagine what the Seattle of the future might look like with four housing units built on many of the currently single family blocks we travel past. And it struck us repeatedly that we would not want to live in the city with the density proposed by this plan as it is currently proposed.

There is no question that we must take a creative look at trying to solve the homelessness crisis we are experiencing by providing more affordable housing options, but this plan would result in dramatically altering the unique character of our city that attracted us to live here in the first place. And has not really resulted in more affordable housing units in those new multiple unit rowhouses

If we are going to truly have a "comprehensive plan" it also needs to address the needs we will have in this denser, more populous city. That means more medical care facilities in all parts of the city. That means having an assurance that the basic infrastructure of the roads, bridges, energy grid, water supply, sewer systems and other critical parts of the infrastructure are

properly maintained and improved where needed.

The city has also just recently embarked on a dramatic, major plan to protect the existing tree canopy and additionally expand the tree canopy towards a 30% canopy goal. The impact of the higher density of the residential "urban neighborhoods" envisioned by this plan is not clearly taken into account. And it is not at clear how the goals of that tree canopy plan and this one will align.

The Fauntleroy neighborhood (and adjacent neighborhoods) we live in are also significantly impacted by the ferry traffic growth of people traveling through our West Seattle neighborhood from nearby areas as people move to nearby places like Vashon Island and over to Kitsap County to escape the already existing density of our Seattle urban landscape. And there does not seem to be a well coordinated effort by Metro Transit, SDOT and WSF to coordinate handling impact of the traffic traveling through our neighborhood. This impact needs to be properly addressed in the EIS review of this One Seattle Plan.

We look forward to hearing more details about how this One Seattle Plan/ Comprehensive Plan evolves and develops.

As a native Seattleite, I strongly support the thoughtful, science-based recommendations that Birds Connect Seattle submitted to your office (see attached). BCS is one of the oldest and most established conservation organizations in our great city, and it's imperative that your planning team listen to their credible advice and apply their input to the One Seattle Comprehensive Plan.

464-1

In my lifetime, Seattle has rationalized sacrificing trees and surrounding nature under the guise of "job growth" or "property owner rights" or "urban villages" or whatever the new spin is. We all know it means more clearcutting, more concrete, more congestion and a lower quality of life for all.

Seattle can be a leader in protecting what's left of our dwindling tree canopy, parks, habitats and the wildlife that depends on us. Our city leaders must be less focused on developers and their endless paper greenery, and instead, **care more about the dwindling natural greenery in our Emerald City.**

Your committee has the power and opportunity to preserve and restore health to our best assets. Please do the right thing before it's too late.

Sincerely,
Sharon Wada

Subject: Save mature trees throughout Seattle
Date: Monday, May 6, 2024 4:12:23 PM

CAUTION: External Email

Your draft proposal on the environment (comprehensive plan and environmental impact statement) is bad for the environment and bad for people's health. Alternatives 2 and 4 would save the most trees, but your overall philosophy is wrong.

It would be beyond short-sighted to think that the negative effects of a mostly treeless high-rise dense city could be offset by trees growing miles away. Reasons include:

1-the suburbs are increasing dramatically as the increasing rents drive people out of the city, so that argument is false.

2-it takes decades for a tree to truly have an impact on the environment, cooling and protecting people from our increasingly hot summers, and housing wildlife, particularly birds, who need mature conifers in which to live and nest, for the most part. Species of birds are going extinct at an alarming rate across the country, and it is all our responsibility to protect the natural world, including wildlife and trees. Temperatures on the ground are less when mature trees exist within cities. Otherwise, heat islands are created, and with global warming, these trees could save human lives, as well. You are being short-sighted to a dangerous degree.

3-this city has become an increasingly unpleasant place to live, crowded with highrises, and the presence of mature trees in neighborhoods really makes a difference between reasonably tolerable and absolutely unbearable. Those kinds of conditions drive people further out past the suburbs into the exurbs, into forest areas themselves, rendering your arguments foolhardy and cynically false.

4- Plans for replanting trees quite often fail, as it takes considerable attention to raise a young tree successfully into a semi-mature tree. Vandalism, lack of adequate watering, and topping kills many young trees planted in neighborhoods. Non-native trees do not support native bees, among other issues, either.

5-If you reduce space for new trees, while removing mature trees due to development, Seattle will not ever be able to reach its tree canopy goals, which are not very impressive in the first place. You would be causing irretrievable damage to Seattle's environment and to its liveability, for both humans and wildlife, especially in the face of global warming. Humans do not have a moral right to destroy the environment.

Sincerely, Erin Wade

Hello Tammy Morales, Tanya Woo and to whom it may concern;
I am writing as a long time Rainier Beach resident to provide input on the Seattle comprehensive plan/Environmental Impact;
Please re-consider any EIS that does not specifically detail the impacts on our valuable urban birds and wildlife and plan for their protection.
Please make sure the alternatives chosen provide analysis of what the effect of increased buildings and accelerated tree removals will have on the urban tree canopy cover in terms of health(physical and mental), climate, wildlife benefits and stated goals of 30%.
What analysis is there that can consider carefully how loss of large urban trees with their valuable contributions can be replaced by smaller re-plantings and time needed for maturation?
Thank you for your careful consideration of these issues so important to the future livability of Seattle for all Generations (people and wildlife)!!
Sincerely,
Christina Wagner

Subject: Comments on DEIS for the One Seattle Plan
Date: Saturday, May 4, 2024 2:49:28 PM

CAUTION: External Email

1. The estimated housing needs are based on the notion that no household should have to spend more than 30% of their income on housing and basic utilities. Has the city of Seattle adopted this aspirational objective in any official way (resolution, ordinance, charter)? What legal mechanism requires the city to accept this as a goal for the CP growth strategy? Note that King County uses 40% as a more realistic share of income for housing. The Dept of Commerce acknowledges that the 30% measure does not apply to home buyers. This is a major policy question that is not analyzed in the DEIS but forms the basis for the potentially exaggerated housing demand estimates.
2. The Housing Appendix includes tables purporting to show the net new housing units by neighborhood for each of the DEIS alternatives. However, using Greenwood/Phinney as an example, the differences across the alternatives are negligible for both housing and jobs. How is this credible given the differences in the alternatives and the expansion of boundaries and zoning changes anticipated by the "centers" concept? Please explain the methodology behind these estimates.
3. The No Action alternative meets the GMA/KING COUNTY requirements to produce the 80,000 new housing units and the updated development capacity report estimates a capacity under existing zoning to almost double that number. What is the justification for selecting any alternative to reach 100,000 or more net new housing units? What new code requirements will need to be enacted to meet the housing needs of households between 0 and 50% AMI, since these low income HH represent close to half of the projected future housing needs?
4. The FEIS should include an estimate of the net new housing units that can now be created under HB1110 and the type of units (townhouses, flats, cottages) and occupancy status, i.e., rental, owner, congregate/shared housing. The estimates should recognize that nearly half of the parcels with NR 1 zoning are less than 5,000 SF.
5. The DEIS claims that existing regulations are adequate to mitigate all environmental impacts however this has a hollow ring to it given the clearly observable impacts of a growing population on energy demand, water supply, surface water quality, tree canopy, air quality (more VMT and congestion) and public safety. How will the environmental impacts of becoming a city of one million people be tracked and addressed over the timeframe of this plan?
6. The DEIS does not address the socio-economic impacts of the Growth Strategy. The FEIS should include an analysis of the public costs for infrastructure (parks, transportation, energy, drainage, wastewater, solid waste) to meet growth demands. How will increasing utility rates and property taxes under the anticipated zoning changes affect affordability for property owners and renters including those on fixed incomes? How will increasing cost of living in Seattle drive all kinds of displacement, not only from those areas mapped as having high risk of displacement? What measures will be required to preserve existing 'naturally affordable' housing including small apt buildings, older duplexes, triplexes, and small commercial

469-1

469-2

buildings that provide space for the desired urban amenities in the "15-minute" neighborhoods? The FEIS should address these elements that effect livability and desired variety in the urban built environment. We already see the monotony of the townhouse/rowhouse explosion and the dilution of design review. Which alternative will produce housing suitable for families with children, seniors, and people with disabilities?

469-2
cont

7. In the DEIS chapter on utilities, Area 1 is described as having significant drainage and wastewater deficits yet Area 1 is targeted for the greatest percentage of new housing under two of the alternatives despite the upgrades to accommodate this growth being called 'cost-prohibitive'. Please explain this seeming inconsistency. In the section on electrical power, the DEIS says that City Light has plans to accommodate 65,000 additional housing units. How does that relate to the Growth Strategy that calls for between 80,000 and 100,000+ housing units? Do we really have affordable capacity to meet future electrical energy demand? Recent news coverage suggests we do not given climate change impacts.

469-3

8. The DEIS suffers from the usual problems of these documents. It does not articulate the cumulative impacts of the growth strategy and assumes that each incremental change is not significant. Seattle risks becoming the frog in the slowly boiling pot!

469-4

Subject: More family sized homes in Seattle
Date: Monday, May 20, 2024 12:14:14 PM

CAUTION: External Email

Hi,

I am a Phinney Ridge homeowner and a parent of two elementary school-aged daughters.

The current draft plan does not go far enough to create real housing options. We need more homes.

I strongly support adding family-sized apartment buildings throughout Seattle neighborhoods like my own.

My feedback:

1. Please **increase the Floor Area Ratio (FAR)** and **increase the height** for 4- and 6-plexes in residential neighborhoods. Increase FAR further if the homes are stacked.
 - a. Small lots - even 3,000 sqft - in our neighborhoods should be able to accommodate four families in comfortably sized units.
2. Buildings in neighborhood centers should be taller and boundaries should expand a quarter of a mile more.
3. Add back the original neighborhood centers.

Thank you,
Galen Ward
Phinney Resident

Upper three photos - Six houses - on one lot - in Maple Leaf

Lower photo - Three on one lot. Please note proximity to home on the left .

Established statistics tell us that crime increases in densely populated areas. WE ALREADY HAVE MORE CRIME THAN CAN BE DEALT WITH in Seattle. Within weeks my empty, locked car was broken

into - \$400. to repair, all around locked mail boxes broken into, a prowler tried to enter my back yard - deterred by locked gate, a deranged person damaged a considerable section of landscaping - and these are just little inconsequential crimes.

I see middle school children waiting for a bus on 90th & Aurora - with a scantily clad prostitute 6' away looking for customers, another one working the west side of the street, while on the south side of that intersection a cluster of people are doing drugs. What will happen when people are packed in even more than they are now?

Dear One Seattle Planners

I am not opposed to increased housing in Seattle - but the proposed plans are very concerning to me. If you would, please read more about the following:

- 1 Location
- 2 Density
- 3 Affordability
- 4 Design
- 5 Tree Canopy

Why are already crowded neighborhoods on the high density plans?

Why aren't wealthier, roomier neighborhoods - Broadmoor, Windemere, Laurelhurst, North Beach, Blue Ridge, Olympic Manor, Madison Park, Mt. Baker,

Seward Park, View Ridge, Madrona- being considered for Urban Centers, Urban Neighborhoods? Lack of public transportation might be an excuse - more bus routes could solve that issue.

473-1

Why are developers allowed to construct multiple houses on one lot with no concern regarding the negative effect on our neighborhoods? I recently walked through a site in Maple Leaf - SIX houses on one lot. Six feet between structures. The 1200 sq. ft. houses will be priced at \$750-\$800,000; the 2500 sq. ft. houses at \$1,600,000. Affordable housing? Really? Trees gone, over built lots destroying neighborhoods, minimal parking space, reduced property value for the rest of the residents- where's the positive part of this?

Nearer to me - three houses are being built on one very small back lot - and four on the front lot. Three stories tall, looming over, at a minimal distance, the homes on north, east and south sides. All sense of privacy is destroyed - in their homes and back yards. What about Seattle's tree canopy and restrictions on removing exceptional trees? In order to get a better price, the owner of the small lot, had three 'beyond exceptional' trees on his property line illegally cut down. Despite it being reported, eye witnesses and photos - the owner was fined a minimal amount and one 6' tree (now gone) was planted in a feeble attempt at the required landscape restoration.

Architecturally these high density houses are a blight on any neighborhood. The developer and his profit will be long one - no concern for having contributed to diminishing the quality of the neighborhood. I worked so hard to earn the money to buy our home and now am facing declining property value as these ugly, "crammed in" houses appear. Additionally these developers completely clear cut the lots, there may be plans for some landscaping but in reality little room is left for planting anything.

I am sending photos in an accompanying email to further illustrate my concerns.

I actually feel that my voice is "in the wind", that my and our concerns are futile. That

said - I do want to thank you for reading my email and hope that someone on the council will have taken seriously what I've said. I wonder how many of you live in the areas of proposed changes and how many of you live or are willing to live right next door to one of these multi storied houses. Sacrificing your privacy/peacefulness & value of your home for the greater good?

Sincerely,
Sheila Warsinske

Subject: Seattle's comprehensive plan
Date: Sunday, May 5, 2024 6:28:36 PM

CAUTION: External Email

1.

I am writing to you to comment on the comprehensive plan - Seattle's comprehensive plan which has been released related to URBAN TREES and urban tree removal.

474-1

I believe, out of the five alternatives in the plan, alternatives 2 and 4 would save the most trees. I am asking you to choose alternatives 2 or 4 in the comprehensive plan so we can build 100,000 new homes while preserving our trees.

I also have questions: The environmental impact statement doesn't protect urban nature:

Section P 3-3 states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild." **What is the impact of the plan specifically on Seattle's plants and animals?**

Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." **What analysis shows that tree planting programs, coupled with increased hardscape, will compensate for lost urban forest?**

The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. **How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development?**

Regards.

CAUTION: External Email

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.
- * We need more trees in seattle - especially in heat island areas - incentivize these plantings and follow up

Thank you for your consideration.

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

Subject: Seeking Your Support to Protect Seattle's Urban Tree Canopy
Date: Sunday, May 5, 2024 8:05:42 PM

CAUTION: External Email

Dear Councilmember Moore,

As a longtime resident of District 5, I am reaching out to express my concerns about the Environmental Impact Statement's lack of robust protections for our city's precious tree canopy.

While Section P 3-3 suggests minimal impact on Seattle's wildlife, I believe the public would benefit from greater transparency regarding the data and methods used to reach this conclusion. Providing access to this information would help foster trust and understanding among constituents like myself.

I also have reservations about the reliance on tree planting initiatives to mitigate the loss of mature urban forests. Although well-intentioned, saplings cannot provide the same ecological benefits as established trees for many years. We must be cautious not to irreversibly damage our green spaces in the short term.

Furthermore, I worry that the new tree ordinance's restrictions on private land planting, combined with our already unreached 30% canopy goal, may put undue pressure on limited public land resources. Has the city conducted a thorough assessment of the feasibility and cost of this approach?

Councilmember Moore, I believe that you share my love for Seattle's urban canopy and the countless benefits it provides our community. I kindly ask for your support in ensuring that our city's growth does not come at the expense of our environment and quality of life.

I would greatly appreciate any insights you could provide on how these concerns are being addressed. Your leadership on this critical issue is vital to preserving Seattle's green legacy for generations to come.

Thank you for your time and consideration.

Best regards,
Paul Weinstein
Seattle Resident

Subject: Environmental Impact statement lacks adequate protections for existing tree canopy
Date: Sunday, May 5, 2024 8:27:11 PM

CAUTION: External Email

Dear Council member Cathy Moore,

As a concerned resident of North Seattle's District 5, I am writing to express my serious reservations about the lack of protections for our city's existing tree canopy in the recently released Environmental Impact Statement.

479-1

First and foremost, I am troubled by the vague assertion in Section P 3-3 that the proposed plan will not significantly impact Seattle's plants and animals. Where is the concrete data to support this claim? Who conducted the studies, and what were their methodologies? The public deserves transparency and access to the scientific evidence that supposedly justifies this conclusion.

Furthermore, I challenge the notion that tree planting initiatives alone will adequately compensate for the loss of our mature urban forest. Newly planted saplings cannot provide the same ecological benefits as established trees for many years. Where are the displaced flora and fauna supposed to find habitat in the meantime? Once we lose our precious green spaces, they may be gone forever.

I also question the feasibility of reaching Seattle's 30% canopy cover goal, which we are already falling short of, given the new tree ordinance's significant reduction of available planting space on private land. Has the city calculated how many acres of public land would need to be dedicated to tree planting to make up for this deficit? Is there even enough suitable public land available?

Moreover, what is the projected annual tree planting rate necessary to offset the canopy loss from development? Is this figure realistically achievable within the city's budget and resources, year after year? I respectfully request a detailed, data-driven response to these critical questions.

Councilmember Moore, I urge you to prioritize the preservation and expansion of our urban tree canopy in all neighborhoods, on both public and private land. Trees provide irreplaceable benefits to our environment, health, and quality of life. We cannot afford to sacrifice Seattle's green legacy for short-sighted development.

Thank you for your attention to this vital matter. I look forward to your timely response and concrete actions to address these concerns.

Sincerely,

Colleen Weinstein

Plants and Animals Section

Protecting mature trees and other remaining native plant landscapes is key to Seattle's future as an attractive, livable city. The urban forest, including large evergreen and other mature trees on public and private lands, is an essential component of Seattle's green infrastructure. It provides a line of defense against climate change, as well as habitat for our city's rich but declining bird and wildlife populations.

484-1

Tree Canopy

According to DEIS "No appreciable impacts on regional populations of plants or animals... and a substantial portion of development-related reductions in canopy cover would be reversed over time as replacement trees grow and the potential for any such reductions would be limited by regulations that protect existing trees and require replacement of trees that are removed from private parcels."

This statement is overly optimistic and somewhat delusional when it comes to the devastating impacts that developments will have under a weak tree ordinance which the Seattle Times correctly characterized as "a chainsaw." Further, this statement makes the false assumption that a newly planted tree is an adequate replacement for a mature tree. The city's own urban forest management plan debunks this myth.

So does New York Times columnist and author Margaret Renkl, who wrote in her 4/28/2024 column "America's Urban Forests Deserve Protection: Newly planted seedlings can help, but with nowhere near the same effectiveness as mature trees." "But too few of us (including the city of Seattle) understand the crucial contribution that trees make in our cities and suburbs: cooling hot buildings, preventing storm-water runoff, improving air quality, pulling carbon out of the air and the like. Not even to mention the habitat—food, shelter, nesting sites—that trees provide our wild neighbors."

The DEIS claims were not substantiated. Current tree protections fall far short of the mostly ignored Seattle Urban Forestry Commission. Seattle is backsliding in its efforts to achieve our city's agreed-upon goal of 30 percent canopy by 2037. In fact, our canopy declined by 255 acres, the size of Green Lake, in the last five years.

As Renkl concludes and I agree "In rapidly growing cities (like Seattle), where even a robust plan for planting trees can't possibly keep pace with development, the preservation of existing trees would go a long way toward keeping the city livable for human beings as well as for wildlife."

Plant and Wildlife Populations

DEIS does not cite data nor does it provide data on specific impacts when it asserts that "The plant and animal species found in Seattle are widespread in the region; some are globally

abundant."

DEIS needs to do a more thorough, scientific assessment of Seattle's urban wildlife where dozens of bird and wildlife species are declining due to shrinking habitat. To conclude that "there will be no environmental impact to urban wildlife populations" after adding 100,000 housing units is ludicrous.

As one exasperated tree advocate said recently "We can kiss the Emerald City goodbye if we continue to allow lots to be clear cut for development." Renkl added in her column "There are ways to preserve the trees on construction sites, of course, but spec-builders rarely bother." Of all cities, The Emerald City in the Evergreen State should be first to "bother!"

Bonnie Williams

Comments on DEIS Executive Summary Impacts April 27

Earth and Water

486-1

Agree increased hard surfaces, and storm water run off are concerns and removing trees and clear cutting without more preservation of trees on private property should be worked into the Comp Plan at 30% tree coverage goal. Mitigations fall short for trees and need improved higher canopy goal of 30%.

I notice that every time a new unit or units connect gas lines or sewer systems that neighborhood streets are dug up then patched over until 3 or 4 projects on a block can cause street damage (patches) to the point it needs resurfacing or replacing which is very expensive.

Air quality

Smoke is terrible from wild fires and tree loss is mitigation not mentioned Increase tree canopy to 30%.

Plants and Animals

Alt 3 broad (HB1110 has similar impacts because 4-6 units will be spread across Seattle) and Alt 5 combined “would likely result in the largest tree canopy loss due to lower density development in Neighborhood Residential zones”. Reject Alt 3 and 5 based on tree loss.

Replacing older trees with new trees that take 30 years to grow 30 feet do not function to absorb storm water as older trees. Planting in right of way is not nearly as effective as trees need to be smaller there.

Rabbits are being seen for the first time in my Wallingford yard because they are being displaced with so much development Cute, but damaging to plants and they multiply quickly (how to get rid of them?).

Big influx of large trucks related to construction in neighborhoods and delivery vehicles that are gas or diesel and idle while delivering to pollute air.

Smokers for barbeques should be banned to emit smoke all day long and are toxic for neighbors breathing this air.

Energy

Expensive replacements for older homes converting from oil furnaces to electric are not mitigated.

Costly upgrades to connect electrical to so many more homes per lot not mitigated

April 27, 2024

Comments on DEIS Alternatives Executive Summary and overlap with Comp Plan

From: Bonnie Williams District 4 Wallingford

Regarding DEIS Executive Summary

487-1

Choose the No Action Alternative because the state mandated HB1110 is a required upzone. No other alternatives are needed. HB1110 should be considered the alternative of choice because the state requires Seattle to apply the legislation of Mandatory 4-6 units on all formerly single family lots across all neighborhoods outside urban villages depending on proximity to transit which creates massive capacity.

How much capacity in changing from commonly existing one home situation on a 5,000 square foot lot or smaller and increasing capacity to allow to 4-6 units per lot city wide? What are the impacts? How will concurrent infrastructure be met? Who will be at risk for displacement for 6 story apartments and retail surrounding new neighborhood centers and those ¼ mile from light rail and rapid transit?

Comp Plan Presentation to City Council March 11

Christa from the Mayor's office presented an overview to the Full City Council of the Comp Plan with Michael Hubner and Rico Quirindongo that was recorded on the Seattle Channel March 11, 2024.

The link is here:

<https://www.seattlechannel.org/CouncilBriefings/?videoid=x1553837=38:07>

Christa mentions in the recording that there are 160,000 units of building capacity without any up zoning. The Comp Plan plans for 100,000 units without considering what HB1110 does in opening up additional zoning capacity in the DEIS making the 4 expanded alternatives listed in the DEIS unnecessary to reach a goal of 80k to 100K unit capacity. The capacity created by HB1110 has not been studied so apparently the capacity of 160,000 is inaccurate without more study?

Up zone triggers suggested in the Comp Plan and Deis to be considered are:

Using an alternative from the DEIS focused, broad, corridor or combined
Frequent transit network bus lines across the city

Expanding capacity of 24 New Neighborhood Centers

HB1110 upzones anything within a ¼ mile of rapid transit or light rail.

All of these suggested ways to up zones need reducing or eliminating except to adapt to HB1110?

The other suggested alternatives and many ways to expand seem like excessive ideas that and will drive displacement. The DEIS needs to study impacts and capacity created by implementing HB1110. How the city can manage and provide the infrastructure needed to accommodate 4-6 units per lot required across the city? More thorough and transparent study in the DEIS of capacity projections and unique environmental impacts by implementing HB1110 alone. Council and the public need this capacity and impact information before any intelligent decision making by council should begin.

The state passed HB1110 legislation while the Seattle's DEIS was already underway. The DEIS and Comp Plan should include a history of 2019 upzones that was created through MHA and ADU/DADU legislation accounting for the additional development capacity that remains.

The impacts of HB1110 requires focusing on keeping infrastructure concurrent with growth especially roads and sidewalks in the north end not just housing. Neighborhoods are not all the same, but, sadly, the city has gotten away from direct efforts to work with neighborhoods on rezoning. One size does not fit all.

The incentive is built into HB1110 for developers as they get two extra units by making them affordable. Withdraw the extra floor height bonus for builder incentive for HB110. The heights and scale of six plexes should be compatible in older established neighborhoods

Impacts resulting from MHA and ADU/DADU upzones predict future impacts across neighborhoods

The impacts of new development, since 2019, have resulted in higher property taxes, more people being displaced due to demolition of older properties, loss of affordable rentals, and the necessity of businesses to relocate out of older established neighborhood business districts to make way for new large apartment or office buildings. Many service businesses such as paint, hardware, and plumbing, roofing, electrical, dry cleaning businesses have left. Restaurants have come in instead.

Mayor Harrell just announced a property tax increase for a 1.3 billion transportation levy for infrastructure. Developers should be paying impact fees, but the levy raises property taxes if passed.

Additional neighborhood impacts include construction noise, very large noisy heavy truck and trailer traffic hauling construction related equipment traveling through Wallingford neighborhood streets. Detours at the base of Stone way due to the storm water project has caused noticeably much louder truck traffic noise, detours for two years. Contractors post no parking signs for weeks at a time when building on any given block for weeks at a time. Many triplex projects are under construction for about a year and neighbors endure inconveniences. Streets are repeatedly torn up for utility connections for each new addition to a block until the project is complete. Construction is ongoing. Major streets with increased truck traffic are getting very beat up and patched for each new project. Lots clear cut of trees.

A proposal for 24 new Neighborhood Centers and is a big proposal.

I question the compatibility of mixing 4-6 story apartment buildings without parking and street level retail without parking. The proposal includes a trade off to up zone a 2-4 block radius of moderate family homes to be replaced by 4-6 story apartment buildings. The proposal goes too far as it is not tailored to

487-1
cont

each neighborhood. Some small businesses already exist in the targeted areas for new neighborhood centers. Some already have corner stores. Working with the neighborhood specifically is required. One size fits all is a mistake which includes a blanket 2-4 block circular rezone around a core intersection. The DEIS should have provided links to current zoning maps so people could be more informed of what properties might be targeted in the expansion plans. Too vague a concept to reply with informed feedback.

487-1
cont

Some people will walk, some businesses will draw people in cars from nearby and other areas of Seattle.

We have Amazon and many delivery services that go door to door. The retail business climate is experiencing a lot of crime. The police are too short staffed to be effective in this crime spree. The idea that most will walk or bike to use these services and stay in their neighborhood is idealistic. Neighborhood stores are often not price competitive.

.

Bonnie Williams

District 4

Noise

Reduce hours of construction on Sunday in neighborhoods and allow no construction noise on Sundays

Reduce size of trucks, trailers, construction equipment trying to squeeze through neighborhood streets

For people on busy streets large semi trucks hauling containers are speeding and they are extremely noisy passing through neighborhoods (stricter truck routes for semis and trailers).

We have Metro buses and Microsoft buses they contribute to noise and pollution especially if increased frequency.

Land Use

Loss of privacy with taller townhomes next to lower smaller older home and shorter setbacks

Arched roofs as compared to flat roofs cast less shadow from town homes on neighbors with solar panels . I suggest better roof designs on these taller buildings for protecting adjacent neighbor's solar panels.

Greater building bulk and heights definitely does decrease views of the city and protection of views is not happening nor are there good transitions from higher to lower building heights as promised.

Tree loss is horrifying and the tree legislation from 2023 unless changed will continue to create heat islands.

Unless the legislation goes to at least 30% canopy goal and OPCD ensures more lots are not clear cut.

Population housing and employment

“Alternative 3 spreading housing across the city would result in the highest level of renter displacement due to a higher ratio of homes demolished to new homes built”. HB1110 is closer to the “broad alternative 3” as both spread growth throughout the city so I conclude that Hb1110 would also result in the highest level of renter displacement. However, Hb1110 is likely to result with subdivisions of 5,000 square foot lots and homes for sale rather than rentals. Alternate 3 would be a bad choice because there is no way to justify that any alternatives will reduce displacement pressure because of increased production of affordable homes. Most of HB1110 will be market rate homes not “affordable” and that is unsubstantiated for either Hb1110 or any alternatives.

Mitigation to produce more affordable homes through implementing MHA developer fees for opting opt or providing units on site should be implemented. I recommend higher fees and more on site through city council review to strengthen the plan.

Cultural Resources

I believe preservation of historic landmarks and historical neighborhood honorary designations should be encouraged and contiguous areas of historic homes celebrated and shared through educational events , walks. I agree funding should be provided for additional historic surveys.

Yes I agree “ Modify demolition review process so that historic review occurs even if SEPA thresholds are increased.

Transportation

Safety on public transit is priority and east west connections to light rail improved.

Prioritize moving cars efficiently over walking, biking while adding improvements for all.

Include maintaining Aurora as a major highway two lane without bike lanes, there are other safer routes for bikes ,scooters.

Public Service

Prioritize adding police and fire protection staffing and equipment to be concurrent with growth.

Parks are overcrowded on sunny weekends in Seattle and some overcrowded all the time. They need to be safe and clean from homeless encampments and drug needles.

Building homes without yards and green space for child play and adult recreation is a resource on private property going away with many new housing types. You do not have to escape to a park if you have a yard.

Green streets should not be permanent and In Wallingford and Phinney. These streets prevent people from getting to small businesses without detours in cars. They are not used heavily enough to justify their existence. They should reopened and signs removed. In some areas of the city, it may be different, but here you see no one hardly using them as intended.

Utilities

“All alternatives have the potential to stress utility systems. “No real mitigations offered. It takes money and infrastructure and who will pay? Why not developer impact fees? Why a levy by the Mayor to raise property taxes for these impacts? Area 1 and 2 where I live will be most impacted by demand for water, electricity, wastewater, stormwater collection. Alt 5 has the greatest impact so avoid alt 5.

CAUTION: External Email

I live near Green Lake park, and seeing the number of visitors, families and children, that visit is a clear indicator that voting citizens want and need more trees in their own neighborhoods

I favor Alternative 2 for the EIS, as it will preserve the most canopy cover and limit the removal of established trees.

> Saying that "none of the action alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." is not backed up by facts but speculative at best. The new tree protection ordinance increases the potential for tree removal and loss in several ways. One is that all the zones that can undergo development under the ordinance state that the newly defined "basic tree protection area cannot be modified" despite Portland, Oregon and the Northwest Society of Arboriculture saying it can be modified to save trees. This and current guaranteed lot coverage of 85 - 100% for multifamily lots and above and rezoning to occur in the Neighborhood Residential zone means more trees, especially large ones, will be removed.

CAUTION: External Email

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

DEIS StoryMap Comment

Name: Tony Williams

Email: tmaxx98225@yahoo.com

Date: 5/3/2024

Comment:

My housing questions for the Comp Plan DEIS (due Monday 5 pm):

- 1) Where is the definition of affordability that's used in the DEIS? It's often said that you can't manage what you can't measure. Without a clear definition, the City has nothing to measure against.
- 2) If the Plan says it implements HB 1011, and the definition of affordability in HB 1011 is clearly stated at less than 60% of AMI for renters and less than 80% of AMI for owner-occupied, why isn't this statewide definition in the Plan?
- 3) In the DEIS Executive Summary, the objective for affordability is: "Increase the supply of housing to ease increasing housing prices caused by limited supply and create more opportunities for income-restricted housing." Where is the evidence that this dependence on supply-side, trickle-down housing works, or that it has worked to reduce housing costs to a level affordable to low-income people, during the past 5 to 10 years of the most extreme increases in supply of rental housing ever experienced in Seattle?
- 4) If you exclude fanciful supply-side housing promises, what is the likelihood that this plan will result in affordable low-income housing provided by the market?
- 5) Do you agree that given the state definition of affordability in HB 1110, that no new for-profit housing will be affordable without subsidies? Where does the DEIS acknowledge this?
- 6) Do you agree that given the state definition of affordability in HB 1110, no new market-rate townhouses are affordable to households with incomes less than 80% of AMI, without subsidies and income restrictions? Do you agree that townhouses are the predominant form of new housing being permitted in formerly single-family zones?
- 7) Although HB 1110 allows duplexes, triplexes, fourplexes, sixplexes, stacked flats and courtyard apartments, what is the likelihood that any of these Middle Housing forms will be built by current for-profit infill developers, when these builders refuse to build rentals of any sort? If these forms are meant to produce rental apartments in formerly single-family neighborhoods, and non-profits have told the city that they can't build there either, because they need economies of scale for construction and staffing, where are the programs or zoning incentives Urban Residential neighborhoods?
- 8) What is the environmental impact of continuing to lose 1.7% of our tree canopy every five years, when 70% of our tree canopy and most of the loss is in formerly single-family neighborhoods?
- 9) Where does the plan acknowledge that planting new trees takes 20-30 years to provide tree canopy, to shade houses, or to combat heat islands?

490-1

CAUTION: External Email

Please note my comment on the DEIS:

1: Section P 3-3 states that "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild." What is the impact of the plan specifically on Seattle's plants and animals?

2: Section P 3-3 states that "none of the alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." What analysis shows that tree planting programs, coupled with increased hardscape, will compensate for lost urban forest?

3: The plan states that Seattle will make progress toward its 30% canopy goal. The new tree ordinance substantially reduces private land available for trees. How much public land is available to reach the 30% goal? How many trees will need to be planted in these areas every year to make up for trees removed by development?

Sincerely,
Kevin W.

Comments Planning and Community Development EIS,

Yes, we need more affordable housing as the city grows, but we also need to have healthy and livable communities.

The following are comments on the One Seattle Comprehensive Plan draft Environmental Impact Statement (draft EIS).

- * The draft EIS does not respond to the need to keep as many existing 6" DSH and larger trees as possible during development for public health, climate resiliency, environmental equity or sustainable urban forestry.
- * The draft EIS does not analyze the probable scale of impact of tree loss or give numbers but speculates without proof that "none of the alternatives would be expected to have significant unavoidable adverse impact on tree canopy cover"
- * No time frame is given for any equivalent replacement of the loss of trees and urban forest ecosystem services.

Mitigation recommendations:

- * Reduce tree loss by allowing the city to require alternative site designs on building placement on lots, building up, joined housing units, and larger setbacks for street trees.
- * Require Tree Inventories and Landscape Plans be done before tree removal and building permits are issued.
- * Consider dedicated tree planting and retention areas for trees as Portland does and Tacoma has proposed.
- * Urge amendments to the current Tree Protection Ordinance to remove loopholes like the "basic Tree Protection Area" which allows removal of almost all large trees.

Thank you for your consideration.

DEIS StoryMap Comment

Name: James Wu

Email: notify@james.analogist.net

Date: 5/5/2024

Comment:

1. Section 3.2.2 and Appendix D of the DEIS describing Impacts of GHGs under Alternatives 1-5 scenarios seems to have simply scaled the population size to derive the inputs of VMT Data, with the rest of the variables being held constant or just defaulting to a single set of assumptions relying upon default "Kings County" (misspelled in DEIS Appendix D) data in order to run the EPA Motor Vehicle Emissions Simulator. Is this a correct reflection of the MOVES modeling framework described under Appendix D?
2. The possible modeling methodology described in #1 appeared to have led to the erroneous conclusion that Alternative 1 leads to the lowest GHG impact and Alternative 5 the most, which is an assumption that simply does not pass muster of how GHG pollution in suburban development patterns work and is a simulation that fails to reflect the reality of GHG emissions, as can be seen in any European city development vs an US city of equivalent population and size. This means the modeling methodology is misleading and does not inform reality. Has the City studied the impact of GHGs as an accumulative pollutant, with less urban development directly leading to a complete regional change in VMT patterns that causes exurban and suburban supercommutes that directly change the VMT patterns per regional resident?
3. If a 15-minute bus commute is transformed into a 90-minute regional exurban vehicle commute originating from outside of Seattle bounds into Seattle as a result of lack of affordable housing within Seattle, global and regional GHG emissions rise and is directly attributable and changable as other sources of Core vehicle emissions. Does the DEIS Core Emissions incorporate a model of emissions source attribution that correctly reflects reality, that counts displaced and expanded emissions as being something long range planning is directly responsible for?

 Seattle, WA 98104
 May 6, 2024

Response to Analysis of Plants and Animals in Section 3.3 of the One Seattle Comprehensive Plan draft EIS - lot coverage issue and building will be different than in the past and result in greater loss of large and other size trees. Numbers are given of housing units anticipated to be built. How many more canopy acres over time will be lost based on building projections in each of alternatives?

Page 3.3.7 in the Draft EIS states "Notably, most canopy loss was not associated with development activities; only 14% of the canopy loss occurred on parcels that underwent development during that period.

499-1

This is based on a false methodology assumption used in the [2021 City of Seattle Tree Canopy Assessment Final Report](#).

"Methodology: To assess the impact of development (building) on tree canopy, the SAL team analyzed canopy changes on parcels that were redeveloped between 2017 and 2021²² and compared them to parcels where no development projects were completed during this time. "Redeveloped parcels" were defined as sites that began and completed construction of new buildings that added residential units or new commercial buildings within the identified timeframe."

This is faulty methodology - compare it to number of housing units built in Seattle during this time period. Here is a CITY of Seattle chart on Development and Growth Information. Housing Units built are based on the year the project is completed, not projects started and completed in any 1 year or 5 year period. The same methodology should be used for tree loss. Look at canopy number on start of canopy period and end of period. Look at canopy loss on all projects completed in that 5-year period.

The actual canopy loss per project completed in the NR zone in the 2021 Tree Canopy Assessment was 39.8%. In multifamily the canopy loss per project was 49.5%.

The problem with comparing past loss to potential future loss is that zoning is going to change and the difference between single family housing units and ADU;'s and placing 4-6 units on what is now residential lots to the equivalent of multifamily lots is that a lot more lots will potentially have 4-6 plexes on them with even less room for trees. The LR zones right now are

guaranteed 85% development area of a lot and 100% lot coverage development area for MR, Seattle Mixed and commercial lots. **An analysis needs to be done based on projected building goals and projected canopy to be lost and what amount of tree retention and planting is required to increase canopy to 30% goal by 2037.** Goal needs to be increased afterwards if planting areas are available and more trees are retained rather than being removed. Climate resiliency, environmental equity, public health, ecosystem services, and sustainability suggest that efforts would be beneficial to maximize efforts to increase canopy area above 30% over time.

Steve Zemke TreePAC.org and Friends of Seattle's Urban Forest.

Subject: Questions regarding One Seattle Comprehensive Plan draft EIS
Date: Monday, May 6, 2024 3:12:05 PM

CAUTION: External Email

- What is your estimation of planting needs and time frame to replace canopy lost during development (over 5 year periods as tracked by the city's canopy study)? The Tree Protection Ordinance refers to "tree replacement required shall be designed to result, upon maturity, in a canopy cover that is at least roughly proportional to the canopy cover prior to tree replacement." Would you agree that in most cases removing an 80 year old tree will take probably 80 years to replace?
- Is canopy replacement equivalence even possible with replanting since removed trees, which if not removed, would have increased growing according to scientific articles? It would appear that you've lost any canopy growth that would have occurred if the tree had not been removed.

How many acres are available and suitable for planting trees in each of the following public areas - the city's right of ways, Natural Areas and Developed Parks?

- How many trees and what size (small, medium and large size) will need to be planted in the city every year to make up for trees and canopy removed during development on lots?
- What is acreage is needed and available to plant trees on private property?
- When will it be possible to reach the 30% citywide goal?
- What potential is there for more than 30% tree canopy in Seattle over time?
- Is up to 40% canopy coverage, over time, as proposed in the previous Comprehensive Plan possible with intense planting?
- What is the projected loss in canopy volume over the next 20 years as big conifer trees and others are removed?
- Canopy volume, especially of coniferous trees during our rainy season, is a critical factor in reducing stormwater runoff, particularly in the rainy season in Seattle. Is their loss really possible to replace in a reasonable amount of time?
- What is the projected increase in stormwater runoff and what costs are associated with on site and alternative city water management policies of stormwater and pollutant runoff as a result?

500-1

As to commenting on other tree potential mitigation measures, add:

- Amend the Tree Protection Ordinance to require developers to maximize the retention of existing trees 6" DSH and larger through the whole development process, not just platting and short platting as required now. Existing trees are the survivors and are providing ecosystem services now.
- Give the SCCI Director the ability to ask for alternative site designs to save trees.
- Support building higher and building attached units to allow for tree retention and planting areas like Portland, Oregon has with 20% areas for multifamily and 40% for its 1-4 unit family zone. Zones like the industrial zone are allowed to remove all trees during development under the current ordinance.
- Amend the Tree Protection Ordinance to require the ordinance to apply to all city land use zones.
- Remove the "basic tree protection area" loophole in the current Tree Protection Ordinance that allows developers to unnecessarily remove almost all large trees on lots. It is not standard arboriculture practice according to the Northwest Chapter of The American Arboriculture Society.

Steve Zemke for TreePAC and Friends of Seattle's Urban Forest

From: [Steve Zemke](#)
To: [PCD CompPlan EIS](#)
Subject: Comments on One Seattle Comprehensive Plan.
Date: Monday, May 6, 2024 4:13:33 AM

CAUTION: External Email

The following comment is in regards to legislation passed last year on Comprehensive Plan requirements

1. In the Climate and Environment Section, p 149, of the draft One Seattle Comprehensive Plan, the heading **Tree Canopy**, should be changed to **Urban Forest and Tree Canopy**.
2. Discussion - Seattle's urban forest and tree canopy is fundamental...

Rationale for adding urban forest is legislative amendments noted in text below.

Highlighting is mine (SZ) for pointing out specific sections. Underlined areas are new to the 2023 legislation.

The Washington State Legislature in 2023 passed [E2SHB 1181](#) - AN ACT Relating to improving the state's climate response through updates to the state's planning framework.

Section 1.(14) Climate change and resiliency. Ensure that comprehensive plans, development regulations, and regional policies, plans, and strategies under RCW 36.70A.210 and chapter 47.80 RCW adapt to and mitigate the effects of a changing climate; support reductions in greenhouse gas emissions and per capita vehicle miles traveled; **prepare for climate impact scenarios; foster resiliency to climate impacts and natural hazards; protect and enhance environmental, economic, and human health and safety; and advance environmental justice. ...**

Section 3.(3) The comprehensive plan of a county or city that is required or chooses to plan under RCW 36.70A.040 shall consist of a map or maps, and descriptive text covering objectives, principles, and standards used to develop the comprehensive plan. The plan shall be an internally consistent document and all elements shall be consistent with the future land use map. A comprehensive plan shall be adopted and amended with public participation as provided in RCW 36.70A.140. Each comprehensive plan shall include a plan, scheme, or design for each of the following: (1) **A land use element designating the proposed general distribution and general location and extent of the uses of land, where appropriate, for agriculture, timber production, housing, commerce, industry, recreation, open spaces and green spaces, urban and community forests within the urban growth area.** general aviation airports, public utilities, public facilities, and other land uses. The land use element shall include population densities, building intensities, and estimates of future population growth. The land use element shall provide for protection of the quality and quantity of groundwater

501-1

used for public water supplies. **The land use element must give special consideration to achieving environmental justice in its goals and policies, including efforts to avoid creating or worsening environmental health disparities.** Wherever possible, the land use element should consider utilizing urban planning approaches that promote physical activity and reduce per capita vehicle miles traveled within the jurisdiction, but without increasing greenhouse gas emissions elsewhere in the state. **Where applicable, the land use element shall review drainage, flooding, and stormwater runoff in the area and nearby jurisdictions and provide guidance for corrective actions to mitigate or cleanse those discharges that pollute waters of the state, including Puget Sound or waters entering Puget Sound.** The land use element must reduce and mitigate the risk to lives and property posed by wildfires by using land use planning tools, which may include, but are not limited to, adoption of portions or all of the wildland urban interface code developed by the international code council or developing building and maintenance standards consistent with the firewise USA program or similar program designed to reduce wildfire risk, reducing wildfire risks to residential development in high risk areas and the wildland urban interface area, separating human development from wildfire prone landscapes, and protecting existing residential development and infrastructure through community wildfire preparedness and fire adaptation measures.

501-1
cont

2nd change - In the Land Use Element General Development Standards:
Policies L.U.4.8 add underlined words.

Urban forest and tree requirements to preserve and enhance the City's physical, aesthetic and cultural character and to enhance the value of the trees and urban forest in addressing stormwater management, pollution reduction, climate resiliency and heat island mitigation.

Steve Zemke
Friends of Seattle's Urban Forest

From: [Steve Zemke](#)
To: [PCD CompPlan EIS](#)
Subject: Additional Comments on draft EIS for One Seattle Comprehensive Plan
Date: Monday, May 6, 2024 2:00:55 PM

CAUTION: External Email

Comments on draft EIS

- P 3-3-29-30 Section on Climate and Environment** - Please analyze the potential environmental impact of the 5 options **on Seattle's urban forest and its plants and animals**. The urban forest is not just the canopy. Canopy area is only one measure of the urban forest. And all that is seemingly being looked at is canopy area but not also canopy volume. Some birds only live at the top of Douglas fir trees. Other birds live and nest midstory and others are in the understory. The understory from a plants and animal sense is part of the urban forest. The word understory does not show up in a word search of the Climate and Environment section. Canopy volume is important in helping slow or reduce rainfall which is a big factor in reducing pollution runoff into streams and Puget Sound and Lake Washington which affect salmon and Orca and other marine and freshwater life. Conifers are important for reducing stormwater runoff most in the winter when deciduous trees have no leaves. Our rainfall is highest in the winter and not the summer.

A word search of Climate and Environment Section (times mentioned) came up with: tree (237), canopy (187), urban forest (9), canopy area (1), canopy volume (0), bird (3 - migratory bird treaty), conifers (1), deciduous (1), native plants (0), native trees (0), small trees (0), medium trees (0), large trees (0), evergreen (0), deciduous (1), Douglas fir (0), western red cedar (0), big leaf maple (0), understory (0), street trees (6), park trees (0), insects (0), bees (0), pollinators (0). There are other words that can be also searched relevant to climate and the environment, but this is an indication that a lot of issues have been left out of the discussion and evaluation.

- This is a Seattle EIS, not a regional or state EIS.** Saying "unlikely to result in appreciable impacts on regional populations of plants or animals" and "none of the alternatives would be expected to result in impacts that would reduce the likelihood of survival or recovery of a plant or animal species in the wild" is avoiding commenting on the specific impacts on Seattle plants and animals. Please respond to what will be the specific impacts to the urban forest in Seattle in Seattle, not "in the region" or "in the wild" or otherwise.

p 3-3-30 Saying that "none of the action alternatives would be expected to have significant, unavoidable adverse impacts on tree canopy cover." is also not backed up by facts but

502-1

speculative at best.

The new tree protection ordinance actually increases the potential for tree removal in several ways.

One is that all the developmental areas covered by the ordinance state that the newly defined "basic tree protection area cannot be modified" despite Portland, Oregon and the Northwest Society of Arboriculture saying it can be modified to save trees. The Tree Protection Ordinance SMC 25.11.060 says the tree protection area can be modified by the Director in Section 25.11.060 and then in SMC 25.11.070 for NR and LR, MR, Seattle Mixed and Commercial Zones. It says that the "basic Tree Protection area" cannot be modified. This is a significant loophole that developers are using to remove large trees and contrary to standard arboriculture practice in other cities. It was introduced at the last minute and appears to not have been completely understood as to its impact by the Council and the public at the time. This is an action that should be referenced in the potential mitigation measures.

The current lot coverage of 85 - 100% for multifamily lots and above and rezoning to occur means more trees, especially large ones, will be removed. What is your estimation of potential canopy acreage loss (over 5-year periods consistent with the city's canopy studies) with increased development density in each alternative? The NR zone, following HB 1120, will result in a rezone we are told, probably next year allowing 4 plexes and six plexes in that zone which will significantly increase lot coverage.

SEATTLE CITY COUNCIL

May 22, 2025

**NOTICE OF A SEATTLE CITY COUNCIL PUBLIC HEARING ON TWO PIECES OF LEGISLATION:
LEGISLATION TO ADOPT THE ONE SEATTLE PLAN COMPREHENSIVE PLAN AND AMEND THE
LAND USE CODE TO IMPLEMENT THE ONE SEATTLE PLAN; AND
LEGISLATION TO IMPLEMENT HOUSE BILL 1110 AND OTHER STATE MANDATES ON A
PERMANENT BASIS (Phase 1)**

The Seattle City Council's Select Committee on the Comprehensive Plan will hold a public hearing on June 23, 2025, starting at 9:30 AM, on two pieces of legislation.

1. The first bill would adopt the Mayor's Proposed One Seattle Plan Comprehensive Plan Update ("One Seattle Plan") and amend the Land Use Code to implement changes in the One Seattle Plan (hereafter "Comp. Plan Bill").

The One Seattle Plan proposes adoption of new and amended goals, policies, and elements, and a new Future Land Use Map (FLUM), to the City's Comprehensive Plan, with a planning horizon of 2044. The One Seattle Plan includes extensive edits to the existing Comprehensive Plan, particularly in the following areas:

1. Housing and affordability: Expands housing opportunities across the City. Adds significant new zoning capacity to encourage increased housing supply and diversity. The Plan includes a new Growth Strategy and expanded Housing element.
2. Community and neighborhoods: Focuses growth and investment in complete, walkable, communities. Provides new opportunities for people to live in walkable mixed-use centers across the City. Examples include new Neighborhood Centers and opportunities to add corner stores in existing neighborhoods.
3. Equity and opportunity: Promotes a more equitable Seattle as growth occurs, including addressing the history of racial exclusion in neighborhoods, displacement, and unmet community investment needs.
4. Climate and sustainability: Features a new and expanded Climate and Environment element that redoubles Seattle's commitment to reducing GHG emissions from sources such as transportation and buildings and promotes a range of strategies to build community resilience and adapt to climate impacts like smoke, heat, and flooding.

In particular, the Comp. Plan bill would make changes to the Comp. Plan as follows :

- Amending the Growth Strategy and Land Use Elements to support a wider variety of housing including duplexes, triplexes, fourplexes, cottage housing, and stacked flats, in

areas currently dedicated primarily to detached housing, to increase housing choice and implement recent changes to state law enacted by House Bill 1110.

- Amending the Growth Strategy Element to create a new designation called Urban Neighborhood where a variety of low and moderate density housing options are available in residential areas outside of centers, including housing that meets the requirements of HB 1110 and higher densities along frequent transit arterials. Amending the FLUM to designate areas outside of centers as Urban Neighborhood.
- Retaining existing Urban Centers and Urban Villages, while renaming them Regional Centers and Urban Centers, respectively, to better reflect their roles in regional planning.
- Amending the FLUM to designate Ballard as a Regional Center to reflect its recent growth, existing zoning, and transit investments.
- Amending the FLUM to expand the geographic area of Regional and Urban Centers that are very small or will have new light rail stations.
- Amending the FLUM to designate a new Urban Center around the future NE 130th Street light rail station.
- Amending the FLUM to divide the 23rd and Union/Jackson Urban Center into two: the Central District Urban Center and the Judkins Park Urban Center.
- Amending the Growth Strategy Element to create a new designation called Neighborhood Center which would allow a greater variety of housing around existing business districts and/or areas with access to frequent transit, and amending the FLUM to designate 30 areas around the city as Neighborhood Centers.
- Amending the FLUM to redesignate South Park as a Neighborhood Center with associated boundary changes.
- Removing the Neighborhood Plans section of the Comp Plan due to the out-of-date status of many plans in this section and to remove any inconsistencies with updated citywide goals and policies.
- Adding a new section to the Comp. Plan for subarea plans for Regional Centers and Manufacturing and Industrial Centers.
- Revising the Land Use element to add overarching policies and update goals and policies on topics such as the role of various zones, urban design, parking, historic preservation, and environmentally Critical Areas.
- Amending the Transportation element to incorporate goals and policies that align with the newly adopted Seattle Transportation Plan, include new multimodal level of service measures, and to align transportation investments with the updated growth strategy.
- Rewriting the Transportation appendix to update the inventory of the City's transportation facilities and the analysis of how planned growth will affect those facilities, to include baseline data for level of service (LOS) measures, and to update and provide additional detail on transportation financing and investments.
- Amending the Housing element to clarify goals and policies to strengthen the City's approach to furthering housing supply and variety and address the need for affordable housing to meet the needs of all economic segments as required by HB 1220.

- Updating the Housing appendix to include data that meets the expanded requirements of HB 1220 and the Countywide Planning Policies, including analysis of existing capacity for affordable housing targets, displacement and racial equity, and other housing trends.
- Amending the Capital Facilities element and appendix to better address strategic planning, aging infrastructure, decarbonization and resilience, and to update facilities inventories and information about future investment needs.
- Modifying the Utilities element and appendix to include policies for individual energy, water, and solid waste utilities reflecting adopted long-range utility plans. Adding new policy sections for “Equitable Utility Services and Partnerships” and “Internet for All.” Update utilities inventories and information about future investment needs.
- Expanding the previous Environment element to be a Climate and Environment element implementing Resolution 32059 and State House Bill 1181 to address climate change and improve resiliency. Adding new sections on “Urban Forest” and “Healthy Food System” to reflect recently adopted plans on these topics.
- Amending the Parks and Open Space element to add policies about the right-of-way as open space, and new policies on “Partnering with Communities” and “Climate Resilient Open Space.”
- Modifying the Arts and Culture element to add a foreword about Indigenous planning, and policies about place keeping and Indigenous culture.
- Amending the Community Involvement element to add goals and policies related to community involvement partnerships, community capacity building, and engagement with Indigenous communities. Removing policies related to community and neighborhood planning from the Community Involvement element and moving this section, amended to focus on subarea planning, to the Growth Strategy element.
- Removing the Community Wellbeing element and consolidating many existing policies within other elements.
- Adding goals and policies in multiple elements that further race and social equity and support strategies to address displacement.
- Simplifying the Plan’s language and format and reducing redundancy.

Land use code amendments in the Comp. Plan Bill make technical changes such as updating references to new place type names in the growth strategy, and references to neighborhoods plans. Other changes include streamlining rezone criteria and amending criteria for rezones to reflect changed policy in the Growth Strategy element of the Comprehensive Plan.

2. The second bill would adopt permanent legislation to allow middle housing throughout Seattle’s Neighborhood Residential and Multifamily zones and make other changes to Neighborhood Residential zoning consistent with the One Seattle Plan and Washington State Law (“Phase 1 bill”). The bill would consolidate Neighborhood Residential (NR) 1, 2 and 3 zones into a single NR zone with consistent development standards across the city. Rezone criteria for NR zones would be amended consistent with the One Seattle Plan.

Residential Small Lot zones would be rezoned to the Lowrise 1 (LR1) zone, except for areas outside the updated boundaries of the South Park Neighborhood Center which would be rezoned to the new NR zone.

Key development standards for NR zones include:

Maximum density	1 unit per 1,250 square feet of lot area except that, consistent with state law, at least four units would be allowed on all lots, regardless of lot size, and six units would be allowed within a quarter-mile walk of major transit or if two units are affordable. For lots with environmentally critical areas (ECAs), density would be reduced in proportion to the percentage of lot in an ECA.
Minimum lot size	The creation of new lots smaller than 5,000 square feet would not be permitted. The minimum lot size would apply to the parent lot when creating new unit lot subdivisions.
Floor area ratio (FAR)	The amount of floor area allowed would be equal to the lot size times the FAR. Proposed FARs are: <ul style="list-style-type: none"> • 0.6 FAR for density below 1/4,000 sq ft (e.g., one unit on a 5,000 sq ft lot) • 0.8 FAR for density between 1/4,000 and 1/2,200 sq ft (e.g., two units on a 5,000 sq ft lot) • 1.0 FAR for density between 1/2,200 and 1/1,600 sq ft (e.g., three units on a 5,000 sq ft lot) • 1.2 FAR for density of at least 1/1,600 sq ft (e.g., four units on a 5,000 sq ft lot)
Lot coverage	50 percent
Height limit	32 feet plus a 5 foot pitched roof bonus
Minimum amenity area requirement	<ul style="list-style-type: none"> • 20 percent of lot area • The minimum dimension for amenity area would be 8 feet or, if the open space includes a circulation pathway serving multiple buildings, 11 feet • Amenity area may be private or shared • At least half of the amenity area must be at ground level. Only half of the amenity area not at ground level counts toward this requirement.
Minimum setbacks and separations	Front: 10 feet Rear: 10 feet without an alley, 5 feet for ADUs, and zero feet with an alley Side: 5 feet Separation between buildings within property: 6 feet
Accessory dwelling units	Accessory dwelling units (ADUs) would count toward the density and floor area limits shown above and be subject to the same standards as principal dwelling units, except that ADUs would have a maximum size

	limit of 1,000 square feet plus 250 square feet of garage and would not be required to provide parking.
Alternative standards for stacked flats	Stacked flats located on lots 6,000 square feet or greater and within ¼ mile of frequent transit are subject to an FAR of 1.4 and a density of 1 unit per 650 square feet.
Alternative standards for low-income housing	Low-income housing located on lots 6,000 square feet or greater and within ¼ mile of frequent transit are subject to an FAR of 1.8, a height of 42 feet, a density of 1 unit per 400 square feet and a lot coverage of 60%.
Trees	A new tree point system would be created, with a higher number of points required for projects that contain fewer units. More points would be given for 1) preserving existing trees during construction, 2) planting or preserving larger trees, and 3) preserving or planting evergreen trees. Parking requirements would be able to be reduced or waived if the waiver would allow the preservation of a Type 2 or Type 3 tree.
Design standards	Design standards would require pedestrian access pathways, entries along street-facing facades, and windows or doors occupying at least 20 percent of the street facing façade.

The bill would update zoning code provisions in LR zones to comply with State regulations and increase consistency across zones and building types as follows:

- Apply townhouse setback requirements to all building types, with a six-foot building separation requirement;
- Remove density limits;
- Modify structure width limits to apply a limit of 90 feet for LR1 and LR2 zones and 150 feet for LR3 zones to all housing types other than stacked flats;
- Apply the NR zone design standards to LR zones;
- Allow additional floor area for stacked flats in LR1 and LR2 zones;
- Apply a 20 percent amenity area requirement.

Additional changes affecting multiple zones:

Parking: No residential parking would be required within a half mile walking distance of a major transit stop in any zone. Outside that radius, one parking space would be required for every two residential units, except for projects that are exempt from parking requirements. Parking dimensions would be updated to be consistent with State law.

Corner stores: In NR and LR zones, stores would be permitted on the ground floor of buildings on the corner lots and lots abutting a street and an alley. Corner stores would be allowed up to 2,500 square feet in size. Permitted uses would be specified, and hours would be limited. No parking would be required.

Institutions. The proposed bill would make religious facilities subject to the same rules as non-religious institutions, and private schools would be subject to the same rules as public schools. The only exception is that the public school departure process would continue to be facilitated through the Department of Neighborhoods.

The residential zone use definitions would be updated to simplify the code and address existing problems; adult family homes would be allowed in all zones that allow residential uses as a home occupation as required by state law; and standards for essential public facilities would be updated to address new state guidance.

The bill would repeal the interim zoning regulations scheduled to be adopted in May 2025.

PUBLIC HEARING

The City Council's Select Committee on the Comprehensive Plan will hold a public hearing to take comments on the plan and related land use code amendments and rezones on Monday, June 23, 2025, at 9:30 AM. The hearing will be held in the:

City Council Chambers
2nd Floor, Seattle City Hall
600 Fourth Avenue, Seattle, WA

Persons who wish to participate in or attend the hearing may be offered the opportunity to do so remotely. If this is the case, the City Council will provide instructions in the meeting agenda on how to participate remotely. Please check the Select Committee on the Comprehensive Plan agenda a few days prior to the meeting at <http://www.seattle.gov/council/committees>. Print and communications access is provided on prior request. Seattle City Council Chambers is accessible. Directions to the City Council Chambers, and information about transit access and parking are available at <http://www.seattle.gov/council/meet-the-council/visiting-city-hall>.

WRITTEN COMMENTS

For those unable to attend the public hearing, written comments may be sent to:

Councilmember Hollingsworth
600 Fourth Avenue, Floor 2
PO Box 34025
Seattle, WA 98124-4025
or by email to council@seattle.gov

Written comments should be received by Monday, June 23, 2025, at 5:00 PM.

INFORMATION AVAILABLE

The Mayor's proposed One Seattle Plan Comprehensive Plan and associated legislation to implement the Comprehensive Plan are available at the Office of Planning and Community Development's website at <https://www.seattle.gov/opcd/one-seattle-plan>.

Questions regarding the One Seattle Comprehensive Plan may be directed to Michael Hubner, Office of Planning and Community Development at michael.hubner@seattle.gov or 206-684-8380 or to Lish Whitson, Council Central Staff at 206-615-1674 or lish.whitson@seattle.gov.

Questions regarding zoning code changes can be directed to Brennon Staley, Office of Planning and Community Development at brennon.staley@seattle.gov or 206-684-4625 or to Lish Whitson, Council Central Staff at 206-615-1674 or lish.whitson@seattle.gov.

Legislation Text

File #: CB 120993, **Version:** 1

AN ORDINANCE relating to land use and zoning; implementing a major update of Neighborhood Residential zones and modifying development standards in other zones to comply with various state laws; amending Chapter 23.32 of the Seattle Municipal Code at pages 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 98, 99, 100, 102, 103, 104, 105, 106, 107, 111, 112, 113, 114, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 216, 217, 219, 220, and 221 of the Official Land Use Map; amending Chapters 6.600, 14.08, 14.09, 15.32, 21.49, 22.214, 22.801, 22.907, 23.22, 23.24, 23.28, 23.30, 23.34, 23.42, 23.45, 23.47A, 23.48, 23.49, 23.50, 23.51A, 23.51B, 23.53, 23.54, 23.58C, 23.60A, 23.66, 23.72, 23.75, 23.76, 23.80, 23.84A, 23.86, 23.90, 23.91, 25.09, and 25.11 of the Seattle Municipal Code; renumbering existing subsection 23.54.015.K of the Seattle Municipal Code as Section 23.54.037 and further amending the section; renumbering existing subsections 23.54.030.F, 23.54.030.G, 23.54.030.K, and 23.54.030.L as Sections 23.54.031, 23.54.032, 23.54.033, and 23.54.034 and further amending the sections; repealing Chapter 23.44 and Sections 23.34.010, 23.34.012, 23.34.013, 23.34.072, 23.42.130, 23.45.512, 23.45.531, 23.86.010, and 25.09.260 of the Seattle Municipal Code; adding a new Chapter 23.44 and new Sections 23.42.024, 23.42.132, 23.45.519, 23.80.006, 23.80.008, 23.80.010, 25.09.055, and 25.11.025 to the Seattle Municipal Code; and repealing Ordinance 127219.

Full text of the legislation is attached.

CITY OF SEATTLE

ORDINANCE _____

COUNCIL BILL _____

..title

AN ORDINANCE relating to land use and zoning; implementing a major update of Neighborhood Residential zones and modifying development standards in other zones to comply with various state laws; amending Chapter 23.32 of the Seattle Municipal Code at pages 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 98, 99, 100, 102, 103, 104, 105, 106, 107, 111, 112, 113, 114, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 216, 217, 219, 220, and 221 of the Official Land Use Map; amending Chapters 6.600, 14.08, 14.09, 15.32, 21.49, 22.214, 22.801, 22.907, 23.22, 23.24, 23.28, 23.30, 23.34, 23.42, 23.45, 23.47A, 23.48, 23.49, 23.50, 23.51A, 23.51B, 23.53, 23.54, 23.58C, 23.60A, 23.66, 23.72, 23.75, 23.76, 23.80, 23.84A, 23.86, 23.90, 23.91, 25.09, and 25.11 of the Seattle Municipal Code; renumbering existing subsection 23.54.015.K of the Seattle Municipal Code as Section 23.54.037 and further amending the section; renumbering existing subsections 23.54.030.F, 23.54.030.G, 23.54.030.K, and 23.54.030.L as Sections 23.54.031, 23.54.032, 23.54.033, and 23.54.034 and further amending the sections; repealing Chapter 23.44 and Sections 23.34.010, 23.34.012, 23.34.013, 23.34.072, 23.42.130, 23.45.512, 23.45.531, 23.86.010, and 25.09.260 of the Seattle Municipal Code; adding a new Chapter 23.44 and new Sections 23.42.024, 23.42.132, 23.45.519, 23.80.006, 23.80.008, 23.80.010, 25.09.055, and 25.11.025 to the Seattle Municipal Code; and repealing Ordinance 127219.

..body

WHEREAS, the Office of Planning and Community Development, in cooperation with other

City agencies including the Seattle Planning Commission, began in 2022 a series of programs and events, under the title One Seattle Plan, to engage the public in discussions about potential changes to the Comprehensive Plan, consistent with the One Seattle Plan Public Participation Plan and documented in the One Seattle Plan Public Engagement Report; and

1 WHEREAS, in April 2021, the Washington State Legislature passed Chapter 300, Laws of 2021
2 (also known as House Bill 1287), which directed the Building Code Council to adopt
3 rules for electric vehicle infrastructure requirements; and

4 WHEREAS, the Office of Planning and Community Development held a scoping period for the
5 Environmental Impact Statement from June 23 to August 22, 2022; and

6 WHEREAS, in April 2023, the Washington State Legislature passed Chapter 322, Laws of 2023
7 (also known as House Bill 1110), which amended the Growth Management Act to require
8 certain cities, including Seattle, to allow the development of “middle housing” in all
9 residential areas, including at least four units on each lot and at least six units per lot near
10 transit or when at least two units are affordable; and

11 WHEREAS, in April 2023, the Washington State Legislature passed Chapter 333, Laws of 2023
12 (also known as House Bill 1293), which imposes limits on design review and requires
13 that design standards be clear and objective; and

14 WHEREAS, in April 2023, the Washington State Legislature passed Chapter 334, Laws of 2023
15 (also known as House Bill 1337), which requires cities to remove regulatory barriers to
16 accessory dwelling units; and

17 WHEREAS, in March 2024, the Washington State Legislature passed Chapter 152, Laws of
18 2024 (also known as House Bill 2321), which clarified standards implemented through
19 House Bill 1110; and

20 WHEREAS, in March 2024, the Washington State Legislature passed Chapter 274, Laws of
21 2024 (also known as Senate Bill 6015), which imposes restrictions on parking
22 requirements; and

1 WHEREAS, in March 2024, the Office of Planning and Community Development published a
2 Draft Environmental Impact Statement analyzing the potential effects of five different
3 growth alternatives in the city through 2044 and a “no action” alternative, conducted two
4 public hearings, and received comments from the public on this document; and

5 WHEREAS, in March 2024, the Office of Planning and Community Development published a
6 Draft Comprehensive Plan rooted in a deliberate approach to creating more housing,
7 encouraging density near amenities and frequent transit, and preventing displacement;
8 and

9 WHEREAS, in Spring 2024, the Office of Planning and Community Development held open
10 houses across all seven council districts and received input from residents and community
11 groups over a two-month public comment period on the draft plan and an initial proposal
12 for updating Neighborhood Residential zones as documented in the One Seattle Plan
13 Public Engagement Report; and

14 WHEREAS, in Fall 2024, the Office of Planning and Community Development held open
15 houses across all seven council districts and received input from residents and community
16 groups over a two-month public comment period on a revised proposal for updating
17 Neighborhood Residential zones and draft legislation as documented in the One Seattle
18 Plan Public Engagement Report; and

19 WHEREAS, in January 2025, the Office of Planning and Community Development published a
20 Final Environmental Impact Statement that included analysis of a preferred growth
21 strategy alternative that increased potential housing supply in the city by doubling
22 residential development capacity and that promoted housing supply, variety, and

affordability by adding new and expanded areas for growth in neighborhoods across the city; and

WHEREAS, on March 27, 2025, the Office of Planning and Community Development

transmitted legislation to the City Council which would adopt the One Seattle Plan;

NOW, THEREFORE,

BE IT ORDAINED BY THE CITY OF SEATTLE AS FOLLOWS:

Section 1. The Official Land Use Map, Chapter 23.32 of the Seattle Municipal Code, is amended to rezone properties on pages 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 98, 99, 100, 102, 103, 104, 105, 106, 107, 111, 112, 113, 114, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 216, 217, 219, 220, and 221 of the Official Land Use Map as follows:

A. Properties identified for rezones as shown on Attachment 1 to this ordinance are rezoned as shown in those maps.

B. Except for properties identified to be rezoned as shown on Attachment 1 to this ordinance, all areas identified as “existing zoning” in Table A for Section 1 are rezoned as shown under the “New zoning” column in Table A for Section 1.

Table A for Section 1
Standard zoning changes

Existing zoning	New zoning
RSL (M)	LR1 (M)
NR1	NR
NR2	NR
NR3	NR
NR3-PUD	NR

1. Where the existing zoning includes a Major Institution Overlay, the underlying zoning shall be modified as stated in this subsection 1.B and the Major Institution Overlay shall continue to apply.

2. The rezones in this subsection 1.B shall not remove any existing suffixes other than PUD suffixes.

Section 2. Section 6.600.080 of the Seattle Municipal Code, last amended by Ordinance 126509, is amended as follows:

6.600.080 Bed and breakfast operator general provisions

All bed and breakfast operators who advertise or offer a bed and breakfast unit on a platform in the City, shall comply with the following:

* * *

C. If operating within a (~~neighborhood residential~~) Neighborhood Residential zone, comply with all standards provided in (~~Section 23.44.051~~) subsection 23.44.020.C. If operating within a (~~multi-family~~) multifamily zone, comply with all standards provided in subsection (~~23.45.545.G~~) 23.45.504.I.

* * *

Section 3. Section 14.08.020 of the Seattle Municipal Code, last amended by Ordinance 126767, is amended as follows:

14.08.020 Definitions

Definitions as used in this Chapter 14.08, unless additional meaning clearly appears from the context, shall have the meanings subscribed:

"Accessory dwelling unit" has the meaning defined in ~~((Chapter 23.84A.032's definition of "Residential use."))~~ Section 23.84A.008.

* * *

~~(("Detached accessory dwelling unit" has the meaning defined in Chapter 23.84A.032's definition of "Residential use."))~~

* * *

Section 4. Section 14.09.010 of the Seattle Municipal Code, last amended by Ordinance 126080, is amended as follows:

14.09.010 Definitions

"Accessory dwelling unit" has the meaning defined in Section ~~((23.84A.032's definition of "Residential use."))~~ 23.84A.008.

* * *

~~(("Detached accessory dwelling unit" has the meaning defined in Section 23.84A.032's definition of "Residential use."))~~

* * *

"Single family dwelling unit" has the meaning as defined in Section 22.204.200.A.

* * *

Section 5. Section 15.32.200 of the Seattle Municipal Code, last amended by Ordinance 126509, is amended as follows:

15.32.200 At-grade communication cabinets

* * *

F. The applicant for a new at-grade communication cabinet proposal that is more than 36 inches in height including footings or bases as measured from the grade of the surrounding public place, or has a maximum volume of more than 18 cubic feet, shall: (1) send notice of a Seattle Department of Transportation application by first-class mail to all business entities, property owners, and residents located within a 100-foot radius from where the communication cabinet is proposed to be located; and (2) post notice of the new application at the proposed site. The notice shall be displayed towards the nearest public place that abuts the site and is viewable by the public and shall be maintained on the site for the duration of the public notice period.

1. If the new at-grade communication cabinet proposal is more than 36 inches in height including footings or bases as measured from the grade of the surrounding public place, or has a maximum volume of more than 18 cubic feet, and is abutting a lot zoned ((~~NR1, NR2, NR3, RSL,~~) NR, LR1, LR2, or LR3 as these zoning designations are defined under subsection 23.30.010.A and the abutting zoning does not have an RC classification as shown on the Official Land Use Map, Chapter 23.32 ("residentially zoned parcels"), the communication cabinet shall be fully screened from the public place and abutting private property. If it is not feasible to install mitigation screening due to physical site constraints, the applicant shall provide an alternative mitigation proposal within 200 feet of the project. If the alternative mitigation cannot be located within 200 feet of the project, the applicant shall propose an alternative location that the Director shall review and may approve. All mitigation screening shall comply with setback standards in

1 Section 15.32.250 and remain the permittee's sole responsibility to maintain so long as the
2 communication cabinet or accessory equipment occupies the public place. As determined by the
3 Director, mitigation screening may include landscaping, fencing, or visual treatment to the
4 cabinet surface. Visual treatment to the cabinet may include paint, decals, vinyl wraps, photos, or
5 other surface treatments. A cabinet shall be considered fully screened for visual treatment
6 purposes when the treatment is applied to all communication cabinet vertical surfaces.

7 2. The applicant shall send and post all required notices at least three calendar
8 days before the start of the public notice period. The mailing and on-site notice shall be on a
9 form provided by the Seattle Department of Transportation and shall include: a description of the
10 proposed location and installations, comment period dates, information on how the public can
11 submit comments to the Seattle Department of Transportation, and how to request a
12 reconsideration of a Street Use permit decision. If the proposal is abutting a residentially zoned
13 parcel, the mailing and on-site notice shall include a visual and narrative description of the
14 proposed mitigation screening required in subsection 15.32.200.F.1.

15 3. Written comments concerning the application shall be postmarked or emailed
16 to the Director of the Seattle Department of Transportation within ten business days after the first
17 day of the public notice period.

18 4. The applicant shall provide the Director of the Seattle Department of
19 Transportation with a mailing list containing the individuals the notice was mailed to, the
20 recipient's mailing address, and date the notice was mailed to each recipient.

21 * * *

Section 6. Section 15.32.250 of the Seattle Municipal Code, last amended by Ordinance 126732, is amended as follows:

15.32.250 Communication cabinet standards and setbacks

* * *

C. If the at-grade communication cabinet is to be installed in a planting strip it shall be placed in proximity to and in line with existing utility or street light poles, street signs, or other existing structures within the planting strip in order to create a physical and visual alignment. The communication cabinet shall not impair the line of sight for vehicles exiting adjacent alleys, streets, or driveways as provided in ~~((subsection 23.54.030.G))~~ Section 23.54.032 or other sight triangle requirements adopted by City code or rule.

* * *

Section 7. Section 21.49.110 of the Seattle Municipal Code, last amended by Ordinance 125171, is amended as follows:

21.49.110 Electric service connection provisions

* * *

E. Prohibition of master metering((-))

1. The Department shall not supply electricity for any new service to a duplex or multiple-dwelling building for the purpose of master metering the energy usage of the dwelling units, a central space heating system or HVAC system, or a central domestic water heating system. The Department shall not supply electricity for any larger service to an existing duplex or multiple-dwelling building for the purpose of master metering new central or individual space heating or HVAC systems. The existence of alternative laundry or dining arrangements for residents of multiple-dwelling buildings (such as central kitchens and dining rooms where

residents can buy or eat their meals, or a central laundry), in addition to the availability of cooking and/or laundry facilities within the individual dwelling units, will not be considered grounds for an exemption from the prohibition of master metering.

2. This prohibition does not apply to multiple-dwelling buildings such as transitional housing, student dormitories and residences for religious orders, the elderly or the disabled, in which the residents do not live independently.

3. In situations with a mix of living accommodations where some residents live independently and some do not, those buildings or portions of buildings which provide non-transient independent dwelling units will not be eligible for master metering.

4. Accessory housing exception. ~~((An owner-occupied dwelling unit also containing an additional "accessory housing unit" meeting all provisions as defined in Chapter 23.44 and approved by the City))~~ A structure that only contains one principal dwelling unit and one accessory dwelling unit shall be exempt from the master metering provisions of this Chapter 21.49.

5. Other exceptions. Exemption from the master metering prohibition for residential dwelling situations not covered in the provisions of this Chapter 21.49 may be granted on a case-by-case basis by the Department.

* * *

Section 8. Section 22.214.020 of the Seattle Municipal Code, last amended by Ordinance 124919, is amended as follows:

22.214.020 Definitions

For purposes of this Chapter 22.214, the following words or phrases have the meaning prescribed below:

"Accessory dwelling unit" or "ADU" (~~means an "Accessory dwelling unit" or a~~
~~"Detached accessory dwelling unit" or "DADU" as~~) has a meaning defined ((under "Residential
use")) in Section ((23.84A.032)) 23.84A.008.

* * *

Section 9. Section 22.801.200 of the Seattle Municipal Code, last amended by Ordinance
126509, is amended as follows:

22.801.200 "S"

* * *

"Sidewalk" means "sidewalk" as defined in Section 23.84A.036.

"Sidewalk project" means a project for the creation of a new sidewalk or replacement of
an existing sidewalk, including any associated planting strip, apron, curb ramp, curb, or gutter,
and necessary roadway grading and repair. If the total new plus replaced hard surface in the
roadway exceeds 10,000 square feet, the entire project is a roadway project.

"Single-family residential project" means a project that constructs one (~~Single-family~~
~~Dwelling Unit~~) principal detached or attached dwelling unit as defi

ned in ~~((subsection 23.84A.032))~~ 23.84A.008 and any associated accessory dwelling unit located in land classified as being Neighborhood Residential ~~((1-(NR1), Neighborhood Residential 2 (NR2), or Neighborhood Residential 3 (NR3)))~~ pursuant to Section 23.30.010, and the total new plus replaced hard surface is less than 5,000 square feet.

* * *

Section 10. Section 22.907.030 of the Seattle Municipal Code, last amended by Ordinance 125873, is amended as follows:

22.907.030 Notice of proposed sale of low-income multi-family rental building

A. Except as provided in this Section 22.907.030, an owner of a ~~((multifamily rental housing))~~ building ~~((as defined in Section 23.84A.032,))~~ having two or more housing rental units, excluding congregate residences as defined in Section 23.84A.032, any one of which rents for an amount that is affordable to households at or below 80 percent of area median income, as most recently determined by the United States Department of Housing and Urban Development

1 for the Seattle metropolitan statistical area, shall notify the Seattle Office of Housing (OH) and
2 the Seattle Housing Authority (SHA) of the owner's intent to sell the building. The notice shall
3 be in writing and include the owner's name, phone number, and the address of the rental housing
4 building that will be offered for sale. At the same time, the owner shall submit to OH a
5 declaration signed under penalty of perjury, affirming that the owner has complied with the
6 notice requirements of this Section 22.907.030. The notice and declaration shall be submitted no
7 later than 90 days prior to the building being listed with any real estate listing service or
8 advertised for sale in a printed newspaper or on a website. For the purposes of this Section
9 22.907.030, a building is "listed" when an owner has signed a listing agreement with a real estate
10 agent.

11 * * *

12 Section 11. Section 23.22.062 of the Seattle Municipal Code, last amended by Ordinance
13 127211, is amended as follows:

14 **23.22.062 Unit lot subdivisions**

15 A. The provisions of this Section 23.22.062 apply exclusively to the unit subdivision of
16 land for residential development including ~~((single family dwelling units, townhouse,~~
17 ~~rowhouse, and cottage housing developments,))~~ attached and detached dwelling units and
18 existing ~~((apartment))~~ structures containing stacked dwelling units built prior to January 1,
19 2013, but not individual ~~((apartment))~~ stacked dwelling units, in all zones in which these uses
20 are permitted, or any combination of the above types of residential development as permitted
21 in the applicable zones.

22 * * *

Section 12. Section 23.24.045 of the Seattle Municipal Code, last amended by Ordinance 127211, is amended as follows:

23.24.045 Unit lot subdivisions

A. The provisions of this Section 23.24.045 apply exclusively to the unit subdivision of land for residential development including ~~((single-family dwelling units, townhouse, rowhouse, and cottage housing developments,))~~ attached and detached dwelling units and existing ~~((apartment))~~ structures containing stacked dwelling units built prior to January 1, 2013, but not individual ~~((apartment))~~ stacked dwelling units, in all zones in which these uses are permitted, or any combination of the above types of residential development as permitted in the applicable zones.

* * *

Section 13. Section 23.28.030 of the Seattle Municipal Code, last amended by Ordinance 126157, is amended as follows:

23.28.030 Criteria for approval

A. The Director shall approve an application for a lot boundary adjustment if it is determined that:

1. No additional lot, tract, parcel, site, or division is created by the proposed adjustment;

2. No lot contains insufficient area and dimensions to meet the minimum requirements for development as calculated under the development standards of the zone in which the lots affected are situated~~((, except as provided in Section 23.44.010,))~~ and under any applicable regulations for siting development on parcels with riparian corridors, wetlands, wetland buffers, or steep slopes in Chapter 25.09 or Section 23.60A.156. Adjusted lots shall

continue to be regarded as existing lots for purposes of Chapter 25.09. Any required
nondisturbance area shall be legibly shown and described on the site plan, and a covenant shall
be required as set out in Section 25.09.335;

3. Every proposed adjusted lot shall conform to the following standards for lot
configuration, unless a modification is authorized under subsection 23.28.030.A.4:

a. If an adjusted lot is proposed with street frontage, then one lot line shall
abut the street for at least 10 feet; ~~((and))~~

b. No adjusted lot shall be less than 10 feet wide for a distance of more
than 10 feet as measured at any point; ~~((and))~~

c. No adjusted lot shall have more than six separate lot lines. The lot lines
shall be straight lines unless the irregularly shaped lot line is caused by an existing right-of-way
or existing lot line; and

d. If a lot to be adjusted abuts upon an alley, and that alley is either
improved or required to be improved according to the standards of Section 23.53.030, then no
adjusted lot shall be proposed that does not provide alley access, except that access from a street
to an existing use or structure is not required to be changed to alley access. Either the proposed
adjusted lots shall have sufficient frontage on the alley to meet access standards for the zone in
which the property is located or an access easement from the adjusted lot or lots shall be
provided to the alley that meets access standards for the zone in which the property is located.

4. Modification. The standards of subsection 23.28.030.A.3 may be modified if at
least one of the following criteria applies:

a. One or more of the existing lots prior to the lot boundary adjustment is
irregular in shape;

b. Topography, natural obstructions, configuration of existing lot lines prior to lot line adjustment, existing platting patterns, or street alignment prevent the reconfiguration of one or more lots according to the standards of subsection 23.28.030.A.3;

c. Location of existing principal structures that are retained on lots existing prior to the proposed lot boundary adjustment require a reconfiguration of one or more lots that cannot reasonably meet the standards of subsection 23.28.030.A.3;

d. Location of existing easements or feasibility of access to portions of the property prevents the reconfiguration of lot lines that meet the standards of subsection 23.28.030.A.3; or

e. The lot boundary adjustment establishes an irregular lot line that resulted from an adverse possession claim.

5. No adjusted lot shall be approved for development without a determination that it is capable of being served by existing or extended infrastructure for drainage; a determination that the lot has water supply and sanitary sewage disposal; and a determination that there is access for vehicles, utilities, and fire protection;

6. The lot boundary adjustment is consistent with applicable provisions of this Title 23 including, for lots in the Shoreline District, conformance with the applicable provisions of Section 23.60A.168.

* * *

Section 14. Section 23.30.010 of the Seattle Municipal Code, last amended by Ordinance 126862, is amended as follows:

23.30.010 Classifications for the purpose of this Subtitle III

A. General zoning designations. The zoning classification of land shall include one of the designations in this subsection 23.30.010.A. Only in the case of land designated "RC," the classification shall include both "RC" and one additional multifamily zone designation in this subsection 23.30.010.A.

Section 15. Section 23.34.010 of the Seattle Municipal Code, last amended by Ordinance 126509, is repealed:

~~((23.34.010 Designation of NR1, NR2, and NR3 zones~~

~~A. Except as provided in subsection 23.34.010.B, areas zoned NR1, NR2, or NR3 may be rezoned to zones more intense than NR3 only if the City Council determines that the area does not meet the locational criteria for NR1, NR2, or NR3 zones.~~

~~B. Areas zoned NR1, NR2, or NR3 that meet the locational criteria contained in subsections 23.34.011.B.1 through 23.34.011.B.3 may only be rezoned to zones more intense than NR3 if they are located within the adopted boundaries of an urban village, and the rezone is to a zone that is subject to the provisions of Chapter 23.58B and Chapter 23.58C.))~~

Section 16. Section 23.34.011 of the Seattle Municipal Code, last amended by Ordinance 126509, is amended as follows:

23.34.011 ((NR1, NR2, and NR3 zones)) NR zone, function((,)) and locational criteria

A. Function. An area that provides ~~((predominantly detached single family structures on lot sizes compatible with the existing pattern of development and the character of neighborhood residential areas))~~ for the development of detached, attached, and stacked dwelling units within a predominately three-story height limit.

1 B. Locational criteria. An ((NR1, NR2, or NR3)) NR zone designation is most
2 appropriate in areas that are ((outside of urban centers and villages and meet the following
3 criteria)) generally characterized by the following conditions:

4 ((1. Areas that consist of blocks with at least 70 percent of the existing
5 structures, not including detached accessory dwelling units, in single family residential use; or

6 2. Areas that are designated by an adopted neighborhood plan as appropriate for
7 single family residential use; or

8 3. Areas that consist of blocks with less than 70 percent of the existing
9 structures, not including detached accessory dwelling units, in single family residential use but
10 in which an increasing trend toward single family residential use can be demonstrated; for
11 example:

12 a. The construction of single family structures, not including detached
13 accessory dwelling units, in the last five years has been increasing proportionately to the total
14 number of constructions for new uses in the area, or

15 b. The area shows an increasing number of improvements and
16 rehabilitation efforts to single family structures, not including detached accessory dwelling
17 units, or

18 c. The number of existing single family structures, not including
19 detached accessory dwelling units, has been very stable or increasing in the last five years, or

20 d. The area's location is topographically and environmentally suitable for
21 single family residential developments.))

22 1. The area is located outside of an urban center, urban village, or Station Area
23 Overlay District;

2. The area is characterized by residential structures of generally three stories or less; and

3. One or more of the following conditions are present:

a. The area is not located near a major transit stop or on streets abutting frequent transit routes where higher density development might be more appropriate;

b. A significant portion of the area contains environmentally critical areas; or

c. The area is characterized by limited local access and circulation that make the area less suitable for higher density development.

~~((C. An area that meets at least one of the locational criteria in subsection 23.34.011.B should also satisfy the following size criteria in order to be designated as a NR1, NR2, or NR3 zone:~~

~~1. The area proposed for rezone should comprise 15 contiguous acres or more, or should abut existing NR1, NR2, or NR3 zones.~~

~~2. If the area proposed for rezone contains less than 15 contiguous acres, and does not abut existing NR1, NR2, or NR3 zones, then it should demonstrate strong or stable single-family residential use trends or potentials such as:~~

~~a. That the construction of single-family structures, not including detached accessory dwelling units, in the last five years has been increasing proportionately to the total number of constructions for new uses in the area, or~~

~~b. That the number of existing single-family structures, not including detached accessory dwelling units, has been very stable or increasing in the last five years, or~~

~~c. That the area's location is topographically and environmentally
suitable for single family structures, or~~

~~d. That the area shows an increasing number of improvements or
rehabilitation efforts to single family structures, not including detached accessory dwelling
units.~~

~~D. Half blocks at the edges of NR1, NR2, or NR3 zones which have more than 50
percent single family structures, not including detached accessory dwelling units, or portions
of blocks on an arterial which have a majority of single family structures, not including
detached accessory dwelling units, shall generally be included. This shall be decided on a case-
by-case basis, but the policy is to favor including them.))~~

Section 17. Section 23.34.012 of the Seattle Municipal Code, last amended by Ordinance
126855, is repealed:

~~((23.34.012 Neighborhood Residential Small Lot (RSL) zone, function, and locational
criteria~~

~~A. Function. An area within an urban village that provides for the development of
homes on small lots that may be more affordable compared to detached homes on larger lots
and appropriate for households with children.~~

~~B. Locational criteria. An RSL zone is most appropriate in areas generally characterized
by the following:~~

- ~~1. The area is similar in character to neighborhood residential zones;~~
- ~~2. The area is located inside an urban center, urban village, or Station Area
Overlay District where it would provide opportunities for a diversity of housing types within
these denser environments;~~

~~3. The area is characterized by, or appropriate for, a mix of single family dwelling units, multifamily structures that are similar in scale to single family dwelling units, such as duplex, triplex, rowhouse, and townhouse developments, and single family dwelling units that have been converted to multifamily residential use or are well suited to conversion;~~

~~4. The area is characterized by local access and circulation that can accommodate low density development oriented to the ground level and the street, and/or by narrow roadways, lack of alleys, and/or irregular street patterns that make local access and circulation less suitable for higher density multifamily development;~~

~~5. The area is within a reasonable distance of frequency transit service, but is not close enough to make higher density multifamily development more appropriate.~~

~~6. The area would provide a gradual transition between neighborhood residential zoned areas and multifamily or neighborhood commercial zoned areas; and~~

~~7. The area is supported by existing or projected facilities and services used by residents, including retail sales and services, parks, and community centers.))~~

Section 18. Section 23.34.013 of the Seattle Municipal Code, last amended by Ordinance 126509, is repealed:

~~((23.34.013 Designation of multifamily zones~~

~~An area zoned neighborhood residential that meets the criteria of Section 23.34.011 for designation as NR1, NR2 or NR3 may not be rezoned to multifamily except as otherwise provided in Section 23.34.010.B.))~~

Section 19. Section 23.34.014 of the Seattle Municipal Code, last amended by Ordinance 126509, is amended as follows:

23.34.014 Lowrise 1 (LR1) zone, function and locational criteria

1 A. Function. The function of the LR1 zone is to provide opportunities ~~((for low density~~
2 ~~multifamily housing, primarily rowhouse and townhouse developments, through infill~~
3 ~~development that is compatible with single family dwelling units, or through the conversion of~~
4 ~~existing single family dwelling units to duplexes or triplexes))~~ for the development of
5 detached, attached, and stacked dwelling units within a predominately three-story height limit
6 at a higher intensity than Neighborhood Residential zones.

7 B. Locational ~~((Criteria))~~ criteria. The LR1 zone is most appropriate in areas generally
8 characterized by the following conditions:

- 9 1. ~~((The area is similar in character to neighborhood residential zones;~~
10 2.)) The area is ~~((either))~~:
- 11 a. ~~((located))~~ Located outside of an urban center, urban village, or
12 Station Area Overlay District;
- 13 b. ~~((a))~~ A limited area within an urban center, urban village, or Station
14 Area Overlay District that would provide opportunities for a diversity of housing types within
15 these denser environments; or
- 16 c. ~~((located))~~ Located on a collector or minor arterial;
- 17 3. The area is characterized by ~~((a mix of single family dwelling units,~~
18 ~~multifamily structures that are similar in scale to single family dwelling units, such as~~
19 ~~rowhouse and townhouse developments, and single family dwelling units that have been~~
20 ~~converted to multifamily residential use or are well suited to conversion))~~ residential structures
21 of generally three stories or less;
- 22 4. The area is characterized by local access and circulation that can
23 accommodate low density ~~((multifamily))~~ development ~~((oriented to the ground level))~~ and the

street, and/or by narrow roadways, lack of alleys, and/or irregular street patterns that make local access and circulation less suitable for higher density ((~~multifamily~~)) development;

~~((5. The area would provide a gradual transition between neighborhood residential zoned areas and multifamily or neighborhood commercial zoned areas; and~~

~~6.))~~ 4. The area is supported by existing or projected facilities and services used by residents, including retail sales and services, parks, and community centers.

Section 20. Section 23.34.072 of the Seattle Municipal Code, last amended by Ordinance 126509, is repealed:

~~((23.34.072 Designation of commercial zones.~~

~~A. The encroachment of commercial development into residential areas shall be discouraged.~~

~~B. Areas meeting the locational criteria for a neighborhood residential designation may be designated as certain neighborhood commercial zones as provided in Section 23.34.010.~~

~~C. Preferred configuration of commercial zones shall not conflict with the preferred configuration and edge protection of residential zones as established in Sections 23.34.010 and 23.34.011 of the Seattle Municipal Code.~~

~~D. Compact, concentrated commercial areas, or nodes, shall be preferred to diffuse, sprawling commercial areas.~~

~~E. The preservation and improvement of existing commercial areas shall be preferred to the creation of new business districts.))~~

Section 21. Section 23.42.022 of the Seattle Municipal Code, enacted by Ordinance 127211, is amended as follows:

23.42.022 Accessory dwelling units

1 A. ~~((Attached and detached accessory))~~ Accessory dwelling units are ~~((permitted))~~
2 allowed as a housing use in all zones where ~~((single family dwelling units are permitted))~~
3 housing uses are allowed. In the Shoreline District, accessory dwelling units shall comply with
4 Chapter 23.60A.

5 ~~((B. A maximum of two accessory dwelling units may be located on the same lot as a~~
6 ~~principal dwelling unit. Either or both accessory dwelling units may be attached or detached.~~
7 ~~Two detached accessory dwelling units may be located in one structure.))~~

8 B. Accessory dwelling units may not be accessory to residential uses other than housing
9 uses.

10 C. No lot may have more than two accessory dwelling units.

11 D. Accessory dwelling units may be attached, detached, or stacked.

12 E. Unless otherwise provided in the standards of the underlying zone, accessory dwelling
13 units shall be subject to the same standards as principal dwelling units.

14 F. Accessory dwelling units must be located on the same lot as the principal dwelling
15 unit.

16 ~~((C. Floor area limit in all zones and floor area ratio in Neighborhood Residential zones))~~

17 G. Maximum size

18 1. The gross floor area of an accessory dwelling unit may not exceed 1,000 square
19 feet.

20 2. The following are not included in the gross floor area limit:

21 a. Up to 250 square feet of gross floor area in an attached garage;

22 b. ~~((Exterior only accessed storage areas;~~

23 ~~e.))~~ All stories, or portions of stories, that are underground; and

1 ((~~4.~~)) c. Up to 35 square feet of gross floor area dedicated to long-term
2 bicycle parking.

3 ((~~3.~~ In NR1, NR2, and NR3 zones, gross floor area in an accessory dwelling unit
4 is exempt from FAR limits.

5 D. Permitted height

6 1. Neighborhood Residential zones. The maximum permitted height for accessory
7 dwelling units is the permitted height for a principal dwelling unit.

8 2. Lowrise zones. The maximum permitted height for accessory dwelling units is
9 the permitted height for rowhouse and townhouse development in the applicable zone.

10 3. All zones other than Neighborhood Residential or Lowrise. For zones with
11 height limits of 40 feet or less, accessory dwelling units are subject to the permitted height of the
12 zone for principal dwelling units. For zones with height limits greater than 40 feet, accessory
13 dwelling units are subject to the permitted height for rowhouse and townhouse development in
14 the LR3 zone, whichever height limit is applicable.

15 4. In all zones, accessory dwelling units associated with cottage developments are
16 subject to the permitted height for cottage housing developments for the applicable zone.

17 5. In all zones, allowances above the maximum height limit for pitched roofs,
18 including shed and butterfly roofs, and exemptions for rooftop features are permitted per the
19 applicable zone.

20 E. In all zones, accessory dwelling units and appurtenant architectural elements including
21 architectural details, bay windows, and other projections, such as covered porches, patios, decks,
22 and steps, are subject to the yard and setback provisions for principal dwelling units in the
23 underlying zone, except as follows:

1 ~~1. In all zones detached accessory dwelling units have no required setback from~~
2 ~~any lot line that abuts an alley.~~

3 ~~2. Neighborhood Residential zones~~

4 ~~a. A detached accessory dwelling unit and appurtenant architectural~~
5 ~~elements may be located in the rear yard so long as the structure is no closer than 5 feet to any lot~~
6 ~~line that does not abut an alley. When a detached accessory dwelling unit is located within a rear~~
7 ~~yard, the following features may also be located within 5 feet of any lot line:~~

8 ~~1) External architectural details with no living area, such as~~
9 ~~chimneys, eaves, cornices, and columns, may be located no closer than 3 feet from a property~~
10 ~~line.~~

11 ~~2) Bay windows no more than 8 feet in width may be located no~~
12 ~~closer than 3 feet from a property line.~~

13 ~~3) Other projections that include interior space, such as garden~~
14 ~~windows, may be located no closer than 3.5 feet from a property line starting a minimum of 30~~
15 ~~inches above furnished floor, and with maximum dimensions of 6 feet in height and 8 feet in~~
16 ~~width.~~

17 ~~b. On a through lot, when yards or setbacks cannot be determined, the~~
18 ~~Director shall designate a rear yard or rear setback for the purpose of allowing an accessory~~
19 ~~dwelling. In designating a rear yard or rear setback, the Director shall consider factors including~~
20 ~~but not limited to the location of the yards and setbacks for adjacent structures on the same block~~
21 ~~face, vehicular and pedestrian access, platting patterns in the vicinity, and topography.~~

1 ~~3. Lowrise zones. Detached accessory dwelling units are excluded from setback~~
2 ~~averaging provisions and are subject to the minimum setback provision for a principal dwelling~~
3 ~~unit.~~

4 ~~F. Rooftop decks that are portions of an accessory dwelling unit are allowed up to the~~
5 ~~applicable height limit, including additions allowed to a detached accessory dwelling unit under~~
6 ~~subsection 23.44.014.C.4.~~

7 ~~G.))~~ H. Conversions of existing structures

8 1. For purposes of this subsection (~~((23.42.022.G))~~ 23.42.022.H, the term
9 "conversion" means keeping an existing structure intact, adding to or altering an existing
10 structure, or removing and rebuilding an existing structure, provided that any expansion or
11 relocation of the structure complies with the development standards for accessory dwelling units
12 in this Section 23.42.022 and the provisions of the applicable zone, unless otherwise allowed by
13 this subsection (~~((23.42.022.G))~~ 23.42.022.H.

2. For the purposes of this subsection (~~((23.42.022.G))~~ 23.42.022.H), the term “existing accessory structure” means an accessory structure existing prior to July 23, 2023 or an accessory structure existing prior to July 23, 2023 that was subsequently replaced to the same configuration.

3. Existing accessory structures. An existing accessory structure may be converted into a detached accessory dwelling unit if it meets the following:

a. To facilitate the conversion of and additions to an existing accessory structure, the Director may allow waivers and modifications as a Type I decision to the provisions for accessory dwelling units in this Section 23.42.022 and the development standards of the applicable zone.

b. Conversion of an existing accessory structure to a detached accessory dwelling unit is permitted notwithstanding applicable lot coverage or yard or setback provisions in this Section 23.42.022 or the applicable zone. The converted accessory structure shall comply with the minimum standards set forth in Sections 22.206.020 through 22.206.140.

4. Existing principal structures. The gross floor area of an attached accessory dwelling unit may exceed 1,000 square feet if the portion of the structure in which the attached accessory dwelling unit is located existed as of July 23, 2023.

~~((H. Building separation~~

~~1. Neighborhood Residential zones. A detached accessory dwelling unit shall be separated from its principal dwelling unit by a minimum of 5 feet measured from eave to eave. To be considered attached, an accessory dwelling unit must be connected to the principal dwelling unit by an enclosed space that is at least 3 feet wide, 3 feet tall, and 3 feet long.~~

~~2. All other zones. A detached accessory dwelling unit shall be separated from its principal dwelling unit by a minimum of 3 feet measured from eave to eave. To be considered attached, an accessory dwelling unit must be connected to a principal dwelling unit by an enclosed space that is at least 3 feet wide, 3 feet tall, and 3 feet long.))~~

I. No off-street motor vehicle parking is required for an accessory dwelling unit.

J. When calculating density, the number of dwelling units shall include both accessory dwelling units and principal dwelling units.

~~((J.))~~ K. Title 23 shall not be interpreted or applied to prohibit the sale or other conveyance of a condominium unit on the grounds that the condominium unit was originally built as an accessory dwelling unit.

~~((K.))~~ L. Unless provided otherwise in this Section 23.42.022, the provisions of the applicable zone and overlay district apply. In the event of conflict with provisions elsewhere in Title 23 other than Chapter 23.60A, this Section 23.42.022 shall prevail.

Section 22. A new Section 23.42.024 is added to the Seattle Municipal Code as follows:

23.42.024 Adult family homes

Adult family homes are allowed as a home occupation in all zones where housing uses are allowed.

Section 23. Section 23.42.050 of the Seattle Municipal Code, last amended by Ordinance 126845, is amended as follows:

23.42.050 Home occupations

A home occupation of a person residing in a dwelling unit is permitted outright in all zones as an accessory use to any residential use permitted outright or to a permitted residential conditional use, subject to the following requirements:

* * *

G. A maximum of three passenger vehicles, vans, and similar vehicles, associated with the home occupation, each not exceeding a gross vehicle weight of 10,000 pounds are permitted to be at the home occupation site, independent of commercial deliveries and pickups. For lots developed with a ~~((single-family))~~ residential dwelling unit in NR zones, this limit is in addition to the outdoor parking limit in subsection ~~((23.44.016.C.3))~~ 23.44.160.E.

* * *

Section 24. Section 23.42.106 of the Seattle Municipal Code, last amended by Ordinance 126685, is amended as follows:

23.42.106 Expansion of nonconforming uses

* * *

B. In addition to the standards in subsection 23.42.106.A, a structure in a ~~((neighborhood residential))~~ Neighborhood Residential zone occupied by a nonconforming residential use may be allowed to expand subject to the following:

1. The number of dwelling units shall not be increased, except as may be allowed pursuant to Section 23.40.040.

2. For a nonconforming residential use that is not a multifamily use, except as may be allowed pursuant to Section 23.40.040; if originally permitted by conditional use, the number shall not be allowed to increase above the number permitted by the conditional use approval.

3. An expansion of no more than 500 square feet of gross floor area, meeting the development standards for ~~((single-family))~~ residential construction in Chapter 23.44 and not exceeding the average height of the closest principal structures on either side, is allowed.

4. An expansion greater than 500 square feet of gross floor area and/or exceeding the average height of the closest principal structures on either side may be approved by the Seattle Department of Construction and Inspections through a special exception Type II Master Use Permit, if the proposed expansion meets the development standards for ~~((single-family))~~ residential construction and is compatible with surrounding development in terms of:

- a. Architectural character;
- b. Existing streetscape and pattern of ~~((yards))~~ setbacks; and
- c. Scale and proportion of principal structures.

5. If an addition proposed under subsection 23.42.106.B.3 or 23.42.106.B.4 would require additional parking under the requirements of Section 23.54.015 ~~((for multifamily structures))~~, that additional parking must be provided.

* * *

D. A nonconforming nonresidential use shall not be expanded or extended, except as follows:

1. A structure occupied by a nonconforming nonresidential use may be maintained, repaired, renovated, or structurally altered but shall not be expanded or extended except as otherwise required by law, as necessary to improve access for the elderly or disabled or as specifically permitted elsewhere in this Code.

2. In ~~((the))~~ Seattle Mixed zones, general manufacturing uses exceeding 25,000 square feet of gross floor area and heavy manufacturing uses may be expanded or extended by an amount of gross floor area not to exceed 20 percent of the existing gross floor area of the use, provided that this exception may be applied only once to any individual business establishment.

3. The Seattle Asian Art Museum building and use located in Volunteer Park, as it exists on January 1, 2017, may be expanded subject to the following development standards:

a. Except as provided in this subsection 23.42.106.D.3, the development standards of Chapter 23.44 do not apply.

b. The building may be expanded one or more times but the gross floor area of all expansions combined and occurring after January 1, 2017, may not exceed 15,000 square feet.

c. No expansion may be located in a freestanding building that lacks a common wall with the building either as it existed on January 1, 2017, or as subsequently expanded.

d. No expansion may exceed the elevation of the highest point of the building as it existed on January 1, 2017.

e. Parking and loading for the proposed expansion is required as provided in Sections 23.54.015 and 23.54.035. As a Type I decision, the Director may reduce parking and loading requirements to an amount not less than the amount needed to provide adequate parking and loading facilities, as demonstrated to the satisfaction of the Director by a parking and loading study prepared by a licensed professional engineer and submitted to the Director by the applicant.

f. Bicycle parking for the proposed expansion shall be provided in accordance with ~~((subsection 23.54.015.K))~~ Section 23.54.037.

g. The street and sidewalk requirements of Chapter 23.53 do not apply.

h. Exterior lighting shall be shielded or directed away from adjacent residentially zoned lots.

i. Nothing in this Section 23.42.106 alters the authority of the Landmarks Preservation Board pursuant to the City's Landmarks Preservation Ordinance.

* * *

Section 25. Section 23.42.110 of the Seattle Municipal Code, last amended by Ordinance 126509, is amended as follows:

23.42.110 Change from one nonconforming use to another nonconforming use

A nonconforming use may be converted by an administrative conditional use authorization to another use not otherwise permitted in the zone subject to the following limitations and conditions.

~~A. ((In neighborhood residential and residential small lot zones, a nonconforming multifamily residential use may not be converted to any nonresidential use not otherwise permitted in the zone.~~

~~B.))~~ The proposed new use must be no more detrimental to properties in the zone and vicinity than the existing use. This determination shall be based on consideration of the following factors:

1. The zones in which both the existing use and the proposed new use are allowed;

2. The number of employees and clients associated or expected with the proposed use;

3. The relative parking, traffic, light, glare, noise, odor and similar impacts of the two uses and how these impacts could be mitigated.

~~((C))~~ B. The existence of a single residential unit, such as a caretaker's or proprietor's unit, accessory to a nonconforming commercial use shall not be treated as having established a

1 residential use, and such a unit may be converted or changed provided that it is the only
2 residential use in the structure and comprises less than half of the total floor area of the
3 structure.

4 ~~((D))~~ C. Parking requirements for the proposed use shall be determined by the Director.

5 ~~((E))~~ D. If the new use is permitted, the Director may require mitigation measures,
6 including but not limited to landscaping, sound barriers or fences, mounding or berming,
7 adjustments to ~~((yards))~~ setback or parking standards, design modification, or limiting hours of
8 operation.

9 Section 26. Section 23.42.124 of the Seattle Municipal Code, last amended by Ordinance
10 126509, is amended as follows:

11 **23.42.124 Light and glare standards nonconformity**

12 When nonconforming exterior lighting is replaced, new lighting shall conform to the
13 requirements of the light and glare standards of the respective zone. See ~~((subsection~~
14 ~~23.44.008.H))~~ Section 23.44.150 for ~~((neighborhood residential))~~ Neighborhood Residential
15 zones; Section 23.45.534 for multifamily zones; Section 23.46.020 for residential-commercial
16 zones; Section 23.47A.022 for C zones or NC zones; Section 23.48.075 for SM zones; Section
17 23.49.025 for downtown zones; and Section 23.50.046 for IB and IC zones.

18 Section 27. Section 23.42.130 of the Seattle Municipal Code, last amended by Ordinance
19 127099, is repealed:

20 ~~((23.42.130 Nonconforming solar collectors~~

21 ~~The installation of solar collectors that do not conform to development standards or that increase~~
22 ~~an existing nonconformity may be permitted as follows:~~

23 ~~A. In neighborhood residential zones, pursuant to subsection 23.44.046.B;~~

~~B. In multifamily zones, pursuant to subsection 23.45.545.E;~~

~~C. In NC zones or C zones, pursuant to subsection 23.47A.012.E.))~~

Section 28. A new Section 23.42.132 is added to the Seattle Municipal Code as follows:

23.42.132 Columbariums, garden wall crypts, and mausoleums

Columbariums, garden wall crypts, and mausoleums are permitted only as accessory to existing cemeteries, except that columbariums and garden wall crypts may also be accessory to religious facilities. In addition, no interment openings shall abut or be directly across the street from property other than cemetery property. For columbariums, garden wall crypts, and mausoleums accessory to existing cemeteries, any border between structures and the property line shall be landscaped and maintained by the owner in good condition.

Section 29. Chapter 23.44 of the Seattle Municipal Code, last amended by Ordinance 127099, is repealed as shown in Attachment 2 to this ordinance.

Section 30. A new Chapter 23.44 is added to the Seattle Municipal Code as follows:

Chapter 23.44 NEIGHBORHOOD RESIDENTIAL

23.44.010 Scope of provisions

A. This Chapter 23.44 establishes regulations for the Neighborhood Residential (NR) zone.

B. Some land in these zones may be regulated by Subtitle III, Division 3, Overlay Districts, of this Title 23 in addition to the standards of this Chapter 23.44.

C. Other regulations may apply to development proposals, including but not limited to general use provisions (Chapter 23.42); transportation concurrency and transportation impact mitigation (Chapter 23.52); requirements for streets, alleys, and easements (Chapter 23.53); standards for access, off-street parking, and solid waste storage (Chapter 23.54); sign

regulations (Chapter 23.55); communication regulations (Chapter 23.57); shoreline regulations (Chapter 23.60A); and environmental protection and historic preservation (Title 25).

D. Congregate residences are subject to additional requirements as specified in Section 23.42.049.

23.44.020 Permitted and prohibited uses

A. All uses are permitted outright, prohibited, or permitted as a conditional use according to Table A for 23.44.020 and this Section 23.44.020. Uses not referred to in Table A for 23.44.020 are prohibited, unless otherwise indicated in this Chapter 23.44 or Chapters 23.51A, 23.51B, or 23.57. Communication utilities and accessory communication devices, except as exempted in Section 23.57.002, are subject to this Chapter 23.44 and Chapter 23.57. Public facilities are subject to Section 23.51A.004.

B. All permitted uses are allowed as a principal use or as an accessory use, unless otherwise indicated in this Chapter 23.44.

Footnotes to Table A for 23.44.020

¹ Congregate residences are allowed within a major transit service area and prohibited in other areas.

² Institutions meeting development standards including but not limited to Section 23.44.180 are permitted outright. Public schools that do not meet development standards are regulated by Chapter 23.51B and Chapter 23.79. Institutions other than public schools that do not meet development standards may be permitted as administrative conditional uses pursuant to Section 23.44.030.

³ New private clubs are prohibited. Existing private clubs are permitted provided that the use is not expanded. Existing private clubs may be expanded as a conditional use only if the expansion would not result in the gross floor area or the number of surface parking spaces exceeding the amount existing on the effective date of this ordinance by more than 25%.

⁴ Pursuant to procedures in Chapter 23.78.

⁵ Ground-floor commercial uses are only allowed if they meet the standards of subsection 23.44.020.E.

⁶ Pursuant to subsection 23.44.020.D

⁷ Pursuant to subsection 23.44.030.F.

⁸ Provided that they are located on lots greater than 10 acres and conform to the limits on the number and location of farm animals and structures containing them set forth in Section 23.42.052.

⁹ Pursuant to subsection 23.44.030.D.

¹⁰ Pursuant to subsection 23.44.030.E.

1 C. Accessory uses

1 1. Except as otherwise provided in this subsection 23.44.020.C, accessory uses
2 customarily incidental to principal uses permitted outright are permitted outright.

3 2. All accessory uses and structures, except for urban farms and structures in
4 urban farm use, must be located on the same lot as the principal use or structure unless
5 otherwise specifically provided.

6 3. Urban farms with planting area not more than 4,000 square feet are permitted
7 outright as an accessory use. Urban farms with more than 4,000 square feet of planting area
8 may be permitted as an administrative conditional use accessory to any principal use permitted
9 outright or as a conditional use, pursuant to Section 23.42.051.

10 4. Piers and floats are permitted, provided they comply with Chapter 23.60A.

11 5. Bed and breakfast uses are permitted outright if:

12 a. The bed and breakfast use has a valid business license tax certificate
13 issued by the Department of Finance and Administrative Services;

14 b. The bed and breakfast use is operated by the primary resident of the
15 dwelling unit where the bed and breakfast is located or the resident operator;

16 c. There is no evidence of the bed and breakfast use visible from the
17 exterior of the dwelling unit except for a sign permitted by subsection 23.55.020.D.1; and

18 d. The bed and breakfast use has no more than five guest rooms,
19 provided that this limitation does not apply to bed and breakfast uses that were established on
20 or before April 1, 1987.

21 6. Accessory dwelling units are permitted, provided they comply with Section
22 23.42.022.

23 7. Human service uses accessory to institutional uses are permitted outright.

1 D. Existing cemeteries are permitted and are prohibited from expanding. New
2 cemeteries are prohibited. For purposes of this Section 23.44.020, a change in a cemetery
3 boundary is not considered an expansion in size and is permitted provided that:

- 4 1. The change does not increase the net land area occupied by the cemetery;
- 5 2. The land being added to the cemetery is contiguous to the existing cemetery
6 and is not separated from the existing cemetery by a public street or alley whether or not
7 improved; and
- 8 3. The use of the land being added to the cemetery will not result in the loss of
9 housing.

10 E. All ground-floor commercial uses permitted pursuant to this Section 23.44.020 shall
11 meet the following conditions:

- 12 1. The commercial use is located on a corner lot or on a lot that abuts both a street
13 and an alley;
- 14 2. The commercial use is limited to the following:
 - 15 a. Food processing and craft work;
 - 16 b. General sales and services; and
 - 17 c. Restaurants;
- 18 3. The gross floor area of commercial uses does not occupy more than 2,500
19 square feet of gross floor area;
- 20 4. The commercial use is located only on or below the ground floor of a
21 structure;
- 22 5. Vents for venting of odors, vapors, smoke, gas and fumes, and exterior heat
23 exchangers and other similar devices (e.g., related to ventilation, air conditioning,

refrigeration) shall be at least 10 feet above finished sidewalk grade and directed away to the extent possible from residential uses within 50 feet of the vent;

6. Drive-in businesses are prohibited as a principal or accessory use;

7. Outdoor sales of food or beverages must be located at least 50 feet from adjacent lots;

8. Outdoor service of food or beverages must be located at least 50 feet from adjacent lots; and

9. Businesses may not be open between the hours of 10 p.m. and 6 a.m.

23.44.030 Administrative conditional uses

A. Uses permitted as administrative conditional uses in Section 23.44.020 may be permitted by the Director when the provisions of Section 23.42.042 and this Section 23.44.030 are met.

B. Unless otherwise specified in this Chapter 23.44, conditional uses shall meet the development standards for uses permitted outright. If an existing structure is nonconforming to development standards, no conditional use is required for any alterations that do not increase the nonconformity.

C. Institutions other than public schools that do not meet the development standards of this Chapter 23.44, including Major Institution uses as provided in Chapter 23.69, and the expansion of existing private clubs may be permitted subject to the following:

1. Bulk and siting. In order to accommodate the special needs of the proposed institution, and to better site the facility with respect to its surroundings, the Director may modify the applicable development standards. In determining whether to allow such

1 modifications, the Director shall balance the needs of the institution against the compatibility
2 of the proposed institution with the residential scale and character of the surrounding area.

3 2. Noise, Light and Glare. The Director may condition the permit in order to
4 mitigate potential noise, light and glare impacts. Measures the Director may require for this
5 purpose include, but are not limited to the following: visual screening, landscaping, sound
6 barriers, fences, berms, adjustments to setbacks or the location of refuse storage areas, location
7 of parking areas and access, structural design modifications, limiting exterior lighting fixture
8 type, location and height to mitigate light trespass, and regulating hours of use.

9 3. Transportation plan. A transportation plan is required for proposed new
10 institutions and for those institutions proposing to expand larger than 4,000 square feet of gross
11 floor area and/or to provide 20 or more new parking spaces. The Director may condition a
12 permit to mitigate potential traffic and parking impacts pursuant to a Transportation
13 Management Plan or Program as described in Director's rules governing such plans or
14 programs. The Director will determine the level of detail to be disclosed in the transportation
15 plan based on the probable impacts and/or scale of the proposed institution.

16 D. A use not otherwise permitted in a Neighborhood Residential zone within a structure
17 designated as a Seattle Landmark that is subject to controls and incentives imposed by a
18 designating ordinance, when the owner of the Landmark has executed and recorded an
19 agreement acceptable in form and content to the Landmarks Preservation Board providing for
20 the restoration and maintenance of the historically significant features of the structure, may be
21 permitted subject to the following:

22 1. The use is compatible with the existing design and/or construction of the
23 structure without significant alteration;

2. Uses permitted by the zone are impractical because of structure design and/or that no permitted use can provide adequate financial support necessary to sustain the structure in reasonably good physical condition; and

3. The use shall not be detrimental to other properties in the zone or vicinity or to the public interest.

E. Uses in structures unsuited to uses permitted outright

1. A use not otherwise permitted in a Neighborhood Residential zone may be permitted as an administrative conditional use in structures unsuited to uses permitted outright in Neighborhood Residential zones. The determination that a use may be permitted shall be based on the following factors:

a. The design of the structure is not suitable for conversion to a use permitted outright in a Neighborhood Residential zone;

b. The structure contains more than 4,000 square feet; and

c. The proposed use will provide a public benefit.

2. Parking requirements for uses permitted under this subsection 23.44.030.E shall be determined by the Director.

3. The Director may require measures to mitigate impacts such as noise, odor, parking, or traffic impacts. Mitigating measures may include but are not limited to landscaping, sound barriers, fences, mounding or berming, adjustments to development standards, design modifications, or setting hours of operation.

4. In the case of an existing or former public school, permissible uses other than those permitted outright in the zone and their development standards including parking

requirements shall be established only pursuant to procedures for establishing criteria for joint use or reuse of public schools in Chapter 23.78.

F. A park and ride facility under the management of a public agency responsible for commuter pooling efforts may be permitted if the Director determines that:

1. It is to be located on an existing parking lot;
2. That parking proposed for the park and ride facility is not needed by the principal use or its accessory uses during the hours proposed for park and ride use; and
3. The park and ride use shall not interfere or conflict with the peak-hour activities associated with the principal use and its accessory uses. The Director may control the number and location of parking spaces to be used.

G. Any use that was previously authorized by a conditional use permit but which has been discontinued shall not be re-established or re-commenced except pursuant to a new conditional use permit, provided that such permit is required for the use at the time re-establishment or re-commencement is proposed. Vacant property, except for dead storage of materials or equipment of the conditional use, shall not be considered as being devoted to the authorized conditional use. The expiration of licenses necessary for the conditional use shall be evidence that the property is not being devoted to the conditional use. A conditional use in a residential structure or a multitenant commercial structure shall not be considered as discontinued unless all units are either vacant or devoted to another use. The following shall constitute conclusive evidence that the conditional use has been discontinued:

1. A permit to change the use of the property has been issued and the new use has been established; or

2. The property has not been devoted to the authorized conditional use for more than 24 consecutive months.

H. Minor structural work that does not increase usable gross floor area or seating capacity and that does not exceed the development standards applicable to the use shall not be considered an expansion and does not require approval as a conditional use unless the work would exceed the height limit of the zone for uses permitted outright. Such work includes but is not limited to roof repair or replacement and construction of uncovered decks and porches, facilities for barrier-free access, bay windows, dormers, and eaves.

23.44.040 General provisions

A. An exception from one specific standard does not relieve the applicant from compliance with any other standard.

B. Any structure occupied by a permitted principal use other than residential use may be converted to residential use even if the structure does not conform to the development standards for residential uses in the Neighborhood Residential zone.

C. Assisted living facilities, congregate residences, and structures containing ground floor commercial uses shall meet the development standards for stacked dwelling units unless otherwise specified.

D. If more than one category of residential use is located on a lot, and if different development standards apply to the different categories of use, then each category's percentage of the total limit imposed by the development standard shall be calculated based on each category's percentage of total structure footprint area as follows:

1 1. Calculate the footprint, in square feet, for each category of residential use.
2 For purposes of this calculation, "footprint" is defined as the horizontal area enclosed by the
3 exterior walls of the structure.

4 2. Calculate the total square feet of the footprint of all categories of residential
5 uses on the lot.

6 3. Divide the square footage of the footprint for each category of residential
7 structure in subsection 23.44.040.D.1 by the total square feet of the footprint of all residential
8 uses in subsection 23.44.040.D.2.

9 4. Multiply the percentage calculated in subsection 23.44.040.D.3 for each
10 housing category by the area of the lot. The result is the area of the lot devoted to each housing
11 category.

12 5. The total limit for each category of residential use is the applicable limit for
13 that use multiplied by the percentage calculated in subsection 23.44.040.D.4.

14 **23.44.050 Floor area**

15 A. Gross floor area. In Neighborhood Residential zones, gross floor area includes
16 exterior corridors, breezeways, and stairways that provide building circulation and access to
17 dwelling units or sleeping rooms. Balconies, patios, and decks that are associated with a single
18 dwelling unit or sleeping room and that are not used for common circulation are not considered
19 gross floor area.

20 B. Floor area ratio (FAR) limits. The FAR limit in Neighborhood Residential zones for
21 lots with residential uses is as shown in Table A for 23.44.050. The FAR limit in
22 Neighborhood Residential zones for lots without residential uses is 1.2. The applicable FAR
23 limit applies to the total chargeable floor area of all structures on the lot.

Table A for 23.44.050	
Floor area ratio (FAR) in NR zones	
Density (dwelling units per lot size)	FAR
Less dense than 1 unit / 4,000 square feet	0.6
1 unit / 4,000 square feet to 1 unit / 2,201 square feet	0.8
1 unit / 2,200 square feet to 1 unit / 1,601 square feet	1.0
1 unit / 1,600 square feet or denser	1.2, except that it is 1.4 for stacked dwelling units located within a frequent transit service area on lots 6,000 square feet or larger

C. The following floor area is exempt from FAR limits:

1. All stories, or portions of stories, that are underground.

2. All portions of a story that extend no more than 4 feet above existing or finished grade, whichever is lower, excluding access.

3. Common walls separating individual attached dwelling units.

23.44.060 Maximum density and minimum lot size

A. Except as provided in subsection 23.44.060.C, the maximum density is:

1. For stacked dwelling units on lots larger than 6,000 square feet that are located in a frequent transit service area, one dwelling unit per 650 square feet of lot area;

2. For all other dwelling units, one dwelling unit per 1,250 square feet of lot area.

B. The minimum lot size for lots created after the effective date of this ordinance is 5,000 square feet.

C. Maximum density exceptions

1. At least one dwelling unit is allowed on all lots in existence as of the effective date of this ordinance.

2. A lot that is less than 5,000 square feet may be developed with up to four dwelling units provided that the lot does not contain any riparian corridors; wetlands and their

1 buffers; submerged lands and areas within the shoreline setback; or designated non-disturbance
2 area in steep slopes.

3 3. A lot that is less than 7,500 square feet and within one-quarter mile walking
4 distance of a stop on a major transit service may be developed with up to six dwelling units if
5 the lot does not contain any riparian corridors; wetlands and their buffers; submerged lands and
6 areas within the shoreline setback; or designated non-disturbance area in steep slopes.

7 4. A lot that is less than 7,500 square feet and located more than one-quarter mile
8 walking distance from a stop on a major transit service may be developed with up to six
9 dwelling units if the lot meets the following criteria:

10 a. The lot does not contain any riparian corridors; wetlands and their
11 buffers; submerged lands and areas within the shoreline setback; or designated non-disturbance
12 area in steep slopes;

13 b. At least two principal dwelling units are low-income units subject to a
14 regulatory agreement, covenant, or other legal instrument enforceable by The City of Seattle;

15 c. The low-income units are generally distributed throughout the
16 development and have substantially the same functionality as unrestricted units in the
17 development;

18 d. To the extent practicable, the low-income units are comparable to
19 unrestricted units in terms of square footage and number of bedrooms and bathrooms;

20 e. The tenure (i.e., rental or ownership) of low-income units and
21 unrestricted units is the same;

1 f. The regulatory agreement, covenant, or other legal instrument contains
2 criteria and policies to maintain public benefit if the property is demolished or converted to a
3 non-residential use;

4 g. For ownership housing, the low-income units are stewarded by a
5 qualified non-profit organization, which for purposes of this subsection 23.44.060.C.4 means a
6 non-profit organization that the Office of Housing determines as experienced in the development
7 and stewardship of permanently affordable homes, including:

8 1) Pre-purchase verification of income and other requirements for
9 eligible households, affordable sale price calculations for approval by the Office of Housing, and
10 execution of legal restrictions on the property; and

11 2) Post-purchase support for homeowners by facilitating resales,
12 monitoring compliance with financial, owner occupancy, and other legal requirements, and clear
13 communication of program guidelines and restrictions; and

14 h. At such times as may be required by the Director of Housing but no less
15 than annually, the property owner (for rental housing) or the qualified non-profit organization
16 (for ownership housing) agrees to file property reports with the Office of Housing, verified upon
17 oath or affirmation, which shall contain such information as the Office of Housing may deem
18 necessary to determine compliance with this subsection 23.44.060.C.4 and the regulatory
19 agreement, covenant, or other legal instrument.

20 5. For lots that contain any riparian corridors, wetlands and their buffers,
21 submerged lands and areas within the shoreline setback, or designated non-disturbance area in
22 steep slopes, applicants may choose to develop the lot with the number of dwelling units

provided in the density limits in subsection 23.44.060.A or with the number of dwelling units calculated as follows:

a. Determine the number of units that would be allowed under subsections 23.44.060.C.1 through 23.44.060.C.4 if no environmentally critical areas were located on the lot;

b. Determine the percentage of the lot that is not covered by riparian corridors, wetlands and their buffers, submerged lands and areas within the shoreline setback, or designated non-disturbance area in steep slopes; and

c. Calculate the number of dwelling units by multiplying the number of units determined in subsection 23.44.060.C.5.a by the percentage of the lot calculated in subsection 23.44.060.C.5.b.

D. Measurement of minimum lot size and maximum density

1. When calculation of the number of dwelling units allowed results in a fraction of a unit, any fraction shall be rounded down.

2. Congregate residence sleeping rooms shall be treated as one-fourth of a dwelling unit for purposes of calculating density.

3. In the case of a development within a unit lot subdivision, the density limit shall be applied to the parent lot as a whole.

4. If dedication of right-of-way is required, permitted density shall be calculated before the dedication is made.

5. When calculating density, the number of dwelling units shall include both accessory dwelling units and principal dwelling units.

6. Areas not counted in calculating the lot size. The following areas shall not be counted in calculating the area of lots for the purpose of calculating the maximum density and the minimum lot size:

- a. Riparian corridors;
- b. Wetlands and their buffers;
- c. Submerged lands and areas within the shoreline setback; and
- d. Designated non-disturbance area in steep slopes.

E. For the purpose of this Section 23.44.060, designated non-disturbance area in steep slopes shall include all portions of steep slope hazard areas except the following:

- 1. Areas that are granted relief from the prohibition of development according to Section 25.09.090;
- 2. Areas where development is allowed under a small project waiver according to Section 25.09.090; and
- 3. Areas where intrusion into the steep slope erosion hazard area and buffer is allowed by steep slope erosion hazard area variance according to Section 25.09.290.

23.44.070 Structure height

A. Maximum height established

1. Subject to the exceptions allowed in this Section 23.44.070, the height limit for any structure in NR zones is 32 feet.

2. The height limit for accessory structures that are located in required setbacks is 12 feet, except as follows:

- a. The ridge of a pitched roof may extend up to 3 feet above the 12-foot height limit provided that all parts of the roof above the height limit shall be pitched at a rate of

1 not less than 4:12. No portion of a shed roof is permitted to extend beyond the 12-foot height
2 limit.

3 b. Freestanding flagpoles and religious symbols for religious institutions
4 are exempt from height controls except as regulated in Chapter 23.64, provided they are no
5 closer to any lot line than 50 percent of their height above existing grade.

6 B. Standards for pitched roofs

7 1. The ridge of a pitched roof that is not a shed or butterfly roof may extend up
8 to 5 feet above the maximum height limit, as determined under subsection 23.44.070.A. All
9 parts of the roof above the height limit must be pitched at a rate of not less than 4:12 (see
10 Exhibit A for 23.44.070).

Exhibit A for 23.44.070

Height exception for pitched roofs that are not shed or butterfly roofs

2. The high side(s) of a shed or butterfly roof may extend 3 feet above the maximum height limit, as determined under subsection 23.44.070.A, provided that the low side(s) of the shed or butterfly roof are no higher than the height limit (see Exhibit B for 23.44.070). The roof line of a shed or butterfly roof may be extended in order to accommodate eaves, provided that the highest point of the roof extension is no more than 4 feet above the height limit.

Exhibit B for 23.44.070

Height exception for shed and butterfly roofs

C. Height limit exceptions

1. Except in the Airport Height Overlay District, flagpoles are exempt from height limits, provided that they are no closer to any adjoining lot line than 50 percent of their height above existing grade, or, if attached only to a roof, no closer than 50 percent of their height above the roof portion where attached.

2. Open railings, planters, greenhouses not dedicated to food production, parapets, and firewalls may extend 4 feet above the height limit in subsection 23.44.070.A. Planters on flat roofs shall not be located within 4 feet of more than 25 percent of the perimeter of the roof.

3. Green roofs may extend 2 feet above the height limit in subsection
23.44.070.A or above a pitched roof allowed in subsection 23.44.070.B.

Exhibit C for 23.44.070

Green roof height allowance

4. Solar collectors may extend 4 feet above the height limit in subsection
23.44.070.A or above a pitched roof allowed in subsection 23.44.070.B.

1 5. For nonresidential principal uses, the following rooftop features may extend
2 up to 10 feet above the height limit in subsection 23.44.070.A, as long as the combined total
3 coverage of all features listed in this subsection 23.44.070.C.5 does not exceed 15 percent of
4 the roof area or 20 percent of the roof area if the total includes screened or enclosed
5 mechanical equipment:

- 6 a. Stair and elevator penthouses;
- 7 b. Mechanical equipment;
- 8 c. Wind-driven power generators; or
- 9 d. Chimneys.

10 6. Devices for generating wind power may extend up to 10 feet above the height
11 limit in subsection 23.44.070.A, provided that the combined total coverage of all features does
12 not exceed 15 percent of the roof area.

13 7. For height limits and exceptions for communication utilities and accessory
14 communication devices, see Section 23.57.010.

15 8. Buildings existing prior to the effective date of this ordinance are permitted to
16 extend up to 8 inches above the height limit in subsection 23.44.070.A or a pitched roof
17 allowed in subsection 23.44.070.B solely for the purpose of adding insulation to an existing
18 roof.

19 9. Roofs enclosed by a parapet. Roof surfaces that are completely surrounded by a
20 parapet may exceed the applicable height limit to allow for a slope, provided that the height of
21 the highest elevation of the roof surface does not exceed 75 percent of the parapet height, and
22 provided that the lowest elevation of the roof surface is no higher than the applicable height
23 limit. See Exhibit C for 23.44.070.

Exhibit C for 23.44.070

Height allowance for sloped roofs concealed by a parapet

23.44.080 Lot coverage

A. Except as otherwise provided in this Section 23.44.080, the maximum lot coverage allowed for structures is 50 percent.

B. The following areas shall not be counted in calculating the lot size for the purpose of calculating lot coverage in this Section 23.44.080:

1. Riparian corridors;
2. Wetlands and their buffers;
3. Submerged lands and areas within the shoreline setback; and
4. Designated non-disturbance area in steep slopes.

C. Structures not counted. The following structures and portions of structures are not counted in lot coverage calculations:

1. Underground structures;
2. The first 36 inches of architectural features such as cornices, eaves, gutters, roofs, fireplaces, chimneys, and other similar features that project from principal and accessory structures;
3. Decks or parts of a deck that are 36 inches or less above existing grade;
4. Unenclosed porches or steps no higher than 4 feet above existing grade, or the grade at the street lot line closest to the porch, whichever is lower; and
5. Unenclosed structures that meet the standards of subsection 23.44.090.H.

D. The lot coverage allowed on lots containing areas listed in subsection 23.44.080.B shall not be less than 625 square feet or an amount of lot coverage approved by the Director through an environmentally critical area reduction, waiver, or modification pursuant to Chapter 25.09, whichever is greater.

E. For the purpose of this Section 23.44.080, designated non-disturbance area in steep slopes shall include all portions of steep slope hazard areas except the following:

1. Areas that are granted relief from the prohibition of development according to Section 25.09.090;
2. Areas where development is allowed under a small project waiver according to Section 25.09.090; and
3. Areas where intrusion into the steep slope erosion hazard area and buffer is allowed by steep slope erosion hazard area variance according to Section 25.09.290.

23.44.090 Setbacks

A. Required setbacks for the NR zones are shown in Table A for 23.44.090.

Table A for 23.44.090
Required setbacks in Neighborhood Residential zones

Front	10 feet
Rear	5 feet for accessory dwelling units and 10 feet for other structures except that, if the rear setback abuts an alley, no rear setback is required ¹
Side	5 feet, except that no side setback is required from a side lot line that abuts an alley ¹

Footnote for Table A for 23.44.090

¹ On a reversed corner lot, the setback on the side street lot line shall be 10 feet and the rear setback is 5 feet.

B. Through lots. In the case of a through lot, each setback abutting a street, shall be a front setback.

C. Other setback requirements. Additional structure setbacks may be required in order to meet the provisions of Chapter 23.53.

D. Underground structures. Underground structures, measured from existing or finished grade, whichever is lower, may be located within setbacks.

E. Projections from an enclosed structure allowed in required setbacks

1. Architectural features such as cornices, eaves, gutters, roofs, fireplaces, chimneys, and other similar features may project into required setbacks a maximum of 2 feet if they are no closer than 3 feet to any lot line.

2. Garden windows and other similar features that do not provide floor area may project a maximum of 18 inches into required setbacks if they:

a. Are a minimum of 30 inches above the finished floor;

b. Are no more than 6 feet in height and 8 feet wide; and

c. Combined with bay windows and other similar features that provide floor area, make up no more than 30 percent of the area of the facade.

3. Bay windows and other similar features that provide floor area may project a maximum of 2 feet into required front and rear setbacks if they:

a. Are no closer than 5 feet to any lot line;

b. Are no more than 10 feet in width; and

c. Combined with garden windows and other projections included in subsection 23.44.090.E.2, make up no more than 30 percent of the area of the facade.

4. Unenclosed porches and steps

a. Unenclosed porches or steps no higher than 4 feet above existing grade, or the grade at the street lot line closest to the porch, whichever is lower, may extend to within 5 feet of a street lot line and 3 feet of a side lot line.

b. Porches or steps may be covered, provided that:

1) No portions of the cover-structure, including any supports, are closer than 5 feet to any lot line;

2) The height of the roof over unenclosed porch or steps shall not exceed 15 feet above existing or finished grade, whichever is lower;

3) The roof over such porches or steps shall not be used as a deck; and

4) The total area of porches attached to any individual dwelling unit and located in the setback is not more than 60 square feet.

1 F. Structures with ground-floor commercial uses. The ground floor of a structure
2 containing a ground-floor commercial use may extend into one front setback provided it is not
3 located closer than 2 feet from a front lot line.

4 G. Garages and carports

5 1. Garages and carports may be located in a setback where parking is allowed in
6 a setback as provided in subsections 23.44.160.D.4 and 23.44.160.D.5.

7 2. Garages and carports may be located in a required side setback that abuts the
8 rear or side setback of another lot if:

9 a. The garage or carport is a detached structure and extends only into that
10 portion of a side setback that is either within 40 feet of the centerline of an alley or within 25
11 feet of any rear lot line that is not an alley lot line; or

12 b. An agreement between the owners of record of the abutting properties,
13 authorizing the garage or carport in that location, is executed and recorded with the King
14 County Recorder's Office.

15 3. Garages and carports may be located in the rear setback provided they are not
16 located within 5 feet of the rear property line.

17 4. Garages and carports allowed in required setbacks shall comply with all of the
18 following standards:

19 a. The area of a garage or carport in front setbacks, is limited to 300
20 square feet with 14-foot maximum width if one space is provided, and 600 square feet with 24-
21 foot maximum width if two spaces are provided.

22 b. Roof eaves and gutters that project up to 2 feet are excluded from the
23 maximum coverage and size limits.

c. The roof shall not be used as a balcony or deck in rear or side setbacks.

H. Other unenclosed structures allowed in setbacks

1. All unenclosed structures not more than 18 inches above existing or finished grade, whichever is lower, are allowed in any required setback including but not limited to decks, swimming pools, and hot tubs.

2. Barrier-free access. Access facilities for the disabled and elderly, are allowed in any required setback.

3. Freestanding signs, bike racks, play structures, and similar unenclosed structures that are 6 feet or less in height above existing or finished grade, whichever is lower, are allowed in any required setback, provided that:

a. Signs meet the provisions of Chapter 23.55;

b. Structures located in a side setback allow a 2.5-foot-wide pathway through the side setback; and

c. Structures located within 5 feet of a front lot line are not more than 4 feet in height.

4. Fences

a. Fences no greater than 6 feet in height are allowed in any required setback, except that fences in the required front setback extended to side lot lines or in street side setbacks extended to the front and rear lot lines may not exceed 4 feet in height. Fences located on top of a bulkhead or retaining wall are also limited to 4 feet. If a fence is placed on top of a new bulkhead or retaining wall used to raise grade, the maximum combined height is limited to 9.5 feet.

b. Except for fences in the required front setback extended to side lot lines or in street side setbacks extended to the front and rear lot lines, up to 2 feet of additional height for architectural features such as arbors or trellises on the top of a fence is allowed if the architectural features are predominately open.

c. Fence height may be averaged along sloping grades for each 6-foot-long segment of the fence, but in no case may any portion of the fence exceed 8 feet in height when the height allowed by subsection 23.44.090.H.4.a is 6 feet, or 6 feet in height when the height allowed by subsection 23.44.090.H.4.a is 4 feet.

5. Bulkheads and retaining walls

a. Bulkheads and retaining walls used to raise grade are allowed in any required setback if they are limited to 6 feet in height, measured above existing grade.

b. Bulkheads and retaining walls used to protect a cut into existing grade may not exceed the minimum height necessary to support the cut or 6 feet measured from the finished grade on the low side, whichever is greater. Any fence shall be set back a minimum of 3 feet from such a bulkhead or retaining wall.

6. Mechanical equipment. Heat pumps, charging devices for electric vehicles, and similar mechanical equipment, not including incinerators, are allowed in required setbacks if they are not located within 3 feet of any lot line.

7. Access bridges. Uncovered, unenclosed access bridges are allowed as follows:

a. Pedestrian bridges 5 feet or less in width, and of any height necessary for access, are permitted in required setbacks, except that in side setbacks an access bridge must be at least 3 feet from any side lot line.

b. A driveway access bridge is permitted in the required setback abutting the street if necessary for access to parking. The vehicular access bridge shall be no wider than 12 feet for access to one parking space or 22 feet for access to two or more parking spaces and of any height necessary for access. The driveway access bridge may not be located closer than 5 feet to any side lot line.

8. Unenclosed structures are allowed in the rear setback provided that the structure is:

a. Not located within 5 feet of a rear lot line that is not an alley lot line;

b. Not more than 12 feet in height; and

c. Separated from a dwelling unit by at least 3 feet, eave to eave.

9. Above-grade stormwater management features, such as bioretention planters and cisterns, are allowed in setbacks if:

a. No feature, excluding piping, is more than:

1) Twelve feet tall if located in a portion of the rear setback that is not also a side setback; or

2) Six and a half feet tall, if located in other setbacks.

b. No feature greater than 4.5 feet tall is located within 10 feet of the front lot line, excluding piping, unless it is integrated into a bulkhead or retaining wall that is allowed in subsection 23.44.090.H.5;

c. No feature greater than 6 inches tall is located within 2.5 feet of the side lot line; and

d. The total storage capacity of all above-grade cisterns located in setbacks is no greater than 1,250 gallons.

10. Guardrails or handrails no more than 42 inches are allowed on unenclosed stairs, decks, access bridges, bulkheads, and retaining walls.

I. Other enclosed structures allowed in setbacks

1. Any accessory structure that is not a dwelling unit may be constructed in a side or rear setback that abuts the rear or side setback of another lot upon recording with the King County Recorder's Office an agreement to this effect between the owners of record of the abutting properties.

2. Enclosed structures that are not dwelling units are allowed in the rear setback provided that:

a. They are not located within 5 feet of a rear lot line that is not an alley lot line;

b. They are not more than 12 feet in height; and

c. They are separated from a dwelling unit by at least 3 feet, eave to eave.

J. Certain additions. An addition to an existing dwelling unit may extend into a required side setback if:

1. The existing dwelling unit is already nonconforming with respect to that setback;

2. The portion of the dwelling unit that is presently nonconforming is at least 60 percent of the total width of the respective facade of the structure prior to the addition;

3. The addition would not be located within 3 feet of a side lot line; and

4. The addition would not be located any closer to the side lot line than the closest part of the existing structure.

Exhibit A for 23.44.090

Additions into side setbacks for existing dwelling units

K. A structure may be permitted to extend into front and rear setbacks as necessary to protect Tier 1 and Tier 2 trees pursuant to Section 25.11.070.

23.44.100 Separations between structures

A. The minimum required separation between structures containing floor area is 6 feet except that if the structures are separated by a driveway or parking aisle, the minimum required separation between the structures is 2 feet greater than the required width of the driveway or parking aisle or 24 feet, whichever is less.

B. If structures containing floor area are separated by a driveway or parking aisle, projections that enclose floor area may extend a maximum of 3 feet into the required separation if they are at least 8 feet above finished grade.

C. Architectural features such as cornices, eaves, gutters, roofs, fireplaces, chimneys, and other forms of weather protection may project into required separations a maximum of 2 feet. Garden windows, bay windows, covered porches and patios, balconies, and enclosed structures are not allowed in the required separation. Detached structures that are up to 10 feet in height and used exclusively for bike parking are allowed in required separations.

23.44.110 Amenity area

A. The amount of required amenity area is equal to 20 percent of the lot area.

B. All dwelling units shall have access to either a common or private amenity area.

C. For attached and detached dwelling units, required ground-level amenity areas may be provided as either private or common space. For stacked dwelling units, at least half of the amenity area shall be provided as common space.

D. A minimum of 50 percent of the required amenity area shall be provided at ground level or within 4 feet of existing grade. In calculating the total amount of amenity area, only half of the amenity area that is not provided at ground level or within 4 feet of existing grade shall count toward the required amenity area.

E. Amenity area shall not be enclosed within a structure.

F. Each amenity area shall be at least 120 square feet in area and have a minimum width and depth of 8 feet.

G. Features in amenity areas

1. The following features are not allowed in amenity areas:

a. Vehicular parking areas, vehicular access easements, and driveways;

b. Required bike parking;

c. Solid waste and recyclable material storage area; and

d. Enclosed structures.

2. Pathways serving multiple dwelling units are not allowed in private amenity areas.

3. Decks, porches, and steps; swimming pools, spas, and hot tubs; stormwater management features, including but not limited to bioretention planters and cisterns; play equipment; and similar features are allowed in amenity areas.

4. Amenity areas may be covered by weather protection.

5. Projections that do not provide floor area may extend into an amenity area if they meet the standards for projections into setbacks in subsection 23.44.090.E and if garden windows and other similar features are at least 8 feet above finished grade.

6. Rooftop areas located within 8 feet of minor communication utilities and accessory communication devices do not qualify as amenity areas.

H. Areas in environmentally critical areas and their buffers, including but not limited to steep slopes, may count toward amenity areas.

I. No amenity area is required for one new dwelling unit added to a dwelling unit existing as of January 1, 1982, or for one new dwelling unit added to a multifamily residential use existing as of October 10, 2001.

23.44.120 Tree requirements

A. Development containing one or more new dwelling units must plant or retain trees to achieve the number of tree points listed in Table A for 23.44.120.

Table A for 23.44.120	
Number of tree points required	
Density (dwelling units per lot size)	Tree points required per lot area ¹
Less dense than 1 unit / 4,000 square feet	1 point / 500 square feet
1 unit / 4,000 square feet to 1 unit / 2,201 square feet	1 point / 600 square feet
1 unit / 2,200 square feet to 1 unit / 1,601 square feet	1 point / 675 square feet

Table A for 23.44.120

Number of tree points required

Density (dwelling units per lot size)	Tree points required per lot area ¹
1 unit / 1,600 square feet or denser	1 point / 750 square feet
Footnote to Table A for 23.44.120	
¹ For purposes of this Section 23.44.120, lot area shall not include submerged lands.	

B. Individual trees preserved during construction or planted as part of construction, excluding street trees, count toward the tree score according to Table B for 23.44.120. Trees required under Section 25.11.090 shall count toward this standard. All required trees shall meet standards promulgated by the Director to provide for the long-term health and viability of plantings. These standards may include but are not limited to tree selection, invasive species, planting specification, soil and mulch amendment, and protection practices during construction.

Table B for 23.44.120

Tree points

Type of tree	Tree species	Points for deciduous trees	Points for evergreen trees
Trees planted as part of construction	Small	1 point	1.25 point
	Small/medium	2 points	2.5 points
	Medium/large	3 points	3.75 points
	Large	4 points	5 points
Trees preserved during construction	Small	0.4 point per inch of diameter	0.5 point per inch of diameter
	Small/medium	0.8 point per inch of diameter	1 point per inch of diameter
	Medium/large	1.2 point per inch of diameter	1.4 point per inch of diameter

Table B for 23.44.120

Tree points

Type of tree	Tree species	Points for deciduous trees	Points for evergreen trees
	Large	1.6 point per inch of diameter	1.8 point per inch of diameter

C. Tree protection areas shall be designated in accordance with Section 25.11.060 for all trees that are proposed to be preserved to receive points under subsection 23.44.120.B, regardless of tree tier.

D. The owner of the subject lot is required to ensure that the trees planted remain healthy for at least five years after inspection by the City, and the owner of the subject lot shall be responsible for replacing any trees that do not remain healthy after inspection by the City.

E. Tree measurements

1. New trees planted to meet this requirement shall meet the following size standards:

a. Deciduous trees with one trunk must be at least 1.5 inches in diameter, measured 6 inches above the ground.

b. Multi-stemmed deciduous trees must have at least three stems and be at least 6 feet tall.

c. Evergreen trees must be at least 4 feet tall.

2. Existing trees shall be measured 4.5 feet above the ground.

F. Tree location. New trees planted to meet this requirement shall not be planted:

1. For small species trees, within 2 feet of a dwelling unit;

2. For small/medium species trees, within 4 feet of a dwelling unit;

3. For medium/large species trees, within 6 feet of a dwelling unit;

4. For large species trees, within 8 feet of a dwelling unit; and

5. For all trees, within 2 feet of a sidewalk located in the right-of-way.

G. Street tree requirements

1. Street trees are required for development that would add one or more principal dwelling units on a lot, except as provided in subsection 23.44.120.G.2 and Section 23.53.015. Existing street trees shall be retained unless the Director of the Seattle Department of Transportation approves their removal. The Director, in consultation with the Director of the Seattle Department of Transportation, shall determine the number, type, and placement of additional street trees to be provided in order to:

- a. Improve public safety;
- b. Promote compatibility with existing street trees;
- c. Match trees to the available space in the planting strip;
- d. Maintain and expand the urban forest canopy;
- e. Encourage healthy growth through appropriate spacing;
- f. Protect utilities; and
- g. Allow access to the street, buildings, and lot.

2. Exceptions to street tree requirements

a. If a lot borders an unopened right-of-way, the Director may reduce or waive the street tree requirement along that right-of-way as a Type I decision if, after consultation with the Director of the Seattle Department of Transportation, the Director determines that the right-of-way is unlikely to be opened or improved.

b. If it is not feasible to plant street trees in a right-of-way planting strip, a 5-foot setback shall be planted with trees along the street lot line that abuts the required front

setback, or landscaping other than trees shall be provided in the planting strip, subject to approval by the Director of the Seattle Department of Transportation. If a 5-foot setback or landscaped planting strip is not feasible, the Director may reduce or waive this requirement as a Type I decision.

23.44.130 Structure width limits

Structure width for each building containing residential uses in Neighborhood Residential zones may not exceed 90 feet. Measurement of structure width is provided in Section 23.86.014.

23.44.140 Design standards

A. Application of provisions.

1. The provisions of this Section 23.44.140 apply to development that includes the construction of new dwelling units, except for new dwelling units added within existing structures.

2. For the purposes of this Section 23.44.140, requirements for street-facing facades shall only apply to structures located within 40 feet of a street lot line or a vehicle access easement serving ten or more residential units. For structures located within 40 feet of a vehicle access easement serving ten or more residential units but not within 40 feet of a street lot line, the facade that faces the vehicle access easement shall be considered a street-facing facade for the purpose of this Section 23.44.140. If multiple facades face vehicle access easements, the applicant may decide which facade facing a vehicle access easement is considered the street-facing facade.

B. Measurement of street-facing facades. For the purposes of this Section 23.44.140, a street-facing facade includes all vertical surfaces enclosing interior space, including gables and dormers, as shown in Exhibit A for 23.44.140.

Exhibit A for 23.44.140

Measurement of facades

C. Pedestrian access. Each dwelling unit shall have pedestrian access at least 3 feet in width to the sidewalk or, if no sidewalk exists, the front lot line. This pedestrian access may be shared or private. This pedestrian access may cross any required setbacks or interior separation. This pedestrian access may be part of a driveway.

D. Entrances. Each structure with a street-facing facade shall have a pedestrian entry on that street-facing facade meeting the requirements of subsections 23.44.140.D.1 through

23.44.140.D.4. For attached and detached dwelling units, the pedestrian entry may be located on a wall perpendicular to the street-facing facade provided that the pedestrian entry abuts a covered porch or recessed entry that also abuts the street-facing facade.

1. For stacked dwelling units, at least one pedestrian entry shall be required for the structure as a whole.

2. For attached and detached dwelling units, each individual dwelling unit with a street-facing facade within 40 feet of the street lot line shall have at least one pedestrian entry on the street-facing facade.

3. For structures or dwelling units with multiple street-facing facades, a pedestrian entry is required on only one of the street-facing facades.

4. Required pedestrian entry on street-facing facades shall have weather protection, such as a covered porch, canopy, recessed entry, or similar feature, measuring at least 3 feet by 3 feet in width and depth for attached and detached dwelling units and at least 6 feet in width and 4 feet in depth for stacked dwelling units.

E. Windows and doors. At least 20 percent of the area of each street-facing facade shall consist of windows and/or doors. If front and side facades are street-facing, the two facades shall be combined for the purpose of this calculation. Windows count toward the requirement for facade openings in this subsection 23.44.140.E only if they are transparent. Windows composed of garage doors and doors to utility and service areas do not count.

23.44.150 Light and glare standards

A. Exterior lighting shall be shielded and directed away from adjacent properties.

B. To prevent vehicle lights from affecting adjacent properties, driveways and parking areas for more than two vehicles shall be screened from abutting properties by a fence or wall

between 5 feet and 6 feet in height, or a solid evergreen hedge or landscaped berm at least 5 feet in height. If the elevation of the lot line is different from the finished elevation of the driveway or parking surface, the difference in elevation may be measured as a portion of the required height of the screen so long as the screen itself is a minimum of 3 feet in height. The Director may waive the requirement for the screening if it is not needed due to changes in topography, agreements to maintain an existing fence, or the nature and location of adjacent uses.

23.44.160 Parking location and access

A. Parking quantity. Off-street parking is required pursuant to Section 23.54.015.

B. Parking on same lot. Any required parking shall be located on the same lot as the principal use, except that parking accessory to a floating home, floating on-water residence, house barge, or vessel with a dwelling unit may be located on another lot if within 600 feet of the lot on which the floating home, floating on-water residence, house barge, or vessel with a dwelling unit is located.

C. Access to parking

1. Vehicular access to parking from an improved street, alley, or easement is required if parking is provided.

2. Access to parking is permitted from a street only if the Director determines that one of the following conditions exists:

a. There is no alley improved to the standards of subsection 23.53.030.B, and there is no unimproved alley in common usage that currently provides access to parking on the lot or to parking on adjacent lots in the same block;

b. Existing topography does not permit alley access;

c. At least 50 percent of alley frontage abuts property in a nonresidential zone;

d. Due to the relationship of the alley to the street system, use of the alley for parking access would create a significant safety hazard;

e. Parking access must be from the street in order to provide access to a parking space that complies with Chapter 11 of the Seattle Building Code; or

f. Providing alley access would require removal of a tree on private property that is a Tier 1 or Tier 2 tree and all other applicable criteria for tree protection in Chapter 25.11 are met.

D. Location of parking. Except as provided below, parking is not allowed within 20 feet of a front lot line or within 5 feet of a side street lot line:

1. If access to required parking passes through a required setback, automobiles, motorcycles, and similar vehicles may be parked on the open access located in a required setback.

2. If access is taken directly from an alley, surface parking may be located within 20 feet of a street lot line if it is located within 28 feet of an alley lot line and is no closer than 7 feet to any street lot line.

3. For lots at least 40 feet in width, up to two surface parking spaces are allowed within 20 feet of a street lot line provided:

a. Access to parking is allowed through the required setback abutting the street by subsection 23.44.160.C;

b. The parking spaces are located perpendicular to the street lot line from which they are accessed;

1 c. On corner lots, the parking spaces are not located within 20 feet of the
2 street lot line parallel to the parking spaces;

3 d. No other parking spaces or driveways are located on the lot;

4 e. The parking spaces are not located within 10 feet of a street lot line; and

5 f. The combined width of the parking spaces shall not exceed 20 feet.

6 4. Lots with uphill setbacks abutting streets. Parking may be located in a
7 required setback abutting a street provided:

8 a. Access to parking is allowed through the required setback abutting the
9 street by subsection 23.44.160.C;

10 b. The existing grade of the lot slopes upward from the street lot line an
11 average of at least 6 feet above sidewalk grade at a line that is 10 feet from the street lot line;

12 c. The parking area shall be at least an average of 6 feet below the
13 existing grade prior to excavation and/or construction at a line that is 10 feet from the street lot
14 line;

15 d. No other parking spaces or driveways are located on the lot;

16 e. If no garage is provided, the combined width of the parking spaces
17 shall not exceed 20 feet. If a garage is provided, the width of a garage structure shall not
18 exceed 24 feet; and

19 f. The total width of parking spaces and garages is not more than 60
20 percent of the width of the lot.

21 5. Lots with downhill setbacks abutting streets. Parking may be located in a
22 required setback abutting a street if the following conditions are met:

1 a. Access to parking is allowed through the required setback abutting the
2 street by subsection 23.44.160.C;

3 b. The existing grade slopes downward from the street lot line that the
4 parking faces;

5 c. For parking located in a front setback, the lot has a vertical drop of at
6 least 6 feet in the first 10 feet, measured along a line from the midpoint of the front lot line to
7 the midpoint of the rear lot line;

8 d. Parking is not located in required side setbacks abutting a street;

9 e. No other parking spaces or driveways are located on the lot;

10 f. If no garage is provided, the combined width of the parking spaces
11 shall not exceed 20 feet. If a garage is provided, the width of a garage structure shall not
12 exceed 24 feet; and

13 g. The total width of parking spaces and garages is not more than 60
14 percent of the width of the lot.

15 E. No more than three vehicles may be parked outdoors per dwelling unit on a lot.

16 F. Trailers, boats, recreational vehicles, and similar equipment shall not be parked in
17 required setbacks, unless fully enclosed in a structure otherwise allowed in a required setback
18 by subsection 23.44.160.D.

19 G. The total combined horizontal width of all garage entrances that are located on front
20 facades may not be more than 50 percent of the horizontal width of the street-level front
21 facades or 10 feet, whichever is greater. No dwelling unit may have a garage entrance on both
22 a front facade and a side facade.

H. Except as provided in subsections 23.44.160.D.4 and 23.44.160.D.5, garage entrances facing the street shall be set back at least 20 feet from the street lot line.

23.44.170 Alternative standards for development of low-income housing

A. Development of low-income housing that meets all of the following criteria may meet the alternative development standards in subsection 23.44.170.B:

1. The lot is located within a frequent transit service area;
2. The restricted units are generally distributed throughout the development and have substantially the same functionality as unrestricted units, if any, in the development;
3. To the extent practicable, the restricted units are comparable to unrestricted units, if any, in terms of square footage and number of bedrooms and bathrooms;
4. The tenure (i.e., rental or ownership) of restricted units and unrestricted units, if any, is the same;
5. For ownership housing, the restricted units are stewarded by a qualified non-profit organization, which for purposes of this subsection 23.44.170.A means a non-profit organization that the Office of Housing determines as experienced in the development and stewardship of permanently affordable homes, including:
 - a. Pre-purchase verification of income and other requirements for eligible households, affordable sale price calculations for approval by the Office of Housing, and execution of legal restrictions on the property; and
 - b. Post-purchase support for homeowners by facilitating resales, monitoring compliance with financial, owner occupancy, and other legal requirements, and clear communication of program guidelines and restrictions; and

6. At such times as may be required by the Director of Housing but no less than annually, the property owner (for rental housing) or the qualified non-profit organization (for ownership housing) agree to file property reports with the Office of Housing, verified upon oath or affirmation, which shall contain such information as the Office of Housing may deem necessary to determine compliance with this subsection 23.44.170.A and the regulatory agreement, covenant, or other legal instrument.

B. Proposed development on a lot meeting the criteria in subsection 23.44.170.A may elect to meet the following development standards in lieu of the standards in subsections 23.44.050.B (floor area), 23.44.060.B (density), and 23.44.070.A (structure height), and Section 23.44.080 (lot coverage):

1. The maximum floor area ratio (FAR) limit is 1.8. The applicable FAR limit applies to the total chargeable floor area of all structures on the lot.

2. The maximum density limit is one unit per 400 square feet.

3. The maximum height limit is 42 feet.

4. The maximum lot coverage is 60 percent.

23.44.180 Institutions

A. Institutions located in a Neighborhood Residential zone shall meet the development standards of this Section 23.44.180 and other sections of Chapter 23.44 except as provided in Section 23.44.030, Chapter 23.51B, Chapter 23.69, or Chapter 23.79. In the event of conflict between the standards in this Section 23.44.180 and other sections of Chapter 23.44, the standards in this Section 23.44.180 shall control.

B. Height limits

1. The height limit for institutions shall be 32 feet, except as provided in subsection 23.44.180.B.2.

2. For gymnasiums, auditoriums, and wood shops that are accessory to an institution, the maximum permitted height is 35 feet if all portions of the structure above the height limit of the zone are set back at least 20 feet from all lot lines. Pitched roofs on the auditorium, gymnasium, or wood shop with a slope of not less than 4:12 may extend 10 feet above the 35-foot height limit. No portion of a shed roof on a gymnasium, auditorium, or wood shop is permitted to extend beyond 35 feet.

C. Landscaping

1. Landscaping that achieves a Green Factor score of 0.3 or greater, pursuant to Section 23.86.019, is required for any lot with:

a. Development, either a new structure or an addition to an existing structure, containing more than 4,000 new square feet of non-residential uses; or

b. Any parking lot containing more than 20 new parking spaces for automobiles.

2. All required trees shall meet standards promulgated by the Director to provide for the long-term health, viability, and coverage of plantings. These standards may include, but are not limited to, the type and size of plants, spacing of plants, depth, and quality of soil, access to light and air, and protection practices during construction.

D. Parking

1. Location of parking. Parking areas and facilities may be located anywhere on the lot except in the required front setback or side street setback.

2. Screening of surface parking areas. Surface parking areas for more than five vehicles shall be screened in accordance with the following requirements:

a. Screening shall be provided on each side of the parking area that abuts, or faces across a street, alley, or access easement, a lot in a residential zone.

b. Screening shall consist of a fence, solid evergreen hedge, or wall at least 3 feet in height.

E. Odors. The venting of odors, vapors, smoke, cinders, dust, gas, and fumes shall be at least 10 feet above finished sidewalk grade and directed away to the extent possible from residential uses within 50 feet of the vent.

F. Light and glare

1. Exterior lighting for institutions shall be shielded or directed away from residential structures on adjacent lots.

2. Poles for freestanding exterior lighting are permitted up to a maximum height of 32 feet. Light poles for illumination of athletic fields on new and existing public school sites will be allowed to exceed 30 feet pursuant to Chapter 23.51B.

G. The Director may allow, as a Type I decision, higher fencing in a required setback when necessary for sports fields.

23.44.190 Parks and open space

A. The following accessory uses shall be permitted in public parks when within a structure or on a terrace abutting the structure, provided that when the use is within 100 feet of another lot in a residential zone the use is completely enclosed:

1. The sale and consumption of beer and wine during daylight hours;

2. The sale and consumption of alcoholic beverages under a Class H liquor license at municipal golf courses during established hours of operation.

B. The sale and consumption of beer and wine with meals served in a restaurant facility within the boundaries of Woodland Park shall be permitted. The use shall be permitted in only one facility located no closer than 100 feet from any lot in a residential zone and separated from other public activity areas and zoo buildings by at least 50 feet.

C. Storage structures and areas and other structures and activities customarily associated with parks and playgrounds are subject to the following development standards in addition to the general development standards for accessory uses:

1. Any active play area shall be located 30 feet or more from any lot in a Neighborhood Residential zone;

2. Garages and service or storage areas shall be located 100 feet or more from any other lot in a residential zone and obscured from view from each such lot.

Section 31. Section 23.45.502 of the Seattle Municipal Code, last amended by Ordinance 125791, is amended as follows:

23.45.502 Scope of provisions

* * *

D. Other regulations~~((;))~~ may apply to development proposals including but not limited to general use provisions (Chapter 23.42); transportation concurrency and transportation impact mitigation (Chapter 23.52); requirements for streets, alleys, and easements (Chapter 23.53); standards for access, off-street parking, ~~((quantity, access, and design))~~ and solid waste storage (Chapter 23.54); ~~((standards for solid waste storage (Chapter 23.54)))~~; ~~((signs))~~ sign regulations (Chapter 23.55); communication regulations (Chapter 23.57); ~~((and methods for~~

measurements (~~Chapter 23.86~~), may apply to development proposals)) shoreline regulations
(Chapter 23.60A); and environmental protection and historic preservation (Title 25).

E. Congregate residences are subject to additional requirements as specified in Section
23.42.049.

Section 32. Section 23.45.504 of the Seattle Municipal Code, last amended by Ordinance
127098, is amended as follows:

23.45.504 Permitted and prohibited uses

A. All uses are permitted outright, prohibited, or permitted as a conditional use
according to Table A for 23.45.504 and this Section 23.45.504. Uses not referred to in Table A
for 23.45.504 are prohibited, unless otherwise indicated in this Chapter 23.45 or Chapters
23.51A, 23.51B, or 23.57. Communication utilities and accessory communication devices,
except as exempted in Section 23.57.002, are subject to (~~the regulations in~~) this Chapter
23.45 and (~~additional regulations in~~) Chapter 23.57. Public facilities are subject to (~~the~~
~~regulations in~~) Section 23.51A.004.

B. All permitted uses are allowed as a principal use or as an accessory use, unless
otherwise indicated in this Chapter 23.45.

Permitted and prohibited uses

Uses	Permitted and prohibited uses by zone	
	LR1, LR2, and LR3	MR and HR
<p><u>RC = Permitted in areas zoned Residential Commercial (RC), and subject to the provisions of the RC zone, Chapter 23.46</u></p> <p><u>X = Prohibited</u></p> <p>Footnotes to Table A for 23.45.504</p> <p>¹ Institutions meeting development standards <u>including but not limited to the standards in Section 23.45.570</u> are permitted outright; all others are administrative conditional uses pursuant to Section 23.45.506. The provisions of this Chapter 23.45 shall apply to Major Institution uses as provided in Chapter 23.69.</p> <p>² Prohibited in Station Area Overlay Districts (SAODs); otherwise, permitted as an administrative conditional use pursuant to Section 23.45.506 on surface parking existing as of January 1, 2017.</p> <p>³ Prohibited in LR1 and LR2 zones, including LR1/RC and LR2/RC. Permitted outright in LR3, MR, HR, and LR3/RC zones, except prohibited in ((the)) a SAOD.</p> <p>⁴ ((Permitted in development that meets)) <u>For lots located in a zone that does not include an RC designation, ground-floor commercial uses are allowed if they meet the requirements of Section 23.42.055 and Chapter 23.46 or the standards of subsection 23.45.504.D ((even if it is not located in a zone that includes an RC designation)).</u></p> <p>⁵ ((Subject to subsection 23.45.504.E except in zones that include an RC designation.)) <u>For lots located in a zone that does not include an RC designation, ground-floor commercial uses are allowed if they meet the standards of subsection 23.45.504.E and Section 23.45.532.</u></p> <p>⁶ Subject to subsections 23.45.504.G and 23.45.506.F.</p> <p>⁷ Subject to subsection 23.45.504.F.</p> <p>⁸ Prohibited in LR1 and LR2 zones. Permitted outright in all other multifamily zones as surface parking on surface parking lots existing as of January 1, 2017; permitted outright in garages; subject to Section 23.54.026.</p> <p>((P= Permitted outright CU= Permitted as an Administrative Conditional Use RC= Permitted in areas zoned Residential Commercial (RC), and subject to the provisions of the RC zone, Chapter 23.46 X= Prohibited))</p>		

C. Accessory uses. The following accessory uses are permitted in all multifamily zones, subject to ~~((the standards in))~~ Section 23.45.545, if applicable:

1. Private garages and carports;

2. Private, permanent swimming pools, hot tubs, and other similar uses;

3. Solar collectors, including solar greenhouses;

4. ~~((Open wet moorage accessory to residential structures;))~~ Piers and floats,

provided they comply with Chapter 23.60A;

5. Uses accessory to parks and playgrounds, pursuant to Section 23.45.578;

6. Bed and breakfasts in a dwelling unit that is at least five years old, provided
they comply with subsection 23.45.504.I;

7. Recycling collection stations;

8. Urban farms with planting area not more than 4,000 square feet. Urban farms
with greater than 4,000 square feet of planting area may be allowed as an administrative
conditional use to any use permitted outright or as a conditional use. The Director may grant,
condition, or deny a conditional use permit in accordance with subsection 23.42.051.B; and

9. Accessory dwelling units provided they comply with Section 23.42.022.

D. ~~((Heat recovery incinerators may be permitted as accessory administrative
conditional uses, pursuant to Section 23.45.506.))~~ Ground-floor commercial use in Lowrise
zones without an RC suffix are allowed if they comply with the following:

1. The commercial use is located on a corner lot or on a lot that abuts both a street
and an alley.

2. The commercial use is limited to the following:

a. Food processing and craft work;

b. General sales and services; and

c. Restaurants.

3. The commercial uses do not occupy more than 2,500 square feet of gross floor area.

4. The commercial use is permitted only on or below the ground floor of a structure.

5. Vents for venting of odors, vapors, smoke, gas and fumes, and exterior heat exchangers and other similar devices (e.g., related to ventilation, air conditioning, or refrigeration) shall be at least 10 feet above finished sidewalk grade and directed away to the extent possible from residential uses within 50 feet of the vent.

6. Drive-in businesses are prohibited as a principal or accessory use.

7. Outdoor sales of food or beverages must be located at least 50 feet from adjacent lots.

8. Outdoor service of food or beverages must be located at least 50 feet from adjacent lots.

9. Businesses may not be open between the hours of 10 p.m. and 6 a.m.

E. Ground-floor commercial use in Midrise and Highrise zones without an RC suffix are allowed if they comply with the following:

1. Drive-in businesses are prohibited((;)) as either a principal or accessory use.

2. ~~((The following uses are permitted as ground floor commercial uses in MR and HR zones pursuant to Section 23.45.532:))~~ The commercial use is limited to the following:

a. Business support services;

b. Food processing and craft work;

c. General sales and services;

d. Medical services;

e. Offices;

f. Restaurants; and

g. Live-work units with one of the uses permitted in this subsection

23.45.504.E as the permitted commercial use.

3. The ground-floor commercial uses meet the requirements of Section

23.45.532.

F. Existing cemeteries are permitted to continue in use. New cemeteries are prohibited and existing cemeteries are prohibited from expanding. For purposes of this Section 23.45.504, a change in a cemetery boundary is not considered an expansion in size and is permitted provided that:

1. The change does not increase the net land area occupied by the cemetery;

2. The land being added to the cemetery is contiguous to the existing cemetery and is not separated from the existing cemetery by a public street or alley whether or not improved; and

3. The use of the land being added to the cemetery will not result in the loss of housing.

G. Except as provided in subsections 23.45.504.G.1 and 23.45.504.G.2 (~~below~~), medical service uses other than permitted ground-floor commercial uses are prohibited.

1. Medical service uses in HR zones may be permitted as administrative conditional uses pursuant to subsection 23.45.506.F.

2. Medical service uses meeting the development standards for institutions are permitted outright on property conveyed by a deed from the City that, at the time of conveyance, restricted the property's use to a health care or health-related facility.

H. Fences and free-standing walls of utility services uses shall be set back from the street lot line by an average of 7 feet and be no less than 5 feet from the street lot line at any point. Landscaping shall be provided between the fence or wall and the street lot line. The Director may reduce this setback after finding that the reduced setback will not significantly increase project impacts, including but not limited to noise, odor, and the scale of the structure in relation to nearby buildings. Acceptable methods to reduce fence or wall impacts include changes in the height, design, or construction of the fence or wall, including the use of materials, architectural detailing, artwork, vegetated trellises, decorative fencing, or similar features to provide visual interest facing the street lot line. Fences and walls may obstruct or allow views to the interior of a site. Where site dimensions and conditions allow, applicants are encouraged to provide both a landscaped setback between the fence or wall and the right-of-way, and a fence or wall that provides visual interest facing the street lot line, through the height, design, or construction of the fence or wall, including the use of materials, architectural detailing, artwork, vegetated trellises, decorative fencing, or similar features.

I. Bed and breakfast uses. A bed and breakfast use may be operated in a principal dwelling unit or an accessory dwelling unit under the following conditions:

1. The bed and breakfast use has a valid business license tax certificate issued by the Department of Finance and Administrative Services;

2. The bed and breakfast use is operated by the primary resident of the dwelling unit where the bed and breakfast is located or the resident operator; and

3. There is no evidence of a bed and breakfast use visible from the exterior of the dwelling unit other than a sign permitted by subsection 23.55.022.D.1.

Section 33. Section 23.45.508 of the Seattle Municipal Code, last amended by Ordinance 127098, is amended as follows:

23.45.508 General provisions

A. Except for structures related to an urban farm, a structure occupied by a permitted use other than a residential use may be partially or wholly converted to a residential use even if the structure does not conform to the development standards for residential uses in multifamily zones.

~~B. ((Off street parking shall be provided pursuant to Section 23.54.015, and as permitted by provisions of Sections 23.45.504 and 23.45.506, if applicable.~~

~~C.))~~ Expansions of nonconforming converted structures and conversions of structures occupied by nonconforming uses are regulated by Sections 23.42.108 and 23.42.110.

~~((D. Methods for measurements are provided in Chapter 23.86. Requirements for streets, alleys, and easements are provided in Chapter 23.53. Standards for parking and access and design are provided in Chapter 23.54. Standards for solid waste and recyclable materials storage space are provided in Section 23.54.040. Standards for signs are provided in Chapter 23.55.~~

~~E.))~~ C. Assisted living facilities, congregate residences, nursing homes, and structures containing ground floor commercial uses as allowed by Chapter 23.46 in RC zones shall meet the development standards for ~~((apartments))~~ stacked dwelling units unless otherwise specified.

~~((F. Single family dwelling units. In LR zones, single family dwelling units shall meet the development standards for townhouse developments, except as otherwise provided. In MR and HR zones, single family dwelling units shall meet the development standards of the zone.~~

~~G. Proposed uses in all multifamily zones are subject to the transportation concurrency level of service standards prescribed in Chapter 23.52.~~

~~H.))~~ D. Lots with no street frontage. For purposes of structure width, depth, and setbacks, multifamily zoned lots that have no street frontage are subject to the following:

1. For lots that have only one alley lot line, the alley lot line shall be treated as a front lot line.

2. For lots that have more than one alley lot line, the Director shall determine which alley lot line shall be treated as the front lot line.

3. For lots that have no alley lot lines, the applicant may choose the front lot line provided that the selected front lot line length is at least 50 percent of the width of the lot.

~~((I-))~~ E. Any other provision of the Seattle Municipal Code notwithstanding, an applicant is not entitled to a permit for any use or development on a lot in an LR zone that would be inconsistent with any term, condition, or restriction contained either in any recorded agreement that is in effect as to that lot and was made in connection with a rezone of the lot to LDT, L1, L2, L3, or L4, or in any City Council decision or ordinance related to a rezone of the lot to LDT, L1, L2, L3, or L4 conditioned on a recorded agreement prior to April 19, 2011.

~~((J-))~~ F. If more than one category of residential use is located on a lot, and if different development standards apply to the different categories of use, then each category's percentage of the total limit imposed by the development standard shall be calculated based on each category's percentage of total structure footprint area, as follows:

1. Calculate the footprint, in square feet, for each category of residential use. For purposes of this calculation, "footprint" is defined as the horizontal area enclosed by the exterior walls of the structure.

2. Calculate the total square feet of footprint of all categories of residential uses on the lot.

3. Divide the square footage of the footprint for each category of residential structure in subsection ~~((23.45.508.J.1))~~ 23.45.508.F.1 by the total square feet of footprints of all residential uses in subsection ~~((23.45.508.J.2))~~ 23.45.508.F.2.

4. Multiply the percentage calculated in subsection ~~((23.45.508.J.3))~~ 23.45.508.F.3 for each housing category by the area of the lot. The result is the area of the lot devoted to each housing category.

5. The total limit for each category of residential use is the applicable limit for that use multiplied by the percentage calculated in subsection ~~((23.45.508.J.4))~~ 23.45.508.F.4.

~~((K.))~~ G. Unless otherwise specified, the development standards of each zone shall be applied in that zone, and may not be used in any other zone, except that if both zones have the same development standards, the development standard shall be applied to the lot as a whole. If a lot or development site includes more than one zoning designation and a development standard is based on lot area, the lot area used in applying the development standard shall be the portion of the contiguous area with the corresponding zoning designation.

Section 34. Section 23.45.510 of the Seattle Municipal Code, last amended by Ordinance 127099, is amended as follows:

23.45.510 Floor area

A. Gross floor area. In multifamily zones, gross floor area includes exterior corridors, breezeways, and stairways that provide building circulation and access to dwelling units or sleeping rooms. Balconies, patios, and decks that are associated with a single dwelling unit or

sleeping room and that are not used for common circulation(~~(, and ground-level walking paths,))~~) are not considered gross floor area.

B. Floor area ratio (FAR) limits in LR and MR zones. FAR limits apply in LR and MR zones as shown in Table A for 23.45.510(~~(-)~~), provided that if the LR zone designation includes an incentive zoning suffix, then gross floor area may exceed the base FAR as identified in the suffix designation, up to the limits shown in Table A for 23.45.510, if the applicant complies with Chapter 23.58A, Incentive Provisions. The applicable FAR limit applies to the total chargeable floor area of all structures on the lot.

**Table A for 23.45.510
 FAR limits in LR and MR zones**

Zone	Zones with an MHA suffix	Zones without an MHA suffix
LR1	1.3, <u>except 1.5 for stacked dwelling units</u>	1.0
LR2	1.4, <u>except 1.6 for stacked dwelling units</u> ¹	1.1
LR3 outside urban centers and urban villages	1.8	1.2, except 1.3 for ((apartments)) <u>stacked dwelling units</u>
LR3 inside urban centers and urban villages	2.3	1.2, except 1.5 for ((apartments)) <u>stacked dwelling units</u>
MR	4.5	3.2

Footnote to Table A for 23.45.510

¹ Except that the FAR is ~~((1.6))~~ 1.8 for ~~((apartments))~~ stacked dwelling units that provide one or more outdoor amenity areas meeting the requirements of Section 23.45.522 and the following provisions are met:

1. The total amount of~~((7))~~ outdoor amenity area is equal to at least 35 percent of the lot area;

**Table A for 23.45.510
 FAR limits in LR and MR zones**

Zone	Zones with an MHA suffix	Zones without an MHA suffix
2. No part of such amenity area has a width or depth of less than 20 feet; and 3. The outdoor amenity area is located at ground level or within 4 feet of finished grade.		

* * *

D. The following floor area is exempt from FAR limits:

1. All stories, or portions of stories, that are underground.

2. The floor area in a Landmark structure subject to controls and incentives imposed by a designating ordinance, if the owner of the Landmark has executed and recorded an agreement acceptable in form and content to the Landmarks Preservation Board, providing for the restoration and maintenance of the historically significant features of the structure, except that this exemption does not apply to a lot from which a transfer of development potential (TDP) has been made under Chapter 23.58A, and does not apply for purposes of determining TDP available for transfer under Chapter 23.58A.

3. The floor area in structures built prior to January 1, 1982, as ~~((single family)) detached~~ dwelling units that will remain in residential use, regardless of the number of dwelling units within the existing structure, provided that:

a. ~~((All residential structures in LR zones, except as provided in subsection 23.45.510.D.4.b;))~~ No other principal structure is located between the existing residential structure and the street lot line along at least one street frontage. If the existing residential structure is moved on the lot, the floor area of the existing residential structure remains exempt if it continues to meet this subsection 23.45.510.D.3.a; and

1 b. ~~((Single family, cottage housing, rowhouse, and townhouse~~
2 ~~developments in LR zones, provided that all parking is located at the rear of the structure or is~~
3 ~~enclosed in structures with garage entrances located on the rear facade; and))~~ The exemption is
4 limited to the gross floor area that existed on January 1, 1982 and does not include any
5 additions to floor area made to the residential structure after January 1, 1982.

6 4. Portions of a story that extend no more than 4 feet above existing or finished
7 grade, whichever is lower, excluding access, (see Exhibit A for 23.45.510), in the following
8 circumstances:

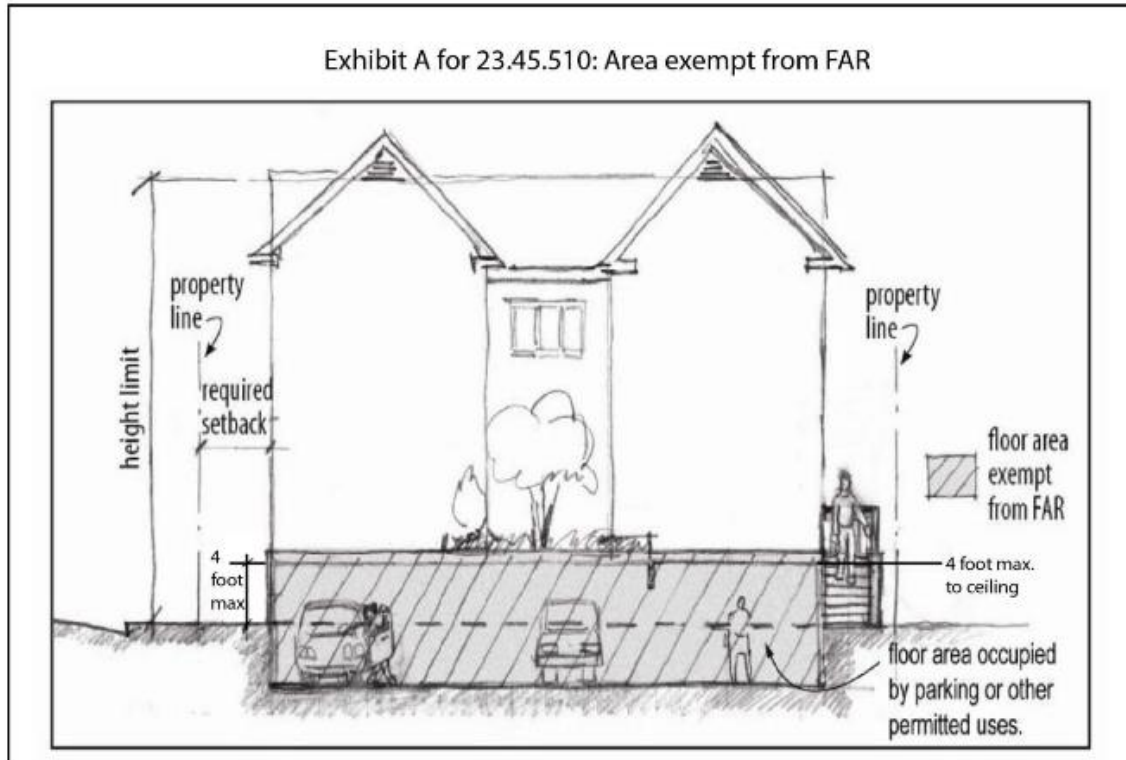

9 a. ~~((All residential structures))~~ Stacked dwelling units in LR zones
10 ~~((except as provided in subsection 23.45.510.D.4.b))~~;

11 b. ~~((Single family, cottage housing, rowhouse, and townhouse~~
12 ~~developments))~~ Attached and detached dwelling units in LR zones, provided that all parking is
13 located at the rear of the structure or is enclosed in structures with garage entrances located on
14 the rear facade; and

15 c. All ~~((multifamily structures))~~ dwelling units in MR and HR zones.

Exhibit A for 23.45.510

Area exempt from FAR

5. For ~~((rowhouse and townhouse developments and apartments))~~ attached and stacked dwelling units, floor area within a story, or portion of a story, that is partially above grade if all of the following conditions are met:

a. The story, or portion of the story, that is partially above grade is used for parking or other accessory uses and has no additional stories above;

b. The average height of the exterior walls enclosing the floor area does not exceed one story, measured from existing or finished grade, whichever is lower;

c. The roof area above the exempt floor area is predominantly flat, is used as amenity area, and meets the standards for amenity area at ground level in Section 23.45.522; and

d. At least 25 percent of the perimeter of the amenity area on the roof above the floor area is not enclosed by the walls of the structure.

6. Enclosed common amenity area in HR zones.

7. As an allowance for mechanical equipment, in any structure more than 85 feet in height, 3.5 percent of the gross floor area that is not otherwise exempt under this subsection 23.45.510.D.

8. In HR zones, ground floor commercial uses meeting the requirements of Section 23.45.532, if the street level of the structure containing the commercial uses has a minimum floor-to-floor height of 13 feet and a minimum depth of 15 feet.

9. The floor area of required bicycle parking for small efficiency dwelling units or congregate residence sleeping rooms, if the bicycle parking is located within the structure containing the small efficiency dwelling units or congregate residence sleeping rooms. Floor area of bicycle parking that is provided beyond the required bicycle parking is not exempt from FAR limits.

10. Common walls separating individual ~~((rowhouse and townhouse))~~ attached dwelling units.

11. In the Northgate Urban Center, up to 15,000 square feet of floor area in residential use in a structure built prior to 1990 that is located on a split-zoned lot of at least 40,000 square feet in size.

12. In MR and HR zones, all gross floor area in child care centers.

13. In low-income housing, all gross floor area for accessory human service uses.

1 E. If TDP is transferred from a lot pursuant to Section 23.58A.042, the amount of non-
2 exempt floor area that may be permitted is ~~((an))~~ a FAR of 7, plus any net amount of TDP
3 previously transferred to the lot, minus the sum of the existing non-exempt floor area on the lot
4 and the amount of TDP transferred.

5 Section 35. Section 23.45.512 of the Seattle Municipal Code, last amended by Ordinance
6 127211, is repealed:

7 ~~((23.45.512 Density limits and family-size unit requirements—LR zones~~

8 A. Density limits

9 1. ~~Except according to subsection 23.45.512.A.4, the following developments~~
10 ~~must meet the density limits described in this subsection 23.45.512.A:~~

11 a. ~~In LR1 zones, rowhouse development on interior lots and all~~
12 ~~townhouse development; and~~

13 b. ~~All development in Lowrise zones that do not have a mandatory~~
14 ~~housing affordability suffix.~~

15 2. ~~Development described in subsection 23.45.512.A.1 shall not exceed a~~
16 ~~density of one dwelling unit per 1,150 square feet of lot area, except that apartments in LR3~~
17 ~~zones that do not have a mandatory housing affordability suffix shall not exceed a density limit~~
18 ~~of one dwelling unit per 800 square feet.~~

19 3. ~~When density calculations result in a fraction of a unit, any fraction up to and~~
20 ~~including 0.85 constitutes zero additional units, and any fraction over 0.85 constitutes one~~
21 ~~additional unit.~~

22 4. ~~Low income housing shall have a maximum density of one dwelling unit per~~
23 ~~400 square feet of lot area.~~

~~B. Family-sized unit requirements in LR1 zones~~

~~1. Apartment developments in LR1 zones with four or more units shall provide at least one unit with two or more bedrooms and a minimum net unit area of 850 square feet for every four units in the structure.~~

~~2. One unit with three or more bedrooms and a minimum net unit area of 1,050 square feet may be provided in place of any two units required to include two bedrooms and a minimum net unit area of 850 square feet.~~

~~C. Nursing homes, congregate housing, assisted living facilities, and accessory dwelling units that meet the standards of Section 23.45.545 are exempt from the density limit set in subsection 23.45.512.A and the requirements in subsection 23.45.512.B.~~

~~D. Dwelling unit(s) located in structures built prior to January 1, 1982, as single family dwelling units that will remain in residential use are exempt from density limits.~~

~~E. If dedication of right-of-way is required, permitted density shall be calculated before the dedication is made.~~

~~F. Adding units to existing structures~~

~~1. One additional dwelling unit may be added to an existing residential structure regardless of the density restrictions in subsection 23.45.512.A and the requirements in subsection 23.45.512.B. An additional unit is allowed only if the proposed additional unit is to be located entirely within an existing structure, and no additional floor area to accommodate the new unit is proposed to be added to the existing structure.~~

~~2. For the purposes of this subsection 23.45.512.F, "existing residential structures" are those that were established under permit as of October 31, 2001, or for which a permit has been granted and the permit has not expired as of October 31, 2001.))~~

Section 36. Section 23.45.514 of the Seattle Municipal Code, last amended by Ordinance 127211, is amended as follows:

23.45.514 Structure height

A. Subject to the additions and exceptions allowed as set forth in this Section 23.45.514, the height limits for structures in LR zones are as shown on Table A for 23.45.514.

**Table A for 23.45.514
Structure height for LR zones (in feet)**

((Housing)) Dwelling unit type	LR1	LR2	LR3 outside urban centers, urban villages, and Station Area Overlay Districts	LR3 in urban centers, urban villages, and Station Area Overlay Districts
((Cottage housing developments))	22	22	22	22
Rowhouse and townhouse developments)) Attached and detached dwelling units	((30)) 32	40 ¹	40 ¹	50 ¹
((Apartments)) Stacked dwelling units	((30)) 32	40 ¹	40 ¹	50 ²

Footnotes for Table A for 23.45.514

¹ Except that the height limit is ~~((30))~~ 32 feet in zones without a mandatory housing affordability suffix.

² Except that the height limit is 40 feet in zones without a mandatory housing affordability suffix.

* * *

C. The height limit for accessory structures other than accessory dwelling units that are located in required setbacks or separations is 12 feet, except as follows:

1. Garages and carports are limited to 12 feet in height as measured on the facade containing the vehicle entrance. Open rails may extend an additional 3 feet above the

roof of the garage or carport if any portion of the roof is within 4 feet of existing grade. The ridge of a pitched roof on a garage located in a required setback may extend up to 3 feet above the 12-foot height limit. All parts of the roof above the height limit shall be pitched at a rate of not less than 4:12. No portion of a shed roof is permitted to extend beyond the 12-foot height limit.

2. ~~((The height limit for an accessory dwelling unit is provided in subsection 23.42.022.D.~~

3.)) Freestanding flagpoles and religious symbols for religious institutions are exempt from height controls((;)) except as regulated in Chapter 23.64, provided they are no closer to any lot line than 50 percent of their height above existing grade.

* * *

F. For ~~((apartments in LR2 zones, and for all residential uses in LR3))~~ stacked dwelling units in LR zones, the applicable height limit is increased 4 feet above the height shown on Table A for 23.45.514 for a structure that includes a story that is partially below-grade, provided that:

1. This height exception does not apply to portions of lots that are within 50 feet of a ~~((neighborhood residential))~~ Neighborhood Residential zone boundary line, unless the lot in the LR zone is separated from a ~~((neighborhood residential))~~ Neighborhood Residential zoned lot by a street;

2. The number of stories above the partially below-grade story is limited to four stories for residential uses with a 40-foot height limit and to five stories for residential uses with a 50-foot height limit;

3. On the street-facing facade(s) of the structure, the story above the partially below-grade story is at least 18 inches above the elevation of the street, except that this requirement may be waived to accommodate units accessible to the disabled or elderly, consistent with the Seattle Residential Code(~~(, Chapter 3,)~~) or the Seattle Building Code(~~(, Chapter 11)~~); and

4. The average height of the exterior walls of the portion of the story that is partially below-grade does not exceed 4 feet, measured from existing or finished grade, whichever is less.

* * *

Section 37. Section 23.45.518 of the Seattle Municipal Code, last amended by Ordinance 126685, is amended as follows:

23.45.518 Setbacks (~~(and separations)~~)

A. LR zones

1. Required setbacks for the LR zones are as shown in Table A for 23.45.518 and subsection 23.45.518.A.2.

**~~((Table A for 23.45.518
Required setbacks in LR zones measured in feet~~**

All LR zones	Category of residential use			
Setback	Cottage housing developments and single-family dwelling units	Rowhouse developments	Townhouse developments	Apartments
Front	7 average; 5 minimum	5 minimum	7 average; 5 minimum	5 minimum

**((Table A for 23.45.518
 Required setbacks in LR zones measured in feet**

All LR zones	Category of residential use			
Rear	0 with alley; 7 if no alley	0 with alley; With no alley: 7 average; 5 minimum	7 average; 5 minimum	10 minimum with alley; 15 minimum if no alley
Side setback for facades 40 feet or less in length ¹	5	0 where abutting another rowhouse development ² ; otherwise 3.5; except that on side lot lines that abut a neighborhood residential zone, the setback is 5	5	5
Side setback for facades greater than 40 feet in length ³	5 minimum	0 where abutting another rowhouse development ² ; otherwise 3.5; except that on side lot lines that abut a neighborhood residential zone, the setback is 7 average; 5 minimum	7 average; 5 minimum	7 average; 5 minimum

Footnotes to Table A for 23.45.518

¹—Additions to existing nonconforming structures built prior to April 11, 2011, shall be set back a sufficient distance so that the addition complies with setback standards. For any portion of a structure built before April 11, 2011, the average setback applies only to a new addition built after that date. If an addition is to a side wall extended vertically, the existing side wall line may be continued by the addition, provided that the average setback of 7 feet or the 5 foot minimum setback is met.

²—If the side facades of rowhouse developments on abutting lots are not joined, then a 3.5 foot setback is required, except the side setback may be reduced to zero if the abutting lot contains a rowhouse development and an easement is provided along the shared lot line of the abutting lot sufficient to leave a 3.5 foot separation between the principal structures of the abutting rowhouse developments.

³—Portions of structures that qualify for the FAR exemption in subsection 23.45.510.D.5 are

~~((Table A for 23.45.518
 Required setbacks in LR zones measured in feet~~

All LR zones	Category of residential use
-------------------------	--

~~not considered part of the facade length for the purposes of determining the side setback requirement.))~~

Table A for 23.45.518
Required setbacks in LR zones

<u>Front</u>	<u>7 feet average, 5 feet minimum</u>
<u>Rear</u>	<u>If rear lot line abuts an alley, 0 feet</u> <u>Otherwise, 7 feet average, 5 feet minimum</u>
<u>Side</u>	<u>5 feet</u>

2. Upper-level setbacks in LR2 and LR3 zones

a. An upper-level setback of 12 feet from the front lot line is required for

all portions of a structure above the following height:

1) Forty-four feet for zones with a height limit of 40 feet; and

2) Fifty-four feet for zones with a height limit of 50 feet.

b. An upper-level setback of 12 feet from each side or rear lot line that abuts a lot zoned ~~((single-family))~~ Neighborhood Residential is required for all portions of the structure above 34 feet in height.

c. Projections allowed in subsection ~~((23.45.518.H))~~ 23.45.518.G are allowed in upper-level setbacks.

d. Structures allowed in subsection ~~((23.45.518.I))~~ 23.45.518.H are not allowed in upper-level setbacks.

e. Rooftop features are not allowed in upper-level setback except as follows:

1) A pitched roof, other than a shed roof or butterfly roof, is allowed in the upper-level setback if all parts of the roof are pitched at a rate of not less than 6:12 and not more than 12:12.

2) Open railings may extend up to 4 feet above the height at which the setback begins.

3) Parapets may extend up to 2 feet above the height at which the setback begins.

* * *

D. Through lots. In the case of a through lot, each setback abutting a street (~~except a side setback~~) shall be a front setback. Rear setback requirements shall not apply to the through lot.

E. Other setback requirements. Additional structure setbacks may be required in order to meet the provisions of Chapter 23.53(~~(Requirements for Streets, Alleys, and Easements)~~).

F. (~~Separations between multiple structures~~

~~1. In LR and MR zones, the minimum required separation between principal structures at any two points on different interior facades is 10 feet, except for cottage housing developments, and principal structures separated by a driveway or parking aisle.~~

~~2. In LR and MR zones, if principal structures are separated by a driveway or parking aisle, the minimum required separation between the principal structures is 2 feet greater than the required width of the driveway or parking aisle, provided that the separation is not required to be any greater than 24 feet. If principal structures are separated by a driveway~~

~~or parking aisle, projections that enclose floor area may extend a maximum of 3 feet into the required separation if they are at least 8 feet above finished grade.~~

~~3. Cottage housing developments in LR and MR zones:~~

~~a. The minimum required separation between principal structures at any two points on different interior facades is 6 feet, unless there is a principal entrance on an interior facade, in which case the minimum separation required from that facade is 10 feet.~~

~~b. Facades of principal structures shall be separated from facades of accessory structures by a minimum of 3 feet.~~

~~G.))~~ Front and rear setbacks ~~((and all separations))~~ on lots containing certain environmentally critical areas or buffers may be reduced pursuant to Sections 25.09.280 and 25.09.300.

~~((H.))~~ G. Projections permitted in required setbacks ~~((and separations))~~

1. ~~((Cornices))~~ Architectural features such as cornices, eaves, gutters, roofs, fireplaces, chimneys, and other ~~((forms of weather protection))~~ similar features may project into required setbacks ~~((and separations))~~ a maximum of 4 feet if they are no closer than 3 feet to any lot line.

2. Garden windows and other similar features that do not provide floor area may project a maximum of 18 inches into required setbacks ~~((and separations))~~ if they:

- a. Are a minimum of 30 inches above the finished floor;
- b. Are no more than 6 feet in height and 8 feet wide; and
- c. Combined with bay windows and other similar features with floor area, make up no more than 30 percent of the area of the facade.

3. Bay windows and other similar features that provide floor area may project a maximum of 2 feet into required setbacks (~~((and separations))~~) if they:

- a. Are no closer than 5 feet to any lot line;
- b. Are no more than 10 feet in width; and
- c. Combined with garden windows and other (~~((features))~~) projections included in subsection (~~((23.45.518.H.2))~~) 23.45.518.G.2, make up no more than 30 percent of the area of the facade.

4. Unenclosed decks up to 18 inches above existing or finished grade, whichever is lower, may project into required setbacks (~~((or separations))~~).

5. Unenclosed porches or steps

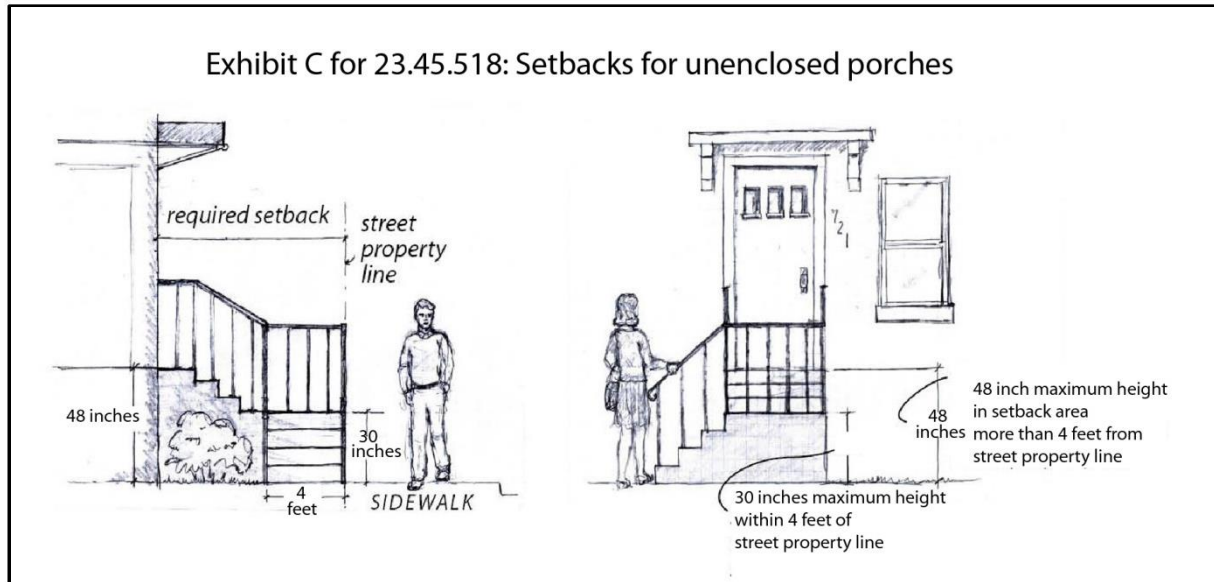

a. Unenclosed porches or steps no higher than 4 feet above existing grade, or the grade at the street lot line closest to the porch, whichever is lower, may extend to within 4 feet of a street lot line, except that portions of entry stairs or stoops not more than 2.5 feet in height from existing or finished grade, whichever is lower, (~~((excluding guard rails or hand rails,))~~) may extend to a street lot line. See Exhibit C for 23.45.518.

b. Unenclosed porches or steps no higher than 4 feet above existing grade may project into the required rear setback (~~((or required separation))~~) between structures a maximum of 4 feet provided they are a minimum of 5 feet from a rear lot line.

c. Unenclosed porches or steps permitted in required setbacks (~~((and separations))~~) shall be limited to a combined maximum width of 20 feet.

Exhibit C for 23.45.518

Setbacks for unenclosed porches

d. Permitted porches or steps may be covered, provided that no portions of the cover-structure, including any supports, are closer than 3 feet to any lot line.

6. Fireplaces and chimneys may project up to 18 inches into required setbacks ((or separations)).

7. Unenclosed decks and balconies may project a maximum of 4 feet into required setbacks if each one is:

- a. No closer than 5 feet to any lot line;
 - b. No more than 20 feet wide; and
 - c. Separated from other decks and balconies on the same facade of the structure by a distance equal to at least $\frac{1}{2}$ the width of the projection.
8. Mechanical equipment. Heat pumps and similar mechanical equipment, not including incinerators, are permitted in required setbacks if they comply with the requirements of Chapter 25.08. Any heat pump or similar equipment shall not be located within 3 feet of any

lot line. Charging devices for electric cars are considered mechanical equipment and are permitted in required setbacks if not located within 3 feet of any lot line.

~~((I))~~ H. Structures in required setbacks (~~((or separations))~~), except upper-level setbacks

1. Detached garages, carports, or other accessory structures that are not accessory dwelling units are allowed in (~~((required separations and))~~) required rear or side setbacks, subject to the following requirements:

a. Any accessory structure located between a principal structure and a side lot line shall provide the setback required for the principal structure;

b. Any portion of an accessory structure located more than 25 feet from a rear lot line shall be set back at least 5 feet from the side lot line;

c. Accessory structures shall be set back at least 7 feet from any lot line that abuts a street; and

d. Accessory structures shall be separated by at least 3 feet from all principal structures, including the eaves, gutters, and other projecting features of the principal structure.

2. Ramps or other devices necessary for access for the disabled and elderly that meet the Seattle Residential Code(~~((, Chapter 3,))~~) or Seattle Building Code(~~((, Chapter 11, Accessibility,))~~) are allowed in any required setback (~~((or separation))~~).

3. Uncovered, unenclosed pedestrian bridges, necessary for access and 5 feet or less in width, are allowed in any required setback (~~((or separation))~~).

4. Underground structures are allowed in any required setback (~~((or separation))~~).

5. Solar collectors are allowed in any required setback (~~((or separation))~~), pursuant to the provisions of Section 23.45.545.

6. Freestanding signs, bike racks, and similar unenclosed structures that are 6 feet or less in height above existing or finished grade, whichever is lower, are allowed in any required setback (~~((or separation))~~), provided that signs meet the provisions of Chapter 23.55(~~((Signs))~~).

7. Fences

a. Fences no greater than 6 feet in height are allowed in any required setback (~~((or separation))~~), except that fences in the required front setback extended to side lot lines or in street side setbacks extended to the front and rear lot lines may not exceed 4 feet in height. Fences located on top of a bulkhead or retaining wall are also limited to 4 feet. If a fence is placed on top of a new bulkhead or retaining wall used to raise grade, the maximum combined height is limited to 9.5 feet.

b. Up to 2 feet of additional height for architectural features such as arbors or trellises on the top of a fence is allowed(~~((;))~~) if the architectural features are predominately open.

c. Fence height may be averaged along sloping grades for each 6-foot-long segment of the fence, but in no case may any portion of the fence exceed 8 feet in height when the height allowed by subsection (~~((23.45.518.I.7.a))~~) 23.45.518.H.7.a is 6 feet, or 6 feet in height when the height allowed by subsection (~~((23.45.518.I.7.a))~~) 23.45.518.H.7.a is 4 feet.

8. Bulkheads and retaining walls

a. Bulkheads and retaining walls used to raise grade are allowed in any required setback if they are limited to 6 feet in height, measured above existing grade. (~~((A guardrail no higher than 42 inches may be placed on top of a bulkhead or retaining wall existing as of January 3, 1997.))~~)

b. Bulkheads and retaining walls used to protect a cut into existing grade may not exceed the minimum height necessary to support the cut or 6 feet measured from the finished grade on the low side, whichever is greater. ~~((If the bulkhead is measured from the low side and it exceeds 6 feet, an open guardrail of no more than 42 inches meeting Seattle Residential Code or Seattle Building Code requirements may be placed on top of the bulkhead or retaining wall.))~~ Any fence shall be set back a minimum of 3 feet from such a bulkhead or retaining wall.

~~((9. Arbors are allowed in any required setback or separation under the following conditions:~~

~~a. In each required setback or separation, an arbor may be erected with no more than a 40 square foot footprint, measured on a horizontal roof plane inclusive of eaves, to a maximum height of 8 feet. At least 50 percent of both the sides and the roof of the arbor shall be open, or, if latticework is used, there shall be a minimum opening of 2 inches between crosspieces.~~

~~b. In each required setback abutting a street, an arbor over a private pedestrian walkway with no more than a 30 square foot footprint, measured on the horizontal roof plane and inclusive of eaves, may be erected to a maximum height of 8 feet. At least 50 percent of the sides of the arbor shall be open, or, if latticework is used, there shall be a minimum opening of 2 inches between crosspieces.~~

~~10. Above-grade green stormwater infrastructure (GSI) features are allowed in any required setback or separation if:~~

~~a. Each above-grade GSI feature is no more than 4.5 feet tall, excluding piping;~~

~~b. Each above-grade GSI feature is no more than 4 feet wide; and~~
~~c. The total storage capacity of all above-grade GSI features is no greater than 600 gallons.~~

~~11. Above-grade GSI features larger than what is allowed in subsection 23.45.518.I.10 are allowed in any required setback or separation if:~~

~~a. Above-grade GSI features do not exceed ten percent coverage of any one setback or separation area;~~

~~b. No portion of an above-grade GSI feature is located closer than 2.5 feet from a side lot line; and~~

~~c. No portion of an above-grade GSI feature projects more than 5 feet into a front or rear setback area.))~~

9. Guardrails or handrails that are no more than 42 inches in height are allowed on unenclosed stairs, decks, access bridges, bulkheads, and retaining walls.

10. Above-grade stormwater management features, such as bioretention planters and cisterns, are allowed in setbacks if:

a. No feature, excluding piping, is more than:

1) Twelve feet tall if located in a portion of the rear setback that is not also a side setback; or

2) Six and one half feet tall, if located in other setbacks;

b. No feature greater than 4.5 feet tall is located within 10 feet of the front lot line, excluding piping, unless it is integrated into a bulkhead or retaining wall that is allowed in subsection 23.45.518.H.8;

1 c. No feature greater than 6 inches tall is located within 2.5 feet of the
2 side lot line; and

3 d. The total storage capacity of all above-grade cisterns is no greater than
4 1,250 gallons.

5 ~~((12.))~~ 11. Mechanical equipment. Heat pumps and similar mechanical
6 equipment, not including incinerators, are allowed in any required setback if they comply with
7 the requirements of Chapter 25.08. No heat pump or similar equipment shall be located within
8 3 feet of any lot line. Charging devices for electric cars are considered mechanical equipment
9 and are allowed in any required setbacks if not located within 3 feet of any lot line.

10 ~~((13.))~~ 12. Detached, unenclosed structures accessory to ~~((townhouses))~~ attached
11 or detached dwelling units that are up to 8 feet in height and used exclusively for bike parking
12 are allowed in any required setback ~~((or separation))~~.

13 ~~((14. Detached structures accessory to townhouses that are up to 10 feet in~~
14 ~~height and used exclusively for bike parking are allowed in required separations.))~~

15 13. Private, permanent swimming pools, hot tubs, and other similar uses are
16 permitted in any required setback, provided that:

17 a. No part of any swimming pools, hot tubs, and other similar uses
18 projects more than 18 inches above existing grade in a required front setback; and

19 b. No swimming pool is placed closer than 5 feet to any front or side lot
20 line.

21 ~~((I.))~~ I. Exceptions for existing ~~((single-family))~~ structures. ~~((4.))~~ In all multifamily
22 zones, certain additions to a ~~((single-family dwelling unit))~~ residential structure may extend
23 into a required side setback if the structure is already nonconforming with respect to that

setback, and if the presently nonconforming section is at least 60 percent of the total width of the respective facade of the structure prior to the addition. The line formed by the nonconforming wall of the structure shall be the limit to which any additions may be built, which may extend up to the height limit and may include basement additions (Exhibit D for 23.45.518), provided that additions shall be at least 3 feet from the side lot line.

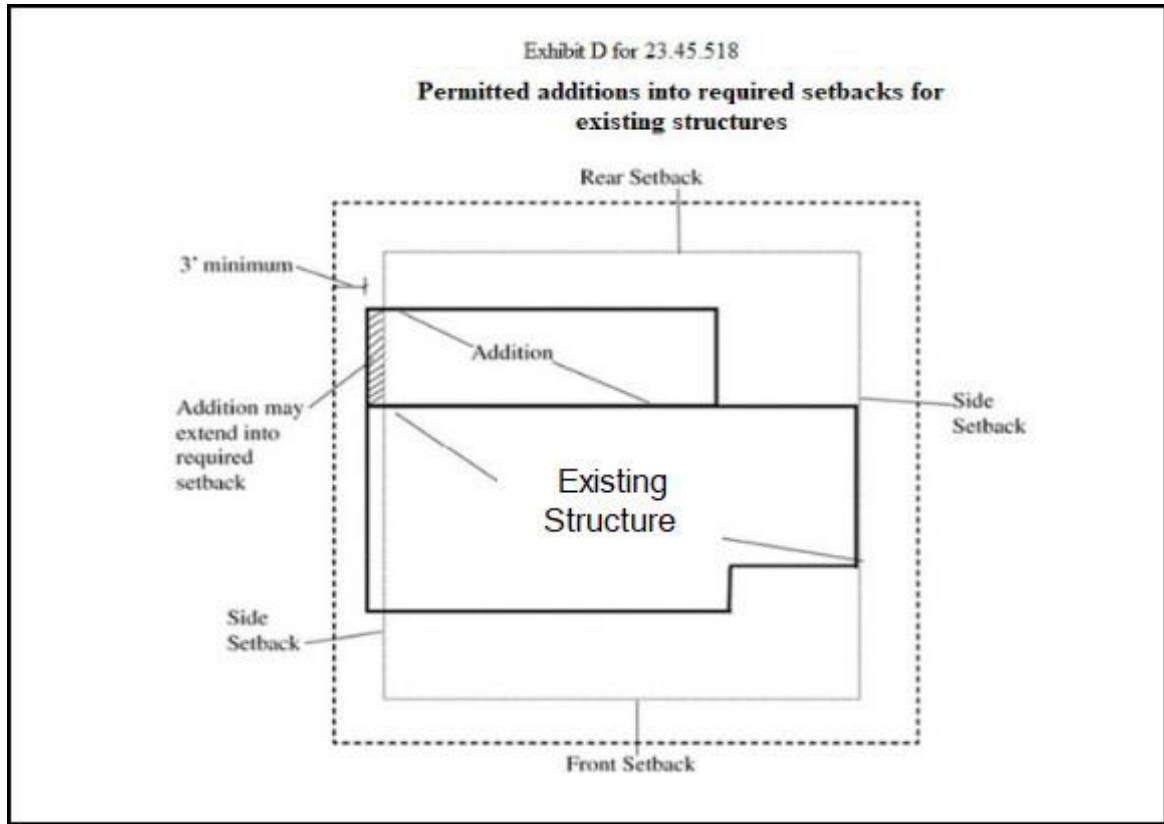

~~((2. An existing single family dwelling unit in a LR zone may be converted to a multifamily use without conforming to setback standards for apartments in subsection 23.45.518.A, provided that the building envelope is not changed. For the purposes of this subsection 23.45.518.J.2, "existing single family dwelling unit" is one that was established under permit as of October 31, 2001, or for which a permit has been granted and the permit has not expired on October 31, 2001.))~~

Exhibit D for 23.45.518

**Permitted additions into required setbacks for existing ~~((single family dwelling units))~~
structures**

1

2

Section 38. A new Section 23.45.519 is added to the Seattle Municipal Code as follows:

23.45.519 Separations between structures

A. In LR and MR zones, the minimum required separation between structures containing floor area is 6 feet except that, if the structures are separated by a driveway or parking aisle, the minimum required separation between structures containing floor area is 2 feet greater than the required width of the driveway or parking aisle or 24 feet, whichever is less. If the structures are separated by a driveway or parking aisle, projections that enclose floor area may extend a maximum of 3 feet into the required separation if they are at least 8 feet above finished grade.

B. Architectural features such as cornices, eaves, gutters, roofs, fireplaces, chimneys, and other forms of weather protection may project into required separations a maximum of 2 feet. Unenclosed structures allowed in side setbacks are allowed in the minimum separation. Garden windows, bay windows, covered porches and patios, balconies, and enclosed structures are not allowed in the required separation. Detached structures that are up to 10 feet in height and used exclusively for bike parking are allowed in required separations.

Section 39. Section 23.45.522 of the Seattle Municipal Code, last amended by Ordinance 126157, is amended as follows:

23.45.522 Amenity area

A. Amount of amenity area (~~((required for rowhouse and townhouse developments and apartments in LR zones))~~)

1. The (~~((required))~~) amount of required amenity area (~~((for rowhouse and townhouse developments and apartments))~~) in LR zones is equal to (~~((25))~~) 20 percent of the lot area.

~~((2. A minimum of 50 percent of the required amenity area shall be provided at ground level, except that amenity area provided on the roof of a structure that meets the provisions of subsection 23.45.510.D.5 may be counted as amenity area provided at ground level.~~

~~3. For rowhouse and townhouse developments, amenity area required at ground level may be provided as either private or common space.~~

~~4. For apartments, amenity area required at ground level shall be provided as common space.~~

~~B. Amenity area requirements for cottage housing developments in all multi-family zones~~

~~1. A minimum of 300 square feet of amenity area is required for each cottage.~~

~~2. A minimum of 150 square feet of amenity area is required for each carriage house.~~

~~3. The required quantity shall be allocated as follows:~~

~~a. Half of the amenity area required for each cottage, and all of the amenity area required for each carriage house, shall be provided as common amenity area; and~~

~~b. Half of the amenity area required for each cottage shall be provided as private amenity area for that unit.~~

~~4. The required common amenity area may be divided into no more than two separate areas and shall:~~

~~a. have cottages or carriage houses abutting on at least two sides;~~

~~b. be in a location central to the cottage housing development; and~~

~~c. have no horizontal dimension of less than 10 feet.~~

~~5. Carriage houses shall have stairs that provide access to the common amenity area.~~

~~C. Amount of amenity area required in MR and HR zones.)) 2. The ((required))~~
amount of required amenity area in MR and HR zones is equal to ~~((5))~~ five percent of the total gross floor area of a residential structure. ~~((in residential use, except that cottage housing developments shall meet the standards in subsection 23.45.522.B.~~

~~D. General requirements. Required amenity areas shall meet the following conditions:~~

~~1. All units))~~ B. Attached and detached dwelling units shall have access to either a common or private amenity area. Stacked dwelling units shall have access to a common amenity area.

C. In LR zones, a minimum of 50 percent of the required amenity area shall be provided at ground level or within 4 feet of existing grade. Amenity area used to meet the requirements of this subsection 23.45.522.C may not be covered by any projections that provide floor area.

~~((2.))~~ D. Enclosed amenity areas

~~((a. In LR zones, an amenity area shall not be enclosed within a structure.~~

~~b. In MR and HR zones, except for cottage housing, no))~~ 1. No more than 50
percent of the amenity area may be enclosed, and this enclosed area shall be provided as common amenity area.

2. Enclosed amenity areas must be provided in a room used exclusively for this purpose or in an area on the ground floor that can be accessed directly from the building lobby or an outdoor amenity space and does not include any of the following:

a. Internal circulation hallways between outside doors and elevators or stairs;

b. Mailrooms;

c. Bike parking;

d. Solid waste and recyclable materials storage; and

e. Laundry facilities.

~~((3. Projections into amenity areas. Structural projections that do not provide floor area, such as garden windows, may extend up to 2 feet into an amenity area if they are at least 8 feet above finished grade.))~~

E. Amenity area size

~~((4.)) 1. Private amenity areas. ((a. There is no minimum dimension for private amenity areas, except that if a private amenity area is located between the structure and a side lot line that is not a side street lot line, the minimum horizontal dimension shall be measured from the side lot line and is required to be a minimum of 10 feet.~~

~~b. An unenclosed porch that is a minimum of 60 square feet in size and that faces a street or a common amenity area may be counted as part of the private amenity area for the rowhouse, townhouse, or cottage to which it is attached.))~~ Each private amenity area shall be at least 60 square feet in area and have a minimum width and depth of 6 feet.

~~((5.)) 2. Common amenity areas. ((for rowhouse and townhouse developments and apartments shall meet the following conditions: a. No))~~ Each common amenity area shall be ((less than)) at least 250 square feet ((in area, and common amenity areas shall)) and have a minimum ((horizontal dimension)) width and depth of 10 feet.

~~((b. Common amenity areas shall be improved as follows:~~

~~1) At least 50 percent of a common amenity area provided at ground level shall be landscaped with grass, ground cover, bushes, bioretention facilities, and/or trees.~~

~~2) Elements that enhance the usability and livability of the space for residents, such as seating, outdoor lighting, weather protection, art, or other similar features, shall be provided.~~

~~c. The common amenity area required at ground level for apartments shall be accessible to all apartment units.~~

~~6. Parking areas, vehicular access easements, and driveways do not qualify as amenity areas, except that a woonerf may provide a maximum of 50 percent of the amenity area if the design of the woonerf is approved through a design review process pursuant to Chapter 23.41.~~

~~7. Swimming pools, spas, and hot tubs may be counted toward meeting the amenity area requirement.~~

~~8. Rooftop areas excluded because they are near minor communication utilities and accessory communication devices, pursuant to subsection 23.57.011.C.1, do not qualify as amenity areas.))~~

F. Features in amenity areas

1. The following features are not allowed in amenity areas:

a. Vehicular parking areas, vehicular access easements, and driveways:

b. Required bike parking;

c. Solid waste and recyclable material storage area; and

d. Enclosed structures.

1 2. Pathways serving multiple dwelling units are not allowed in private amenity
2 areas.

3 3. Decks, porches, and steps; swimming pools, spas, and hot tubs; stormwater
4 management features, including but not limited to bioretention planters and cisterns; play
5 equipment; and similar features are allowed in amenity areas.

6 4. Amenity areas may be covered by weather protection.

7 5. Projections that do not provide floor area may extend into an amenity area if
8 they meet the standards for projections into setbacks in subsection 23.45.518.G and if garden
9 windows and other similar features are at least 8 feet above finished grade.

10 6. Rooftop areas located within 8 feet of minor communication utilities and
11 accessory communication devices do not qualify as amenity areas.

12 G. Common amenity areas shall be improved as follows:

13 1. At least 35 percent of a common amenity area provided at ground level shall
14 be landscaped with grass, ground cover, bushes, bioretention facilities, and/or trees.

15 2. Elements that enhance the usability and livability of the space for residents,
16 such as seating, outdoor lighting, weather protection, art, or other similar features, shall be
17 provided.

18 H. Areas in environmentally critical areas and their buffers, including but not limited to
19 steep slopes, may count toward amenity areas. No amenity area enhancement elements shall be
20 placed in the environmentally critical areas and their buffers non disturbance area.

21 ~~((E.))~~ I. No amenity area is required for ((a)) one dwelling unit added to a ((single-
22 family dwelling unit)) residential structure existing as of January 1, 1982, ((or for one new

~~dwelling unit added to a multifamily residential use existing as of October 10, 2001)) provided that no dwelling units have been added since that date.~~

Section 40. Section 23.45.527 of the Seattle Municipal Code, last amended by Ordinance 126509, is amended as follows:

23.45.527 Structure width ~~((and façade length))~~ limits in LR zones

~~((A.)) Structure width ~~((in LR zones))~~ for buildings containing residential uses may not exceed ~~((the width indicated on Table A for 23.45.527))~~ 90 feet in LR1 and LR2 zones and 150 feet in LR3 zones.~~

~~**((Table A for 23.45.527: Maximum Structure Width in LR zones in feet**~~

Zone	Width in feet by Category of Residential Use		
	Cottage Housing and Rowhouse Developments	Townhouse Developments	Apartments
LR1	No limit	60	45
LR2	No limit	90	90
LR3 outside Urban Villages, Urban Centers or Station Area Overlay Districts	No limit	120	120
LR3 inside Urban Villages, Urban Centers or Station Area Overlay Districts	No limit	150	150

B. Maximum façade length in Lowrise zones.

~~1. The maximum combined length of all portions of façades within 15 feet of a lot line that is neither a rear lot line nor a street or alley lot line shall not exceed 65 percent of the length of that lot line, except as specified in subsection 23.45.527.B.2.~~

~~2. For a rowhouse development on a lot that abuts the side lot line of a lot in a neighborhood residential zone, the maximum combined length of all portions of façades within 15 feet of the abutting side lot line is 40 feet.))~~

Section 41. Section 23.45.529 of the Seattle Municipal Code, last amended by Ordinance 127099, is amended as follows:

23.45.529 Design standards

~~((A. Intent. The intent of the design standards in this Section 23.45.529 is to:~~

~~1. Enhance street facing and side facades to provide visual interest, promote new development that contributes to an attractive streetscape, and avoid the appearance of blank walls along a street or adjacent residential property;~~

~~2. Foster a sense of community by integrating new pedestrian-oriented multifamily development with the neighborhood street environment and promoting designs that allow easy surveillance of the street by area residents;~~

~~3. Promote livability in multifamily areas by providing a sense of openness and access to light and air; and~~

~~4. Encourage the compatibility of a variety of housing types with the scale and character of neighborhoods where new multifamily development occurs.~~

~~B. Application of provisions. The provisions of this Section 23.45.529 apply to all residential uses that do not undergo any type of design review pursuant to Chapter 23.41, except single family dwelling units.~~

~~C. Treatment of street facing facades. For the purposes of this subsection 23.45.529.C, a street-facing facade includes all vertical surfaces enclosing interior space, including gables and dormers, as shown in Exhibit A for 23.45.529.~~

Exhibit A for 23.45.529

Measurement of facades

1. Facade openings

a. At least 20 percent of the area of each street-facing facade shall consist of windows and/or doors, except as provided in subsection 23.45.529.C.1.b. If a front and side facade are street-facing, the two facades may be combined for the purpose of this calculation.

b. For any rowhouse or townhouse dwelling unit that has both a front and a side facade that are street-facing, the percentage of the side street-facing facade required to consist of windows and/or doors is reduced to ten percent for the portion of the facade associated with that dwelling unit. This reduction to ten percent is not allowed if the facades

1 ~~are combined for the purpose of this standard pursuant to subsection 23.45.529.C.1.a or if any~~
2 ~~of the exceptions in subsection 23.45.529.C.3 are applied.~~

3 ~~c. Windows count toward the requirement for facade openings in this~~
4 ~~subsection 23.45.529.C.1 only if they are transparent. Windows composed of glass blocks or~~
5 ~~opaque glass, garage doors, and doors to utility and service areas do not count.~~

6 ~~2. Facade articulation~~

7 ~~a. If a street-facing facade or portion of a street-facing facade is not~~
8 ~~vertical, the Director shall determine whether the facade is substantially vertical and required~~
9 ~~to comply with this subsection 23.45.529.C.~~

10 ~~b. If the street-facing facade of a structure exceeds 750 square feet in~~
11 ~~area, division of the facade into separate facade planes is required (see Exhibit B for~~
12 ~~23.45.529).~~

13 ~~c. In order to be considered a separate facade plane for the purposes of~~
14 ~~this subsection 23.45.529.C.2, a portion of the street-facing facade shall have a minimum area~~
15 ~~of 150 square feet and a maximum area of 500 square feet, and shall project or be recessed~~
16 ~~from abutting facade planes by a minimum depth of 18 inches.~~

17 ~~d. Trim that is a minimum of 0.75 inches deep and 3.5 inches wide is~~
18 ~~required to mark roof lines, porches, windows, and doors on all street-facing facades.~~

~~Exhibit B for 23.45.529~~

~~Street-facing facades~~

~~3. The Director may allow exceptions to the facade opening requirements in subsection 23.45.529.C.1 and the facade articulation requirements in subsection 23.45.529.C.2, if the Director determines that the street-facing facade will meet the intent of subsection 23.45.529.A.1 for all housing types, and, as applicable, the intent of subsections 23.45.529.E.2, 23.45.529.F.3, and 23.45.529.G.4 for cottage housing developments, rowhouse developments, and townhouse developments, respectively, through one or more of the following street-facing facade treatments:~~

1 a. ~~Variations in building materials and/or color, or both, that reflect the~~
2 ~~stacking of stories or reinforce the articulation of the facade;~~

3 b. ~~Incorporation of architectural features that add interest and dimension~~
4 ~~to the facade, such as porches, bay windows, chimneys, pilasters, columns, cornices, and/or~~
5 ~~balconies;~~

6 c. ~~Special landscaping elements provided to meet Green Factor~~
7 ~~requirements pursuant to Section 23.45.524, such as trellises, that accommodate vegetated~~
8 ~~walls covering a minimum of 25 percent of the facade surface;~~

9 d. ~~Special fenestration treatment, including an increase in the percentage~~
10 ~~of windows and doors to at least 25 percent of the street-facing facade(s).~~

11 D. ~~Treatment of side facades that are not street-facing. For the purposes of this~~
12 ~~subsection 23.45.529.D, a side facade that is not street-facing includes all vertical surfaces~~
13 ~~enclosing interior space, including gables and dormers, as shown in Exhibit A for 23.45.529, if~~
14 ~~located within 10 feet of a side lot line.~~

15 1. ~~If the side facade of a structure that is not street-facing exceeds 1,000 square~~
16 ~~feet in area, one of the following must be met:~~

17 a. ~~A portion of the side facade with a minimum area of 250 square feet~~
18 ~~and a maximum area of 750 square feet shall project or be recessed from abutting facade~~
19 ~~planes by a minimum depth of 18 inches; or~~

20 b. ~~The side facade shall include vertical or horizontal variations in~~
21 ~~building materials or color, covering a minimum of 25 percent of the facade surface.~~

22 2. ~~Structures shall be designed to maintain the privacy of dwelling units by~~
23 ~~minimizing placement of proposed windows where they would directly align with windows on~~

~~the side facade of a structure on an abutting lot located within 20 feet of the side property line or by use of fencing, screening, landscaping, or translucent windows to create privacy between buildings.~~

~~E. Design standards for cottage housing developments~~

~~1. Pedestrian entry. Each cottage with a street-facing facade that is located within 10 feet of the street lot line shall have a visually prominent pedestrian entry through the use of covered stoops, porches, or other architectural entry features. For cottages on corner lots that have more than one street-facing facade within 10 feet of the street lot line, a visually prominent pedestrian entry is required on only one of the street-facing facades. Access to these entrances may be through a required private amenity area that abuts the street.~~

~~2. Architectural expression. Cottage housing developments shall include architectural details that reduce the visual scale of the units. Each cottage shall employ one or more of the following design techniques to reduce visual scale of the units:~~

- ~~a. Attached covered porch;~~
- ~~b. Roofline features such as dormers or clerestories;~~
- ~~c. Bay windows;~~
- ~~d. Variation in siding texture and materials; and~~
- ~~e. Other appropriate architectural techniques demonstrated by the applicant to reduce the visual scale of cottages.~~

~~F. Design standards for rowhouse developments~~

~~1. Pedestrian entry. Each rowhouse unit shall have a pedestrian entry on the street-facing facade that is designed to be visually prominent through the use of covered~~

~~stoops, porches, or other architectural entry features. For rowhouse units on corner lots, a visually prominent pedestrian entry is required on only one of the street-facing facades.~~

~~2. Front setback. Design elements to provide a transition between the street and the rowhouse units, such as landscaping, trees, fences, or other similar features, are required in the front setback.~~

~~3. Architectural expression. The street-facing facade of a rowhouse unit shall provide architectural detail or composition to visually identify each individual rowhouse unit as seen from the street. Design elements such as trim or molding, modulation, massing, color and material variation, or other similar features may be used to achieve visual identification of individual units. Rooftop features, such as dormers or clerestories, or roofline variation may be used to visually identify individual rowhouse units.~~

~~G. Design standards for townhouse developments~~

~~1. Building orientation. Townhouse developments shall maximize the orientation of individual units to the street by complying with one of the following conditions:~~

~~a. When multiple buildings are located on a lot, at least 50 percent of the townhouse units shall be located so that there is no intervening principal structure between the unit and the street, unless the intervening principal structure was established under permit as of October 31, 2001, or was granted a permit on October 31, 2001, and the permit has not expired; or~~

~~b. All townhouse units without a street-facing facade shall have direct access to a common amenity area meeting the requirements of Section 23.45.522 that either abuts the street or is visible and accessible from the street by a clear pedestrian pathway.~~

1 2. Pedestrian pathway. A clear pedestrian pathway from the street to the
2 entrance of each townhouse unit shall be provided. The pedestrian pathway may be part of a
3 driveway, provided that the pathway is differentiated from the driveway by pavement color,
4 texture, or similar technique. Signage identifying townhouse unit addresses and the directions
5 to the unit entrance(s) from the street shall be provided.

6 3. Pedestrian entry. Each townhouse unit with a street-facing facade shall have a
7 pedestrian entry on the street-facing facade that is designed to be a visually prominent feature
8 through the use of covered stoops, porches, or other architectural entry features. For townhouse
9 units on corner lots, a visually prominent pedestrian entry is required on only one of the street-
10 facing facades.

11 4. Architectural expression. Architectural detail or composition shall be
12 provided to visually identify each individual townhouse unit, as seen from the public street.
13 Design elements such as trim or molding, modulation, massing, color and material variation, or
14 other similar features may be used to achieve visual identification of individual units. Rooftop
15 features, such as dormers or clerestories, or roofline variation may be used to visually identify
16 individual townhouse units.

17 H. Building entry orientation standards for apartments

18 1. For each apartment structure, a principal shared pedestrian entrance is
19 required that faces either a street or a common amenity area, such as a landscaped courtyard,
20 that abuts and has direct access to the street. Additional pedestrian entrances to individual units
21 are permitted.

~~2. If more than one apartment structure is located on a lot, each apartment structure separated from the street by another principal structure shall have a principal entrance that is accessible from a common amenity area with access to the street.~~

~~3. The shared entrance of each apartment structure shall have a pedestrian entry that is designed to be visually prominent, through the use of covered stoops, overhead weather protection, a recessed entry, or other architectural entry features.))~~

A. Application of provisions

1. The provisions of this Section 23.45.529 apply to development that includes the construction of new dwelling units, except for new dwelling units added within existing structures.

2. For the purposes of this Section 23.45.529, requirements for street-facing facades shall only apply to structures located within 40 feet of a street lot line or a vehicle access easement serving ten or more residential units. For structures located within 40 feet of a vehicle access easement serving ten or more residential units but not within 40 feet of street lot line, the facade that faces the vehicle access easement shall be considered a street-facing facade for the purpose of this Section 23.45.529. If multiple facades face vehicle access easements, the applicant may decide which facade facing a vehicle access easement is considered the street-facing facade.

B. Measurement of street-facing facades. For the purposes of this Section 23.45.529, a street-facing facade includes all vertical surfaces enclosing interior space, including gables and dormers, as shown in Exhibit A for 23.45.529.

Exhibit A for 23.45.529

Measurement of facades

C. Pedestrian access. Each dwelling unit shall have pedestrian access at least 3 feet in width to the sidewalk or, if no sidewalk exists, the front lot line. This pedestrian access may be shared or private. This pedestrian access may cross any required setbacks or interior separation. This pedestrian access may be part of a driveway.

D. Entrances. Each structure with a street-facing facade shall have a pedestrian entry on that street-facing facade meeting the requirements of subsections 23.44.140.D.1 through 23.44.140.D.4. For attached and detached dwelling units, the pedestrian entry may be located on a wall perpendicular to the street-facing facade provided that the pedestrian entry abuts a covered porch or recessed entry that also abuts the street-facing facade.

1 1. For stacked dwelling units, at least one pedestrian entry shall be required for
2 the structure as a whole.

3 2. For attached and detached dwelling units, each individual dwelling unit with a
4 street-facing facade within 40 feet of the street lot line shall have at least one pedestrian entry on
5 the street-facing facade.

6 3. For structures or dwelling units with multiple street-facing facades, a
7 pedestrian entry is required on only one of the street-facing facades.

8 4. Required pedestrian entry on street-facing facades shall have weather
9 protection, such as a covered porch, canopy, recessed entry, or similar feature, measuring at least
10 3 feet by 3 feet in width and depth for attached and detached dwelling units and at least 6 feet in
11 width and 4 feet in depth for stacked dwelling units.

12 E. Windows and doors. At least 20 percent of the area of each street-facing facade shall
13 consist of windows and/or doors. If front and side facades are street-facing, the two facades
14 shall be combined for the purpose of this calculation. Windows count toward the requirement
15 for facade openings in this subsection 23.45.529.E only if they are transparent. Windows
16 composed of garage doors and doors to utility and service areas do not count. For the purpose
17 of this Section 23.45.529, a window shall include the glass pane, window frame, and internal
18 components such as sashes, mullions, grilles, muntins, and stiles.

19 Section 42. Section 23.45.531 of the Seattle Municipal Code, enacted by Ordinance
20 123495, is repealed:

21 ~~((23.45.531 Development standards for cottage housing developments and carriage house~~
22 ~~structures~~

23 ~~A. Size limit for dwelling units.~~

~~1. The maximum gross floor area of each cottage in a cottage housing development is 950 square feet.~~

~~2. The maximum gross floor area of a carriage house is 600 square feet.~~

~~B. Size limit for garages. The maximum gross floor area for a shared garage structure in a cottage housing development is 1,200 square feet, and the garage shall contain no more than four parking spaces.~~

~~C. Carriage house structures. A carriage house structure is permitted in a cottage housing development subject to the following standards:~~

~~1. The maximum number of dwelling units permitted in carriage house structures is one-third of the total number of units in the cottage housing development on the lot.~~

~~2. The maximum gross floor area of the ground floor of a carriage house structure is 1,200 square feet.~~

~~D. Existing single family dwelling units in a cottage housing development. Existing single family dwelling units that are non-conforming with respect to the standards for a cottage housing development are permitted to remain, provided that the extent of the nonconformity shall not be increased.))~~

Section 43. Section 23.45.536 of the Seattle Municipal Code, last amended by Ordinance 126682, is amended as follows:

23.45.536 Parking location, access, and screening

* * *

D. Screening of parking

1. Parking shall be screened from direct street view by:

1 a. The street-facing facade of a structure;
2 b. Garage doors;
3 c. A fence or wall; or
4 d. Landscaped areas, including bioretention facilities or landscaped
5 berms.

6 2. Screening provided by a fence, wall, or vegetation in a landscaped area shall
7 not be located within any required sight triangle and shall meet the following conditions:

8 a. The fence, wall, or vegetation in the landscaped area shall be at least 3
9 feet tall measured from the elevation of the curb, or from the elevation of the street if no curb
10 is present. If the elevation of the ground at the base of the fence, wall, or landscaped area is
11 higher than the finished elevation of the parking surface, the difference in elevation may be
12 measured as a portion of the required height of the screen, so long as the fence, wall, or
13 vegetation in the landscaped area is at least 3 feet in height. If located in a setback, the fence or
14 wall shall meet the requirements of subsection ((~~23.45.518.I.7~~)) 23.45.518.H.7.

15 b. The fence, wall, or vegetation in the landscaped area shall be set back
16 at least 3 feet from the lot line.

17 3. Screening by garage doors in LR zones. If parking is provided in a garage in
18 or attached to a principal structure and garage door(s) face a street, the garage door(s) may be
19 no more than 75 square feet in area.

20 * * *

21 Section 44. Section 23.45.545 of the Seattle Municipal Code, last amended by Ordinance
22 127211, is amended as follows:

23 **23.45.545 Standards for ((~~certain accessory uses~~)) solar collectors**

1 A. ~~((Private, permanent swimming pools, hot tubs and other similar uses are permitted~~
2 ~~in any required setback, provided that:~~

3 1. ~~No part of any swimming pools, hot tubs and other similar uses shall project~~
4 ~~more than 18 inches above existing grade in a required front setback; and~~

5 2. ~~No swimming pool shall be placed closer than 5 feet to any front or side lot~~
6 ~~line.~~

7 B. ~~Solar greenhouses, greenhouses and solariums~~

8 1. ~~Solar greenhouses, greenhouses and solariums, in each case that are attached~~
9 ~~to and integrated with the principal structure and no more than 12 feet in height are permitted~~
10 ~~in a required rear setback, subject to subsection 23.45.545.B.3, and may extend a maximum of~~
11 ~~6 feet into required front and side setbacks, subject to subsection 23.45.545.B.2.~~

12 2. ~~An attached solar greenhouse, greenhouse or solarium, in a required setback,~~
13 ~~shall be no closer than 3 feet from side lot lines and 8 feet from front lot lines.~~

14 3. ~~A solar greenhouse, greenhouse or solarium allowed pursuant to subsection~~
15 ~~23.45.545.B.1 shall not be closer than 5 feet to the rear lot line, except that it may abut an alley~~
16 ~~if it is no taller than 10 feet along the rear lot line, is of no greater average height than 12 feet~~
17 ~~for a depth of 15 feet from the rear lot line, and is no wider than 50 percent of lot width for a~~
18 ~~depth of 15 feet from the rear lot line.~~

19 C. ~~Solar~~) General standards for solar collectors

20 1. Solar collectors are permitted in required setbacks, subject to the following:
21 a. Detached solar collectors are permitted in required rear setbacks, no
22 closer than 5 feet to any other principal or accessory structure.

b. Detached solar collectors are permitted in required side setbacks, no closer than 5 feet to any other principal or accessory structure, and no closer than 3 feet to the side lot line.

2. Sunshades that provide shade for solar collectors that meet minimum written energy conservation standards administered by the Director may project into southern front or rear setbacks. Those that begin at 8 feet or more above finished grade may be no closer than 3 feet from the lot line. Sunshades that are between finished grade and 8 feet above finished grade may be no closer than 5 feet to the lot line.

3. Solar collectors on roofs. Solar collectors that are located on a roof are permitted as follows:

a. In LR zones up to 4 feet above the maximum height limit or 4 feet above the height of stair or elevator penthouse(s), whichever is higher; and

b. In MR and HR zones up to 10 feet above the maximum height limit or 10 feet above the height of stair or elevator penthouse(s), whichever is higher.

c. If the solar collectors would cause an existing structure to become nonconforming, or increase an existing nonconformity, the Director may permit the solar collectors as a special exception pursuant to Chapter 23.76. Solar collectors may be permitted under this subsection ((~~23.45.545.C.3.e~~)) 23.45.545.A.3.c even if the structure exceeds the height limits established in this subsection ((~~23.45.545.C.3~~)) 23.45.545.A.3, if the following conditions are met:

1) There is no feasible alternative solution to placing the collector(s) on the roof; and

2) The collector(s) are located so as to minimize view blockage from surrounding properties and the shading of property to the north, while still providing adequate solar access for the solar collectors.

~~((D. [Reserved.]~~

~~E. Nonconforming solar collectors.))~~ B. Special exceptions. The Director may permit the installation of solar collectors that meet minimum energy standards and that increase an existing nonconformity as a special exception pursuant to Chapter 23.76. Such an installation may be permitted even if it exceeds the height limits established in this Section 23.45.545 and Section 23.45.514 when the following conditions are met:

1. There is no feasible alternative solution to placing the collector(s) on the roof;
and

2. Such collector(s) are located so as to minimize view blockage from surrounding properties and the shading of property to the north, while still providing adequate solar access for the solar collectors.

~~((F. Open wet moorage facilities for residential uses are permitted as an accessory use pursuant to Chapter 23.60A, Shoreline District, if only one slip per residential unit is provided.~~

~~G. Bed and breakfast uses. A bed and breakfast use may be operated under the following conditions:~~

~~1. The bed and breakfast use has a valid business license tax certificate issued by the Department of Finance and Administrative Services;~~

~~2. All operators of bed and breakfast uses who use a short-term rental platform for listing the bed and breakfast shall have a valid short-term rental operator's license issued by the Department of Finance and Administrative Services.~~

1 ~~3. The bed and breakfast use shall be operated by the primary resident of the~~
2 ~~dwelling unit where the bed and breakfast is located or the resident operator;~~

3 ~~4. There shall be no evidence of a bed and breakfast use visible from the~~
4 ~~exterior of the dwelling unit other than a sign permitted by subsection 23.55.022.D.1; and~~

5 ~~5. A bed and breakfast use may be located in a dwelling unit or an accessory~~
6 ~~dwelling unit.~~

7 ~~H. Heat recovery incinerators, located on the same lot as the principal use, may be~~
8 ~~permitted by the Director as accessory administrative conditional uses, pursuant to Section~~
9 ~~23.45.506.~~

10 ~~I. Accessory dwelling units are allowed pursuant to Section 23.42.022.~~

11 ~~J. Urban farms are subject to the standards in Section 23.42.051 and the conditional use~~
12 ~~requirement in subsection 23.45.504.C.8.))~~

13 Section 45. Section 23.45.550 of the Seattle Municipal Code, last amended by Ordinance
14 126855, is amended as follows:

15 **23.45.550 Alternative ((Standards)) standards for development of ((affordable)) low-income**
16 **units ((on property owned or controlled by a religious organization))**

17 ~~((In lieu of meeting development standards contained in subsections 23.45.510.B and~~
18 ~~23.45.510.C (floor area), subsections 23.45.512.A and 23.45.512.B (density), and subsections~~
19 ~~23.45.514.A and 23.45.514.B (height), a proposed development that meets the requirements of~~
20 ~~Section 23.42.055 may elect to meet the alternative development standards in this Section~~
21 ~~23.45.550.))~~

22 A. Development on a lot that meets the requirements of Section 23.42.055 may elect to
23 meet the development standards in subsections 23.45.550.B and 23.45.550.C in lieu of the

standards in subsection 23.45.510.C (floor area) and subsections 23.45.514.A and 23.45.514.B (height).

((A.)) B. Floor area

1. Development permitted pursuant to Section 23.42.055 is subject to the FAR limits as shown in Table A for 23.45.550.

Table A for 23.45.550
FAR limits for development permitted pursuant to Section 23.42.055

Zone	Base FAR	Maximum additional exempt FAR ¹
LR1	1.5 ²	0.3
LR2	((1.8)) <u>2.0</u>	0.3
LR3 outside urban centers and urban villages	2.5	0.5
LR3 inside urban centers and urban villages	3.25	0.5
MR	5.0	0.5
HR	16	1.0

Footnotes to Table A for 23.45.550

¹ Gross floor area for uses listed in subsection 23.45.550.B.2 are exempt from FAR calculations up to this amount.

² Except that lots in LR1 zones that have previously been zoned RSL have a base FAR of 2.7.

2. In addition to the FAR exemptions in subsection 23.45.510.D, an additional FAR exemption up to the total amount specified in Table A for 23.45.550 is allowed for any combination of the following floor area:

a. Floor area in units with two or more bedrooms and a minimum net unit area of 850 square feet;

- 1 b. Floor area of a religious facility; ~~((and))~~
- 2 c. Floor area in a structure designated as a Landmark pursuant to Chapter
- 3 25.12; and/or
- 4 d. Any floor area in a development located within ~~((1/4 mile (1,320 feet)~~
- 5 ~~of a transit stop or station served by a frequent transit route as defined in subsection~~
- 6 ~~23.54.015.B.4))~~ a frequent transit service area.

7 3. Split-zoned lots

8 a. On lots located in two or more zones, the FAR limit for the entire lot

9 shall be the highest FAR limit of all zones in which the lot is located, provided that:

10 1) At least 65 percent of the total lot area is in the zone with the

11 highest FAR limit;

12 2) No portion of the lot is located in a ~~((neighborhood~~

13 ~~residential))~~ Neighborhood Residential zone; and

14 3) A minimum setback of 10 feet applies for any lot line that

15 abuts a lot in a ~~((neighborhood residential))~~ Neighborhood Residential zone.

16 b. For the purposes of this subsection ~~((23.45.550.A.3))~~ 23.45.550.B.3,

17 the calculation of the percentage of a lot or lots located in two or more zones may include lots

18 that abut and are in the same ownership at the time of the permit application.

19 ~~((B.))~~ C. Maximum height

20 1. Development permitted pursuant to Section 23.42.055 is subject to the height

21 limits as shown in Table B for 23.45.550.

Table B for 23.45.550
Structure height for development permitted pursuant to Section 23.42.055

Zone	Height limit (in feet)
LR1	((40)) 50
LR2	50
LR3 outside urban centers and urban villages	55
LR3 inside urban centers and urban villages	65
MR	95
HR	480

2. Split-zoned lots

a. On lots located in two or more zones, the height limit for the entire lot shall be the highest height limit of all zones in which the lot is located, provided that:

1) At least 65 percent of the total lot area is in the zone with the highest height limit;

2) No portion of the lot is located in a ((neighborhood residential)) Neighborhood Residential zone; and

3) A minimum setback of 10 feet applies for any lot line that abuts a lot in a ((neighborhood residential)) Neighborhood Residential zone.

b. For the purposes of this subsection ((23.45.550.B.2)) 23.45.550.C.2, the calculation of the percentage of a lot or lots located in two or more zones may include lots that abut and are in the same ownership at the time of the permit application.

((C. Density limits. Development permitted pursuant to this Section 23.45.550 is not subject to the standards of subsections 23.45.512.A and 23.45.512.B.))

Section 46. Table A for Section 23.47A.004 of the Seattle Municipal Code, which section was last amended by Ordinance 127099, is amended as follows:

Footnotes to Table A for 23.47A.004

¹ In pedestrian-designated zones, a portion of the street-level street-facing facade of a structure along a designated principal pedestrian street may be limited to certain uses as provided in subsection 23.47A.005.D. In pedestrian-designated zones, drive-in lanes are prohibited (Section 23.47A.028).

² In addition to the provisions in this Chapter 23.47A, uses that entail major cannabis activity are subject to the requirements of Section 23.42.058.

³ For commercial uses with drive-in lanes, see Section 23.47A.028.

⁴ Subject to subsection 23.47A.004.H.

⁵ Permitted at Seattle Center.

⁶ Bed and breakfasts in existing structures are permitted outright with no maximum size limit.

⁷ Medical services over 10,000 square feet within 2,500 feet of a medical Major Institution Overlay boundary require conditional use approval, unless they are included in a Major Institution Master Plan or dedicated to veterinary services.

⁸ Medical service uses that are located in an urban center or urban village, which are in operation at such location before August 1, 2015, and that routinely provide medical services on a reduced fee basis to individuals or families having incomes at or below 200 percent of the poverty guidelines updated periodically in the Federal Register by the U.S. Department of Health and Human Services under the authority of 42 USC 9902(2), are limited to 20,000 square feet. This provision does not apply to medical service uses that are subject to a Major Institution Master Plan.

⁹ Office uses in C1 and C2 zones are permitted up to the greater of 1 FAR or 35,000 square feet as provided in subsection 23.47A.010.D. Office uses in C1 and C2 zones are permitted outright with no maximum size limit if they meet the standards identified in subsection 23.47A.010.D.

¹⁰ Gas stations and other businesses with drive-in lanes are not permitted in pedestrian-designated zones (Section 23.47A.028). Elsewhere in NC zones, establishing a gas station may require a demonstration regarding impacts under Section 23.47A.028.

¹¹ Grocery stores meeting the conditions of subsection 23.47A.010.E are permitted up to 23,000 square feet in size.

¹² Subject to subsection 23.47A.004.G.

¹³ Permitted pursuant to subsection 23.47A.004.D.7.

¹⁴ Residential uses may be limited to 20 percent of a street-level street-facing facade

<p>pursuant to subsection 23.47A.005.C.</p> <p>¹⁵ Residential uses are conditional uses in C2 zones ((under)) <u>subject to</u> subsection 23.47A.006.A.3, except <u>that low-income housing is allowed outright or as otherwise provided ((above in Table A for 23.47A.004 or))</u> in subsection 23.47A.006.A.3.</p> <p>¹⁶ Permitted at Seattle Center; see Section 23.47A.011.</p> <p>¹⁷ Flexible-use parking is subject to Section 23.54.026. In pedestrian-designated zones, surface parking is prohibited adjacent to principal pedestrian streets pursuant to subsection 23.47A.032.B.2.</p> <p>¹⁸ Permitted as surface parking only on surface parking lots existing as of January 1, 2017. In pedestrian-designated zones, surface parking is prohibited adjacent to principal pedestrian streets pursuant to subsection 23.47A.032.B.2.</p> <p>¹⁹ Permitted outright, except prohibited in ((the)) <u>a</u> SAOD.</p> <p>²⁰ See Chapter 23.57, Communications regulations, for regulation of communication utilities.</p> <p>²¹ A recycling use that is located on the same development site as a solid waste transfer station may be permitted by administrative conditional use, subject to the requirements of subsection 23.47A.006.A.7.</p>						

Section 47. Section 23.47A.009 of the Seattle Municipal Code, last amended by Ordinance 126862, is amended as follows:

23.47A.009 Standards applicable to specific areas

* * *

C. Bitter Lake Village Hub Urban Village. Development on lots designated on Map A for 23.47A.009 shall meet the following requirements:

Map A for 23.47A.009

Standards ((Applicable)) applicable to ((Specific Areas)) specific areas: Bitter Lake

1. Upper-level setback requirement. The following standards apply to development on lots abutting the east side of Linden ((Ave)) Avenue North or along both sides of the corridor required in subsection 23.47A.009.C.2.

a. Any portion of a structure greater than 45 feet in height, measured from the finished grade along the street property line that abuts Linden Avenue North or along the access corridor required in subsection 23.47A.009.C.2, measured from the finished grade along the edge of the access corridor, shall set back an average of 10 feet from the lot line abutting

Linden Avenue North or from the edge of the access corridor as measured according to Section 23.86.012. The maximum depth of a setback that can be used for calculating the average setback is 20 feet.

b. Structures permitted in required setbacks are subject to subsection 23.47A.014.G.

2. Corridor requirement. An access corridor shall be provided on lots over 8 acres that abut Linden Avenue North and Aurora Avenue North, to connect Linden Avenue North and Aurora Avenue North. The location of the proposed corridor shall be clearly shown on the site plan that is submitted with the permit application.

a. The corridor shall have a minimum width of 40 feet and a maximum width of 60 feet.

b. The point at which the corridor intersects Linden Avenue North and Aurora Avenue North shall be at least 335 feet south of the south boundary of the North 135th Street right-of-way, and 700 feet north of the north boundary of the North 130th Street right-of-way, as illustrated by example in Map A for 23.47A.009.

c. The corridor shall include a minimum of one walkway, at least 6 feet wide, extending between Linden Avenue North and Aurora Avenue North. If vehicle access is provided within the corridor, the corridor shall include walkways at least 6 feet wide along both sides of the vehicle access.

d. Landscaping shall be provided along the corridor. If vehicle access is provided within the corridor, trees shall be provided between the walkways and vehicle travel lanes. The Director will determine the number, type, and placement of trees to be provided in order to:

- 1) Match trees to the available space;
 - 2) Complement existing or planned street trees on abutting streets;
 - and
 - 3) Encourage healthy growth through appropriate spacing.
- e. Pedestrian-scaled lighting shall be provided along the corridor.
- f. The corridor shall not include any features or structures except the following:
- 1) Vehicle access, not more than one lane in each direction and meeting the standards of Section 23.54.030.
 - 2) Parking meeting the standards of Section 23.54.030 is allowed along vehicle access lanes within the corridor. Such parking is in addition to the maximum number of spaces allowed under subsection 23.54.015.C.2. The requirements of subsection 23.47A.032.A do not apply to access to parking from the corridor.
 - 3) Overhead horizontal building projections of an architectural or decorative character such as cornices, eaves, sills, and gutter, provided that they project no more than 18 inches from the structure facade.
 - 4) Ramps or other devices that provide access for the disabled and elderly and that meet the standards of the Seattle Building Code are permitted.
 - 5) Stairs or ramps to accommodate changes in grade.
 - 6) Underground structures.
 - 7) Unenclosed porches or steps for residential units no higher than 4 feet above the finished grade of the corridor are permitted to project no more than 4 feet into the corridor.

8) Green stormwater infrastructure.

9) Features required elsewhere in this subsection 23.47A.009.C.2.

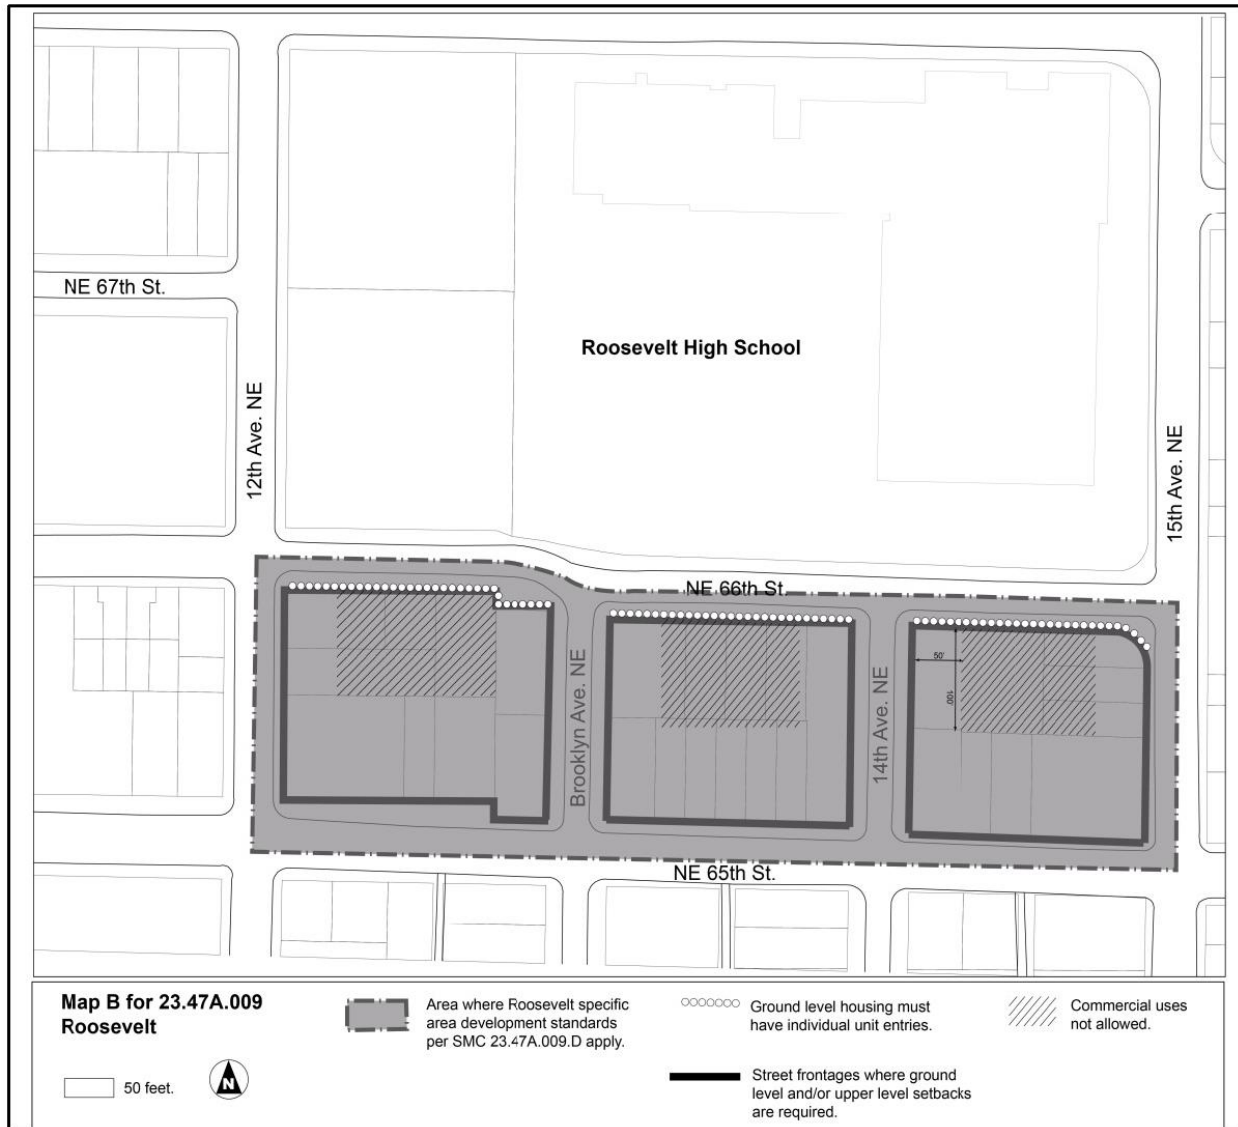

10) The Director may approve other features or structures, such as overhead weather protection, signage, and art, that do not impede safe access from the site to Linden Avenue North and Aurora Avenue North, and that enhance pedestrian comfort and safety of the corridor.

g. If the area proposed for development on a site meeting the size threshold for this subsection 23.47A.009.C.2 is less than the full lot, the Director may waive or modify the access corridor requirement, if the applicant submits a site plan demonstrating how Linden Avenue North and Aurora Avenue North will be connected by an access corridor when the remainder of the lot is developed.

D. Roosevelt Urban Village. The following provisions apply within the area shown on Map B for 23.47A.009.

Map B for 23.47A.009

Roosevelt

1. Setback requirements

a. The following setbacks are required from the listed street property lines:

1) Northeast 66th Street. An average ground-level setback of 10 feet along the length of the street property line and a minimum upper-level setback of 4 feet. The minimum upper-level setback shall be provided in addition to the required ground-level setback

at all points along the length of the street property line at 45 feet of height and above, as measured from average finished grade.

2) Brooklyn Avenue Northeast. An average ground-level setback of 5 feet along the length of the street property line and a minimum upper-level setback of 4 feet. The minimum upper-level setback shall be provided in addition to the required ground-level setback at all points along the length of the street property line at 45 feet of height and above, as measured from average finished grade.

3) 14th Avenue Northeast. An average ground-level setback of 15 feet and a minimum ground-level setback of 5 feet along the length of the street property line and a minimum upper-level setback of 3 feet. The minimum upper-level setback shall be provided in addition to the required ground-level setback at all points along the length of the street property line at 45 feet of height and above, as measured from average finished grade.

4) 15th Avenue Northeast. A minimum ground-level setback of 5 feet along the length of the street property line and an average upper-level setback of 7 feet. The average upper-level setback shall be provided in addition to the required ground-level setback at all points along the length of the street property line at 45 feet of height and above, as measured from average finished grade.

5) Northeast 65th Street and 12th Avenue Northeast. An average ground-level setback of 8 feet shall be provided, and the setback may include pedestrian access and circulation.

b. Structures permitted in required setbacks are subject to subsection 23.47A.014.G, except that:

1 1) Decks with open railings may project up to 5 feet into the
2 required setback area if they are no lower than 20 feet above existing or finished grade. Decks
3 may cover no more than 20 percent of the total setback area.

4 2) Stoops or porches providing direct access to individual housing
5 units may project up to 5 feet into the required ground-level setback area, except that portions of
6 stoops or porches not more than 2.5 feet in height from existing or finished grade, whichever is
7 lower, may extend to a street lot line. The 2.5-foot height limit for stoops or porches does not
8 apply to guard rails or hand rails. Such stoops or porches shall cover no more than 20 percent of
9 the total ground-level setback area.

10 3) Fences no greater than 4 feet in height are permitted in the
11 required ground-level setback, and up to 2 feet of additional height for architectural features such
12 as arbors or trellises on the top of a fence is permitted. Fence height may be averaged along
13 sloping grades for each 4-foot-long segment of the fence, but in no case may any portion of the
14 fence exceed 6 feet in height.

15 c. Where required setbacks may be averaged, measurement shall be
16 pursuant to subsection ((~~23.86.012.A~~)) 23.86.012.B and the following:

17 1) Where a building is set back more than 30 feet from a lot line at
18 ground level, 30 feet shall be used as the ground-level setback amount for averaging purposes.

19 2) Where averaging is allowed for a required upper-level setback,
20 the measurement shall be taken horizontally from points directly above the lot line to the facade
21 of the structure at the height where the upper-level setback is required.

22 2. Landscaping. Required ground-level setbacks shall be landscaped, and may
23 include paving and lighting to enhance pedestrian safety and comfort. Sidewalks, plazas, and

other amenities or landscaped areas approved by the Director are permitted in required ground-level setbacks.

3. Limit on commercial uses. Commercial uses are prohibited within 80 feet of the street property line of Northeast 66th Street, except within 50 feet of the intersections of Northeast 66th Street with Brooklyn Avenue Northeast, 14th Avenue Northeast, 12th Avenue Northeast, and 15th Avenue Northeast, as shown on Map B for 23.47A.009.

4. Housing units on the ground floor. All housing units with a facade that faces Northeast 66th Street with no intervening housing units or commercial uses between the housing unit and the Northeast 66th Street lot line, and located on the first floor of a building, shall have the primary pedestrian entrance to each housing unit directly accessible from the exterior of the structure rather than a primary pedestrian entry through a common entrance hallway.

5. Underground parking. Parking shall be located below grade, except a portion of a below-grade garage may extend up to 4 feet above existing or finished grade, whichever is lower, provided that the parking that extends above grade is fully screened from direct street view by the street-facing facade of the structure or by landscaping.

* * *

Section 48. Section 23.47A.013 of the Seattle Municipal Code, last amended by Ordinance 126855, is amended as follows:

23.47A.013 Floor area ratio

* * *

B. The following gross floor area is not counted toward FAR:

1. All stories, or portions of stories, that are underground;

2. All portions of a story that extend no more than 4 feet above existing or finished grade, whichever is lower, excluding access;

3. Gross floor area of a transit station, including all floor area open to the general public during normal hours of station operation but excluding retail or service establishments to which public access is limited to customers or clients, even where such establishments are primarily intended to serve transit riders;

4. On a lot containing a peat settlement-prone environmentally critical area, above-grade parking within or covered by a structure or portion of a structure, if the Director finds that locating a story of parking below grade is infeasible due to physical site conditions such as a high water table, if either:

a. The above-grade parking extends no more than 6 feet above existing or finished grade and no more than 3 feet above the highest existing or finished grade along the structure footprint, whichever is lower, as measured to the finished floor level or roof above, pursuant to subsection 23.47A.012.A.3; or

b. All of the following conditions are met:

1) No above-grade parking is exempted by subsection 23.47A.013.B.4.a;

2) The parking is accessory to a residential use on the lot;

3) Total parking on the lot does not exceed one space for each residential dwelling unit plus the number of spaces required for ~~((non-residential))~~ nonresidential uses; and

4) The amount of gross floor area exempted by this subsection 23.47A.013.B.4.b does not exceed 25 percent of the area of the lot in zones with a height limit

less than 65 feet, or 50 percent of the area of the lot in zones with a height limit 65 feet or greater; ((and))

5. Rooftop greenhouse areas meeting the standards of subsections 23.47A.012.C.4, 23.47A.012.C.5, and 23.47A.012.C.6;

6. Bicycle commuter shower facilities required by subsection ((23.54.015.K.8)) 23.54.037.H;

7. The floor area of required bicycle parking for small efficiency dwelling units or congregate residence sleeping rooms, if the bicycle parking is located within the structure containing the small efficiency dwelling units or congregate residence sleeping rooms. Floor area of bicycle parking that is provided beyond the required bicycle parking is not exempt from FAR limits;

8. All gross floor area in child care centers; and

9. In low-income housing, all gross floor area for accessory human service uses.

* * *

Section 49. Section 23.47A.032 of the Seattle Municipal Code, last amended by Ordinance 125558, is amended as follows:

23.47A.032 Parking location and access

A. Access to parking

1. NC zones. The following rules apply in NC zones, except as provided under subsections 23.47A.032.A.2 and 23.47A.032.D:

a. Access to parking shall be from the alley if the lot abuts an alley improved to the standards of subsection 23.53.030.C, or if the Director determines that alley

access is feasible and desirable to mitigate parking access impacts. If alley access is infeasible, the Director may allow street access.

b. If access is not provided from an alley and the lot abuts only one street, access is permitted from the street, and limited to one two-way curb cut.

c. If access is not provided from an alley and the lot abuts two or more streets, access is permitted across one of the side street lot lines pursuant to subsection 23.47A.032.C, and curb cuts are permitted pursuant to ~~((subsection 23.54.030.F.2.a.1))~~ Section 23.54.031.

d. For each permitted curb cut, street-facing facades may contain one garage door, not to exceed the maximum width allowed for curb cuts.

2. In addition to the provisions governing NC zones in subsection 23.47A.032.A.1, the following rules apply in pedestrian-designated zones, except as may be permitted under subsection 23.47A.032.D:

a. If access is not provided from an alley and the lot abuts two or more streets, access to parking shall be from a street that is not a principal pedestrian street.

b. If access is not provided from an alley and the lot abuts only a principal pedestrian street or streets, access is permitted from the principal pedestrian street, and limited to one two-way curb cut.

3. In C1 and C2 zones, access to off-street parking may be from a street, alley, or both when the lot abuts an alley. However, structures in C zones with residential uses, structures in C zones with pedestrian designations, and structures in C zones across the street from residential zones shall meet the requirements for parking access for NC zones as provided in subsection 23.47A.032.A.1. If two or more structures are located on a single site, then a single

curb cut shall be provided according to the standards in ~~((Sections))~~ subsections
23.47A.032.A.1(~~(;)~~) and 23.47A.032.A.2(~~(;)~~) and ~~((23.54.030.F.2))~~ Section 23.54.031.

4. In the event of conflict between the standards for curb cuts in this subsection
23.47A.032.A and the provisions of ~~((subsection 23.54.030.F))~~ Section 23.54.031, the standards
in ~~((subsection 23.54.030.F))~~ Section 23.54.031 shall control.

* * *

Section 50. Section 23.48.020 of the Seattle Municipal Code, last amended by Ordinance
127198, is amended as follows:

23.48.020 Floor area ratio (FAR)

* * *

B. Floor area exempt from FAR calculations. The following floor area is exempt from
maximum FAR calculations:

1. All underground stories or portions of stories.
2. Portions of a story that extend no more than 4 feet above existing or finished
grade, whichever is lower, excluding access.
3. As an allowance for mechanical equipment, in any structure 65 feet in height or
more, 3.5 percent of the total chargeable gross floor area in a structure is exempt from FAR
calculations. Calculation of the allowance includes the remaining gross floor area after all
exempt space allowed in this subsection 23.48.020.B has been deducted. Mechanical equipment
located on the roof of a structure, whether enclosed or not, is not included as part of the
calculation of total gross floor area.
4. All gross floor area for solar collectors and wind-driven power generators.

5. Bicycle commuter shower facilities required by ((subsection 23.54.015.K.8))

Section 23.54.037.

6. The floor area of required bicycle parking for small efficiency dwelling units or congregate residence sleeping rooms, if the bicycle parking is located within the structure containing the small efficiency dwelling units or congregate residence sleeping rooms. Floor area of bicycle parking that is provided beyond the required bicycle parking is not exempt from FAR limits.

7. Child care centers.

8. In low-income housing, all gross floor area for accessory human service uses.

9. Other uses permitted by interim street activation provisions in Section 23.42.041.

* * *

Section 51. Section 23.49.019 of the Seattle Municipal Code, last amended by Ordinance 125815, is amended as follows:

23.49.019 Parking quantity, location, and access requirements, and screening and landscaping of parking areas

The regulations in this Section 23.49.019 do not apply to the Pike Market Mixed zones.

A. Parking quantity requirements

1. No parking, either long-term or short-term, is required for uses on lots in ((Downtown)) downtown zones, except as follows:

a. In the International District Mixed and International District Residential zones, parking requirements for restaurants, motion picture theaters, and other entertainment uses are as prescribed by Section 23.66.342.

b. In the International District Mixed and International District Residential zones, the Director of the Department of Neighborhoods, upon the recommendation of the International District Special Review District Board, may waive or reduce required parking according to the provisions of Section 23.66.342, Parking and access.

c. Bicycle parking is required as specified in ~~((subsection 23.54.015.K))~~
Section 23.54.037.

2. Reduction or elimination of parking required by permits. A property owner may apply to the Director for the reduction or elimination of parking required by any permit issued under this Title 23 or Title 24, except for a condition contained in or required pursuant to any Council conditional use, contract rezone, planned community development, or other Type IV decision. The Director may grant reduction or elimination of required parking as a Type I decision, either as part of a Master Use Permit for the establishment of any new use or structure, or as an independent application for reduction or elimination of parking required by permit. Parking for bicycles may not be reduced or eliminated under this subsection 23.49.019.A.2. Any Transportation Management Plan (TMP) required by permit for the development for which a parking reduction or elimination is proposed shall remain in effect, except that the Director may change the conditions of the TMP to reflect current conditions and to mitigate any parking and traffic impacts of the proposed changes. If any bonus floor area was granted for the parking, then reduction or elimination shall not be permitted except in compliance with applicable provisions regarding the elimination or reduction of bonus features. If any required parking that is allowed to be reduced or eliminated under this subsection 23.49.019.A.2 is the subject of a recorded parking covenant, the Director may authorize modification or release of the covenant.

* * *

C. Maximum parking limits

1. Except as provided in subsections 23.49.019.C.2 and 23.66.342.B, parking for ~~((non-residential))~~ nonresidential uses is limited to a maximum of one parking space per 1,000 square feet.

2. In the area east of Interstate 5, parking for general sales and service uses and for eating and drinking establishments is limited to a maximum of two parking spaces per 1,000 square feet.

D. Ridesharing and transit incentive program requirements. The following requirements apply to all new structures containing more than 10,000 square feet of new ~~((non-residential))~~ nonresidential use, and to structures where more than 10,000 square feet of ~~((non-residential))~~ nonresidential use is proposed to be added.

1. The building owner shall establish and maintain a transportation coordinator position for the proposed structure and designate a person to fill this position, or the building owner may contract with an area-wide transportation coordinator acceptable to the Department. The transportation coordinator shall devise and implement alternative means for employee commuting. The transportation coordinator shall be trained by the Seattle Department of Transportation or by an alternative organization with ridesharing experience, and shall work with the Seattle Department of Transportation and building tenants. The coordinator shall disseminate ridesharing information to building occupants to encourage use of public transit, carpools, vanpools, and flextime; administer the in-house ridesharing program; and aid in evaluation and monitoring of the ridesharing program by the Seattle Department of Transportation. The transportation coordinator in addition shall survey all employees of building tenants once a year to determine commute mode percentages.

2. The Seattle Department of Transportation, in conjunction with the transportation coordinator, shall monitor the effectiveness of the ridesharing/transit incentive program on an annual basis. The building owner shall allow a designated Seattle Department of Transportation or rideshare representative to inspect the parking facility and review operation of the ridesharing program.

3. The building owner shall provide and maintain a transportation information center, which has transit information displays including transit route maps and schedules and Seattle ridesharing program information. The transportation display shall be located in the lobby or other location highly visible to employees within the structure, and shall be established prior to issuance of a certificate of occupancy.

E. Bicycle parking is required according to ((~~subsection 23.54.015.K~~)) Section 23.54.037.

F. Reserved.

* * *

H. Standards for location of access to parking. This subsection 23.49.019.H does not apply to Pike Market Mixed, Pioneer Square Mixed, International District Mixed, and International District Residential zones except that subsection 23.49.019.H.1 applies to International District Mixed and International District Residential zones to the extent stated in subsection 23.66.342.D.

1. Curb cut location

a. If a lot abuts an alley, alley access is required, except as provided in subsection 23.49.019.H.1.c.

b. If a lot does not abut an alley and abuts more than one right-of-way, the location of access is determined by the Director as a Type I decision after consulting with the

Director of the Seattle Department of Transportation. Unless the Director otherwise determines under subsection 23.49.019.H.1.c, access is allowed only from a right-of-way in the category, determined by the classifications shown on Map 1B and Map 1F of the Downtown Overlay Maps or another map identified in a note to Map 1F, that is most preferred among the categories of rights-of-way abutting the lot, according to the ranking set forth below, from most to least preferred (a portion of a street that is included in more than one category is considered as belonging only to the least preferred of the categories in which it is included):

- 1) Access street;
- 2) Class II pedestrian street/Minor arterial;
- 3) Class II pedestrian street/Principal arterial;
- 4) Class I pedestrian street/Minor arterial;
- 5) Class I pedestrian street/Principal arterial;
- 6) Principal transit street;
- 7) Designated green street.

c. The Director may allow or require access from a right-of-way other than one indicated by subsection 23.49.019.H.1.a or 23.49.019.H.1.b if, after consulting with the Director of the Seattle Department of Transportation on whether and to what extent alternative locations of access would enhance pedestrian safety and comfort, facilitate transit operations, facilitate the movement of vehicles, minimize the on-street queuing of vehicles, enhance vehicular safety, or minimize hazards, and, for hotel use, improve passenger loading safety or increase visibility of vehicular access for guests arriving by car, the Director finds that an exception to the general policy is warranted. The Director may approve an exception for hotel use and impose conditions to minimize any adverse impacts to the pedestrian environment or

street operations, including but not limited to allowing one-way driveways that are less than the minimum width otherwise required. Curb cut controls on designated green streets shall be evaluated on a case-by-case basis, but generally access from green streets is not allowed if access from any other right-of-way is possible.

d. If a street or alley vacation is proposed, the Director shall consult with the Seattle Design Commission on how the location and extent of proposed curb cuts affects or impacts the public realm and how those impacts have been reduced.

2. Curb cut width and number. The width and number of ~~((curb cuts))~~ curb cuts shall comply with Section ~~((23.54.030, Parking space standards))~~ 23.54.031.

I. Screening and landscaping of surface parking areas

1. Screening. Surface parking areas for more than five vehicles shall be screened in accordance with the following requirements:

a. Screening is required along each street lot line.

b. Screening shall consist of:

1) A view-obscuring fence or wall at least 3 feet in height; or

2) A landscaped area with vegetation at least 3 feet in height.

Landscaped areas may include bioretention facilities or landscaped berms, provided that the top of the vegetation is at least 3 feet above the grade abutting the facility or berm.

c. A landscaped strip on the street side of the fence or wall shall be provided if a fence or wall is used for screening. The strip shall be an average of 3 feet from the property line, but at no point less than 1.5 feet wide. Each landscaped strip shall be planted with sufficient shrubs, grass, and/or evergreen groundcover so that the entire strip, excluding

driveways, will be covered in three years. Each landscaped strip may be a bioretention facility, at grade, or a raised berm.

d. Sight triangles shall be provided in accordance with Section ~~((23.54.030, Parking space standards))~~ 23.54.032.

2. Landscaping. Surface parking areas for 20 or more vehicles, except temporary surface parking areas, shall be landscaped according to the following requirements:

a. The amount of landscaped area required is shown on Table B for 23.49.019:

Table B for 23.49.019 Required landscaping for surface parking areas with 20 or more parking spaces	
Total number of parking spaces	Minimum required landscaped area
20 to 50	18 square feet per parking space
51 to 99	25 square feet per parking space
100 or more spaces	35 square feet per parking space

b. The minimum size of a required landscaped area is 100 square feet. Berms provided to meet the screening standards in subsection 23.49.019.I.1 may be counted as part of a landscaped area. No part of a landscaped area shall be less than 4 feet in any dimension except those dimensions reduced by turning radii or angles of parking spaces.

c. The landscaped area may include bioretention facilities.

d. No parking stall shall be more than 60 feet from a required landscaped area.

e. One tree per every five parking spaces is required.

f. Each tree shall be at least 3 feet from any curb of a landscaped area or edge of the parking area.

g. Permanent curbs or structural barriers shall protect landscaped areas.

h. Sufficient hardy evergreen groundcover shall be planted to cover each landscaped area completely within three years. Trees shall be selected from the Seattle Department of Transportation's list for parking area planting.

J. Transportation management programs

1. When a development is proposed that is expected to generate 50 or more employees single-occupant vehicle (SOV) trips in any one p.m. hour, the applicant shall prepare and implement a Transportation Management Program (TMP) consistent with requirements for TMPs in any applicable Director's Rule.

a. For purposes of measuring attainment of SOV goals contained in the TMP, the proportion of SOV trips shall be calculated for the p.m. hour in which an applicant expects the largest number of vehicle trips to be made by employees at the site (the p.m. peak hour of the generator). The proportion of SOV trips shall be calculated by dividing the total number of employees using an SOV to make a trip during the expected peak hour by the total number of employee person trips during the expected peak hour.

b. Compliance with this ~~((section))~~ Section 23.49.019 does not supplant the responsibility of any employer to comply with Seattle's Commute Trip Reduction (CTR) Ordinance.

2. An applicant who proposes multifamily development that is expected to generate 50 or more vehicle trips in any one p.m. hour or demand for 25 or more vehicles parking on the street overnight shall prepare and implement a TMP. The TMP shall be consistent

with requirements for TMPs in any applicable Director's Rule. For purposes of measuring attainment of the SOV goal, the proportion of SOV trips shall be calculated for the p.m. hour in which an applicant expects the largest number of vehicle trips to be made by residents of the site (the p.m. peak hour of the generator). The proportion of SOV trips shall be calculated by dividing the total number of residential trips made by SOV during the expected peak hour by the total number of residential person trips.

3. Each owner subject to the requirements of this ~~((section))~~ Section 23.49.019 shall prepare a TMP as described in rules promulgated by the Director, as part of the requirements for obtaining a master use permit.

4. The TMP shall be approved by the Director if, after consulting with the Seattle Department of Transportation, the Director determines that the TMP measures are likely to achieve the mode-share targets for trips made by travel modes other than driving alone for the Downtown Urban Center in 2035 that are contained in Seattle's Comprehensive Plan's Transportation Element.

K. Electric vehicle charging infrastructure. Off-street parking spaces shall be designed according to the standards of ~~((subsection 23.54.030.L))~~ Section 23.54.034.

Section 52. Section 23.50.028 of the Seattle Municipal Code, last amended by Ordinance 126864, is amended as follows:

23.50.028 Floor area

* * *

B. Exemptions from FAR calculations

1. The following areas are exempt from FAR calculations in all industrial zones:

a. All stories, or portions of stories, that are underground;

b. All gross floor area used for accessory parking, except as provided in subsection 23.50.028.D;

c. All gross floor area located on the rooftop of a structure and used for any of the following: mechanical equipment, stair and elevator penthouses, and communication equipment and antennas;

d. All gross floor area used for covered rooftop recreational space of a building existing as of December 31, 1998, in an IG1 or IG2 zone, if complying with subsection 23.50.012.D; and

e. Bicycle commuter shower facilities required by subsection ~~((23.54.015.K.8))~~ 23.54.037.H.

2. In addition to areas exempt from FAR calculations in subsection 23.50.028.B.1, within IG1 and IG2 zones, the gross floor area of rooftop recreational space accessory to office use meeting the standards of subsection 23.50.012.D is exempt from FAR calculations.

Section 53. Section 23.51A.002 of the Seattle Municipal Code, last amended by Ordinance 126685, is amended as follows:

23.51A.002 Public facilities in ~~((neighborhood residential))~~ Neighborhood Residential zones

A. Except as provided in subsections ~~((B, D and E of this Section 23.51A.002))~~ 23.51A.002.B, 23.51A.002.D and 23.51A.002.F, uses in public facilities that are most similar to uses permitted outright or permitted as an administrative conditional use under Chapter 23.44 are also permitted outright or as an administrative conditional use, subject to the same use regulations, development standards and administrative conditional use criteria that govern the similar use. The City Council may waive or modify applicable development standards or administrative conditional use criteria according to the provisions of Chapter 23.76, Subchapter

III, ~~((Council Land Use Decisions,))~~ with public projects considered as Type IV quasi-judicial decisions and City facilities considered as Type V legislative decisions.

B. Permitted ~~((Uses))~~ uses in ~~((Public Facilities Requiring))~~ public facilities requiring City Council ~~((Approval))~~ approval. The following uses in public facilities in ~~((neighborhood residential))~~ Neighborhood Residential zones may be permitted by the City Council, according to the provisions of Chapter 23.76~~((, Procedures for Master Use Permits and Council Land Use Decisions))~~:

1. Police precinct station;
2. Fire station;
3. Public boat moorage;
4. Utility services use; and
5. Other similar use.

The proponent of any such use shall demonstrate the existence of a public necessity for the public facility use in a ~~((neighborhood residential))~~ Neighborhood Residential zone. The public facility use shall be developed according to the development standards for institutions (Section ~~((23.44.022))~~ 23.44.180), unless the City Council makes a determination to waive or modify applicable development standards according to the provisions of Chapter 23.76, Subchapter III, ~~((Council Land Use Decisions,))~~ with public projects considered as Type IV quasi-judicial decisions and City facilities considered as Type V legislative decisions.

* * *

D. Sewage treatment plants. The expansion or reconfiguration (which term shall include reconstruction, redevelopment, relocation on the site, or intensification of treatment capacity) of existing sewage treatment plants in ~~((neighborhood residential))~~ Neighborhood Residential zones

may be permitted if there is no feasible alternative location in a zone where the use is permitted and the conditions imposed under subsections 23.51A.002.D.3 and 23.51A.002.D.4 are met.

1. Applicable procedures. Except as provided in subsection 23.51A.002.C.2.a, the decision on an application for the expansion or reconfiguration of a sewage treatment plant is a Type IV Council land use decision. If an application for an early determination of feasibility is required to be filed pursuant to subsection 23.51A.002.D.2, the early determination of feasibility will also be a Council land use decision subject to Sections 23.76.038 through 23.76.056.

2. Need for feasible alternative determination. The proponent shall demonstrate that there is no feasible alternative location in a zone where establishment of the use is permitted.

a. The Council's decision as to the feasibility of alternative location(s) shall be based upon a full consideration of the environmental, social, and economic impacts on the community, and the intent to preserve and to protect the physical character of neighborhood residential areas, and to protect neighborhood residential areas from intrusions of ~~((non-single-family))~~ nonresidential uses.

b. The determination of feasibility may be the subject of a separate application for a Council land use decision prior to submission of an application for a project-specific approval if the Director determines that the expansion or reconfiguration proposal is complex, involves the phasing of programmatic and project-specific decisions, or affects more than one site in a ~~((neighborhood residential))~~ Neighborhood Residential zone.

c. Application for an early determination of feasibility shall include:

1) The scope and intent of the proposed project in the ~~((neighborhood residential))~~ Neighborhood Residential zone and appropriate alternative(s) in zones where establishment of the use is permitted, identified by the applicant or the Director;

2) The necessary environmental documentation as determined by the Director, including an assessment of the impacts of the proposed project and of the permitted-zone alternative(s), according to the state and local SEPA guidelines;

3) Information on the overall sewage treatment system that outlines the interrelationship of facilities in ~~((neighborhood residential))~~ Neighborhood Residential zones and in zones where establishment of the use is permitted;

4) Schematic plans outlining dimensions, elevations, locations on site, and similar specifications for the proposed project and for the alternative(s).

d. If a proposal or any portion of a proposal is also subject to a feasible alternative location determination under Section 23.60A.066, the Plan Shoreline Permit application and the early determination application will be considered in one determination process.

3. Conditions for ~~((Approval))~~ approval of ~~((Proposal))~~ proposal

a. The project is located so that adverse impacts on residential areas are minimized.

b. The expansion of a facility does not result in a concentration of institutions or facilities that would create or appreciably aggravate impacts that are incompatible with single-family residences.

c. A facility management and transportation plan is required. The level and kind of detail to be disclosed in the plan shall be based on the probable impacts and/or scale of the proposed facility, and shall at a minimum include discussion of sludge transportation, noise control, and hours of operation. Increased traffic and parking expected to occur with use of the facility shall not create a serious safety problem or a blighting influence on the neighborhood.

d. Measures to minimize potential odor emission and airborne pollutants including methane shall meet standards of and be consistent with best available technology as determined in consultation with the Puget Sound Clean Air Agency (PSCAA), and shall be incorporated into the design and operation of the facility.

e. Methods of storing and transporting chlorine and other hazardous and potentially hazardous chemicals shall be determined in consultation with the Seattle Fire Department and incorporated into the design and operation of the facility.

f. Vehicular access suitable for trucks is available or provided from the plant to a designated arterial improved to City standards.

g. The bulk of facilities shall be compatible with the surrounding community. Public facilities that do not meet bulk requirements may be located in ~~((neighborhood residential))~~ Neighborhood Residential zones if there is a public necessity for their location there.

h. Landscaping and screening, separation from less intensive zones, noise, light and glare controls, and other measures to ensure the compatibility of the use with the surrounding area and to mitigate adverse impacts shall be incorporated into the design and operation of the facility.

i. No residential structures, including those modified for nonresidential use, are demolished for facility expansion unless a need has been demonstrated for the services of the institution or facility in the surrounding community.

4. Substantial ~~((Conformance))~~ conformance. If the application for a project-specific proposal is submitted after an early determination that location of the sewage treatment plant is not feasible in a zone where establishment of the use is permitted, the proposed project

must be in substantial conformance with the feasibility determination. Substantial conformance shall include, but not be limited to, a determination that:

a. There is no net substantial increase in the environmental impacts of the project-specific proposal as compared to the impacts of the proposal as approved in the feasibility determination.

b. Conditions included in the feasibility determination are met.

E. Prohibited ~~((Uses))~~ uses. ~~((The))~~ Unless determined to be an essential public facility under Chapter 23.80, the following public facilities are prohibited in ~~((neighborhood residential))~~ Neighborhood Residential zones:

1. Jails;
2. Metro operating bases;
3. Park and ride lots;
4. Establishment of new sewage treatment plants;
5. Solid waste transfer stations;
6. Animal control shelters;
7. Post Office distribution centers; and
8. Work-release centers.

F. Essential ~~((Public Facilities))~~ public facilities. ~~((Permitted essential))~~ Essential public facilities shall also be reviewed according to the provisions of Chapter 23.80~~((, Essential Public Facilities))~~.

Section 54. Section 23.51B.002 of the Seattle Municipal Code, last amended by Ordinance 126685, is amended as follows:

23.51B.002 Public schools in residential zones

* * *

C. Lot (~~Coverage~~) coverage in Neighborhood Residential (~~Zones~~) zones

1. For new public school construction on new public school sites, the maximum lot coverage permitted for all structures is (~~45 percent of the lot area for one-story structures or 35 percent of the lot area if any structure or portion of a structure has more than one-story~~) as provided in Section 23.44.080.

2. For new public school construction and additions to existing public school structures on existing public school sites, the maximum lot coverage permitted is the greater of the following:

a. The lot coverage (~~permitted in subsection 23.51B.002.C.1~~) provided in Section 23.44.080; or

b. The lot coverage of the former school structures on the site, provided that the height of the new structure or portion of structure is no greater than that of the former structures when measured according to (~~Section 23.86.006.F~~) subsection 23.86.006.E, and at least 50 percent of the footprint of the new principal structure is constructed on a portion of the lot formerly occupied by the footprint of the former principal structure.

3. Departures from lot coverage limits may be granted or required pursuant to the procedures and criteria set forth in Chapter 23.79. (~~Up to 55 percent lot coverage may be allowed for single-story structures, and up to 45 percent lot coverage for structures of more than one-story.~~) Lot coverage restrictions may be waived by the Director as a Type I decision when waiver would contribute to reduced demolition of residential structures.

(~~4. The exceptions to lot coverage set forth in subsection 23.44.010.D apply.~~)

D. Height

1. Neighborhood Residential and (~~(Lowrise Zones)~~) lowrise zones

a. For new public school construction on new public school sites, the maximum permitted height is (~~(30)~~) 32 feet plus 5 feet for a pitched roof. For gymnasiums and auditoriums that are accessory to the public school, the maximum permitted height is 35 feet plus 10 feet for a pitched roof if all portions of the structure above 30 feet are set back at least 20 feet from all lot lines. All parts of a pitched roof above the height limit must be pitched at a rate of not less than 4:12. No portion of a shed roof on a gymnasium or auditorium is permitted to extend above the 35-foot height limit under this (~~(provision)~~) subsection 23.51B.002.D.1.a.

b. For new public school construction on existing public school sites, the maximum permitted height is 35 feet plus 15 feet for a pitched roof. All parts of the roof above the height limit must be pitched at a rate of not less than 4:12. No portion of a shed roof is permitted to extend beyond the 35-foot height limit under this (~~(provision)~~) subsection 23.51B.002.D.1.b.

c. For additions to existing public schools on existing public school sites, the maximum height permitted is the height of the existing school or 35 feet plus 15 feet for a pitched roof, whichever is greater. When the height limit is 35 feet, the ridge of the pitched roof on a principal structure may extend up to 15 feet above the height limit, and all parts of the roof above the height limit must be pitched at a rate of not less than 4:12. No portion of a shed roof is permitted to extend beyond the 35-foot limit under this (~~(provision)~~) subsection 23.51B.002.D.1.c.

2. Midrise and (~~(Highrise Zones)~~) highrise zones. The maximum permitted height for any public school located in a MR or HR zone is the base height permitted in that zone for multifamily structures.

1 3. In ~~((Lowrise))~~ lowrise zones, departures from height limits may be granted or
2 required pursuant to the procedures and criteria set forth in Chapter 23.79. For construction of
3 new structures on new and existing public school sites to the extent not otherwise permitted
4 outright, the maximum height that may be granted as a development standard departure is 35 feet
5 plus 15 feet for a roof pitched at a rate of not less than 4:12 for elementary schools and 60 feet
6 plus 15 feet for a roof pitched at a rate of not less than 4:12 for secondary schools. No departures
7 may be granted for a portion of a shed roof to extend beyond 35 feet in height under this
8 ~~((provision))~~ subsection 23.51B.002.D.3.

9 4. Height maximums in all residential zones may be waived by the Director as a
10 Type I decision when the waiver would contribute to reduced demolition of residential
11 structures.

12 5. The provisions of subsection ~~((B of Section 23.44.012))~~ 23.44.070.B and the
13 exemptions of subsection ~~((C of Section 23.44.012))~~ 23.44.070.C apply.

14 6. Light ~~((Standards))~~ standards

15 a. Light standards for illumination of athletic fields on new and existing
16 public school sites may be allowed to exceed the maximum permitted height, up to a maximum
17 height of 100 feet, if the Director determines that the additional height is necessary to ensure
18 adequate illumination and that impacts from light and glare are minimized to the greatest extent
19 practicable. The applicant must submit an engineer's report demonstrating that impacts from light
20 and glare are minimized to the greatest extent practicable. When proposed light standards are
21 reviewed as part of a project being reviewed pursuant to Chapter 25.05, ~~((Environmental Policies~~
22 ~~and Procedures,))~~ and requiring a SEPA determination, the applicant must demonstrate that the
23 additional height contributes to a reduction in impacts from light and glare.

b. When proposed light standards are not included in a proposal being reviewed pursuant to Chapter 25.05, the Director may permit the additional height as a special exception subject to Chapter 23.76(~~(Procedures for Master Use Permits and Council Land Use Decisions))~~).

1) When seeking a special exception for taller light standards, the applicant must submit an engineer's report demonstrating that the additional height contributes to a reduction in impacts from light and glare. When the proposal will result in extending the lighted area's duration of use, the applicant must address and mitigate potential impacts, including but not limited to, increased duration of noise, traffic, and parking demand. The applicant also shall conduct a public workshop for residents within 1/8 (~~(of a)~~) mile of the affected school in order to solicit comments and suggestions on design as well as potential impacts.

2) The Director may condition a special exception to address negative impacts from light and glare on surrounding areas, and conditions may also be imposed to address other impacts associated with increased field use due to the addition of lights, including, but not limited to, increased noise, traffic, and parking demand.

E. Setbacks

1. General requirements

a. No setbacks are required for new public school construction or for additions to existing public school structures for that portion of the site across a street or an alley or abutting a lot in a nonresidential zone. If any portion of the site is across a street or an alley from or abuts a lot in a residential zone, setbacks are required for areas facing or abutting residential zones, as provided in subsections (~~(E.2 through E.5 of this Section 23.51B.002))~~)

23.51B.002.E.2 through 23.51B.002.E.5. Setbacks for sites across a street or alley from or abutting lots in Residential-Commercial (RC) zones are based upon the residential zone classification of the RC lot.

b. The minimum setback requirement may be averaged along the structure facade with absolute minimums for areas abutting lots in residential zones as provided in subsections ~~((E.2.b, E.3.b and E.4.b of this Section 23.51B.002))~~ 23.51B.002.E.2.b, 23.51B.002.E.3.b, and 23.51B.002.E.4.b.

c. Trash disposals, operable windows in a gymnasium, main entrances, play equipment, kitchen ventilators, or other similar items shall be located at least 30 feet from any ~~((neighborhood residential))~~ Neighborhood Residential zoned lot and 20 feet from any multi-family zoned lot.

d. The exceptions of subsections ~~((23.44.014.C.5, 23.44.014.C.6, 23.44.014.C.7, 23.44.014.C.8, 23.44.014.C.9, 23.44.014.C.10, 23.44.014.C.11, and 23.44.014.C.12))~~ 23.44.090.D, 23.44.090.E, 23.44.090.G, 23.44.090.H, and 23.44.090.I apply.

2. New public school construction on new public school sites((-))

a. New public school construction on new public school sites across a street or alley from lots in residential zones shall provide minimum setbacks according to the height of the school and the designation of the facing residential zone, as shown in Table A for 23.51B.002((-)) .

~~((Table A for 23.51B.002: Minimum Setbacks for a New Public School Site Located Across a Street or Alley from a Residential Zone))~~

Greater than 35 up to 50	20(10)	20(10)	10(5)	0(0)
Greater than 50	25(10)	25(10)	15(5)	0(0)
<u>Footnote to Table F for 23.51B.002</u> <u>Average setbacks are shown outside of the parentheses and minimum setbacks are shown in parentheses.</u>				

5. Departures from setback requirements may be granted or required pursuant to the procedures and criteria set forth in Chapter 23.79 as follows:

a. The minimum average setback may be reduced to 10 feet and the minimum setback to 5 feet for structures or portions of structures across a street or alley from lots in residential zones.

b. The minimum average setback may be reduced to 15 feet and the minimum setback to 5 feet for structures or portions of structures abutting lots in residential zones.

c. The limits in subsections (~~(E.5.a and E.5.b of this Section 23.51B.002)~~) 23.51B.002.E.5.a and 23.51B.002.E.5.b may be waived by the Director if a waiver would contribute to reduced demolition of residential structures.

F. Structure (~~(Width)~~) width

1. When a new public school structure is built on a new public school site or on an existing public school site, the maximum width of a structure is 66 feet unless either the modulation option in subsection 23.51B.002.F.1.a (~~(below)~~) or the landscape option in subsection 23.51B.002.F.1.b (~~(below)~~) is met.

a. Modulation (~~(Option)~~) option. Facades shall be modulated according to the following provisions:

1) The minimum depth of modulation is 4 feet.

2) The minimum width of modulation is 20 percent of the total structure width or 10 feet, whichever is greater.

b. Landscape (~~(Option)~~) option. The (~~(yards provided by the required)~~) setbacks shall be landscaped as follows:

1) One tree and three shrubs are required for each 300 square feet of (~~(required yard)~~) setback area.

2) Trees and shrubs that already exist in the required planting area or have their trunk or center within 10 feet of the area may be substituted for required plantings

on a one-tree-to-one-tree or one-shrub-((-))to-one-shrub basis. In order to qualify, a tree must be 6 inches or greater in diameter, measured 4.5 feet above the ground.

3) The planting of street trees may be substituted for required trees on a one-to-one basis. All street trees shall be planted according to City of Seattle tree planting standards.

4) Each setback required to be landscaped shall be planted with shrubs, grass, and/or evergreen ground cover.

5) Landscape features such as decorative paving are permitted to a maximum of 25 percent of each required landscaped area.

6) A plan shall be filed showing the layout of the required landscaping.

7) The School District shall maintain all landscape material and replace any dead or dying plants.

2. There is no maximum width limit for additions to existing public school structures on existing public school sites. The Director may require landscaping to reduce the appearance of bulk.

3. Departures from the modulation and landscaping standards may be granted or required pursuant to the procedures and criteria set forth in Chapter 23.79 to permit other techniques to reduce the appearance of bulk. Techniques to reduce the appearance of bulk may be waived by the Director as a Type I decision when the waiver would contribute to reduced demolition of residential structures.

G. Parking (~~((Quantity))~~) quantity. Parking shall be required as provided in Chapter 23.54.

H. Parking (~~((Location))~~) location. Parking may be located:

1. Within the principal structure; or

2. On any portion of the lot except the front setback, provided that the parking is separated from streets and from abutting lots in residential zones by an area with a minimum depth of 5 feet that is landscaped with trees and ground cover determined by the Director, as a Type I decision, as adequate to soften the view of the parking from adjacent properties. In the case of a through lot, parking may also be located in one front setback when landscaped as described in this subsection 23.51B.002.H.2;

3. Departures may be granted or required pursuant to the procedures set forth in Chapter 23.79 to permit parking location anywhere on the lot and to reduce required landscaping. Landscaping may be waived in whole or in part if the topography of the site or other circumstances result in the purposes of landscaping being served, as, for example, when a steep slope shields parking from the view of abutting properties. This test may be waived by the Director, as a Type I decision, when waiver would contribute to reduced demolition of residential structures.

I. Bus and ~~((Truck Loading))~~ truck loading and ~~((Unloading))~~ unloading

1. Unless subsection ~~((I.4 of this section 23.51B.002))~~ 23.51B.002.I.4 applies, an off-street bus loading and unloading area of a size reasonable to meet the needs of the school shall be provided and may be located in any required ~~((yard))~~ setback. The bus loading and unloading area may be permitted in landscaped areas provided under subsection 23.51B.002.F.1.b if the Director determines that landscaping around the loading and unloading area softens the impacts of its appearance on abutting properties.

2. One off-street truck loading berth that is 13 feet wide and 40 feet long is required for new public school construction.

3. Departures from the requirements and standards for bus and truck loading and unloading areas and berths may be granted or required pursuant to the procedures and criteria set forth in Chapter 23.79 only when departure would contribute to reduced demolition of residential structures.

4. When a public school is remodeled or rebuilt at the same site, an existing on-street bus loading area is allowed if the following conditions are met:

- a. The school site is not proposed to be expanded;
- b. The student capacity of the school is not being expanded by more than 25 percent; and
- c. The location of the current on-street bus loading remains the same.

J. Noise, ~~((Odor, Light))~~ odor, light, and ~~((Glare))~~ glare. The development standards for small institutions set forth in Section 23.45.570 apply. Departures from these standards may be granted or required pursuant to the procedures and criteria set forth in Chapter 23.79 only when departure would contribute to reduced demolition of residential structures.

Section 55. Section 23.53.006 of the Seattle Municipal Code, last amended by Ordinance 127099, is amended as follows:

23.53.006 Pedestrian access and circulation

* * *

F. Exceptions. The following exceptions to pedestrian access and circulation requirements and standards apply:

1. Projects exempt from requirements. Pedestrian access and circulation improvements are not required for the following types of projects:

- a. Change of use;

b. Alterations to existing structures;

c. Additions to existing structures that are exempt from environmental review;

d. Construction of a detached structure that does not contain a dwelling unit and is accessory to ~~((a single-family))~~ an existing dwelling unit in any zone, if the property owner enters into a no-protest agreement, as authorized by chapter 35.43 RCW, to future pedestrian access and circulation improvements and that agreement is recorded with the King County ~~((Recorder))~~ Recorder's Office;

e. Construction of ~~((a single-family))~~ one dwelling unit on a lot in any zone, if the property owner enters into a no-protest agreement, as authorized by chapter 35.43 RCW, to future pedestrian access and circulation improvements and that agreement is recorded with the King County ~~((Recorder))~~ Recorder's Office, and if at least one of the following conditions is met:

1) The lot is on a block front where there are no existing pedestrian access and circulation improvements within 100 feet of the lot; or

2) Construction of pedestrian access and circulation improvements is not necessary because, for example, the existing right-of-way has suitable width and surface treatment for pedestrian use; or the existing right-of-way has a limited amount of existing and potential vehicular traffic; or the Director anticipates limited, if any, additional development near the lot because the development near the lot is at or near zoned capacity under current zoning designations;

f. Construction of accessory dwelling units;

1 ((f.)) g. Expansions of surface parking, outdoor storage, outdoor sales
2 and outdoor display of rental equipment of less than 20 percent of the parking, storage, sales or
3 display area, or number of parking spaces;

4 ((g.)) h. In the MML zone, the addition of:
5 1) Fewer than ten artist's studio dwellings;
6 2) Less than 750 square feet of gross floor area of major and
7 minor vehicle repair uses and multipurpose retail sales; ((and)) or
8 3) Less than 4,000 square feet of gross floor area of ((non-
9 residential)) nonresidential uses not listed in subsection ((23.53.006.F.1.g.2)) 23.53.006.F.1.h.2;
10 and

11 ((h.)) i. Construction of a new ((non-residential)) nonresidential structure
12 of up to 4,000 square feet of gross floor area if the structure is at least 50 feet from any lot line
13 abutting an existing street that does not have pedestrian access and circulation improvements.

14 2. Waiver or modification of pedestrian access and circulation requirements.
15 The Director, in consultation with the Director of Transportation, may waive or modify
16 pedestrian access and circulation requirements when one or more of the following conditions
17 are met. The waiver or modification shall provide the minimum relief necessary to
18 accommodate site conditions while maximizing pedestrian access and circulation.

19 a. Location in an environmentally critical area or buffer makes
20 installation of a sidewalk, curb, and/or curb ramp structurally impracticable or technically
21 infeasible;

b. The existence of a bridge, viaduct, or structure such as a substantial retaining wall in proximity to the project site makes installation of a sidewalk, curb, and/or curb ramp structurally impracticable or technically infeasible;

c. Sidewalk, curb, and/or curb ramp construction would result in undesirable disruption of existing drainage patterns, or disturbance to or removal of natural features such as significant trees or other valuable and character-defining mature vegetation; or

d. Sidewalk, curb, and/or curb ramp construction would preclude vehicular access to the lot, for example on project sites where topography would render driveway access in excess of the maximum 15 percent slope.

3. Notwithstanding any provision of Section 23.76.026, the applicant for a Master Use Permit or a building permit to which ~~((the Land Use Code))~~ Title 23 in effect prior to October 30, 2009, applies may, by written election, use the exemptions in subsections 23.53.006.F.1 and 23.53.006.F.2.

Section 56. Section 23.53.025 of the Seattle Municipal Code, last amended by Ordinance 126682, is amended as follows:

23.53.025 Access easement standards

If access by easement has been approved by the Director, the easement shall meet the following standards. Surfacing of easements, pedestrian walkways required within easements, and turnaround dimensions shall meet the requirements of the Right-of-Way Improvements Manual.

A. Vehicle access easements serving one or two ~~((single-family))~~ dwelling units ~~((or one multifamily residential use with a maximum of two units))~~ shall meet the following standards:

1. Easement width shall be a minimum of 10 feet.

2. No maximum easement length shall be set. If easement length is more than 150 feet, a vehicle turnaround shall be provided.

3. ~~((Curbcut))~~ Curb cut width from the easement to the street shall be the minimum necessary for safety and access.

B. Vehicle access easements serving at least three but fewer than ~~((five single family))~~ ten dwelling units shall meet the following standards:

1. Easement width shall be a minimum of 10 feet.

2. The easement shall provide a hard-surfaced roadway at least 10 feet wide.

3. No maximum easement length shall be set. If the easement is over 600 feet long, a fire hydrant may be required by the Director.

4. A turnaround shall be provided unless the easement extends from street to street.

5. ~~((Curbcut))~~ Curb cut width from the easement to the street shall be the minimum necessary for safety and access.

C. ~~((Vehicle access easements serving at least five but fewer than ten single family dwelling units, or at least three but fewer than ten multifamily dwelling units~~

~~1. Easement width, surfaced width, length, turn around, and curbcut width shall be as required in subsection 23.53.025.B.~~

~~2. No single family structure shall be closer than 5 feet to the easement, except that structural features allowed to extend into required yards under subsection 23.44.014.C.6 are also allowed to extend into the 5-foot setback from an easement.~~

~~D.)) Vehicle ((Access Easements Serving Ten))~~ access easements serving ten or more
~~((Residential Units.))~~ dwelling units shall meet the following standards:

1. Easement width shall be a minimum of 32 feet~~((:))~~ .
2. The easement shall provide a surfaced roadway at least 24 feet wide, except
in the MPC-YT zone, where the minimum surfaced roadway width is 20 feet~~((:))~~ .
3. No maximum length shall be set. If the easement is over 600 feet long, a fire
hydrant may be required by the Director~~((:))~~ .
4. A turnaround shall be provided unless the easement extends from street to
street~~((:))~~ .
5. ~~((Curb cut))~~ Curb cut width from the easement to the street shall be the
minimum necessary for safety access~~((:))~~ .
6. No ~~((single-family structure;))~~ detached dwelling unit shall be located closer
than ~~((10))~~ 5 feet to an easement, except that architectural features such as cornices, eaves,
gutters, roofs, fireplaces, chimneys, and other similar features shall not be located closer than 3
feet to a required easement.

7. One pedestrian walkway shall be provided, extending the length of the
easement.

~~((E. Vehicle Access Easements Serving Nonresidential or Live-work Uses.~~

~~1.))~~ D. For nonresidential or live-work uses providing fewer than ten ~~((10))~~ parking
spaces, the easement shall meet the requirements of subsection ~~((E))~~ 23.53.025.B.

~~((2))~~ E. For nonresidential or live-work uses providing ten ~~((10))~~ or more parking
spaces, the easement shall meet the requirements of subsection ~~((D))~~ 23.53.025.C.

1 F. Pedestrian (~~((Access Easements))~~) access easements. Where a lot proposed for a
2 residential use abuts an alley but does not abut a street and the provisions of the zone require
3 access by vehicles from the alley, or where the alley access is an exercised option, an easement
4 providing pedestrian access to a street from the lot shall be provided meeting the following
5 standards:

- 6 1. Easement width shall be a minimum of (~~((five-))~~) 5 (~~(('))~~) feet;
- 7 2. Easements serving one (~~((1-))~~) or two (~~((2-))~~) dwelling units shall provide a
8 paved pedestrian walkway at least (~~((three-))~~) 3 (~~(('))~~) feet wide;
- 9 3. Easements serving three (~~((3-))~~) or more dwelling units shall provide a paved
10 pedestrian walkway at least (~~((five-))~~) 5 (~~(('))~~) feet wide;
- 11 4. Easements over (~~((one hundred-))~~) 100 (~~(('))~~) feet in length shall provide
12 lighting at intervals not to exceed (~~((fifty-))~~) 50 (~~(('))~~) feet. Lighting placement shall not exceed
13 (~~((fifteen-))~~) 15 (~~(('))~~) feet in height;
- 14 5. Pedestrian access easements shall not exceed (~~((two hundred-))~~) 200 (~~(('))~~) feet
15 in length.

16 G. Vertical (~~((Clearance Above Easements))~~) clearance above easements. When an
17 easement serves fewer than ten (~~((10-))~~) residential units and crosses a residentially zoned lot,
18 portions of structures may be built over the easement provided that a minimum vertical
19 clearance of (~~((sixteen and one half (16 1/2-))~~) 16.5 feet is maintained above the surface of the
20 easement roadway and a minimum turning path radius in accordance with (~~((Section 23.54.030~~
21 ~~((C))~~) subsection 23.54.030.D is maintained. (~~((See))~~) Exhibit (~~((23.53.025 A-))~~) A for 23.53.025.)

22 H. Exceptions (~~((From Access Easement Standards))~~) from access easement standards.
23 The Director, in consultation with the Fire Chief, may modify the requirements for easement

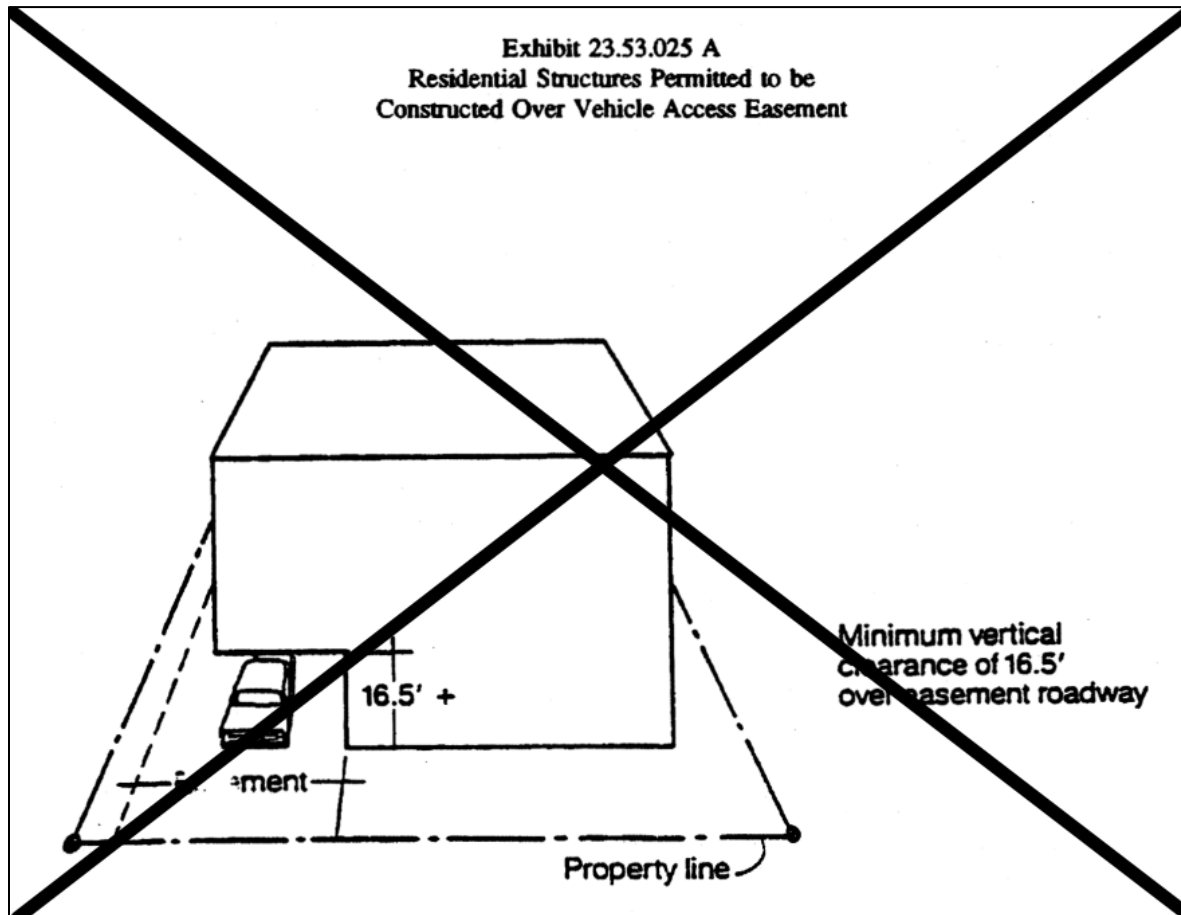

width and surfacing for properties located in environmentally critical areas or their buffers
when it is determined that:

1. Such modification(s) would reduce adverse effects to identified
environmentally critical areas or buffers; and

2. Adequate access and provisions for fire protection can be provided for
structures served by the easement.

Exhibit A for 23.53.025

Residential structures permitted to be constructed over vehicle access easement

Section 57. Section 23.54.015 of the Seattle Municipal Code, last amended by Ordinance 127099, is amended as follows:

23.54.015 Required vehicular parking and maximum vehicular parking limits

A. Required parking. The minimum number of off-street motor vehicle parking spaces required for specific uses is set forth in Table A for 23.54.015 for ~~((non-residential))~~ nonresidential uses other than institutional uses, Table B for 23.54.015 for residential uses, and Table C for 23.54.015 for institutional uses, except as otherwise provided in this Chapter 23.54. Required parking is based upon gross floor area of a use within a structure minus gross floor area in parking uses, and the square footage of a use when located outside of an enclosed structure, or as otherwise specified. Maximum parking limits for specific uses and specific areas are set forth in subsection 23.54.015.C. Exceptions to motor vehicle parking requirements set forth in this Section 23.54.015 are provided in ~~((:))~~ subsections 23.54.015.B and 23.54.015.C ~~((:))~~ and in Section 23.54.020 ~~((unless otherwise specified))~~. This Chapter

23.54 does not apply to parking for construction activity, which is regulated by Section 23.42.044.

B. Required parking for specific zones and areas

1. Parking in downtown zones is regulated by Chapters 23.49 and 23.66, and not by this Section 23.54.015.

2. Parking in the MPC-YT zone is regulated by Section 23.75.180 and not by this Section 23.54.015.

3. Parking for major institution uses in the Major Institution Overlay District is regulated by Sections 23.54.015 and 23.54.016.

4. The Director shall adopt by rule a map of frequent transit and major transit service areas based on proximity to a transit station or stop served by a frequent transit route or a major transit service. The determination whether a proposed development site is in a scheduled frequent transit or major transit service area shall be based on the (~~frequent transit service area~~) map adopted by rule that exists on the date a project vests according to the standards of Section 23.76.026, provided that a rule that takes effect on a date after the project vests may be applied to determine whether the site is in a scheduled frequent transit or major transit service area, at the election of the project applicant in accordance with subsection 23.76.026.E.

C. Maximum parking limits for specific zones or areas

1. In the Stadium Transition Area Overlay District certain uses are subject to a maximum parking ratio pursuant to subsection 23.74.010.A.1.b. When there are multiple uses on a lot, the total parking requirement for all uses subject to a maximum ratio cannot exceed the aggregate maximum for those uses under Section 23.74.010.

2. In all commercial zones, except C2 zones outside of urban villages, no more than 145 spaces per lot may be provided as surface parking or as flexible-use parking.

3. In all Neighborhood Residential and multifamily zones, commercial uses are limited to no more than ten parking spaces per business establishment.

4. In the Northgate Overlay District, the Director may permit parking to exceed applicable maximum parking limits as a Type I decision pursuant to Chapter 23.76 if:

a. The parking is provided in a structure according to a joint-use parking agreement with King County Metro Transit; and

b. It can be demonstrated to the satisfaction of the Director through a parking demand study that the spaces are only needed to meet evening and weekend demand or as overflow on less than ten percent of the weekdays in a year, and the spaces shall otherwise be available for daytime use by the general public.

5. Notwithstanding the minimum parking requirements set out in Table A for 23.54.015, in the Industry and Innovation zones, the maximum parking ratio for all uses is one space per 1,000 square feet of gross floor area.

D. Parking waivers for ((~~non-residential~~)) nonresidential uses

1. In all commercial zones, no parking is required for the first 1,500 square feet of each business establishment or the first 15 fixed seats for motion picture and performing arts theaters.

2. In all other zones, no parking is required for the first 2,500 square feet of gross floor area of ((~~non-residential~~)) nonresidential uses in a structure, except for the following:

a. Structures or portions of structures occupied by restaurants with drive-in lanes((;)) ;

b. Motion picture theaters((;)) ;

c. Offices((;)) ; or

d. Institution uses, including Major Institution uses.

When two or more uses with different parking ratios occupy a structure, the 2,500 square foot waiver is prorated based on the area occupied by the ((~~non-residential~~)) nonresidential uses for which the parking waiver is permitted.

E. Fleet vehicles. Notwithstanding any other provisions of this ((~~section~~)) Section 23.54.015, off-street parking shall be provided for all fleet vehicles and those parking spaces will not be counted toward the parking requirements of Table A for 23.54.015, Table B for 23.54.015, or Table C for 23.54.015.

F. Use and reuse of schools. For non-school uses permitted to locate in a former or existing public school, parking requirements will be determined by school use pursuant to criteria adopted according to Chapter 23.78((~~, Establishment of Criteria for Joint Use or Reuse of Schools~~)).

G. New ((~~non-residential~~)) nonresidential uses in existing structures in commercial and industrial zones. Up to 20 required parking spaces are waived for a new ((~~non-residential~~)) nonresidential use established in an existing structure or the expansion of an existing ((~~non-residential~~)) nonresidential use entirely within an existing structure. Existing required parking shall remain. For purposes of this Section 23.54.015, "existing structure" means a structure that was established under permit, or for which a building permit has been granted and has not expired, at least two years prior to the application to establish the new use or expand the use.

1 Parking spaces required for loading and unloading of passengers are not eligible for the waiver
2 under this subsection 23.54.015.G.

3 H. Uses not shown on parking tables. In the case of a use not shown on Table A for
4 23.54.015, Table B for 23.54.015, or Table C for 23.54.015, the requirements for off-street
5 parking will be determined by the Director based on the requirements for the most comparable
6 use. Where, in the judgment of the Director, none of the uses on Table A for 23.54.015, Table
7 B for 23.54.015, and Table C for 23.54.015 are comparable to a proposed use, the Director
8 may base ~~((his or her))~~ a determination as to the amount of parking required for the proposed
9 use on detailed information provided by the applicant. The information required may include,
10 but not be limited to, a description of the physical structure(s), identification of potential users,
11 and analysis of likely parking demand.

12 I. Uses in multiple parking table categories. If an entire use or structure, or the same
13 portion of a use or structure, falls under more than one category in Table A for 23.54.015,
14 Table B for 23.54.015, or Table C for 23.54.015 then, unless otherwise specified, the category
15 requiring the smallest number of parking spaces applies except as expressly set forth on such
16 tables.

17 J. Existing parking deficits. Existing legal parking deficits of legally established uses
18 are allowed to continue even if a change of use occurs. This subsection 23.54.015.J will not be
19 construed to permit a parking deficit caused by the failure to satisfy conditions of a reduced
20 parking requirement for any use or structure.

Table A for 23.54.015

Required parking for ((~~non-residential~~)) nonresidential uses other than institutions

Use			Minimum parking required
I. General ((non-residential)) <u>nonresidential</u> uses (other than institutions)			
* * *			
B.	COMMERCIAL USES		
	B.1.	Animal shelters and kennels	1 space for each 2,000 square feet
	B.2.	Eating and drinking establishments	1 space for each 250 square feet
	B.3.	Entertainment uses, general, except as noted below ²	For public assembly areas: 1 space for each 8 fixed seats, or 1 space for each 100 square feet of public assembly area not containing fixed seats
		B.3.a.	Adult cabarets
		B.3.b.	Sports and recreation uses ³
	B.4.	Food processing and craft work	1 space for each 2,000 square feet
	B.5.	Laboratories, research and development	1 space for each 1,500 square feet
	B.6.	Lodging uses	1 space for each 4 rooms; For bed and breakfast facilities in ((neighborhood residential)) <u>Neighborhood Residential</u> and multifamily zones, 1 space for each dwelling unit, plus 1 space for each 2 guest rooms
	B.7.	Medical services	1 space for each 500 square feet
	B.8.	Offices	1 space for each 1,000 square feet
	B.9.	Sales and services, automotive	1 space for each 2,000 square feet

Table A for 23.54.015

Required parking for ((~~non-residential~~)) nonresidential uses other than institutions

Use			Minimum parking required
	B.10.	Sales and services, general, except as noted below	1 space for each 500 square feet
		B.10.a. Pet daycare centers ⁴	1 space for each 10 animals or 1 space for each staff member, whichever is greater, plus 1 loading and unloading space for each 20 animals
	B.11.	Sales and services, heavy	1 space for each 2,000 square feet
	B.12.	Sales and services, marine	1 space for each 2,000 square feet

* * *

II. ((~~Non-residential~~)) Nonresidential use requirements for specific areas

I.	((Non-residential)) <u>Nonresidential</u> uses in urban centers or the Station Area Overlay District ⁵	No minimum requirement
J.	((Non-residential)) <u>Nonresidential</u> uses in urban villages that are not within an urban center or ((the)) a Station Area Overlay District, if the ((non-residential)) <u>nonresidential</u> use is located within a frequent transit service area ⁵	No minimum requirement
K.	((Non-residential)) <u>Nonresidential</u> uses permitted in MR and HR zones pursuant to Section 23.45.504	No minimum requirement
L.	((Non-residential)) <u>Nonresidential</u> uses permitted in II zones	No minimum requirement

Footnotes for Table A for 23.54.015

¹ No parking is required for urban farms or community gardens in residential zones.

² Required parking for spectator sports facilities or exhibition halls must be available when the facility or exhibition hall is in use. A facility shall be considered to be "in use" during

Table A for 23.54.015

Required parking for ((~~non-residential~~)) nonresidential uses other than institutions

Use	Minimum parking required
<p>the period beginning three hours before an event is scheduled to begin and ending one hour after a scheduled event is expected to end. For sports events of variable or uncertain duration, the expected event length shall be the average length of the events of the same type for which the most recent data are available, provided it is within the past five years. During an inaugural season, or for nonrecurring events, the best available good faith estimate of event duration will be used. A facility will not be deemed to be "in use" by virtue of the fact that administrative or maintenance personnel are present. The Director may reduce the required parking for any event when projected attendance for a spectator sports facility is certified to be 50 percent or less of the facility's seating capacity, to an amount not less than that required for the certified projected attendance, at the rate of one space for each ten fixed seats of certified projected attendance. An application for reduction and the certification shall be submitted to the Director at least 15 days prior to the event. When the event is one of a series of similar events, such certification may be submitted for the entire series 15 days prior to the first event in the series. If the Director finds that a certification of projected attendance of 50 percent or less of the seating capacity is based on satisfactory evidence such as past attendance at similar events or advance ticket sales, the Director shall, within 15 days of such submittal, notify the facility operator that a reduced parking requirement has been approved, with any conditions deemed appropriate by the Director to ensure adequacy of parking if expected attendance should change. The parking requirement reduction may be applied for only if the goals of the facility's Transportation Management Plan are otherwise being met. The Director may revoke or modify a parking requirement reduction approval during a series, if projected attendance is exceeded.</p> <p>³ For indoor sports and recreation uses that exceed 25,000 square feet in size in a Manufacturing Industrial Center, the minimum requirement is ((+)) <u>one</u> space for each 2,000 square feet.</p> <p>⁴ The amount of required parking is calculated based on the maximum number of staff or animals the center is designed to accommodate.</p> <p>⁵ The general minimum requirements of Part I of Table A for 23.54.015 are superseded to the extent that a use, structure, or development qualifies for either a greater or a lesser minimum parking requirement (which may include no requirement) under any other provision. To the extent that a ((non-residential)) <u>nonresidential</u> use fits within more than one line in Table A for 23.54.015, the least of the applicable minimum parking requirements applies. The different parking requirements listed for certain categories of ((non-residential)) <u>nonresidential</u> uses shall not be construed to create separate uses for purposes of any requirements related to establishing or changing a use under this Title 23.</p>

Use		Minimum parking required
	District, if the use is located within a frequent transit service area	

Footnotes to Table C for 23.54.015

¹ ~~((When this use is permitted in a neighborhood residential zone as a conditional use, the))~~ The Director may modify the parking requirements in this Table A for 23.54.015 for institutions in Neighborhood Residential and multifamily zones pursuant to the conditional uses provisions in Section ((23.44.022)) 23.44.030 ((; ~~when the use is permitted in a multifamily zone as a conditional use, the Director may modify the parking requirements pursuant to))~~ and Section 23.45.570.

² The amount of required parking is calculated based on the maximum number of staff, children, or clients that the center is designed to accommodate on site at any one time.

³ As a Type I decision, the Director, in consultation with the Director of the Seattle Department of Transportation, may allow adult care and child care centers to provide loading and unloading spaces on street, if not prevented by current or planned transportation projects adjacent to their property, when no other alternative exists.

⁴ A child care facility, when co-located with an assisted living facility, may count the passenger load/unload space required for the assisted living facility toward its required passenger load/unload spaces.

⁵ ~~((When this use is permitted outright in a neighborhood residential or multifamily zone, the Director may reduce the parking and loading requirements of Section 23.54.015 and the requirements of Section 23.44.016 or Section 23.45.536 on a case-by-case basis if the applicant can demonstrate that the modification is necessary due to the specific features, activities, or programs of the institution and links the reduction to the features of the institution that justify the reduction. Such modifications shall be valid only under the conditions specified, and if those conditions change, the standard requirement shall be satisfied.))~~ The Director may reduce the minimum parking requirements for a child care center in any zone if a portion of its parking demand can be accommodated in nearby on-street parking.

⁶ When family support centers are located within community centers owned and operated by the Department of Parks and Recreation, the Director may lower the combined parking requirement by up to a maximum of 15 percent, pursuant to subsection 23.54.020.I.

⁷ Indoor gymnasiums are not considered ball courts, nor are they considered auditoria or public assembly rooms unless they contain bleachers (fixed seats). If the gymnasium contains bleachers, the parking requirement for the gymnasium is one

Table C for 23.54.015
Required parking for public uses and institutions

Use

Minimum parking required

parking space for every eight fixed seats. Each 20 inches of width of bleachers is counted as one fixed seat for the purposes of determining parking requirements. If the gymnasium does not contain bleachers and is in a school, there is no parking requirement for the gymnasium. If the gymnasium does not contain bleachers and is in a community center, the parking requirement is one space for each 350 square feet.

⁸ The Director may reduce the parking and loading requirements of Section 23.54.015 and the requirements of Section 23.44.080 or Section 23.45.536 on a case-by-case basis if the applicant can demonstrate that the modification is necessary due to the specific features, activities, or programs of the institution and links the reduction to the features of the institution that justify the reduction. Such modifications shall be valid only under the conditions specified, and if those conditions change, the standard requirement shall be satisfied.

² When a library is permitted in a multifamily or commercial zone as a conditional use, the Director may modify the parking requirements of Section 23.54.015 and the requirements of Section 23.45.536 or Sections 23.47A.030 and 23.47A.032 on a case-by-case basis if the applicant can demonstrate that the modification is necessary due to the specific features, activities, or programs of the institution and links the reduction to the features of the institution that justify the reduction. Such modifications shall be valid only under the conditions specified, and if those conditions change, the standard requirement shall be satisfied.

^{((9)) 10} For public schools, when an auditorium or other place of assembly is demolished and a new one built in its place, parking requirements are determined based on the new construction. When an existing public school on an existing public school site is remodeled, additional parking is required if any auditorium or other place of assembly is expanded or additional fixed seats are added. Additional parking is required as shown in this Table C for 23.54.015 for the increase in floor area or increase in number of seats only. If the parking requirement for the increased area or seating is ~~((40))~~ ten percent or less than that for the existing auditorium or other place of assembly, then no additional parking is required.

^{((40)) 11} ~~((Development))~~ For public schools, development standard departures may be granted or required pursuant to the procedures and criteria set forth in Chapter 23.79 to reduce the required or permitted number of parking spaces.

^{((4+)) 12} The general requirements of lines A through P of this Table C for 23.54.015 for general public uses and institutions, and requirements of subsection 23.54.016.B for Major Institution uses, are superseded to the extent that a use, structure, or development qualifies for either a greater or a lesser parking requirement (which may include no requirement) under any other provision. To the extent that a general public use, institution, or Major Institution use fits within more than one line in this

Table C for 23.54.015
Required parking for public uses and institutions

Use	Minimum parking required
-----	--------------------------

Table C for 23.54.015, the least of the applicable parking requirements applies. The different parking requirements listed for certain categories of general public uses or institutions shall not be construed to create separate uses for purposes of any requirements related to establishing or changing a use under this Title 23.
~~((42 The Director may reduce the minimum parking requirements for a child care center in any zone if a portion of its parking demand can be accommodated in nearby on-street parking.))~~

~~((K. Bicycle parking.))~~

23.54.037 Bicycle parking

A. Number of spaces

1. The minimum number of parking spaces for bicycles required for specified uses is set forth in Table ~~((D for 23.54.015))~~ A for 23.54.037.

2. Long-term parking for bicycles shall be for bicycles parked four or more hours. Short-term parking for bicycles shall be for bicycles parked less than four hours. In the case of a use not shown on Table ~~((D for 23.54.015))~~ A for 23.54.037, one bicycle parking space per 10,000 gross square feet of either short- or long-term bicycle parking is required~~((except single family residential use is exempt from bicycle parking requirements))~~ .

3. The minimum requirements are based upon gross floor area of the use in a structure minus gross floor area in parking uses, or the square footage of the use when located outside of an enclosed structure, or as otherwise specified.

~~((4.))~~ 4. Rounding. For long-term bicycle parking, calculation of the minimum requirement shall round up the result to the nearest whole number. For short-term bicycle

parking, calculation of the minimum requirement shall round up the result to the nearest whole even number.

~~((2-))~~ B. Performance standards. Provide bicycle parking in a highly visible, safe, and convenient location, emphasizing user convenience and theft deterrence, based on rules promulgated by the Director of the Seattle Department of Transportation that address the considerations in this subsection ~~((23.54.015.K.2))~~ 23.54.037.B.

~~((a-))~~ 1. Provide secure locations and arrangements of long-term bicycle parking, with features such as locked rooms or cages and bicycle lockers. The bicycle parking should be installed in a manner that avoids creating conflicts with automobile accesses and driveways.

~~((b-))~~ 2. For a garage with bicycle parking and motor vehicle parking for more than two dwelling units, provide pedestrian and bicycle access to long-term bicycle parking that is separate from other vehicular entry and egress points or uses the same entry or egress point but has a marked walkway for pedestrians and bicyclists.

~~((c-))~~ 3. Provide adequate lighting in the bicycle parking area and access routes to it.

~~((d-))~~ 4. If short-term bicycle parking facilities are not clearly visible from the street or sidewalk or adjacent on-street bicycle facilities, install directional signage in adequate amounts and in highly visible locations in a manner that promotes easy wayfinding for bicyclists.

~~((e-))~~ 5. Provide signage to long-term bicycle parking that is oriented to building users.

1 ((f)) 6. Long-term bicycle parking shall be located where bicyclists are not
2 required to carry bicycles on exterior stairs with more than five steps to access the parking. The
3 Director, as a Type I decision, may allow long-term bicycle parking for rowhouse and
4 townhouse development to be accessed by stairs with more than five steps, if the slope of the
5 lot makes access with five or fewer steps infeasible.

6 ((g)) 7. Where practicable, long-term bicycle parking shall include a variety of
7 rack types to accommodate different types of bicycles.

8 ((h)) 8. Install bicycle parking hardware so that it can perform to its
9 manufacturer's specifications and any design criteria promulgated by the Director of the Seattle
10 Department of Transportation, allowing adequate clearance for bicycles and their riders.

11 ((i)) 9. Provide full weather protection for all required long-term bicycle
12 parking.

13 ((j)) C. Location of bicycle parking

14 ((a)) 1. Long-term bicycle parking required for residential uses shall be located
15 on-site except as provided in subsection ((23.54.015.K.3.e)) 23.54.037.C.3.

16 ((b)) 2. Short-term bicycle parking may be provided on the lot or in an adjacent
17 right-of-way, subject to approval by the Director of the Seattle Department of Transportation,
18 or as provided in subsection ((23.54.015.K.3.e)) 23.54.037.C.3.

19 ((c)) 3. Both long-term and short-term bicycle parking for residential uses may
20 be provided off-site if within 600 feet of the residential use to which the bicycle parking is
21 accessory and if the site of the bicycle parking is functionally interrelated to the site of the
22 residential use to which the bicycle parking is accessory, such as within a unit lot subdivision

or if the sites are connected by access easements, or if a covenant or similar property right is established to allow use of the off-site bicycle parking.

~~((4.))~~ D. Long-term bicycle parking required for small efficiency dwelling units and congregate residence sleeping rooms is required to be covered for full weather protection. If the required, covered long-term bicycle parking is located inside the building that contains small efficiency dwelling units or congregate residence sleeping rooms, the space required to provide the required long-term bicycle parking shall be exempt from floor area ratio (FAR) limits. Covered long-term bicycle parking that is provided beyond the required bicycle parking shall not be exempt from FAR limits.

~~((5.))~~ E. Bicycle parking facilities shared by more than one use are encouraged.

~~((6.))~~ F. Except as provided in subsection ~~((23.54.015.K.7))~~ 23.54.015.G, bicycle parking facilities required for ~~((non-residential))~~ nonresidential uses shall be located:

~~((a.))~~ 1. On the lot; or

~~((b.))~~ 2. For a functionally interrelated campus containing more than one building, in a shared bicycle parking facility within 600 feet of the lot; or

~~((c.))~~ 3. Short-term bicycle parking may be provided in an adjacent right-of-way, subject to approval by the Director of the Seattle Department of Transportation.

~~((7.))~~ G. For ~~((non-residential))~~ nonresidential uses on a functionally interrelated campus containing more than one building, both long-term and short-term bicycle parking may be located in an off-site location within 600 feet of the lot, and short-term public bicycle parking may be provided in a right-of-way, subject to approval by the Director of the Seattle Department of Transportation. The Director of the Seattle Department of Transportation may

consider whether bicycle parking in the public place shall be sufficient in quality to effectively serve bicycle parking demand from the site.

~~((8-))~~ H. Bicycle commuter shower facilities. Structures containing 100,000 square feet or more of office use floor area shall include shower facilities and clothing storage areas for bicycle commuters. Two showers shall be required for every 100,000 square feet of office use. They shall be available in a manner that results in equal shower access for all users. The facilities shall be for the use of the employees and occupants of the building, and shall be located where they are easily accessible to bicycle parking facilities, which may include in places accessible by elevator from the bicycle parking location.

~~((9-))~~ I. Bicycle parking spaces within dwelling units or on balconies do not count toward the bicycle parking requirement, except if the bike parking spaces are located:

~~((a-))~~ 1. In a private garage; or

~~((b-))~~ 2. Within the ground floor of a dwelling unit in ~~((a townhouse or rowhouse development))~~ an attached dwelling unit.

		Long-term	Short-term
		peak period daily ridership ^{((6)) 7}	peak period daily ridership

Footnotes to Table ((~~D for 23.54.015~~)) A for 23.54.037

¹ Required bicycle parking includes long-term and short-term amounts shown in this Table ((~~D for 23.54.015~~)) A for 23.54.037.

² The Director may reduce short-term bicycle parking requirements for theaters and spectator sport facilities that provide bicycle valet services authorized through a Transportation Management Program. A bicycle valet service is a service that allows bicycles to be temporarily stored in a secure area, such as a monitored bicycle corral.

³ For residential uses, after the first 50 spaces for bicycles are provided, additional spaces are required at three-quarters the ratio shown in this Table ((~~D for 23.54.015~~)) A for 23.54.037.

⁴ For ((~~congregate residences or multifamily~~)) residential structures that are owned and operated by a not-for-profit entity serving seniors or persons with disabilities, or that are licensed by the State and provide supportive services for seniors or persons with disabilities, as a Type I decision, the Director shall have the discretion to reduce the amount of required bicycle parking to as few as zero if it can be demonstrated that residents are less likely to travel by bicycle.

⁵ In low-income housing, there is no minimum required long-term bicycle parking requirement for each unit subject to affordability limits no higher than 30 percent of median income and long-term bicycle parking requirements may be waived by the Director as a Type I decision for each unit subject to affordability limits greater than 30 percent of median income and no higher than 80 percent of median income if a reasonable alternative is provided (e.g., in-unit vertical bike storage).

⁶ Long-term bike parking is not required in NR zones.

^{((6)) 7} The Director, in consultation with the Director of Transportation, may require more bicycle parking spaces based on the following factors: area topography; pattern and volume of expected bicycle users; nearby residential and employment density; proximity to the Urban Trails system and other existing and planned bicycle facilities; projected transit ridership and expected access to transit by bicycle; and other relevant transportation and land use information.

Section 58. Section 23.54.016 of the Seattle Municipal Code, last amended by Ordinance 125558, is amended as follows:

23.54.016 Major Institutions—((parking)) Parking and transportation

Except in the MPC-YT zone, Major Institution uses are subject to the following transportation and parking requirements:

* * *

B. Parking (~~((Quantity Required-))~~) quantity required

1. In urban centers and the Station Area Overlay District, no parking is required for Major Institution uses, except for hospitals.

2. For all other Major Institutions the minimum number of parking spaces required is as follows:

a. Long-term (~~((Parking-))~~) parking

1) Medical (~~((Institutions))~~) institutions. A number of spaces equal to 80 percent of hospital-based doctors; plus 25 percent of staff doctors; plus 30 percent of all other employees present at peak hour;

2) Educational (~~((Institutions))~~) institutions. A number of spaces equal to 15 percent of the maximum students present at peak hour, excluding resident students; plus 30 percent of employees present at peak hour; plus 25 percent of the resident unmarried students; plus one space for each married student apartment unit.

b. Short-term (~~((Parking-))~~) parking

1) Medical (~~((Institutions))~~) institutions. A number of spaces equal to one space per six beds; plus one space per five average daily outpatients;

2) Educational (~~((Institutions))~~) institutions. A number of spaces equal to five percent of the maximum students present at peak hour excluding resident students.

c. Additional (~~((Short-term Parking Requirements))~~) short-term parking requirements. When one of the following uses is a Major Institution use, the following additional

short-term parking requirements shall be met. Such requirements may be met by joint use of parking areas and facilities if the Director determines that the uses have different hours of operation according to subsection 23.54.020.G:

1) Museum. One space for each 250 square feet of public floor area;

2) Theater, ~~((Auditorium))~~ auditorium, or ~~((Assembly Hall))~~ assembly hall. One space for each 200 square feet of audience assembly area not containing fixed seats, and one space for every ~~((40))~~ ten seats for floor area containing fixed seats;

3) Spectator ~~((Sports Facility Containing Fewer))~~ sports facility containing fewer than 20,000 ~~((Seats))~~ seats. One space for each ~~((40))~~ ten permanent seats and one space for each 100 square feet of spectator assembly area not containing fixed seats;

4) Spectator ~~((Sports Facility Containing))~~ sports facility containing 20,000 or ~~((More Seats))~~ more seats. One space for each ~~((40))~~ ten permanent seats and one bus space for each 300 permanent seats.

d. Bicycle ~~((Parking))~~ parking. Bicycle parking meeting the development standards of subsections ~~((23.54.015.K.2))~~ 23.54.037.B through ~~((23.54.015.K.6))~~ 23.54.037.G and subsection 23.54.016.D.2 shall be provided in the following quantities:

1) Medical ~~((Institutions))~~ institutions. A number of spaces equal to two percent of employees, including doctors, present at peak hour;

2) Educational ~~((Institutions))~~ institutions. A number of spaces equal to ~~((40))~~ ten percent of the maximum students present at peak hour plus five percent of employees.

If at the time of application for a master use permit, the applicant can demonstrate that the bicycle parking requirement is inappropriate for a particular institution because of topography, location, nature of the users of the institution or other reasons, the Director may modify the bicycle parking requirement.

3. Parking ~~((Deficits))~~ deficits. In addition to providing the minimum required parking for a new structure, five percent of any vehicular or bicycle parking deficit as determined by the minimum requirements of this subsection 23.54.016.B, existing on ~~((the effective date of the ordinance codified in this section))~~ May 2, 1990, shall be supplied before issuance of a certificate of occupancy.

* * *

Section 59. Section 23.54.020 of the Seattle Municipal Code, last amended by Ordinance 126509, is amended as follows:

23.54.020 Parking quantity exceptions

The motor vehicle parking quantity exceptions set forth in this Section 23.54.020 apply in all zones except downtown zones, which are regulated by Section 23.49.019, and Major Institution zones, which are regulated by Section 23.54.016.

A. Adding ~~((Units))~~ units to ~~((Existing Structures))~~ existing structures in Multifamily and Commercial ~~((Zones:))~~ zones

1. For the purposes of this Section 23.54.020, "existing structures" means those structures that were established under permit, or for which a permit has been granted and has not expired as of the applicable date, as follows:

a. In multifamily zones, August 10, 1982;

b. In commercial zones, June 9, 1986.

2. In locations in a multifamily or commercial zone where there is a minimum parking requirement, one dwelling unit may either be added to an existing structure or may be built on a lot that contains an existing structure without additional parking if both of the following requirements are met:

a. Either the existing parking provided on the lot meets development standards, or the lot area is not increased and existing parking is screened and landscaped to the greatest extent practical; and

b. Any additional parking shall meet all development standards for the zone.

3. In locations in a multifamily or commercial zone where there is a minimum parking requirement, the Director may authorize a reduction or waiver of the parking requirement as a Type I decision when dwelling units are proposed to be added either to an existing structure or on a lot that contains an existing structure, in addition to the exception permitted in subsection 23.54.020.A.2, if the ~~((conditions in subsections 23.54.020.A.3.a and b below are met, and either of the conditions in subsections 23.54.020.A.3.c or d below are met:~~

~~a. The))~~ only use of the structure will be residential((;)) and one of the following conditions is met:

~~((b. The lot is not located in either the University District Parking Overlay Area (Map A for 23.54.015) or the Alki Area Parking Overlay (Map B for 23.54.015); and~~

~~e.))~~ a. The topography of the lot or location of existing structures makes provision of an off-street parking space physically infeasible in a conforming location; or

~~((d.))~~ b. The lot is located in a residential parking zone (RPZ) and a current parking study is submitted showing a utilization rate of less than 75 percent for on-street parking within 400 feet of all lot lines.

B. Tandem ~~((Parking))~~ parking in ~~((Multifamily Structures))~~ multifamily structures.
~~((f.))~~ Off-street parking required for multifamily structures may be provided as tandem parking, as defined in Section 23.54.030. ~~((A tandem parking space counts as one and one-half parking spaces, except as provided in subsection 23.54.020.B.2 below, and must meet the minimum size requirements of subsection 23.54.030.A.~~

~~2. When a minimum of at least one parking space per dwelling unit in a multifamily structure is required, the total number of parking spaces provided, counting each tandem parking space as one space, may not be less than the total number of dwelling units.))~~
A tandem parking space counts at a rate of one space for every 20 linear feet of depth excluding required access aisles.

* * *

Section 60. Section 23.54.030 of the Seattle Municipal Code, last amended by Ordinance 127099, is amended as follows:

23.54.030 Parking space and access standards

All parking spaces provided, whether required by Section 23.54.015 or not, and required barrier-free parking, shall meet the standards of this Section 23.54.030.

A. Parking space dimensions

1. "Large vehicle" means the minimum size of a large vehicle parking space shall be ~~((8.5))~~ 8 feet in width and 19 feet in length.

2. "Medium vehicle" means the minimum size of a medium vehicle parking space shall be 8 feet in width and 16 feet in length.

3. "Small vehicle" means the minimum size of a small vehicle parking space shall be 7.5 feet in width and 15 feet in length.

4. "Barrier-free parking" means a parking space meeting the following standards:

a. Parking spaces shall not be less than 8 feet in width and shall have an adjacent access aisle not less than 5 feet in width. Van-accessible parking spaces shall have an adjacent access aisle not less than 8 feet in width. Where two adjacent spaces are provided, the access aisle may be shared between the two spaces. Boundaries of access aisles shall be marked so that aisles will not be used as parking space.

b. A minimum length of 19 feet or when more than one barrier-free parking space is provided, at least one shall have a minimum length of 19 feet, and other spaces may be the lengths of small, medium, or large spaces in approximate proportion to the number of each size space provided on the lot.

5. "Tandem parking" means a parking space equal to the width and two times the length of the vehicle size standards in subsections 23.54.030.A.1, 23.54.030.A.2, and 23.54.030.A.3 for the size of the vehicle to be accommodated.

6. No wall, post, guardrail, or other obstruction, or lot line, is permitted within the area for car door opening. Columns or other structural elements may encroach into the parking space a maximum of 6 inches on a side, except in the area for car door opening 5 feet from the longitudinal centerline, or 4 feet from the transverse centerline of a parking space (see Exhibit A for 23.54.030).

7. If the parking space is next to a lot line and the parking space is parallel to the lot line, the minimum width of the space is 9 feet.

Encroachments ((~~Into Required Parking Space~~)) into required parking

Exhibit A for 23.54.030 Encroachments into required parking

B. Parking space requirements. The required size of parking spaces shall be determined by whether the parking is for a residential, live-work, or ~~((non-residential))~~ nonresidential use. In structures containing residential uses and also containing either ~~((non-residential))~~ nonresidential uses or live-work units, parking that is clearly set aside and reserved for residential or live-work use shall meet the standards of subsection 23.54.030.B.1. Parking for

all other uses within the structure shall meet the standards of subsection 23.54.030.B.2. All uses shall provide barrier-free accessible parking if required by the Seattle Building Code or the Seattle Residential Code.

1. Residential uses

a. When five or fewer parking spaces are provided, the minimum required size of a parking space shall be for a medium vehicle, as described in subsection 23.54.030.A.2, except as provided in subsection 23.54.030.B.1.d.

b. When more than five parking spaces are provided, a minimum of 60 percent of the parking spaces shall be striped for medium vehicles. The minimum size for a medium parking space shall also be the maximum size. Forty percent of the parking spaces may be striped for any size category in subsection 23.54.030.A, provided that when parking spaces are striped for large vehicles, the minimum required aisle width shall be as shown for medium vehicles.

c. Assisted living facilities. Parking spaces shall be provided as in subsections 23.54.030.B.1.a and 23.54.030.B.1.b, except that a minimum of two spaces shall be striped for a large vehicle.

d. ~~((Townhouse units.))~~ For an individual garage serving ~~((a townhouse))~~ an individual dwelling unit, the minimum required size of a parking space shall be for a medium vehicle, as described in subsection 23.54.030.A.

2. ~~((Non-residential))~~ Nonresidential uses

a. When ten or fewer parking spaces are provided, a maximum of 25 percent of the parking spaces may be striped for small vehicles. A minimum of 75 percent of the spaces shall be striped for large vehicles.

b. When between 11 and 19 parking spaces are provided, a minimum of 25 percent of the parking spaces shall be striped for small vehicles. The minimum required size for these small parking spaces shall also be the maximum size. A maximum of 65 percent of the parking spaces may be striped for small vehicles. A minimum of 35 percent of the spaces shall be striped for large vehicles.

c. When 20 or more parking spaces are provided, a minimum of 35 percent of the parking spaces shall be striped for small vehicles. The minimum required size for small parking spaces shall also be the maximum size. A maximum of 65 percent of the parking spaces may be striped for small vehicles. A minimum of 35 percent of the spaces shall be striped for large vehicles.

d. The minimum vehicle clearance shall be at least 6 feet 9 inches on at least one floor, and there shall be at least one direct entrance that is at least 6 feet 9 inches in height for all parking garages accessory to ~~((non-residential))~~ nonresidential uses and live-work units and for all flexible-use parking garages.

3. Live-work uses. The first required parking space shall meet the parking standards for residential use. Additional required parking for a live-work use shall meet the parking standards for ~~((non-residential))~~ nonresidential use.

C. Backing ~~((Distances))~~ distances and ~~((Moving Other Vehicles.))~~ moving other vehicles

1. Adequate ingress to and egress from all parking spaces shall be provided without having to move another vehicle, except in the case of multiple spaces provided for a ~~((single-family))~~ dwelling unit ~~((or an accessory dwelling unit associated with a single-family~~

1 ~~dwelling,))~~ or in the case of tandem parking authorized under ((~~Section~~)) subsection
2 23.54.020.B.

3 2. Except for lots with fewer than three parking spaces, ingress to and egress
4 from all parking spaces shall be provided without requiring backing more than 50 feet.

5 D. Driveways. Driveway requirements for residential and nonresidential uses are
6 described below. When a driveway is used for both residential and nonresidential parking, it
7 shall meet the standards for nonresidential uses described in subsection 23.54.030.D.2.

8 1. Residential uses(((-))

9 a. Driveway width. Driveways less than 100 feet in length that serve 30
10 or fewer parking spaces shall be a minimum of 10 feet in width for one-way or two-way traffic.

11 b. Except for driveways serving one ((~~single-family~~)) dwelling unit,
12 driveways more than 100 feet in length that serve 30 or fewer parking spaces shall either:

13 1) ((~~be~~)) Be a minimum of 16 feet wide, tapered over a 20 foot
14 distance to a 10 foot opening at the lot line; or

15 2) ((~~be~~)) Be a minimum of 10 feet wide and provide a passing
16 area at least 20 feet wide and 20 feet long. The passing area shall begin 20 feet from the lot
17 line, with an appropriate taper to meet the 10-foot opening at the lot line. If a taper is provided
18 at the other end of the passing area, it shall have a minimum length of 20 feet.

19 c. Driveways of any length that serve more than 30 parking spaces shall
20 be at least 10 feet wide for one-way traffic and at least 20 feet wide for two-way traffic.

21 d. Driveways for two attached ((~~rowhouse or townhouse~~)) dwelling units
22 may be paired so that there is a single curb cut providing access. The maximum width of the
23 paired driveway is 18 feet.

e. Driveways with a turning radius of more than 35 degrees shall conform to the minimum turning path radius shown in Exhibit B for 23.54.030.

((Exhibit B for 23.54.030: Turning Path Radius))

Exhibit B for 23.54.030

Turning path radius

f. Vehicles may back onto a street from a parking area serving five or fewer vehicles, provided that either:

- 1) The street is not an arterial as defined in Section 11.18.010; or
- 2) For a lot with one (~~((single family))~~) dwelling unit or one parking space, the Director may permit backing onto an arterial based on a safety analysis that addresses visibility, traffic volume, and other relevant issues.

g. Nonconforming driveways. The number of parking spaces served by an existing driveway that does not meet the standards of this subsection 23.54.030.D.1 shall not be increased. This prohibition may be waived by the Director after consulting with the Director of the Seattle Department of Transportation, based on a safety analysis.

2. Nonresidential (~~((Uses-))~~) uses

a. Driveway (~~(Widths.)~~) widths

1) The minimum width of driveways for (~~(one-way)~~) one-way traffic shall be 12 feet and the maximum width shall be 15 feet.

2) The minimum width of driveways for (~~(two-way)~~) two-way traffic shall be 22 feet and the maximum width shall be 25 feet.

b. Driveways shall conform to the minimum turning path radius shown in Exhibit B for 23.54.030.

c. For driveways that provide access to a solid waste management use the Director may allow both a maximum driveway width greater than the limits set in subsection 23.54.030.D.2.a and appropriate turning path radii, as determined necessary for truck maneuvering.

3. Driveway slope for all uses. No portion of a driveway, whether located on a lot or on a right-of-way, shall exceed a slope of 15 percent, except as provided in this subsection 23.54.030.D.3. The maximum 15 percent slope shall apply in relation to both the current grade of the right-of-way to which the driveway connects, and to the proposed finished grade of the right-of-way if it is different from the current grade. The ends of a driveway shall be adjusted to accommodate an appropriate crest and sag. The Director may permit a driveway slope of more than 15 percent if it is found that:

a. The topography or other special characteristic of the lot makes a 15 percent maximum driveway slope infeasible;

b. The additional amount of slope permitted is the least amount necessary to accommodate the conditions of the lot; and

c. The driveway is still useable as access to the lot.

E. Parking aisles

1. Parking aisles shall be provided according to the requirements of

Table A for 23.54.030 and Exhibit C for 23.54.030.

Table A for 23.54.030

Parking aisle dimensions

<u>Parking angle</u>	<u>Stall width</u>	<u>Stall length (in feet)</u>	<u>Aisle width (in feet)¹</u>	<u>Curb depth per car (in feet)</u>	<u>Unit width (in feet)²</u>	<u>Curb length per car (in feet)</u>

	<u>Large</u>	<u>19</u>	<u>24³</u>	<u>19</u>	<u>62²</u>	<u>8</u>

Footnotes for Table A for 23.54.030

¹ Required aisle width is for one-way traffic only. If two-way traffic is proposed, then the minimum aisle width shall be 20 feet or greater.

² 60 feet may be substituted for required unit width on lots where the available width is in 60-foot whole multiples, provided that the minimum width of the parking stalls shall be 9 feet.

³ For lots 44 feet in width or less, the Director may reduce the aisle width to as low as 20 feet if large parking spaces are provided at 90 degrees as long as the spaces are 9 feet wide.

A Parking Angle	B Stall Width	C Stall Length	D Aisle Width ¹	E Curb Depth Per Car	F Unit Width ³	G Curb Length Per Car
0°	7.5	18.0	10.0	7.5	25.0	18.0

	8.5	19.0 ²	24.0 ²	19.0	62.0 ³	8.5

¹ Required aisle width is for one-way traffic only. If two-way traffic is proposed, then the minimum aisle width shall be 20 feet or greater.

² When lot width is less than 43 feet, 40 feet may be substituted for a two-way aisle and a single row of cars at 90° to the aisle, provided that the minimum width of the parking stalls shall be 9½ feet.

³ 60 feet may be substituted for required unit width on lots where the available width is in 60-foot whole multiples, provided that the minimum width of the parking stalls shall be 9½ feet.

The following equations may be used to compute dimensions for parking angles other than those provided in the chart above:

$$E = C \sin A + B \cos A$$

$$G = B / \sin A$$

NOTE: Aisle widths shall be provided as required for the next greater parking angle shown in the chart above.

1

2 ((Exhibit C for 23.54.030: Parking Aisle Dimensions))

Exhibit C for 23.54.030

Parking aisle dimension measurement

Exhibit C for 23.54.030
Parking aisle dimension measurement

The following equations may be used to compute dimensions for parking angles other than those provided in the chart above.

$$E = C \sin A + B \cos A$$

$$G = B / \sin A$$

Note: Aisle widths shall be provided as required for the next greater parking angle shown in the chart above.

2. Minimum aisle widths shall be provided for the largest vehicles served by the aisle.

3. Turning and maneuvering areas shall be located on private property, except that alleys may be credited as aisle space.

4. Aisle slope shall not exceed 17 percent provided that the Director may permit a greater slope if the criteria in subsections 23.54.030.D.3.a, 23.54.030.D.3.b, and 23.54.030.D.3.c are met.

* * *

~~((H))~~ F. Attendant ((Parking)) parking. In downtown zones, any off-street parking area or structure providing more than ~~((5))~~ five parking spaces where automobiles are parked solely by attendants employed for that purpose shall have parking spaces at least 8 feet in width, and 15 feet in length. Subsections ~~((A, B, C, D and E of this Section 23.54.030))~~ 23.54.030.A, 23.54.030.B, 23.54.030.C, 23.54.030.D, and 23.54.030.E shall not apply, except that the grade curvature of any area used for automobile travel or storage shall not exceed that specified in subsection 23.54.030.D.3. Should attendant operation be discontinued, the provisions of subsections ~~((23.54.030 A, B, C, D and E))~~ 23.54.030.A, 23.54.030.B, 2054.030.C, 23.54.030.D, and 23.54.030.E shall apply to the parking.

((I)) ~~G.~~ ~~Off-street ((Bus Parking))~~ bus parking. Bus parking spaces, when required, shall be 13 feet in width and 40 feet in length. Buses parked ~~((en-masse))~~ together shall not be required to have adequate ingress and egress from each parking space.

((J)) H. The Director may, as a Type I decision, modify any required dimension or distribution percentage of parking spaces identified in subsections 23.54.030.A or 23.54.030.B to allow more efficient use of a surface parking area or parking garage, when the parking area or parking garage provides adequate and safe circulation.

* * *

Section 61. Subsections 23.54.030.F and 23.54.030.G of the Seattle Municipal Code, which section was last amended by Ordinance 127099, are amended as follows:

* * *

23.54.031 Curb cuts

((~~F. Curb cuts.~~) The number of permitted curb cuts is determined by whether the parking served by the curb cut is for residential or nonresidential use, and by the zone in which the use

is located. If a curb cut is used for more than one use or for one or more live-work units, the requirements for the use with the largest curb cut requirements shall apply.

~~((1-))~~ A. Residential uses

~~((a-))~~ 1. Number of curb cuts

~~((1-))~~ a. For lots not located on a principal arterial as designated by the Seattle Department of Transportation, curb cuts are permitted according to Table A for ~~((23.54.030))~~ 23.54.031:

Table A for ((23.54.030)) <u>23.54.031</u> Curb cuts for lots not located on a principal arterial or easement frontage	
Street or easement frontage of the lot	Number of curb cuts permitted
80 feet or less	1
Greater than 80 feet up to 160 feet	2
Greater than 160 feet up to 240 feet	3
Greater than 240 feet up to 320 feet	4
For lots with frontage in excess of 320 feet, the pattern established above continues.	

~~((2-))~~ b. For lots on principal arterials as designated by the Seattle Department of Transportation, curb cuts are permitted according to Table B for ~~((23.54.030))~~ 23.54.031:

Table B for ((23.54.030)) <u>23.54.031</u> Curb cuts for principal arterial street frontage	
Street or easement frontage of the lot	Number of curb cuts permitted
160 feet or less	1

**Table B for ((23.54.030)) 23.54.031
 Curb cuts for principal arterial street frontage**

Street or easement frontage of the lot	Number of curb cuts permitted
Greater than 160 feet up to 320 feet	2
Greater than 320 feet up to 480 feet	3
For lots with street frontage in excess of 480 feet, the pattern established above continues.	

((3)) c. On a lot that has both principal arterial and non-principal arterial street frontage, the total number of curb cuts on the principal arterial is calculated using only the length of the street lot line on the principal arterial.

((4)) d. If two adjoining lots share a common driveway, the combined frontage of the two lots will be considered as one in determining the maximum number of permitted curb cuts.

((b-)) 2. Curb cut width. Curb cuts shall not exceed a maximum width of 10 feet except that:

((4)) a. For lots on principal arterials as designated by the Seattle Department of Transportation, the maximum curb cut width is 23 feet;

((2)) b. One curb cut greater than 10 feet but in no case greater than 20 feet in width may be substituted for each two curb cuts permitted by subsection

((23.54.030.F.1.a)) 23.54.031.A.1;

((3)) c. A greater width may be specifically permitted by the development standards in a zone;

((4)) d. If subsection 23.54.030.D requires a driveway greater than 10 feet in width, the curb cut may be as wide as the required width of the driveway; and

1 ~~((5))~~ e. A curb cut may be less than the maximum width permitted but
2 shall be at least as wide as the minimum required width of the driveway it serves.

3 ~~((e))~~ 3. Distance between curb cuts

4 ~~((4))~~ a. The minimum distance between any two curb cuts located on a
5 lot is 30 feet, except as provided in subsection ~~((23.54.030.F.1.e.2))~~ 23.54.031.A.3.b.

6 ~~((2))~~ b. For ~~((rowhouse and townhouse developments))~~ attached
7 dwelling units, the minimum distance between curb cuts is 18 feet (See Exhibit ~~((D for~~
8 ~~23.54.030))~~ A for 23.54.031). For ~~((rowhouse and townhouse developments))~~ attached
9 dwelling units located on abutting lots, the minimum distance between curb cuts is 18 feet.

1 **Exhibit ((D for 23.54.030)) A for 23.54.031**

2 **Paired driveways for attached units**

3

Exhibit A for 23.54.031
Paired driveways for attached units

~~((2-))~~ B. Nonresidential uses in all zones except industrial zones

~~((a-))~~ 1. Number of curb cuts

~~((4-))~~ a. In all residential zones, RC zones, and within the Major Institution Overlay District, two-way curb cuts are permitted according to Table C for

~~((23.54.030))~~ 23.54.031:

Table C for ~~((23.54.030))~~ 23.54.031

Number of curb cuts in residential zones, RC zones, and the Major Institution Overlay District

Street frontage of the lot	Number of curb cuts permitted
80 feet or less	1

Table C for ((23.54.030)) 23.54.031

Number of curb cuts in residential zones, RC zones, and the Major Institution Overlay District

Street frontage of the lot	Number of curb cuts permitted
Greater than 80 feet up to 240 feet	2
Greater than 240 feet up to 360 feet	3
Greater than 360 feet up to 480 feet	4
For lots with frontage in excess of 480 feet, one curb cut is permitted for every 120 feet of street frontage.	

1 ((2)) b. The Director may allow two one-way curb cuts to be substituted
 2 for one two-way curb cut, after determining, as a Type I decision, that there would not be a
 3 significant conflict with pedestrian traffic.

4 ((3)) c. The Director shall, as a Type I decision, determine the number
 5 and location of curb cuts in C1 and C2 zones and the location of curb cuts in SM zones.

6 ((4)) d. In downtown zones, a maximum of two curb cuts for one-way
 7 traffic at least 40 feet apart, or one curb cut for two-way traffic, are permitted on each street
 8 front where access is permitted by subsection 23.49.019.H. No curb cut shall be located within
 9 40 feet of an intersection. These standards may be modified by the Director as a Type I
 10 decision on lots with steep slopes or other special conditions, to the minimum extent necessary
 11 to provide vehicular and pedestrian safety and facilitate a smooth flow of traffic.

12 ((5)) e. For public schools, the Director shall permit, as a Type I
 13 decision, the minimum number of curb cuts that the Director determines is necessary.

1 ~~((6))~~ f. In NC zones, curb cuts shall be provided according to subsection
2 23.47A.032.A, or, when subsection 23.47A.032.A does not specify the maximum number of
3 curb cuts, according to subsection ~~((23.54.030.F.2.a.1))~~ 23.54.031.B.1.a.

4 ~~((7))~~ g. For police and fire stations the Director shall permit the
5 minimum number of curb cuts that the Director determines is necessary to provide adequate
6 maneuverability for emergency vehicles and access to the lot for passenger vehicles.

7 ~~((b-))~~ 2. Curb cut widths

8 ~~((1))~~ a. For one-way traffic, the minimum width of curb cuts is 12 feet,
9 and the maximum width is 15 feet.

10 ~~((2))~~ b. For two-way traffic, the minimum width of curb cuts is 22 feet,
11 and the maximum width is 25 feet, except that the maximum width may be increased to 30 feet
12 if truck and auto access are combined.

13 ~~((3))~~ c. For public schools, the maximum width of a curb cut is 25 feet.
14 Development standard departures may be granted or required pursuant to the procedures and
15 criteria set forth in Chapter 23.79.

16 ~~((4))~~ d. For fire and police stations, the Director may allow curb cuts up
17 to, and no wider than, the minimum width necessary to provide access for official emergency
18 vehicles that have limited maneuverability and that must rapidly respond to emergencies. Curb
19 cuts for fire and police stations are considered curb cuts for two-way traffic.

20 ~~((5))~~ e. If one of the following conditions applies, the Director may
21 require a curb cut of up to 30 feet in width, if it is found that a wider curb cut is necessary for
22 safe access:

((i.)) 1) The abutting street has a single lane on the side that abuts the lot; or

or

((iii)) 3) The proposed development is located on an arterial with an average daily traffic volume of over 7,000 vehicles; or

((iv.)) 4) Off-street loading berths are required according to Section 23.54.035.

((e-)) 3. The entrances to all garages accessory to nonresidential uses or live-work units and the entrances to all flexible-use parking garages shall be at least 6 feet 9 inches high.

((3.)) C. All uses in industrial zones

((a-)) 1. Number and location of curb cuts. The number and location of curb cuts will be determined by the Director.

((b-)) 2. Curb cut width. Curb cut width in ((Industrial)) industrial zones shall be as follows:

~~((4))~~ a. Except as set forth in subsection ~~((23.54.030.F.3.b.4))~~
23.54.031.C.2.d, if the curb cut provides access to a parking area or structure, it must be a
minimum of 15 feet wide and a maximum of 30 feet wide.

((2)) b. If the curb cut provides access to a loading berth, the maximum width may be increased to 50 feet.

((3)) c. Within the minimum and maximum widths established by this subsection ((23.54.030.F.3)) 23.54.031.C, the Director shall determine the size of the curb cuts.

1 ~~((4))~~ d. If the curb cut provides access to a solid waste management use,
2 the Director may determine the maximum width of the curb cut.

3 ~~((4-))~~ D. Curb cuts for access easements

4 ~~((a-))~~ 1. If a lot is crossed by an access easement serving other lots, the curb cut
5 serving the easement may be as wide as the easement roadway.

6 ~~((b-))~~ 2. The curb cut serving an access easement shall not be counted against
7 the number or amount of curb cuts permitted to a lot if the lot is not itself served by the
8 easement.

9 ~~((5-))~~ E. Curb cut flare. A flare with a maximum width of 2.5 feet is permitted on either
10 side of curb cuts in any zone.

11 ~~((6-))~~ F. Replacement of unused curb cuts. When a curb cut is no longer needed to
12 provide access to a lot, the curb and any planting strip must be replaced.

13 ~~((7-))~~ G. Curb cuts are not allowed on streets if alley access to a lot is feasible but has
14 not been provided.

15 **23.54.032 Sight triangles**

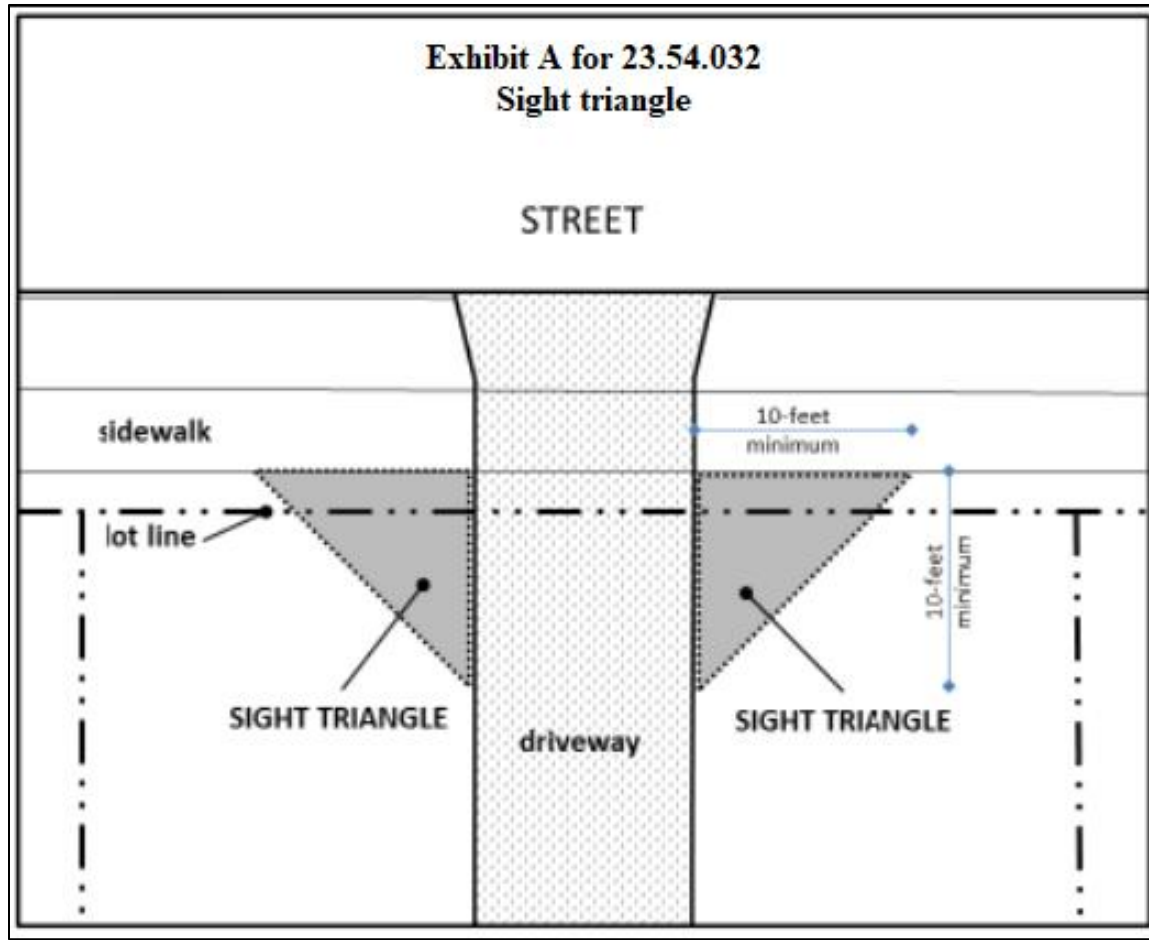

16 ~~((G. Sight triangle~~

17 ~~4-))~~ A. For exit-only driveways and easements, and two-way driveways and easements
18 less than 22 feet wide, a sight triangle on both sides of the driveway or easement shall be
19 provided, and shall be kept clear of any obstruction for a distance of 10 feet from the
20 intersection of the driveway or easement with a driveway, easement, sidewalk, or curb
21 intersection if there is no sidewalk, as depicted in Exhibit ~~((E for 23.54.030))~~ A for 23.54.032.

1 **Exhibit ((~~E for 23.54.030~~) A for 23.54.032**

2 **Sight triangle**

~~((2.))~~ B. For two-way driveways or easements 22 feet wide or more, a sight triangle on the side of the driveway used as an exit shall be provided, and shall be kept clear of any obstruction for a distance of 10 feet from the intersection of the driveway or easement with a driveway, easement, sidewalk, or curb intersection if there is no sidewalk. The entrance and exit lanes shall be clearly identified.

~~((3.))~~ C. The sight triangle shall also be kept clear of obstructions in the vertical spaces between 32 inches and 82 inches from the ground.

~~((4.))~~ D. When the driveway or easement is less than 10 feet from the lot line, the sight triangle may be provided as follows:

1 ((a-)) 1. An easement may be provided sufficient to maintain the sight triangle.

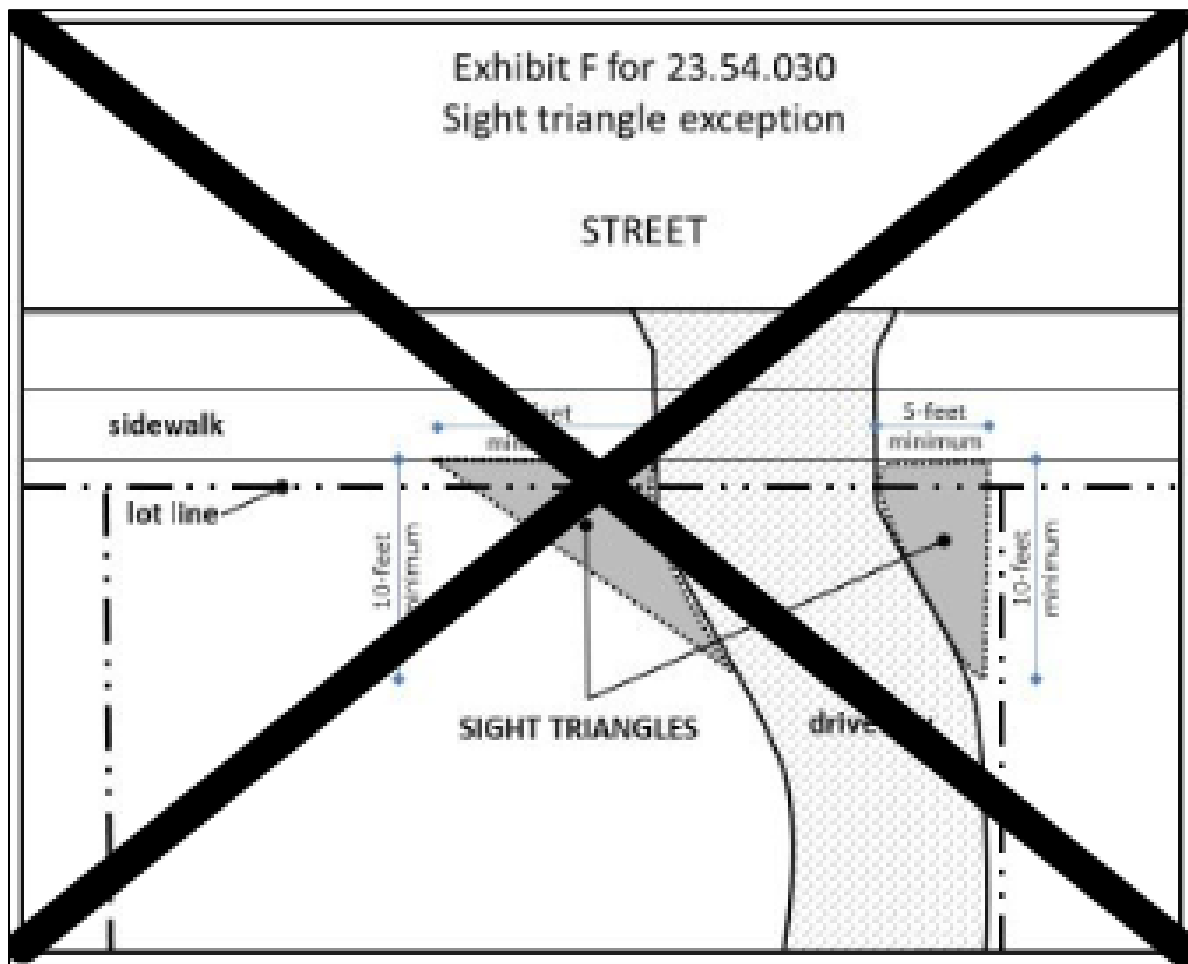

2 The easement shall be recorded with the King County Recorder's Office; or

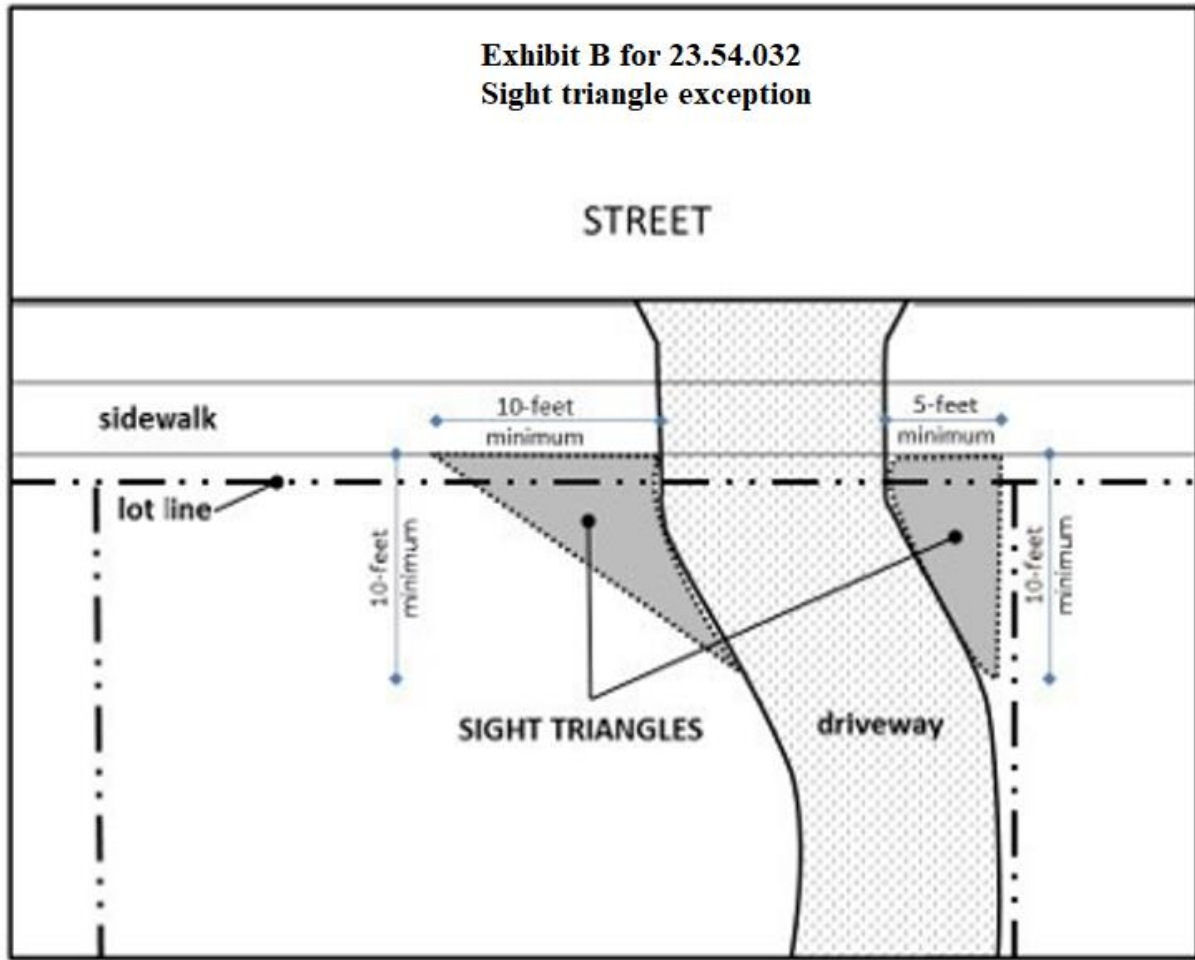

3 ((b-)) 2. The driveway may be shared with a driveway on the neighboring lot; or

4 ((c-)) 3. The driveway or easement may begin 5 feet from the lot line, as
5 depicted in Exhibit ((F for 23.54.030)) B for 23.54.032.

6 **Exhibit ((F for 23.54.030)) B for 23.54.032**

7 **Sight triangle exception**

~~((5-))~~ E. An exception to the sight triangle requirement may be made for driveways serving lots containing only residential uses and fewer than three parking spaces, when providing the sight triangle would be impractical.

~~((6-))~~ F. In all ~~((Downtown, Industrial,))~~ downtown, industrial, Commercial 1, and Commercial 2 zones, the sight triangle at a garage exit may be provided by mirrors and/or other approved safety measures.

~~((7-))~~ G. Sight triangles are not required for one-way entrances into a parking garage or surface parking area.

((8-)) H. Sight triangles are not required when access to parking is provided from an alley.

* * *

Section 62. Subsections 23.54.030.K and 23.54.030.L of the Seattle Municipal Code, which section was last amended by Ordinance 127099, are amended as follows:

* * *

23.54.033 Pedestrian access to garage

~~((K. Pedestrian access to garage.))~~ For new structures that include a garage, in a zone where flexible-use parking is permitted, at least one pedestrian access walkway or route shall be provided between a garage and a public right-of-way, which may be an alley, including a side-hinged door for pedestrian use. A fire exit door, or other access through lobbies, may serve this purpose if the access route and doors are accessible for ingress and egress by garage users.

23.54.034 Electric vehicle (EV) charging infrastructure

~~((L. Electric vehicle (EV) charging infrastructure.))~~ New parking spaces provided on a lot when a new building is constructed shall be ~~(("))~~EV-ready~~(("))~~ as specified in this ~~((subsection 23.54.030.L))~~ Section 23.54.034. The required number of EV-ready parking spaces shall be determined by whether the parking is for a residential or nonresidential use. Parking that is clearly set aside and reserved for residential use shall meet the standards of subsection ~~((23.54.030.L.1))~~ 23.54.034.A; parking for all other uses within the structure shall meet the standards of subsection ~~((23.54.030.L.2))~~ 23.54.034.B.

((1.)) A. Residential uses

((a.)) 1. Private parking for individual ((residential)) dwelling units. When parking for any individual dwelling unit is provided in a private garage, carport, or parking

area, separate from any parking facilities serving other units, at least one parking space for each unit in that garage, carport, or surface parking area shall be EV-ready.

~~((b-))~~ 2. Surface parking for multiple ~~((residences))~~ dwelling units. When parking for ~~((multifamily residential uses))~~ multiple dwelling units is provided in a surface parking area serving multiple ~~((residences))~~ dwelling units, the number of parking spaces that shall be EV-ready shall be as follows:

~~((1) When between one and six parking spaces are provided, each of those parking spaces shall be EV-ready;~~

~~2) When between seven and 25 parking spaces are provided, a minimum of six of those parking spaces shall be EV-ready; and~~

~~3) When more than 25 parking spaces are provided, a minimum of 20 percent of those parking spaces shall be EV-ready.))~~

a. When up to 25 parking spaces are provided, the first 12 parking spaces shall be EV-ready; and

b. When more than 25 parking spaces are provided, 45 percent of all parking spaces shall be EV-ready.

~~((e-))~~ 3. Parking garages for multiple ~~((residences))~~ dwelling units. When parking for ~~((multifamily residential uses))~~ multiple dwelling units is provided in a parking garage serving multiple ~~((residences))~~ dwelling units, a minimum of ~~((20))~~ 45 percent of those parking spaces shall be EV-ready.

~~((d. Other residential uses. When parking is provided for all other residential uses, a minimum of 20 percent of those spaces shall be EV-ready.~~

~~2-))~~ B. Nonresidential uses~~((:))~~

1 1. When parking is provided for nonresidential uses, a minimum of ~~((ten))~~ 30
2 percent of those spaces shall be EV-ready((-)), except as provided in subsection 23.54.034.B.2
3 and subsection 23.54.034.B.3.

4 2. For the uses listed in subsection 23.54.034.B.3, the following requirements
5 apply:

6 a. Where fewer than ten parking spaces are provided for the use, one EV-
7 ready space is required.

8 b. Where ten or more parking spaces are provided for the use, 10 percent
9 of parking spaces shall be EV-ready.

10 3. The following uses are subject to the alternative requirements in
11 23.54.034.B.2:

12 a. The following institutional uses:

13 1. Community club or center;

14 2. Child care center;

15 3. Community farm;

16 4. Library;

17 5. Museum;

18 6. Private club;

19 7. Religious facility; and

20 8. School, elementary or secondary;

21 b. Entertainment uses;

22 c. Eating and drinking establishments;

23 d. Automotive sales and services;

1 e. Multipurpose retail sales;

2 f. Heavy sales and services, except heavy commercial services; and

3 g. Marine sales and services.

4 ((3-)) C. Rounding. When calculating the number of required EV-ready parking spaces,
5 any fraction or portion of an EV-ready parking space required shall be rounded up to the
6 nearest whole number.

7 ((4-)) D. Reductions

8 ((a-)) 1. The Director may, in consultation with the Director of Seattle City
9 Light, reduce the requirements of this ((subsection 23.54.030.L)) Section 23.54.034 as a Type I
10 decision ((where)) if there is substantial evidence ((substantiating)) that the added electrical
11 load that can be attributed to meeting the requirements will:

12 ((1-)) a. Alter the local utility infrastructure design requirements on the
13 utility side of the legal point of service, so as to require on-property power transformation; or

14 ((2-)) b. Require an upgrade to an existing residential electrical service.

15 ((b-)) 2. In cases where the provisions of subsection ((23.54.030.L.4.a))
16 23.54.034.D.1 have been met, the maximum quantity of EV charging infrastructure required to
17 be installed shall be reduced to the maximum service size that would not require the changes to
18 transformation or electrical service in subsection ((23.54.030.L.4.a)) 23.54.034.D.1. The
19 Director may first reduce the required level of EV infrastructure at EV-ready parking spaces
20 from 40-amp to 20-amp circuits. If necessary, the Director may also then reduce the number of
21 required EV-ready parking spaces or otherwise reduce the level of EV infrastructure at EV-
22 ready parking spaces.

((e-)) 3. The Director may establish by rule the procedures and documentation required for a reduction request.

~~((5.))~~ E. All EV charging infrastructure shall be installed in accordance with the Seattle Electrical Code. Where EV-ready surface parking spaces are located more than 4 feet from a building, raceways shall be extended to a pull box or stub in the vicinity of the designated space and shall be protected from vehicles.

((6-)) F. Accessible parking. Where new EV-ready parking spaces and new accessible parking are both provided, parking facilities shall be designed so that at least ~~((one))~~ 20 percent of the accessible parking spaces or two accessible parking spaces, whichever is greater, shall be EV-ready. The accessible parking EV-ready infrastructure may also serve adjacent parking spaces not designated as accessible parking. The EV-ready accessible parking spaces, rounded up to the next whole number, are allowed to be included in the total number of electric vehicle parking spaces required under 23.54.034.A. and 23.54.034.B.

((7-)) G. Nothing in this ((subsection 23.54.030.L)) Section 23.54.034 shall be construed to modify the minimum number of off-street motor vehicle parking spaces required for specific uses or the maximum number of parking spaces allowed, as set forth in Section 23.54.015 or elsewhere in this Title 23.

((8-)) H. This Section ((23.54.030)) 23.54.034 does not require EV supply equipment, as defined by Article 100 of the Seattle Electrical Code, to be installed.

Section 63. Section 23.60A.156 of the Seattle Municipal Code, last amended by Ordinance 124750, is amended as follows:

23.60A.156 Standards for environmentally critical areas in the Shoreline District

* * *

K. Subdivisions and short subdivisions

1. The standards for short subdivisions and subdivisions in Section 25.09.240 incorporated by reference into this Chapter 23.60A apply to short subdivisions and subdivisions in the Shoreline District, except as provided in subsections 23.60A.156.K.2 and 23.60A.156.K.3.

2. Subsection 25.09.240.B does not apply. Parcels shall be divided so that each lot contains an area for the principal structure, all accessory structures, and necessary walkways and access for this area that are outside the riparian corridor, wetlands, wetland buffers, and steep slope areas and buffers, except as follows:

a. Development on upland lots may be located on steep slope areas that have been created through previous legal grading activities, including rockeries or retaining walls resulting from rights-of-way improvements, if steep slope erosion is not increased as determined by the Director based on a geotechnical report; and

b. Development on upland lots may be located on steep slope areas that are less than 20 feet in vertical rise and that are 30 feet or more from other steep slope areas, if steep slope erosion is not increased as determined by the Director based on a geotechnical report.

3. Subsection ((~~25.09.240.E~~)) 25.09.240.D does not apply. In computing the number of lots a parcel in a single-family zone may contain, the Director shall exclude easements and/or fee simple property used for shared vehicular access to proposed lots that are required under Section 23.53.005.

L. ((~~Environmentally critical areas administrative conditional use. The provisions of Section 25.09.260 do not apply in the Shoreline District.~~)) Reserved.

* * *

Section 64. Subsection 23.66.030.D of the Seattle Municipal Code, which section was last amended by Ordinance 126760, is amended as follows:

23.66.030 Certificates of Approval – Application, review, and appeals

* * *

D. Review

1. Review when no special review board is established

a. When there is no special review board, the Department of Neighborhoods Director shall, within 30 days of a determination that an application for a certificate of approval is complete, determine whether the proposed action is consistent with the use and development standards for the district and shall, within 15 additional days, issue, issue with conditions, or deny the requested certificate of approval.

b. A copy of the Department of Neighborhoods Director's decision shall be sent to the Director and mailed to the owner and the applicant at the addresses provided in the application. Notice of the Director's decision also shall be provided to any person who, prior to the rendering of the decision, made a written request to receive notice of the decision or submitted written substantive comments on the application.

2. Review when special review board is established

a. When a special review board has been established, the board shall hold a public meeting to receive comments on certificate of approval applications.

b. Notice of the board's public meeting shall be posted in two prominent locations in the district at least three days prior to the meeting.

c. The board, after reviewing the application and considering the information received at the public meeting, shall make a written recommendation to the

1 Department of Neighborhoods Director to grant, grant with conditions, or deny the certificate of
2 approval application based upon the consistency of the proposed action with the requirements of
3 this Chapter 23.66, the district use and development standards, and the purposes for creating the
4 district. The board shall make its recommendation within 30 days of the receipt of a completed
5 application by the board staff, except that the applicant may waive the deadlines in writing for
6 the special review board to make a recommendation or the Director of the Department of
7 Neighborhoods to make a decision, if the applicant also waives any deadlines on the review or
8 issuance of related permits that are under review by the Seattle Department of Construction and
9 Inspections.

10 d. The Department of Neighborhoods Director shall, within 15 days of
11 receiving the board's recommendation, issue or deny a certificate of approval or issue an
12 approval with conditions.

13 e. A copy of the decision shall be sent to the Director and mailed to the
14 owner and the applicant at the addresses provided in the application. Notice of the decision shall
15 be provided to any person who, prior to the rendering of the decision, made a written request for
16 notice of the decision, or submitted substantive written comments on the application.

17 3. Notwithstanding any contrary provision of Section 23.66.020 or Title 23,
18 applications for certificates of approval for the following items shall be subject to the process in
19 subsection 23.66.030.D.1 rather than the process in subsection 23.66.030.D.2:

20 a. The installation, removal, or alteration of: fire escapes, ducts, conduits,
21 HVAC vents, grilles, pipes, panels (including photovoltaic panels), weatherheads, wiring,
22 meters, utility connections, downspouts and gutters, or other similar mechanical, electrical, or
23 telecommunication elements necessary for the normal operation of the site, building, or structure.

b. Installation, removal, or alteration(~~(, or removal)~~) of minor communication utility equipment on rooftops or streetlight poles, when the location does not have impacts on other historic resources and otherwise complies with the City Design Guidelines for minor communication utilities.

c. Installation, removal, or alteration of exterior light fixtures, exterior security lighting, ~~((and))~~ or security system equipment.

d. Installation, removal, or alteration of exterior or interior signage.

e. Installation, removal, or alteration of awnings or canopies.

f. Installation, removal, or alteration(~~(, or removal)~~) of window treatments, including but not limited to blinds, curtains, shades, or window film.

g. Alterations to storefront systems, if the proposed alterations are sympathetic to and do not destroy historic building materials.

h. Alteration to exterior paint colors and other finishes when painting a previously painted or otherwise finished material.

i. Installation, removal, or alteration of the following landscape elements: shrubs; perennials; annuals; and similar low-lying plantings.

j. Installation, removal, or alteration of the following site furnishings: benches; movable tables and seating; movable planters; movable water features; trash/recycling receptacles; and bike racks.

k. Installation, removal, or alteration of fences, gates, and barriers.

l. Right-of-way alterations, including but not limited to alterations to sidewalks, curbs, and the roadway.

m. Repaving and restriping of existing asphalt paved areas not within public rights-of-way.

n. Installation of improvements for accessibility compliance.

o. Installation, removal, or alteration of fire and life safety equipment.

p. Temporary emergency alterations, if the proposed replacement material used is compatible with the historic building fabric.

q. Change of use, establishment of a new use, or expansion of use, if use is a preferred use per Chapter 23.66 or applicable district rules.

r. Replacement of non-original doors and windows within original openings, when the design intent is consistent with the Secretary of the Interior's Standards for Rehabilitation.

s. Revisions to a previously approved (~~Certificate~~) certificate of (~~Approval~~) approval, where the design revisions are sympathetic to and do not destroy historic building materials.

t. Alterations or changes to accommodate seismic improvements.

4. A decision denying a certificate of approval shall state the specific reasons for the denial and explain why the proposed changes are inconsistent with the requirements of this Subchapter I and adopted use and development standards for the district.

5. Essential public facilities. No certificate of approval may be denied or conditioned in a manner that would preclude the siting of an essential public facility as provided in Chapter 23.80.

* * *

Section 65. Section 23.72.008 of the Seattle Municipal Code, last amended by Ordinance 124378, is amended as follows:

23.72.008 Uses permitted in specified areas within the Sand Point Overlay District

* * *

B. Uses (~~((Permitted Within Portions))~~) permitted within portions of Subarea B depicted on Map A for 23.72.008(~~(-)~~)

1. Principal (~~((Uses Permitted Outright))~~) uses permitted outright. In addition to the principal uses permitted by the provisions of Section (~~((23.44.006))~~) 23.44.020, the following principal uses are permitted outright in Subarea B as depicted on Map A for 23.72.004, subject to subsection (~~((B4:))~~) 23.72.008.B.4:

- a. Custom and craft work;
- b. Dry boat storage, limited to storage of non-motorized, hand-launchable boats such as kayaks, canoes, and sail boats;
- c. Indoor and outdoor sports and recreation;
- d. Institutions, except hospitals;
- e. Lecture and meeting halls;
- f. Motion picture theater not to exceed 500 seats within Building 47;
- g. Offices, limited to a total of 86,000 gross square feet in the entire subarea;
- h. Performing arts theaters;
- i. Research and development laboratories;
- j. Restaurants without drive-in lanes, limited to no more than 2,500 square feet per business establishment;

k. Storage of fleet vehicles including accessory service and repair;
l. Warehouses; and
m. General retail sales and service, up to 6,000 square feet per business establishment.

2. Accessory ~~((Uses))~~ uses. Accessory uses that meet the following standards and that are customarily incidental to the principal uses permitted outright, are permitted outright:

a. The area devoted to the accessory use is limited no more than 20 percent of the gross floor area of the principal use it serves;

b. Only principal uses permitted by this ~~((section))~~ Section 23.72.008 and by the applicable provisions of Chapter 23.60A are allowed as accessory uses.

3. When not in use as a motion picture studio, a structure with an established use as a motion picture studio as of July 18, 1997, may be used for indoor and outdoor sports and recreation.

4. Any area not occupied by structures in existence as of July 18, 1997, paved parking areas in existence as of July 18, 1997, or rights-of-way in existence as of July 18, 1997, is limited to open space, dry boat storage or recreation uses.

* * *

Section 66. Section 23.75.180 of the Seattle Municipal Code, last amended by Ordinance 124843, is amended as follows:

23.75.180 Parking

A. Parking is regulated by this Section 23.75.180 and not by Sections 23.54.015~~((;))~~ or 23.54.016~~((;))~~ or subsections 23.54.030.A~~((;))~~ or 23.54.030.B, except for bicycle parking, which is required pursuant to ~~((subsection 23.54.015.K))~~ Section 23.54.037. Parking maximums in this

Section 23.75.180 do not include parking for dwelling units existing as of January 1, 2012, so long as those units exist.

B. There is no minimum requirement for parking spaces for motor vehicles. Maximum motor vehicle parking space limits are as follows:

1. For the NW Sector, parking shall not exceed 1,350 spaces, plus 0.7 spaces per dwelling unit or live-work unit in the sector, except that up to an additional 450 parking spaces may be permitted as a special exception pursuant to Chapter 23.76. When deciding whether to grant a special exception, the Director shall consider evidence of parking demand for nonresidential uses and alternative means of transportation, including but not limited to the following:

a. Whether the additional parking will substantially encourage the use of single occupancy vehicles;

b. Characteristics of the work force and employee hours, such as multiple shifts that end when transit service is not readily available;

c. Proximity of transit lines to the lot and headway times of those lines;

d. Whether the additional parking will adversely affect vehicular and pedestrian circulation in the area; and

e. Potential for shared use of additional parking as residential or short-term parking.

2. For the NE, SE, and SW Sectors, Table A for 23.75.180 establishes maximum parking allowed based on the uses on a lot, subject to any transfer of unused parking allowance between lots in the same sector under Section 23.75.040.

~~((Table A for 23.75.180~~

~~Maximum motor vehicle parking limits for NE, SE, and SW Sectors))~~

Table A for 23.75.180

Maximum motor vehicle parking limits for NE, SE, and SW sectors

Use	Maximum parking allowed ¹
Residential	0.7 spaces/dwelling unit or live-work unit ²
Office	1 space/1,000 square feet of gross floor area
All other uses	1 space/500 square feet of gross floor area

Footnote to Table A for 23.75.180

¹ Based on the development of one or more uses on the lot where the parking is located, subject to any transfer of unused allowance between lots in the same sector under Section 23.75.040.

² One additional space beyond this maximum limit shall be allowed for each dwelling unit with ((3)) three or more bedrooms.

C. Barrier-free parking is required consistent with Seattle Building Code requirements.

D. For purposes of this Section 23.75.180, all parking is classified as "surface parking," as defined in Section 23.84A.030, or as "aboveground," "partially underground," or "underground," as shown in Exhibit A for 23.75.180 and described as follows:

1. "Aboveground parking" means any portion of a parking garage where:

a. ~~((the))~~ The structure projects more than 4 feet in height above finished grade within 30 feet of a build-to line or reduced setback area; or

b. ~~((the))~~ The structure projects more than 6 feet in height above finished grade in any other location.

2. "Partially underground parking" means any portion of a parking garage where:

a. ~~((the))~~ The structure projects 4 feet or less in height above finished grade within 30 feet of a build-to line or reduced setback area; or

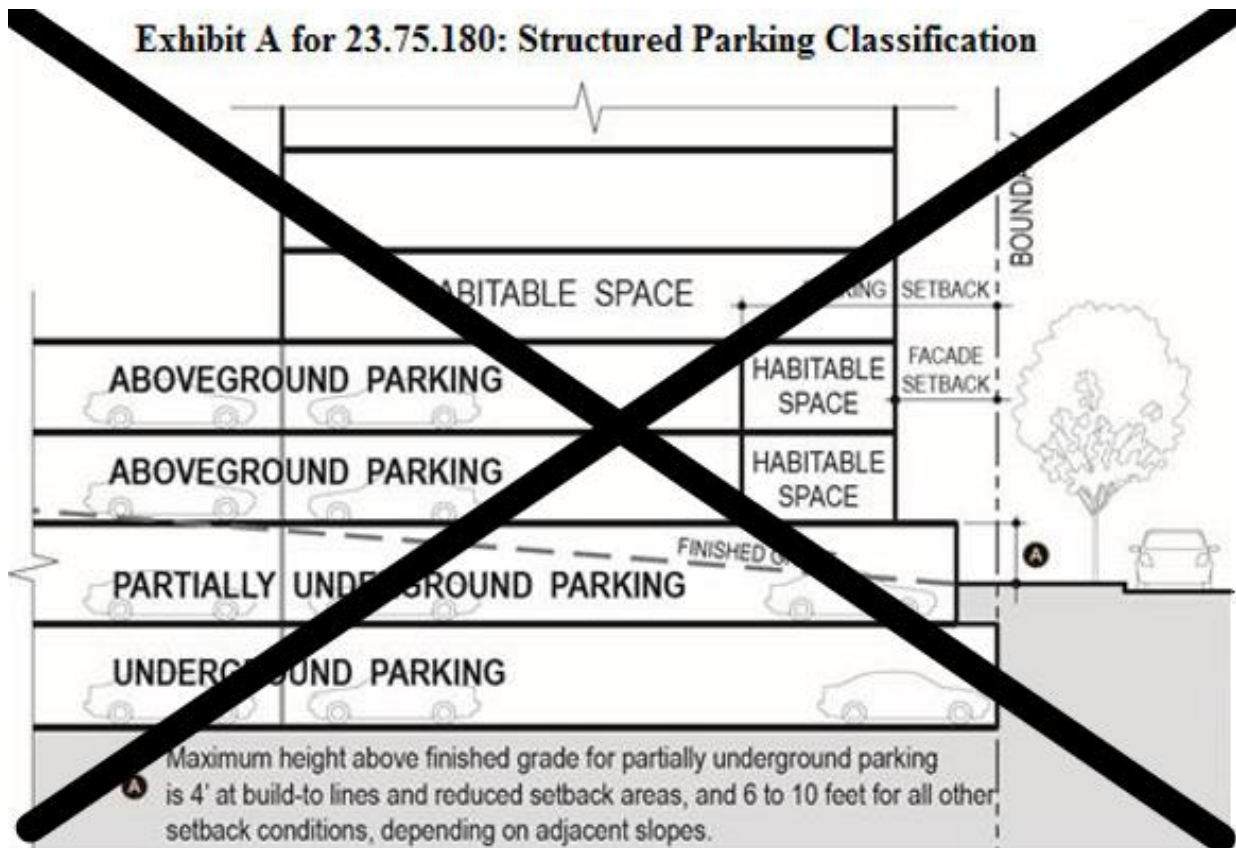

b. ~~((the))~~ The structure projects 6 feet or less in height above finished grade along any other location where the grade along the boundary has a slope of less than ~~((6))~~ six percent; or

c. ~~((the))~~ The structure projects 10 feet or less in height above finished grade along any other location where the grade along the boundary has a slope of ~~((6))~~ six percent or greater.

3. "Underground parking" means a story of parking garage where all floor area, walls, and ceiling structure are entirely below finished grade, excluding access.

1 **Exhibit A for 23.75.180**

2 **Structured ((~~Parking Classification~~)) parking classification**

3

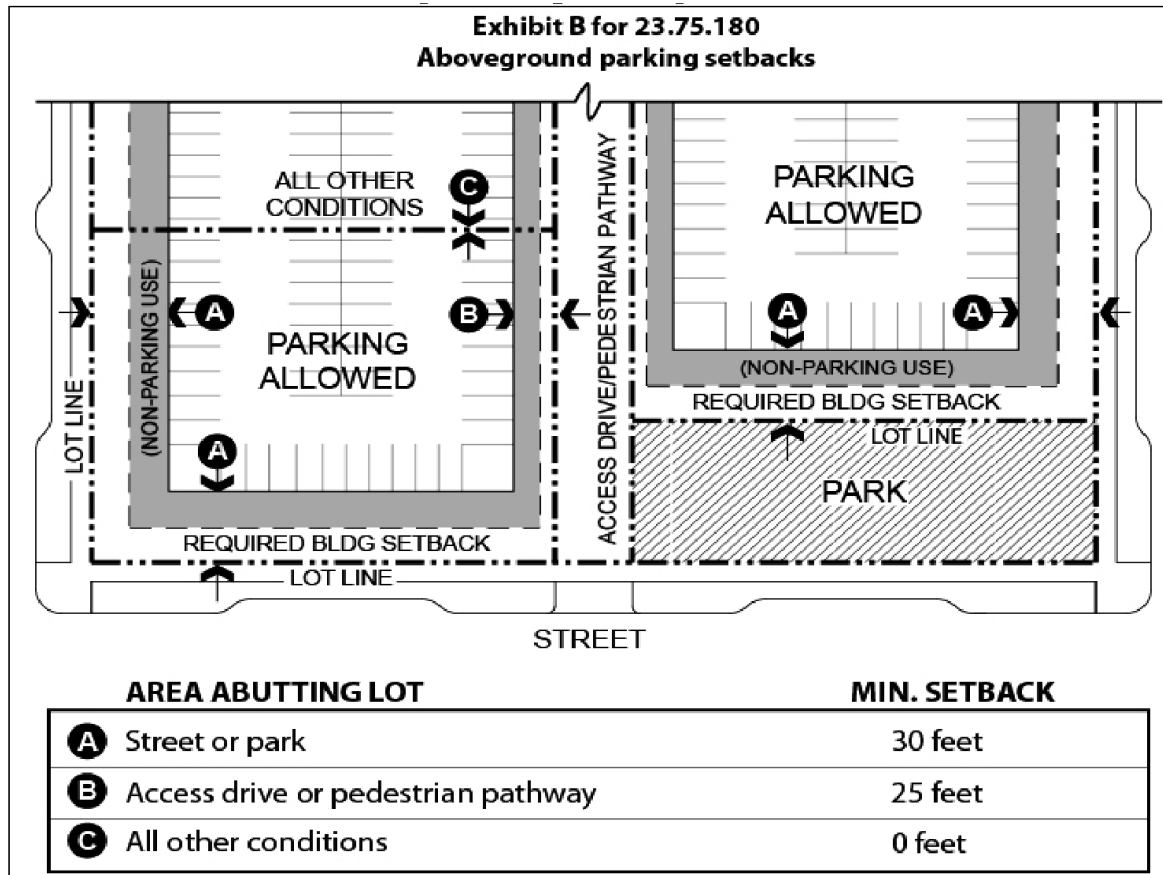

* * *

F. Aboveground parking is subject to the following requirements((-)) :

1. Minimum setbacks for aboveground parking are established in Exhibit B for 23.75.180. No parking setbacks are required from lot lines abutting the Interstate 5 right-of-way.

Exhibit B for 23.75.180

Aboveground parking setbacks

2. Parking within 50 feet of a street, park that is open to the public, access drive, or pedestrian pathway may not exceed three levels of aboveground parking.

3. Aboveground parking and loading areas shall be separated from each regulated facade by a normally occupied use along at least 80 percent of the width of the regulated facade, except where parking access and/or loading access occurs. The remaining part of the ((~~facade~~)) facade shall include architectural detailing, artwork, vegetated walls, or other landscape features, with an opaque screen at least 3.5 feet high on each story.

4. If aboveground parking or an aboveground loading area abuts any ((~~facade~~)) facade other than a regulated ((~~facade~~)) facade, that ((~~facade~~)) facade shall be enhanced with

1 architectural detailing, artwork, vegetated walls, or other landscape features. Each story shall
2 have an opaque screen at least 3.5 feet high.

3 G. Partially underground parking is subject to the following requirements:

4 1. At build-to lines and in reduced setback areas as depicted in Exhibit C for
5 23.75.140, partially underground parking is required to be set back at least 2 feet from the
6 boundary, as shown in Exhibit C for 23.75.180. In these locations, the aboveground portion of
7 the parking garage is not allowed to exceed 4 feet above finished grade.

8 2. Along boundaries that do not abut a street, park that is open to the public,
9 pedestrian pathway, or access drive, no setback is required for partially underground parking.

Exhibit C for 23.75.180

Setback for partially underground parking at build-to lines and reduced setback areas

3. Along boundaries that abut a street, park that is open to the public, pedestrian pathway, or access drive and are not subject to a build-to line or reduced setback area, partially underground parking is required to be set back at least 4 feet from the boundary, as shown in Exhibit D for 23.75.180, and must meet the following standards:

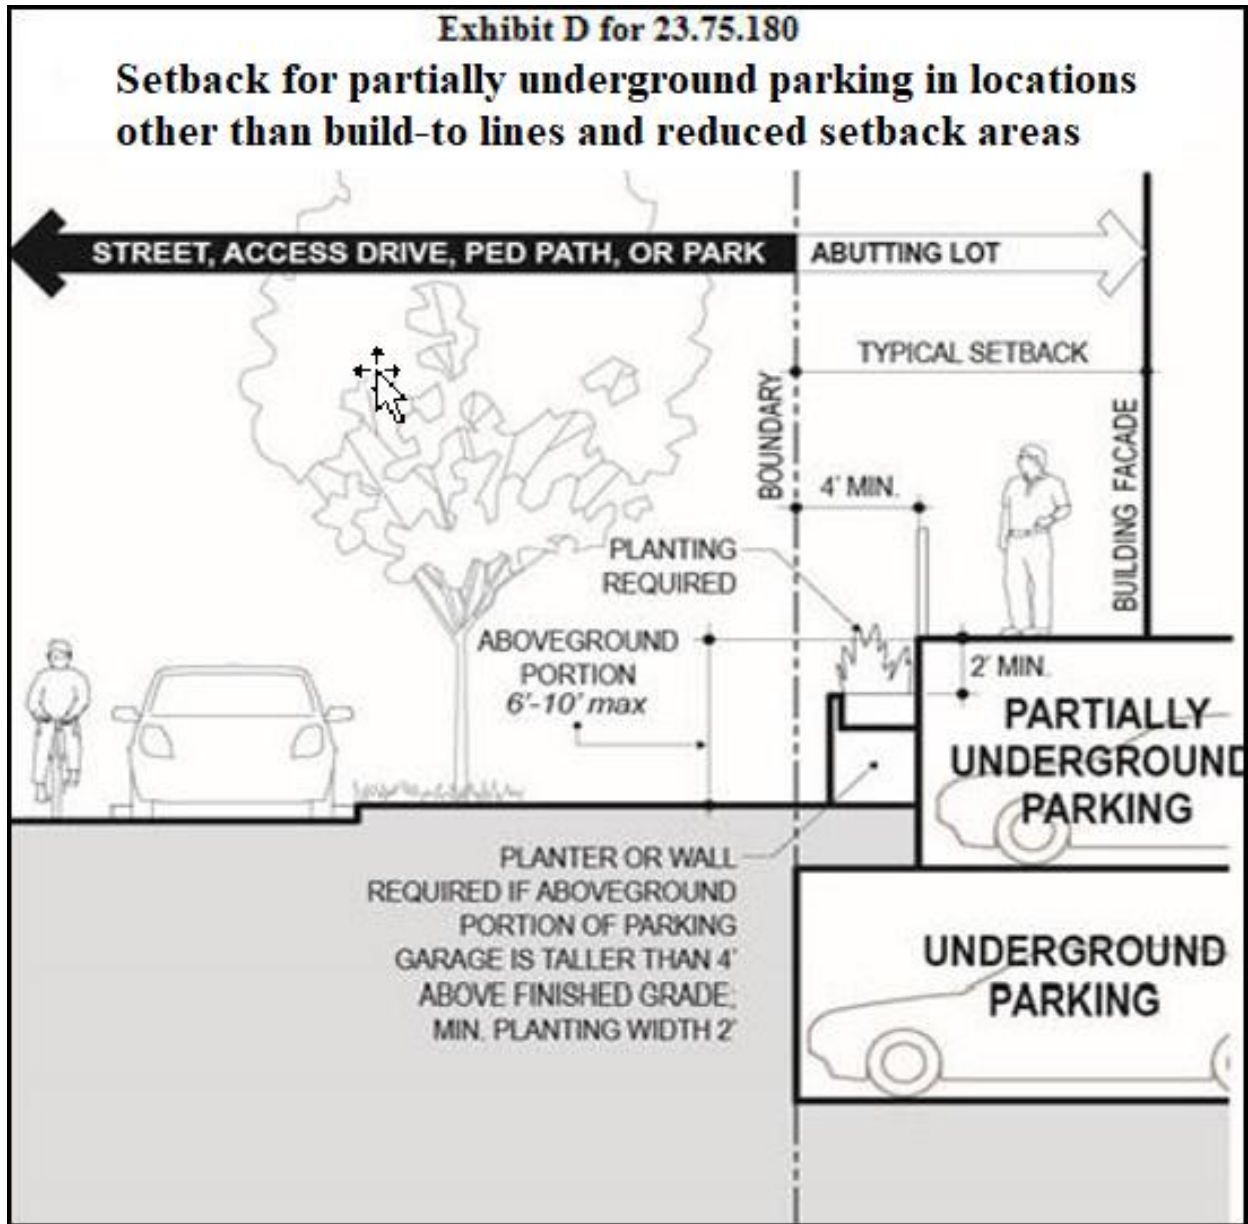

1 a. The aboveground portion is required to be no higher than 6 feet above
2 the finished grade at the boundary.

3 b. If the aboveground portion of the parking garage is taller than 4 feet
4 above finished grade, a wall or planter shall be provided between the parking garage and the
5 boundary, as illustrated in Exhibit D for 23.75.180. The top of this wall or planter shall be at
6 least ~~((two))~~ 2 feet below the top of the aboveground portion of the parking garage, and the
7 planting area shall be at least 2 feet in width. Vegetation shall be provided at the top of this wall
8 or planter.

Exhibit D for 23.75.180

Setback ((for Partially Underground Parking in Locations Other Than Build-to Lines and Reduced Setback Areas)) for partially underground parking in locations other than build-to lines and reduced setback areas

* * *

I. Parking and loading access

1. Access for parking and for loading is required to meet the following requirements:

- a. Access is not allowed within 40 feet of the curb line of an intersection.

b. Access is not allowed within 20 feet of a structure corner that includes a regulated ~~((façade))~~ facade on one or both sides.

2. Each access drive is required to include a dedicated pedestrian area along at least one side of the length of the drive. The dedicated pedestrian area is required to:

a. ~~((include))~~ Include a walking surface at least 6 feet wide along the length of the access drive; and

b. ~~((be))~~ Be separated from the access drive roadway by a raised curb, bollards, landscaping, or textured paving details.

3. Curb cuts are required to meet the standards of ~~((subsections 23.54.030.F and 23.54.030.G))~~ Section 23.54.031.

4. Driveways are required to meet the standards of subsection 23.54.030.D.

Section 67. Section 23.76.064 of the Seattle Municipal Code, last amended by Ordinance 118672, is amended as follows:

23.76.064 Approval of City facilities~~((:))~~

A. Concept ~~((Approval))~~ approval for City ~~((Facilities.))~~ facilities

1. In acting on the proposed siting or expansion of a City facility, the Council shall decide whether to approve in concept the facility. If concept approval is granted, the Council may impose terms and conditions, including but not limited to design criteria and conditions relating to the size and configuration of the proposed facility.

2. Following Council approval, final plans for a City facility shall be submitted to the Director. If the Director determines that the project is consistent with the Council's concept approval, the Director shall issue the necessary permits for the facility.

3. No further Council action is required for a City facility unless the Director determines that the final plans represent a major departure from the terms of the original Council concept approval, in which case the final plan shall be submitted to the Council for approval in the same manner as the original application.

B. City (~~(Facilities Not Meeting Development Standards)~~) facilities not meeting development standards. The Council may waive or modify applicable development standards, accessory use requirements, special use requirements, or conditional use criteria for City facilities. If a waiver or modification of a development regulation is sought because the development regulation would otherwise preclude the siting of an essential public facility, then the decision to waive or modify shall be made pursuant to Chapter 23.80 and not this Section 23.76.064.

Section 68. Subsection 23.80.004.B of the Seattle Municipal Code, which section was last amended by Ordinance 124105, is amended as follows:

23.80.004 Review criteria(~~(:)~~)

* * *

B. (~~(If)~~) Except as provided in subsection 23.80.004.C, if the decisionmaker determines that attaching conditions to the permit approval will facilitate project siting in light of the considerations identified above, the decisionmaker may establish conditions for the project for that purpose. However, the decisionmaker may waive or modify development regulations only to the extent that a waiver or modification is approved pursuant to Section 23.80.010.

* * *

Section 69. A new Section 23.80.006 is added to the Seattle Municipal Code as follows:

23.80.006 Identifying new types of essential public facilities

The Director may, as a Type I decision, determine that a facility not otherwise listed in the definition of an essential public facility in Section 23.84A.010 is an essential public facility if:

A. The facility provides or is necessary to provide a public service; and

B. Any of the following conditions exist:

1. The public facility needs a specific type of site of such a size, location, or availability of public services for which there are few choices;

2. The public facility needs to be located near another public facility or is an expansion of an essential public facility at an existing location;

3. The public facility has significant adverse impacts that make it difficult to site;

4. Use of the normal development review process would effectively preclude the siting of an essential public facility; or

5. Development regulations require the proposed facility to use an essential public facility siting process.

Section 70. A new Section 23.80.008 is added to the Seattle Municipal Code as follows:

23.80.008 Review is supplementary

Review of an essential public facility, except for light rail facilities, under this Chapter 23.80, including a decision to condition approval of a project or to waive or modify a development regulation as authorized by this Chapter 23.80, is part of the decision to approve or deny a permit application and is not a separate or distinct regulatory decision. If the underlying decision is subject to administrative appeal, then decisions made under this Chapter 23.80 are subject to review on administrative appeal of the underlying decision. If the underlying decision is not subject to administrative appeal, then decisions made under this Chapter 23.80 are not subject to review on administrative appeal of the underlying decision.

Section 71. A new Section 23.80.010 is added to the Seattle Municipal Code as follows:

23.80.010 Waiver or modification of development regulation

A. Application for waiver or modification. If the applicant for approval of an essential public facility seeks the waiver or modification of a development regulation, the applicant shall include in the application:

1. The specific identification of each development regulation sought to be waived or modified;

2. A detailed explanation of the manner in which each development regulation is believed to preclude the siting of the essential public facility; and

3. A detailed description of any mitigation measures the applicant proposes to take to avoid or mitigate the adverse effects that may result from the proposed waiver or modification of the development regulation.

B. Decision to waive or modify. If the decisionmaker determines that application of a development regulation will preclude the siting of an essential public facility, the decisionmaker shall waive or modify the application of the development regulation to the extent necessary to allow siting the facility. The decisionmaker shall consider the provisions of WAC 365-196-550 when deciding whether a development regulation precludes the siting of the facility.

C. Mitigation. If the decisionmaker waives or modifies a development regulation, the decisionmaker may require the applicant to comply with conditions that avoid or mitigate adverse effects that the decisionmaker believes may result from waiver or modification of the development regulation. If the development regulation to be waived or modified is contained in Chapter 23.60A or Chapter 25.09, and the waiver or modification would result in a net loss of

1 ecological function, the decisionmaker shall impose mitigation conditions to achieve no net loss
2 of ecological functions as a result of granting the waiver or modification.

3 D. Relationship to other provisions authorizing exceptions, variances, exemptions, and
4 other forms of relief

5 1. Except as provided in subsection 23.80.010.D.2, regardless of any other
6 provision of this Title 23, Chapter 25.09, or Chapter 25.11, if an applicant seeks the waiver or
7 modification of a development regulation under this Section 23.80.010, the applicant is not
8 required to also seek relief from the application of the development regulation pursuant to any
9 other form of relief afforded by the Seattle Municipal Code, including procedures for exceptions,
10 variances, exemptions, and similar procedures. However, an applicant is not precluded from
11 seeking such other relief in addition to relief under this Section 23.80.010.

12 2. When the waiver or modification sought under this Section 23.80.010 is of a
13 development regulation contained in Chapter 23.60A, the applicant must seek relief from the
14 development regulation pursuant to the procedures set forth in Chapter 23.60A. In the event that
15 relief cannot be granted under those procedures, the development regulation may be waived or
16 modified under this Section 23.80.010.

17 E. Exemption for light rail facilities. This Section 23.80.010 does not apply to light rail
18 facilities. Development standards for light rail facilities may be waived or modified pursuant to
19 subsection 23.80.004.C.

20 Section 72. Section 23.84A.002 of the Seattle Municipal Code, last amended by
21 Ordinance 126855, is amended as follows:

22 **23.84A.002 “A”**

23 * * *

“Adult family home((?))” ~~((See “Residential use.”))~~ means the occupation of a dwelling unit by an adult family home defined and licensed as such by the State of Washington under chapter 70.128 RCW.

* * *

Section 73. Section 23.84A.006 of the Seattle Municipal Code, last amended by Ordinance 127099, is amended as follows:

23.84A.006 "C"

* * *

~~((“Carriage House” See “Residential use.”
“Carriage House structure” See “Residential use.”))~~

* * *

~~((“Cottage, backyard.” See “detached accessory dwelling unit” under the definition of “Residential use” in Section 23.84A.032.))~~

* * *

Section 74. Section 23.84A.008 of the Seattle Municipal Code, last amended by Ordinance 127211, is amended as follows:

23.84A.008 “D”

* * *

~~((“Duplex” means a single structure containing only two dwelling units, neither of which is a legally established accessory dwelling unit.))~~

“Dwelling unit” means a room or rooms located within a structure that are configured to meet the standards of Section 23.42.048 ~~((and that are occupied or intended to be occupied by not more than one household as living accommodations independent from any other~~

~~household.))~~ , providing independent living facilities for one household, including permanent provisions for sleeping, food preparation, and sanitation.

“Dwelling unit, accessory((-))” (~~See “Residential use.”~~) means a dwelling unit that:

1. Is located within the same structure as a principal dwelling unit or within an accessory structure on the same lot as a principal dwelling unit; and
2. Is designed and arranged to be occupied as living facilities independent from any other dwelling unit.

“Dwelling unit, attached” means a dwelling unit that:

1. Occupies space from the ground to the roof of the structure in which it is located; and
2. Is attached to another dwelling unit. Dwelling units are considered attached if they share a common or party wall or have walls containing floor area that are located within 2 feet of each other.

“Dwelling unit, detached” means a dwelling unit that:

1. Occupies space from the ground to the roof of the structure in which it is located; and
2. Is not attached to any other dwelling unit.

~~((“Dwelling unit, detached accessory.” Also known as a backyard cottage. See “detached accessory dwelling unit” under the definition of “Residential use” in Section 23.84A.032.))~~

“Dwelling unit, principal” means a dwelling unit that is not accessory to another dwelling unit.

“Dwelling unit((-)), small efficiency” means a dwelling unit with an amount of square footage less than the minimum amounts specified for Efficiency Dwelling Units in the Seattle Building Code, and that meets the standards prescribed in Section 23.42.048.

“Dwelling unit, stacked” means dwelling units that are located above or below other dwelling units such as apartments or condominium buildings.

Section 75. Section 23.84A.010 of the Seattle Municipal Code, last amended by Ordinance 126685, is amended as follows:

23.84A.010 “E”

* * *

“Essential public facilities” (~~((within the City of Seattle))~~) means (~~((airports,))~~) sewage treatment plants, (~~((jails,))~~) light rail transit systems, (~~((and))~~) power plants, any facilities identified as an essential public facility in RCW 36.70A.200, and any facility determined to be an essential public facility pursuant to Section 23.80.006.

“EV-ready” means a minimum 40-ampere dedicated 208- or 240-volt branch circuit (32-amp load) terminated at a junction box or receptacle outlet in close proximity to a parking space.

* * *

Section 76. Section 23.84A.016 of the Seattle Municipal Code, last amended by Ordinance 127099, is amended as follows:

23.84A.016 "H"

* * *

"Housing, low-income" means a structure or structures for which:

1 1. An application for public funding for the capital costs of development or
2 rehabilitation of the structure(s) has been or will be submitted; and
3 2. ~~((Public))~~ A written notice of public funding ~~((is awarded))~~ award, including
4 terms, is received prior to issuance of the ~~((first))~~ building permit, which for development
5 projects shall be the first building permit that includes the structural frame for each structure, and
6 such funding is conditioned on one or more regulatory agreements, covenants, or other legal
7 instruments, recorded on the title of the property and enforceable by The City of Seattle, King
8 County, State of Washington, Washington State Housing Finance Commission, or other public
9 agency, if approved by the Director of Housing, ~~((being executed and recorded on the title of the~~
10 ~~property that includes the low-income housing and such legal instruments either:~~
11 a. ~~For a minimum period of 40 years, require rental of at least 40 percent~~
12 ~~of the dwelling units, small efficiency dwelling units, or congregate residence sleeping rooms as~~
13 ~~restricted units with rent and income limits no higher than 60 percent of median income; or~~
14 b. ~~For a minimum period of 50 years, require at least 40 percent of the~~
15 ~~dwelling units as restricted units sold to buyers with incomes no higher than 80 percent of~~
16 ~~median income at prices (initial sale and resale) to allow modest growth in homeowner equity~~
17 ~~while maintaining long-term affordability for income-eligible buyers, all as determined by the~~
18 ~~Director of Housing))~~ that ensure at least 50 percent of total dwelling units shall be low-income
19 units.

20 * * *

21 Section 77. Section 23.84A.018 of the Seattle Municipal Code, last amended by
22 Ordinance 126862, is amended as follows:

23 **23.84A.018 "I"**

* * *

"Institution" means (~~((structures(s)))~~) structures and related grounds used by organizations for the provision of educational, medical, cultural, social, and/or recreational services to the community, including but not limited to the following uses:

1. "Adult care center" means an institution that regularly provides care to a group of adults for less than 24 hours a day, whether for compensation or not.

2. "College" means a post-secondary educational institution, operated by a nonprofit organization, granting associate, bachelor, and/or graduate degrees.

3. "Community club or center" means an institution used for athletic, social, civic, cultural, artistic, or recreational purposes, operated by a nonprofit organization, and open to the general public on an equal basis. Activities in a community club or center may include, but are not limited to, classes and events sponsored by nonprofit organizations, community programs for the elderly, social gatherings, educational programming, gardens, and art exhibits(~~((;))~~).

a. "Community center" means a community club or center use, providing direct services to people on the premises rather than carrying out only administrative functions, that is open to the general public without membership. Community centers may include accessory commercial uses including but not limited to commercial kitchens and food processing, craft work and maker spaces, cafes, galleries, co-working spaces, health clinics, office spaces, and retail sales of food and goods.

b. "Community club" means a community club or center use(~~((;~~
~~membership)))~~ to which membership is open to the general public on an equal basis.

4. "Child care center" means an institution that regularly provides care to a group of children for less than 24 hours a day, whether for compensation or not. Preschools,

cooperative child care exchanges, and drop-in centers where children receive care by the day
((shall be)) are considered to be child care centers.

5. "Community farm" means an institution, operated by a nonprofit organization,
in which land and related structures are primarily used to grow or harvest plants for food,
educational, cultural, or ecological restoration purposes, or to keep animals in accordance with
Section 23.42.052. Additional activities may include but are not limited to indoor and outdoor
classes and events, food processing and preparation, community programs and gatherings, and
the sale of plants, harvested or prepared food, ornamental crops, and animal products such as
eggs or honey but not including the slaughtering of animals or birds for meat.

~~6. ("Family support center" means an institution that offers support services and
instruction to families, such as parenting classes and family counseling, and is co-located with a
Department of Parks and Recreation community center.~~

~~7.))~~ "Hospital" means an institution other than a nursing home that provides
accommodations, facilities, and services over a continuous period of 24 hours or more, for
observation, diagnosis, and care of individuals who are suffering from illness, injury, deformity,
or abnormality or from any condition requiring obstetrical, medical, or surgical services, or
alcohol or drug detoxification.

~~((8.))~~ 7. "Institute for advanced study" means an institution operated by a
nonprofit organization for the advancement of knowledge through research, including the
offering of seminars and courses, and technological and/or scientific laboratory research.

~~((9.))~~ 8. "Library" means an institution where literary, musical, artistic, or
reference materials are kept for use but not generally for sale.

1 ((10-)) 9. "Museum" means an institution operated by a nonprofit organization as
2 a repository of natural, scientific, historical, cultural, or literary objects of interest or works of
3 art, and where the collection of such items is systematically managed for the purpose of
4 exhibiting them to the public.

5 ((11-)) 10. "Private club" means an institution used for athletic, social, or
6 recreational purposes and operated by a private nonprofit organization, ((membership)) to which
7 membership is by written invitation and election according to qualifications in the club's charter
8 or bylaws and the use of which is generally restricted to members and their guests.

9 ((12-)) 11. "Religious facility" means an institution, such as a church, temple,
10 mosque, synagogue, or other structure, together with its accessory structures, used primarily for
11 religious worship.

12 ((13-)) 12. "School, elementary or secondary" means an institution operated by a
13 public or nonprofit organization primarily used for systematic academic or vocational instruction
14 through the twelfth grade.

15 ((14-)) 13. "School, vocational or fine arts" means an institution that teaches
16 trades, business courses, hairdressing, and similar skills on a post-secondary level, or that teaches
17 fine arts such as music, dance, or painting to any age group, whether operated for nonprofit or
18 profit-making purposes, except businesses that provide training, instruction, or lessons
19 exclusively on an individual basis, which are classified as general retail sales and service uses,
20 and except those businesses accessory to an indoor participant sports use.

21 ((15-)) 14. "University." See "College."

22 Section 78. Section 23.84A.024 of the Seattle Municipal Code, last amended by
23 Ordinance 126855, is amended as follows:

23.84A.024 “L”

* * *

"Lot line, front" means: ~~((in the case of a lot with frontage on a single street, the lot line separating the lot from the street, and in the case of a lot with frontage on more than one street other than a through lot, the lot line separating the lot from any abutting street, provided the other lot line(s) that abut streets are considered to be either side street lot line(s) or the rear lot line according to the definitions of those terms. In the case of a through lot, the lot lines separating the lot from the streets that are parallel or within 15 degrees of parallel to each other are both front lines. For new development on a lot with no street frontage, the front lot line shall be the lot line designated by the project applicant in accordance with Section 23.86.010. If the area of the front yard based on a front lot line determined according to this definition is less than 20 percent of the total lot area and is less than 1,000 square feet in area, the Director may designate a different lot line as the front lot line in order to provide structural setbacks, building separations, and open space that are more consistent with those of other lots that are within 100 feet of the property.))~~

1. For a lot with frontage on a single street, the lot line separating the lot from the street;

2. For a through lot, all lot lines separating the lot from the streets that are parallel or within 15 degrees of parallel to each;

3. For a lot with frontage on more than one street other than a through lot, a lot line determined by the Director based on the existing pattern of lots and buildings on the block;
and

4. For a lot with no street frontage;

1 a. On a lot that has only one alley lot line, the alley lot line;

2 b. On a lot that has more than one alley lot line, one alley lot line

3 determined by the Director based on existing pattern of lots and buildings on the alleys; and

4 c. On a lot that has no alley lot lines, a lot line chosen by the applicant,

5 provided that the selected front lot line length is at least 50 percent of the width of the lot.

6 * * *

7 Section 79. Section 23.84A.025 of the Seattle Municipal Code, last amended by
8 Ordinance 127099, is amended as follows:

9 **23.84A.025 “M”**

10 * * *

11 “Major retail store” means a structure or portion of a structure that provides adequate
12 space of at least ~~((eighty thousand-))~~ 80,000 ~~(())~~ square feet to accommodate the merchandising
13 needs of a major new retailer with an established reputation, and providing a range of
14 merchandise and services, including both personal and household items, to anchor downtown
15 shopping activity around the retail core, thereby supporting other retail uses and the area's
16 vitality and regional draw for customers.

17 “Major transit service.” See “Transit service, major.”

18 “Major transit stop.” See “Transit stop, major.”

19 * * *

20 ~~((“Multifamily residential structure” means a structure containing only multifamily~~
21 ~~residential uses and permitted uses accessory to the multifamily residential uses.~~

22 ~~“Multifamily structure.” See “Residential use.”))~~

23 * * *

Section 80. Section 23.84A.030 of the Seattle Municipal Code, last amended by Ordinance 127099, is amended as follows:

23.84A.030 “P”

* * *

"Permanent supportive housing." ~~((means low income housing that is paired with on or off site voluntary human services to support people living with complex and disabling behavioral health or physical health conditions and experiencing homelessness or at imminent risk of homelessness prior to moving into such housing.))~~ See “Residential use, permanent supportive housing.”

* * *

~~((“Planned community development (PCD)” means a zoning process that authorizes exceptions from certain development standards for structures on large tracts of land in certain downtown zones. A PCD is developed as a single entity through a public process.~~

~~“Planned residential development (PRD)” means a zoning mechanism that allows for flexibility in the grouping, placement, size and use of structures on a fairly large tract of land. A PRD is developed as a single entity, using a public process that incorporates design review.))~~

* * *

Section 81. Section 23.84A.032 of the Seattle Municipal Code, last amended by Ordinance 127211, is amended as follows:

23.84A.032 “R”

* * *

"Residential use" means ~~((any one or more of))~~ a use in one or more structures, including interior and exterior accessory spaces, in which people primarily live including the following uses:

1. ~~((("Accessory dwelling unit" means a dwelling unit that:~~
a. ~~Is located within or attached to a structure containing a principal dwelling unit or within an accessory structure on the same lot as principal dwelling unit(s); and~~
b. ~~Is designed, arranged, and intended to be occupied as living facilities independent from any other dwelling unit.~~

2. ~~"Attached accessory dwelling unit" means an accessory dwelling unit that is within or attached to a structure containing a principal dwelling unit.~~

3. ~~"Adult family home" means an adult family home defined and licensed as such by the State of Washington in a dwelling unit.~~

4. ~~"Apartment" means a multifamily residential use that is not a cottage housing development, rowhouse development, or townhouse development.~~

5.)) "Artist's studio/dwelling" means a combination working studio and dwelling unit for artists, consisting of a room or suite of rooms occupied by not more than one household.

~~((6.))~~ 2. "Assisted living facility" means a ~~((use licensed by the State of Washington as a))~~ boarding home licensed by the State of Washington that contains at least two assisted living units for people who have either a need for assistance with activities of daily living (which are defined as eating, toileting, ambulation, transfer (e.g., moving from bed to chair or chair to bath), and bathing) or some form of cognitive impairment but who do not need the skilled critical care provided by nursing homes. See "Assisted living unit."

~~((7. "Carriage house" means a dwelling unit in a carriage house structure.~~

~~8. "Carriage house structure" means a structure within a cottage housing development, in which one or more dwelling units are located on the story above an enclosed parking garage at ground level that either abuts an alley and has vehicle access from that alley, or is located on a corner lot and has access to the parking in the structure from a driveway that abuts and runs parallel to the rear lot line of the lot. See also "Carriage house."~~

~~9.)) 3. "Caretaker's quarters" means a ((use accessory to a non-residential use consisting of a)) dwelling unit not exceeding 800 square feet of living area ((and)) that is occupied by a caretaker or watchperson and accessory to a nonresidential use.~~

~~((10.)) 4. "Congregate residence" means a use in which sleeping rooms are independently rented and lockable and provide living and sleeping space, and residents share kitchen facilities and other common elements with other residents in a building.~~

~~((11. "Cottage housing development" means a use consisting of cottages arranged on at least two sides of a common open space or a common amenity area. A cottage housing development may include a carriage house structure. See "Cottage," "Carriage house," and "Carriage house structure."~~

~~12. "Detached accessory dwelling unit" means an accessory dwelling unit in an accessory structure.~~

~~13. "Domestic violence shelter" means a structure or portion of a structure managed by a nonprofit organization, which unit provides housing at a confidential location and support services for victims of domestic violence.~~

~~14. "Floating home" means a dwelling unit constructed on a float that is moored, anchored, or otherwise secured in the water.~~

1 ~~15. "Low income housing.")~~

2 5. "Housing" means one or more dwelling units with permanent foundations or
3 moorage at a marina that are not defined as another type of residential use in this definition.

4 ~~((16.))~~ 6. "Mobile home" means a structure that is designed and constructed to
5 be transportable in one or more sections and built on a permanent chassis, designed to be used
6 as a dwelling unit without a permanent foundation, and connected to utilities that include
7 plumbing, heating, and electrical systems. A structure that was transportable at the time of
8 manufacture is still considered to meet this definition notwithstanding that it is no longer
9 transportable.

10 ~~((17. "Mobile home park" means a tract of land that is rented for the use of more~~
11 ~~than one mobile home occupied as a dwelling unit.~~

12 ~~18. "Multifamily residential use" means a use consisting of two or more~~
13 ~~dwelling units in a structure or portion of a structure, excluding accessory dwelling units, or a~~
14 ~~congregate residence.~~

15 ~~19. "Nursing home" means a use licensed by the State of Washington as a~~
16 ~~nursing home, that provides full-time convalescent and/or chronic care for individuals who, by~~
17 ~~reason of chronic illness or infirmity, are unable to care for themselves, but that does not~~
18 ~~provide care for the acutely ill or surgical or obstetrical services. This definition excludes~~
19 ~~hospitals or sanitariums.~~

20 ~~20.))~~ 7. "Permanent supportive housing((:))" means low-income housing that is
21 paired with on- or off-site voluntary human services to support people living with complex and
22 disabling behavioral health or physical health conditions and experiencing homelessness or at
23 imminent risk of homelessness prior to moving into such housing.

1 ~~((21. "Rowhouse development" means a multifamily residential use in which all~~
2 ~~principal dwelling units on the lot meet the following conditions:~~

3 ~~a. Each dwelling unit occupies the space from the ground to the roof of~~
4 ~~the structure in which it is located;~~

5 ~~b. No portion of a dwelling unit, except for an accessory dwelling unit or~~
6 ~~shared parking garage, occupies space above or below another dwelling unit;~~

7 ~~c. Each dwelling unit is attached along at least one common wall to at~~
8 ~~least one other dwelling unit, with habitable interior space on both sides of the common wall,~~
9 ~~or abuts another dwelling unit on a common lot line;~~

10 ~~d. The front of each dwelling unit faces a street lot line;~~

11 ~~e. Each dwelling unit provides pedestrian access directly to the street that~~
12 ~~it faces; and~~

13 ~~f. No portion of any other dwelling unit, except for an attached accessory~~
14 ~~dwelling unit, is located between any dwelling unit and the street faced by the front of that~~
15 ~~unit.~~

16 ~~22. "Single family dwelling unit" means a detached principal structure having a~~
17 ~~permanent foundation, containing one dwelling unit, except that the structure may also contain~~
18 ~~one or two attached accessory dwelling units where expressly authorized pursuant to this Title~~

19 ~~23. A detached accessory dwelling unit is not considered a single family dwelling unit for~~
20 ~~purposes of this Chapter 23.84A.~~

21 ~~23. "Townhouse development" means a multifamily residential use that is not a~~
22 ~~rowhouse development, and in which:~~

~~a. Each dwelling unit occupies space from the ground to the roof of the structure in which it is located;~~

~~b. No portion of a dwelling unit occupies space above or below another dwelling unit, except for an attached accessory dwelling unit and except for dwelling units constructed over a shared parking garage, including shared parking garages that project up to 4 feet above grade; and~~

~~c. Each dwelling unit is attached along at least one common wall to at least one other dwelling unit, with habitable interior space on both sides of the common wall, or abuts another dwelling unit on a common lot line.))~~

* * *

Section 82. Section 23.84A.036 of the Seattle Municipal Code, last amended by Ordinance 126157, is amended as follows:

23.84A.036 “S”

* * *

"Short subdivision" means the division or redivision of land into nine ~~((9))~~ or fewer lots, tracts, parcels, sites, or divisions for the purpose of sale, lease, development, or financing.

“Short subdivision, zero lot line” means a short subdivision that conforms to the unit lot subdivision standards in Section 23.24.045.

* * *

"Solar collector" means ~~((any))~~ a device used to collect direct sunlight for use in the heating or cooling of a structure, domestic hot water, ~~((or))~~ swimming pool, or the generation of electricity, including photovoltaic panels and solar thermal panels.

~~((“Solar greenhouse” means a solar collector that is a structure or portion of a structure utilizing glass or similar glazing material to collect direct sunlight for space heating purposes.))~~

* * *

"Structure, accessory." See "Accessory structure."

“Structure, attached” means a structure that shares a common or party wall with another structure or have walls containing floor area that are located within 2 feet of another structure.

"Structure, detached" means a structure (~~((having no common or party wall with another structure))~~) that is not attached to any other structure.

* * *

"Subdivision" means the division or redivision of land into ten ((10)) or more lots, tracts, parcels, sites, or divisions for the purpose of sale, lease, or transfer of ownership.

“Subdivision, zero lot line” means a subdivision that conforms to the unit lot subdivision standards in Section 23.22.062.

* * *

Section 83. Section 23.84A.038 of the Seattle Municipal Code, last amended by Ordinance 127211, is amended as follows:

23.84A.038 "T"

* * *

"Transit route, frequent" means a transit route or segment of a transit route providing frequent transit service in each direction. Segments of overlapping routes that are co-scheduled and together provide frequent transit service shall be considered to provide frequent transit service, and segments of these routes that do not overlap or do not meet these frequencies will not be considered to provide frequent transit service.

"Transit service, frequent" means transit service with scheduled service in a typical week meeting or exceeding the following scheduled frequencies:

1. On weekdays from 6 a.m. to 7 p.m., 15 minutes on average (i.e., 52 trips between 6 a.m. and 6:59 p.m., inclusive), and no individual hour with fewer than three scheduled trips in each direction;

2. On weekdays from 7 p.m. to 12 a.m., 30 minutes on average (i.e., ten trips between 7 p.m. and 11:59 p.m., inclusive), and no individual hour with fewer than one scheduled trip in each direction; and

3. On weekends from 6 a.m. to 12 a.m., 30 minutes on average (i.e., 36 trips between 6 a.m. and 11:59 p.m., inclusive), and no individual hour with fewer than one scheduled trip in each direction.

4. For the purposes of this definition, "individual hour" means the 60-minute period beginning at the top of each hour; e.g., 6 a.m. to 6:59 a.m., inclusive, or 3 p.m. to 3:59 p.m., inclusive.

"Transit service, major" means the following transit services:

1. Commuter rail;

2. Light rail or street car systems; and

3. Bus rapid transit routes that are in operation or are funded for development and projected for construction within an applicable six-year transit plan under RCW 35.58.2795.

"Transit service area, frequent" means an area within 1,320 feet walking distance of a bus stop served by a frequent transit route or an area within 2,640 feet walking distance of a rail transit station, as shown on a map adopted by Director's Rule.

1 “Transit service area, major” means an area within 2,640 feet walking distance of a stop
2 served by a major transit service, as shown on a map adopted by Director's Rule.

3 "Transit station, light rail." See "Rail transit facility" under "Transportation facility."

4 "Transit station access easement" means an easement for a pedestrian route or
5 connection to provide direct access from street level to transit tunnel stations and concourses
6 and/or light rail transit facilities.

7 "Transit station access, grade-level" means a pedestrian connection that provides direct
8 access from street level to transit tunnel stations or concourses and/or light rail transit facilities
9 at approximately the same level as the station mezzanine.

10 "Transit station access, mechanical" means a pedestrian connection that incorporates a
11 mechanical device, such as an escalator, to provide direct access from street level to transit
12 tunnel stations and concourses and/or light rail transit facilities.

13 “Transit stop, major” means a stop on a major transit service.

14 * * *

15 ~~((“Triplex” means a single structure containing three dwelling units, none of which is a~~
16 ~~legally established accessory dwelling unit.))~~

17 * * *

18 Section 84. Section 23.84A.040 of the Seattle Municipal Code, last amended by
19 Ordinance 126862, is amended as follows:

20 **23.84A.040 "U"**

21 * * *

22 "Unit, low-income" means a ~~((dwelling))~~ restricted unit that, for a minimum period of at
23 least 50 years, is ~~((a restricted unit))~~ affordable to and reserved solely for ~~((families))~~ households

1 with annual incomes not to exceed 60 percent of median income for rental units or 80 percent of
2 median income for ownership units ~~((according to one or more regulatory agreements,~~
3 ~~covenants, or other legal instruments that, as a condition to issuance of the first building permit~~
4 ~~that includes the structural frame for the structure that includes the low-income unit, shall be~~
5 ~~executed and recorded on the title of the property and are enforceable by The City of Seattle,~~
6 ~~King County, State of Washington, Washington State Housing Finance Commission, or other~~
7 ~~public agency if approved by the Director of Housing)).~~

8 "Unit, moderate-income" means a ~~((dwelling))~~ restricted unit that, for a minimum period
9 of at least 50 years, is ~~((a restricted unit))~~ affordable to and reserved solely for ~~((families))~~
10 households with annual incomes not to exceed 80 percent of median income for rental units or
11 100 percent of median income for ownership units ~~((according to one or more regulatory~~
12 ~~agreements, covenants, or other legal instruments that, as a condition to issuance of the first~~
13 ~~building permit that includes the structural frame for the structure that includes the moderate-~~
14 ~~income unit, shall be executed and recorded on the title of the property and are enforceable by~~
15 ~~The City of Seattle, King County, State of Washington, Washington State Housing Finance~~
16 ~~Commission, or other public agency if approved by the Director of Housing)).~~

17 "Unit, restricted" means a dwelling unit ~~((on a property))~~ subject to ~~((a recorded~~
18 ~~agreement with the))~~ one or more regulatory agreements, covenants, or other legal instruments
19 recorded on the title of the property and enforceable by The City of Seattle, King County, State
20 of Washington, Washington State Housing Finance Commission, or other public agency, if
21 approved by the Director of Housing, that for a specified number of years limits ~~((both the unit's~~
22 ~~rent or sale price, as applicable, and eligible residents' annual income at a specified percentage of~~
23 ~~median income. For purposes of each restricted unit, eligible residents shall be a "family"~~

1 ~~according to 24 CFR Section 5.403 or successor provision, and the family's "annual income"~~
2 ~~shall be determined according to 24 CFR Section 5.609 or successor provision, unless otherwise~~
3 ~~approved in writing by the Director of Housing))~~ housing costs for income-eligible households,
4 specified as a percentage of median income, as follows:

5 1. For renter-occupied housing, rental housing costs for each restricted unit shall
6 not exceed 30 percent of the income limit; and

7 2. For owner-occupied housing, the initial sale price of each restricted unit shall
8 be affordable to income-eligible households and resale prices must allow modest growth in
9 homeowner equity while maintaining long-term affordability for subsequent eligible
10 homebuyers, all as determined by the Director of Housing, consistent with Council-adopted
11 Housing Funding Policies if funded by the Office of Housing or subsections 23.58C.050.C.7.a
12 and 23.58C.050.C.7.b if not funded by the Office of Housing.

13 * * *

14 Section 85. Section 23.84A.046 of the Seattle Municipal Code, last amended by
15 Ordinance 125603, is amended as follows:

16 **23.84A.046 "Y"**

17 ~~(("Yard." See "Yard, front," "Yard, side" and "Yard, rear."~~

18 ~~"Yard, front" means an area from the ground upward between the side lot lines of a lot,~~
19 ~~extending from the front lot line to a line on the lot parallel to the front lot line, the horizontal~~
20 ~~depth of which is specified for each zone. The front yard includes all portions of the lot that are~~
21 ~~within the specified distance from the street along which the front lot line extends, even if~~
22 ~~separated from the street by an intervening lot. In the case of an irregularly shaped lot, the front~~
23 ~~yard shall be a portion of the property as determined according to Section 23.86.010.~~

~~"Yard, rear" means an area from the ground upward between the side lot lines of a lot, extending from the rear lot line to a line on the lot parallel to the rear lot line, the horizontal depth of which is specified for each zone. In the case of an irregularly shaped lot, the rear yard shall be a portion of the property adjacent to the rear lot line as determined according to subsection 23.86.010.C.~~

~~"Yard, side" means an area from the ground upward between the front yard (or front lot line if no front yard is required); and the rear yard (or rear lot line if no rear yard is required); and extending from a side lot line to a line on the lot, parallel to the side lot line, the horizontal depth of which is specified for each zone.))~~

* * *

Section 86. Section 23.84A.048 of the Seattle Municipal Code, last amended by Ordinance 126685, is amended as follows:

23.84A.048 "Z"

* * *

~~(("Zone, neighborhood residential" means a zone with a classification that includes any of the following: NR1, NR2, NR3, and RSL.))~~

* * *

"Zone, residential" means a zone with a classification that includes any of the following: ~~((NR1, NR2, NR3, RSL))~~ NR, LR1, LR2, LR3, MR, HR, RC, DMR, IDR, SM/R, SM-SLU/R, and SM-U/R which classification also may include one or more suffixes ~~((, but not including any zone with an RC designation)).~~

~~((“Zone, single family” means a zone with a classification that includes any of the following: Neighborhood Residential 1 (NR1), Neighborhood Residential 2 (NR2), Neighborhood Residential 3 (NR3), and Residential Small Lot (RSL).))~~

Section 87. Section 23.86.002 of the Seattle Municipal Code, last amended by Ordinance 125791, is amended as follows:

23.86.002 General provisions

* * *

B. Fractions

1. Unless otherwise indicated, if any measurement technique for determining the number of items required or allowed, including but not limited to motor vehicle parking, or required trees or shrubs, results in fractional requirements, any fraction up to and including 0.5 of the applicable unit of measurement shall be disregarded and fractions over 0.5 shall require the next higher full unit of measurement.

2. If any measurement technique for determining required minimum or allowed maximum dimensions, including but not limited to height, (~~(yards,)~~) setbacks, lot coverage, open space, building depth, parking space size, or curb cut width, results in fractional requirements, the dimension shall be measured to the nearest inch. Any fraction up to and including 0.5 of an inch shall be disregarded and fractions over 0.5 of an inch shall require the next higher unit.

3. ((Except within Lowrise and RSL zones, if density calculations result in a fraction of a unit, any fraction up to and including 0.5 constitutes zero additional units, and any fraction over 0.5 constitutes one additional unit. Within Lowrise zones, the effect of a density calculation that results in a fraction of a unit is as described in Section 23.45.512. Within RSL zones, the effect of a density calculation that results in a fraction of a unit is as described in

1 ~~Section 23.44.017. This provision may not be applied to density calculations that result in a~~
2 ~~quotient less than one.))~~ When calculation of the number of dwelling units allowed results in a
3 fraction of a unit, any fraction shall be rounded down.

4 * * *

5 Section 88. Section 23.86.006 of the Seattle Municipal Code, last amended by Ordinance
6 126685, is amended as follows:

7 **23.86.006 Structure height measurement**

8 * * *

9 B. Within the South Lake Union Urban Center, at the applicant's option, structure
10 height shall be measured either as provided for in subsection 23.86.006.A(~~(, 23.86.006.E))~~ or
11 23.86.006.D, or under provisions of this subsection 23.86.006.B. Structure height shall be
12 measured for all portions of the structure. All measurements shall be taken vertically from
13 existing or finished grade, whichever is lower, to the highest point of the structure located
14 directly above each point of measurement. Existing or finished grade shall be established by
15 drawing straight lines between the corresponding elevations at the perimeter of the structure.
16 The straight lines will be existing or finished grade for the purpose of height measurement.
17 When a contour line crosses a facade more than once, that contour line will be disregarded
18 when establishing existing or finished grade.

19 C. ~~((Height averaging for neighborhood residential zones. In a neighborhood residential~~
20 ~~zone, when expanding an existing structure occupied by a nonconforming residential use per~~
21 ~~Section 23.42.106, the following measurement shall be used to determine the average height of~~
22 ~~the closest principal structures on either side:~~

1 ~~1. Each structure used for averaging shall be on the same block front as the lot~~
2 ~~for which a height limit is being established. The structures used shall be the nearest single-~~
3 ~~family structure on each side of the lot, and shall be within 100 feet of the side lot lines of the~~
4 ~~lot.~~

5 ~~2. The height limit for the lot shall be established by averaging the elevations of~~
6 ~~the structures on either side in the following manner:~~

7 ~~a. If the nearest structure on either side has a roof with at least a 4:12~~
8 ~~pitch, the elevation to be used for averaging shall be the highest point of that structure's roof~~
9 ~~minus 5 feet.~~

10 ~~b. If the nearest structure on either side has a flat roof, or a roof with a~~
11 ~~pitch of less than 4:12, the elevation of the highest point of the structure's roof shall be used for~~
12 ~~averaging.~~

13 ~~c. Rooftop features which are otherwise exempt from height limitations~~
14 ~~according to subsection 23.44.012.C, shall not be included in elevation calculations.~~

15 ~~d. The two elevations obtained from subsection 23.86.006.B.2.a and/or~~
16 ~~subsection 23.86.006.B.2.b shall be averaged to derive the height limit for the lot. This height~~
17 ~~limit shall be the difference in elevation between the midpoint of a line parallel to the front lot~~
18 ~~line at the required front setback and the average elevation derived from subsection~~
19 ~~23.86.006.B.2.a and/or subsection 23.86.006.B.2.b.~~

20 ~~e. The height measurement technique used for the lot shall then be the~~
21 ~~City's standard measurement technique, subsection 23.86.006.A.~~

22 ~~3. If there is no single family structure within 100 feet of a side lot line, or if the~~
23 ~~nearest single family structure within 100 feet of a side lot line is not on the same block front,~~

~~the elevation used for averaging on that side shall be 30 feet plus the elevation of the midpoint of the front lot line of the abutting vacant lot.~~

~~4. If the lot is a corner lot, the height limit may be the highest elevation of the nearest structure on the same block front, provided that the structure is within 100 feet of the side lot line of the lot and that both front yards face the same street.~~

~~5. In no case shall the height limit established according to these height averaging provisions be greater than 40 feet.~~

~~6. Lots using height averaging to establish a height limit shall be eligible for the pitched roof provisions of subsection 23.44.012.B.~~

~~D.))~~ Stories or portions of stories of a structure that are underground are not analyzed for purposes of structure height measurement.

~~((E.))~~ D. Height measurement techniques in downtown zones and in the South Lake Union Urban Center

1. Determine the major street lot line, which shall be the lot's longest street lot line. When the lot has two or more street lot lines of equal length, the applicant shall choose the major street lot line.

2. Determine the slope of the lot along the entire length of the major street lot line.

3. ~~((The))~~ Measure the maximum height ~~((shall be measured))~~ as follows:

a. When the slope of the major street lot line is less than or equal to 7.5 percent, the elevation of maximum height shall be determined by adding the maximum permitted height to the existing grade elevation at the midpoint of the major street lot line. On a through-lot, the elevation of maximum height shall apply only to the half of the lot nearest

the major street lot line. On the other half of a through-lot, the elevation of maximum height shall be determined by the above method using the street lot line opposite and parallel to the major street lot line as depicted in Exhibit ((B)) A for 23.86.006.

Exhibit A for 23.86.006

Maximum height

Slope Less than or equal to 7-1/2 percent

b. When the slope of the major street lot line exceeds 7.5 percent, the major street lot line shall be divided into four or fewer equal segments no longer than 120 feet

1 in length. The elevation of maximum height shall be determined by adding the maximum
2 permitted height to the existing grade elevation at the midpoint of each segment. On a through-
3 lot, the elevation of maximum height shall apply only to the half of the lot nearest the major
4 street lot line. On the other half of a through-lot, the elevation of maximum height shall be
5 determined by the above method using the street lot line opposite and parallel to the major
6 street lot line, as depicted in Exhibit ((€)) B for 23.86.006.

Exhibit B for 23.86.006

Maximum height

Slope greater than 7-1/2 percent

c. For lots with more than one street frontage, where there is no street lot line that is essentially parallel to the major street lot line, when a measurement has been made for the portion of the block containing the major street lot line, the next measurement shall be

taken from the remaining street lot line that is opposite and most distant from the major street lot line.

~~((F.))~~ E. Determining the height of existing public school structures. When the height of the existing public school structure is measured for purposes of determining the permitted height or lot coverage of a public school structure, either of the following measurement methods may be used:

1. If all parts of the new roof are pitched at a rate of not less than 4:12, the ridge of the new roof may extend to the highest point of the existing roof. A shed roof does not qualify for this option; or

2. If all parts of the new roof are not pitched at a rate of not less than 4:12, then the elevation of the new construction may extend to the average height of the existing structure. The average height shall be determined by measuring the area of each portion of the building at each height and averaging those areas, as depicted in Exhibit ~~((D))~~ C for 23.86.006.

Exhibit C for 23.86.006

Maximum elevations for additions to public schools

((G-)) F. Height measurement technique for structures located partially within the Shoreline District. When any portion of the structure falls within the Shoreline District,

structure height for the entire structure shall be measured according to Section 23.60A.952(~~(Height)~~)).

~~((H.))~~ G. For projects accepted into the Living Building Pilot Program authorized pursuant to Section 23.40.060, the applicant may choose either the height definition of Chapter 2 of the Seattle Building Code or the height measurement method described in this Section 23.86.006.

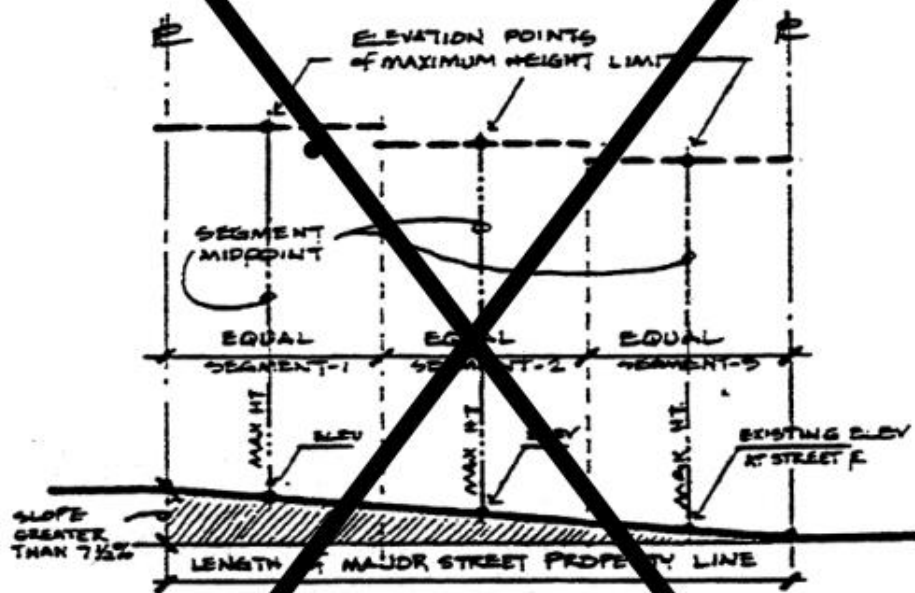

Exhibit 23.86.006 C
Maximum Height, Slope Greater Than 7-½%

1
2

Exhibit 23.86.006 D

ROOF LEVEL	AREA	x	ELEV.	=	PRODUCT
A	1000	x	145	=	145,000
B	1500	x	155	=	232,500
C	1700	x	130	=	221,000
	<u>4200</u>				<u>598,500</u>

$$\begin{aligned}
 \text{PERMITTED ROOF ELEVATION FOR BUILDING ADDITION} &= \frac{\text{TOTAL PRODUCT}}{\text{TOTAL AREA}} = \text{MAXIMUM ELEVATION} \\
 &= \frac{598,500}{4,200} = 142.5
 \end{aligned}$$

Section 89. Section 23.86.007 of the Seattle Municipal Code, last amended by Ordinance 126855, is amended as follows:

23.86.007 Floor area and floor area ratio (FAR) measurement

A. Gross floor area. Except where otherwise expressly provided in this Title 23, gross floor area shall be as defined in Chapter 23.84A and as measured in this Section 23.86.007. The following are included in the measurement of gross floor area in all zones:

1. Floor area contained in stories above and below grade;
2. The area of stair penthouses, elevator penthouses, and other enclosed rooftop features;
3. The area of motor vehicle and bicycle parking that is enclosed; and
4. The area of motor vehicle parking that is covered by a structure or portion of a structure containing enclosed floor area, excluding motor vehicle parking in ~~((neighborhood residential))~~ Neighborhood Residential and multifamily zones that is only covered by one of the following:

- a. Projections containing enclosed floor area of up to 4 feet; or
- b. Projections containing enclosed floor area of up to 6 feet for the area of parking accessed from an alley and located directly adjacent to an alley.

* * *

D. Pursuant to subsections ~~((23.44.011.C, 23.44.018.A,))~~ 23.44.050.C, 23.45.510.D, and 23.47A.013.B, and Section 23.48.020, for certain structures in ~~((neighborhood residential))~~ Neighborhood Residential, multifamily, commercial, and Seattle Mixed zones, portions of a story that extend no more than 4 feet above existing or finished grade, whichever is lower, are exempt from calculation of gross floor area. The exempt gross floor area of such partially below-grade stories is measured as follows:

1 1. Determine the elevation 4 feet below the ceiling of the partially below-grade
2 story, or 4 feet below the roof surface if there is no next floor above the partially below-grade
3 story;

4 2. Determine the points along the exterior wall of the story where the elevation
5 determined in subsection 23.86.007.D.1 intersects the abutting corresponding existing or finished
6 grade elevation, whichever is lower;

7 3. Draw a straight line across the story connecting the two points on the exterior
8 walls; and

9 4. The gross floor area of the partially below-grade story or portion of a partially
10 below-grade story is the area of the story that is at or below the straight line drawn in subsection
11 23.86.007.D.3, excluding openings required by the Building Code for egress. (See Exhibit B for
12 23.86.007.)

Exhibit B for 23.86.007

Floor area for partially below grade stories for certain structures in ((RSL)) Neighborhood

Residential, multifamily, commercial, and Seattle Mixed zones

Section 90. Section 23.86.008 of the Seattle Municipal Code, last amended by Ordinance 126509, is amended as follows:

23.86.008 Lot (~~coverage,~~) width (~~and depth,~~) in Neighborhood Residential zones

~~((A. Lot coverage shall be calculated in accordance with Exhibit 23.86.008 A.~~

~~B. In neighborhood residential zones, lot depth shall be the length of the line extending between the front lot line or front lot line extended, and the rear lot line or lines, or in the case of a through lot, between the two (2) front lot lines or lines extended. This line shall be perpendicular to the front lot line or front lot line extended. Where an alley abuts the rear of the property, one half (1/2) of the width of the alley shall be included as a portion of the lot for determining lot depth.~~

~~C. Lot Width in Neighborhood Residential Zones:~~

1 4.)) A. When a lot is essentially rectangular, the lot width ((~~shall be~~)) is the mean
2 horizontal distance between side lot lines measured at right angles to lot depth ((~~Exhibit~~
3 ~~23.86.008-B~~))) Exhibit A for 23.86.008.

4 **Exhibit A for 23.86.008**

5 **Lot width**

1 ((~~2. In the case of~~)) B. For a lot with more than one ((~~1~~)) rear lot line ((~~Exhibits~~
2 ~~23.86.008 C and 23.86.008 D~~)) (Exhibit B for 23.86.008 and Exhibit C for 23.86.008), the lot
3 width shall be measured according to the following:

Exhibit B for 23.86.008

Lots with more than one rear lot line, and where the distance between the rear lot line is less than 50 percent of lot depth

Exhibit B for 23.86.008
Lots with more than one rear lot line,
and where the distance between the rear
lot line is less than 50 percent of lot depth

Where $A + B$ is less than 50% of D , the lot width shall be W .

Exhibit C for 23.86.008

Lots with more than one rear lot line, and where the distance between the rear lot line is

greater than 50 percent of lot depth

Exhibit C for 23.86.008

**Lots with more than one rear lot line, and where the
distance between the rear lot line is greater than 50
percent of lot depth**

Where $A + B$ is greater than 50% of D :

Width of lot shall be: $\frac{(A \times X) + (B \times Y) + (C \times Z)}{D}$

1 ~~((a-))~~ 1. If the distance between the rear lot lines is ~~((fifty-))~~ 50 ~~((+))~~
2 percent or less of the lot depth, the lot width shall be measured parallel to the front lot line and
3 shall be the greatest distance between the side lot lines ~~((Exhibit 23.86.008 C))~~ Exhibit B for
4 23.86.008; or

5 ~~((b-))~~ 2. If the distance between the rear lot lines is greater than ~~((fifty-))~~
6 50 ~~((+))~~ percent of the lot depth, the lot width shall be determined by measuring average lot
7 width according to ~~((Exhibit 23.86.008 D))~~ Exhibit C for 23.86.008.

8 ~~((3-))~~ C. For irregular lots not meeting the conditions of subsections ~~((C1 or C2))~~
9 23.86.008.A or 23.86.008.B, the Director shall determine the measurement of lot width.

1

2

Exhibit 23.86.008 C

Lots With More Than One Rear Lot Line,
And Where The Distance Between The Rear
Lot Line Is Less Than 50% Of Lot Depth

Where $A + B$ is less than 50% of D , the lot width shall be W .

((Exhibit 23.86.008C))

Exhibit 23.86.008 D

Lots with More Than One Rear Lot Line, And Where
The Distance Between the Rear Lot Line
Is Greater than 50% Of Lot Depth

Where A + B is greater than 50% of D

Width of lot shall be: $\frac{(A \times X) + (B \times Y) + (C \times Z)}{D}$

Section 91. Section 23.86.010 of the Seattle Municipal Code, last amended by Ordinance 126509, is repealed:

~~((23.86.010 Yards~~

~~A. Measuring required yards. Required yard dimensions shall be horizontal distances, measured perpendicular to the appropriate lot lines (Exhibit A for 23.86.010). For lots with no street frontage, the applicant may designate the front lot line, provided that under the resulting orientation, the area of the front yard is at least 20 percent of the area of the lot or 1,000 square feet whichever is less. If a lot with frontage on more than one street is developed with an existing principal structure, the orientation of the lot for the purpose of current yard requirements shall be the orientation under which the existing structure is most conforming to current yard standards.~~

~~B. Front Yards.~~

~~1. Determining Front Yard Requirements. Front yard requirements are presented in the development standards for each zone. Where the minimum required front yard is to be determined by averaging the setbacks of structures on either side of a lot, the following provisions apply:~~

~~a. The required depth of the front yard shall be the average of the distance between single-family structures and front lot lines of the nearest single-family structures on each side of the lot (Exhibit B for 23.86.010). If the front facade of the single-family structure is not parallel to the front lot line, the shortest distance from the front lot line to the structure shall be used for averaging purposes (Exhibit C for 23.86.010).~~

~~b. The yards used for front yard averaging shall be on the same block front as the lot, and shall be the front yards of the nearest single family structures within 100 feet of the side lot lines of the lot.~~

~~c. For averaging purposes, front yard depth shall be measured from the front lot lines to the wall nearest to the street or, where there is no wall, the plane between supports, which comprises 20 percent or more of the width of the front facade of the single family structure. Enclosed porches shall be considered part of the single family structure for measurement purposes. Attached garages or carports permitted in front yards under 23.44.016.D, decks, uncovered porches, eaves, attached solar collectors, and other similar parts of the structure shall not be considered part of the structure for measurement purposes.~~

~~d. If there is a dedication of street right of way to bring the street abutting the lot closer to the minimum widths established in Section 23.53.015, for averaging purposes the amount of the dedication shall be subtracted from the front yard depth of the structures on either side.~~

~~e. If the first single family structure within 100 feet of a side lot line of the lot is not on the same block front, or does not provide its front yard on the same street, or if there is no single family structure within 100 feet of the side lot line, the yard depth used for averaging purposes on that side shall be 20 feet (Exhibits D and E for 23.86.010).~~

~~f. If the front yard of the first single family structure within 100 feet of the side lot line of the lot exceeds 20 feet, the yard depth used for averaging purposes on that side shall be 20 feet (Exhibit F for 23.86.010).~~

~~g. In cases where the street is very steep or winding, the Director shall determine which adjacent single family structures should be used for averaging purposes.~~

1 ~~2. Sloped Lots in Neighborhood Residential Zones. For a lot in a neighborhood~~
2 ~~residential zone, reduction of the required front yard is permitted at a rate of 1 foot for every~~
3 ~~percent of slope in excess of 35 percent. For the purpose of this provision the slope shall be~~
4 ~~measured along the centerline of the lot. In the case of irregularly shaped lots, the Director~~
5 ~~shall determine the line along which slope is calculated.~~

6 ~~C. Rear yards. Rear yard requirements are presented in the standard development~~
7 ~~requirements for each zone. In determining how to apply these requirements, the following~~
8 ~~provisions shall apply:~~

9 ~~1. The rear yard shall be measured horizontally from the rear lot line if the lot~~
10 ~~has a rear lot line that is essentially parallel to the front lot line for its entire length.~~

11 ~~2. If the front lot line is essentially parallel to portions of the rear property line,~~
12 ~~as with a stepped rear property line, each portion of the rear property line that is opposite and~~
13 ~~essentially parallel to the front lot line is considered to be a rear lot line for the purpose of~~
14 ~~establishing a rear yard.~~

15 ~~3. On a lot with a rear property line, part of which is not essentially parallel to~~
16 ~~any part of the front lot line, the rear yard is measured from a line or lines drawn from side lot~~
17 ~~line(s) to side lot line(s), at least 10 feet in length, parallel to and at a maximum distance from~~
18 ~~the front lot line. If an alley abuts the rear of the property, 1/2 the width of the alley, between~~
19 ~~the side lot lines extended, is considered to be part of the lot for drawing this line. For those~~
20 ~~portions of the rear lot line that are essentially parallel to the front lot line, subsection~~
21 ~~23.86.010.C.2 above shall apply. The lot depth is then measured perpendicularly from this 10~~
22 ~~foot long line extended as needed to the point on the actual front lot line that is the furthest~~

~~distance away. This establishes lot depth, which then may be used to determine the required rear yard depth.~~

~~4. For a lot with a curved front lot line, the rear yard is measured from a line at least 10 feet in length, parallel to and at a maximum distance from a line drawn between the endpoints of the curve. The lot depth is then measured perpendicularly from this 10 foot long line extended as needed to the point on the actual front lot line that is the furthest distance away. This establishes lot depth, which then may be used to determine the required rear yard depth.~~

~~5. For a lot with an irregular shape or with an irregular front lot line not meeting conditions of subsections 23.86.010.C.1 through 23.86.010.C.4, the Director shall determine the measurement of the rear yard.~~

~~D. Side Yards.~~

~~1. Side Yard Averaging. Side yard requirements are presented in the standard development requirements for each zone. In certain cases where specifically permitted, the side yard requirement may be satisfied by averaging the distance from side lot line to structure facade for the length of the structure. In those cases the side yard shall be measured horizontally from side lot line to the side facade of the structure.))~~

Exhibit 23.86.010 A
Standard Required Yards
(NR Zone Example)

Exhibit B for 23.86.010
 Determination of Front Yard Setback

- Required minimum front setback for Lot B determined as follows:
1. Front setback, Lot A = 16'.
 2. Front setback, Lot C = 20'.
 3. Average front setback = 18'.
 4. Required minimum front setback for Lot B = 18'.

Exhibit C for 23.86.010

Calculating Minimum Required Front Yard
Unusual Front Walls

Minimum required front yard for Lot B:

1. Front yard, Lot A = 15'.
2. Front yard, Lot C = 18'.
3. Average front yard = 16.5'.
4. Required minimum front yard for lot B = 16.5'

Exhibit D for 23.86.010

1. Front yard, Lot D = 16'.
2. Lot B unimproved.
3. Lot A not on same block front.
4. Use 20' for averaging purposes on west side.
5. Minimum required front yard,
 $\text{Lot C} = (20 + 16)/2 = 18'$.

Exhibit E for 23.86.010

Minimum Required Front Yards, Adjoining Lots Unimproved

1. Front yard, Lot F = 18'.
2. Lots B, C, D unimproved.
3. Use 20' for averaging purposes on west side.
4. Minimum required front yard,
 $\text{Lot E} = (20 + 18)/2 = 19'$.

Exhibit F for 23.86.010

1. Minimum required front yard,
 $\text{Lot B} = (20 + 20)/2 = 20'$.
2. Minimum required front yard,
 $\text{Lot E} = (20 + 18)/2 = 19'$.

Section 92. Section 23.86.012 of the Seattle Municipal Code, last amended by Ordinance 125791, is amended as follows:

**23.86.012 ((Multifamily and commercial zone setback)) Setback and separations
measurement**

A. For purposes of setback and separation standards, measurement shall be taken to the outside of building foundations and exterior walls rather than to exterior finishing provided that exterior finishes extend no more than 8 inches into a required setback.

B. Setback averaging. In multifamily and commercial zones, certain required setbacks may be averaged. In such cases ((the following provisions apply)):

1. The average front and rear setbacks are calculated based on the entire width of the structure;

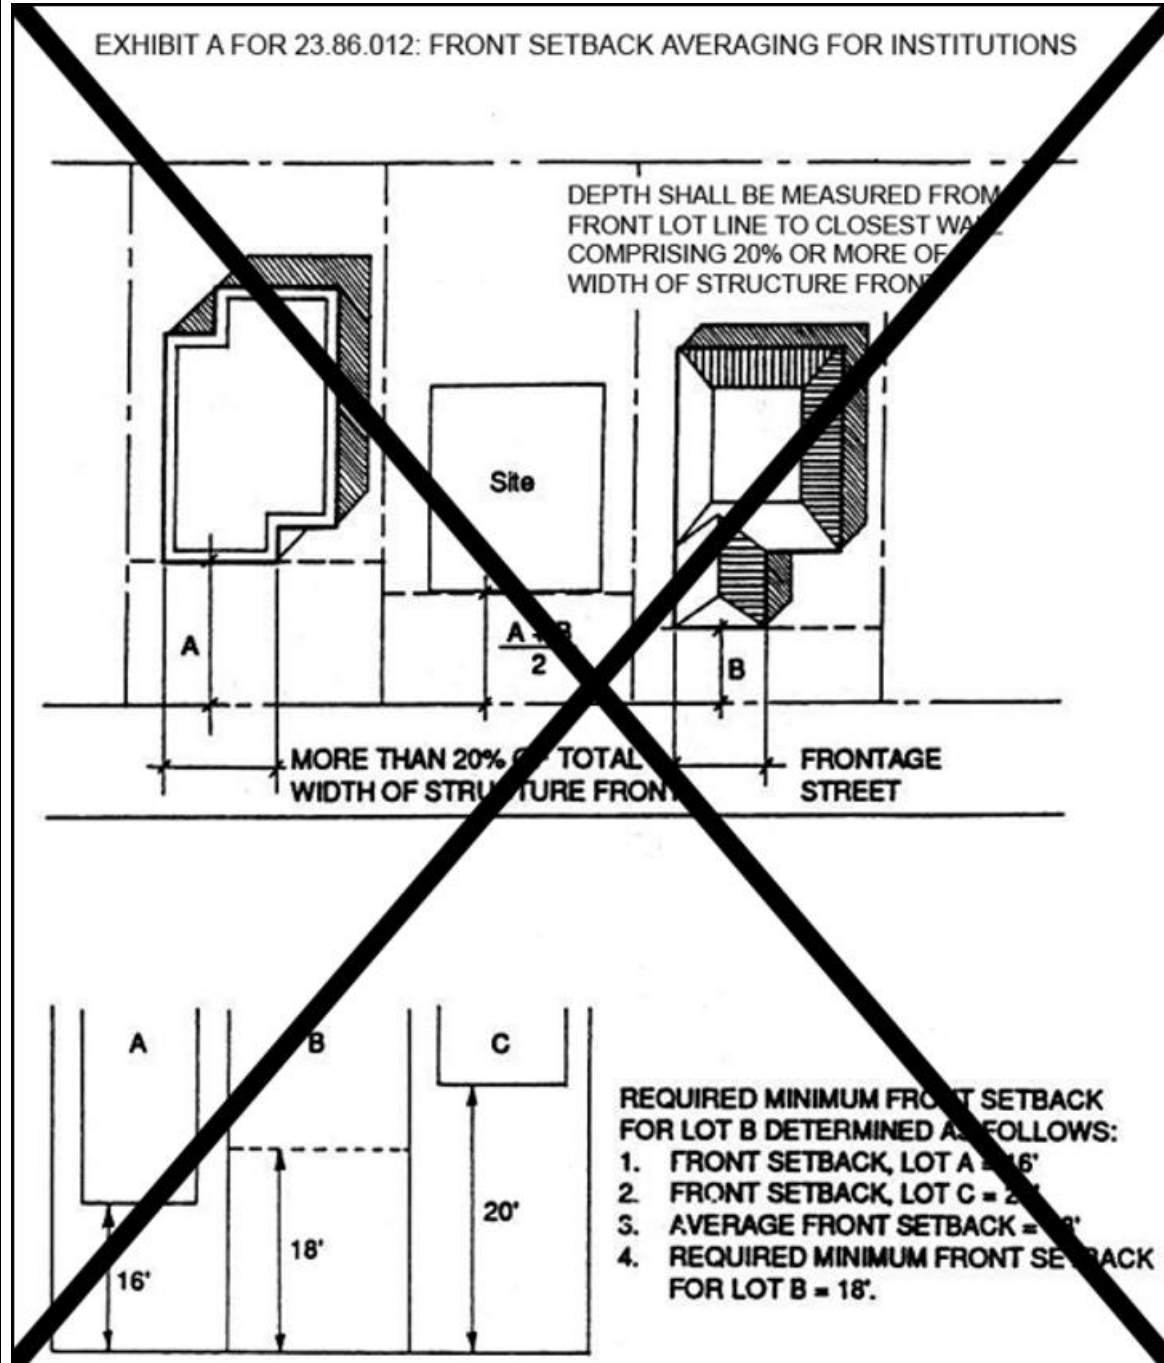

2. The average side setbacks are calculated based on the entire depth of the structure;

3. Setbacks are measured horizontally from the lot line to the facade of the structure. The facade(s) used in calculating the average and minimum setback requirements shall be those facades that are nearest to that lot line except that any features allowed to project into the setback are excluded.

~~((B. Determining front setbacks for institutions. In LR zones, the minimum required front setback for institutions is determined by averaging the setbacks of structures on either side of the subject lot, as follows:~~

~~1. The required front setback is the average of the distances between principal structures and front lot lines of the nearest principal structures on each side of the subject lot if~~

each of those structures is on the same block front as the subject lot and is within 100 feet of the side lot lines of the subject lot (Exhibit A for 23.86.012).

~~2. If the first principal structure within 100 feet of a side lot line of the subject lot is not on the same block front or there is no principal structure within 100 feet of the side lot line, the setback depth used for averaging purposes on that side is 7 feet.~~

~~3. For averaging purposes, the front setback is the shortest distance from the front lot line to the nearest wall or, where there is no wall, the plane between supports that span 20 percent or more of the width of the front facade of the principal structure. Attached garages and enclosed porches are considered part of the principal structure for measurement purposes. Decks less than 18 inches above existing grade, uncovered porches, eaves, attached solar collectors and other similar parts of the structure are not considered part of the principal structure.~~

~~4. If there is a dedication of street right of way to bring the street abutting the lot closer to the minimum widths established in Section 23.53.015, for averaging purposes the amount of dedication is subtracted from the front setbacks of the structures on either side.~~

~~5. If the front setback of the first principal structure within 100 feet of the side lot line of the subject lot exceeds 20 feet, the setback depth used for averaging purposes on that side is 20 feet.~~

~~6. In cases where the street is very steep or winding, the Director will determine which adjacent structures should be used for averaging purposes.~~

~~7. In the case of a through lot, the front setback is determined independently for each street frontage. The measurement techniques of this section 23.86.012 apply to each street frontage separately.~~

~~8. For multiple structures on the same lot, the front setback of a principal structure on the same lot may be used for averaging purposes.))~~

* * *

Section 93. Section 23.86.017 of the Seattle Municipal Code, enacted by Ordinance 123495, is amended as follows:

23.86.017 Amenity area measurement

~~((Certain zones require a minimum amount of amenity area to be provided on the lot.))~~ If amenity area is required, the following provisions shall apply:

A. If the applicable development standards specify a minimum contiguous amenity area, areas smaller than the minimum contiguous area are not to be counted toward fulfilling amenity area requirements.

1. Driveways and vehicular access easements, whether paved or unpaved, shall be considered to separate the amenity areas they bisect(~~(, except for woonerfs permitted to qualify as required amenity area)).~~).

2. Pedestrian access areas shall not be considered to break the contiguity of amenity area on each side.

B. In shoreline areas, when determining the amount of amenity area required or provided, no land waterward of the ordinary high water mark shall be included in the calculation.

C. In cases where the shape or configuration of the amenity area is irregular or unusual, the Director shall determine whether amenity area requirements have been met, notwithstanding the following provisions, based on whether the proposed configuration would result in amenity area that is truly usable for normal residential recreational purposes. For the purpose of measuring the minimum horizontal dimension of the amenity area, if one is specified, the following provisions shall apply:

1. For rectangular or square areas, each exterior dimension of the area shall meet the minimum dimension (Exhibit A for 23.86.017).

Exhibit A for ((Section)) 23.86.017((: Measurement of Regular Amenity Area))

Measurement of amenity area

Exhibit A for 23.86.017 Measurement of amenity area

2. For circular areas, the diameter of the circle shall meet the minimum dimension((; for)) . For semicircular areas, the radius of the area shall meet the minimum dimension (Exhibit B for 23.86.017).

Exhibit B for 23.86.017(~~(= Measurement of Circular Amenity Areas)~~)

Measurement of circular amenity areas

Section 94. Section 23.86.026 of the Seattle Municipal Code, last amended by Ordinance 124503, is amended as follows:

23.86.026 Facade transparency

A. In zones, other than Neighborhood Residential or Lowrise zones, where a certain percentage of the street-facing facade is required to be transparent, transparency shall be measured in an area between 2 feet and 8 feet above the elevation of the lot line at the sidewalk, as depicted in Exhibit A for 23.86.026, unless a different area is specified in the development standards applicable to the lot. Areaways, stairways, and other excavations at the lot line shall not be considered in measuring the elevation of the street lot line. When sidewalk widening is required according to Section 23.49.022, the elevation of the lines establishing the new sidewalk width shall be used rather than the street lot line.

Exhibit A for 23.86.026

Street ((~~Facade Transparency~~)) facade transparency

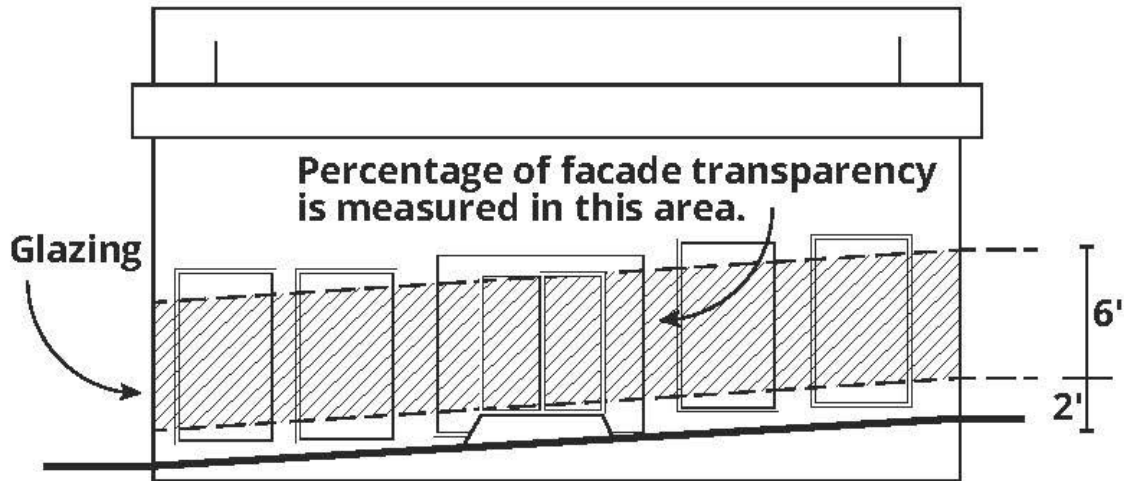

Exhibit A for 23.86.026 Street facade transparency

B. When transparency is required for facades that abut bonused public open spaces, the measurement of facade transparency shall be from the elevation of the public open space.

C. The full length of ~~((landmark))~~ Landmark designated structures, and character structures retained according to Section 23.73.015, shall not be counted in determining the required transparency.

Section 95. Section 23.90.019 of the Seattle Municipal Code, last amended by Ordinance 127211, is amended as follows:

23.90.019 Civil penalty for unauthorized dwelling units ~~((in neighborhood residential zones))~~

In addition to any other sanction or remedial procedure that may be available, the following penalties apply to unauthorized dwelling units ~~((in neighborhood residential zones in violation of Section 23.44.006))~~. An owner of a ~~((neighborhood residential zoned))~~ lot ~~((that has more than~~

1 ~~one single family dwelling unit and~~) who is issued a notice of violation for an unauthorized
2 dwelling unit((;)) is subject to a civil penalty of \$5,000 for each ~~((additional))~~ unauthorized
3 dwelling unit(~~(, unless the additional unit is an authorized dwelling unit in compliance with~~
4 ~~Section 23.42.022, is a legal non-conforming use, or is approved as part of an administrative~~
5 ~~conditional use permit pursuant to Section 25.09.260))~~. Penalties for ~~((violation of Sections~~
6 ~~23.44.006 and 23.44.022 except for those violations subject to subsection 23.90.018.B,))~~
7 unauthorized dwelling units in this Section 23.90.019 shall be reduced from \$5,000 to \$500 if,
8 prior to the compliance date stated on the notice of violation for an unauthorized dwelling unit,
9 the dwelling unit is removed or authorized ~~((, is a legal non-conforming use, or is approved as~~
10 ~~part of an administrative conditional use permit pursuant to Section 25.09.260))~~.

11 Section 96. Section 23.91.002 of the Seattle Municipal Code, last amended by Ordinance
12 126509, is amended as follows:

13 **23.91.002 Scope of this Chapter 23.91**

14 A. Violations of the following provisions of this Title 23 shall be enforced under the
15 citation or criminal provisions set forth in this Chapter 23.91:

16 1. Junk storage in residential zones ~~((Chapter 23.44, Chapter 23.45, Chapter~~
17 ~~23.46, Chapter 23.49 Subchapter IV, and Chapter 23.49 Subchapter VII))~~), unless the lot
18 contains a vacant structure subject to the vacant building maintenance standards contained in
19 subsection 22.206.200.A and a notice of violation has been issued requiring compliance with
20 subsection 22.206.200.F;

21 2. Construction or maintenance of structures in required ~~((yards or))~~ setbacks in
22 residential zones ~~((Chapter 23.44, Chapter 23.45, Chapter 23.46, Chapter 23.49 Subchapter IV,~~
23 ~~and Chapter 23.49 Subchapter VII))~~);

3. Parking of vehicles in a (~~(neighborhood residential)~~) Neighborhood Residential
zone (Section (~~(23.44.016)~~) 23.44.160), unless the lot contains a vacant structure subject to the
vacant building maintenance standards contained in subsection 22.206.200.A;

4. Keeping of animals (Section 23.42.052); and

~~((5. Reserved.))~~

~~6.))~~ 5. The following violations of (~~(the Shoreline District,))~~ Chapter 23.60A:

a. Discharging, leaking, or releasing solid or liquid waste and untreated
effluent, oil, chemicals, or hazardous materials into the water (subsection 23.60A.152.R);

b. Releasing debris and other waste materials from construction,
maintenance, repair, or in operation or management of a property, into any water body
(subsections 23.60A.152.H, 23.60A.152.I, 23.60A.152.T, and 23.60A.152.U);

c. Conducting activity in or over water outside the allowed work windows
(subsection 23.60A.152.J); and

d. Closing required public access (Section 23.60A.164).

B. Any enforcement action or proceeding pursuant to this Chapter 23.91 shall not affect,
limit, or preclude any previous, pending, or subsequent enforcement action or proceeding taken
pursuant to Chapter 23.90.

Section 97. Section 25.09.052 of the Seattle Municipal Code, last amended by Ordinance
126685, is amended as follows:

25.09.052 Replacing structures in environmentally critical areas and buffers

* * *

B. Replacing a (~~(single-family residence)~~) detached dwelling unit voluntarily in wetlands,
wetland buffers, and fish and wildlife habitat conservation areas

1 1. Replacing a ~~((single-family residence))~~ detached dwelling unit and its
2 appurtenant structures and access is allowed in wetlands, wetland buffers, and fish and wildlife
3 habitat conservation areas if the replacement complies with the following:

4 a. The replacement is in substantially the same location as the original
5 development;

6 b. The area of the footprint of the replacement does not exceed that of the
7 original development;

8 c. The proposed access does not exceed the width and length of necessary
9 access;

10 d. Lot size

11 1) Riparian watercourse and wetlands. For a ~~((single-family~~
12 ~~residence))~~ detached dwelling unit located over a riparian watercourse or built in a wetland, the
13 replaced ~~((residence))~~ dwelling unit and necessary access meets wetland buffer or riparian
14 management area requirements to the maximum extent feasible; or

15 2) For all other property, the lot does not have sufficient area to
16 site a ~~((residence))~~ dwelling unit with the same area of footprint as existed on May 14, 2017, plus
17 necessary access, consistent with the regulations for the applicable environmentally critical area
18 and buffer, including reducing the ~~((yard and))~~ front and/or rear setback requirements ~~((for front~~
19 ~~and rear yards in Title 23))~~ allowed under Section 25.09.280, except subsection 25.09.280.B.2, to
20 the minimum necessary to accommodate the ~~((residence))~~ dwelling unit and necessary access;
21 and

22 e. The site for the ~~((residence))~~ dwelling unit, necessary access, and
23 utilities has the least impact on the functions and values of the environmentally critical area.

2. A structure that is replaced and activities related to replacing the structure shall:

a. Comply with restrictions on flood hazard areas reconstruction, if the structure is located in a flood-prone area; and

b. Comply with the development standards for the environmentally critical area and buffer in which it is located to the maximum extent feasible, including requirements for access and shall comply with the standards in Sections 25.09.060, 25.09.065, and 25.09.070; and

c. Mitigate impacts to the functions and values of the environmentally critical area and buffers, in compliance with Section 25.09.065, including any impacts caused by removing the ((~~residence~~)) dwelling unit from its original location, runoff from impervious surfaces, and/or replacing any portion of the ((~~residence~~)) dwelling unit within the environmentally critical area or buffer.

Section 98. A new Section 25.09.055 is added to the Seattle Municipal Code as follows:

25.09.055 Essential public facilities

If an essential public facility as defined in Section 23.84A.010 is proposed within an environmentally critical area as defined in Section 25.09.020, review of the proposed facility is subject to the provisions of Chapter 23.80.

Section 99. Section 25.09.240 of the Seattle Municipal Code, last amended by Ordinance 126509, is amended as follows:

25.09.240 Short subdivisions and subdivisions

* * *

C. Application submittal requirements. All short subdivision and subdivision applications, in addition to the application submittal requirements included in Title 23 and this Chapter 25.09,

shall include on the surveyed site plan the information required by this Section 25.09.240 ((and Section 25.09.260)), as applicable.

~~((D. Development standards for new lots in neighborhood residential zones. If new lots are created in neighborhood residential zones by short subdivision or subdivision, the following development standards apply based on the area of each new lot that is outside the environmentally critical areas listed in subsection 25.09.240.A, plus environmentally critical areas in which development is allowed pursuant to subsections 25.09.240.B.1, 25.09.240.B.2, and 25.09.240.B.3:~~

~~1. Lot coverage and lot coverage exceptions according to subsections 23.44.010.C and 23.44.010.D.~~

~~2. Height limits according to Section 23.44.012, including the requirements of subsection 23.44.012.A.3 if the area of the largest rectangle or other quadrilateral that can be drawn within the lot lines of the new lot outside the environmentally critical areas is less than 3,200 square feet.~~

~~E.))~~ D. Lots shall be configured to preserve the environmentally critical areas and buffers identified in subsection 25.09.240.A by:

1. Establishing a separate buffer tract or lot with each owner having an undivided interest; or

2. Establishing non-disturbance areas on individual lots.

~~((F.))~~ E. The environmentally critical areas and buffers identified in subsection 25.09.240.A, except for areas qualifying for development under subsections 25.09.240.B.1, 25.09.240.B.2, and 25.09.240.B.3, shall be designated non-disturbance areas on the final plat. A statement that these non-disturbance areas are located on the lots and the definition of "non-

disturbance area" shall be recorded in the King County Recorder's Office along with the final plat in a form approved by the Director. At the same time, a covenant protecting non-disturbance areas shall be recorded as set out in Section 25.09.335.

~~((G. In computing the number of lots a parcel in a neighborhood residential zone may contain, the Director shall exclude the following areas:~~

~~1. The environmentally critical areas and buffers identified in subsection 25.09.240.A, unless:~~

~~a. The environmentally critical areas and buffers are on a lot that meets the provisions of subsection 25.09.240.B; or~~

~~b. The applicant obtains an administrative conditional use under Section 25.09.260, if it is not practicable to meet the requirements of subsection 25.09.240.B considering the parcel as a whole.))~~

Section 100. Section 25.09.260 of the Seattle Municipal Code, last amended by Ordinance 126509, is repealed:

~~((25.09.260 Environmentally critical areas administrative conditional use~~

~~A. Administrative conditional use~~

~~1. In neighborhood residential zones the Director is authorized to approve an environmentally critical areas administrative conditional use pursuant to Section 23.42.042 and this Section 25.09.260 for one or both of the following purposes:~~

~~a. In calculating the maximum number of lots and units allowed on the entire parcel under subsection 25.09.240.G, the Director may count environmentally critical areas and/or buffers, except the open water area of a wetland or riparian corridor, that would~~

1 ~~otherwise be excluded, if an applicant is unable to demonstrate compliance with the requirements~~
2 ~~of subsection 25.09.240.B for the entire parcel proposed to be subdivided.~~

3 ~~b. For the entire parcel proposed to be subdivided, the Director may~~
4 ~~approve development of single family residences that meet the development standards of~~
5 ~~subsection 25.09.260.B.3 and the platting conditions in subsections 25.09.260.B.1 and~~
6 ~~25.09.260.C.2.b. Except as specifically superseded by the development standards of subsection~~
7 ~~25.09.260.B.3 and the platting conditions of subsection 25.09.260.C.2.b, all applicable~~
8 ~~regulations of Title 23 shall also apply to the entire parcel. The entire parcel is designated as the~~
9 ~~site.~~

10 ~~2. Process. If an administrative conditional use application includes an application~~
11 ~~to authorize development in a steep slope erosion hazard area or buffer, the application is not~~
12 ~~required to include an application for the variances allowed under Sections 25.09.280 or~~
13 ~~25.09.290, but the application must address the criteria listed in subsection 25.09.260.B.1.c.~~

14 ~~B. Criteria. An application under this Section 25.09.260 shall provide information~~
15 ~~sufficient to demonstrate that the proposal meets the following criteria:~~

16 ~~1. Environmental impacts on environmentally critical areas and buffers~~

17 ~~a. No development is allowed in a biodiversity area or corridor, riparian~~
18 ~~corridor, wetland, or wetland buffer.~~

19 ~~b. No riparian management area or wetland buffer is reduced.~~

20 ~~c. No development is on a steep slope erosion hazard area or its buffer unless~~
21 ~~either the proposed development meets the criteria of subsections 25.09.090.B.2.a,~~
22 ~~25.09.090.B.2.b, or 25.09.090.B.2.c or the property is a lot in existence as a legal building site~~

~~prior to October 31, 1992, is predominantly characterized by steep slope erosion hazard areas, and the following criteria are met:~~

~~1) The proposed development shall be located away from steep slope erosion hazard areas and buffers to the extent practicable.~~

~~2) The Director shall require clear and convincing evidence that the provisions of this subsection 25.09.260.B are met if development is located on steep slope erosion hazard areas and buffers with these characteristics:~~

~~a) A wetland over 1,500 square feet in size or a watercourse designated part of a riparian corridor;~~

~~b) An undeveloped area over 5 acres characterized by steep slope erosion hazard areas; or~~

~~c) Areas designated by the Washington Department of Fish and Wildlife (WDFW) as biodiversity areas and corridors, or areas identified by the Director with significant tree and vegetation cover providing wildlife habitat.~~

~~3) If the application includes a proposal to develop in a steep slope erosion hazard area or buffer, the development in the steep slope erosion hazard area or buffer shall be the minimum necessary to achieve the number of single family dwelling units that would be allowed on the original entire parcel according to the calculation for subdivision required under subsection 25.09.240.G in the following order of priority:~~

~~a) The proposal reduces the front and/or rear yards pursuant to subsection 25.09.260.B.3.b.1 and complies with the building separation standards of subsections 25.09.260.B.3.b.2 and 25.09.260.B.3.b.3;~~

~~b) The proposal reduces the steep slope erosion hazard area
buffer; and~~

~~c) The proposal intrudes into not more than 30 percent of
the steep slope erosion hazard area.~~

~~d. The proposal protects WDFW priority species and maintains wildlife
habitat.~~

~~e. The proposal does not result in unmitigated negative environmental
impacts pursuant to Section 25.09.065, including drainage and water quality, erosion, loss of
trees and vegetation, and slope stability on the identified environmentally critical area and buffer.~~

~~f. The proposal promotes expansion, restoration, or enhancement of the
identified environmentally critical area and buffer.~~

~~2. General environmental impacts and site characteristics~~

~~a. The proposal minimizes potential negative effects of the development
on the undeveloped portion of the site and preserves topographic features.~~

~~b. The proposal retains and protects trees and vegetation on designated
non-disturbance areas, protects stands of mature trees, minimizes tree removal, removes noxious
weeds and non-native vegetation and replaces this vegetation with native trees and vegetation,
and protects the visual continuity of treed and vegetated areas and tree canopy.~~

~~3. Development standards~~

~~a. The total number of single-family dwelling units permitted through the
environmentally critical areas conditional use regulations shall not exceed the number that would
be allowed based on compliance with the use regulations of Section 23.44.008, and the minimum
lot area standards of the underlying neighborhood residential zone, and shall be established only~~

~~on the site comprised of the original entire parcel, with subdivision of the original entire parcel
allowed only as unit lots approved through the unit lot subdivision process in Section
25.09.260.C.2.b.2.~~

~~b. Single family dwelling units shall be the sole type of principal use
permitted through the environmentally critical areas conditional use regulations and shall meet
the development standards of Chapter 23.44, except that the following standards apply instead of
the standards in Chapter 23.44, as applicable:~~

~~1) Front and rear yards required by subsections 23.44.014.A and
23.44.014.B may be reduced to no less than 10 feet each and 30 feet for the sum of both yards if
the reduction would minimize or eliminate any intrusion into the steep slope erosion hazard area
or required buffer;~~

~~2) Front and rear building separations between proposed single
family residences shall be a minimum of 25 feet;~~

~~3) Side building separations shall be a minimum of 10 feet;~~

~~4) The maximum lot coverage shall be calculated by deducting
required non-disturbance areas from total lot size; and~~

~~5) Front, rear, and side separations shall be determined by the
Director, based on location of the building in relation to other buildings and the front lot line.))~~

~~C. Conditions~~

~~1. In authorizing an administrative conditional use, mitigation pursuant to Section
25.09.065 shall apply to protect and mitigate negative impacts to biodiversity areas and
corridors, priority habitat and setbacks, riparian corridors, wetlands, wetland buffers, and steep
slope erosion hazard areas and buffers, and the Director may impose additional conditions to~~

1 ~~protect other properties that could be adversely affected in the zone or vicinity in which the~~
2 ~~property is located.~~

3 ~~2. In addition to any conditions imposed under subsection 25.09.260.C.1, the~~
4 ~~following conditions apply to all administrative conditional uses approved under this Section~~
5 ~~25.09.260:~~

6 ~~a. Replacement and establishment of native trees and vegetation shall be~~
7 ~~required where it is not possible to save trees and vegetation and shall comply with Section~~
8 ~~25.09.070.~~

9 ~~b. If a subdivision or short subdivision is proposed, the following~~
10 ~~standards apply:~~

11 ~~1) The development as a whole shall meet development standards~~
12 ~~under Title 23 and this Chapter 25.09 applicable at the time the application is vested.~~

13 ~~2) A unit lot short subdivision or unit lot subdivision proposal shall~~
14 ~~be required to ensure that the development standards of subsection 25.09.260.B.3 are~~
15 ~~implemented for development. New unit lots created under this Section 25.09.260 shall be~~
16 ~~approved through the unit lot subdivision regulations of Sections 23.22.062 and 23.24.045 and~~
17 ~~by compliance with this Section 25.09.260. Development on individual unit lots, except as~~
18 ~~otherwise set forth in this Section 25.09.260, may be nonconforming as to some or all of the~~
19 ~~development standards.~~

20 ~~3) Subsequent platting actions or additions or modifications to~~
21 ~~structures may not create or increase any nonconformity of the development as a whole to this~~
22 ~~Chapter 25.09, and this shall be noted on the document creating the new unit lots that is recorded~~
23 ~~with the King County Recorder's Office.~~

~~4) Access easements and joint use and maintenance agreements shall be executed for use of common garage or parking areas, common open space, and other similar features and be recorded with the King County Recorder's Office.~~

~~D. The Director shall issue written findings of fact and conclusions to support the Director's decision. The process and procedures for notice of decision and appeal of this administrative conditional use shall be as prescribed for Type II land use decisions in Chapter 23.76.))~~

Section 101. Section 25.09.300 of the Seattle Municipal Code, last amended by Ordinance 125292, is amended as follows:

25.09.300 Environmentally critical area exception

A. Types of exceptions

1. General. An applicant for a City permit to develop real property that is located in an environmentally critical area or buffer may apply to the Director for an exception to modify environmentally critical area development standards, provided that an applicant cannot apply for an exception to allow development ~~((or to obtain development credit under subsection 25.09.240.G))~~ or to relocate lot lines under Section 23.28.030. An applicant seeking relief under this Section 25.09.300 shall demonstrate that no other applicable administrative remedies in this Chapter 25.09 or Title 23 will provide sufficient relief.

2. Public projects. If development in an environmentally critical area or buffer is necessary to accommodate a public facility or public utility, the Director may grant an exception permitting the public facility or public utility using the following criteria in lieu of subsections 25.09.300.C and 25.09.300.D:

a. No reasonable alternative location will accommodate the facility or utility, as demonstrated by an analysis of appropriate alternative locations provided by the applicant or the Director;

b. Mitigation sequencing under Section 25.09.065 is applied to the siting, design, and construction of the facility or utility; and

c. All requirements of subsections 25.09.300.A.1, 25.09.300.B, 25.09.300.E, and 25.09.300.F apply(~~(; and~~

~~d. In granting an exception to the development standards in Sections 25.09.090, 25.09.160, and 25.09.200 the Director shall apply the mitigation standards in Section 25.09.065 when imposing any conditions)).~~

* * *

Section 102. Section 25.09.520 of the Seattle Municipal Code, last amended by Ordinance 126685, is amended as follows:

25.09.520 Definitions

* * *

"Department" means the Seattle Department of Construction and Inspections or its successor department.

"Detached dwelling unit" means a detached dwelling unit as defined in Section 23.84A.008.

* * *

~~(("Single family residence" means single family dwelling unit as defined in Section 23.84A.032 in the definition of "residential use."))~~

* * *

Section 103. A new Section 25.11.025 is added to the Seattle Municipal Code as follows:

25.11.025 Essential public facilities

If this Chapter 25.11 applies to a proposal for an essential public facility as defined in Section 23.84A.010, review of the proposed facility is subject to the provisions of Chapter 23.80.

Section 104. Section 25.11.090 of the Seattle Municipal Code, last amended by Ordinance 126821, is amended as follows:

25.11.090 Tree replacement, maintenance, and site restoration

A. In all zones, Tier 1, Tier 2, and Tier 3 trees removed in association with development or because they are hazardous, infested by insects, pests, or pathogens, or an invasive or nuisance tree, or in accordance with the removal criteria in subsection 25.11.050.D, shall be replaced by one or more new trees, the size and species of which shall be determined by the Director; the tree replacement required shall be designed to result, upon maturity, in a canopy cover that is at least roughly proportional to the canopy cover prior to tree removal. Site restoration where there is on-site tree replacement in association with development shall include the removal of all invasive vegetation and shall prohibit replacement with invasive species. When on-site replacement is proposed, such trees count toward the Green Factor under ((SMC)) Section 23.86.019 and private property tree point requirements under Section 23.44.120. When off-site replacement is proposed, preference for the location shall be on public property.

* * *

Section 105. Ordinance 127219, implementing interim controls to comply with various state laws and attached to this ordinance as Attachment 3, is repealed. This ordinance shows Seattle Municipal Code sections common to both ordinances as if the repealed ordinance did not take effect.

Section 106. This ordinance shall take effect as provided by Seattle Municipal Code
Sections 1.04.020 and 1.04.070.

Passed by the City Council the _____ day of _____, 2025,
and signed by me in open session in authentication of its passage this _____ day of
_____, 2025.

President _____ of the City Council

Approved / returned unsigned / vetoed this _____ day of _____, 2025.

ATTACHMENT 2 - REPEALED TEXT OF CHAPTER 23.44

Chapter 23.44 NEIGHBORHOOD RESIDENTIAL

23.44.002 Scope of provisions

A. This Chapter 23.44 establishes regulations for the following neighborhood residential zones: NR1, NR2, NR3, and RSL, zones.

B. Some land in these zones may be regulated by Subtitle III, Division 3, Overlay Districts, of this Title 23 in addition to the standards of this Chapter 23.44.

C. Other regulations, including but not limited to general use provisions (Chapter 23.42); requirements for streets, alleys, and easements (Chapter 23.53); standards for parking quantity, access, and design (Chapter 23.54); standards for solid waste storage (Chapter 23.54); sign regulations (Chapter 23.55); communication regulations (Chapter 23.57); and methods for measurements (Chapter 23.86) may apply to development proposals.

Subchapter I Principal Uses Permitted Outright

23.44.006 Principal uses permitted outright

The following principal uses are permitted outright in neighborhood residential zones:

- A. Single-family dwelling unit;
- B. In RSL zones, apartments, carriage houses, cottage housing development, rowhouse development, and townhouse developments;
- C. Floating homes, subject to the requirements of Chapter 23.60A;
- D. Parks and open space, and community gardens;
- E. Existing railroad right-of-way;
- F. Public schools meeting development standards. New public schools or additions to existing public schools, and accessory uses including child care centers, subject to the special

development standards and departures from standards contained in Chapter 23.51B, except that departures from development standards may be permitted or required pursuant to procedures and criteria established in Chapter 23.79;

G. Uses in existing or former public schools:

1. Child care centers, public or private schools, educational and vocational training for the disabled, adult evening education classes, nonprofit libraries, community centers, community programs for the elderly, and similar uses are permitted outright in existing or former public schools, provided that any new children's play equipment or active play area associated with the use shall be located at least 20 feet from any other lot in any residential zone.

2. Other non-school uses in existing or former public schools, if permitted pursuant to procedures established in Chapter 23.78.

3. Additions to existing public schools only when the proposed use of the addition is a public school;

H. Nursing homes. Nursing homes meeting the development standards of this Chapter 23.44, and limited to eight or fewer residents;

I. Adult family homes. Adult family homes, as defined and licensed by the state of Washington;

J. Commercially operating horse farms in existence before July 1, 2000, on lots greater than ten acres, conforming to the limits on the number and location of farm animals and structures containing them set forth in Section 23.42.052;

K. Child care centers;

L. Community centers that do not provide shelter services;

M. Community farms; and

N. Libraries.

23.44.007 Mandatory Housing Affordability in RSL zones

RSL zones that have a mandatory housing affordability suffix are subject to the provisions of Chapters 23.58B and 23.58C.

23.44.008 Development standards for uses permitted outright

A. The development standards set out in this Subchapter I apply to principal and accessory uses permitted outright in neighborhood residential zones.

B. All structures or uses shall be built or established on a lot or lots.

C. Floating homes are subject to the provisions of Chapter 23.60A and are also subject to the parking provisions of this Chapter 23.44.

D. An exception from one specific standard does not relieve the applicant from compliance with any other standard.

E. Methods for measurements are provided in Chapter 23.86. Standards for parking access and design are provided in Chapter 23.54.

F. Any structure occupied by a permitted principal use other than single-family residential use may be converted to single-family residential use even if the structure does not conform to the development standards for single-family structures. Expansions of converted nonconforming structures are regulated by Section 23.42.108. Conversion of structures occupied by nonconforming uses is regulated by Sections 23.42.108 and 23.42.110.

G. Development standards governing lots containing an environmentally critical area or buffer may be modified according to the provisions of Chapter 25.09.

H. Exterior lighting shall be shielded and directed away from residentially zoned lots.

The Director may require that the intensity of illumination be limited and that the location of the lighting be changed.

23.44.009 Design standards in RSL zones

In RSL zones, the following provisions apply:

A. Pedestrian access at least 3 feet in width shall be provided between each principal structure and the street. This access may be over a driveway and may cross any required yards or interior separation. The pedestrian access may be part of a driveway, provided that the pathway is differentiated from the driveway by pavement color, texture, or similar technique.

B. Each dwelling unit with a street-facing facade or each apartment structure with a street-facing facade, that is located within 40 feet of a street lot line shall have a pedestrian entry or front door on that street-facing facade. For dwelling units or apartment structures on corner lots, a pedestrian entry or front door is required on only one of the street-facing facades. The pedestrian entry or front door shall be marked with a covered stoop, porch, or other similar architectural entry feature.

23.44.010 Minimum lot area and lot coverage

A. Minimum lot area. The minimum lot area in neighborhood residential zones shall be as provided in Table A for 23.44.010:

Table A for 23.44.010	
Minimum lot area	
Zone	Minimum lot area required
NR1	9,600 square feet
NR2	7,200 square feet
NR3	5,000 square feet
RSL	No minimum lot area ¹
Footnote to Table A for 23.44.010	
¹ In RSL zones, there is no minimum lot area; however, the maximum number of dwelling units on a lot is limited by the density limits in subsection 23.44.017.B.	

Submerged lands shall not be counted in calculating the area of lots for the purpose of these minimum lot area requirements, or the exceptions to minimum lot area requirements provided in this Section 23.44.010. A parcel that does not meet the minimum lot area requirements or exceptions of this Section 23.44.010, and that is in common ownership with an abutting lot when the abutting lot is the subject of any permit application, shall be included as a part of the abutting lot for purposes of the permit application.

B. Exceptions to minimum lot area requirements. The following exceptions to minimum lot area requirements are allowed in NR1, NR2, and NR3 zones, subject to the requirements in subsection 23.44.010.B.2, and further subject to the requirements in subsection 23.44.010.B.3 for any lot less than 3,200 square feet in area:

1. A lot that does not satisfy the minimum lot area requirements of its zone may be developed or redeveloped under one of the following circumstances:

a. "The Seventy-Five/Eighty Rule." The Seventy-Five/Eighty Rule exception may be applied to allow separate development of lots already in existence in their current configuration, or new lots resulting from a full subdivision, short subdivision, or lot boundary adjustment. In order to qualify for this exception, the lot must have an area at least 75 percent of the minimum required for the zone and also at least 80 percent of the mean area of the lots within the same block front, subject to the following provisions:

1) To be counted as a separate lot for the purposes of calculating the mean area of the lots on a block front, a lot must be entirely within a neighborhood residential zone, and must be currently developed as a separate building site or else currently qualify for separate development based on facts in existence as of the date a building permit, full

or short subdivision, or lot boundary adjustment application is filed with the Department. The existence of structures or portions of structures on the property that is the subject of the application may be disregarded when the application indicates the structures or portions of structures will be demolished. In cases where this exception is applied for the purpose of a lot boundary adjustment, the calculation shall be based on the existing lots as they are configured before the adjustment.

2) To be counted as a separate lot for the purposes of calculating the mean area of the lots on a block front, a lot must have at least 10 feet of frontage on the street the calculation is applied to.

3) Publicly owned properties and public or private lots developed with non-residential uses such as parks or institutional uses may be excluded from the calculation. There must, however, be at least one lot on the block front used for the calculation other than the property that is the subject of the platting, lot boundary adjustment, or building permit application that this exception is being applied to.

4) If property is to be subdivided or its lot lines are modified by a lot boundary adjustment that increases the number of lots that qualify for separate development, the property subject to the subdivision, or the lots modified by the lot boundary adjustment, shall be excluded from the block front mean area calculation.

5) For purposes of this subsection 23.44.010.B.1.a, if the platting pattern is irregular, the Director will determine which lots are included within a block front.

6) If an existing or proposed lot has frontage on more than one street, the lot may qualify for this exception based on the calculation being applied to any street on which the lot has at least 30 feet of frontage. If a proposed lot has frontage on multiple streets

but does not have 30 feet of frontage on any street, the exception may be applied based on the calculation along the street on which the lot has the most frontage, provided the lot has at least 10 feet of frontage on that street. If the lot has less than 30 feet of frontage on any one street but equal frontage on multiple streets, the rule may be applied based on the calculation along any one of the streets, provided the lot has at least 10 feet of frontage on that street.

7) New lots created pursuant to subsection 23.44.010.B.1.a shall comply with the following standards:

a) For a lot that is subdivided or short platted, the configuration requirements of subsections 23.22.100.C.3 and 23.24.040.A.9 or with the modification provisions of subsections 23.22.100.D and 23.24.040.B, as applicable; or

b) For an existing lot that is reconfigured under the provisions of Chapter 23.28, the configuration requirements of subsection 23.28.030.A.3 or with the modification provisions of subsection 23.28.030.A.4.

b. The lot area deficit is the result of a dedication or sale of a portion of the lot to the City or state for street or highway purposes, payment was received for only that portion of the lot, and the lot area remaining is at least 2,500 square feet.

c. The lot would qualify as a legal building site under subsection 23.44.010.B but for a reduction in the lot area due to court-ordered adverse possession, and the amount by which the lot was so reduced was less than ten percent of the former area of the lot. This exception does not apply to lots reduced to less than 2,500 square feet.

d. The historic lot exception. The historic lot exception may be applied to allow separate development of lots already in existence if the lot has an area of at least 2,500 square feet, and was established as a separate building site in the public records of the county or

City prior to July 24, 1957, by deed, contract of sale, platting, or building permit. The qualifying lot shall be subject to the following provisions:

1) A lot is considered to have been established as a separate building site by deed if the lot was held under separate ownership from all abutting lots for at least one year after the date the recorded deed transferred ownership. A lot is considered to have been established as a separate building site by contract of sale only if that sale would have caused the property to be under separate ownership from all abutting lots.

2) If two contiguous lots have been held in common ownership at any time after January 18, 1987, and a principal structure extends onto or over both lots, neither lot qualifies for the exception. If the principal structure does not extend onto or over both lots, but both lots were required to meet development standards other than parking requirements in effect at the time the structure was built or expanded, neither lot qualifies for the exception unless the vacant lot is not needed to meet current development standards other than parking requirements. If the combined property fronts on multiple streets, the orientation of the principal structure shall not be considered when determining if it could have been built to the same configuration without using the vacant lot or lots as part of the principal structure's building site.

3) Lots that do not otherwise qualify for this exception cannot qualify as a result of all or part of a principal structure being removed or destroyed by fire or act of nature that occurred on or after January 18, 1987. Lots may, however, qualify as a result of removing from the principal structure minor features that do not contain enclosed interior space, including but not limited to eaves and unenclosed decks.

4) If parking for an existing principal structure on one lot has been provided on an abutting lot and parking is required under Chapter 23.54 the required parking for

the existing house shall be relocated onto the same lot as the existing principal structure in order for either lot to qualify for the exception.

e. The lot is within a clustered housing planned development pursuant to Section 23.44.024, a planned residential development pursuant to Section 23.44.034, or a development approved as an environmentally critical areas conditional use pursuant to Section 25.09.260.

f. If a lot qualifies for an exception to the lot area requirement under subsection 23.44.010.B.1.a, 23.44.010.B.1.b, 23.44.010.B.1.c, 23.44.010.B.1.d, or 23.44.010.B.1.e, the boundaries between that lot and contiguous lots on the same block face that also qualify for separate development may be adjusted through the lot boundary adjustment process if the adjustment maintains the existing lot areas, increases the area of a qualifying substandard lot without reducing another lot below the minimum permitted lot area, or causes the areas of the lots to become more equal provided the number of parcels qualifying for separate development is not increased.

2. Limitations

a. Development may occur on a substandard lot containing a riparian corridor, a wetland and wetland buffer, or a steep slope and steep slope buffer pursuant to the provisions of Chapter 25.09 or containing priority freshwater habitat or priority saltwater habitat described in Section 23.60A.160, only if one of the following conditions applies:

1) The substandard lot is not held in common ownership with an abutting lot or lots at any time after October 31, 1992, or

2) The substandard lot is held in common ownership with an abutting lot or lots, or has been held in common ownership at any time after October 31, 1992, if

proposed and future development will not intrude into the environmentally critical area or buffer or priority freshwater habitat or priority saltwater habitat described in Section 23.60A.160.

b. Lots on totally submerged lands do not qualify for any minimum lot area exceptions.

3. Special exception review for lots less than 3,200 square feet in area. A special exception Type II review as provided for in Section 23.76.006 is required for separate development of any lot that has not been previously developed as a separate lot and has an area less than 3,200 square feet that qualifies for any lot area exception in subsection 23.44.010.B.1. The special exception application shall be subject to the following provisions:

a. The depth of any structure on the lot shall not exceed two times the width of the lot. If a side yard easement is provided according to subsection 23.44.014.C.3, the portion of the easement within 5 feet of the structure on the lot qualifying under this subsection 23.44.010.B.3 may be treated as a part of that lot solely for the purpose of determining the lot width for purposes of complying with this subsection 23.44.010.B.3.a.

b. Windows in a proposed principal structure facing an existing abutting lot that is developed with a house shall be placed in manner that takes into consideration the interior privacy in abutting houses, provided that this subsection 23.44.010.B.3.b shall not prohibit placing a window in any room of the proposed house.

c. In approving a special exception review, additional conditions may be imposed that address window placement to address interior privacy of existing abutting houses.

C. Maximum lot coverage

1. The maximum lot coverage permitted for principal and accessory structures is as provided in Table B for 23.44.010.

Table B for 23.44.010 Maximum lot coverage		
Zone	Lot size	Maximum lot coverage
NR1, NR2, and NR3	Less than 5,000 square feet	1,000 square feet plus 15 percent of lot area
	5,000 square feet or more	35 percent of lot area
RSL	All lots	50 percent of lot area

2. For purposes of computing maximum lot coverage, only those portions of a lot that measure at least 10 feet in all directions shall be included in lot coverage calculations, except for portions of a lot that are used for access or that are granted a waiver under subsections 23.22.100.D, 23.24.040.B, or 23.28.030.A.4 for the purpose of providing access.

D. Lot coverage exceptions

1. Lots abutting alleys. For purposes of computing the lot coverage only:

a. The area of a lot with an alley or alleys abutting any lot line may be increased by one-half of the width of the abutting alley or alleys.

b. The total lot area for any lot may not be increased by the provisions of this Section 23.44.010 by more than ten percent.

2. Special structures and portions of structures. The following structures and portions of structures are not counted in lot coverage calculations:

a. Access bridges

1) Uncovered, unenclosed pedestrian bridges 5 feet or less in width and of any height necessary for access,

2) Uncovered, unenclosed vehicular bridges no wider than 12 feet for access to one parking space or 18 feet for access to two parking spaces and of any height necessary for access;

- b. Barrier-free access. Ramps or other access for the disabled or elderly that comply with the Seattle Building Code, Chapter 11;
- c. Decks. Decks or parts of a deck that are 36 inches or less above existing grade;
- d. Freestanding structures and bulkheads. Fences, freestanding walls, bulkheads, signs, and other similar structures;
- e. Underground structures. An underground structure, or underground portion of a structure;
- f. Eaves and gutters. The first 36 inches of eaves and gutters that project from principal and accessory structures;
- g. Solar collectors and swimming pools. Solar collectors that comply with Section 23.44.046 and swimming pools that comply with Section 23.44.044.

23.44.011 Floor area in neighborhood residential zones

A. Gross floor area. In neighborhood residential zones, gross floor area includes exterior corridors, breezeways, and stairways that provide building circulation and access to dwelling units or sleeping rooms. Balconies, patios, and decks that are associated with a single dwelling unit or sleeping room and that are not used for common circulation, and ground-level walking paths, are not considered gross floor area.

B. Floor area ratio (FAR) limits.

1. The FAR limit on lots developed with a single-family dwelling unit as the principal use in NR1, NR2, and NR3 zones, is 0.5, except that lots with less than 5,000 square feet of lot area can include up to 2,500 square feet of total chargeable floor area. The applicable FAR limit applies to the total chargeable floor area of all structures on the lot.

2. The FAR limit in RSL zones is 0.75. The applicable FAR limit applies to the total chargeable floor area of all structures on the lot.

C. The following floor area is exempt from FAR limits:

1. All stories, or portions of stories, that are underground.
2. All portions of a story that extend no more than 4 feet above existing or finished grade, whichever is lower, excluding access.
3. In NR1, NR2, and NR3 zones:
 - a. Any floor area contained in an accessory dwelling unit;
 - b. Either up to 500 additional square feet of floor area in any accessory structure that is not a detached accessory dwelling unit, or up to 250 square feet of floor area in an attached garage.

4. In RSL zones, 50 percent of the chargeable floor area contained in structures built prior to January 1, 1982, as single-family dwelling units that will remain in residential use, regardless of the number of dwelling units within the existing structure, provided the exemption is limited to the gross square footage in the single-family dwelling unit as of January 1, 1982.

D. In NR1, NR2, and NR3 zones, additions to a single-family dwelling unit existing on the effective date of the ordinance introduced as Council Bill 119544 may exceed the FAR limit in subsection 23.44.011.B.1 if the addition adds floor area equal to or less than 20 percent of the floor area that existed on the effective date of the ordinance introduced as Council Bill 119544. Only one addition to any single-family dwelling unit may be exempted under this subsection 23.44.011.D.

23.44.012 Height limits

A. Maximum height established. The provisions of this Section 23.44.012 apply in neighborhood residential zones, except as provided elsewhere in the Land Use Code for specific types of structures or structures in particular locations.

1. Except as provided in subsections 23.44.012.A.2 and 23.44.012.A.3, the maximum permitted height for any structure not located in a required yard is 30 feet.

2. In NR1, NR2, and NR3 zones, the maximum permitted height for any structure on a lot 30 feet or less in width is 25 feet.

3. In NR1, NR2, and NR3 zones, for a lot or unit lot of any width, if the area of the largest rectangle or other quadrilateral that can be drawn within the lot lines of the lot or unit lot is less than 3,200 square feet the maximum permitted height for any structure on that lot shall be 18 feet. Additional height shall be allowed, subject to the limit that would otherwise apply under subsections 23.44.012.A.1 and 23.44.012.A.2, provided that the elevation at the top of the exterior walls of the structure, exclusive of pitched roofs, does not exceed the average of the elevations at the tops of the walls of single-family residences on abutting lots within the same zone. The limit of this subsection 23.44.012.A.3 shall not apply to additions to single-family residences existing as of February 1, 2013, that do not exceed the greater of 1,000 square feet of new gross floor area or the amount of gross floor area on any one floor of the existing house.

B. Pitched roofs. The ridge of a pitched roof on a principal structure may extend up to 5 feet above the maximum height limit, as determined under subsection 23.44.012.A. All parts of the roof above the height limit must be pitched at a rate of not less than 4:12 (Exhibit A for 23.44.012). No portion of a shed or butterfly roof, except on a dormer, shall be permitted to extend beyond the maximum height limit, as determined under subsection 23.44.012.A. Roof forms including but not limited to barreled and domed roofs may be allowed under this

subsection 23.44.012.B if the Director determines that the roof form remains within the massing of a pitched roof form such as a gable or gambrel roof that would otherwise be allowed by this subsection 23.44.012.B (Exhibit B for 23.44.012).

C. Height limit exemptions

1. Flagpoles. Except in the Airport Height Overlay District, Chapter 23.64, flagpoles are exempt from height limits, provided that they are no closer to any adjoining lot line than 50 percent of their height above existing grade, or, if attached only to a roof, no closer than 50 percent of their height above the roof portion where attached.

2. Other features. Open rails and planters may extend no higher than the ridge of a pitched roof permitted under subsection 23.44.012.B or 4 feet above the maximum height limit in subsection 23.44.012.A. Planters on flat roofs shall not be located within 4 feet of more than 25 percent of the perimeter of the roof. For any structure with a green roof and having a minimum rooftop coverage of 50 percent, up to 24 inches of additional height above the height limit is allowed to accommodate structural requirements, roofing membranes, and soil. Chimneys may extend 4 feet above the ridge of a pitched roof or above a flat roof.

3. Projections that accommodate windows and result in additional interior space, including dormers, clerestories, skylights, and greenhouses, may extend no higher than the ridge of a pitched roof permitted pursuant to subsection 23.44.012.B, or 4 feet above the applicable height limit pursuant to subsection 23.44.012.A, whichever is higher, if all of the following conditions are satisfied (Exhibit D for 23.44.012:

- a. The total area of these projections is limited to 30 percent of the area of each roof plane measured from the plan view perspective;
- b. On pitched roofs, projections are limited to 10 feet in width with a minimum separation of 3 feet from other projections; and
- c. On flat roofs, projections are set back at least 4 feet from exterior walls.

4. Solar collectors. For height exceptions for solar collectors, not including solar greenhouses, see Section 23.44.046.

5. For nonresidential principal uses, the following rooftop features may extend up to 10 feet above the maximum height limit, as long as the combined total coverage of all features listed in this subsection 23.44.012.C.5 does not exceed 15 percent of the roof area or 20 percent of the roof area if the total includes screened or enclosed mechanical equipment:

- a. Stair and elevator penthouses;
- b. Mechanical equipment; or
- c. Wind-driven power generators.

6. Wind-driven power generators. Devices for generating wind power may be located on structures as a rooftop feature and may extend up to 10 feet above the maximum height limit set in subsections 23.44.012. A and 23.44.012.B, provided that the combined total coverage of all features does not exceed 15 percent of the roof area.

7. For height limits and exceptions for communication utilities and accessory communication devices, see Section 23.57.010.

23.44.013 Transportation concurrency level-of-service standards.

Proposed uses in neighborhood residential zones shall meet the transportation concurrency level-of-service standards prescribed in Chapter 23.52.

23.44.014 Yards

A. General

- 1. Yards are required for every lot in a neighborhood residential zone.
- 2. In the case of a through lot, each yard abutting a street, except a side yard, shall be a front yard. Rear yard provisions shall not apply to the through lot, except pursuant to Section 23.40.030 or 23.40.035.
- 3. Setbacks from a street or alley may be required in order to meet the provisions of Section 23.53.015.
- 4. Setbacks from access easements may also be required for principal structures according to the standards in subsections 23.53.025.C.2 and 23.53.025.D.6.

B. Required yards for neighborhood residential zones are shown in Table A for 23.44.014.

Table A for 23.44.014		
Required yards in neighborhood residential zones		
Yard	NR1, NR2, and NR3	RSL
Front	20 feet or the average of the front yards of the single-family structures on either side, whichever is less ¹	10 feet
Rear	25 feet or 20 percent of lot depth, whichever is less, except that it may never be less than 10 feet ²	10 feet except that, if the rear yard abuts an alley, there is no rear yard requirement
Side	5 feet ^{3, 4, 5}	5 feet ⁵
Footnotes to Table A for 23.44.014 ¹ If the natural gradient or slope (as measured from the front line of the lot for a distance of 60 feet or the full depth of the lot, whichever is less) is in excess of 35 percent, the required front yard depth shall be the lesser of: 20 feet less 1 foot for each one percent of gradient or slope in excess of 35 percent; or the average of the front yards on either side. ² If the rear lot line abuts an alley, the centerline of the alley between the side lot lines extended shall be assumed to be the rear lot line for purposes of the provision of rear yard and the determination of lot depth; provided, that at no point shall the principal structure be closer than 5 feet to the alley. ³ In the case of a reversed corner lot, the key lot of which is in a neighborhood residential zone, the width of the side yard on the street side of the reversed corner lot shall not be less than 10 feet. ⁴ If any side street lot line is a continuation of the front lot line of an abutting neighborhood residential zoned lot, whether or not separated by an alley, the width of the street side yard shall not be less than 10 feet. ⁵ No side yard is required from a side lot line that abuts an alley.		

C. Exceptions from standard yard requirements. No structure shall be placed in a required yard except as follows:

1. Garages. Attached and detached garages may be located in a required yard subject to the standards of Section 23.44.016.

2. Certain accessory structures in side and rear yards

a. Except for detached accessory dwelling units, any accessory structure that complies with the requirements of Section 23.44.040 may be constructed in a side yard that abuts the rear or side yard of another lot, or in that portion of the rear yard of a reversed corner lot within 5 feet of the key lot and not abutting the front yard of the key lot, upon recording with

the King County Recorder's Office an agreement to this effect between the owners of record of the abutting properties.

b. Except for detached accessory dwelling units, any detached accessory structure that complies with the requirements of Section 23.44.040 may be located in a rear yard, provided that on a reversed corner lot, no accessory structure shall be located in that portion of the required rear yard that abuts the required front yard of the adjoining key lot, nor shall the accessory structure be located closer than 5 feet from the key lot's side lot line unless the provisions of subsections 23.44.014.C.2.a or 23.44.016.D.9 apply.

3. A principal structure with or without an accessory dwelling unit, and/or a detached accessory dwelling unit may extend into one side yard if an easement is provided along the side or rear lot line of the abutting lot, sufficient to leave a 10-foot separation between that structure and any principal structure or detached accessory dwelling unit on the abutting lot. The 10-foot separation shall be measured from the wall of the structure proposed to extend into a side yard to the wall of the structure on the abutting lot.

a. No structure or portion of a structure may be built on either lot within the 10-foot separation, except as provided in this Section 23.44.014.

b. Features of and projections from structures, such as porches, eaves, and chimneys, are permitted in the 10-foot separation area required by this subsection 23.44.014.C.3 if otherwise allowed in side yards by this subsection 23.44.014.C. For purposes of calculating the distance a structure or feature may project into the 10-foot separation, assume the property line is 5 feet from the wall of the structure proposed to extend into a side yard and consider the 5 feet between the wall and the assumed property line to be the required side yard.

c. Notwithstanding subsection 23.44.014.C.3.b, no portion of any structure, including eaves or any other projection, shall cross the actual property line.

d. The easement shall be recorded with the King County Recorder's Office. The easement shall provide access for normal maintenance activities to the structures on the lot with less than the required 5-foot side yard.

4. Certain additions to structures may be permitted. An existing single-family structure may extend into a required yard if the existing structure is already nonconforming with respect to that yard. The presently nonconforming portion must be at least 60 percent of the total width of the respective facade of the structure prior to the addition. The line formed by the existing nonconforming wall of the structure is the limit to which any additions may be built, except as described in subsections 23.44.014.C.4.a through 23.44.014.C.4.e. Additions may extend up to the height limit and may include basement additions. New additions to the nonconforming wall or walls within required yards shall comply with the following requirements:

a. Side yard. If the addition is a side wall, the existing wall line may be continued by the addition except that in no case shall the addition be closer than 3 feet to the side lot line;

b. Rear yard. If the addition is a rear wall, the existing wall line may be continued by the addition except that in no case shall the addition be closer than 20 feet to the rear lot line or centerline of an alley abutting the rear lot line;

c. Front yard. If the addition is a front wall, the existing wall line may be continued by the addition except that in no case shall the addition be closer than 15 feet to the front lot line;

d. If the nonconforming wall of the structure is not parallel or is otherwise irregular, relative to the lot line, then the Director shall determine the limit of the wall extension, except that the wall extension shall not be located closer than specified in subsections 23.44.014.C.4.a, 23.44.014.C.4.b, and 23.44.014.C.4.c.

e. Roof eaves, gutters, and chimneys on such additions may extend an additional 18 inches into a required yard, but in no case shall such features be closer than 2 feet to the side lot line.

5. Uncovered porches or steps. Uncovered, unenclosed porches or steps may project into any required yard, if the surface of porches or steps are no higher than 4 feet above existing grade, no closer than 3 feet to any side lot line, and has a width and depth no greater than 6 feet within the required yard. For each entry to a structure, one uncovered, unenclosed porch and/or associated steps are permitted in each required yard.

6. Certain features of a structure. Unless otherwise provided elsewhere in this Chapter 23.44 or Section 23.42.022, certain features of a principal or accessory structure may extend into required yards if they comply with the following:

a. External architectural details with no living area, such as chimneys, eaves, cornices, and columns, may project no more than 18 inches into any required yard;

b. Bay windows are limited to 8 feet in width and may project no more than 2 feet into a required front, rear, and street side yard;

c. Other projections that include interior space, such as garden windows, may extend no more than 18 inches into any required yard, starting a minimum of 30 inches above finished floor, and with maximum dimensions of 6 feet in height and 8 feet in width;

d. The combined area of features permitted by subsections 23.44.014.C.6.b and 23.44.014.C.6.c may comprise no more than 30 percent of the area of the facade, except that no limit applies to detached accessory dwelling units.

7. Covered, unenclosed decks and roofs over patios. Covered, unenclosed decks and roofs over patios, if attached to a principal structure, may extend into the required rear yard, but shall not be within 12 feet of the centerline of any alley, or within 5 feet of any rear lot line that is not an alley lot line, or closer to any side lot line in the required rear yard than the side yard requirement of the principal structure along that side, or closer than 5 feet to any accessory structure. The height of the roof over unenclosed decks and patios shall not exceed 12 feet above existing or finished grade, whichever is lower. The roof over such decks or patios shall not be used as a deck.

8. Access bridges. Uncovered, unenclosed access bridges are permitted as follows:

a. Pedestrian bridges 5 feet or less in width, and of any height necessary for access, are permitted in required yards, except that in side yards an access bridge must be at least 3 feet from any side lot line.

b. A driveway access bridge is permitted in the required yard abutting the street if necessary for access to parking. The vehicular access bridge shall be no wider than 12 feet for access to one parking space or 18 feet for access to two or more parking spaces and of any height necessary for access. The driveway access bridge may not be located closer than 5 feet to an adjacent property line.

9. Barrier-free access. Access facilities for the disabled and elderly that comply with the Seattle Building Code, Chapter 11, are permitted in any required yard.

10. Freestanding structures and bulkheads

a. Fences, freestanding walls, bulkheads, signs, and similar structures 6 feet or less in height above existing or finished grade, whichever is lower, may be erected in any required yard. The 6-foot height may be averaged along sloping grade for each 6-foot-long segment of the fence, but in no case may any portion of the fence exceed 8 feet. Architectural features may be added to the top of the fence or freestanding wall above the 6-foot height if the features comply with the following: horizontal architectural feature(s), no more than 10 inches high, and separated by a minimum of 6 inches of open area, measured vertically from the top of the fence, are permitted if the overall height of all parts of the structure, including post caps, is no more than 8 feet. Averaging the 8-foot height is not permitted. Structural supports for the horizontal architectural feature(s) may be spaced no closer than 3 feet on center.

b. The Director may allow variation from the development standards listed in subsection 23.44.014.C.10.a, according to the following:

- 1) No part of the structure may exceed 8 feet; and
- 2) Any portion of the structure above 6 feet shall be predominately open, such that there is free circulation of light and air.

c. Bulkheads and retaining walls used to raise grade may be placed in any required yard when limited to 6 feet in height, measured above existing grade. A guardrail no higher than 42 inches may be placed on top of a bulkhead or retaining wall existing as of February 20, 1982. If a fence is placed on top of a new bulkhead or retaining wall, the maximum combined height is limited to 9 1/2 feet.

d. Bulkheads and retaining walls used to protect a cut into existing grade may be placed in any required yard when limited to the minimum height necessary to support the

cut. If the bulkhead or retaining wall is measured from the low side and it exceeds 6 feet, an open guardrail of no more than 42 inches meeting Seattle Building Code requirements may be placed on top of the bulkhead or retaining wall. If the bulkhead or retaining wall is 6 feet or less, a fence may be placed on top up to a maximum combined height of 9.5 feet for both fence and bulkhead or retaining wall.

e. If located in shoreline setbacks or in view corridors in the Shoreline District as regulated in Chapter 23.60A, structures shall not obscure views protected by Chapter 23.60A, and the Director shall determine the permitted height.

11. Decks in yards. Except for decks attached to a detached accessory dwelling unit, decks no higher than 18 inches above existing or finished grade, whichever is lower, may extend into required yards.

12. Mechanical equipment. Heat pumps and similar mechanical equipment, not including incinerators, are permitted in required yards if they comply with the requirements of Chapter 25.08. Any heat pump or similar equipment shall not be located within 3 feet of any lot line. Charging devices for electric cars are considered mechanical equipment and are permitted in required yards if not located within 3 feet of any lot line.

13. Solar collectors. Solar collectors may be located in required yards, subject to the provisions of Section 23.44.046.

14. Front yard projections for structures on lots 30 feet or less in width. For a structure on a lot in an NR1, NR2, and NR3 zone that is 30 feet or less in width, portions of the front facade that begin 8 feet or more above finished grade may project up to 4 feet into the required front yard, provided that no portion of the facade, including eaves and gutters, shall be closer than 5 feet to the front lot line (Exhibit A for 23.44.014), and provided further that no

portion of the facade of an existing structure that is less than 8 feet or more above finished grade already projects into the required front yard.

Exhibit A for 23.44.014

Front yard projections permitted for structures on lots 30 feet or less in width

Exhibit A for 23.44.014
Front yard projections permitted for structures on lots 30 feet or less in width

15. Front and rear yards may be reduced by 25 percent, but no more than 5 feet, if the site contains a required environmentally critical area buffer or other area of the property that cannot be disturbed pursuant to subsection 25.09.280.A.

16. Arbors. Arbors may be permitted in required yards under the following conditions:

a. In any required yard, an arbor may be erected with no more than a 40-square-foot footprint, measured on a horizontal roof plane inclusive of eaves, to a maximum height of 8 feet. Both the sides and the roof of the arbor shall be at least 50 percent open, or if latticework is used, there shall be a minimum opening of 2 inches between crosspieces.

b. In each required yard abutting a street, an arbor over a private pedestrian walkway with no more than a 30-square-foot footprint, measured on the horizontal roof plane and inclusive of eaves, may be erected to a maximum height of 8 feet. The sides of the arbor shall be at least 50 percent open, or if latticework is used, there shall be a minimum opening of 2 inches between crosspieces.

17. Stormwater management

a. Above-grade green stormwater infrastructure (GSI) features are allowed without yard restrictions if:

- 1) Each above-grade GSI feature is no more than 4.5 feet tall, excluding piping;
- 2) Each above-grade GSI feature is no more than 4 feet wide; and
- 3) The total storage capacity of all above-grade GSI features is no greater than 600 gallons.

b. Above-grade GSI features larger than what is allowed in subsection 23.44.014.C.17.a are allowed within a required yard if:

- 1) Above-grade GSI features do not exceed ten percent coverage of any one yard area;
- 2) No portion of an above-grade GSI feature is located closer than 3 feet from a side lot line;
- 3) No portion of an above-grade GSI feature is located closer than 20 feet from a rear lot line or centerline of an alley abutting the rear lot line; and
- 4) No portion of an above-grade GSI feature is located closer than 15 feet from the front lot line.

18. A structure may be permitted to extend into front and rear yards as necessary to protect a Tier 1 or Tier 2 tree, as defined in Section 25.11.130.

19. Below grade structures. Structures below grade, measured from existing or finished grade, whichever is lower, may be located below required yards.

D. Additional standards for structures if allowed in required yards. Structures in required yards shall comply with the following:

1. Accessory structures, attached garages, and portions of a principal structure shall not exceed a maximum combined coverage of 40 percent of the required rear yard, except that, when a detached accessory structure is proposed, the structures may cover an additional 20 percent of the rear yard provided that the increased rear yard coverage does not require removal of any Tier 1 or Tier 2 tree. In the case of a rear yard abutting an alley, rear yard coverage shall be calculated from the centerline of the alley.

2. Any accessory structure located in a required yard shall be separated from its principal structure by a minimum of 5 feet. This requirement does not apply to terraced garages that comply with subsection 23.44.016.C.9.b.

3. Except for detached accessory dwelling units, any accessory structure located in a required yard shall meet both the following standards:

- a. A maximum height of 12 feet; and
- b. A maximum size of 1,000 square feet in area.

4. Any detached accessory dwelling unit located in a required yard is subject to the requirements of Section 23.42.022.

E. Separations between multiple structures in RSL zones

1. In RSL zones, the minimum required separation between principal structures is 10 feet, except for principal structures separated by a driveway or parking aisle.

2. If principal structures are separated by a driveway or parking aisle, the minimum required separation between the principal structures is 2 feet greater than the required width of the driveway or parking aisle, provided that the separation is not required to be any greater than 24 feet. If principal structures are separated by a driveway or parking aisle, projections that enclose floor area may extend a maximum of 3 feet into the required separation if they are at least 8 feet above finished grade.

3. Uncovered porches or steps, features of a structure listed in subsection 23.44.014.C.6, and decks shall be allowed in the separation between principal structures provided they:

- a. Comply with the standards of subsections 23.44.014.C.5, 23.44.014.C.6, and 23.44.014.C.11 if the separation were treated like a yard; and

b. Project no more than 3 feet into the separation area.

4. Fences shall be allowed in the separation between principal structures provided they meet the development standards in subsection 23.44.014.C.10.

23.44.016 Parking and garages

A. Parking quantity. Off-street parking is required pursuant to Section 23.54.015.

B. Access to parking

1. Vehicular access to parking from an improved street, alley, or easement is required if parking is required pursuant to Section 23.54.015.

2. Access to parking is permitted through a required yard abutting a street only if the Director determines that one of the following conditions exists:

a. There is no alley improved to the standards of subsection 23.53.030.C, and there is no unimproved alley in common usage that currently provides access to parking on the lot or to parking on adjacent lots in the same block; or

b. Existing topography does not permit alley access; or

c. At least 50 percent of alley frontage abuts property in a non-residential zone; or

d. The alley is used for loading or unloading by an existing non-residential use; or

e. Due to the relationship of the alley to the street system, use of the alley for parking access would create a significant safety hazard; or

f. Parking access must be from the street in order to provide access to a parking space that complies with the Seattle Building Code, Chapter 11; or

g. Providing alley access would require removal of a tree on private property that is a Tier 1 or Tier 2 tree, as defined in Section 25.11.130.

C. Location of parking

1. Parking shall be located on the same lot as the principal use, except as provided in this subsection 23.44.016.C.

2. Parking on planting strips is prohibited.

3. For lots developed with one single-family dwelling, no more than three vehicles may be parked outdoors on any lot.

4. Parking accessory to a floating home may be located on another lot if within 600 feet of the lot on which the floating home is located. The accessory parking shall be screened and landscaped according to subsection 23.44.016.G.

5. Parking accessory to a single-family structure existing on June 11, 1982, may be established on another lot if all the following conditions are met:

a. There is no vehicular access to permissible parking areas on the lot.

b. Any garage constructed is for no more than two two-axle, or two up to four-wheeled vehicles.

c. Parking is screened or landscaped as required by the Director, who shall consider development patterns of the block or nearby blocks.

d. The lot providing the parking is within the same block or across the alley from the principal use lot.

e. The accessory parking shall be tied to the lot of the principal use by a covenant or other document recorded with the King County Recorder's Office.

D. Parking and garages in required yards. Parking and garages are regulated as described in this subsection 23.44.016.D. Unless otherwise specified, the terms "garage" or "garages" as used in this subsection 23.44.016.D refer to both attached and detached garages.

1. Parking and garages shall not be located in the required front yard except as provided in subsections 23.44.016.D.6, 23.44.016.D.8, 23.44.016.D.9, 23.44.016.D.10, and 23.44.016.D.11.

2. Parking and garages shall not be located in a required side yard abutting a street or the first 10 feet of a required rear yard abutting a street except as provided in subsections 23.44.016.D.6, 23.44.016.D.8, 23.44.016.D.9, 23.44.016.D.10, and 23.44.016.D.11.

3. Garages shall not be located in a required side yard that abuts the rear or side yard of another lot or in that portion of the rear yard of a reversed corner lot within 5 feet of the key lot's side lot line unless:

a. The garage is a detached garage and extends only into that portion of a side yard that is either within 35 feet of the centerline of an alley or within 25 feet of any rear lot line that is not an alley lot line; or

b. An agreement between the owners of record of the abutting properties, authorizing the garage in that location, is executed and recorded, pursuant to subsection 23.44.014.C.2.a.

4. Garages with vehicular access facing an alley, shall not be located within 12 feet of the centerline of any alley, nor within 12 feet of any rear lot line that is not an alley lot line, except as provided in subsections 23.44.016.D.8, 23.44.016.D.9, 23.44.016.D.10, and 23.44.016.D.11, or the Director may waive or modify this standard as a Type I decision provided the applicant can demonstrate that adequate turning and maneuvering areas can be provided.

5. On a reversed corner lot, no garage shall be located in that portion of the required rear yard that abuts the required front yard of the adjoining key lot unless the provisions of subsection 23.44.016.D.8 apply.

6. If access to required parking passes through a required yard, automobiles, motorcycles, and similar vehicles may be parked on the open access located in a required yard.

7. Trailers, boats, recreational vehicles, and similar equipment shall not be parked in required front and side yards or the first 10 feet of a rear yard measured from the rear lot line, or measured 10 feet from the centerline of an alley if there is an alley adjacent to the rear lot line, unless fully enclosed in a structure otherwise allowed in a required yard by this subsection 23.44.016.D.

8. Lots with uphill yards abutting streets. In NR1, NR2, and NR3 zones, parking for one two-axle or one up to four-wheeled vehicle may be established in a required yard abutting a street according to subsection 23.44.016.D.8.a or 23.44.016.D.8.b only if access to parking is permitted through that yard pursuant to subsection 23.44.016.B.

a. Open parking space

1) The existing grade of the lot slopes upward from the street lot line an average of at least 6 feet above sidewalk grade at a line that is 10 feet from the street lot line; and

2) The parking area shall be at least an average of 6 feet below the existing grade prior to excavation and/or construction at a line that is 10 feet from the street lot line; and

3) The parking space shall be no wider than 10 feet for one parking space at the parking surface and no wider than 20 feet for two parking spaces if permitted as provided in subsection 23.44.016.D.11.

b. Terraced garage

1) The height of a terraced garage is limited to no more than 2 feet above existing or finished grade, whichever is lower, for the portions of the garage that are 10 feet or more from the street lot line. The ridge of a pitched roof on a terraced garage may extend up to 3 feet above this 2-foot height limit. All parts of the roof above the 2-foot height limit shall be pitched at a rate of not less than 4:12. No portion of a shed roof shall be permitted to extend beyond the 2-foot height limit of this provision. Portions of a terraced garage that are less than 10 feet from the street lot line shall comply with the height standards in subsection 23.44.016.E.2;

2) The width of a terraced garage structure shall not exceed 14 feet for one two-axle or one up to four-wheeled vehicle, or 24 feet if permitted to have two two-axle or two up to four-wheeled vehicles as provided in subsection 23.44.016.D.11;

3) All above ground portions of the terraced garage shall be included in lot coverage; and

4) The roof of the terraced garage may be used as a deck and shall be considered to be a part of the garage structure even if it is a separate structure on top of the garage.

9. Lots with downhill yards abutting streets. In NR1, NR2, and NR3 zones, parking, either open or enclosed in an attached or detached garage, for one two-axle or one up to four-wheeled vehicle may be located in a required yard abutting a street if the following conditions are met:

- a. The existing grade slopes downward from the street lot line that the parking faces;
- b. For front yard parking, the lot has a vertical drop of at least 20 feet in the first 60 feet, measured along a line from the midpoint of the front lot line to the midpoint of the rear lot line;
- c. Parking is not permitted in required side yards abutting a street;
- d. Parking in a rear yard complies with subsections 23.44.016.D.2, 23.44.016.D.4 and 23.44.016.D.5; and
- e. Access to parking is permitted through the required yard abutting the street by subsection 23.44.016.B.

10. Through lots. On through lots less than 125 feet in depth in NR1, NR2, and NR3 zones, parking, either open or enclosed in an attached or detached garage, for one two-axle or one up to four-wheeled vehicle may be located in one of the required front yards. The front yard in which the parking may be located shall be determined by the Director based on the location of other garages or parking areas on the block. If no pattern of parking location can be determined, the Director shall determine in which yard the parking shall be located based on the prevailing character and setback patterns of the block.

11. Lots with uphill yards abutting streets or downhill or through lot front yards fronting on streets that prohibit parking. In NR1, NR2, and NR3 zones, parking for two two-axle or two up to four-wheeled vehicles may be located in uphill yards abutting streets or downhill or through lot front yards as provided in subsections 23.44.016.D.8, 23.44.016.D.9, or 23.44.016.D.10 if, in consultation with the Seattle Department of Transportation, it is found that uninterrupted parking for 24 hours is prohibited on at least one side of the street within 200 feet

of the lot line over which access is proposed. The Director may authorize a curb cut wider than would be permitted under Section 23.54.030 if necessary, for access.

E. Standards for garages if allowed in required yards. Garages that are either detached structures or portions of a principal structure for the primary purpose of enclosing a two-axle or four-wheeled vehicle may be permitted in required yards according to the following conditions:

1. Maximum coverage and size

a. Garages, together with any other accessory structures and other portions of the principal structure, are limited to a maximum combined coverage of 40 percent of the required rear yard. In the case of a rear yard abutting an alley, rear yard coverage shall be calculated from the centerline of the alley.

b. Garages located in side or rear yards shall not exceed 1,000 square feet in area.

c. In front yards, the area of garages is limited to 300 square feet with 14-foot maximum width if one space is provided, and 600 square feet with 24-foot maximum width if two spaces are provided. Access driveway bridges permitted under subsection 23.44.014.C.8.b shall not be included in this calculation.

2. Height limits

a. Garages are limited to 12 feet in height measured on the facade containing the entrance for the vehicle.

b. The ridge of a pitched roof on a garage located in a required yard may extend up to 3 feet above the 12-foot height limit. All parts of the roof above the height limit shall be pitched at a rate of not less than 4:12. No portion of a shed roof is permitted to extend beyond the 12-foot height limit.

c. Open rails around balconies or decks located on the roofs of garages may exceed the 12-foot height limit by a maximum of 3 feet. The roof over a garage shall not be used as a balcony or deck in rear yards.

3. Separations. Any detached garage located in a required yard, including projecting eaves and gutters, shall be separated from a principal structure by a minimum of 5 feet including eaves and gutters of all structures. This requirement does not apply to terraced garages that comply with subsection 23.44.016.D.9.b.

4. Roof eaves and gutters of a garage located in a required yard may extend a maximum of 18 inches from the exterior wall of the garage. Such roof eaves and gutters are excluded from the maximum coverage and size limits of subsection 23.44.016.E.1.

5. Except for terraced garages that comply with subsection 23.44.016.D.9.b, the roof over a garage in a rear yard shall not be used as a balcony or deck.

F. Appearance of garages

1. Garage setback.

a. In NR1, NR2, and NR3 zones, no portion of a garage, whether attached to a principal structure or within a detached accessory structure, may be closer to the street lot line than 80 percent of the remaining non-garage, street-level facade (see Exhibit A for 23.44.016) of the principal structure to which the garage is accessory. If the entire street-level facade of either a principal or accessory structure is garage, no portion of the garage may be closer to the street lot line than 80 percent of the facade of the story above the street-level facade.

b. In RSL zones, garage entrances facing the street shall be set back at least 18 feet from the street lot line.

Exhibit A for 23.44.016

Garage setback

2. Garage entrance width. The total combined horizontal width of all garage entrances on the lot that are located on the front facade may be up to 50 percent of the horizontal width of the front facade or 10 feet, whichever is greater. On corner lots, a garage entrance shall be allowed on only one street-facing facade.

3. Exemptions

a. Garages allowed under subsections 23.44.016.D.9, 23.44.016.D.10, 23.44.016.D.11, and 23.44.016.D.12 are not subject to the standards of this subsection 23.44.016.F.

b. Garages that are set back more than 35 feet from the front lot line are not subject to the standards of this subsection 23.44.016.F.

c. The Director may waive or modify the standards of this subsection 23.44.016.F based on one or more of the following factors:

- 1) Irregular lot shape;

- 2) Topography of the lot;
- 3) Configuration of proposed or existing structures on the lot;
- 4) Location of Tier 1 or Tier 2 trees as defined in Section

25.11.130; and

5) The proposed structure or addition has design features including but not limited to modulation, screening, and landscaping.

G. Screening

1. Parking accessory to floating homes when located on a separate lot from the floating homes shall be screened from direct street view by a fence or wall between 5 and 6 feet in height. When the fence or wall runs along the street front, there shall be a landscaped strip on the street side of the fence or wall. This strip may be between 1 and 5 feet deep, as measured from the property line, but the average distance from the property line to the fence shall be 3 feet. Such screening shall be located outside any required sight triangle.

2. The height of the visual barrier created by the screen required by subsection 23.44.016.G.1 shall be measured from street level. If the elevation of the lot line is different from the finished elevation of the parking surface, the difference in elevation may be measured as a portion of the required height of the screen, so long as the screen itself is a minimum of 3 feet in height (see Exhibit B for 23.44.016).

Exhibit B for 23.44.016

Screening of parking

23.44.017 Density limits

A. In NR1, NR2, and NR3 zones, only one single-family dwelling unit is allowed per lot, except that accessory dwelling units may also be approved pursuant to Section 23.42.022, and except as approved as part of an administrative conditional use permit under Section 25.09.260, a clustered housing planned development under Section 23.44.024, or a planned residential development under Section 23.44.034.

B. The following provisions apply in RSL zones:

1. The minimum lot area per principal dwelling unit is 2,000 square feet.

2. Except as provided in subsection 23.44.017.B.3, when calculation of the number of principal dwelling units allowed according to subsection 23.44.017.B.1 results in a fraction of a unit, any fraction up to and including 0.85 constitutes zero additional principal dwelling units, and any fraction over 0.85 constitutes one additional principal dwelling unit.

3. For lots in existence on April 19, 2019, if the number of principal dwelling units allowed according to subsection 23.44.017.B.1 equals less than two, two units are allowed.

4. Accessory dwelling units are allowed pursuant to Section 23.42.022.

23.44.018 Maximum dwelling unit size in RSL zones

The maximum net unit area of any dwelling unit in RSL zones, including any floor area in an accessory dwelling unit, is 2,200 square feet, except as provided in subsection 23.44.018.B.

A. The following floor area is exempt from the maximum net unit area limit:

1. All stories, or portions of stories, that are underground.
2. All portions of a story that extend no more than 4 feet above existing or finished grade, whichever is lower, excluding access.

B. Certain additions

1. The limit of this Section 23.44.018 shall not apply to an addition to single-family residences existing on April 19, 2019, if the addition:

a. Adds floor area equal to or less than 20 percent of the floor area that existed on April 19, 2019; or

b. Adds floor area only by adding or expanding a second-story, provided that the second-story addition is directly above a portion of the dwelling unit that existed prior to April 19, 2019. For purposes of this subsection 23.44.018.B.1, portions of a story that extend no

more than 4 feet above existing or finished grade, whichever is lower, shall not be considered in the calculation of the number of stories.

2. Only one addition to any single-family residence may be exempted under this subsection 23.44.018.B.

23.44.019 Alternative standards for development of affordable units on property owned or controlled by a religious organization

In lieu of meeting development standards contained in subsection 23.44.010.A (minimum lot area), subsection 23.44.010.C (maximum lot coverage), subsection 23.44.011.B (floor area), subsection 23.44.012.A (height), and Section 23.44.017 (density), a proposed development that meets the requirements of Section 23.42.055 and subsection 23.44.019.A may elect to meet the alternative development standards in subsection 23.44.019.B through subsection 23.44.019.F.

A. Lot requirements

1. Development on a lot that meets one of the following criteria, but does not meet the additional requirements in subsection 23.44.019.A.2, may meet the alternative development standards in subsection 23.44.019.B and subsection 23.44.019.D through subsection 23.44.019.F:

- a. The lot has or abuts a lot with a religious facility or other use accessory to a religious facility; or
- b. The lot area is 10,000 square feet or greater; or
- c. The lot is in an RSL zone.

2. Development on a lot that meets the following additional requirements may meet the alternative development standards in subsection 23.44.019.C and subsection 23.44.019.D through subsection 23.44.019.F:

a. The lot area is 10,000 square feet or greater;

b. The lot is in an urban village, within 1/4 mile (1,320 feet) of an urban village, or within 1/4 mile (1,320 feet) of a transit stop or station served by a frequent transit route on the map required by subsection 23.54.015.B.4; and

c. The lot meets one of the following locational criteria:

1) The lot abuts, is located on a block front with, or is located across a right-of-way from a zone not designated a neighborhood residential zone; or

2) No lot line is located within 50 feet of a single-family dwelling unit.

B. Proposed development on lots meeting the criteria in subsection 23.44.019.A.1 but not subsection 23.44.019.A.2 may meet the following development standards:

1. The minimum lot area per dwelling unit is 1,500 square feet in NR1, NR2, and NR3 zones and 1,200 square feet in RSL zones.

2. The maximum lot coverage is 50 percent of lot area in NR1, NR2, and NR3 zones and 65 percent in RSL zones.

3. The maximum FAR limit is 1.0 in NR1, NR2, and NR3 zones and 1.2 in RSL zones. The applicable FAR limit applies to the total chargeable floor area of all structures on the lot.

4. In NR1, NR2, and NR3 zones, the maximum height for a proposed development that exceeds the maximum lot coverage limit in subsection 23.44.010.C is 22 feet. The maximum height for all other developments is 30 feet.

C. Proposed development on lots meeting the criteria in subsection 23.44.019.A.2 may meet the following development standards:

1. The minimum lot area per dwelling unit is 400 square feet.
2. The maximum lot coverage is 50 percent of lot area in NR1, NR2, and NR3 zones and 65 percent in RSL zones.
3. The maximum height limit is 40 feet in NR1, NR2, and NR3 zones and 50 feet in RSL zones.
4. The maximum FAR limit is 2.0 in NR1, NR2, and NR3 zones and 3.0 in RSL zones. The applicable FAR limit applies to the total chargeable floor area of all structures on the lot.

D. Permitted uses. In addition to the uses listed in Section 23.44.006, the following uses are permitted outright on lots meeting the requirements of this Section 23.44.019: apartments, cottage housing development, rowhouse development, and townhouse development.

E. Setback requirements. In addition to the yard requirements of Section 23.44.014, the following standards apply:

1. No structure shall be closer than 10 feet to a side lot line of an abutting neighborhood residential-zoned lot.
2. No structure shall be closer than 20 feet to a rear lot line of an abutting neighborhood residential-zoned lot.
3. No structure shall be closer than 5 feet to any lot line.

F. Maximum facade length. The maximum combined length of all portions of a facade within 20 feet of a lot line of an abutting neighborhood residential-zoned lot may not exceed 40 feet. Maximum facade length shall be measured as described in Section 23.86.015.

23.44.020 Tree requirements

- A. Tree requirements in NR1, NR2, and NR3 zones

1. Trees sufficient to meet the following requirements shall be provided when single-family dwelling units are constructed:

a. For lots over 3,000 square feet, at least 2 caliper inches of tree per 1,000 square feet of lot area.

b. On lots that are 3,000 square feet or smaller, at least 3 caliper inches of tree.

2. Trees sufficient to meet the following requirements shall be provided when a new structure, or an addition to an existing structure, containing an accessory dwelling unit is constructed:

a. For lots that do not contain the minimum number of caliper inches of tree required by subsection 23.44.020.A.1 at the time a permit application is submitted for any number of accessory dwelling units, at least 2 caliper inches of tree shall be planted;

b. For lots that contain the minimum number of caliper inches of tree required by subsection 23.44.020.A.1 at the time a permit application is submitted for any number of accessory dwelling units, no new trees are required.

3. The minimum number of caliper inches of tree required may be met by preserving existing trees, planting new trees, or by a combination of preservation and planting. The preservation or planting of trees in the right-of-way may be counted, provided that they are approved by the Director of Transportation.

4. Submerged land shall not be included in calculating lot area for purposes of either the tree preservation option or tree planting option.

5. Tree measurements. Trees planted to meet the requirements in this subsection 23.44.020.A shall be at least 1.5 inches in diameter. The diameter of new trees shall be measured

(in caliper inches) 6 inches above the ground. Existing trees shall be measured 4.5 feet above the ground. When an existing tree is 3 to 10 inches in diameter, each 1 inch counts as 1 inch toward meeting the tree requirements in this subsection 23.44.020.A. When an existing tree is more than 10 inches in diameter, each 1 inch of the tree that is over 10 inches shall count as 3 inches toward meeting the tree requirement.

6. Tree preservation plans. If the tree preservation option is chosen, a tree preservation plan must be submitted by a certified arborist and approved. Tree preservation plans shall provide for protection of trees during construction according to standards promulgated by the Director.

7. The owner of the subject lot shall ensure that the trees planted remain healthy for at least five years after inspection by the City and be responsible for replacing any trees that do not remain healthy after inspection by the City.

B. Tree requirements in RSL zones

1. Trees sufficient to achieve one point, according to Table A for 23.44.020, per 500 square feet of lot area shall be provided for any development:

- a. Containing one or more new dwelling units;
- b. Containing more than 4,000 square feet of non-residential uses in either a new structure or an addition to an existing structure; or
- c. Expanding surface area parking by more than 20 parking spaces for automobiles.

2. Individual trees preserved during construction or planted after construction, excluding street trees, count toward the tree score according to Table A for 23.44.020. All required trees shall meet standards promulgated by the Director to provide for the long-term

health, viability, and coverage of plantings. These standards may include, but are not limited to, the type and size of plants, spacing of plants, depth, and quality of soil, access to light and air, and protection practices during construction.

Table A for 23.44.020		
Tree points		
Type of tree	Points for deciduous trees	Points for evergreen trees
Small tree planted after construction	1 point	1.25 point
Small/medium tree planted after construction	2 points	2.5 points
Medium/large tree planted after construction	3 points	3.75 points
Large tree planted after construction	4 points	5 points
Trees 6 inches in diameter or greater that are preserved during construction	1 point per inch of diameter	1.25 point per inch of diameter

3. Tree protection areas shall be designated for all trees that are proposed to be preserved to receive points under this subsection 23.44.020.B. No excavation, fill, placing of materials or equipment, or vehicle operation shall be allowed during construction within a tree protection area. Tree protection areas shall be an area equal to the outer extent of the dripline of the tree, except that they may be reduced if the following conditions are met:

- a. A certified arborist has submitted and received approval for a plan providing the rationale used to demonstrate that the alternate method provides an adequate level of protection based on visiting the site and examining the specific tree's size, location, and extent of root cover, evaluating the tree's tolerance to construction impact based on its species and health, and identifying any past impacts that have occurred within the root zone; and
- b. The alternative tree protection area is prepared under the supervision of the certified arborist.

4. The owner of the subject lot is required to ensure that the trees planted remain healthy for at least five years after inspection by the City and the owner of the subject lot shall be responsible for replacing any trees that do not remain healthy after inspection by the City.

C. Street tree requirements

1. Street trees are required for development that would add one or more principal dwelling units on a lot, except as provided in subsection 23.44.020.C.2 and Section 23.53.015. Existing street trees shall be retained unless the Director of Transportation approves their removal. The Director, in consultation with the Director of Transportation, shall determine the number, type, and placement of additional street trees to be provided in order to:

- a. Improve public safety;
- b. Promote compatibility with existing street trees;
- c. Match trees to the available space in the planting strip;
- d. Maintain and expand the urban forest canopy;
- e. Encourage healthy growth through appropriate spacing;
- f. Protect utilities; and
- g. Allow access to the street, buildings, and lot.

2. Exceptions to street tree requirements

a. If a lot borders an unopened right-of-way, the Director may reduce or waive the street tree requirement along that right-of-way as a Type I decision if, after consultation with the Director of Transportation, the Director determines that the right-of-way is unlikely to be opened or improved.

b. If it is not feasible to plant street trees in a right-of-way planting strip, a 5-foot setback shall be planted with street trees along the street lot line that abuts the required

front yard, or landscaping other than trees shall be provided in the planting strip, subject to approval by the Director of the Seattle Department of Transportation. If, according to the Director of the Department of Transportation, a 5-foot setback or landscaped planting strip is not feasible, the Director may reduce or waive this requirement as a Type I decision.

Subchapter II Conditional Uses

23.44.021 General provisions

A. Only those conditional uses identified in this Subchapter II may be authorized as conditional uses in neighborhood residential zones. The Master Use Permit Process set forth in Chapter 23.76 shall be used to authorize conditional uses.

B. Unless otherwise specified in this Subchapter II, conditional uses shall meet the development standards for uses permitted outright in Sections 23.44.008 through 23.44.020.

C. A conditional use may be approved, conditioned, or denied based on a determination of whether the proposed use meets the criteria for establishing a specific conditional use and whether the use will be materially detrimental to the public welfare or injurious to property in the zone or vicinity in which the property is located.

D. In authorizing a conditional use, the Director or Council may mitigate adverse negative impacts by imposing requirements or conditions deemed necessary for the protection of other properties in the zone or vicinity in which the property is located.

E. Any use that was previously authorized by a conditional use permit but which has been discontinued shall not be reestablished or recommenced except pursuant to a new conditional use permit, provided that such permit is required for the use at the time re-establishment or recommencement is proposed. The following shall constitute conclusive evidence that the conditional use has been discontinued:

1. A permit to change the use of the property has been issued and the new use has been established; or

2. The property has not been devoted to the authorized conditional use for more than 24 consecutive months.

Vacant property, except for dead storage of materials or equipment of the conditional use, shall not be considered as being devoted to the authorized conditional use. The expiration of licenses necessary for the conditional use shall be evidence that the property is not being devoted to the conditional use. A conditional use in a multifamily structure or a multitenant commercial structure shall not be considered as discontinued unless all units are either vacant or devoted to another use.

F. Minor structural work that does not increase usable floor area or seating capacity and that does not exceed the development standards applicable to the use shall not be considered an expansion and does not require approval as a conditional use, unless the work would exceed the height limit of the zone for uses permitted outright. Such work includes but is not limited to roof repair or replacement and construction of uncovered decks and porches, facilities for barrier-free access, bay windows, dormers, and eaves.

Part 1 Administrative Conditional Uses

23.44.022 Institutions

A. Scope of standards

1. The standards of this Section 23.44.022 apply only to institutions permitted as conditional uses in neighborhood residential zones.

2. The following institutions may be permitted as conditional uses in neighborhood residential zones:

- a. Community centers that provide shelter services;
- b. Private schools;
- c. Religious facilities;
- d. Existing institutes for advanced study; and
- e. Other similar institutions.

3. The following institutions are prohibited in neighborhood residential zones:

- a. Hospitals;
- b. Colleges;
- c. Museums;
- d. Private clubs; and
- e. Vocational schools.

B. Major institutions. Existing major institutions and major institution uses within an existing Major Institution Overlay District shall be permitted in accordance with the provisions of Chapter 23.69 this Section 23.44.022.

C. Public schools shall be permitted as regulated in Section 23.51B.002.

D. General provisions

1. New or expanding institutions in neighborhood residential zones shall meet the development standards for uses permitted outright in Sections 23.44.008 through 23.44.020 unless modified elsewhere in this Section 23.44.022 or in a Major Institution master plan.

2. The establishment of a shelter for homeless youths and young adults in a legally established elementary or secondary school is not considered a new use or an expansion of the institutional use provided that:

- a. The use does not violate any condition of approval of the existing institutional use;
- b. The use does not require expansion of the existing structure;
- c. Any new children's play area is located at least 30 feet from any other lot in a neighborhood residential zone and at least 20 feet from any lot in a multifamily zone; and
- d. The occupants are enrolled students of the established school.

3. Institutions seeking to establish or expand on property that is developed with residential structures may expand their campus up to a maximum of 2.5 acres. An institution campus may be established or expanded beyond 2.5 acres if the property proposed for the expansion is substantially vacant land.

E. Dispersion. The lot line of any proposed new or expanding institution shall be located at least 600 feet from any lot line of any other institution in a residential zone, with the following exceptions:

- 1. An institution may expand even though it is within 600 feet of a public school if the public school is constructed on a new site subsequent to December 12, 1985.
- 2. A proposed institution may be located less than 600 feet from a lot line of another institution if the Director determines that the intent of the dispersion criteria is achieved due to the presence of physical elements that provide substantial separation from other institutions, such as bodies of water, large open spaces, or topographical breaks or other elements such as arterials, freeways, or nonresidential uses.

F. Demolition of residential structures. No residential structure shall be demolished, nor shall its use be changed to provide for parking. This prohibition may be waived if the demolition or change of use proposed is necessary to meet the parking requirements of Title 23 and if

alternative locations would have greater noise, odor, light and glare, or traffic impacts on surrounding property in residential use. If the demolition or change of use is proposed for required parking, the Director may consider waiver of parking requirements in order to preserve the residential structure and/or use. The waiver may include, but is not limited to, a reduction in the number of required parking spaces and a waiver of parking development standards such as location or screening.

G. Reuse of existing structures. Existing structures may be converted to institution use if the yard requirements for institutions are met. Existing structures that do not meet these yard requirements may be permitted to convert to institution use, provided that the Director may require additional mitigating measures to reduce impacts of the proposed use on surrounding properties.

H. Noise and odors

1. For the purpose of reducing potential noise and odor impacts, the Director shall consider the location on the lot of the proposed institution, on-site parking, outdoor recreational areas, trash and refuse storage areas, ventilating mechanisms, sports facilities, and other noise-generating and odor-generating equipment, fixtures, or facilities. The institution shall be designed and operated in compliance with Chapter 25.08.

2. In order to mitigate identified noise and/or odor impacts, the Director may require measures such as landscaping, sound barriers or fences, mounding or berming, adjustments to yard or parking development standards, design modifications, or setting hours of operation for facilities.

I. Landscaping

1. The Director shall promulgate rules to foster the long-term health, viability, and coverage of plantings. The rules shall address, at a minimum, the type and size of plants, spacing of plants, use of drought-tolerant plants, and access to light and air for plants. All landscaping provided to meet the requirements of this Section 23.44.022 shall comply with these rules.

2. Landscaping that achieves a Green Factor score of 0.3 or greater, pursuant to Section 23.86.019, is required for any lot with:

- a. Development containing more than four new dwelling units;
- b. Development, either a new structure or an addition to an existing structure, containing more than 4,000 new square feet of non-residential uses; or
- c. Any parking lot containing more than 20 new parking spaces for automobiles.

J. Light and glare

1. Exterior lighting shall be shielded or directed away from adjacent residentially zoned lots. The Director may also require that the area, intensity, and location or angle of illumination be limited.

2. Nonreflective surfaces shall be used to help reduce glare.

K. Bulk and siting

1. Lot area. If the proposed site is more than one acre in size, the Director may require the following and similar development standards:

- a. For lots with unusual configuration or uneven boundaries, the proposed principal structures be located so that changes in potential and existing development patterns on the block or blocks within which the institution is located are kept to a minimum;

b. For lots with large street frontage in relationship to their size, the proposed institution reflect design and architectural features associated with adjacent residentially zoned block fronts in order to provide continuity of the block front and to integrate the proposed structures with residential structures and uses in the immediate area.

2. Yards. Yards of institutions shall be as required for uses permitted outright pursuant to Section 23.44.014, provided that no structure other than freestanding walls, fences, bulkheads, or similar structures shall be closer than 10 feet to the side lot line. If the Director finds that a reduced yard will not significantly increase project impacts, including but not limited to noise, odor, and the scale of the structure in relation to nearby buildings, the side yard may be reduced to 5 feet. Fences and freestanding walls of utility services uses, regulated under this Section 23.44.022 pursuant to Section 23.51A.002, shall be set back from the street lot line a minimum of 10 feet, and landscaping shall be provided between the fence or wall and the right-of-way. The Director may reduce the required yard after finding that the reduced yard will not significantly increase project impacts, including but not limited to noise, odor, and the scale of the fence, wall, or structure in relation to nearby buildings. Acceptable methods to reduce fence or wall impacts include changes in the height, design, or construction of the fence or wall, including the use of materials, architectural detailing, artwork, vegetated trellises, decorative fencing, or similar features to provide visual interest facing the street lot line. Fences and walls may obstruct or allow views to the interior of a site. Where site dimensions and conditions allow, applicants are encouraged to provide both: a landscaped yard between the fence or wall and the right-of-way; and a fence or wall that provides visual interest facing the street lot line through the height, design, or construction of the fence or wall, including the use of materials, architectural detailing, artwork, vegetated trellises, decorative fencing, or similar features.

3. Institutions located on lots in more than one zone classification. For lots that include more than one zone classification, neighborhood residential zone provisions shall apply only to the neighborhood residential-zoned lot area involved.

4. Height limit

a. Religious symbols for religious institutions may extend an additional 25 feet above the height limit.

b. For gymnasiums and auditoriums that are accessory to an institution the maximum height shall be 35 feet if portions of the structure above 35 feet are set back at least 20 feet from all property lines. Pitched roofs on a gymnasium or auditorium that have a slope of not less than 4:12 may extend 10 feet above the 35-foot height limit. No portion of a shed roof on a gymnasium or an auditorium shall be permitted to extend beyond the 35-foot height limit under this provision.

5. Facade scale. If any facade of a new or expanding institution is longer than 30 feet, the Director may require that facades adjacent to the street or a residentially zoned lot be developed with design features intended to minimize the appearance of bulk. Design features that may be required include, but are not limited to, modulation, architectural features, landscaping, and increased yards.

L. Parking and loading berth requirements

1. Quantity and location of off-street parking

a. Use of transportation modes such as public transit, vanpools, carpools, and bicycles to reduce the use of single-occupancy vehicles is encouraged.

b. Parking and loading is required as provided in Section 23.54.015.

c. The Director may modify the parking and loading requirements of Section 23.54.015 and the requirements of Section 23.44.016 on a case-by-case basis using the information contained in the transportation plan prepared pursuant to subsection 23.44.022.M. The modification shall be based on adopted City policies and shall:

1) Provide a demonstrable public benefit, such as reduction of traffic on residential streets, preservation of residential structures, and reduction of noise, odor, light, and glare; and

2) Not cause undue traffic through residential streets or create a safety hazard.

2. Parking design. Parking access and parking shall be designed as provided in Chapter 23.54.

3. Loading berths. The quantity and design of loading berths shall be as provided in Chapter 23.54.

M. Transportation plan. A transportation plan shall be required for proposed new institutions and for those institutions proposing expansions that are larger than 4,000 square feet of structure area and/or are required to provide an additional 20 or more parking spaces. The Director shall determine the level of detail to be disclosed in the transportation plan based on the probable impacts and/or scale of the proposed institution. Discussion of the following elements and other factors may be required:

1. Traffic. Number of staff on site during normal working hours, number of users, guests and others regularly associated with the site, level of vehicular traffic generated, traffic peaking characteristics of the institution and in the immediate area, likely vehicle use patterns,

extent of traffic congestion, types and numbers of vehicles associated with the institution, and mitigating measures to be taken by the applicant;

2. Parking. Number of spaces, the extent of screening from the street or abutting residentially zoned lots, direction of vehicle light glare, direction of lighting, sources of possible vibration, prevailing direction of exhaust fumes, location of parking access and curb cuts, accessibility or convenience of parking, and measures to be taken by the applicant such as preference given to some parking spaces for carpool and vanpool vehicles and provision of bicycle racks;

3. Parking overflow. Number of vehicles expected to park on neighboring streets, percentage of on-street parking supply to be removed or used by the proposed project, opportunities for sharing existing parking, trends in local area development, and mitigating measures to be taken by the applicant;

4. Safety. Measures to be taken by the applicant to ensure safe vehicular and pedestrian travel in the vicinity;

5. Availability of public or private mass transportation systems. Route location and frequency of service and private mass transportation programs to be provided by the applicant, such as carpools and vanpools.

N. Development standards for existing institutes for advanced study

1. The institute shall be located on a lot of not less than 15 acres.
2. The lot coverage for all structures shall not exceed 20 percent of the total lot area.
3. Structures shall be set back a minimum of 25 feet from any lot line.
4. Parking areas shall be set back a minimum of 10 feet from any lot line.

5. In the event of expansion, parking shall be required as provided for existing institutes for advanced study in Section 23.54.015.

6. Landscaping shall be provided between a lot line and any structure and shall be maintained for the duration of the use.

23.44.024 Clustered housing planned developments

Clustered housing planned developments (CHPDs) may be permitted as an administrative conditional use in NR1, NR2, and NR3 zones. A CHPD is intended to enhance and preserve natural features, encourage the construction of low-income housing, allow for development and design flexibility, and protect and prevent harm in environmentally critical areas. CHPDs shall be subject to the following provisions:

A. Site requirements

1. The minimum size of a CHPD is two acres, excluding submerged land and any land designated an environmentally critical area or buffer due to the presence of a riparian corridor, wetland, wetland buffer, priority habitat area, steep slope, or steep slope buffer according to Chapter 25.09, Regulations for Environmentally Critical Areas.

2. Where portions of a site are designated an environmentally critical area or buffer due to the presence of a riparian corridor, wetland, wetland buffer, priority habitat area, steep slope, or steep slope buffer according to Chapter 25.09, Regulations for Environmentally Critical Areas, the conditional use provisions under Section 25.09.260 shall apply, superseding the standards of this Section 23.44.024.

3. The Director may exclude land from a CHPD if it is separated from the site by topography, if it has a poor functional relationship with the site, or if including the land would have a negative impact on adjacent neighborhood residential zoned lots.

B. Type of dwelling units permitted. Only single-family dwelling units shall be permitted in a CHPD.

C. Number of dwelling units permitted

1. The number of dwelling units permitted in a CHPD shall be calculated by dividing the CHPD land area by the minimum lot area required in subsection 23.44.010.A for the neighborhood residential where the CHPD is located. Land that is designated an environmentally critical area or buffer due to the presence of a riparian corridor, wetland, wetland buffer, priority habitat area, steep slope, or steep slope buffer and submerged land shall be excluded from the land used to calculate the permitted number of dwelling units in a CHPD. For CHPDs located in more than one zone, the number of dwelling units shall be calculated based on the proportion of land area in each zone.

2. Where portions of a site are designated an environmentally critical area or buffer due to the presence of a riparian corridor, wetland, wetland buffer, priority habitat area, steep slope, or steep slope buffer according to Chapter 25.09, Regulations for Environmentally Critical Areas, the administrative conditional use provisions under Section 25.09.260 shall apply.

3. One additional detached single-family structure may be permitted if the development includes one or more of the following facilities open to the surrounding community:

- a. Usable open space and other recreational facilities approved by the Director;
- b. Community center; and
- c. Child care facility.

D. Subdivision. A CHPD may be subdivided into lots of less than the minimum area required by subsection 23.44.010.A.

E. Yards. Yards shall be required for structures within a CHPD. For the purposes of this subsection 23.44.024.E, setbacks shall be considered yards, and the provisions relating to accessory structures in required yards of the applicable neighborhood residential zone shall apply.

1. Structures shall be set back a minimum distance of 20 feet from the street lot line of a CHPD.

2. No dwelling unit in a CHPD shall be closer than 5 feet to a side lot line of an abutting neighborhood residential zoned lot.

3. No dwelling unit in a CHPD shall be closer than 25 feet to a rear lot line of an abutting neighborhood residential zoned lot.

4. No dwelling unit in a CHPD shall be closer than 5 feet to any lot line of an abutting non-neighborhood residential zoned lot.

5. There shall be a minimum distance of 10 feet between principal structures within 100 feet of the lot line of a CHPD.

6. To provide a sense of privacy and to mitigate the effects of shadows between structures located more than 100 feet from the lot line of a CHPD, the required separation between structures in the CHPD shall vary depending on the design of the facing facades as follows:

a. Walls of interior facades that do not have a principal entrance shall be at least 10 feet apart at any point.

b. A principal entrance to a structure shall be at least 15 feet from the nearest interior facade that does not have a principal entrance.

c. A principal entrance to a structure shall be at least 20 feet from the nearest interior facade with a principal entrance.

7. The Director may increase the minimum required yards or require alternate spacing or placement of structures in order to:

- a. preserve or enhance topographical conditions;
- b. enhance the relationship with adjacent uses and the layout of the project;
- c. promote green stormwater infrastructure and other measures to reduce stormwater runoff; or
- d. maintain a compatible scale and design with the surrounding community.

F. Landscaping. The Director may require retention of existing mature landscaping, or provision of new landscaping, where that existing or new landscaping is compatible with surrounding flora and favors native species to:

- 1. Minimize the impacts of the CHPD on adjacent land uses along some or all exterior lot lines;
- 2. Reduce stormwater runoff, potential erosion, and impervious surfaces; or
- 3. Screen parking from the view of adjacent residentially zoned lots and the street.

G. Maintenance of required landscaping and open space. Required landscaping and open space shall be maintained for the life of the project. Maintenance of required landscaping and open space shall be the continuing responsibility of the owner.

23.44.026 Use of landmark structures or sites

A. The Director may authorize a use not otherwise permitted in the zone as an administrative conditional use within a structure or on a site designated as a landmark pursuant to Chapter 25.12 subject to the following development standards:

1. The use shall be compatible with the existing configuration of the site and with the existing design and/or construction of the structure without significant alteration; and
2. The use shall be allowed only when it is demonstrated that uses permitted in the zone are impractical because of site configuration or structure design and/or that no permitted use can provide adequate financial support necessary to sustain the structure or site in a reasonably good physical condition; and
3. The use shall not be detrimental to other properties in the zone or vicinity or to the public interest.

B. The parking requirements for a use allowed in a landmark are those listed in Section 23.54.015. These requirements may be waived pursuant to subsection 23.54.020.C.

23.44.028 Structures unsuited to uses permitted outright

A. Uses not otherwise permitted in the zone may be permitted as an administrative conditional use in structures unsuited to uses permitted outright in neighborhood residential zones. The determination that a use may be permitted shall be based on the following factors:

1. The design of the structure is not suitable for conversion to a use permitted outright in a neighborhood residential zone; and
2. The structure contains more than 4,000 square feet; and
3. The proposed use will provide a public benefit.

B. Parking requirements for uses permitted under this section shall be determined by the Director.

C. The Director may require measures to mitigate impacts such as noise, odor, parking or traffic impacts. Mitigating measures may include but are not limited to landscaping, sound barriers, fences, mounding or berming, adjustments to development standards, design modifications or setting hours of operation.

D. In the case of an existing or former public school, permissible uses other than those permitted outright in the zone and their development standards including parking requirements shall be established only pursuant to procedures for establishing criteria for joint use or reuse of public schools in Chapter 23.78 of this Land Use Code.

23.44.030 Park and ride facility

The Director may authorize a park and ride facility under the management of a public agency responsible for commuter pooling efforts as an administrative conditional use. The Director shall determine that:

- A. It is to be located on an existing parking lot;
- B. That parking proposed for the park and ride facility is not needed by the principal use or its accessory uses during the hours proposed for park and ride use; and
- C. The park and ride use shall not interfere or conflict with the peak-hour activities associated with the principal use and its accessory uses. The Director may control the number and location of parking spaces to be used.

23.44.032 Certain nonconforming uses.

Nonconforming uses which are authorized pursuant to Section 23.42.110 may be permitted as a conditional use.

Part 2 Council Conditional Uses

23.44.034 Planned residential development (PRD)

Planned residential developments (PRDs) may be permitted in NR1, NR2, and NR3 zones as a council conditional use. A PRD is intended to enhance and preserve natural features, encourage the construction of low-income housing, allow for development and design flexibility, promote green stormwater infrastructure and protect and prevent harm in environmentally critical areas. PRDs shall be subject to the following provisions:

A. Site requirements

1. The minimum size of a PRD is two acres, excluding submerged land and any land designated as an environmentally critical area or buffer due to the presence of a riparian corridor, wetland, wetland buffer, steep slope, or steep slope buffer according to Chapter 25.09, Regulations for Environmentally Critical Areas.

2. The area of the site devoted to single-family uses at the time of application, calculated by multiplying the number of such uses by the minimum lot area for the zone, shall not exceed 20 percent of the area of the entire site.

3. Land that is designated as an environmentally critical area or buffer due to the presence of a riparian corridor, wetland, wetland buffer, steep slope, or steep slope buffer according to Chapter 25.09, Regulations for Environmentally Critical Areas, and submerged land shall be excluded from the land used to calculate permitted density in a PRD.

4. Land may be excluded from a PRD by the Director if it is separated from the site by topography, if it has a poor functional relationship with the site, or if including the land would have a negative impact on adjacent neighborhood residential zoned lots.

5. Where portions of a site are designated as an environmentally critical area or buffer due to the presence of a riparian corridor, wetland, wetland buffer, steep slope, or steep slope buffer according to Chapter 25.09, Regulations for Environmentally Critical Areas, the conditional use provisions under Section 25.09.260 shall apply, superseding the standards of this Section 23.44.034.

B. Type of housing permitted

1. Only single-family dwelling units are permitted within 100 feet of a PRD lot line that abuts or is directly across the street from a neighborhood residential zoned lot, except as provided in this subsection 23.44.034.B.

2. Single-family dwelling units, cottage housing developments, rowhouse developments, and townhouse developments are permitted within 100 feet of a lot line of a PRD that does not abut and is not across a street from a neighborhood residential zoned lot, or that is separated from the neighborhood residential zoned lot by physical barriers, such as bodies of water, ravines, greenbelts, freeways, expressways, and other major traffic arterials or topographic breaks that provide substantial separation from the surrounding neighborhood residential neighborhood.

3. Single-family dwelling units, cottage housing developments, rowhouse developments, and townhouse developments are permitted when more than 100 feet from a lot line of a PRD.

4. Cottage housing developments, rowhouse developments, and townhouse developments shall meet the development standards for structures in LR1 zones, unless otherwise specified in this Chapter 23.44.

C. Number of dwelling units permitted

1. The number of dwelling units permitted in a PRD shall be calculated by dividing the PRD lot area by the minimum lot area required in subsection 23.44.010.A. If the PRD includes more than one zone, the number of dwelling units shall be calculated based on the proportion of land area in each zone.

2. An increase in number of dwelling units may be permitted in a PRD up to a maximum increase of 20 percent. An increase in permitted density shall be based on the extent to which the proposed PRD provides substantial additional public benefits such as the following:

- a. Low-income housing;
- b. Usable open space;
- c. Child care center, meeting space, or recreational facilities open to the surrounding community; and
- d. Green stormwater infrastructure beyond the requirements of the Stormwater Code (Chapters 22.800 through 22.808).

D. Subdivision

1. A PRD may be subdivided into lots of less than the minimum size required by subsection 23.44.010.A.

2. A minimum of 300 square feet of private, landscaped open space is required for each unit and shall be provided at ground level and directly accessible to the unit.

E. Yards. Yards shall be required for residential structures within a PRD. For the purposes of this subsection 23.44.034.E, setbacks shall be considered yards, and the provisions relating to accessory structures in required yards of the applicable neighborhood residential zone shall apply.

1. Structures within 100 feet of the exterior lot line of a PRD shall be set back a minimum distance of 20 feet from the street lot line of a PRD.

2. No dwelling unit in a PRD shall be closer than 5 feet to a side lot line of an abutting neighborhood residential zoned lot.

3. No dwelling unit in a PRD shall be closer than 25 feet to a rear lot line of an abutting neighborhood residential zoned lot.

4. No dwelling unit in a PRD shall be closer than 5 feet to any lot line of an abutting non-residentially zoned lot.

5. Principal structures shall be at least 10 feet apart.

6. To provide a sense of privacy and to mitigate the effects of shadows between structures that are more than 100 feet from the lot line of a PRD, the required separation between structures shall vary depending on the design of the facing facades as follows:

a. Walls shall be at least 10 feet apart.

b. A principal entrance to a structure shall be at least 15 feet from the nearest interior facade that does not have a principal entrance.

c. A principal entrance to a structure shall be at least 20 feet from the nearest interior facade with a principal entrance.

7. The Director may modify the minimum required setbacks or require alternate spacing or placement of structures in order to preserve or enhance topographical conditions, enhance the relationship with adjacent uses or the layout of the project, promote green stormwater infrastructure and other measures to reduce stormwater runoff, or maintain a compatible scale and design with the surrounding community.

F. Landscaping. The Director may require landscaping that is compatible with surrounding flora and favors native species in addition to the following requirements:

1. Minimize the impacts of the PRD on adjacent land uses along some or all exterior lot lines;
2. Reduce stormwater runoff, potential erosion, and impervious surfaces; and/or
3. Screen parking from the view of adjacent residentially zoned lots and the street.

G. Maintenance of required landscaping and open space. Required landscaping and open space shall be maintained for the life of the project. Maintenance of required landscaping and open space shall be the continuing responsibility of the owner.

23.44.035 Communication utilities.

Communication utilities may be permitted in neighborhood residential zones subject to the provisions of section 23.57.010.

23.44.036 Public facilities

Public facilities may be permitted in neighborhood residential zones according to the provisions of Section 23.51A.002 and the provisions of Chapter 23.76, Subchapter III, Council Land Use Decisions. Public facilities include, but are not limited to, police precinct stations, fire stations, public boat moorages, and utility services uses.

Subchapter III Accessory Uses

23.44.040 General Provisions

A. Accessory uses customarily incidental to principal uses permitted outright are permitted outright.

B. All accessory uses and structures, except for urban farms and structures in urban farm use, must be located on the same lot as the principal use or structure unless otherwise specifically provided.

C. Accessory conditional uses are subject to the development standards for accessory uses permitted outright unless otherwise specified in this Section 23.44.040. Urban farms also are subject to the development standards in Section 23.42.051.

23.44.042 Urban farms

A. An urban farm with up to 4,000 square feet of planting area is permitted outright as an accessory use to any principal use permitted outright or to a permitted conditional use, in each case subject to the applicable standards of this title, including the provisions of Section 23.42.051.

B. An urban farm with over 4,000 square feet of planting area may permitted as an administrative conditional use accessory to any principal use permitted outright or accessory to a permitted conditional use, pursuant to Sections 23.44.021 and 23.42.051.

23.44.044 Swimming pools

Private, permanent swimming pools, hot tubs and other similar uses are permitted as accessory uses to a single-family structure subject to the following specific development standards:

A. Private, permanent swimming pools, hot tubs and other similar uses over 18 inches above existing grade are subject to the development standards for accessory uses.

B. Private, permanent swimming pools, hot tubs and other similar uses projecting not more than 18 inches above existing grade shall not be counted in lot coverage.

C. Private, permanent swimming pools, hot tubs and other similar uses may be placed in a required front or rear yard, provided that:

1. No part of the structure shall project more than 18 inches above existing lot grade in a required front yard; and

2. No part of the structure shall be placed closer than 5 feet to any front or side lot line.

23.44.046 Solar collectors

A. Solar collectors are permitted outright as an accessory use to any principal use permitted outright or to a permitted conditional use and accessory dwelling units subject to the following development standards:

1. Solar collectors, including solar greenhouses, shall not be counted in lot coverage.

2. Solar collectors except solar greenhouses attached to principal use structures may exceed the height limits of neighborhood residential zones by 4 feet or extend 4 feet above the ridge of a pitched roof. However, the total height from existing grade to the top of the solar collector may not extend more than 9 feet above the height limit established for the zone (see Exhibit 23.44.046 A). A solar collector that exceeds the height limit for neighborhood residential zones shall be placed so as not to shade an existing solar collector or property to the north on January 21, at noon, any more than would a structure built to the maximum permitted height and bulk.

3. Solar collectors and solar greenhouses may be located in required yards according to the following conditions:

a. In a side yard, no closer than 3 feet from the side property line; or

b. In a rear yard, no closer than 15 feet from the rear property line unless there is a dedicated alley, in which case the solar collector shall be no closer than 15 feet from the centerline of the alley; or

c. In a front yard, solar greenhouses which are integrated with the principal structure and have a maximum height of 12 feet may extend up to 6 feet into the front yard. In no case shall the greenhouse be located closer than 5 feet from the front property line.

B. Nonconforming solar collectors. The Director may permit the installation of solar collectors which cause an existing structure to become nonconforming, or which increase an existing nonconformity, as a special exception pursuant to Chapter 23.76. Such installation may be permitted even if it exceeds the height limit established in subsection 23.44.046.A.2, so long as total structure height including solar collectors does not exceed 39 feet above existing grade and the following conditions are met:

1. There is no feasible alternative to placing the collector(s) on the roof;
2. Such collector(s) are located so as to minimize view blockage for surrounding properties and shading of property to the north, while still providing adequate solar access for the collectors;
3. Such collector(s) meet minimum written energy conservation standards administered by the Director; and
4. The collector(s) add no more than 7 feet of height to the existing structure. To minimize view blockage or shadow impacts, the Director shall have the authority to limit a nonconforming solar collector to less than 7 additional feet of height.

23.44.048 Keeping of animals.

The keeping of animals is regulated by Section 23.42.052, Keeping of Animals.

23.44.050 Home occupations.

Home occupations are regulated by Section 23.42.050, Home Occupations.

23.44.051 Bed and breakfasts

A bed and breakfast use is permitted if it meets the following standards:

A. General provisions

1. The bed and breakfast use shall have a valid business license tax certificate issued by the Department of Finance and Administrative Services;

2. All operators of bed and breakfast uses who use a short-term rental platform for listing the bed and breakfast shall have a valid short-term rental operator's license issued by the Department of Finance and Administrative Services.

3. The bed and breakfast use shall be operated by the primary resident of the dwelling unit where the bed and breakfast is located or the resident operator;

4. There shall be no evidence of the bed and breakfast use visible from the exterior of the dwelling unit except for a sign permitted by subsection 23.55.020.D.1;

5. The bed and breakfast use shall have no more than five guest rooms, provided that this limitation does not apply to bed and breakfast uses that were established on or before April 1, 1987; and

6. A bed and breakfast use may be located in a dwelling unit or an accessory dwelling unit.

B. Alterations to single-family structures. Interior and exterior alterations consistent with the development standards of the underlying zone are permitted.

23.44.052 Open wet moorage

Piers and floats for open wet moorage of private pleasure craft are permitted as regulated by the Shoreline District, Chapter 23.60A.

23.44.053 Transitional encampments accessory use

Transitional encampments accessory to religious facilities or to principal uses located on property owned or controlled by a religious organization are regulated by Section 23.42.054, Transitional Encampments Accessory to Religious Facilities.

23.44.058 Columbariums, garden wall crypts and mausoleums.

Columbariums, garden wall crypts and mausoleums are permitted only as accessory to existing cemeteries except that columbariums and garden wall crypts may also be accessory to religious facilities, and subject to the general development standards for accessory uses. In addition, no interment openings shall abut or be directly across the street from property other than cemetery property. For columbariums, garden wall crypts and mausoleums accessory to existing cemeteries, any border between structures and the property line shall be landscaped and maintained by the owner in good condition. For columbariums and garden wall crypts accessory to religious facilities, the landscaping requirements of SMC Section 23.44.022 I applicable to religious facilities and other institutions shall apply.

23.44.060 Uses accessory to parks and playgrounds

A. The following accessory uses shall be permitted in any park when within a structure or on a terrace abutting the structure:

1. The sale and consumption of beer during daylight hours;
2. The sale and consumption of alcoholic beverages under a Class H liquor license at municipal golf courses during established hours of operation.

When the use is within one hundred (100) feet from any lot in a residential zone the use shall be completely enclosed.

B. The sale and consumption of beer and wine with meals served in a restaurant facility within the boundaries of Woodland Park shall be permitted. The use shall be permitted in only one (1) facility located no closer than one hundred (100) feet from any lot in a residential zone and separated from other public activity areas and zoo buildings by at least fifty (50) feet.

C. Storage structures and areas and other structures and activities customarily associated with parks and playgrounds are subject to the following development standards in addition to the general development standards for accessory uses:

1. Any active play area shall be located 30 feet or more from any lot in a neighborhood residential zone.
2. Garages and service or storage areas shall be located 100 feet or more from any other lot in a residential zone and obscured from view from each such lot.

23.44.068 Heat recovery incinerator.

The Director may permit a heat recovery incinerator as an accessory use to institutions, public facilities and parks and playgrounds, subject to the following conditions:

- A. The incinerator shall be located on the same lot as the institution or public facility.
- B. An incinerator in a park or playground shall be permitted only when a permanent structure other than that which houses the incinerator exists and the incinerator abuts the structure.
- C. The use shall be located no closer than one hundred (100) feet to any property line unless completely enclosed within a structure.
- D. If not within a structure, the use shall be enclosed by a view-obscuring fence of sufficient strength and design to resist entrance by children.
- E. Adequate control measures for insects, rodents and odors shall be maintained continuously.

23.44.070 Recycling collection stations.

The Director may permit recycling collection stations as accessory uses to institutions and public facilities. These recycling collection stations shall be maintained in good condition by the respective institution or public facility.

CITY OF SEATTLE
ORDINANCE 127219
COUNCIL BILL 120969

AN ORDINANCE relating to land use and zoning; implementing interim controls to comply with various state laws; establishing findings and adopting a workplan for permanent legislation; amending Sections 23.22.062, 23.24.045, 23.34.011, 23.44.006, 23.44.010, 23.44.011, 23.44.012, 23.44.014, 23.44.016, 23.44.017, 23.44.044, 23.45.512, 23.45.514, 23.45.518, 23.45.522, 23.45.527, 23.45.529, 23.53.006, 23.53.025, 23.54.015, 23.54.020, 23.54.030, 23.84A.010, 23.84A.025, 23.84A.036, and 25.09.240 of the Seattle Municipal Code.

WHEREAS, the Office of Planning and Community Development, in cooperation with other City agencies including the Seattle Planning Commission, began in 2022 a series of programs and events, under the title One Seattle Plan, to engage the public in discussions about potential changes to the Comprehensive Plan, consistent with the One Seattle Plan Public Participation Plan and documented in the One Seattle Plan Public Engagement Report; and

WHEREAS, in April 2021, the Washington State Legislature passed Chapter 300, Laws of 2021 (also known as House Bill 1287), which directed the building code council to adopt rules for electric vehicle infrastructure requirements; and

WHEREAS, in April 2023, the Washington State Legislature passed Chapter 322, Laws of 2023 (also known as House Bill 1110), which amended the Growth Management Act to require certain cities, including Seattle, to allow the development of “middle housing” in all residential areas, including at least four units on each lot and at least six units per lot near transit or when at least two units are affordable; and

1 WHEREAS, in April 2023, the Washington State Legislature passed Chapter 333, Laws of 2023
2 (also known as House Bill 1293), which imposes limits on design review and requires
3 that design standards be clear and objective; and

4 WHEREAS, in March 2024, the Washington State Legislature passed Chapter 152, Laws of
5 2024 (also known as House Bill 2321), which clarified standards implemented through
6 House Bill 1110; and

7 WHEREAS, in March 2024, the Washington State Legislature passed Chapter 274, Laws of
8 2024 (also known as Senate Bill 6015), which imposes restrictions on parking
9 requirements; and

10 WHEREAS, in March 2024, the Office of Planning and Community Development published a
11 Draft Environmental Impact Statement analyzing the potential effects of five different
12 growth alternatives in the city through 2044 and a “no action” alternative, conducted two
13 public hearings, and received comments from the public on this document; and

14 WHEREAS, in March 2024, the Office of Planning and Community Development published a
15 Draft Comprehensive Plan rooted in a deliberate approach to creating more housing,
16 encouraging density near amenities and frequent transit, and preventing displacement;
17 and

18 WHEREAS, in Spring 2024, the Office of Planning and Community Development held open
19 houses across all seven council districts and received input from residents and community
20 groups over a two-month public comment period on the draft plan and an initial proposal
21 for updating Neighborhood Residential zones; and

22 WHEREAS, in Fall 2024, the Office of Planning and Community Development held open
23 houses across all seven council districts and received input from residents and community

1 groups over a two-month public comment period on a revised proposal for updating
2 Neighborhood Residential zones and draft legislation; and

3 WHEREAS, in January 2025, the Office of Planning and Community Development published a
4 Final Environmental Impact Statement that included analysis of a preferred growth
5 strategy alternative that increased potential housing supply in the city by doubling
6 residential development capacity and that promoted housing supply, variety, and
7 affordability by adding new and expanded areas for growth in neighborhoods across the
8 city;

9 WHEREAS, in February 2025, the Final Environmental Impact Statement was appealed to the
10 Hearing Examiner;

11 NOW, THEREFORE,

12 **BE IT ORDAINED BY THE CITY OF SEATTLE AS FOLLOWS:**

13 Section 1. The City Council makes the following legislative findings of fact and declares
14 as follows:

15 A. Chapter 322, Laws of 2023, Chapter 333, Laws of 2023, and Chapter 152, Laws of
16 2024, establish a deadline for local jurisdiction compliance of six months after its next periodic
17 comprehensive plan update required under RCW 36.70A.130. The Washington State Department
18 of Commerce has interpreted this deadline to be six months after the statutory deadline
19 established in RCW 36.70A.130. Consistent with this guidance, a compliance deadline for The
20 City of Seattle would be June 30, 2025. The requirements of Chapter 300, Laws of 2021, and
21 Chapter 274, Laws of 2024, are currently in effect.

1 B. The Land Use Code does not fully comply with Chapter 300, Laws of 2021, Chapter
2 322, Laws of 2023, Chapter 333, Laws of 2023, Chapter 152, Laws of 2024, and Chapter 274,
3 Laws of 2024, necessitating amendment of the code to ensure consistency with State law.

4 C. In October 2024, the Washington State Department of Commerce released an updated
5 model ordinance for local implementation of Chapter 322, Laws of 2023.

6 D. Chapter 322, Laws of 2023, stipulates that if a jurisdiction fails to enact development
7 regulations that comply with its requirements by the deadline, that the model ordinance
8 supersedes any non-compliant local development regulations for the purpose of issuance of
9 permits for middle housing development.

10 E. The Final Environmental Impact Statement (FEIS) released by the Office of Planning
11 and Community Development in January 2025 includes analysis of a preferred alternative that
12 implements Chapter 300, Laws of 2021, Chapter 322, Laws of 2023, Chapter 333, Laws of 2023,
13 Chapter 152, Laws of 2024, and Chapter 274, Laws of 2024 through amendments to the City's
14 Comprehensive Plan and zoning regulations.

15 F. Following a 14-day appeal period, six separate appeals of the adequacy of the FEIS
16 were submitted to the City's Hearing Examiner.

17 G. Consistent with subsection 23.76.062.D and Sections 25.05.055 and 25.05.070 of the
18 Seattle Municipal Code, the City Council could not take action to approve legislation that is
19 subject to an active appeal under the State Environmental Policy Act (SEPA).

20 H. On April 11, 2025, the City Hearing Examiner dismissed all six appeals of the FEIS
21 pursuant to RCW 36.70A.600(3), RCW 36.70A.680(3), and RCW 43.21C.495.

22 I. If the City does not enact legislation to meet the requirements of Chapter 322, Laws of
23 2023, by June 30, 2025, any denial of a permit for development of middle housing that is

1 inconsistent with current development regulations is subject to challenge on the basis that State
2 model code would supersede the City's development regulations. The City would also be subject
3 to potential challenge to any permitting decision related to the requirements of other State
4 legislation cited in subsection 1.B of this ordinance.

5 J. Adopting interim legislation at this time, as an alternative to allowing the State model
6 code to apply automatically, is necessary to ensure that the requirements governing approval of
7 permits for middle housing meet the minimum requirements of Chapter 322, Laws of 2023, and
8 to ensure that regulations for middle housing development are sufficiently clear and complete for
9 the issuance of permits by the City. Interim legislation will also ensure compliance with other
10 new State requirements cited in subsection 1.B of this ordinance.

11 Section 2. The interim development regulations set forth in this ordinance shall be in
12 effect for a period of one year from the effective date of this ordinance and shall automatically
13 expire after the one-year period unless the same is extended as provided by statute, or unless
14 terminated sooner by the City Council.

15 Section 3. Pursuant to RCW 36.70A.390, the Council will hold a public hearing prior to
16 adoption or within 60 days of adoption of this interim zoning legislation to take public testimony
17 and to consider adopting further findings.

18 Section 4. Under RCW 36.70A.390, the Council approves the following work plan for
19 the development of permanent regulations to address the issues in this ordinance and directs the
20 Office of Planning and Community Development to transmit proposed legislation. The Council
21 intends to consider the permanent legislation and to adopt the Seattle Comprehensive Plan under
22 the following schedule:

Mayor Transmits Legislation to Council	Anticipated May 2025
Council Deliberations and Public Hearing on Proposed Comprehensive Plan and Permanent Controls	Anticipated June through September 2025
Comprehensive Plan and Permanent Controls Effective	Anticipated October 2025

The Council intends to consider the issues included in Attachment 1 during its deliberations on the permanent legislation.

Section 5. Based on the authority of RCW 36.70A.390 and the findings in Section 1 of this ordinance, Section 23.76.062 of the Seattle Municipal Code is waived for the adoption of this ordinance.

Section 6. Based on the findings of fact set forth in Section 1 of this ordinance, the City Council may renew these interim regulations for one or more six-month periods in accordance with RCW 36.70A.390.

Section 7. [Reserved]

Section 8. [Reserved]

Section 9. Section 23.34.011 of the Seattle Municipal Code, last amended by Ordinance 126509, is amended as follows:

23.34.011 NR1, NR2, and NR3 zones, function, and locational criteria

A. Function. An area that provides ~~((predominantly detached single family structures on lot sizes compatible with the existing pattern of development and the character of neighborhood residential areas))~~ for the development of detached, attached, and stacked dwelling units within a predominately three-story height limit.

* * *

Section 10. Section 23.44.006 of the Seattle Municipal Code, last amended by Ordinance 126858, is amended as follows:

23.44.006 Principal uses permitted outright

The following principal uses are permitted outright in neighborhood residential zones:

A. Single-family dwelling unit;

B. ~~((In RSL zones, apartments))~~ Apartments, carriage houses, cottage housing development, rowhouse development, and townhouse developments;

* * *

Section 11. Section 23.44.010 of the Seattle Municipal Code, last amended by Ordinance 126685, is amended as follows:

23.44.010 Minimum lot area and lot coverage

* * *

C. ~~((Maximum lot coverage 1.))~~ Maximum lot coverage

1. The maximum lot coverage permitted for principal and accessory structures ((is as provided in Table B for 23.44.010)) on a lot with two or more principal and detached accessory dwelling units is 50 percent.

2. The maximum lot coverage permitted for structures on a lot with no more than one principal dwelling unit and no detached accessory dwelling units is as follows:

a. On a lot greater than or equal to 5,000 square feet, the maximum permitted lot coverage is 35 percent; and

b. On a lot less than 5,000 square feet, the maximum permitted lot coverage is 1,000 square feet plus 15 percent of lot area, provided that lot coverage cannot exceed 50 percent.

((Table B for 23.44.010 Maximum lot coverage		
Zone	Lot size	Maximum lot coverage
NR1, NR2, and NR3	Less than 5,000 square feet	1,000 square feet plus 15 percent of lot area
	5,000 square feet or more	35 percent of lot area
RSL	All lots	50 percent of lot area

~~2. For purposes of computing maximum lot coverage, only those portions of a lot that measure at least 10 feet in all directions shall be included in lot coverage calculations, except for portions of a lot that are used for access or that are granted a waiver under subsections 23.22.100.D, 23.24.040.B, or 23.28.030.A.4 for the purpose of providing access.))~~

* * *

Section 12. Section 23.44.011 of the Seattle Municipal Code, last amended by Ordinance 126685, is amended as follows:

23.44.011 Floor area in neighborhood residential zones

A. Gross floor area. In neighborhood residential zones, gross floor area includes exterior corridors, breezeways, and stairways that provide building circulation and access to dwelling units or sleeping rooms. Balconies, patios, and decks that are associated with a single dwelling unit or sleeping room and that are not used for common circulation, and ground-level walking paths, are not considered gross floor area.

B. Floor area ratio (FAR) limits.

~~((1. The FAR limit on lots developed with a single family dwelling unit as the principal use in NR1, NR2, and NR3 zones, is 0.5, except that lots with less than 5,000 square feet of lot area can include up to 2,500 square feet of total chargeable floor area. The applicable FAR limit applies to the total chargeable floor area of all structures on the lot.~~

2. ~~The FAR limit in RSL zones is 0.75. The applicable FAR limit applies to the total chargeable floor area of all structures on the lot.)~~ The FAR limit in neighborhood residential zones for lots with residential uses is as shown in Table A for 23.44.011, except that in NR1, NR2, and NR3 zones, lots with less than 5,000 square feet of lot area can include up to 2,500 square feet of total chargeable floor area or the amount of total chargeable floor area allowed by the FAR limit shown in Table A for 23.44.011, whichever is greater. The applicable FAR limit applies to the total chargeable floor area of all structures on the lot.

Table A for 23.44.011

Floor area ratio (FAR) in neighborhood residential zones

<u>Density (dwelling units per lot size)</u>	<u>FAR</u>
<u>Less dense than 1 unit / 4,000 square feet</u>	<u>0.6 in NR1, NR2, and NR3 zones</u> <u>0.75 in RSL zones</u>
<u>1 unit / 4,000 square feet to 1 unit / 2,201 square feet</u>	<u>0.8</u>
<u>1 unit / 2,200 square feet to 1 unit / 1,601 square feet</u>	<u>1.0</u>
<u>1 unit / 1,600 square feet or denser</u>	<u>1.2</u>

C. The following floor area is exempt from FAR limits:

1. All stories, or portions of stories, that are underground.
2. All portions of a story that extend no more than 4 feet above existing or finished grade, whichever is lower, excluding access.

~~((3. In NR1, NR2, and NR3 zones:
 - a. Any floor area contained in an accessory dwelling unit;
 - b. Either up to 500 additional square feet of floor area in any accessory structure that is not a detached accessory dwelling unit, or up to 250 square feet of floor area in an attached garage.))~~
3. Common walls separating individual attached dwelling units.
4. In RSL zones, 50 percent of the chargeable floor area contained in structures built prior to January 1, 1982, as single-family dwelling units that will remain in residential use,

1 regardless of the number of dwelling units within the existing structure, provided the exemption
2 is limited to the gross square footage in the single-family dwelling unit as of January 1, 1982.

3 ~~((D. In NR1, NR2, and NR3 zones, additions to a single-family dwelling unit existing on
4 the effective date of the ordinance introduced as Council Bill 119544 may exceed the FAR limit
5 in subsection 23.44.011.B.1 if the addition adds floor area equal to or less than 20 percent of the
6 floor area that existed on the effective date of the ordinance introduced as Council Bill 119544.
7 Only one addition to any single-family dwelling unit may be exempted under this subsection
8 23.44.011.D.))~~

9 Section 13. Section 23.44.012 of the Seattle Municipal Code, last amended by Ordinance
10 126600, is amended as follows:

11 **23.44.012 Height limits**

12 A. Maximum height established. The provisions of this Section 23.44.012 apply in
13 neighborhood residential zones, except as provided elsewhere in the Land Use Code for specific
14 types of structures or structures in particular locations.

15 ~~((1. Except as provided in subsections 23.44.012.A.2 and 23.44.012.A.3, the))~~
16 The maximum permitted height for any structure not located in a required yard is ~~((30))~~ 32 feet.

17 ~~((2. In NR1, NR2, and NR3 zones, the maximum permitted height for any
18 structure on a lot 30 feet or less in width is 25 feet.~~

19 ~~3. In NR1, NR2, and NR3 zones, for a lot or unit lot of any width, if the area of
20 the largest rectangle or other quadrilateral that can be drawn within the lot lines of the lot or unit
21 lot is less than 3,200 square feet the maximum permitted height for any structure on that lot shall
22 be 18 feet. Additional height shall be allowed, subject to the limit that would otherwise apply
23 under subsections 23.44.012.A.1 and 23.44.012.A.2, provided that the elevation at the top of the~~

1 ~~exterior walls of the structure, exclusive of pitched roofs, does not exceed the average of the~~
2 ~~elevations at the tops of the walls of single-family residences on abutting lots within the same~~
3 ~~zone. The limit of this subsection 23.44.012.A.3 shall not apply to additions to single-family~~
4 ~~residences existing as of February 1, 2013, that do not exceed the greater of 1,000 square feet of~~
5 ~~new gross floor area or the amount of gross floor area on any one floor of the existing house.))~~

6 * * *

7 Section 14. Section 23.44.014 of the Seattle Municipal Code, last amended by the
8 ordinance introduced as Council Bill 120949, is amended as follows:

9 **23.44.014 Yards**

10 A. General

- 11 1. Yards are required for every lot in a neighborhood residential zone.
- 12 2. In the case of a through lot, each yard abutting a street, except a side yard, shall
13 be a front yard. Rear yard provisions shall not apply to the through lot, except pursuant to
14 Section 23.40.030 or 23.40.035.
- 15 3. Setbacks from a street or alley may be required in order to meet the provisions
16 of Section 23.53.015.
- 17 4. Setbacks from access easements may also be required for principal structures
18 according to the standards in ((~~subsections 23.53.025.C.2 and 23.53.025.D.6~~)) subsection
19 23.53.025.C.6.

20 B. Required yards for neighborhood residential zones are shown in Table A for
21 23.44.014.

**((Table A for 23.44.014
Required yards in neighborhood residential zones**

Yard	NR1, NR2, and NR3	RSL
Front	20 feet or the average of the front yards of the single-family structures on either side, whichever is less ¹	10 feet
Rear	25 feet or 20 percent of lot depth, whichever is less, except that it may never be less than 10 feet ²	10 feet except that, if the rear yard abuts an alley, there is no rear yard requirement
Side	5 feet ^{3, 4, 5}	5 feet ⁵

Footnotes to Table A for 23.44.014

¹—If the natural gradient or slope (as measured from the front line of the lot for a distance of 60 feet or the full depth of the lot, whichever is less) is in excess of 35 percent, the required front yard depth shall be the lesser of: 20 feet less 1 foot for each one percent of gradient or slope in excess of 35 percent; or the average of the front yards on either side.

²—If the rear lot line abuts an alley, the centerline of the alley between the side lot lines extended shall be assumed to be the rear lot line for purposes of the provision of rear yard and the determination of lot depth; provided, that at no point shall the principal structure be closer than 5 feet to the alley.

³—In the case of a reversed corner lot, the key lot of which is in a neighborhood residential zone, the width of the side yard on the street side of the reversed corner lot shall not be less than 10 feet.

⁴—If any side street lot line is a continuation of the front lot line of an abutting neighborhood residential-zoned lot, whether or not separated by an alley, the width of the street side yard shall not be less than 10 feet.

⁵—No side yard is required from a side lot line that abuts an alley.))

**Table A for 23.44.014
Required yards in neighborhood residential zones**

<u>Front</u>	<u>Lots with one or two dwelling units: 15 feet;¹</u> <u>Lots with three or more dwelling units: 10 feet¹</u>
<u>Rear</u>	<u>Lots not abutting an alley with one or two dwelling units: 15 feet</u> <u>Lots not abutting an alley with three or more dwelling units: 10 feet</u> <u>Lots abutting an alley: no rear yard is required</u>
<u>Side</u>	<u>5 feet</u>

Table A for 23.44.014
Required yards in neighborhood residential zones

Footnote for Table A for 23.44.090

¹ For lots abutting landmarked public right of way on Queen Anne Boulevard, front yards shall be 20 feet or the average of the front yards of the structures on abutting lots, whichever is less, except that if the natural gradient or slope (as measured from the front line of the lot for a distance of 60 feet or the full depth of the lot, whichever is less) is in excess of 35 percent, the required front yard depth shall be the lesser of: 20 feet less 1 foot for each one percent of gradient or slope in excess of 35 percent; or the average of the front yards on the abutting lots.

* * *

Section 15. Section 23.44.016 of the Seattle Municipal Code, last amended by the ordinance introduced as Council Bill 120949, is amended as follows:

23.44.016 Parking and garages

* * *

D. Parking and garages in required yards. Parking and garages are regulated as described in this subsection 23.44.016.D. Unless otherwise specified, the terms “garage” or “garages” as used in this subsection 23.44.016.D refer to both attached and detached garages.

1. Parking and garages shall not be located (~~((in the required front yard))~~) within 20 feet of a front lot line except as provided in subsections 23.44.016.D.6, 23.44.016.D.8, 23.44.016.D.9, 23.44.016.D.10, and 23.44.016.D.11.

2. Parking and garages shall not be located in a required side yard abutting a street or the first 10 feet of a required rear yard abutting a street except as provided in subsections 23.44.016.D.6, 23.44.016.D.8, 23.44.016.D.9, 23.44.016.D.10, and 23.44.016.D.11.

3. Garages shall not be located in a required side yard that abuts the rear or side yard of another lot or in that portion of the rear yard of a reversed corner lot within 5 feet of the key lot’s side lot line unless:

1 a. The garage is a detached garage and extends only into that portion of a
2 side yard that is either within 35 feet of the centerline of an alley or within 25 feet of any rear lot
3 line that is not an alley lot line; or

4 b. An agreement between the owners of record of the abutting properties,
5 authorizing the garage in that location, is executed and recorded, pursuant to subsection
6 23.44.014.C.2.a.

7 4. Garages with vehicular access facing an alley, shall not be located within 12
8 feet of the centerline of any alley, nor within 12 feet of any rear lot line that is not an alley lot
9 line, except as provided in subsections 23.44.016.D.8, 23.44.016.D.9, 23.44.016.D.10, and
10 23.44.016.D.11, or the Director may waive or modify this standard as a Type I decision provided
11 the applicant can demonstrate that adequate turning and maneuvering areas can be provided.

12 5. On a reversed corner lot, no garage shall be located in that portion of the
13 required rear yard that abuts the required front yard of the adjoining key lot unless the provisions
14 of subsection 23.44.016.D.8 apply.

15 6. If access to required parking passes through a required yard, automobiles,
16 motorcycles, and similar vehicles may be parked on the open access located in a required yard.

17 7. Trailers, boats, recreational vehicles, and similar equipment shall not be parked
18 in required front and side yards or the first 10 feet of a rear yard measured from the rear lot line,
19 or measured 10 feet from the centerline of an alley if there is an alley adjacent to the rear lot line,
20 unless fully enclosed in a structure otherwise allowed in a required yard by this subsection
21 23.44.016.D.

22 8. Lots with uphill yards abutting streets. In NR1, NR2, and NR3 zones, parking
23 for one two-axle or one up to four-wheeled vehicle may be established in a required yard

1 abutting a street according to subsection 23.44.016.D.8.a or 23.44.016.D.8.b only if access to
2 parking is permitted through that yard pursuant to subsection 23.44.016.B.

3 a. Open parking space

4 1) The existing grade of the lot slopes upward from the street lot
5 line an average of at least 6 feet above sidewalk grade at a line that is 10 feet from the street lot
6 line; and

7 2) The parking area shall be at least an average of 6 feet below the
8 existing grade prior to excavation and/or construction at a line that is 10 feet from the street lot
9 line; and

10 3) The parking space shall be no wider than 10 feet for one parking
11 space at the parking surface and no wider than 20 feet for two parking spaces if permitted as
12 provided in subsection 23.44.016.D.11.

13 b. Terraced garage

14 1) The height of a terraced garage is limited to no more than 2 feet
15 above existing or finished grade, whichever is lower, for the portions of the garage that are 10
16 feet or more from the street lot line. The ridge of a pitched roof on a terraced garage may extend
17 up to 3 feet above this 2-foot height limit. All parts of the roof above the 2-foot height limit shall
18 be pitched at a rate of not less than 4:12. No portion of a shed roof shall be permitted to extend
19 beyond the 2-foot height limit of this provision. Portions of a terraced garage that are less than 10
20 feet from the street lot line shall comply with the height standards in subsection 23.44.016.E.2;

21 2) The width of a terraced garage structure shall not exceed 14 feet
22 for one two-axle or one up to four-wheeled vehicle, or 24 feet if permitted to have two two-axle
23 or two up to four-wheeled vehicles as provided in subsection 23.44.016.D.11;

3) All above ground portions of the terraced garage shall be included in lot coverage; and

4) The roof of the terraced garage may be used as a deck and shall be considered to be a part of the garage structure even if it is a separate structure on top of the garage.

9. Lots with downhill yards abutting streets. In NR1, NR2, and NR3 zones, parking, either open or enclosed in an attached or detached garage, for one two-axle or one up to four-wheeled vehicle may be located in a required yard abutting a street if the following conditions are met:

a. The existing grade slopes downward from the street lot line that the parking faces;

b. For front yard parking, the lot has a vertical drop of at least 20 feet in the first 60 feet, measured along a line from the midpoint of the front lot line to the midpoint of the rear lot line;

c. Parking is not permitted in required side yards abutting a street;

d. Parking in a rear yard complies with subsections 23.44.016.D.2, 23.44.016.D.4, and 23.44.016.D.5; and

e. Access to parking is permitted through the required yard abutting the street by subsection 23.44.016.B.

10. Through lots. On through lots less than 125 feet in depth in NR1, NR2, and NR3 zones, parking, either open or enclosed in an attached or detached garage, for one two-axle or one up to four-wheeled vehicle may be located in one of the required front yards. The front yard in which the parking may be located shall be determined by the Director based on the

location of other garages or parking areas on the block. If no pattern of parking location can be determined, the Director shall determine in which yard the parking shall be located based on the prevailing character and setback patterns of the block.

11. Lots with uphill yards abutting streets or downhill or through lot front yards fronting on streets that prohibit parking. In NR1, NR2, and NR3 zones, parking for two two-axle or two up to four-wheeled vehicles may be located in uphill yards abutting streets or downhill or through lot front yards as provided in subsections 23.44.016.D.8, 23.44.016.D.9, or 23.44.016.D.10 if, in consultation with the Seattle Department of Transportation, it is found that uninterrupted parking for 24 hours is prohibited on at least one side of the street within 200 feet of the lot line over which access is proposed. The Director may authorize a curb cut wider than would be permitted under Section 23.54.030 if necessary, for access.

* * *

Section 16. Section 23.44.017 of the Seattle Municipal Code, last amended by the ordinance introduced as Council Bill 120949, is amended as follows:

23.44.017 Density limits

A. On lots in existence as of June 30, 2025, in ((the)) NR1, NR2, ((and)) NR3, and RSL zones, the following density limits apply, except as otherwise provided in subsections 23.44.017.B, 23.44.017.C and 23.44.017.D. For the purposes of this Section 23.44.017,

“dwelling unit” includes both principal and accessory units.

1. Up to four dwelling units are permitted per lot.

2. Up to six dwelling units are permitted per lot within one-quarter mile walking distance of a major transit stop.

1 3. Up to six dwelling units are permitted per lot located more than one-quarter mile
2 walking distance away from a major transit stop, provided that at least two affordable principal
3 dwelling units are provided, and the following requirements are met:

4 ~~((only one single family dwelling unit is allowed per lot, except that accessory dwelling~~
5 ~~units may also be approved pursuant to Section 23.42.022, and except as approved as part of an~~
6 ~~administrative conditional use permit under Section 25.09.260, a clustered housing planned~~
7 ~~development under Section 23.44.024, or a planned residential development under Section~~
8 ~~23.44.034.~~

9 ~~B. The following provisions apply in RSL zones:~~

10 ~~1. The minimum lot area per principal dwelling unit is 2,000 square feet.~~

11 ~~2. Except as provided in subsection 23.44.017.B.3, when calculation of the~~
12 ~~number of principal dwelling units allowed according to subsection 23.44.017.B.1 results in a~~
13 ~~fraction of a unit, any fraction up to and including 0.85 constitutes zero additional principal~~
14 ~~dwelling units, and any fraction over 0.85 constitutes one additional principal dwelling unit.~~

15 ~~3. For lots in existence on April 19, 2019, if the number of principal dwelling~~
16 ~~units allowed according to subsection 23.44.017.B.1 equals less than two, two units are allowed.~~

17 ~~4. Accessory dwelling units are allowed pursuant to Section 23.42.022.))~~

18 a. A regulatory agreement, covenant, or other legal instrument, recorded
19 on the title of the property and enforceable by the City of Seattle, ensures affordability for
20 income-eligible households for 50 years in at least two principal dwelling units as follows:

21 1) For rental housing, restricted units serving households with
22 incomes no higher than 60 percent of median income at initial occupancy and with rents not
23 exceeding 30 percent of 60 percent of median income; or

1 2) For ownership housing, restricted units sold to households with
2 incomes no higher than 80 percent of median income at prices (initial sale and resale) that allow
3 modest growth in homeowner equity while maintaining long-term affordability for income-
4 eligible buyers, as determined by the Director of Housing;

5 b. The low-income units must be generally distributed throughout the
6 development and have substantially the same functionality as unrestricted units in the
7 development;

8 c. To the extent practicable, the low-income units must be comparable to
9 the unrestricted units in terms of square footage and number of bedrooms and bathrooms;

10 d. Tenure (i.e., rental or ownership) of low-income units and unrestricted
11 units must be the same;

12 e. The regulatory agreement, covenant, or other legal instrument must
13 contain criteria and policies to maintain public benefit if the property is demolished or converted
14 to a non-residential use;

15 f. For ownership developments, the low-income units must be stewarded
16 by a qualified non-profit organization including:

17 1). Pre-purchase verification of income and other requirements for
18 eligible households, affordable sale price calculations for approval by the Office of Housing, and
19 execution of legal restrictions on the property; and

20 2). Post-purchase support for homeowners by facilitating resales,
21 monitoring compliance with financial, owner occupancy, and other legal requirements, and clear
22 communication of program guidelines and restrictions;

1 g. For purposes of this subsection 23.44.017.A.3, qualified non-profit
2 organization means a non-profit organization that the Office of Housing determines as
3 experienced in the development and stewardship of permanently affordable homes;

4 h. At such times as may be required by the Director of Housing but no less
5 than annually, the property owner for rental housing or the qualified non-profit organization for
6 ownership housing must file property reports with the Office of Housing, verified upon oath or
7 affirmation, which shall contain such information as the Office of Housing may deem necessary
8 to determine compliance with this subsection 23.44.017.A.3 and the regulatory agreement,
9 covenant, or legal instrument according to subsection 23.44.017.A.3.a; and

10 i. In RSL zones that have a mandatory housing affordability suffix, the
11 dwelling units for which the regulatory agreement, covenant, or other legal instrument required
12 by subsection 23.44.017.A.3.a ensures affordability as required by that subsection shall be
13 counted towards any obligation to provide MHA-R units according to subsection 23.58C.050.A.

14 B. The following provisions apply in RSL zones:

- 15 1. The minimum lot area per principal dwelling unit is 2,000 square feet.
16 2. The number of dwelling units allowed on a lot existing as of June 30, 2025, is
17 the greater of the number dwelling units allowed by subsection 23.44.017.A or subsection
18 23.44.017.B.1.
19 3. Accessory dwelling units are allowed pursuant to Section 23.42.022.

20 C. For lots, other than unit lots, created after June 30, 2025, the following provisions
21 apply:

- 22 1. In NR1, NR2, and NR3 zones, only one single-family dwelling unit is
23 allowed per lot.

2. In RSL zones, the minimum lot area per principal dwelling unit is 2,000 square feet.

3. Accessory dwelling units are allowed pursuant to Section 23.42.022.

D. Lot density exceptions for lots that contain any riparian corridors; wetlands and their buffers; submerged lands and areas within the shoreline setback; or designated non-disturbance area in steep slopes. For lots that contain any riparian corridors, wetlands and their buffers, submerged lands and areas within the shoreline setback, or designated non-disturbance area in steep slopes, applicants may choose to develop the lot with the number of dwelling units provided in the density limits in subsections 23.44.017.A and 23.44.017.B or with the number of principal and accessory dwelling units calculated as follows:

1. Determine the number of units that would be allowed under subsection 23.44.017.A if no environmentally critical areas were located on the lot;

2. Determine the percentage of the lot that is not covered by riparian corridors, wetlands and their buffers, submerged lands and areas within the shoreline setback, or designated non-disturbance area in steep slopes; and

3. Calculate the number of dwelling units by multiplying the number of dwelling units determined in subsection 23.44.017.D.1 by the percentage of the lot calculated in subsection 23.44.017.D.2.

E. For the purpose of this Section 23.44.017, “designated non-disturbance area” in steep slopes shall include all portions of steep slope hazard areas except the following:

1. Areas that are granted relief from the prohibition of development according to Section 25.09.090;

2. Areas where development is allowed under a small project waiver according to Section 25.09.090;

3. Areas where development is allowed under an administrative conditional use according to Section 25.09.260; and

4. Areas where intrusion into the steep slope erosion hazard area and buffer is allowed by steep slope erosion hazard area variance according to Section 25.09.290.

F. Measurement of minimum lot size and maximum density

1. When calculation of the number of dwelling units allowed results in a fraction of a unit, any fraction over 0.85 constitutes one additional unit.

2. Congregate residence sleeping rooms shall be treated as one-fourth of a dwelling unit for purposes of calculating density.

3. In the case of a development within a unit lot subdivision, the density limit shall be applied to the parent lot as a whole.

4. If dedication of right-of-way is required, permitted density shall be calculated before the dedication is made.

Section 17. Section 23.44.044 of the Seattle Municipal Code, last amended by Ordinance 124378, is amended as follows:

23.44.044 Swimming pools

Private, permanent swimming pools, hot tubs and other similar uses are permitted as accessory uses to a ~~((single family))~~ residential structure subject to the following specific development standards:

A. Private, permanent swimming pools, hot tubs and other similar uses over 18 inches above existing grade are subject to the development standards for accessory uses.

B. Private, permanent swimming pools, hot tubs and other similar uses projecting not more than 18 inches above existing grade shall not be counted in lot coverage.

C. Private, permanent swimming pools, hot tubs and other similar uses may be placed in a required front or rear yard, provided that:

1. No part of the structure shall project more than 18 inches above existing lot grade in a required front yard; and

2. No part of the structure shall be placed closer than 5 feet to any front or side lot line.

Section 18. Section 23.45.512 of the Seattle Municipal Code, last amended by the ordinance introduced as Council Bill 120949, is amended as follows:

23.45.512 Density limits and ~~((family-size-unit-requirements))~~ minimum lot size —LR zones

A. ~~((Density limits))~~ There is no density limit for residential development in LR zones, except that in LR1 zones for rowhouse development on interior lots, all townhouse development, and all single-family dwelling units, and for all residential development in all LR zones that do not have a mandatory housing affordability suffix, the number of dwelling units allowed on a lot is the greater of the number of dwelling units allowed under subsections 23.45.512.B or 23.45.512.C.

~~1. Except according to subsection 23.45.512.A.4, the following developments must meet the density limits described in this subsection 23.45.512.A:~~

~~a. In LR1 zones, rowhouse development on interior lots and all townhouse development; and~~

~~b. All development in Lowrise zones that do not have a mandatory housing affordability suffix.~~

1 B. Rowhouse development on interior lots, all townhouse development and all single-
2 family dwelling units in LR1 zones, and all residential development in LR zones that do not
3 have a mandatory housing affordability suffix shall not exceed a density of one principal
4 dwelling unit per 1,150 square feet of lot area; ~~except((, except that apartments in LR3 zones~~
5 ~~that do not have a mandatory housing affordability suffix shall not exceed a density limit of~~
6 ~~one principal dwelling unit per 800 square feet.~~

7 ~~3. When density calculations result in a fraction of a unit, any fraction up to and~~
8 ~~including 0.85 constitutes zero additional units, and any fraction over 0.85 constitutes one~~
9 ~~additional principal dwelling unit.~~

10 ~~4. Low))~~ low-income housing shall have a maximum density of one principal
11 dwelling unit per 400 square feet of lot area.

12 ~~((B. Family sized unit requirements in LR1 zones~~

13 ~~1. Apartment developments in LR1 zones with four or more principal dwelling~~
14 ~~units shall provide at least one unit with two or more bedrooms and a minimum net unit area of~~
15 ~~850 square feet for every four principal dwelling units in the structure.~~

16 ~~2. One unit with three or more bedrooms and a minimum net unit area of 1,050~~
17 ~~square feet may be provided in place of any two principal dwelling units required to include~~
18 ~~two bedrooms and a minimum net unit area of 850 square feet.))~~

19 C. Alternative Density Limits. Rowhouse development on interior lots, all townhouse
20 development and all single-family dwelling units in LR1 zones and all residential development
21 in LR zones that do not have a mandatory housing affordability suffix may include the number
22 of dwelling units permitted under subsection 23.45.512.C.1 or 23.45.512.C.2, as applicable.

1 For the purposes of this subsection 23.45.512.C, dwelling units include both principal and
2 accessory dwelling units.

3 1. Permitted densities. The following density limits apply on lots that do not
4 contain any riparian corridors, any wetlands or their buffers, any submerged lands or areas within
5 the shoreline setback, or designated non-disturbance area in steep slopes:

6 a. Up to four dwelling units are permitted on lots existing as of June 30,
7 2025.

8 b. Up to six dwelling units are permitted on all lots existing as of June 30,
9 2025 that are located within one-quarter mile walking distance of a major transit stop.

10 c. Up to six dwelling units are allowed on a lot existing as of June 30,
11 2025 provided that:

12 ~~((Nursing homes, congregate housing, assisted living facilities, and accessory~~
13 ~~dwelling units that meet the standards of Section 23.42.022 are exempt from the density limit~~
14 ~~set in subsection 23.45.512.A and the requirements in subsection 23.45.512.B.~~

15 ~~D. Dwelling unit(s) located in structures built prior to January 1, 1982, as single family~~
16 ~~dwelling units that will remain in residential use are exempt from density limits.~~

17 ~~E. If dedication of right of way is required, permitted density shall be calculated before~~
18 ~~the dedication is made.))~~

19 1). A regulatory agreement, covenant, or other legal instrument,
20 recorded on the title of the property and enforceable by The City of Seattle, ensures affordability
21 for income-eligible households for 50 years in at least two principal dwelling units as follows:

1 a) For rental housing, restricted units serving households
2 with incomes no higher than 60 percent of median income at initial occupancy and with rents not
3 exceeding 30 percent of 60 percent of median income; or

4 b) For ownership housing, restricted units sold to
5 households with incomes no higher than 80 percent of median income at prices (initial sale and
6 resale) that allow modest growth in homeowner equity while maintaining long-term affordability
7 for income-eligible buyers, all as determined by the Director of Housing;

8 2) The low-income units must be generally distributed throughout
9 the development and have substantially the same functionality as unrestricted units in the
10 development;

11 3) To the extent practicable, the low-income units must be
12 comparable to unrestricted units in terms of square footage and number of bedrooms and
13 bathrooms;

14 4) Tenure (i.e., rental or ownership) of low-income units and
15 unrestricted units must be the same;

16 5) The regulatory agreement, covenant, or other legal instrument
17 must contain criteria and policies to maintain public benefit if the property is demolished or
18 converted to a non-residential use;

19 6) For ownership developments, the low-income units must be
20 stewarded by a qualified non-profit organization including;

21 a) Pre-purchase verification of income and other
22 requirements for eligible households, affordable sale price calculations for approval by the
23 Office of Housing, and execution of legal restrictions on the property; and

b) Post-purchase support for homeowners by facilitating resales, monitoring compliance with financial, owner occupancy, and other legal requirements, and clear communication of program guidelines and restrictions:

7) For purposes of this subsection 23.45.512.C.5, qualified non-profit organization means a non-profit organization that the Office of Housing determines as experienced in the development and stewardship of permanently affordable homes:

8) At such times as may be required by the Director of Housing but no less than annually, the property owner for rental housing or the qualified non-profit organization for ownership housing must file property reports with the Office of Housing, verified upon oath or affirmation, which shall contain such information as the Office of Housing may deem necessary to determine compliance with this subsection 23.45.512.C.1.c and the regulatory agreement, covenant, or legal instrument according to subsection 23.45.512.C.1.c.1; and

9) In zones that have a mandatory housing affordability suffix, the dwelling units for which the regulatory agreement, covenant, or other legal instrument required by subsection 23.45.512.C.1.c.1 ensures affordability as required by that subsection shall be counted towards any obligation to provide MHA-R units according to subsection 23.58C.050.A.

2. For lots that contain any riparian corridors, wetlands and their buffers, submerged lands and areas within the shoreline setback, or designated non-disturbance area in steep slopes, applicants may choose the density limits in subsection 23.45.512.B or develop the lot with the number of principal and accessory dwelling units as follows:

a. Determine the number of dwelling units that would be allowed under subsection 23.45.512.C.1 if no environmentally critical areas were located on the lot:

1 b. Determine the percentage of the lot that is not covered by riparian
2 corridors, wetlands and their buffers, submerged lands and areas within the shoreline setback, or
3 designated non-disturbance area in steep slopes;

4 c. Calculate the number of permitted dwelling units by multiplying the
5 number of units determined in subsection 23.45.512.C.2.a by the percentage of the lot calculated
6 in subsection 23.45.512.C.2.b.

7 ~~((F-))~~ D. Adding units to existing structures

8 1. One additional principal dwelling unit may be added to an existing residential
9 structure regardless of the density restrictions in subsection 23.45.512.B or 23.45.512.C ~~((and~~
10 ~~the requirements in subsection 23.45.512.B))~~. An additional principal dwelling unit is allowed
11 only if the proposed additional unit is to be located entirely within an existing structure, and no
12 additional floor area to accommodate the new unit is proposed to be added to the existing
13 structure.

14 2. For the purposes of this subsection ~~((23.45.512.F))~~ 23.45.512.D, “existing
15 residential structures” are those that were established under permit as of October 31, 2001, or
16 for which a permit has been granted and the permit has not expired as of October 31, 2001.

17 E. Measurement of minimum lot size and maximum density

18 1. When density calculations result in a fraction of a unit, any fraction up to and
19 including 0.85 constitutes zero additional units, and any fraction over 0.85 constitutes one
20 additional unit.

21 2. If dedication of right-of-way is required, permitted density shall be calculated
22 before the dedication is made.

1 3. In the case of a development within a unit lot subdivision, the density limit
2 shall be applied to the parent lot as a whole.

3 4. When calculating maximum density, the number of dwelling units shall
4 include accessory dwelling units and principal dwelling units.

5 F. For the purpose of this Section 23.45.512, “designated non-disturbance area in steep
6 slopes” shall include all portions of steep slope hazard areas except the following:

7 1. Areas that are granted relief from the prohibition of development according to
8 Section 25.09.090;

9 2. Areas where development is allowed under a small project waiver according to
10 Section 25.09.090;

11 3. Areas where development is allowed under an administrative conditional use
12 according to Section 25.09.260; and

13 4. Areas where intrusion into the steep slope erosion hazard area and buffer is
14 allowed by steep slope erosion hazard area variance according to Section 25.09.290.

15 G. Exception to Density Limits. Dwelling unit(s) located in structures built prior to
16 January 1, 1982 that will remain in residential use are exempt from the density limit described in
17 subsections 23.45.512.B and 23.45.512.C.

18 H. The minimum lot size for lots created through a subdivision process is the lot size
19 necessary to allow a density of one principal dwelling unit.

20 Section 19. Section 23.45.514 of the Seattle Municipal Code, last amended by the
21 ordinance introduced as Council Bill 120949, is amended as follows:

23.45.514 Structure height

A. Subject to the additions and exceptions allowed as set forth in this Section 23.45.514, the height limits for structures in LR zones are as shown on Table A for 23.45.514.

Table A for 23.45.514
Structure height for LR zones (in feet)

Housing type	LR1	LR2	LR3 outside urban centers, urban villages, and Station Area Overlay Districts	LR3 in urban centers, urban villages, and Station Area Overlay Districts
Cottage housing developments	22	22	22	22
Rowhouse and townhouse developments	((30)) <u>32</u>	40 ¹	40 ¹	50 ¹
Apartments	((30)) <u>32</u>	40 ¹	40 ¹	50 ²

Footnotes for Table A for 23.45.514

¹ Except that the height limit is ~~((30))~~ 32 feet in zones without a mandatory housing affordability suffix.

² Except that the height limit is 40 feet in zones without a mandatory housing affordability suffix.

* * *

Section 20. Section 23.45.518 of the Seattle Municipal Code, last amended by Ordinance 126685, is amended as follows:

23.45.518 Setbacks (~~(and separations)~~)

A. LR zones

1. Required setbacks for the LR zones are as shown in Table A for 23.45.518 and subsection 23.45.518.A.2.

**((Table A for 23.45.518
Required setbacks in LR zones measured in feet**

All LR zones		Category of residential use		
Setback	Cottage housing developments and single-family dwelling units	Rowhouse developments	Townhouse developments	Apartments
Front	7 average; 5 minimum	5 minimum	7 average; 5 minimum	5 minimum
Rear	0 with alley; 7 if no alley	0 with alley; With no alley: 7 average; 5 minimum	7 average; 5 minimum	10 minimum with alley; 15 minimum if no alley
Side setback for facades 40 feet or less in length ¹	5	0 where abutting another rowhouse development ² ; otherwise 3.5; except that on side lot lines that abut a neighborhood residential zone, the setback is 5	5	5
Side setback for facades greater than 40 feet in length ³	5 minimum	0 where abutting another rowhouse development ² ; otherwise 3.5; except that on side lot lines that abut a neighborhood residential zone, the setback is 7 average; 5 minimum	7 average; 5 minimum	7 average; 5 minimum

Footnotes to Table A for 23.45.518

¹ Additions to existing nonconforming structures built prior to April 11, 2011, shall be set back a sufficient distance so that the addition complies with setback standards. For any portion of a structure built before April 11, 2011, the average setback applies only to a new addition built

**~~((Table A for 23.45.518
Required setbacks in LR zones measured in feet~~**

All LR zones	Category of residential use
---------------------	------------------------------------

~~after that date. If an addition is to a side wall extended vertically, the existing side wall line may be continued by the addition, provided that the average setback of 7 feet or the 5-foot minimum setback is met.~~

~~²If the side facades of rowhouse developments on abutting lots are not joined, then a 3.5-foot setback is required, except the side setback may be reduced to zero if the abutting lot contains a rowhouse development and an easement is provided along the shared lot line of the abutting lot sufficient to leave a 3.5-foot separation between the principal structures of the abutting rowhouse developments.~~

~~³Portions of structures that qualify for the FAR exemption in subsection 23.45.510.D.5 are not considered part of the facade length for the purposes of determining the side setback requirement.))~~

**Table A for 23.45.518
Required setbacks in LR zones**

<u>Front</u>	<u>7 feet average, 5 feet minimum</u>
<u>Rear</u>	<u>If rear lot line abuts an alley, 0 feet</u> <u>Otherwise, 7 feet average, 5 feet minimum</u>
<u>Side</u>	<u>5 feet</u>

2. Upper-level setbacks in LR2 and LR3 zones

a. An upper-level setback of 12 feet from the front lot line is required for all portions of a structure above the following height:

1) Forty-four feet for zones with a height limit of 40 feet; and

2) Fifty-four feet for zones with a height limit of 50 feet.

b. An upper-level setback of 12 feet from each side or rear lot line that abuts a lot zoned ~~((single-family))~~ neighborhood residential is required for all portions of the structure above 34 feet in height.

c. Projections allowed in subsection 23.45.518.H are allowed in upper-level setbacks.

d. Structures allowed in subsection 23.45.518.I are not allowed in upper-level setbacks.

e. Rooftop features are not allowed in upper-level setback except as follows:

1) A pitched roof, other than a shed roof or butterfly roof, is allowed in the upper-level setback if all parts of the roof are pitched at a rate of not less than 6:12 and not more than 12:12.

2) Open railings may extend up to 4 feet above the height at which the setback begins.

3) Parapets may extend up to 2 feet above the height at which the setback begins.

* * *

F. Separations between multiple structures

1. In LR and MR zones, the minimum required separation between principal structures at any two points on different interior facades is 10 feet, except for cottage housing developments, and principal structures separated by a driveway or parking aisle.

2. In LR and MR zones, if principal structures are separated by a driveway or parking aisle, the minimum required separation between the principal structures is 2 feet greater than the required width of the driveway or parking aisle, provided that the separation is not required to be any greater than 24 feet. If principal structures are separated by a driveway

or parking aisle, projections that enclose floor area may extend a maximum of 3 feet into the required separation if they are at least 8 feet above finished grade.

~~((3. Cottage housing developments in LR and MR zones:~~

~~a. The minimum required separation between principal structures at any two points on different interior facades is 6 feet, unless there is a principal entrance on an interior facade, in which case the minimum separation required from that facade is 10 feet.~~

~~b. Facades of principal structures shall be separated from facades of accessory structures by a minimum of 3 feet.))~~

* * *

J. Exceptions for existing ~~((single family))~~ structures

1. In all multifamily zones, certain additions to a ~~((single family dwelling unit))~~ residential structure may extend into a required side setback if the structure is already nonconforming with respect to that setback, and if the presently nonconforming section is at least 60 percent of the total width of the respective facade of the structure prior to the addition. The line formed by the nonconforming wall of the structure shall be the limit to which any additions may be built, which may extend up to the height limit and may include basement additions (Exhibit D for 23.45.518), provided that additions shall be at least 3 feet from the side lot line.

2. An existing single-family dwelling unit in a LR zone may be converted to a multifamily use without conforming to setback standards ~~((for apartments))~~ in subsection 23.45.518.A, provided that the building envelope is not changed. For the purposes of this subsection 23.45.518.J.2, “existing single-family dwelling unit” is one that was established

under permit as of October 31, 2001, or for which a permit has been granted and the permit has not expired on October 31, 2001.

* * *

Section 21. Section 23.45.522 of the Seattle Municipal Code, last amended by Ordinance 126157, is amended as follows:

23.45.522 Amenity area

A. Amount of amenity area (~~required for rowhouse and townhouse developments and apartments in LR zones~~))

1. The required amount of amenity area (~~for rowhouse and townhouse developments and apartments~~)) in LR zones is equal to 25 percent of the lot area.

~~((2. A minimum of 50 percent of the required amenity area shall be provided at ground level, except that amenity area provided on the roof of a structure that meets the provisions of subsection 23.45.510.D.5 may be counted as amenity area provided at ground level.~~

~~3. For rowhouse and townhouse developments, amenity area required at ground level may be provided as either private or common space.~~

~~4. For apartments, amenity area required at ground level shall be provided as common space.))~~

2. In LR zones, a minimum of 50 percent of the required amenity area shall be provided at ground level or within 4 feet of existing grade.

~~((B. Amenity area requirements for cottage housing developments in all multi-family zones~~

~~1. A minimum of 300 square feet of amenity area is required for each cottage.~~

~~2. A minimum of 150 square feet of amenity area is required for each carriage house.~~

~~3. The required quantity shall be allocated as follows:~~

~~a. Half of the amenity area required for each cottage, and all of the amenity area required for each carriage house, shall be provided as common amenity area; and~~

~~b. Half of the amenity area required for each cottage shall be provided as private amenity area for that unit.~~

~~4. The required common amenity area may be divided into no more than two separate areas and shall:~~

~~a. have cottages or carriage houses abutting on at least two sides;~~

~~b. be in a location central to the cottage housing development; and~~

~~c. have no horizontal dimension of less than 10 feet.~~

~~5. Carriage houses shall have stairs that provide access to the common amenity area.~~

~~C. Amount of amenity area required in MR and HR zones.)) The required amount of amenity area in MR and HR zones is equal to ((5)) five percent of the total gross floor area of a residential structure ((in residential use, except that cottage housing developments shall meet the standards in subsection 23.45.522.B.~~

~~D.)) B.~~ General requirements. Required amenity areas shall meet the following conditions:

1. All units shall have access to a common or private amenity area.

2. Enclosed amenity areas

a. In LR zones, an amenity area shall not be enclosed within a structure.

b. In MR and HR zones, ~~((except for cottage housing,))~~ no more than 50 percent of the amenity area may be enclosed, and this enclosed area shall be provided as common amenity area.

3. Projections into amenity areas. Structural projections that do not provide floor area, such as garden windows, may extend up to 2 feet into an amenity area if they are at least 8 feet above finished grade.

4. Private amenity areas

a. There is no minimum dimension for private amenity areas, except that if a private amenity area is located between the structure and a side lot line that is not a side street lot line, the minimum horizontal dimension shall be measured from the side lot line and is required to be a minimum of 10 feet.

b. An unenclosed porch that is a minimum of 60 square feet in size and that faces a street or a common amenity area may be counted as part of the private amenity area for the ~~((rowhouse, townhouse, or cottage))~~ residential structure to which it is attached.

5. Common amenity areas ~~((for rowhouse and townhouse developments and apartments))~~ shall meet the following conditions:

a. No common amenity area shall be less than 250 square feet in area, and common amenity areas shall have a minimum horizontal dimension of 10 feet.

b. Common amenity areas shall be improved as follows:

1) At least 50 percent of a common amenity area provided at ground level shall be landscaped with grass, ground cover, bushes, bioretention facilities, and/or trees.

2) Elements that enhance the usability and livability of the space for residents, such as seating, outdoor lighting, weather protection, art, or other similar features, shall be provided.

c. The common amenity area (~~(required)~~) at ground level (~~(for apartments)~~) shall be accessible to all (~~(apartment)~~) dwelling units.

6. Parking areas, vehicular access easements, and driveways do not qualify as amenity areas, except that a woonerf may provide a maximum of 50 percent of the amenity area if the design of the woonerf is approved through a design review process pursuant to Chapter 23.41.

7. Swimming pools, spas, and hot tubs may be counted toward meeting the amenity area requirement.

8. Rooftop areas excluded because they are near minor communication utilities and accessory communication devices, pursuant to subsection 23.57.011.C.1, do not qualify as amenity areas.

~~((E-))~~ C. No amenity area is required for ~~((a))~~ one dwelling unit added to a ~~((single-family dwelling unit))~~ residential structure existing as of January 1, 1982, ~~((or for one new dwelling unit added to a multifamily residential use existing as of October 10, 2001))~~ provided that no dwelling units have been added since that date.

Section 22. Section 23.45.527 of the Seattle Municipal Code, last amended by Ordinance 126509, is amended as follows:

23.45.527 Structure width and façade length limits in LR zones

A. Structure width in LR zones may not exceed ~~((the width indicated on Table A for 23.45.527))~~ 90 feet in LR1 and LR2 zones and 150 feet in LR3 zones.

~~((Table A for 23.45.527: Maximum Structure Width in LR zones in feet~~

Zone	Width in feet by Category of Residential Use		
	Cottage Housing and Rowhouse Developments	Townhouse Developments	Apartments
LR1	No limit	60	45
LR2	No limit	90	90
LR3 outside Urban Villages, Urban Centers or Station Area Overlay Districts	No limit	120	120
LR3 inside Urban Villages, Urban Centers or Station Area Overlay Districts	No limit	150	150))

B. Maximum façade length in Lowrise zones. ~~((1-))~~ The maximum combined length of all portions of façades within 15 feet of a lot line that is neither a rear lot line nor a street or alley lot line shall not exceed 65 percent of the length of that lot line~~((, except as specified in subsection 23.45.527.B.2.~~

~~2. For a rowhouse development on a lot that abuts the side lot line of a lot in a neighborhood residential zone, the maximum combined length of all portions of façades within 15 feet of the abutting side lot line is 40 feet)).~~

Section 23. Section 23.45.529 of the Seattle Municipal Code, last amended by Ordinance 127099, is amended as follows:

23.45.529 Design standards

A. Intent. The intent of the design standards in this Section 23.45.529 is to:

1. Enhance street-facing and side facades to provide visual interest, promote new development that contributes to an attractive streetscape, and avoid the appearance of blank walls along a street or adjacent residential property;

2. Foster a sense of community by integrating new pedestrian-oriented multifamily development with the neighborhood street environment and promoting designs that allow easy surveillance of the street by area residents;

3. Promote livability in multifamily areas by providing a sense of openness and access to light and air; and

4. Encourage the compatibility of a variety of housing types with the scale and character of neighborhoods where new multifamily development occurs.

B. Application of provisions. The provisions of this Section 23.45.529 apply to all residential uses that do not undergo any type of design review pursuant to Chapter 23.41(~~(except single family dwelling units)~~)).

C. Treatment of street-facing facades. For the purposes of this subsection 23.45.529.C, a street-facing facade includes all vertical surfaces enclosing interior space, including gables and dormers, as shown in Exhibit A for 23.45.529.

Exhibit A for 23.45.529

Measurement of facades

~~((1-))~~ D. Facade openings

~~((a-))~~ 1. At least 20 percent of the area of each street-facing facade shall consist of windows and/or doors, except as provided in subsection ~~((23.45.529.C.1.b))~~ 23.45.529.D.2.

If a front and side facade are street-facing, the two facades may be combined for the purpose of this calculation.

~~((b-))~~ 2. For any rowhouse or townhouse dwelling unit that has both a front and a side facade that are street-facing, the percentage of the side street-facing facade required to consist of windows and/or doors is reduced to ten percent for the portion of the facade

1 associated with that dwelling unit. This reduction to ten percent is not allowed if the facades
2 are combined for the purpose of this standard pursuant to subsection ((~~23.45.529.C.1.a~~))
3 23.45.529.D.1 ((~~or if any of the exceptions in subsection 23.45.529.C.3 are applied~~)).

4 ((~~e~~)) 3. Windows count toward the requirement for facade openings in this
5 subsection ((~~23.45.529.C.1~~)) 23.45.529.D only if they are transparent. Windows composed of
6 glass blocks or opaque glass, garage doors, and doors to utility and service areas do not count.

7 ((~~2. Facade articulation~~

8 a. ~~If a street-facing facade or portion of a street-facing facade is not~~
9 ~~vertical, the Director shall determine whether the facade is substantially vertical and required~~
10 ~~to comply with this subsection 23.45.529.C.~~

11 b. ~~If the street-facing facade of a structure exceeds 750 square feet in~~
12 ~~area, division of the facade into separate facade planes is required (see Exhibit B for~~
13 ~~23.45.529).~~

14 c. ~~In order to be considered a separate facade plane for the purposes of~~
15 ~~this subsection 23.45.529.C.2, a portion of the street-facing facade shall have a minimum area~~
16 ~~of 150 square feet and a maximum area of 500 square feet, and shall project or be recessed~~
17 ~~from abutting facade planes by a minimum depth of 18 inches.~~

18 d. ~~Trim that is a minimum of 0.75 inches deep and 3.5 inches wide is~~
19 ~~required to mark roof lines, porches, windows, and doors on all street-facing facades.~~

~~Exhibit B for 23.45.529~~

~~Street-facing facades~~

~~3. The Director may allow exceptions to the facade opening requirements in subsection 23.45.529.C.1 and the facade articulation requirements in subsection 23.45.529.C.2, if the Director determines that the street-facing facade will meet the intent of subsection 23.45.529.A.1 for all housing types, and, as applicable, the intent of subsections 23.45.529.E.2, 23.45.529.F.3, and 23.45.529.G.4 for cottage housing developments, rowhouse developments, and townhouse developments, respectively, through one or more of the following street-facing facade treatments:~~

~~a. Variations in building materials and/or color, or both, that reflect the stacking of stories or reinforce the articulation of the facade;~~

~~b. Incorporation of architectural features that add interest and dimension to the facade, such as porches, bay windows, chimneys, pilasters, columns, cornices, and/or balconies;~~

~~c. Special landscaping elements provided to meet Green Factor requirements pursuant to Section 23.45.524, such as trellises, that accommodate vegetated walls covering a minimum of 25 percent of the facade surface;~~

~~d. Special fenestration treatment, including an increase in the percentage of windows and doors to at least 25 percent of the street-facing facade(s).))~~

~~((D-))~~ E. Treatment of side facades that are not street-facing. For the purposes of this subsection 23.45.529.D, a side facade that is not street-facing includes all vertical surfaces enclosing interior space, including gables and dormers, as shown in Exhibit A for 23.45.529, if located within 10 feet of a side lot line. ~~((4-))~~ If the side facade of a structure that is not street-facing exceeds 1,000 square feet in area, one of the following must be met:

~~((a-))~~ 1. A portion of the side facade with a minimum area of 250 square feet and a maximum area of 750 square feet shall project or be recessed from abutting facade planes by a minimum depth of 18 inches; or

~~((b-))~~ 2. The side facade shall include vertical or horizontal variations in building materials or color, covering a minimum of 25 percent of the facade surface.

~~((2- Structures shall be designed to maintain the privacy of dwelling units by minimizing placement of proposed windows where they would directly align with windows on the side facade of a structure on an abutting lot located within 20 feet of the side property line~~

~~or by use of fencing, screening, landscaping, or translucent windows to create privacy between buildings.~~

~~E. Design standards for cottage housing developments~~

~~1. Pedestrian entry. Each cottage with a street-facing facade that is located within 10 feet of the street lot line shall have a visually prominent pedestrian entry through the use of covered stoops, porches, or other architectural entry features. For cottages on corner lots that have more than one street-facing facade within 10 feet of the street lot line, a visually prominent pedestrian entry is required on only one of the street-facing facades. Access to these entrances may be through a required private amenity area that abuts the street.~~

~~2. Architectural expression. Cottage housing developments shall include architectural details that reduce the visual scale of the units. Each cottage shall employ one or more of the following design techniques to reduce visual scale of the units:~~

- ~~a. Attached covered porch;~~
- ~~b. Roofline features such as dormers or clerestories;~~
- ~~c. Bay windows;~~
- ~~d. Variation in siding texture and materials; and~~
- ~~e. Other appropriate architectural techniques demonstrated by the applicant to reduce the visual scale of cottages.~~

~~F. Design standards for rowhouse developments~~

~~1. Pedestrian entry. Each rowhouse unit shall have a pedestrian entry on the street-facing facade that is designed to be visually prominent through the use of covered stoops, porches, or other architectural entry features. For rowhouse units on corner lots, a visually prominent pedestrian entry is required on only one of the street-facing facades.~~

1 ~~2. Front setback. Design elements to provide a transition between the street and~~
2 ~~the rowhouse units, such as landscaping, trees, fences, or other similar features, are required in~~
3 ~~the front setback.~~

4 ~~3. Architectural expression. The street-facing facade of a rowhouse unit shall~~
5 ~~provide architectural detail or composition to visually identify each individual rowhouse unit~~
6 ~~as seen from the street. Design elements such as trim or molding, modulation, massing, color~~
7 ~~and material variation, or other similar features may be used to achieve visual identification of~~
8 ~~individual units. Rooftop features, such as dormers or clerestories, or roofline variation may be~~
9 ~~used to visually identify individual rowhouse units.~~

10 ~~G. Design standards for townhouse developments~~

11 ~~1. Building orientation. Townhouse developments shall maximize the~~
12 ~~orientation of individual units to the street by complying with one of the following conditions:~~

13 ~~a. When multiple buildings are located on a lot, at least 50 percent of the~~
14 ~~townhouse units shall be located so that there is no intervening principal structure between the~~
15 ~~unit and the street, unless the intervening principal structure was established under permit as of~~
16 ~~October 31, 2001, or was granted a permit on October 31, 2001, and the permit has not~~
17 ~~expired; or~~

18 ~~b. All townhouse units without a street-facing facade shall have direct~~
19 ~~access to a common amenity area meeting the requirements of Section 23.45.522 that either~~
20 ~~abuts the street or is visible and accessible from the street by a clear pedestrian pathway.~~

21 ~~2. Pedestrian pathway. A clear pedestrian pathway from the street to the~~
22 ~~entrance of each townhouse unit shall be provided. The pedestrian pathway may be part of a~~
23 ~~driveway, provided that the pathway is differentiated from the driveway by pavement color,~~

~~texture, or similar technique. Signage identifying townhouse unit addresses and the directions to the unit entrance(s) from the street shall be provided.~~

~~3. Pedestrian entry. Each townhouse unit with a street-facing facade shall have a pedestrian entry on the street-facing facade that is designed to be a visually prominent feature through the use of covered stoops, porches, or other architectural entry features. For townhouse units on corner lots, a visually prominent pedestrian entry is required on only one of the street-facing facades.~~

~~4. Architectural expression. Architectural detail or composition shall be provided to visually identify each individual townhouse unit, as seen from the public street. Design elements such as trim or molding, modulation, massing, color and material variation, or other similar features may be used to achieve visual identification of individual units. Rooftop features, such as dormers or clerestories, or roofline variation may be used to visually identify individual townhouse units.~~

~~H. Building entry orientation standards for apartments~~

~~1. For each apartment structure, a principal shared pedestrian entrance is required that faces either a street or a common amenity area, such as a landscaped courtyard, that abuts and has direct access to the street. Additional pedestrian entrances to individual units are permitted.~~

~~2. If more than one apartment structure is located on a lot, each apartment structure separated from the street by another principal structure shall have a principal entrance that is accessible from a common amenity area with access to the street.~~

1 3. ~~The shared entrance of each apartment structure shall have a pedestrian entry~~
2 ~~that is designed to be visually prominent, through the use of covered stoops, overhead weather~~
3 ~~protection, a recessed entry, or other architectural entry features.))~~

4 F. Pedestrian access. Each dwelling unit shall have pedestrian access at least 3 feet in
5 width to the sidewalk or, if no sidewalk exists, the front lot line. This pedestrian access may be
6 shared or private. This pedestrian access may cross any required setbacks or interior separation.
7 The pedestrian access may be part of a driveway.

8 G. Entrances. Each structure with a street-facing facade shall have a pedestrian entry on
9 that street-facing facade meeting the following:

10 1. For apartments, at least one pedestrian entry shall be required for the structure
11 as a whole.

12 2. For single-family dwelling units, cottage housing, rowhouses, and townhouses,
13 each individual dwelling unit with a street-facing facade within 40 feet of the street lot line shall
14 have at least one pedestrian entry on the street-facing facade.

15 3. For structures or dwelling units on corner lots, a pedestrian entry is required
16 on only one of the street-facing facades.

17 4. Required pedestrian entry on street-facing facades shall have weather
18 protection, such as a covered porch, canopy, recessed entry or similar feature, measuring at least
19 3 feet by 3 feet in width and depth for attached and detached dwelling units and at least 6 feet in
20 width and 4 feet in depth for stacked dwelling units.

21 5. For attached and detached dwelling units, the pedestrian entry may be located
22 on a wall perpendicular to the street-facing facade provided that the pedestrian entry abuts a
23 covered porch or recessed entry that is a portion of the street-facing facade.

Section 24. Section 23.53.006 of the Seattle Municipal Code, last amended by Ordinance 127099, is amended as follows:

23.53.006 Pedestrian access and circulation

* * *

F. Exceptions. The following exceptions to pedestrian access and circulation requirements and standards apply:

1. Projects exempt from requirements. Pedestrian access and circulation improvements are not required for the following types of projects:

- a. Change of use;
- b. Alterations to existing structures;
- c. Additions to existing structures that are exempt from environmental review;
- d. Construction of a detached structure accessory to ~~((a single family))~~ an existing dwelling unit in any zone, if the property owner enters into a no-protest agreement, as authorized by chapter 35.43 RCW, to future pedestrian access and circulation improvements and that agreement is recorded with the King County ~~((Recorder))~~ Recorder's Office;

e. Construction of ~~((a single family))~~ one dwelling unit on a lot in any zone, if the property owner enters into a no-protest agreement, as authorized by chapter 35.43 RCW, to future pedestrian access and circulation improvements and that agreement is recorded with the King County ~~((Recorder))~~ Recorder's Office, and if at least one of the following conditions is met:

- 1) The lot is on a block front where there are no existing pedestrian access and circulation improvements within 100 feet of the lot; or

2) Construction of pedestrian access and circulation

improvements is not necessary because, for example, the existing right-of-way has suitable width and surface treatment for pedestrian use; or the existing right-of-way has a limited amount of existing and potential vehicular traffic; or the Director anticipates limited, if any, additional development near the lot because the development near the lot is at or near zoned capacity under current zoning designations;

f. Expansions of surface parking, outdoor storage, outdoor sales and outdoor display of rental equipment of less than 20 percent of the parking, storage, sales or display area, or number of parking spaces;

g. In the MML zone, the addition of:

1) Fewer than ten artist's studio dwellings;

2) Less than 750 square feet of gross floor area of major and minor vehicle repair uses and multipurpose retail sales; ~~((and))~~ or

3) Less than 4,000 square feet of gross floor area of ~~((non-residential))~~ nonresidential uses not listed in subsection 23.53.006.F.1.g.2; and

h. Construction of a new ~~((non-residential))~~ nonresidential structure of up to 4,000 square feet of gross floor area if the structure is at least 50 feet from any lot line abutting an existing street that does not have pedestrian access and circulation improvements.

2. Waiver or modification of pedestrian access and circulation requirements.

The Director, in consultation with the Director of Transportation, may waive or modify pedestrian access and circulation requirements when one or more of the following conditions are met. The waiver or modification shall provide the minimum relief necessary to accommodate site conditions while maximizing pedestrian access and circulation.

1 a. Location in an environmentally critical area or buffer makes
2 installation of a sidewalk, curb, and/or curb ramp structurally impracticable or technically
3 infeasible;

4 b. The existence of a bridge, viaduct, or structure such as a substantial
5 retaining wall in proximity to the project site makes installation of a sidewalk, curb, and/or
6 curb ramp structurally impracticable or technically infeasible;

7 c. Sidewalk, curb, and/or curb ramp construction would result in
8 undesirable disruption of existing drainage patterns, or disturbance to or removal of natural
9 features such as significant trees or other valuable and character-defining mature vegetation; or

10 d. Sidewalk, curb, and/or curb ramp construction would preclude
11 vehicular access to the lot, for example on project sites where topography would render
12 driveway access in excess of the maximum 15 percent slope.

13 3. Notwithstanding any provision of Section 23.76.026, the applicant for a
14 Master Use Permit or a building permit to which ~~((the Land Use Code))~~ Title 23 in effect prior
15 to October 30, 2009, applies may, by written election, use the exemptions in subsections
16 23.53.006.F.1 and 23.53.006.F.2.

17 Section 25. Section 23.53.025 of the Seattle Municipal Code, last amended by Ordinance
18 126682, is amended as follows:

19 **23.53.025 Access easement standards**

20 If access by easement has been approved by the Director, the easement shall meet the
21 following standards. Surfacing of easements, pedestrian walkways required within easements,
22 and turnaround dimensions shall meet the requirements of the Right-of-Way Improvements
23 Manual.

1 A. Vehicle access easements serving one or two (~~((single-family))~~) dwelling units (~~((or~~
2 ~~one multifamily residential use with a maximum of two units))~~) shall meet the following
3 standards:

4 1. Easement width shall be a minimum of 10 feet.

5 2. No maximum easement length shall be set. If easement length is more than
6 150 feet, a vehicle turnaround shall be provided.

7 3. (~~((Curbcut))~~) Curb cut width from the easement to the street shall be the
8 minimum necessary for safety and access.

9 B. Vehicle access easements serving at least three but fewer than (~~((five single-family))~~)
10 ten dwelling units shall meet the following standards:

11 1. Easement width shall be a minimum of 10 feet.

12 2. The easement shall provide a hard-surfaced roadway at least 10 feet wide.

13 3. No maximum easement length shall be set. If the easement is over 600 feet
14 long, a fire hydrant may be required by the Director.

15 4. A turnaround shall be provided unless the easement extends from street to
16 street.

17 5. (~~((Curbcut))~~) Curb cut width from the easement to the street shall be the
18 minimum necessary for safety and access.

19 C. (~~((Vehicle access easements serving at least five but fewer than ten single-family~~
20 ~~dwelling units, or at least three but fewer than ten multifamily dwelling units~~

21 1. ~~Easement width, surfaced width, length, turn-around, and curbcut width shall~~
22 ~~be as required in subsection 23.53.025-B.~~

2. ~~No single-family structure shall be closer than 5 feet to the easement, except that structural features allowed to extend into required yards under subsection 23.44.014.C.6 are also allowed to extend into the 5-foot setback from an easement.~~

~~D-)) Vehicle ((Access Easements Serving Ten))~~ access easements serving ten or more ((Residential Units-)) dwelling units shall meet the following standards:

1. Easement width shall be a minimum of 32 feet;
2. The easement shall provide a surfaced roadway at least 24 feet wide, except in the MPC-YT zone, where the minimum surfaced roadway width is 20 feet;
3. No maximum length shall be set. If the easement is over 600 feet long, a fire hydrant may be required by the Director;
4. A turnaround shall be provided unless the easement extends from street to street;
5. ~~((Curb cut))~~ Curb cut width from the easement to the street shall be the minimum necessary for safety access;
6. No ~~((single-family structure))~~ detached dwelling unit shall be located closer than ~~((10))~~ 5 feet to an easement, except that architectural features such as cornices, eaves, gutters, roofs, fireplaces, chimneys, and other similar features shall not be located closer than 3 feet to a required easement;
7. One pedestrian walkway shall be provided, extending the length of the easement.

~~((E- Vehicle Access Easements Serving Nonresidential or Live-work Uses-~~

~~4-))~~ D. For nonresidential or live-work uses providing fewer than ten ~~((10))~~ parking spaces, the easement shall meet the requirements of subsection ~~((E))~~ 23.53.025.B.

1 ((2)) E. For nonresidential or live-work uses providing ten ~~((10))~~ or more parking
2 spaces, the easement shall meet the requirements of subsection ~~((D))~~ 23.53.025.C.

3 F. Pedestrian ~~((Access Easements))~~ access easements. Where a lot proposed for a
4 residential use abuts an alley but does not abut a street and the provisions of the zone require
5 access by vehicles from the alley, or where the alley access is an exercised option, an easement
6 providing pedestrian access to a street from the lot shall be provided meeting the following
7 standards:

8 1. Easement width shall be a minimum of ~~((five-))~~ 5 ~~(())~~ feet;

9 2. Easements serving one ~~((1))~~ or two ~~((2))~~ dwelling units shall provide a
10 paved pedestrian walkway at least ~~((three-))~~ 3 ~~(())~~ feet wide;

11 3. Easements serving three ~~((3))~~ or more dwelling units shall provide a paved
12 pedestrian walkway at least ~~((five-))~~ 5 ~~(())~~ feet wide;

13 4. Easements over ~~((one hundred-))~~ 100 ~~(())~~ feet in length shall provide
14 lighting at intervals not to exceed ~~((fifty-))~~ 50 ~~(())~~ feet. Lighting placement shall not exceed
15 ~~((fifteen-))~~ 15 ~~(())~~ feet in height;

16 5. Pedestrian access easements shall not exceed ~~((two hundred-))~~ 200 ~~(())~~ feet
17 in length.

18 G. Vertical ~~((Clearance Above Easements))~~ clearance above easements. When an
19 easement serves fewer than ten ~~((10))~~ residential units and crosses a residentially zoned lot,
20 portions of structures may be built over the easement provided that a minimum vertical
21 clearance of ~~((sixteen and one-half (16 1/2))~~ 16.5 feet is maintained above the surface of the
22 easement roadway and a minimum turning path radius in accordance with ~~((Section 23.54.030~~
23 ~~E))~~ subsection 23.54.030.D is maintained. ~~((See))~~ Exhibit ~~((23.53.025 A))~~ A for 23.53.025.)

H. Exceptions ((~~From Access Easement Standards~~)) from access easement standards.

The Director, in consultation with the Fire Chief, may modify the requirements for easement width and surfacing for properties located in environmentally critical areas or their buffers when it is determined that:

1. Such modification(s) would reduce adverse effects to identified environmentally critical areas or buffers; and

2. Adequate access and provisions for fire protection can be provided for structures served by the easement.

Exhibit A for 23.53.025

Residential structures permitted to be constructed over vehicle access easement

**Exhibit 23.53.025 A
Residential Structures Permitted to be
Constructed Over Vehicle Access Easement**

Section 26. Section 23.54.015 of the Seattle Municipal Code, last amended by Ordinance 127099, is amended as follows:

23.54.015 Required parking and maximum parking limits

* * *

Table B for 23.54.015
Required parking for residential uses

Use		Minimum parking required
I. General residential uses ²		
A.	Adult family homes	1 space for each dwelling unit
B.	Artist's studio/dwellings	1 space for each dwelling unit ₂
C.	Assisted living facilities	1 space for each 4 assisted living units; plus 1 space for each 2 staff members on-site at peak staffing time; plus 1 barrier-free passenger loading and unloading space
D.	Caretaker's quarters	1 space for each dwelling unit
E.	Congregate residences ¹	1 space for each 4 sleeping rooms
F.	Cottage housing developments ^{1, 3, 4}	1 space for each dwelling unit
G.	Floating homes	1 space for each dwelling unit
H.	Mobile home parks	1 space for each mobile home lot as defined in Chapter 22.904
I.	Multifamily residential uses ((, except as otherwise provided in this Table B for 23.54.015)) ^{1, ((2)) 3, 4}	1 space per dwelling unit, or 1 space for each 2 small efficiency dwelling units
J.	Nursing homes	1 space for each 2 staff doctors; plus 1 additional space for each 3 employees; plus 1 space for each 6 beds
K.	Single-family dwelling units ^{1, 3, 4}	1 space for each dwelling unit

Table B for 23.54.015
Required parking for residential uses

Use	Minimum parking required
II. Residential use requirements for specific areas ²	
L.	All residential uses within urban centers or within the Station Area Overlay District ⁽⁽²⁾⁾ No minimum requirement
M.	All residential uses in commercial, RSL, and multifamily zones within urban villages that are not within urban center or the Station Area Overlay District, if the residential use is located within a frequent transit service area ⁽⁽²⁻⁴⁾⁾ No minimum requirement
N.	Multifamily residential uses within the University of Washington parking impact area shown on Map A for 23.54.015 ⁽⁽²⁾⁾ 1 space per dwelling unit for dwelling units with fewer than 2 bedrooms; plus 1.5 spaces per dwelling units with 2 or more bedrooms; plus 0.25 spaces per bedroom for dwelling units with 3 or more bedrooms
O.	Multifamily dwelling units, within the Alki area shown on Map B for 23.54.015 ⁽⁽²⁾⁾ 1.5 spaces for each dwelling unit
P.	Congregate residences located within one-half mile walking distance of a major transit stop <u>or a frequent transit stop</u> No minimum requirement
Q.	<u>Middle housing, as defined in Section 23.84A.025, located within one-half mile walking distance of a major transit stop</u> <u>No minimum requirement</u>
<p>Footnotes to Table B for 23.54.015</p> <p>¹ For each moderate-income unit and each low-income unit, no minimum amount of parking is required.</p> <p>² The minimum amount of parking prescribed by Part I of Table B for 23.54.015 does not</p>	

Table B for 23.54.015
Required parking for residential uses

Use	Minimum parking required
<p>apply if a use, structure, or development qualifies for a greater or a lesser amount of minimum parking, including no parking, under any other provision of this Section 23.54.015. If more than one provision in this Table B for 23.54.015 is applicable, the provision requiring the least amount of minimum parking applies((, except that if item O in Part II of Table B for 23.54.015 applies, it shall supersede any other requirement in Part I or Part II of this Table B for 23.54.015)).</p> <p>³ No parking is required for ((single-family residential uses)) <u>accessory dwelling units.</u></p> <p>⁴ <u>No parking is required for principal dwelling units</u> on lots in any residential zone that are less than 3,000 square feet in size or less than 30 feet in width where access to parking is permitted through a required yard or setback abutting a street according to the standards of subsections 23.44.016.B.2, 23.45.536.C.2, or 23.45.536.C.3.</p> <p>((⁴ Except as provided in Footnote 4, the minimum amounts of parking prescribed by Part I of Table B for 23.54.015 apply within 1,320 feet of the Fauntleroy Ferry Terminal.))</p>

	Long-term	Short-term
<p>decision, the Director shall have the discretion to reduce the amount of required bicycle parking to as few as zero if it can be demonstrated that residents are less likely to travel by bicycle.</p> <p>⁵ In low-income housing, there is no minimum required long-term bicycle parking requirement for each unit subject to affordability limits no higher than 30 percent of median income and long-term bicycle parking requirements may be waived by the Director as a Type I decision for each unit subject to affordability limits greater than 30 percent of median income and no higher than 80 percent of median income if a reasonable alternative is provided (e.g., in-unit vertical bike storage).</p> <p>⁶ No bike parking is required for middle housing as defined in Section 23.84A.025.</p> <p>^{((6)) 7} The Director, in consultation with the Director of Transportation, may require more bicycle parking spaces based on the following factors: area topography; pattern and volume of expected bicycle users; nearby residential and employment density; proximity to the Urban Trails system and other existing and planned bicycle facilities; projected transit ridership and expected access to transit by bicycle; and other relevant transportation and land use information.</p>		

Section 27. Section 23.54.020 of the Seattle Municipal Code, last amended by Ordinance 126509, is amended as follows:

23.54.020 Parking quantity exceptions

The motor vehicle parking quantity exceptions set forth in this Section 23.54.020 apply in all zones except downtown zones, which are regulated by Section 23.49.019, and Major Institution zones, which are regulated by Section 23.54.016.

A. Adding ((Units)) units to ((Existing Structures)) existing structures in Multifamily and Commercial ((Zones-)) zones

1. For the purposes of this Section 23.54.020, “existing structures” means those structures that were established under permit, or for which a permit has been granted and has not expired as of the applicable date, as follows:

1 a. In multifamily zones, August 10, 1982;

2 b. In commercial zones, June 9, 1986.

3 2. In locations in a multifamily or commercial zone where there is a minimum
4 parking requirement, one dwelling unit may either be added to an existing structure or may be
5 built on a lot that contains an existing structure without additional parking if both of the
6 following requirements are met:

7 a. Either the existing parking provided on the lot meets development
8 standards, or the lot area is not increased and existing parking is screened and landscaped to
9 the greatest extent practical; and

10 b. Any additional parking shall meet all development standards for the
11 zone.

12 3. In locations in a multifamily or commercial zone where there is a minimum
13 parking requirement, the Director may authorize a reduction or waiver of the parking
14 requirement as a Type I decision when dwelling units are proposed to be added either to an
15 existing structure or on a lot that contains an existing structure, in addition to the exception
16 permitted in subsection 23.54.020.A.2, if the conditions in subsections 23.54.020.A.3.a and b
17 below are met, and either of the conditions in subsections 23.54.020.A.3.c or d below are met:

18 a. The only use of the structure will be residential; and

19 b. The lot is not located in either the University District Parking Overlay
20 Area (Map A for 23.54.015) or the Alki Area Parking Overlay (Map B for 23.54.015); and

21 c. The topography of the lot or location of existing structures makes
22 provision of an off-street parking space physically infeasible in a conforming location; or

~~d.~~ The lot is located in a residential parking zone (RPZ) and a current parking study is submitted showing a utilization rate of less than 75 percent for on-street parking within 400 feet of all lot lines.

B. Tandem ~~((Parking))~~ parking in ~~((Multifamily Structures))~~ multifamily structures.
~~((1.))~~ Off-street parking required for multifamily structures may be provided as tandem parking, as defined in Section 23.54.030. ~~((A tandem parking space counts as one and one-half parking spaces, except as provided in subsection 23.54.020.B.2 below, and must meet the minimum size requirements of subsection 23.54.030.A.~~

~~2. When a minimum of at least one parking space per dwelling unit in a multifamily structure is required, the total number of parking spaces provided, counting each tandem parking space as one space, may not be less than the total number of dwelling units.))~~
A tandem parking space counts at a rate of one space for every 20 linear feet of depth excluding required aisles.

* * *

Section 28. Section 23.54.030 of the Seattle Municipal Code, last amended by Ordinance 127099, is amended as follows:

23.54.030 Parking space and access standards

All parking spaces provided, whether required by Section 23.54.015 or not, and required barrier-free parking, shall meet the standards of this Section 23.54.030.

A. Parking space dimensions

1. “Large vehicle” means the minimum size of a large vehicle parking space shall be ~~((8-5))~~ 8 feet in width and 19 feet in length.

2. “Medium vehicle” means the minimum size of a medium vehicle parking space shall be 8 feet in width and 16 feet in length.

3. “Small vehicle” means the minimum size of a small vehicle parking space shall be 7.5 feet in width and 15 feet in length.

4. “Barrier-free parking” means a parking space meeting the following standards:

a. Parking spaces shall not be less than 8 feet in width and shall have an adjacent access aisle not less than 5 feet in width. Van-accessible parking spaces shall have an adjacent access aisle not less than 8 feet in width. Where two adjacent spaces are provided, the access aisle may be shared between the two spaces. Boundaries of access aisles shall be marked so that aisles will not be used as parking space.

b. A minimum length of 19 feet or when more than one barrier-free parking space is provided, at least one shall have a minimum length of 19 feet, and other spaces may be the lengths of small, medium, or large spaces in approximate proportion to the number of each size space provided on the lot.

5. “Tandem parking” means a parking space equal to the width and two times the length of the vehicle size standards in subsections 23.54.030.A.1, 23.54.030.A.2, and 23.54.030.A.3 for the size of the vehicle to be accommodated.

6. No wall, post, guardrail, or other obstruction, or lot line, is permitted within the area for car door opening. Columns or other structural elements may encroach into the parking space a maximum of 6 inches on a side, except in the area for car door opening 5 feet from the longitudinal centerline, or 4 feet from the transverse centerline of a parking space (see Exhibit A for 23.54.030).

7. If the parking space is next to a lot line and the parking space is parallel to the lot line, the minimum width of the space is 9 feet.

Exhibit A for 23.54.030

Encroachments ((~~Into Required Parking Space~~)) into required parking

Exhibit A for 23.54.030 Encroachments into required parking

B. Parking space requirements. The required size of parking spaces shall be determined by whether the parking is for a residential, live-work, or ~~((non-residential))~~ nonresidential use. In structures containing residential uses and also containing either ~~((non-residential))~~ nonresidential uses or live-work units, parking that is clearly set aside and reserved for residential or live-work use shall meet the standards of subsection 23.54.030.B.1. Parking for

all other uses within the structure shall meet the standards of subsection 23.54.030.B.2. All uses shall provide barrier-free accessible parking if required by the Seattle Building Code or the Seattle Residential Code.

1. Residential uses

a. When five or fewer parking spaces are provided, the minimum required size of a parking space shall be for a medium vehicle, as described in subsection 23.54.030.A.2, except as provided in subsection 23.54.030.B.1.d.

b. When more than five parking spaces are provided, a minimum of 60 percent of the parking spaces shall be striped for medium vehicles. The minimum size for a medium parking space shall also be the maximum size. Forty percent of the parking spaces may be striped for any size category in subsection 23.54.030.A, provided that when parking spaces are striped for large vehicles, the minimum required aisle width shall be as shown for medium vehicles.

c. Assisted living facilities. Parking spaces shall be provided as in subsections 23.54.030.B.1.a and 23.54.030.B.1.b, except that a minimum of two spaces shall be striped for a large vehicle.

d. ~~((Townhouse units))~~ For an individual garage serving ~~((a townhouse))~~ an individual dwelling unit, the minimum required size of a parking space shall be for a medium vehicle, as described in subsection 23.54.030.A.

2. ~~((Non-residential))~~ Nonresidential uses

a. When ten or fewer parking spaces are provided, a maximum of 25 percent of the parking spaces may be striped for small vehicles. A minimum of 75 percent of the spaces shall be striped for large vehicles.

b. When between 11 and 19 parking spaces are provided, a minimum of 25 percent of the parking spaces shall be striped for small vehicles. The minimum required size for these small parking spaces shall also be the maximum size. A maximum of 65 percent of the parking spaces may be striped for small vehicles. A minimum of 35 percent of the spaces shall be striped for large vehicles.

c. When 20 or more parking spaces are provided, a minimum of 35 percent of the parking spaces shall be striped for small vehicles. The minimum required size for small parking spaces shall also be the maximum size. A maximum of 65 percent of the parking spaces may be striped for small vehicles. A minimum of 35 percent of the spaces shall be striped for large vehicles.

d. The minimum vehicle clearance shall be at least 6 feet 9 inches on at least one floor, and there shall be at least one direct entrance that is at least 6 feet 9 inches in height for all parking garages accessory to ~~((non-residential))~~ nonresidential uses and live-work units and for all flexible-use parking garages.

3. Live-work uses. The first required parking space shall meet the parking standards for residential use. Additional required parking for a live-work use shall meet the parking standards for ~~((non-residential))~~ nonresidential use.

C. Backing ~~((Distances))~~ distances and ~~((Moving Other Vehicles.))~~ moving other vehicles

1. Adequate ingress to and egress from all parking spaces shall be provided without having to move another vehicle, except in the case of multiple spaces provided for ~~((a single family))~~ one dwelling unit ~~((or an accessory dwelling unit associated with a single-~~

1 ~~family dwelling~~)) or in the case of tandem parking authorized under ((~~Section~~)) subsection
2 23.54.020.B.

3 2. Except for lots with fewer than three parking spaces, ingress to and egress
4 from all parking spaces shall be provided without requiring backing more than 50 feet.

5 D. Driveways. Driveway requirements for residential and nonresidential uses are
6 described below. When a driveway is used for both residential and nonresidential parking, it
7 shall meet the standards for nonresidential uses described in subsection 23.54.030.D.2.

8 1. Residential uses((-))

9 a. Driveway width. Driveways less than 100 feet in length that serve 30
10 or fewer parking spaces shall be a minimum of 10 feet in width for one-way or two-way traffic.

11 b. Except for driveways serving one ((~~single-family~~)) dwelling unit,
12 driveways more than 100 feet in length that serve 30 or fewer parking spaces shall either:

13 1) ((~~be~~)) Be a minimum of 16 feet wide, tapered over a 20 foot
14 distance to a 10 foot opening at the lot line; or

15 2) ((~~be~~)) Be a minimum of 10 feet wide and provide a passing
16 area at least 20 feet wide and 20 feet long. The passing area shall begin 20 feet from the lot
17 line, with an appropriate taper to meet the 10-foot opening at the lot line. If a taper is provided
18 at the other end of the passing area, it shall have a minimum length of 20 feet.

19 c. Driveways of any length that serve more than 30 parking spaces shall
20 be at least 10 feet wide for one-way traffic and at least 20 feet wide for two-way traffic.

21 d. Driveways for two attached ((~~rowhouse or townhouse~~)) dwelling units
22 may be paired so that there is a single curb cut providing access. The maximum width of the
23 paired driveway is 18 feet.

e. Driveways with a turning radius of more than 35 degrees shall conform to the minimum turning path radius shown in Exhibit B for 23.54.030.

((Exhibit B for 23.54.030: Turning Path Radius))

Exhibit B for 23.54.030

Turning path radius

f. Vehicles may back onto a street from a parking area serving five or fewer vehicles, provided that either:

- 1) The street is not an arterial as defined in Section 11.18.010; or
- 2) For a lot with one (~~single-family~~) dwelling unit or one parking space, the Director may permit backing onto an arterial based on a safety analysis that addresses visibility, traffic volume, and other relevant issues.

g. Nonconforming driveways. The number of parking spaces served by an existing driveway that does not meet the standards of this subsection 23.54.030.D.1 shall not be increased. This prohibition may be waived by the Director after consulting with the Director of the Seattle Department of Transportation, based on a safety analysis.

2. Nonresidential (~~(Uses:)~~) uses

a. Driveway (~~(Widths:)~~) widths

1) The minimum width of driveways for (~~(one-way)~~) one-way traffic shall be 12 feet and the maximum width shall be 15 feet.

2) The minimum width of driveways for (~~(two-way)~~) two-way traffic shall be 22 feet and the maximum width shall be 25 feet.

b. Driveways shall conform to the minimum turning path radius shown in Exhibit B for 23.54.030.

c. For driveways that provide access to a solid waste management use the Director may allow both a maximum driveway width greater than the limits set in subsection 23.54.030.D.2.a and appropriate turning path radii, as determined necessary for truck maneuvering.

3. Driveway slope for all uses. No portion of a driveway, whether located on a lot or on a right-of-way, shall exceed a slope of 15 percent, except as provided in this subsection 23.54.030.D.3. The maximum 15 percent slope shall apply in relation to both the current grade of the right-of-way to which the driveway connects, and to the proposed finished grade of the right-of-way if it is different from the current grade. The ends of a driveway shall be adjusted to accommodate an appropriate crest and sag. The Director may permit a driveway slope of more than 15 percent if it is found that:

a. The topography or other special characteristic of the lot makes a 15 percent maximum driveway slope infeasible;

b. The additional amount of slope permitted is the least amount necessary to accommodate the conditions of the lot; and

c. The driveway is still useable as access to the lot.

E. Parking aisles

1. Parking aisles shall be provided according to the requirements of Table A for

23.54.030 and Exhibit C for 23.54.030.

Table A for 23.54.030

Parking aisle dimensions

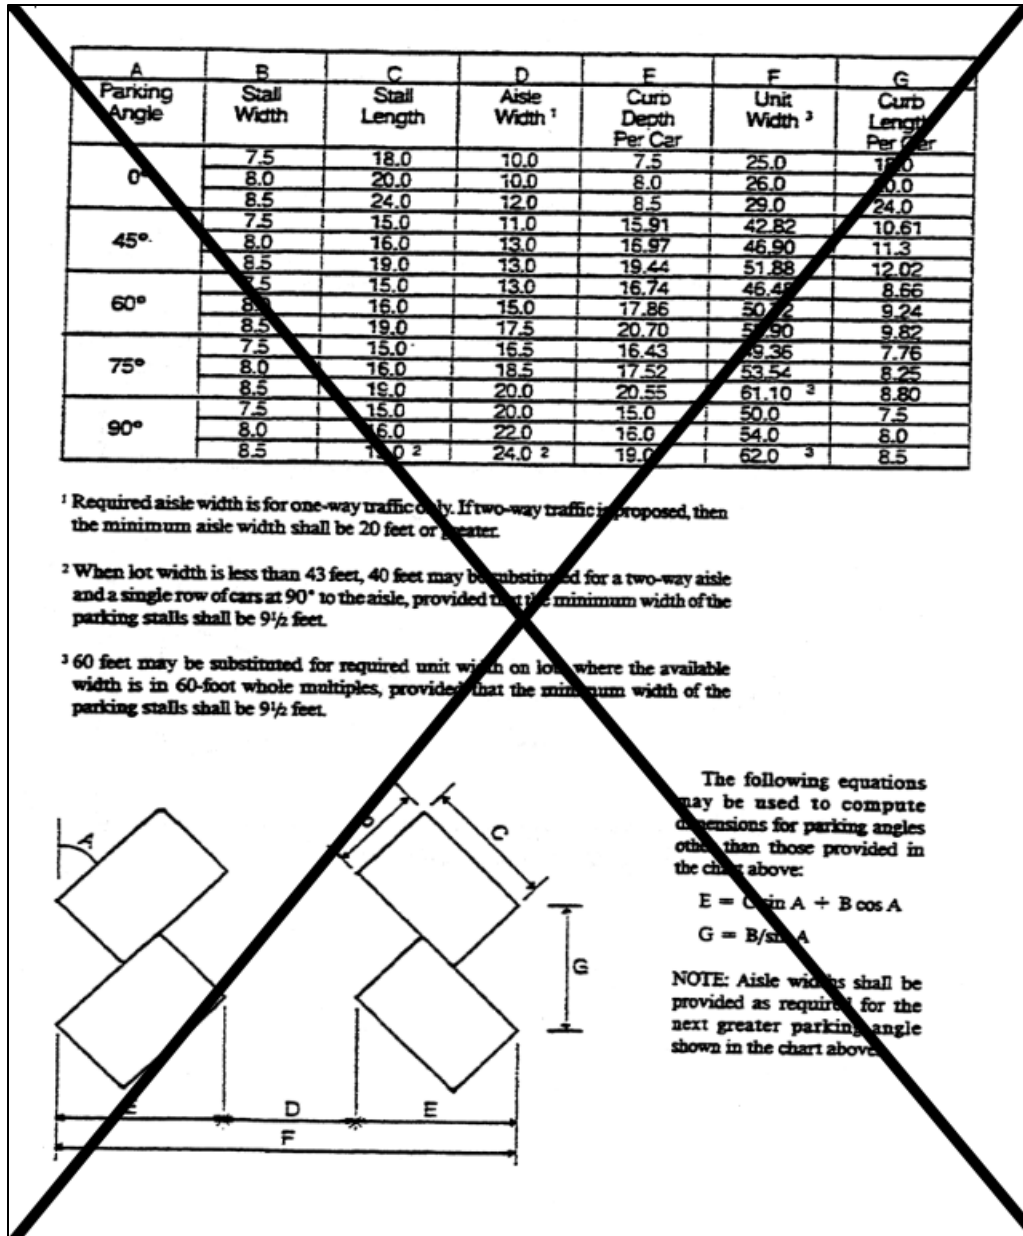

<u>Parking angle</u>	<u>Stall width</u>	<u>Stall length (in feet)</u>	<u>Aisle width (in feet)¹</u>	<u>Curb depth per car (in feet)</u>	<u>Unit width (in feet)²</u>	<u>Curb length per car (in feet)</u>
<u>0°</u>	<u>Small</u>	<u>18</u>	<u>10</u>	<u>7.5</u>	<u>25</u>	<u>18</u>

<u>90°</u>	<u>Small</u>	<u>15</u>	<u>20</u>	<u>15</u>	<u>50</u>	<u>7.5</u>
	<u>Medium</u>	<u>16</u>	<u>22</u>	<u>16</u>	<u>54</u>	<u>8</u>
	<u>Large</u>	<u>19</u>	<u>24³</u>	<u>19</u>	<u>62²</u>	<u>8</u>

Footnotes for Table A for 23.54.030

¹ Required aisle width is for one-way traffic only. If two-way traffic is proposed, then the minimum aisle width shall be 20 feet or greater.

² 60 feet may be substituted for required unit width on lots where the available width is in 60-foot whole multiples, provided that the minimum width of the parking stalls shall be 9 feet.

³ For lots 44 feet in width or less, the Director may reduce the aisle width to as low as 20 feet if large parking spaces are provided at 90 degrees as long as the spaces are 9 feet wide.

1

2 ((Exhibit C for 23.54.030: Parking Aisle Dimensions))

Exhibit C for 23.54.030

Parking aisle dimension measurement

Exhibit C for 23.54.030
Parking aisle dimension measurement

The following equations may be used to compute dimensions for parking angles other than those provided in the chart above.

$$E = C \sin A + B \cos A$$

$$G = B / \sin A$$

Note: Aisle widths shall be provided as required for the next greater parking angle shown in the chart above.

2. Minimum aisle widths shall be provided for the largest vehicles served by the aisle.

3. Turning and maneuvering areas shall be located on private property, except that alleys may be credited as aisle space.

4. Aisle slope shall not exceed 17 percent provided that the Director may permit a greater slope if the criteria in subsections 23.54.030.D.3.a, 23.54.030.D.3.b, and 23.54.030.D.3.c are met.

* * *

L. Electric vehicle (EV) charging infrastructure. New parking spaces provided on a lot when a new building is constructed shall be “EV-ready” as specified in this subsection 23.54.030.L. The required number of EV-ready parking spaces shall be determined by whether the parking is for a residential or nonresidential use. Parking that is clearly set aside and reserved for residential use shall meet the standards of subsection 23.54.030.L.1; parking for all other uses within the structure shall meet the standards of subsection 23.54.030.L.2.

1. Residential uses

a. Private parking for individual residential units. When parking for any individual dwelling unit is provided in a private garage, carport, or parking area, separate from any parking facilities serving other units, at least one parking space for each unit in that garage, carport, or surface parking area shall be EV-ready.

b. Surface parking for multiple ~~((residences))~~ dwelling units. When parking for ~~((multifamily residential uses))~~ multiple dwelling units is provided in a surface parking area serving multiple ~~((residences))~~ dwelling units, the number of parking spaces that shall be EV-ready shall be as follows:

~~((1) When between one and six parking spaces are provided, each of those parking spaces shall be EV-ready;~~

~~2) When between seven and 25 parking spaces are provided, a minimum of six of those parking spaces shall be EV-ready; and~~

~~3) When more than 25 parking spaces are provided, a minimum of 20 percent of those parking spaces shall be EV-ready.))~~

1) When up to 25 parking spaces are provided, the first 12 parking spaces shall be EV-ready; and

2) When more than 25 parking spaces are provided, 45 percent of all parking spaces shall be EV-ready.

c. Parking garages for multiple ~~((residences))~~ dwelling units. When parking for ~~((multifamily residential uses))~~ multiple dwelling units is provided in a parking garage serving multiple ~~((residences))~~ dwelling units, a minimum of ~~((20))~~ 45 percent of those parking spaces shall be EV-ready.

~~((d. Other residential uses. When parking is provided for all other residential uses, a minimum of 20 percent of those spaces shall be EV-ready.))~~

2. Nonresidential uses.

a. When parking is provided for nonresidential uses, a minimum of ~~((ten))~~ 30 percent of those spaces shall be EV-ready~~((--))~~, except as provided in subsection 23.54.030.L.2.b and subsection 23.54.030.L.2.c.

b. For the uses listed in subsection 23.54.030.L.2.c, the following requirements apply:

1) Where less than ten parking spaces are provided for the use, one EV-ready space is required.

2) Where ten or more parking spaces are provided for the use, ten percent of parking spaces shall be EV-ready.

c. The following uses are subject to the alternative requirements in 23.54.030.L.2.b:

1) The following institutional uses:

a) Community club or center;

b) Child care center;

c) Community farm;

d) Library;

e) Museum;

f) Private club;

g) Religious facility; and

h) School, elementary or secondary;

2) Entertainment uses;

3) Eating and drinking establishments;

4) Automotive sales and services;

5) Multipurpose retail sales;

6) Heavy sales and services, except heavy commercial services;

and

7) Marine sales and services.

3. Rounding. When calculating the number of required EV-ready parking spaces, any fraction or portion of an EV-ready parking space required shall be rounded up to the nearest whole number.

4. Reductions

a. The Director may, in consultation with the Director of Seattle City Light, reduce the requirements of this subsection 23.54.030.L as a Type I decision ~~((where))~~ if there is substantial evidence ~~((substantiating))~~ that the added electrical load that can be attributed to meeting the requirements will:

1) Alter the local utility infrastructure design requirements on the utility side of the legal point of service, so as to require on-property power transformation; or

2) Require an upgrade to an existing residential electrical service.

b. In cases where the provisions of subsection 23.54.030.L.4.a have been met, the maximum quantity of EV charging infrastructure required to be installed shall be reduced to the maximum service size that would not require the changes to transformation or electrical service in subsection 23.54.030.L.4.a. The Director may first reduce the required level of EV infrastructure at EV-ready parking spaces from 40-amp to 20-amp circuits. If necessary, the Director may also then reduce the number of required EV-ready parking spaces or otherwise reduce the level of EV infrastructure at EV-ready parking spaces.

c. The Director may establish by rule the procedures and documentation required for a reduction request.

5. All EV charging infrastructure shall be installed in accordance with the Seattle Electrical Code. Where EV-ready surface parking spaces are located more than 4 feet from a building, raceways shall be extended to a pull box or stub in the vicinity of the designated space and shall be protected from vehicles.

6. Accessible parking. Where new EV-ready parking spaces and new accessible parking are both provided, parking facilities shall be designed so that at least ~~((one))~~ 20 percent of the accessible parking spaces shall be EV-ready with no fewer than two EV-ready spaces. The accessible parking EV-ready infrastructure may also serve adjacent parking spaces not designated as accessible parking. The EV-ready accessible parking spaces, rounded up to the next whole number, are allowed to be included in the total number of electric vehicle parking spaces required under 23.54.030.L.1. and 23.54.030.L.2.

7. Nothing in this subsection 23.54.030.L shall be construed to modify the minimum number of off-street motor vehicle parking spaces required for specific uses or the

maximum number of parking spaces allowed, as set forth in Section 23.54.015 or elsewhere in this Title 23.

8. This Section 23.54.030 does not require EV supply equipment, as defined by Article 100 of the Seattle Electrical Code, to be installed.

Section 29. Section 23.84A.010 of the Seattle Municipal Code, last amended by Ordinance 126685, is amended as follows:

23.84A.010 “E”

* * *

“Essential public facilities” within the City of Seattle means airports, sewage treatment plants, jails, light rail transit systems, and power plants.

“EV-ready” means a minimum 40-ampere dedicated 208- or 240-volt branch circuit (32-amp load) terminated at a junction box or receptacle outlet in close proximity to a parking space.

* * *

Section 30. Section 23.84A.025 of the Seattle Municipal Code, last amended by Ordinance 127099, is amended as follows:

23.84A.025 “M”

* * *

“Major retail store” means a structure or portion of a structure that provides adequate space of at least eighty thousand (80,000) square feet to accommodate the merchandising needs of a major new retailer with an established reputation, and providing a range of merchandise and services, including both personal and household items, to anchor downtown shopping activity

around the retail core, thereby supporting other retail uses and the area’s vitality and regional draw for customers.

“Major transit stop” means:

1. Stops on a bus route operated by Sound Transit;

2. Commuter rail stops;

3. Stops on light rail, street car, or trolley bus systems;

4. Stops on bus rapid transit routes; and

5. Any future stop on a bus rapid transit route funded for development and projected for construction within an applicable six-year transit plan under RCW 35.58.2795.

* * *

“Mid-block corridor” means an amenity feature that provides open space and publicly accessible connections across extremely long blocks to mitigate transportation impacts of new development by improving pedestrian circulation in high density areas, including but not limited to the South Lake Union Urban Center, the University Community Urban Center west of 15th Avenue NE, the Uptown Urban Center, the Northgate Urban Center, and the Downtown Urban Center east of Interstate 5.

“Middle housing” means any of the following residential uses, provided that they are located in structures that do not exceed a height limit of 32 feet not including roofs or rooftop features allowed in the underlying zone, as measured in Section 23.86.006:

1. Accessory dwelling unit

2. Adult family home

3. Apartment

4. Carriage house

5. Congregate residence

6. Cottage housing development

7. Low-income housing

8. Mobile home

9. Multifamily residential use

10. Permanent supportive housing

11. Rowhouse development

12. Single-family dwelling unit

13. Townhouse development

* * *

Section 31. Section 23.84A.036 of the Seattle Municipal Code, last amended by Ordinance 126157, is amended as follows:

23.84A.036 “S”

* * *

“Short subdivision” means the division or redivision of land into nine (~~((9))~~) or fewer lots, tracts, parcels, sites, or divisions for the purpose of sale, lease, development, or financing.

“Short subdivision, zero lot line” means a short subdivision that conforms to the unit lot subdivision standards in Section 23.24.045.

* * *

“Subdivision” means the division or redivision of land into ten (~~((10))~~) or more lots, tracts, parcels, sites, or divisions for the purpose of sale, lease, or transfer of ownership.

“Subdivision, zero lot line” means a subdivision that conforms to the unit lot subdivision standards in Section 23.22.062.

* * *

Section 32. Section 25.09.240 of the Seattle Municipal Code, last amended by Ordinance 126509, is amended as follows:

25.09.240 Short subdivisions and subdivisions

* * *

D. Development standards for new lots in neighborhood residential zones. If new lots are created in neighborhood residential zones by short subdivision or subdivision, the following development standards apply based on the area of each new lot that is outside the environmentally critical areas listed in subsection 25.09.240.A, plus environmentally critical areas in which development is allowed pursuant to subsections 25.09.240.B.1, 25.09.240.B.2, and 25.09.240.B.3:

1. Lot coverage and lot coverage exceptions according to subsections 23.44.010.C and 23.44.010.D.

2. Height limits according to Section 23.44.012(~~(, including the requirements of subsection 23.44.012.A.3))~~) if the area of the largest rectangle or other quadrilateral that can be drawn within the lot lines of the new lot outside the environmentally critical areas is less than 3,200 square feet.

* * *

Section 33: The City Council requests that the Seattle Department of Construction and Inspections (SDCI) report to the Council on changes made by the Washington State Building Code Council (SBCC) to the types of projects that are reviewed under the Washington Residential Code. The Council requests that SDCI report back to Council the later of January

2026 or after the SBCC makes final decisions on what changes the SBCC has made, and the City's work program to incorporate those changes into the Seattle Residential Code.

Section 34. The provisions of this ordinance are declared to be separate and severable. The invalidity of any clause, sentence, paragraph, subdivision, section, or portion of this ordinance, or the invalidity of its application to any person or circumstance, does not affect the validity of the remainder of this ordinance or the validity of its application to other persons or circumstances.

Section 35. This ordinance shall take effect as provided by Seattle Municipal Code Sections 1.04.020 and 1.04.070 or on June 30, 2025, whichever is later.

Passed by the City Council the 27th day of May, 2025,
and signed by me in open session in authentication of its passage this 27th day of
May, 2025.

President _____ of the City Council

☒ Approved / ☐ returned unsigned / ☐ vetoed this 28th day of May, 2025.

1. City Council Topics for Permanent Legislation to implement State Land Use Regulations

City Council Topics for Permanent Legislation to implement State Land Use Regulations

The City Council understands the long-term importance of permanent legislation to implement Washington State's land use mandates and intends to carefully consider the implications of the legislation on the City's ability to be a welcoming, accessible, affordable, livable and safe city. In pursuit of those goals, the City will consider the following concepts in its review of the Comprehensive Plan and permanent legislation:

1. Supporting measures to reduce displacement pressure, such as:
 - a. Supporting a variety of housing types, to address the needs of households of different sizes, people with different accessibility requirements, and families at different income levels;
 - b. Supporting lot splitting;
 - c. Considering opportunities to support utility connections;
 - d. Incorporating strategies to help protect homeowners from predatory developers; and
 - e. Considering bonuses for community land trusts;
2. Considering whether residential densities should be based on the number of units on a lot or the square footage per unit;
3. Considering whether Accessory Dwelling Units should be counted toward determining the density of development on a lot;
4. Considering consistent and appropriate thresholds for street, alley, driveway, and pedestrian improvements;
5. Clarifying "designated non-disturbance areas in steep slopes" and reviewing density limits and development standards for properties with steep slope critical areas;
6. Considering adjustments to setbacks and amenity area regulations to maximize tree protection and support retention of existing trees during development and support flexibility in design to address neighborhood needs and provide buffers along major thoroughfares;
7. Considering whether to extend the City's Mandatory Housing Affordability program (Chapter 23.58C Seattle Municipal Code) to Neighborhood Residential zones; such consideration would be informed by information, analyses, and policy proposals that are currently being developed for permanent legislation by the Mayor and Council;
8. Supporting a diversity of housing options near public amenities, goods, and services;
9. Considering the modification of off-street parking requirements to support City goals for neighborhoods accessible by pedestrians, people with disabilities, bicyclists, transit users, and others who do not drive; and
10. Clarifying that the scope of provisions for NR zones do not preclude regulation of cladding materials for qualifying historic districts and landmarks pursuant to SB 5571.

Office of Planning & Community Development (OPCD)	Brennon Staley	Christie Parker

1. BILL SUMMARY

Legislation Title: AN ORDINANCE relating to land use and zoning; implementing a major update of Neighborhood Residential zones and modifying development standards in other zones to comply with various state laws; amending Chapter 23.32 of the Seattle Municipal Code at pages 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 98, 99, 100, 102, 103, 104, 105, 106, 107, 111, 112, 113, 114, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 216, 217, 219, 220, and 221 of the Official Land Use Map; amending Chapters 6.600, 14.08, 14.09, 15.32, 21.49, 22.214, 22.801, 22.907, 23.22, 23.24, 23.28, 23.30, 23.34, 23.42, 23.45, 23.47A, 23.48, 23.49, 23.50, 23.51A, 23.51B, 23.53, 23.54, 23.58C, 23.60A, 23.66, 23.72, 23.75, 23.76, 23.80, 23.84A, 23.86, 23.90, 23.91, 25.09, and 25.11 of the Seattle Municipal Code; renumbering existing subsection 23.54.015.K of the Seattle Municipal Code as Section 23.54.037 and further amending the section; renumbering existing subsections 23.54.030.F, 23.54.030.G, 23.54.030.K, and 23.54.030.L as Sections 23.54.031, 23.54.032, 23.54.033, and 23.54.034 and further amending the sections; repealing Chapter 23.44 and Sections 23.34.010, 23.34.012, 23.34.013, 23.34.072, 23.42.130, 23.45.512, 23.45.531, 23.86.010, and 25.09.260 of the Seattle Municipal Code; adding a new Chapter 23.44 and new Sections 23.42.024, 23.42.132, 23.45.519, 23.80.006, 23.80.008, 23.80.010, 25.09.055, and 25.11.025 to the Seattle Municipal Code; and repealing Ordinance 127219.

Summary and Background of the Legislation:

This legislation would implement a comprehensive update of Neighborhood Residential zones to comply with Washington State House Bill 1110 and to meet other goals. House Bill 1110 (also known as the “Middle Housing bill”) requires cities to allow a wider variety of housing types such as duplexes, triplexes, and stacked flats in primarily single-family zones, and places limits on the regulation of middle housing.

This legislation would also implement changes to comply with:

- House Bill 1293 which requires that design standards be “clear and objective”
- Senate Bill 6015 which places limits on requirements for off-street parking
- House Bill 1287 which establishes requirements for electric vehicle charging in new development

This legislation would replace interim regulations currently being considered by City Council to comply with a June 30, 2025, deadline to implement HB 1110.

A summary of the key development standards are shown below:

Maximum density	1 unit per 1,250 square feet of lot area except that, consistent with state law, at least four units are allowed on all lots, regardless of lot size, and six units within a quarter-mile walk of major transit or if two units are affordable
Floor area ratio (FAR)	The amount of floor area allowed is equal to the lot size times the FAR. Proposed FARs are: <ul style="list-style-type: none"> • 0.6 FAR for density below 1/4,000 sq ft (e.g., one unit on a 5,000 sq ft lot) • 0.8 FAR for density between 1/4,000 and 1/2,200 sq ft (e.g., two units on a 5,000 sq ft lot) • 1.0 FAR for density between 1/2,200 and 1/1,600 sq ft (e.g., three units on a 5,000 sq ft lot) • 1.2 FAR for density of at least 1/1,600 sq ft (e.g., four units on a 5,000 sq ft lot)
Lot coverage	50 percent
Height limit	32 feet plus a 5 foot pitched roof bonus
Minimum Amenity area requirement	<ul style="list-style-type: none"> • 20 percent of lot area • The minimum dimension for amenity area is 8 feet or, if the open space includes a circulation pathway serving multiple buildings, 11 feet • Amenity area may be private or shared • At least half of the amenity area must be at ground level. Only half of amenity area not at ground level counts toward this requirement.
Minimum setbacks and separations	<ul style="list-style-type: none"> • Front: 10 feet • Rear: 10 feet without an alley, 5 feet for ADUs, and zero feet with an alley • Side: 5 feet • Separation between buildings within property: 6 feet
Accessory dwelling units	Accessory dwelling units (ADUs) would count toward the density and floor area limits shown above and be subject to the same standards as principal dwelling units except for a maximum size limit of 1,000 square feet plus 250 square feet of garage.
Alternative standards for stacked flats	Stacked flats located on lots 6,000 square feet or greater and within ¼ mile of frequent transit are subject to an FAR of 1.4 and a density of 1 unit per 650 square feet.

Alternative standards for low-income housing	Low-income housing located on lots 6,000 square feet or greater and within ¼ mile of frequent transit are subject to an FAR of 1.8, a height of 42 feet, a density of 1 unit per 400 square feet and a lot coverage of 60%.
---	---

The legislation would also amend standards in other zones to comply with other state requirements.

Background

The City of Seattle has been working since 2022 to update our Comprehensive Plan. We are calling the updated plan the One Seattle Plan. The Plan is a roadmap for where and how Seattle will grow and invest in communities over the next 20 years, toward becoming a more equitable, livable, sustainable, and resilient city.

In 2023, the Washington State legislature passed a suite of bills that were intended to increase the production of housing and address our housing affordability crisis. These bills include:

- HB 1110 (also known as the “Middle Housing bill”) which requires cities to allow 4 to 6 units on residentially-zoned lots and a wider variety of housing types such as duplex, triplexes, and stacked flats as well as placing limits on the regulation of middle housing
- HB 1337 which places limits on the regulation of accessory dwelling units
- HB 1293 which places limits on design review processes and requires that design standards be “clear and objective”

The Mayor’s Recommended Plan was transmitted to Council in March 2025. Legislation to implement the Recommended Plan through zoning changes will be transmitted in two phases. This legislation would update development standards in Neighborhood Residential zones and make changes to comply with state law. A second piece of legislation (called “Centers and Corridors”) to implement rezones in neighborhood centers, regional and urban center expansions, and frequent transit routes would be transmitted separately.

2. CAPITAL IMPROVEMENT PROGRAM

Does this legislation create, fund, or amend a CIP Project? ☐ Yes ☒ No

3. SUMMARY OF FINANCIAL IMPLICATIONS

Does this legislation have financial impacts to the City? ☒ Yes ☐ No

This legislation will not have any direct impacts to expenditures, revenues, or positions. However, it would have the following indirect impacts:

Tax Base

The legislation is likely to increase the construction of housing in Neighborhood Residential zones. Increased housing construction would bring in additional tax revenue directly through increased construction sales tax and REET tax and indirectly through an increase in property taxes and the number of residents in Seattle. While we don’t have an estimate of likely increases

in housing and population, the Environmental Impact Statement for this legislation and the Centers and Corridors legislation analyzed the impact of 40,000 additional homes over 20 years. About half of these homes were in Neighborhood Residential zones.

Permit Review

This legislation is likely to increase the number of permits for housing that the City has to review but would also make changes to simplify the existing code. Increased permit review would be paid for by the permit fees on the additional volume of permits.

Information Technology, Education, & Outreach

Implementation of this legislation will require updating of zoning maps, GIS layers, websites, director's rules, and other public materials as well as minor changes to the software tracking tools such as Accela to account for new zone names. It is expected that this work will be accomplished using existing staff resources; however, if implementation occurs after June 30, 2025 when SDCI staffing resources will significantly decrease due to budget cuts, SDCI may seek to hire a short-term employee to assist with the implementation process and a separate budget request may be necessary. A memo prepared by SDCI is attached to this document with greater detail and cost estimates. Technology update costs outlined in the memo would be paid by SDCI from existing permit fees through an existing MOU with IT. Language translation costs outlined in the memo would be paid by SDCI permit fees most likely to DON through an existing process. Material update costs outlined in the memo would be paid for by SDCI permit fees.

4. OTHER IMPLICATIONS

a. Please describe how this legislation may affect any departments besides the originating department.

Fiscal impacts, described herein, are primarily on permitting departments including the Seattle Department of Construction and Inspections (SDCI), Department of Transportation (DOT), Seattle Public Utilities, (SPU), Seattle City Light (SCL), Seattle Fire Department (SFD), and the Department of Neighborhoods (DON).

b. Does this legislation affect a piece of property? If yes, please attach a map and explain any impacts on the property. Please attach any Environmental Impact Statements, Determinations of Non-Significance, or other reports generated for this property.

The legislation will apply to Neighborhood Residential Zones throughout Seattle. Neighborhood Residential zones represent about 2/3rds of Seattle. It would also have minor impacts on development regulations in other areas.

c. Please describe any perceived implication for the principles of the Race and Social Justice Initiative.

- i. How does this legislation impact vulnerable or historically disadvantaged communities? How did you arrive at this conclusion? In your response please consider impacts within City government (employees, internal programs) as well as in the broader community.**

This legislation would help address multiple equity issues by:

- reducing the cost of housing by increasing the supply of housing in order to address the competition for housing which is driving price increases
- allow for more home ownership opportunities in parts of Seattle where only detached homes and accessory dwelling units are currently allowed
- implement an affordable housing bonus in NR zones to support the development of this type of housing in areas where affordable housing is lacking.

- ii. Please attach any Racial Equity Toolkits or other racial equity analyses in the development and/or assessment of the legislation.** A summary of racial equity analysis is attached.

- iii. What is the Language Access Plan for any communications to the public?**
SDCI will provide a summary of the updated standards in the languages specified in their office's language access plan.

d. Climate Change Implications

- i. Emissions: How is this legislation likely to increase or decrease carbon emissions in a material way? Please attach any studies or other materials that were used to inform this response.**

This legislation will tend to encourage housing within Seattle compared to areas outside of Seattle. Consequently, it will help to reduce carbon emissions from transportation by locating new households in areas of transit, employment, and amenities.

- ii. Resiliency: Will the action(s) proposed by this legislation increase or decrease Seattle's resiliency (or ability to adapt) to climate change in a material way? If so, explain. If it is likely to decrease resiliency in a material way, describe what will or could be done to mitigate the effects.**

This legislation is not expected to substantially affect Seattle's resiliency.

- e. If this legislation includes a new initiative or a major programmatic expansion: What are the specific long-term and measurable goal(s) of the program? How will this legislation help achieve the program's desired goal(s)? What mechanisms will be used to measure progress towards meeting those goals?**

This legislation would implement the Mayor's proposed One Seattle Plan. No new initiative or major programmatic expansion is proposed.

5. CHECKLIST

- ☒ Is a public hearing required?
- ☒ Is publication of notice with *The Daily Journal of Commerce* and/or *The Seattle Times* required?
- ☐ If this legislation changes spending and/or revenues for a fund, have you reviewed the relevant fund policies and determined that this legislation complies?
- ☐ Does this legislation create a non-utility CIP project that involves a shared financial commitment with a non-City partner agency or organization?

6. ATTACHMENTS

RE: Implementation Costs for Proposed 2025 Seattle Comprehensive Plan Legislation & Rezone Phase I

EXECUTIVE SUMMARY

SDCI has collaborated with Seattle IT to review the proposed legislation and identify costs needed to support implementation of the new zoning changes outlined in the anticipated 2025 Comprehensive Plan and related legislation. This memo identifies the additional technology, outreach and education resources needed to implement the proposed legislation within the timeline outlined and is intended to inform the fiscal notes that accompany the legislative packages.

ANTICIPATED COSTS

Based on our initial analysis and assumption of a 30-day effective date, SDCI expects the technology costs associated with the implementation of the Comp Plan legislation and Rezone Phase 1* to total approximately **\$20,875**. Additionally, SDCI anticipates the costs associated with outreach materials to be **between \$5,000 and \$10,000**, depending on the outreach work undertaken by OPCD. Finally, if adoption and implementation is significantly delayed beyond June 30, 2025, supplementary staff capacity to assist with updating public information would cost approximately \$25,500. More detailed information about the anticipated technology, education and outreach work is provided below.

TECHNOLOGY

The proposed legislation requires numerous updates to GIS zoning maps, data layers, as well as updates to SDCI's permit tracking system, Accela. We expect this new work will be primarily handled by SDCI's dedicated IT GIS liaison; the single existing resource dedicated to all GIS work at SDCI, with assistance from an additional analyst as available in the IT GIS workplan. Estimates for the time and costs necessary to implement this technology work are provided below in more detail:

*Please note that SDCI is not assessing implementation needs for the Phase 2 Rezone at this time.

Technology Updates: Implementation Costs

	Proposed Phases of Legislation	Estimated Costs w/ Added Staffing Resources **
1	Comp Plan Legislation Updates (Expected May/June 2025)* <ul style="list-style-type: none"> • Develop new Major Transit Service Area Layer • Update Frequent Transit Service Area Layer • Propagate layer updates • Update GIS SDCI reports • Coordination/quality assurance for updates to Accela script • Potential new layer/items • Project planning/management 	(167 hours)
2	Phase 1 Rezone (Expected May/June 2025)* <ul style="list-style-type: none"> • Update zoning layers & zoning view layers, as well as other zoning derived layers • Update GIS SDCI reports • Coordination/quality assurance for updates to two Accela scripts • Communications/outreach to stakeholders • Project planning/management • Update Muni Code maps • Update IT GIS tree tracking data 	\$20,875
<p>*The estimated implementation time assumes these pieces of legislation are adopted at the same time, with a 30-day effective date.</p> <p>**Technology estimates shown here assume in-house development at loaded IT rate of \$125/hour.</p>		

EDUCATION & OUTREACH

Along with staff training, thoughtful outreach aimed at educating Seattle residents on zoning changes and requirements is critical to successful compliance and ultimately, the success of the Comprehensive Plan. SDCI will rely heavily on OPCD's significant outreach efforts throughout the development of the Comprehensive Plan.

SDCI education and outreach is anticipated to include activities such as:

- Publicizing a phone line for in-language translation capability to answer questions and direct customers to informational resources.
- Content creation and updates to numerous references on the Seattle.gov web site, multiple public resources documents such as Tips, as well as the creation of new information materials. Potentially including translation of certain content.
- Development of staff training materials.
- Use of OPCD's press-release content to publicize adopted legislation on SDCI newsletter, list serve and social media, as well as coordination with DON to publish in their newsletter.
- Working with DON to publicize to the ethnic media sites and outlets.

With the exception of language translation, SDCI believes that it currently has in-house capacity to support the work to support the necessary outreach and education efforts. This resourcing may change, however, depending on the timing of the legislation adoption. Should the timeline deviate from the currently expected timeline, SDCI may require temporary staffing resources to update and make current our public facing information**. This assessment is based on our best estimates with the information available and the bill as drafted in December 2024. Updates or amendments could impact these estimates.

Outreach & Education Costs

Public Outreach	Estimated Costs	Notes
Translated content for webpage, informational materials and language line	\$5,000-\$10,000	<ul style="list-style-type: none">• Offer informational resources in languages other than English, including the ‘Top Tier’ languages: traditional Chinese (Mandarin and Cantonese), Spanish, Vietnamese, Somali, Amharic, Korean, and Tagalog• Provision of education and accessible information required for the successful implementation of legislation
**Update public information materials	\$25,500	<ul style="list-style-type: none">• 3-month temporary Permit Specialist 1 FTE needed to support the updates if adoption and implementation is significantly delayed beyond June 30, 2025.

Thank you for your consideration and please do not hesitate to reach out with any questions.

One Seattle Plan Comprehensive Plan Update

Racial Equity Toolkit Summary

May 2025

Background

The City of Seattle is updating its Comprehensive Plan, a roadmap for where and how Seattle will grow and invest in communities over the next 20 years and beyond. Seattle last engaged in a citywide process to update its Comprehensive Plan a decade ago. This major update, the One Seattle Plan (Plan), sets a refreshed vision and charts a new roadmap for the future. Central to that vision is working toward a city where current and future residents can benefit from and experience racially equitable outcomes — a city where someone’s race or ethnicity does not impact health, wellbeing, or access to opportunity, including housing.

A Racial Equity Toolkit (RET) is a process to guide the development of the goals and policies in this Plan in order to further racial equity. Conducting a RET is an iterative process of community engagement, analysis, policy development, and evaluation, with each step informing the next. With [guidance](#) from the Seattle Office of Civil Rights (SOCR), the Office of Planning and Community Development (OPCD) employed a RET process in developing the Mayor’s Recommended One Seattle Plan.

This work included an analysis of the existing Seattle 2035 Comprehensive Plan, extensive racial equity data and analysis published in the One Seattle Plan Housing appendix, analysis of racial equity impacts in an Environmental Impact Statement, and enhanced public engagement with communities that have historically been marginalized from policy processes like a major update of the Comprehensive Plan. More complete documentation of each of these components of the RET can be found via the links provided.

Finally, the RET has resulted in key changes and additions to the City’s policies that will guide actions by multiple departments over the next 20 years, including a new growth strategy and policies that promote racial equity added throughout the Plan.

Racial Equity Analysis of Seattle 2035 and Urban Village Strategy (2021)

A Statement of Legislative Intent (29-4-B-1-2019) adopted by City Council in 2019 requested that the OPCD, in consultation with the Department of Neighborhoods (DON) and SOCR, “prepare a racial equity analysis of Seattle’s strategy for accommodating growth” as part of “pre-planning work in anticipation of the next major update to the Comprehensive Plan.” To accomplish this work, OPCD contracted with PolicyLink, a national research and action institute dedicated to advancing racial and economic equity.

The project involved targeted outreach to historically marginalized communities and included a series of focus groups and a larger citywide stakeholder workshop in fall 2020. Participants included community members, organizations active in community development and advocacy around racial equity issues, and City boards and commissions. A community engagement summary report from this process can be found [here](#).

PolicyLink’s evaluation of the current Comprehensive Plan was informed by input from this public outreach and was also informed by a review of data analysis and documents related to the Comprehensive Plan and its implementation.

A final report from this process includes findings and recommendations from PolicyLink on what changes should be made in the Comprehensive Plan and how implementation can achieve more equitable outcomes. Topic areas included: housing supply and affordability, housing and neighborhood choice, jobs and economy, displacement, and community engagement. The final report can be found [here](#).

Equitable Community Engagement

Beginning with the official launch of the One Seattle Plan process in spring 2022, OPCD engaged the public through several phases of community and stakeholder input oriented around key milestones in the Comprehensive Plan update process. These included early engagement and scoping for the Environmental Impact Statement (EIS) in 2022, engagement around key policy topics in the Plan in 2022 and 2023, feedback on the draft Plan and Draft EIS in spring 2024, and feedback on draft zoning changes in fall 2024.

Foundational community engagement goals for the One Seattle Plan were:

- Provide additional opportunities for communities that have been historically underrepresented in the City's planning and engagement processes, especially Black, Indigenous, and People of Color communities.
- Create opportunities for interaction and co-creation with community and stakeholders.

Equitable community engagement included a range of new and expanded strategies:

- DON Community Liaisons assisted with outreach to cultural communities, conducted focus groups, and provided translation services as needed.
- OPCD ensured language access to communities speaking all 7 of Seattle’s Tier 1 languages through translated materials for community events, translation tools on project websites, and interpretation at key community engagement events.
- OPCD contracted with 8 community-based organizations (CBOs) to conduct tailored engagement with the members of communities they serve and produce reports of findings and recommendations for the Comprehensive Plan. The CBOs included Asian Pacific American Labor Alliance (APALA), Capitol Hill Eco District, Duwamish Valley Sustainability Association/ Duwamish Valley Youth Vision Project, Estelita’s Library, Khmer Community of Seattle/King County/ Noio Pathways/ KIMYUNITY, Wa Na Wari/ CACE 21, and sləp̓iləbəxʷ (Rising Tides). Reports from each of the CBOs are available [here](#).
- OPCD worked with key City boards and commissions for input on the Plan, including the Equitable Development Initiative Advisory Board, sləp̓iləbəxʷ (Rising Tides) Indigenous Planning Group, Green New Deal Oversight Board, Mayor's Council on African American Elders, and Seattle Immigrant and Refugee Commission, among others.
- Between June and July of 2023, OPCD facilitated stakeholder interviews with representatives from over 40 organizations working to address displacement in their communities.

A complete description of community engagement for the One Seattle Plan can be found [here](#).

Data Analysis

The Comprehensive Plan update was informed by several rounds of data analysis that identified, quantified, and mapped equity related factors including historical and ongoing racial disparities, displacement risk, and racial outcomes associated with alternative growth scenarios.

One outcome of the last major Comprehensive Plan update, Seattle 2035, was the creation of the Equitable Development Initiative (EDI). In coordination with EDI, OPCD has analyzed and reported on data that show how the city is progressing toward equitable outcomes across neighborhoods and racial and cultural communities. The resulting Equitable Development Monitoring Program ([link](#)) was established to fulfill this role, publishing several reports and data dashboards in the years leading up to the One Seattle Plan process. As stated in the Plan's Introduction, it is OPCD's intent after adoption of the One Seattle Plan to continue similar monitoring work focusing on implementation and outcomes that impact racial equity.

The Community Indicators Report was released in 2020. This report contains data on housing, community and neighborhood access to opportunity, transportation, and access to education and economic opportunities, which collectively show ongoing disparities among demographic groups and areas of the city.

The Comprehensive Plan update process that led to the adoption of Seattle 2035 in 2015 and 2016 used a newly developed Displacement Risk Index map to inform growth strategy and anti-displacement policies. Alongside the Community Indicators Report, OPCD also produced a new data dashboard of Heightened Displacement Risk Indicators that complement the map. The One Seattle Plan update process built upon this prior work with an updated map (included in the Housing Appendix) and early work to update the dashboard and initiate a multi-departmental and data-informed effort to track and improve upon the City's existing anti-displacement toolbox.

The Plan update was informed by new and more complete documentation of a long history of racial discrimination in Seattle. The Housing Appendix includes a new section, Historical Context of Racist Housing and Land Use Practices, that details this history from initial colonization through highly discriminatory housing policies in the 20th century to conditions today that continue to result in racially disparate outcomes in housing and access to opportunity.

The Housing Appendix includes additional data and analysis explicitly directed at identifying racial disparities. Data on households shows ongoing differences across racial and cultural communities in income, homeownership, and housing cost burden. A Geographic Analysis of Racial and Social Equity in Housing explores patterns of segregation within the city and neighborhood disparities in housing affordability and access to opportunities that intersect with race.

Racial equity was also incorporated into environmental review for the One Seattle Plan. As part of the scoping process in Fall 2022, OPCD identified equity metrics that were to be addressed in the Environmental Impact Statement analysis. The One Seattle Comprehensive Plan EIS evaluated six growth strategy alternatives for potential impacts to the built and natural environment. Elements of the environment that were studied included earth and water quality, air quality/GHG, plants and animals, energy and natural resources, noise, land use patterns, historic resources, population, employment and housing, transportation, and public services and utilities. For each element historical inequities related to each topic area are documented. Where environmental impacts for

any of the alternatives are identified, consideration is given to whether there are racial disparities in how these impacts are experienced and mitigation measures are identified.

Goals and Policies in the One Seattle Plan

The RET process informed and shaped the final Mayor’s Recommended One Seattle Plan, with goals, policies, and implementation approaches that are explicitly designed to promote equity and opportunity broadly and specifically address the impacts of historical racism and persistent racial disparities.

The Introduction to the Plan describes four “key moves” which include housing and affordability, equity and opportunity, community and neighborhoods, and climate and sustainability, all of which describe the broad objectives of the Plan to foster a more equitable city as we grow and invest in the future.

A centerpiece of the Plan is the newly revised growth strategy, which provides direction on the types and locations of development, particularly housing, to meet our needs for housing supply, diversity, and affordability over the next 20 years. The proposed growth strategy addresses the legacy of racially exclusive zoning through implementation of HB 1110 (the new state “middle housing” requirement) and with proposed locations for denser housing, including more affordable rental housing, in more places across the city, including new Neighborhood Centers and transit corridors located in areas with high access to opportunity and few housing options now. These changes were designed to reduce market pressures that are contributing to high housing costs and displacement of low income and communities of color and to promote opportunities and incentives for affordable housing development.

In addition to the Growth Strategy element, the proposed One Seattle Plan includes significant changes to 10 topical policy elements, changes that include adding and strengthening goals and policies that promote racial equity and anti-displacement strategies. Highlights include:

- In the Transportation element, a new Creating an Equitable Transportation System section with policies on transportation equity, including promotion of affordability, equitable access, and investments in underserved areas of the city.
- In the Housing element, a new Housing Security and Stable Communities section with expanded goals and policies on anti-displacement.
- In the Housing element, new and expanded policies underscoring the role of community ownership of land, proactive involvement of groups historically excluded from and burdened by housing policies, and support for lower- and moderate-income homeowners to achieve stability and wealth creation through development on their properties.
- In the Capital Facilities element, a new Equitable Capital Facilities and Service section
- In the Utilities element, expanded policies on equitable service provision to address all utilities as well as specific issues, such as affordability and community impacts.
- In the Economic Development element, policies promoting small business ownership, particularly among historically marginalized communities.
- In the Climate and Environment element, a Carbon Pollution Reduction subelement that emphasizes strategies consistent with a just transition away from fossil fuels.

- In the Climate and Environment element, a Healthy, Resilient Communities and Environment subelement that promotes strategies to achieve an equitable distribution of investments to mitigate climate impacts.
- In the Parks and Open Space element, new policies emphasizing equitable access and community partnerships, enhancing and indigenous culture and practice
- In the Arts and Culture element, new narrative and policies recognizing and promoting Indigenous arts and culture.
- In the Community Involvement element, a strong orientation around equitable engagement with goals and policies related to partnerships, community capacity building, and engagement with Indigenous communities.

Mayor Harrell's

ONE SEATTLE PLAN

COMPREHENSIVE PLAN UPDATE

Agenda

- Background
- Overview of Legislation
 - Changes to Neighborhood Residential (NR) zones
 - Changes to Lowrise (LR) zones
 - Changes affecting multiple zones

Purpose of legislation

The primary purpose of permanent legislation is to update Neighborhood Residential zoning and comply with House Bill 1110.

It would also implement changes to comply with:

- **House Bill 1293:** Design Standards
- **Senate Bill 6015:** Off-street Parking
- **House Bill 1287:** Electric Vehicle Charging

Approach

The permanent legislation:

- Repeals the interim legislation
- Repeals and replaces the entire Land Use Code chapter that includes standards for Neighborhood Residential zones (Chapter 23.44)
- Amends other SMC chapters to comply with new state law and meet other goals
- Goes beyond interim legislation to implement a complete overhaul of Neighborhood Residential zones, address existing code issues, and encourage stacked flats

Current Neighborhood Residential zones

- Residential Small Lot (RSL)
- Neighborhood Residential 3 (NR3)
- Neighborhood Residential 2 (NR2)
- Neighborhood Residential 1 (NR1)

Why update Neighborhood Residential zoning?

- Required to comply with state law (especially HB 1110)
- NR zones have not been comprehensively updated since 1982
- Updating NR zones is a critical step towards addressing our current and future housing needs and increasing access to neighborhoods that have been primarily composed of single-family homes. These changes can:
 - Increase supply and diversity of housing, especially homeownership opportunities
 - Allow a wider range of people to live in neighborhoods currently accessible only to high-income households
 - Create opportunities for new housing types that are more accessible for young people and can allow people to age in place in their neighborhoods

Changes to Neighborhood Residential (NR) zones

Density & minimum lot size

- The number of dwelling units allowed on a lot would be the greater of:
 - 1 unit per 1,250 square feet;
 - 4 units; or
 - 6 units if the lot is located within one half-mile of a major transit stop or if at least two units are affordable.
- Accessory dwelling units (ADUs) count toward density limits.
- Density on lots with environmentally critical areas (ECAs) would be reduced in proportion to the percentage of a lot that contains ECAs.
- Minimum lot size of 5,000 square feet required for new lots to prevent using subdivision to avoid density limits.

Floor area ratio (FAR)

- Varies with density
- On a 5,000-square-foot lot, it would result in:
 - One home: 0.6 FAR
 - Two homes: 0.8 FAR
 - Three homes: 1.0 FAR
 - Four or more homes: 1.2 FAR
- Generally results in 3-bedroom homes

Height

- Building height limit would increase from 30 feet to 32 feet to allow more livable floor-to-ceiling heights.
- Pitched roofs continue to be allowed up to 5 feet above base height.
- Shed roofs would be newly allowed up to 3 feet above base height to support solar panels.

Setbacks & lot coverage

- **Front setback:** 10 feet minimum
- **Rear setback:** 10 feet minimum for principal structure, 5 feet for ADUs, 0 feet if abutting an alley
- **Side setback:** 5 feet minimum
- **Maximum lot coverage:** 50 percent

This approach would:

- Allow flexibility for various middle housing types and site layouts
- Support adding new homes while preserving existing homes
- Align with parking requirements
- Accommodate ground-level amenity area for rear units with parking off alley
- Allow light access to homes and interior of site

Amenity Area

- Defined as outdoor space set aside for resident use, such as lawns, landscaping, patios, or roof decks
- 20% of lot must be amenity area
- Cannot include driveways, parking stalls, required bike parking, or solid waste storage
- Must have minimum size of 120 square feet and minimum width and depth of 8 feet.
- At least half must be at ground level, and only half of an amenity area not at ground level would count toward the 20% requirement.

Tree Canopy: Existing Regulations

Development in NR zones will continue to be subject to the following rules:

- **The Tree Protection Code** limits the number, size, and type of trees that can be removed from private property and establishes requirements for replacing trees cut down.
- **Tree planting requirements** require planting of trees as part of development.
- **Street tree requirements** limit removal of street trees and require planting of new street trees as part development.
- **Environmentally critical areas (ECA) and Shoreline regulations** protect trees and vegetation around shorelines, creeks, wetlands, and steep slopes.

Tree Canopy: Tree Protection Requirements

- Tree protection rules in NR are different than in multifamily zones
- Front and rear yards can be reduced by 50% to preserve a tree
- Tier 1 trees cannot be removed unless hazardous or through extreme hardship exemption
- Tier 2 trees cannot be removed unless lot coverage can't be met after using front and rear yard reductions, if it causes a dwelling unit to be less than 15 feet in width, or if needed to accommodate infrastructure needed for development

Tree Canopy: New Planting Requirement

- New requirements are based on potential canopy cover rather than size at time of planting.
- New development would have to plant or preserve trees on private property to meet a certain number of points.
- Lower density development would have to achieve more points.
- Tree points would be in addition to street tree requirements.
- Modeling suggests that tree points would result in canopy cover on redeveloped lots of 19-26% after 25 years and 36-46% at maturity.

Number of tree points required	
Density	Tree points
Less than 1 unit / 4,000 square feet	1 point / 500 sq ft
1 unit / 4,000 sq ft to 1 unit / 2,201 sq ft	1 point / 600 sq ft
1 unit / 2,200 sq ft to 1 unit / 1,601 sq ft	1 point / 675 sq ft
1 unit / 1,600 sq ft or greater	1 point / 750 sq ft

Options to Achieve Points			
	Tree Species	Deciduous trees	Conifer trees
Trees planted as part of construction	Small	1 point	1.25 point
	Small/medium	2 points	2.5 points
	Medium/large	3 points	3.75 points
	Large	4 points	5 points
Trees preserved during construction	Small	0.4 points per inch	0.5 points per inch
	Small/medium	0.8 points per inch	1.0 points per inch
	Medium/large	1.2 points per inch	1.5 points per inch
	Large	1.6 points per inch	2.0 points per inch

Tree Canopy: Development Standard Flexibility

- Under existing rules, front and rear yards can be reduced by 50% to preserve a Type 2 tree. With proposed updated setbacks, this would allow setbacks to be reduced from 10 feet to 5 feet.
- We are also proposing to allow parking to be waived if it would preserve a Type 2 or 3 tree.

Location of parking

- Access must be taken from alley if it is available.
- Parking within 20 feet of front lot line is limited.
- Garages must be setback 20 feet.

Design standards

Proposal would add design standards to NR zones as follows:

- Entries on front façade with 3-foot by 3-foot weather protection are required
- Minimum 20% of front façade must be windows or doors
- Minimum 3-foot pedestrian walkway must be provided to each unit

Example:

4 homes on a 5,000 sq ft lot

Example:

Retain existing home and add units

Bonus for stacked flats

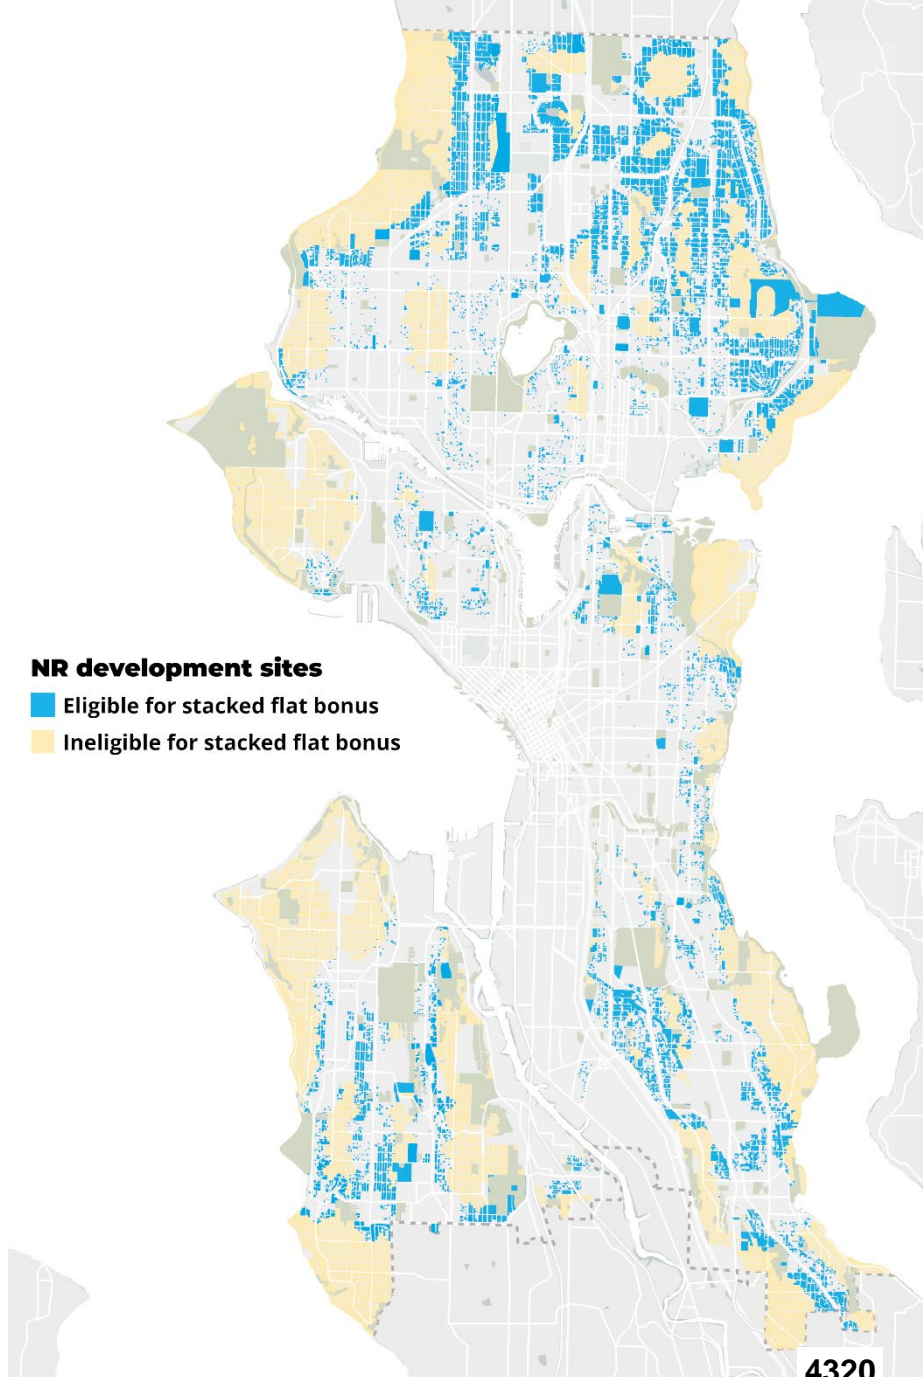

For stacked flats within a quarter-mile of frequent transit and on lots of at least 6,000 square feet:

- 1.4 FAR
- Maximum density of 1 unit per 650 square feet of lot area
- On a 6,000 sq ft lot, results in 9 units (vs. 6); more units allowed as lot size increases

Stacked flats

Geographic area

Bonus for low-income housing

Buildings within a quarter mile of frequent transit where at least half of units are affordable to low-income households would be subject to following:

- Maximum height of 4 stories
- Maximum lot coverage of 60%
- Maximum density of 1 unit per 400 square feet of lot area
- Floor area ratio (FAR) of 1.8

Residential Small Lot (RSL)

- RSL zones are located only within existing Urban Villages
- RSL standards are not consistent with HB 1110
- This legislation would eliminate the RSL zone and rezone areas currently zoned RSL to Lowrise 1 (LR1)
- Currently, the RSL density limit is similar to LR1, but its FAR limit is lower
- Exception: RSL outside the updated boundary of the South Park Neighborhood Center changed to NR

Changes to Lowrise (LR) zones

Changes in Lowrise zones

Change	Rationale
Adopt uniform setbacks for all building types	Comply with HB 1110
Simplify maximum structure width requirements	Comply with HB 1110
Remove density limit	Respond to HB 1096 (lot splitting) and HB 1491 (TOD)
Update design standards	Comply with HB 1293 and SB 5571
Remove facade length requirement	Encourage stacked flats
Add 0.2 FAR bonus for stacked flats in LR1 and LR2 zones	Encourage stacked flats
Update amenity area requirements to minimize requirement for roof decks on townhouses	Reduce costs and encourage pitched roofs

Changes affecting multiple zones

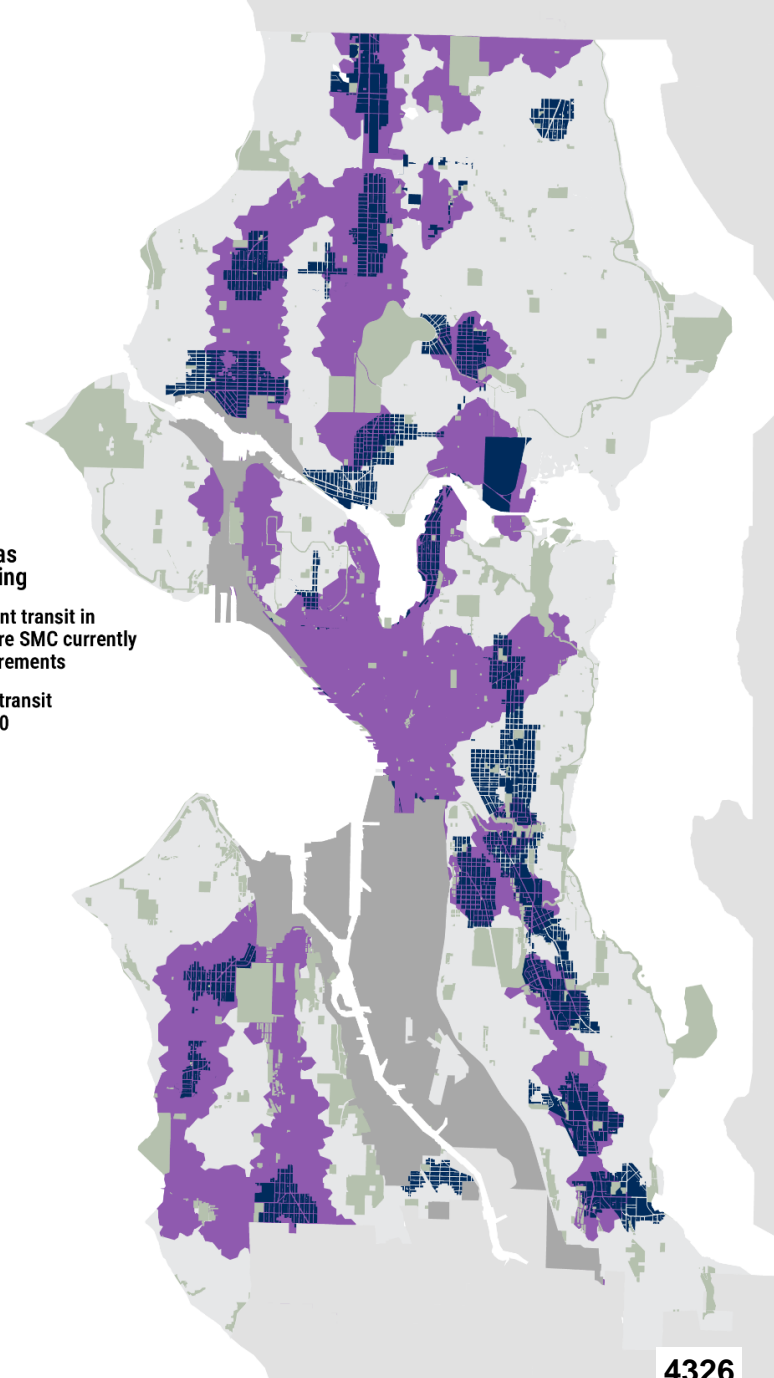

Parking Requirements

- Today, no parking is required in **centers near frequent transit.**
- Consistent with HB 1110, no parking would be required **within a half-mile of light rail and bus rapid transit stops.**
- 1 space per 2 principal dwelling units would be required in other areas.
- Accessory dwelling units would continue to be exempt from parking requirements.

Current and future areas without minimum parking

■ 1/4-mile from frequent transit in existing centers where SMC currently waives parking requirements

■ 1/2-mile from major transit as defined in HB 1110

Corner Stores

Small-scale commercial uses, such as restaurants and retail stores, would be allowed at corner locations and lots next to an alley throughout NR and LR zones provided they meet certain standards for:

- Maximum size
- Hours of operation
- Noise and odor
- Location and screening of solid waste and other outdoor activities

Other changes

- Modify parking space size and tandem parking requirements to comply with SB 6015
- Modify standards for pedestrian access and circulation and access easement requirements consistent with HB 1110
- Update EV charging requirements to meet requirements in HB 1287

Questions?

SEATTLE CITY COUNCIL

May 22, 2025

**NOTICE OF A SEATTLE CITY COUNCIL PUBLIC HEARING ON TWO PIECES OF LEGISLATION:
LEGISLATION TO ADOPT THE ONE SEATTLE PLAN COMPREHENSIVE PLAN AND AMEND THE
LAND USE CODE TO IMPLEMENT THE ONE SEATTLE PLAN; AND
LEGISLATION TO IMPLEMENT HOUSE BILL 1110 AND OTHER STATE MANDATES ON A
PERMANENT BASIS (Phase 1)**

The Seattle City Council's Select Committee on the Comprehensive Plan will hold a public hearing on June 23, 2025, starting at 9:30 AM, on two pieces of legislation.

1. The first bill would adopt the Mayor's Proposed One Seattle Plan Comprehensive Plan Update ("One Seattle Plan") and amend the Land Use Code to implement changes in the One Seattle Plan (hereafter "Comp. Plan Bill").

The One Seattle Plan proposes adoption of new and amended goals, policies, and elements, and a new Future Land Use Map (FLUM), to the City's Comprehensive Plan, with a planning horizon of 2044. The One Seattle Plan includes extensive edits to the existing Comprehensive Plan, particularly in the following areas:

1. Housing and affordability: Expands housing opportunities across the City. Adds significant new zoning capacity to encourage increased housing supply and diversity. The Plan includes a new Growth Strategy and expanded Housing element.
2. Community and neighborhoods: Focuses growth and investment in complete, walkable, communities. Provides new opportunities for people to live in walkable mixed-use centers across the City. Examples include new Neighborhood Centers and opportunities to add corner stores in existing neighborhoods.
3. Equity and opportunity: Promotes a more equitable Seattle as growth occurs, including addressing the history of racial exclusion in neighborhoods, displacement, and unmet community investment needs.
4. Climate and sustainability: Features a new and expanded Climate and Environment element that redoubles Seattle's commitment to reducing GHG emissions from sources such as transportation and buildings and promotes a range of strategies to build community resilience and adapt to climate impacts like smoke, heat, and flooding.

In particular, the Comp. Plan bill would make changes to the Comp. Plan as follows :

- Amending the Growth Strategy and Land Use Elements to support a wider variety of housing including duplexes, triplexes, fourplexes, cottage housing, and stacked flats, in

areas currently dedicated primarily to detached housing, to increase housing choice and implement recent changes to state law enacted by House Bill 1110.

- Amending the Growth Strategy Element to create a new designation called Urban Neighborhood where a variety of low and moderate density housing options are available in residential areas outside of centers, including housing that meets the requirements of HB 1110 and higher densities along frequent transit arterials. Amending the FLUM to designate areas outside of centers as Urban Neighborhood.
- Retaining existing Urban Centers and Urban Villages, while renaming them Regional Centers and Urban Centers, respectively, to better reflect their roles in regional planning.
- Amending the FLUM to designate Ballard as a Regional Center to reflect its recent growth, existing zoning, and transit investments.
- Amending the FLUM to expand the geographic area of Regional and Urban Centers that are very small or will have new light rail stations.
- Amending the FLUM to designate a new Urban Center around the future NE 130th Street light rail station.
- Amending the FLUM to divide the 23rd and Union/Jackson Urban Center into two: the Central District Urban Center and the Judkins Park Urban Center.
- Amending the Growth Strategy Element to create a new designation called Neighborhood Center which would allow a greater variety of housing around existing business districts and/or areas with access to frequent transit, and amending the FLUM to designate 30 areas around the city as Neighborhood Centers.
- Amending the FLUM to redesignate South Park as a Neighborhood Center with associated boundary changes.
- Removing the Neighborhood Plans section of the Comp Plan due to the out-of-date status of many plans in this section and to remove any inconsistencies with updated citywide goals and policies.
- Adding a new section to the Comp. Plan for subarea plans for Regional Centers and Manufacturing and Industrial Centers.
- Revising the Land Use element to add overarching policies and update goals and policies on topics such as the role of various zones, urban design, parking, historic preservation, and environmentally Critical Areas.
- Amending the Transportation element to incorporate goals and policies that align with the newly adopted Seattle Transportation Plan, include new multimodal level of service measures, and to align transportation investments with the updated growth strategy.
- Rewriting the Transportation appendix to update the inventory of the City's transportation facilities and the analysis of how planned growth will affect those facilities, to include baseline data for level of service (LOS) measures, and to update and provide additional detail on transportation financing and investments.
- Amending the Housing element to clarify goals and policies to strengthen the City's approach to furthering housing supply and variety and address the need for affordable housing to meet the needs of all economic segments as required by HB 1220.

- Updating the Housing appendix to include data that meets the expanded requirements of HB 1220 and the Countywide Planning Policies, including analysis of existing capacity for affordable housing targets, displacement and racial equity, and other housing trends.
- Amending the Capital Facilities element and appendix to better address strategic planning, aging infrastructure, decarbonization and resilience, and to update facilities inventories and information about future investment needs.
- Modifying the Utilities element and appendix to include policies for individual energy, water, and solid waste utilities reflecting adopted long-range utility plans. Adding new policy sections for “Equitable Utility Services and Partnerships” and “Internet for All.” Update utilities inventories and information about future investment needs.
- Expanding the previous Environment element to be a Climate and Environment element implementing Resolution 32059 and State House Bill 1181 to address climate change and improve resiliency. Adding new sections on “Urban Forest” and “Healthy Food System” to reflect recently adopted plans on these topics.
- Amending the Parks and Open Space element to add policies about the right-of-way as open space, and new policies on “Partnering with Communities” and “Climate Resilient Open Space.”
- Modifying the Arts and Culture element to add a foreword about Indigenous planning, and policies about place keeping and Indigenous culture.
- Amending the Community Involvement element to add goals and policies related to community involvement partnerships, community capacity building, and engagement with Indigenous communities. Removing policies related to community and neighborhood planning from the Community Involvement element and moving this section, amended to focus on subarea planning, to the Growth Strategy element.
- Removing the Community Wellbeing element and consolidating many existing policies within other elements.
- Adding goals and policies in multiple elements that further race and social equity and support strategies to address displacement.
- Simplifying the Plan’s language and format and reducing redundancy.

Land use code amendments in the Comp. Plan Bill make technical changes such as updating references to new place type names in the growth strategy, and references to neighborhoods plans. Other changes include streamlining rezone criteria and amending criteria for rezones to reflect changed policy in the Growth Strategy element of the Comprehensive Plan.

2. The second bill would adopt permanent legislation to allow middle housing throughout Seattle’s Neighborhood Residential and Multifamily zones and make other changes to Neighborhood Residential zoning consistent with the One Seattle Plan and Washington State Law (“Phase 1 bill”). The bill would consolidate Neighborhood Residential (NR) 1, 2 and 3 zones into a single NR zone with consistent development standards across the city. Rezone criteria for NR zones would be amended consistent with the One Seattle Plan.

Residential Small Lot zones would be rezoned to the Lowrise 1 (LR1) zone, except for areas outside the updated boundaries of the South Park Neighborhood Center which would be rezoned to the new NR zone.

Key development standards for NR zones include:

Maximum density	1 unit per 1,250 square feet of lot area except that, consistent with state law, at least four units would be allowed on all lots, regardless of lot size, and six units would be allowed within a quarter-mile walk of major transit or if two units are affordable. For lots with environmentally critical areas (ECAs), density would be reduced in proportion to the percentage of lot in an ECA.
Minimum lot size	The creation of new lots smaller than 5,000 square feet would not be permitted. The minimum lot size would apply to the parent lot when creating new unit lot subdivisions.
Floor area ratio (FAR)	The amount of floor area allowed would be equal to the lot size times the FAR. Proposed FARs are: <ul style="list-style-type: none"> • 0.6 FAR for density below 1/4,000 sq ft (e.g., one unit on a 5,000 sq ft lot) • 0.8 FAR for density between 1/4,000 and 1/2,200 sq ft (e.g., two units on a 5,000 sq ft lot) • 1.0 FAR for density between 1/2,200 and 1/1,600 sq ft (e.g., three units on a 5,000 sq ft lot) • 1.2 FAR for density of at least 1/1,600 sq ft (e.g., four units on a 5,000 sq ft lot)
Lot coverage	50 percent
Height limit	32 feet plus a 5 foot pitched roof bonus
Minimum amenity area requirement	<ul style="list-style-type: none"> • 20 percent of lot area • The minimum dimension for amenity area would be 8 feet or, if the open space includes a circulation pathway serving multiple buildings, 11 feet • Amenity area may be private or shared • At least half of the amenity area must be at ground level. Only half of the amenity area not at ground level counts toward this requirement.
Minimum setbacks and separations	Front: 10 feet Rear: 10 feet without an alley, 5 feet for ADUs, and zero feet with an alley Side: 5 feet Separation between buildings within property: 6 feet
Accessory dwelling units	Accessory dwelling units (ADUs) would count toward the density and floor area limits shown above and be subject to the same standards as principal dwelling units, except that ADUs would have a maximum size

	limit of 1,000 square feet plus 250 square feet of garage and would not be required to provide parking.
Alternative standards for stacked flats	Stacked flats located on lots 6,000 square feet or greater and within ¼ mile of frequent transit are subject to an FAR of 1.4 and a density of 1 unit per 650 square feet.
Alternative standards for low-income housing	Low-income housing located on lots 6,000 square feet or greater and within ¼ mile of frequent transit are subject to an FAR of 1.8, a height of 42 feet, a density of 1 unit per 400 square feet and a lot coverage of 60%.
Trees	A new tree point system would be created, with a higher number of points required for projects that contain fewer units. More points would be given for 1) preserving existing trees during construction, 2) planting or preserving larger trees, and 3) preserving or planting evergreen trees. Parking requirements would be able to be reduced or waived if the waiver would allow the preservation of a Type 2 or Type 3 tree.
Design standards	Design standards would require pedestrian access pathways, entries along street-facing facades, and windows or doors occupying at least 20 percent of the street facing façade.

The bill would update zoning code provisions in LR zones to comply with State regulations and increase consistency across zones and building types as follows:

- Apply townhouse setback requirements to all building types, with a six-foot building separation requirement;
- Remove density limits;
- Modify structure width limits to apply a limit of 90 feet for LR1 and LR2 zones and 150 feet for LR3 zones to all housing types other than stacked flats;
- Apply the NR zone design standards to LR zones;
- Allow additional floor area for stacked flats in LR1 and LR2 zones;
- Apply a 20 percent amenity area requirement.

Additional changes affecting multiple zones:

Parking: No residential parking would be required within a half mile walking distance of a major transit stop in any zone. Outside that radius, one parking space would be required for every two residential units, except for projects that are exempt from parking requirements. Parking dimensions would be updated to be consistent with State law.

Corner stores: In NR and LR zones, stores would be permitted on the ground floor of buildings on the corner lots and lots abutting a street and an alley. Corner stores would be allowed up to 2,500 square feet in size. Permitted uses would be specified, and hours would be limited. No parking would be required.

Institutions. The proposed bill would make religious facilities subject to the same rules as non-religious institutions, and private schools would be subject to the same rules as public schools. The only exception is that the public school departure process would continue to be facilitated through the Department of Neighborhoods.

The residential zone use definitions would be updated to simplify the code and address existing problems; adult family homes would be allowed in all zones that allow residential uses as a home occupation as required by state law; and standards for essential public facilities would be updated to address new state guidance.

The bill would repeal the interim zoning regulations scheduled to be adopted in May 2025.

PUBLIC HEARING

The City Council's Select Committee on the Comprehensive Plan will hold a public hearing to take comments on the plan and related land use code amendments and rezones on Monday, June 23, 2025, at 9:30 AM. The hearing will be held in the:

City Council Chambers
2nd Floor, Seattle City Hall
600 Fourth Avenue, Seattle, WA

Persons who wish to participate in or attend the hearing may be offered the opportunity to do so remotely. If this is the case, the City Council will provide instructions in the meeting agenda on how to participate remotely. Please check the Select Committee on the Comprehensive Plan agenda a few days prior to the meeting at <http://www.seattle.gov/council/committees>. Print and communications access is provided on prior request. Seattle City Council Chambers is accessible. Directions to the City Council Chambers, and information about transit access and parking are available at <http://www.seattle.gov/council/meet-the-council/visiting-city-hall>.

WRITTEN COMMENTS

For those unable to attend the public hearing, written comments may be sent to:

Councilmember Hollingsworth
600 Fourth Avenue, Floor 2
PO Box 34025
Seattle, WA 98124-4025
or by email to council@seattle.gov

Written comments should be received by Monday, June 23, 2025, at 5:00 PM.

INFORMATION AVAILABLE

The Mayor's proposed One Seattle Plan Comprehensive Plan and associated legislation to implement the Comprehensive Plan are available at the Office of Planning and Community Development's website at <https://www.seattle.gov/opcd/one-seattle-plan>.

Questions regarding the One Seattle Comprehensive Plan may be directed to Michael Hubner, Office of Planning and Community Development at michael.hubner@seattle.gov or 206-684-8380 or to Lish Whitson, Council Central Staff at 206-615-1674 or lish.whitson@seattle.gov.

Questions regarding zoning code changes can be directed to Brennon Staley, Office of Planning and Community Development at brennon.staley@seattle.gov or 206-684-4625 or to Lish Whitson, Council Central Staff at 206-615-1674 or lish.whitson@seattle.gov.
